FEYGENBERG (Imri), RAKHEL (1885–1972), Yiddish and Hebrew author, translator, and journalist. Rakhel Feygenberg was born in Luban, Minsk Province, Belorussia. She wrote about Russian-Jewish life, notably in her books on the 1919 pogroms, *A Pinkes fun a Toyter Shot* ("Record Book of a Dead Town," 1926); *Oyf di Bregn fun Dnyester* ("On the Shores of the Dniester," 1925). Her Shomer-influenced *Di Kinder-Yohren* (*Dos Naye Leben*, 1905; *Warsaw*, 1910) is an impressive achievement for a 20-year old. Her novel *Tekhter* ("Daughters") was serialized in *Warsaw’s Moment* in 1913. She went to Palestine in 1924 for the first time, left in 1926, returned and settled in 1933, and under the name of Rakhel Imri came to write exclusively in Hebrew. A resident of Tel Aviv, she translated most of her Yiddish works into Hebrew, notably her *magnum opus, Megilot Yehudey Rusya: 1905–1964* ("Scrolls of Russian Jewry: 1905–1964," 1965).

Historiated initial letter "F" of the word Fratibus at the beginning of II Maccabees in a 12th-century manuscript from France. It illustrates the sending of the letter from the Jews of Jerusalem to their brethren in Egypt calling on them to observe the feast of Hannukah. Bordeaux, Bibliothèque Municipale, Ms. 21, fol. 256v.
FEYMAN, RICHARD PHILLIPS (1918–1988), U.S. theoretical physicist. Born in New York City, Feynman was the son of an immigrant garment salesman and frustrated scientist whose curiosity and understanding of natural phenomena was a lifelong inspiration to his son. Educated at Massachusetts Institute of Technology (B.S. 1939; he had originally preferred Columbia but was apparently kept out by the Jewish quota) and Princeton (Ph.D. 1942), Feynman worked on the Manhattan (atomic bomb) Project from 1942 to 1946 in Princeton and at Los Alamos, New Mexico, where he was a computational group leader. He taught physics at Cornell University from 1946 to 1950 and at the California Institute of Technology from 1951 until his death.

Feynman won the Nobel Prize for physics in 1965 (jointly, with Julian Schwinger and Shinichiro Tomonaga) for the fundamental theoretical work that led to the development of quantum electrodynamics (from the quantum mechanics of the 1920s and 1930s). In the course of this work he also developed “Feynman diagrams,” a widely used visual analytical technique. He also did important work on superconductivity and, in collaboration with his Cal Tech colleague (and rival) Murray Gell-Mann, on quarks and other subatomic particles.

Near the end of his life Feynman served on the commission investigating the Challenger space shuttle disaster in 1986, creating a public sensation when he conducted, at a public hearing, a simple experiment that revealed the cause of the explosion. He also exposed the institutional management deficiencies that had made the disaster possible.

Feynman was early recognized as one of the most brilliant physicists of his generation and was widely respected as a teacher as well. His published lectures on physics are regarded as classics. He also had a reputation as a “character” – he was famous for his bongo drumming, his womanizing, and his general unconventional demeanor – and for his extreme individualism (said Gell-Mann, “I found that he had difficulty thinking in terms of ‘us’”). In addition to publications in journals, he was the author of several popular books. Among his published works, both professional (mainly transcribed and edited lectures) and popular, are The Theory of Fundamental Processes (1961), Quantum Electrodynamics (1961), The Feynman Lectures on Physics (3 vols., 1963–65, with Robert B. Leighton and Matthew Sands), The Character of Physical Law (1965), Quantum Mechanics and Path Integrals (1965, with A.R. Hibbs), Photon-Hadron Interactions (1972), QED: The Strange Theory of Light and Matter (1985), “Surely You’re Joking, Mr. Feynman!”: Adventures of a Curious Character (1985, with Ralph Leighton), Elementary Particles and the Laws of Physics: the 1986 Dirac Memorial Lecture (1987, with Steven Weinberg), and “What Do You Care What Other People Think?”. Further Adventures of a Curious Character (1988, with Ralph Leighton), A biography, Genius: The Life and Science of Richard Feynman (1992, by James Gleick); Selected Papers of Richard Feynman, with Commentary (2000, edited by Laurie M. Brown); and a collection of letters, Perfectly Reasonable Deviations from the Beaten Track (2005, edited by his daughter Michelle Feynman), have been published. Feynman’s life has inspired countless memoirs, a film, and two plays.

FEZ, city in *Morocco, one of the most important in the Islamic world; founded by Idris I in 789, it became the capital of the kingdom in 808 under Idris II. The first inhabitants of Fez were pagan Berber, but it also included Christians and Jews. Idris II then admitted a large number of Jews who paid him an annual tax of 30,000 dinars. He assigned them a quarter, the al-Funduk al-Yahudi. This community rapidly became influential and respected. Thus, when the ruler Yahya – as it is told – became infatuated with a Jewess and forced his way into the public baths where she was at the time, there was an uprising in the town (c. 860).

A center of civilization, Fez also became a commercial center of prime importance, largely the result of the presence of the Jews, who from there traveled widely. Its position also encouraged a considerable development of the intellectual and religious life of the community: its yeshivot attracted such scholars as Judah Ibn Quraysh in the 9th century. During the 10th–11th centuries its rabbis maintained a regular correspondence with *Sura and *Pumbedita. To Palestine went scholars such as David b. Abraham Alfasi, author of a dictionary, R. Solomon b. Judah (d. 1051), who became head of the Jerusalem Academy, and to Spain grammarians of the stature of Dunash b. Labrat and Judah Hayyuj. R. Isaac Alfasi’s (c. 1015–1105) most extended period of teaching was in Fez, where he wrote his long summary of the Talmud and answered queries on halakhah addressed to him from all over the world. Only in his old age did he arrive in Spain. During this golden era, which lasted several centuries, three grave events occurred: a section of the community was deported to Ashir (Algeria) in about 987; 6,000 Jews were massacred in May 1035 by a fanatic who conquered Fez; and the town was ruthlessly sacked in 1068 by the Almoravides. In about 1127 a pseudo-messiah, Moses Dari, brought some afflictions upon the community. In 1165 the official recognition of a new Almohad monarch resulted in severe changes which went as far as forced conversion. Refusing to submit to this, the dayyan R. Judah ha-Kohen ibn Shushman was burnt alive and *Maimonides and his family, who had been living in Fez as refugees from Spain for five years, permanently left the country for *Egypt. In 1244 the Merinides established themselves in Fez, which once more became the capital of the kingdom. In 1275, there was an insurrection against the Jews, who were particularly well treated by the new masters, and it was the Merinide sultan himself who saved the community. The community lived in freedom and prosperity; its commerce, especially with Aragon, was of considerable importance; learning and science flourished. However, with
the decline of the Merinides and the revival of fanaticism, the Jews were compelled in 1438 to live in a special *Jewish quarter on the site known as *mellah in New Fez. It was the first Jewish quarter in Morocco. Still, in order to straighten out public finances, Sultan 'Abd al-Hagg turned to the Jews of Fez and one of them, Hārūn, became his prime minister. Subsequently, the town rose in revolt, the sultan and his minister were assassinated, and most of the Jews were massacred (1465). The community did not recover from this catastrophe until after 1492 with the arrival of the Spanish refugees; their numbers included some eminent personalities, but several, such as Jacob *Berab, later left for *Palestine.

One of the first Hebrew presses was set up in Fez, by Samuel b. Isaac Nédivot and his son Isaac who had learned their Hebrew printing in Lisbon. From 1516 (?) to 1524 they printed 15 Hebrew books.

The community, which numbered about 10,000, consisted of “Spanish exiles” (*megorashim) and “natives” (*toshashim). The former, by issuing *takkanot based on Judeo-Spanish custom, became entirely detached from the latter; serious friction broke out between these two elements, but the *megorashim finally gained the upper hand. Their descendants instituted the Purim of Los Christianos to commemorate the defeat of the Portuguese at the battle of al-Qasr al-Kabīr in 1578; they held the office of *nagid, established in Fez at the beginning of the 16th century, and their yeshivot were headed by scholars including Nahman b. Sunbal (d. after 1556), Samuel Hagiz (d. after 1596), Judah Uziel (d. 1603), and Saul Serrero (d. after 1622). Their high standard was maintained over a lengthy period due to such personalities as Samuel Sarfaty (d. 1884) and Isaac ibn Danān (d. 1900). The community possessed many schools, five yeshivot, and an important benevolent society. A French school, which received the financial support of the notables of the community, was founded in 1884 by the Alliance Israélite Universelle.

In 1912, two weeks after the establishment of the French Protectorate, a revolt broke out in Fez. The mellah with a population of 12,000 was completely ransacked and set on fire by the mob; about 45 were killed and 27 were wounded. Under the pretext of munitions smuggling, the French military authorities had previously confiscated all the weapons of the Jews, who were left defenseless. The Sharīf received them within the precincts of the palace and ordered the distribution of food and clothes among them. From 1925 many Jews established themselves in the new town of Fez, together with the Europeans; it was only the poor and some Orthodox families who remained in the mellah where in 1942 the dox families who remained in the mellah where in 1942 the French established a fort with the Europeans; it was only the poor and some Orthodox families who remained in the mellah where in 1942 the 45 were killed and 27 were wounded. Under the pretext of munitions smuggling, the French military authorities had previously confiscated all the weapons of the Jews, who were left defenseless. The Sharīf received them within the precincts of the palace and ordered the distribution of food and clothes among them. From 1925 many Jews established themselves in the new town of Fez, together with the Europeans; it was only the poor and some Orthodox families who remained in the mellah where in 1942 the Vichy laws sought to reintegrate all those who had left it. In 1947 there were 22,484 Jews living in Fez and its surroundings. These included several physicians, lawyers, industrialists, and owners of agricultural estates. The traditional occupations disappeared with modernization, and commerce came under Muslim domination, with the exception of the precious metals and cereals businesses in which the Jews retained the leading role.

Zionist Activity

The Zionist association *Hibbat Zion was created before the establishment of the French protectorate, at the end of 1908. It was the only Zionist association which the famous Rabbi Shaul Ibn Danān headed. The reactions of Jews in Fez and other communities in the region to the Balfour Declaration and the end of the war was mass immigration to Ereẓ Israel,
but most of the Jews returned to Fez. We do not know the reasons for the failure of the immigration; however, its impact was very clear: Jews did not emigrate again from the region until the end of World War II.

After World War I a new Zionist association was created, Kol Mevasser, and Josef Halevy was its head. From 1924 Zionist activity almost ceased because of French opposition and the influence of the Alliance on Jewish youth. Unofficially, Jews from Fez participated in Zionist conferences which took place at Casablanca. Eight delegates represented Fez in 1936, four in 1937, five in 1938, two in 1939, and seven in 1946. After World War II all Zionist parties and ideologies were represented in Morocco, including Fez.

Fez was a center of book printing in Morocco. The first printing house was established before 1922, named Imprimerie Allard. Nine printing houses are known in Fez, most of which were active in the 1920s.

Contemporary Period

The Jewish population in Fez was about 10,000 in 1912, 14,000 in 1951, and 12,194 in 1961, comprising 7.5% of the Jewish population of Morocco. Most families had no more than six children. Most Jews left Fez in 1961–68. Until the community was dissolved, the town had many Jewish educational institutions run by the Alliance Israélite Universelle, by Özar ha-Torah (which had 700 pupils in 1961), and Em ha-Banim. In 1961 these and other Jewish schools had a total of 2,823 pupils. Before the emigration in the 1950s and 1960s, there were also general Jewish organizations, such as the Zionist Bnei Akiva, a Hovevei ha-Safah for the study of Hebrew, several social welfare organizations, branches of WZO, and a branch of the World Jewish Congress. Most of the Jews who left Fez made their way to Israel; others went to France and Canada. In 1969 there were only about 1,000 Jews in Fez.

In 1911, Fichman, a younger member of what is usually described as Bialik's school, is generally dubbed impressionist, both for the manner in which he handles his natural themes and images, and for his highly subjective and delicately intuitive criticism, which lacks theoretical interests and varies its criteria to fit the particular work under discussion. Such labels, and the affinities they imply, should however be treated circumspectly, in view of the gap separating the renascent Hebrew literature from the full-blown European context, as well as the often indirect and fragmentary nature of the influences involved. Fichman's criticism itself is an unwitting example of the dangers of facile generalization, as when it lumps together writers, poets, and philosophers of different periods and cultures, and contrasting temperaments. Thus his “imaginary museum” includes Emerson, Carlyle, Taine, Renan, Pisarev and Lessing, Goethe and Hoelderlin, Pushkin, Féret, Baude- laire, and Stefan George. Such lists attest to Fichman's strong desire to bring Hebrew criticism closer to European ideas and individual works. However, they also reflect, hence, the eclectic and impressionistic approach for which he found it necessary to apologize in his essay, Al ha-Bikkoret ha-Yozeret.

Here he defines his role as that of a friend-critic who writes out of gratitude toward the poet for the moments of joy and the insight he has granted him. The task of such criticism is not to find fault, nor even to discriminate according to merit. In contrast to the “hostile critic” who criticizes what is not – the flaws and shortcomings of the work of art – his task is to present that which is: to discover the center of a writer’s “world” and manifest its uniqueness. The creative critic is thus able to appreciate writers of different, and even opposing, characteristics. Fichman does not shrink from sub-

Bibliography: For the works of Fichman, see especially his books, Al ha-Bikkoret ha-Yozeret, published in 1911, and in the first collection of essays, Bavaot, in Odessa in 1911. Fichman, a younger member of what is usually described as Bialik's school, is generally dubbed impressionist, both for the manner in which he handles his natural themes and images, and for his highly subjective and delicately intuitive criticism, which lacks theoretical interests and varies its criteria to fit the particular work under discussion. Such labels, and the affinities they imply, should however be treated circumspectly, in view of the gap separating the renascent Hebrew literature from the full-blown European context, as well as the often indirect and fragmentary nature of the influences involved. Fichman's criticism itself is an unwitting example of the dangers of facile generalization, as when it lumps together writers, poets, and philosophers of different periods and cultures, and contrasting temperaments. Thus his “imaginary museum” includes Emerson, Carlyle, Taine, Renan, Pisarev and Lessing, Goethe and Hoelderlin, Pushkin, Féret, Baudelaire, and Stefan George. Such lists attest to Fichman's strong desire to bring Hebrew criticism closer to European ideas and individual works. However, they also reflect, hence, the eclectic and impressionistic approach for which he found it necessary to apologize in his essay, Al ha-Bikkoret ha-Yozeret. Here he defines his role as that of a friend-critic who writes out of gratitude toward the poet for the moments of joy and the insight he has granted him. The task of such criticism is not to find fault, nor even to discriminate according to merit. In contrast to the “hostile critic” who criticizes what is not – the flaws and shortcomings of the work of art – his task is to present that which is: to discover the center of a writer’s “world” and manifest its uniqueness. The creative critic is thus able to appreciate writers of different, and even opposing, characteristics. Fichman does not shrink from subjectivity. Echoing Anatole France, he maintains that “in talking about the artist I am talking also about myself.” Objectivity, he claims, may be a mere appearance, while the subjective interrelation of critic and artist, and a close attention to the effect of the work on the sensitive reader, reveal its true power.
His point of departure, particularly in his essays on his contemporaries, is the impression which a writer or a particular work have made on him, or on those close to him. Positioning a collective "we," he identifies his own sensibility and responses with those of his generation. At least once, however, he asserted his independence by welcoming the militant modernism of Shlonsky and his followers, notwithstanding that it was mainly directed against his own circle. It was only natural that a criticism as tolerant and ecletic as his would have little to do with the more innovatory trends of 20th-century Hebrew literature. It also refrained from questioning established reputations or calling attention to forgotten writers. Nor was its influence always salutary. Fichman's main merits—the charm of his vignettes, his broad-mindedness, and his desire to establish a "creative community" between writer and critic—were often disregarded by his more militant successors. His florid, cliché-ridden style had a definitely adverse effect on later "impressionists," lacking the strength of his tastes.

Fichman's poetry includes prose poems, folk poems, idylls and sonnets, dramatic poems, and verse on national and biblical themes. Like other contemporaries of his, such as Ya'akov Kahan, Zalman Shneour, Ya'akov Steinberg, and David Shimoni, he too underwent Bialik's formidable influence. But he was equally susceptible to the influence of the new Palestinian poetry led by Shlonsky, particularly in his later Peiat Sadeh (1944). To the latter he is indebted for the Sapirdi prosody, the structuring of the rhyme, and a somewhat harder image. Fichman was among the first of the Bialikites to renounce the-at the time almost compulsory-"prophetic mask," and concentrate on the smaller forms of artistic-conscious craftsmanship.

His more impressive achievements are attained in his symbolic nature-sketches, and in a series of perceptive little lyrical poems, all composed in a minor key. The landscape is represented with an eye to its natural coloring and the interplay of light and shade. The moods are often derived from the familiar romantic and sentimental repertoire. Here, too, as in his criticism, there is no genuine originality, no daring, and little inventiveness. There is however the same respect for good craftsmanship.

Even in these later poems, Fichman's penchant for elevated language often causes him to resort to archaisms, abstractions, hackneyed metaphors, and words or phrases used solely to meet structural and rhythmic needs. He inclines to prefer the often trite poeticism to the concrete rendering of a physical reality. There is hardly a hint in his work of the new, more colloquial idiom which was gaining entry into Hebrew poetry; nor of other qualities usually associated with modern poetry, such as poetic irony and ambiguity. Particularly in his longer poems, it becomes clear that the poet was not capable of sustaining a longer work.

After his immigration to Palestine, Fichman became increasingly absorbed with the Palestinian landscape. Here too he is a member of a transitional generation. His attitude toward the new landscape is basically secular; he does not view it through the biblical-Zionist romanticism of Shimon and other contemporaries. In this, too, he is a forerunner of the changes in Hebrew poetry, some of which he witnessed in his own lifetime.

For translations of his works into English, see Goell. Bibliography:

[Natan Zach]

"FICHTE, JOHANN GOTTLIEB" (1762–1814), German philosopher. Fichte was the founder of ethical idealism, a philosophy which may be described as idealism in that it denies the independent existence of the world, and as ethical in that the reality of the world is determined by man's moral purpose. In his courageous *Reden an die deutsche Nation* (Berlin, 1808; trans. into Eng. as *Addresses to the German Nation*, 1922), originally delivered in Berlin then occupied by the French, he demanded that the foundation of the German national state be based on moral convictions. To achieve this goal, all Germans must be made aware of their moral obligations. These addresses some years later engendered the enthusiasm for the fight against Napoleon, and influenced the European national movements of the 19th century, including Zionism. Fichte's attitude toward Jews and Judaism was complex. Manifesting a reverent attitude toward the Bible, Fichte, in his *Grundlage der gesamten Wissenschaftslehre* (Leipzig, 1794), calls the biblical story of creation "an ancient document, worthy of respect, which contains profound and exalted wisdom and reaches conclusions to which all of philosophy must finally return." By contrast he completely rejected the Jewish religion. The Talmud contains, as he states in his *Kritik aller Offenbarung* (Koenigsberg, 1792), "ludicrously childish conceptions of God." Fichte was against awarding the rights of citizenship to Jews as long as the Jews manifested a strong resistance to the general love of mankind, and as long as they (so he held) believed in two sets of moral laws, one for Jews and another for non-Jews. Distinguishing between human rights and rights of citizenship, he held that "human rights must be granted to them ([Jews] even though they do not grant them to us, for they are human beings and their injustice does not give us the right to be like them; but they must be denied the rights of..."
citizens as long as even one Jewish idea remains with them"
(for full text see Beitrag zur Berechtigung des Urteils uber die franzoesische Revolution, Berlin, 1793).

This negative attitude toward Jews in general must be distinguished from his attitude toward individual Jewish philosophers, particularly Solomon *Maimon. In his Ueber den Begriff der Wissenschaftslehre (Leipzig, 1794), Fichte acknowledges the influence which Maimon's writings had exercised on his own philosophy, describing Maimon as "one of the greatest thinkers of our period."

FICTION, HEBREW.

The Story in Talmudic-Midrashic Literature

Narrative creative writing has been a constant in Hebrew literature and can be found in every period of Jewish culture. The earliest biblical texts include stories, and the telling and retelling of stories continued in every age of Hebrew literature. The long talmudic-midrashic period, however, from the first tanna'im to the first geonim is different from previous or later periods in that the Hebrew story was not regarded as an independent form of expression, nor were stories written as separate works; they formed part of the midrashic literary form, and were subordinate to its didactic and moralistic purposes. No collections of stories as such were published in that epoch. The Hebrew narrative of this period, as it reached medieval Jewish culture, was an integral part of the vast talmudic-midrashic literature with no special or specific literary standing. A great part of the narratives preserved in the Midrash developed the biblical story to conform to the exegetical purposes of the talmudic scholars. Frequently, the stories are biographies of early sages to serve as examples to expound some moral, ethical, or halakhic doctrine. Other stories were included because of nothing more than a vague association with the problem under discussion; this connection, however flimsy it might be, was the only justification for their inclusion.

The subordinate status of the story did not, however, prevent a wealth of narrative material from being included in the talmudic-midrashic literature. L. Ginzberg has shown that this literature contains a complete retelling (in more than one version) of the biblical narrative from the creation to Ezra and Nehemiah; detailed, though sporadic, biographies; stories connected with most of the more important tanna'im and amoraim; stories based on historical facts and legends covering the period of the Second Temple to the "Bar Kokhba War and after; and hundreds of popular stories (usually written in Aramaic, the vernacular of the time). Thus, while the literary aspect of the narrative was insignificant during this period, the narrative creative impulse did not disappear – it only lacked intellectual status as a separate, independent vehicle of expression. The Hebrew story in the Middle Ages opens, therefore, with the slow process of the genre achieving these aims: a separate status and an independent literary form.

The Development of Separate Stories Based on Midrashic Motifs

In the early centuries of the Middle Ages, a large group of independent Hebrew stories based, to some extent, on motifs included in the earlier midrashic literature emerged. Their literary form and content, however, developed independently of that tradition. While talmudic literature merely described the death of some tannaitic martyrs at the hands of the Romans, the medieval narrative "Aggadat Aseret Harugei Malkhut" ("The Legend of the Ten Martyrs," also known as "Midrash Eileh Ezerah" in A. Jellinek, Beit ha-Midrash, 1 (1938), 64–72) used the talmudic stories about R. *Akiva's death and that of other martyrs, and developed a new type of story: the *example for Jewish martyrs in the Middle Ages. Historical truth, evident to some extent in the talmudic stories, was absolutely disregarded here, and the death of the ten tanna'im, who had lived and died in different periods, was described as taking place at the same time.

Talmudic eschatology nursed the idea of two Messiahs, one the son of Ephraim and the other, the final deliverer, a descendant of the House of David. Seefer *Zerubbavel (ibid., 54–57), a medieval tale, developed this idea into an apocalyptic eschatology. It describes, in biblical language, the visions of the last ruler of the House of David who was shown by an angel what is going to happen at the end of time. The main characters in the narrative are the Messiah's mother *Hezq-Bah and Satan, called "Armilus, described as the son of a beautiful stone statue. These are literary figures unknown to talmudic legends. The writing shows independence of form (it is a separate work dedicated to one visionary story) and of content (the addition of new figures and new heroes not mentioned in older tradition).

Another example of this process is found in the tales told by *Eldad ha-Dani (ibid., 2 (1938), 102–13; 3 (1938), 6–11; 5 (1938), 17–21), who, at the end of the ninth century, traveled through Babylonia, North Africa, and Spain, telling strange stories about his travels and adventures. He described his native land, supposedly the home of four of the Lost *Ten Tribes, and his travel to the land of the other six tribes. Out of a few scattered remarks found in talmudic literature, Eldad spun a coherent and organic picture of the life of these tribes: their number, purity, wisdom, and military power. His description of the pure and holy life of the sons of Moses (the Levites),...
who live beyond the river *Sambatyon, is drawn both from Jewish and Moslem sources. A minor midrashic motif was here turned into a detailed and well-developed story which has been preserved in 17 different versions, some of them old and authentic, others including many later additions. This is an instance of a Hebrew medieval story coming into its own, achieving a new form, and developing an old theme in a new way. Eldad’s stories about the Lost Ten Tribes later became part of the messianic eschatology when the belief developed (for which Eldad was not directly responsible) that the tribes were going to come with the Messiah and serve as his armies in the apocalyptic wars at the End of Days.

Using talmudic motifs, the medieval writers also developed the arts of biography and hagiography. They took material from the Talmud about some of the great sages and wove around them new legends, independent in form from their original talmudic setting (see *Hagiography).

The Retelling of Bible Stories

Medieval storytellers continued in the tradition that every period in Jewish culture retells the biblical story according to its own beliefs, views, and literary convention. This was also done in the first centuries of the Middle Ages when many anonymous writers freed the biblical story from its close connection with the exegetical Midrash and developed an independent literary form. The process took two directions: the telling of a short biblical episode as a fully developed independent short story whose plot revolved about a biblical hero or a biblical event; and attempts to retell great portions of the Bible in a new medieval manner.

To the first category belong “Ma’aseh Avraham Avinu” (ibid., 1 (1938), 25–34), a legend about Abraham; “Divrei ha-Yamin shel Moshe Rabbenu” (“The Chronicles of Moses,” ibid., 2 (1938), 1–11); “Midrash Va-Yisse’u” (ibid. 3 (1938), 1–5), a story about the battles of the sons of Jacob. Each of these is a short story using most, or even all, of the pertinent material in the Bible and in the Midrash, but reshaping it into a coherent independent plot, and usually adding many details with no source other than the author’s imagination. In “Midrash Va-Yisse’u,” biblical and fictional wars fought by Jacob and his sons in the area of Shechem are depicted in terms of medieval war strategy and medieval military practices. The valor of the sons of Jacob is characterized by medieval chivalry and knighthood concepts.

Other authors attempted to retell the biblical story in wider scope. The author of *Josippon (tenth century, Italy) dedicated most of his work to the war against the Romans and the destruction of the Second Temple. The work, however, starts with a short recapitulation of Jewish history, told in a medieval, fictional style. The more ambitious author of Sefer ha-Yashar (probably 11th century, Spain) retells, at great length, the story from the creation to the time of the Judges, i.e., the whole story of the Pentateuch. It is the most complete example of this type of medieval writing using biblical motifs, aggadic material, and fictional innovations to weave a new and captivating story. The literary scope of the work was unequaled by any later medieval writing.

The authors of *Josippon and Sefer ha-Yashar added another aspect to the medieval story about biblical times: they attempted, and frequently succeeded, to incorporate non-Jewish legends, history, and mythology (especially Greek and Roman) into the biblical story. The Jews of the Byzantine Empire, Italy, and Spain accepted the legends and history of the people among whom they lived as being part of the history of the world, and argued that as such they form part of the Bible which was believed to include all the important events in human history. These authors, and others, therefore, developed a system of synchronization and analogy to establish a connection between non-Jewish stories and biblical heroes and chronology. The medieval Hebrew narrative, therefore, broke away from its cultural isolation which had prevailed, to a large extent, in the midrashic story, and it became an open form which accepted and drew on the wealth of non-Jewish stories that had become available to the scattered Jewish communities in the East and in Europe.

The Reawakening of the Apocrypha and Pseudepigrapha

One of the most significant differences between talmudic-midrashic literature on the one hand, and Second Temple literature and medieval Hebrew literature on the other, is the attitude toward the literature of the Second Temple, which was not included in the biblical canon. This literature was preserved in Greek, Latin, and other languages, and only recently have some Hebrew originals been found. During the long centuries of the development of the talmudic-midrashic literature, this material was almost completely ignored. The themes, ideas, and stories in the Book of *Jubilees, in the different versions of the Book of *Enoch, in *Tobit, in *Judith, and even in the historical Books of the *Maccabees are hardly mentioned.

After seven centuries of neglect, these works were again incorporated into the framework of Jewish culture by the Hebrew medieval writers. The process began in the early seventh century with *Pirkei de-Rabbi Eliezer, which includes subjects from the Apocrypha. The author also used the Satan motif from the books of Enoch and Jubilees; his adaptation of the Bible story is deeply influenced by this long-disregarded or suppressed literature.

Early medieval Hebrew writers created different versions of the stories of Judith and Tobit usually stylistically influenced by popular folktales, and of stories based on the Books of the Maccabees, especially the story of the mother and her seven sons who were martyred by Antiochus. The story of the fallen angels, vividly told in the Book of Enoch, became the story of Uzza and Azael in the Middle Ages; it was transformed into a folktale, and used as a theological motif by kabbalists.

It is very doubtful whether the Hebrew medieval authors of these works had before them the Hebrew originals of the Second Temple literature, though it is not impossible. It would seem, however, that they used the Christian versions of the
Septuagint and the Vulgate. It is also probable that some of the writers had no direct knowledge of the Greek and Latin versions either, but heard the stories from their non-Jewish friends, since there are some significant variations between the originals and the medieval versions. Whatever the origin from which medieval writers drew their material, an important source of Jewish narrative literature, closed during the talmudic-midrashic period, became a living part of Hebrew medieval writing.

The First Collections of Stories

In the early Middle Ages another new literary form emerged, unknown to Hebrew literature, and scarcely found in other literatures of the time: collected stories in book form. The phenomenon indicates that the Hebrew story had taken its right-full place in Jewish literature. Books, devoted entirely or mainly to stories, began to be written. Four major works of this type were written between the 8th and 12th centuries:

(1) *Midrash Aseret ha-Dibberot* (in A. Jellinek, op. cit., 1 (1938)), 62-90; “Midrash of the Ten Commandments”), which is not a Midrash at all but a collection of about 50 stories (in different redactions the number varies) loosely associated with the Ten Commandments. The stories are interspersed with some midrashic aphorisms, but, their importance is clearly secondary. The Hebrew story thus completely reversed the previous situation. The literary aspect of the story, secondary and unimportant in talmudic-midrashic literature, became the main purpose, while the midrashic elements became merely ornamental.

Some of the stories included in the collection were taken from talmudic literature; others are based on the Apocrypha; many of them are new and were written for the first time in Hebrew, though they might have been previously told as folktales. The narratives are meant to serve as exempla, but do so in a peculiar way. There is no intention of teaching man to fulfill the Ten Commandments; this is so elementary, that it is obviously not the purpose. The aim of the work is to demonstrate the extremes of obedience demanded by the commandments. The moral expounded is usually excessive, without any practical didactic value. This tendency shows the first influence of Moslem ethics in Hebrew literature.

(2) “Alfa Beta of Ben Sira” ed. by M. Steinschneider (1858), a pseudographical work attributed to *Ben Sira, which is in fact a medieval (ninth century?) collection of stories and epigrams. The aim of the work is a protest against accepted norms of Judaism. The stories ridicule some of the biblical figures, like David and Jeremiah, and parody the rabbinic way of learning. Some of the stories carry a bitter note, protesting against the way God conducts the world. These lively humorous tales structurally attained the highest artistic form to be found in early medieval Hebrew storytelling.

(3) *Sefer ha-Maasiyyot* (”Book of Stories,” also *Hibbur Yafeh me-ha-Yeshu’ah*, ed. by H.Z. Hirschberg, 1954) by *Nissim* b. Jacob of Kairouan (11th century), was originally written in Arabic. The Arabic original was forgotten; however, early Hebrew translations made the collection a part of Hebrew medieval literature. R. Nissim used mainly talmudic-midrashic stories and episodes, but added many medieval folktales, some of which had their origin in Judaism, others in Moslem and Arabic sources. His declared purpose was to strengthen the faith in God of a friend who had suffered some misfortune. The body of the collection, however, is not devoted only to this aim. The stories fall into all of the main categories of medieval popular narratives, such as stories about good and bad women, about witches and evil powers, about lust and repentance. In later Hebrew medieval writings, R. Nissim’s stories had a life of their own, independent of their thematic and plot value in the original collection. They were told separately, and were included individually in many later collections.

(4) *The Exempla of the Rabbis*, a collection of stories published from a manuscript by M. Gaster (1924; 1968), by far the largest to be compiled in the Middle Ages. It includes more than 200 tales. Most of them are talmudic, but many, especially in the second half of the collection, are medieval Hebrew folktales told in a captivating manner. Gaster claims that the collection is extremely old, and even suggests – without basis – that it was a source for the Talmud. The collection was most probably compiled in the 11th or 12th century, and shows that some artistic effort had been made to turn it into an organic and unified literary work by arranging the stories into different sequences, each connected to the other through the ending of the preceding narrative.

These four early collections of Hebrew stories mark the beginning of the medieval Hebrew story as a separate literary form, independent of the Midrash, and claiming its own place in Jewish culture.

Stories Included in Hebrew Historiographical Works

Simultaneous with the emergence of the Hebrew story as an independent literary form, Hebrew historiography evolved separately and in the process helped to preserve many Hebrew stories. The dividing line between history and legend, not clearly defined by the medieval historiographer, led to the literary genre of “fictional history” which tried to describe the history of a period, but succeeded mainly in collecting the major stories of it. A classical example is Megillat *Ahima’az* (“The Chronicle of Ahimaaz,” ed. by B. Klar, 1945), which was written in rhymed verse in Italy and describes the history of the Jews in southern Italy from the 8th to the 11th centuries. Most of the work is devoted to stories, which might have some historical foundation, but the writer was mainly interested in telling fables of wonder and mystery connected with the period: Abu Aaron, an eastern mystic living then in Italy, is the hero of a collection of these stories in which such things as his supernatural powers are described.

In Abraham *Ibn Daud’s Sefer ha-Kabbalah*, a more serious attempt to distinguish between history and legend is made. Some legends and tales are, however, included: e.g., the story of the four captives from Babylonia who, after they had been rescued, spread Jewish culture in many communities;
and the legendary material interwoven in the descriptions of the beginnings of Jewish culture in Spain. The same situation is found in many other and later historiographical works. A later example of this kind of "fictional history" is to be found in Gedaliah b. Joseph *Ibn Yahya's *Shalshelet ha-Kabbalah ("The Chain of Tradition"), written in and influenced by Renaissance Italy. It is mainly a collection of stories, hagiographies, and exempla about great medieval scholars, including many demonic and supernatural tales.

The same lack of distinction between fact and fiction is to be found in another literary genre which developed in the Middle Ages: the peregrinations of great travelers, who had returned home full of wonderful and strange tales about faraway countries. Though these travel writings have much important historical data, most of the writers found special pleasure in telling fabulous stories (e.g., those by *Benjamin of Tudela, *Pethahiah of Regensburg, and Hayyim Joseph David *Azulai). Historiography and itineraries, therefore, formed part of the development of the Hebrew story in the Middle Ages.

The Romance in Hebrew Literature
From the 12th century, Hebrew literature began to include many detailed, long, and well-developed romantic stories. Most of the romances do not have their origin in Hebrew culture, but belong to the general medieval stock of fiction. Some are direct translations from Latin, Arabic, or other languages, while others show special Jewish adaptation as they passed from the original language into Hebrew. Most of the romances have more than one Hebrew rendition, and the Jewish elements in them, therefore, vary from one version to another.

Among the direct translations, to which very few or no Jewish motifs were added, are the 13th-century Hebrew version of the romance of King Arthur (Artus) and the Round Table (see *Arthurian Legend), and the Tales of Sendebar (ed. by M. Epstein, 1967), the classic cycle of stories known the faithfulness and unfaithfulness of women and sons, known in the West as the romance of "The Seven Sages of Rome." Whereas only one Hebrew version of the Arthurian legends is known, the Tales of Sendebar is found in many manuscripts and in several versions of various length and number of legends included.

The classic romance, "The Gests of Alexander of Macedo-
nia" (The Book of the Gests of Alexander of Macedon, ed. and translated into English, by I.J. Kazis, 1962), exists in Hebrew in no less than five versions; four of them are based on Latin and Arabic sources in which some Jewish elements were added, the fifth seems to be an almost totally original work, bearing little affinity to the original classic Greek. The Jewish elements fuse well into the legends mainly because in the Greek original there are already a few anecdotes which associate Alexander with the Jews, and in the talmudic-midrashic tradition there are nearly a dozen stories about Alexander. It is not surprising, therefore, that in the Jewish version of the romance, Alexander even encounters the Lost Ten Tribes, is circumcised, and comes to believe in the God of the Jews.

Another medieval cycle of fables, *Kalila and Dimna (ed. by J. Derenbourg, 1881), which probably originated in India and was transmitted into European literature via Persian and Arabic writings, has two medieval Hebrew versions, one translated by a certain R. Joel (probably in the 12th century) and the other by R. Jacob b. Eleazar, a little later. *Mäsëh Yerushalmi ("The Story of the Jerusalemite," ed. by J.L. Zlotnik (1946)), a romance about a man who through a miracle had come to the land of the demons and was there forced to marry *Asmodeus' daughter, is only known from the Jewish original, though the motif exists both in Arabic and Latin literatures. Six Hebrew versions written from the 13th to the 17th centuries are found in Eastern and Western Jewish literatures. The differences in the texts are substantial; many, however, can be explained as a result of the development of the legend within Jewish literature and thought, and not because of non-Jewish literary influences. This is an example of a romance, which was probably first written down in 12th-century Europe, and was preserved, as well as developed, within Jewish culture, becoming one of the standard stories in every Hebrew collection.

The Hebrew view of Jesus' life found full expression in a well-developed and detailed medieval Hebrew romance. The legend, which is the Jewish answer to Christian versions about the birth, life, and death of Jesus, is of an earlier date; in the Middle Ages, however, it had grown into an independent, detailed work, Sefer *Toledot Yeshu. Mary is not unfavorably portrayed, and the author also shows some understanding of Jesus' deeds. It seems that hate itself could not support the development of the story, and when it became a romance, some sympathy had to be shown toward the main characters. Other medieval romances, mainly those originating in the East, reflecting Indian, Persian, and Arabic influences, were incorporated into Hebrew literature as tales in verse, mainly in the *maqama form, which in Hebrew is usually regarded as a poetic rather than a prose genre. The full acceptance of the medieval romance into Hebrew literature, both in its various forms and independent development, signifies that from the 12th century onward Hebrew fictional prose writing became a part of general medieval fiction. It used the stock heroes and plots of medieval fiction, but infused them with special Jewish motifs.

The Story in Hebrew Ethical Literature
With the development of Jewish ethical literature in the 11th century, the story found another major outlet, as well as a wide field for its development. Writers of ethical works, trying to reach as wide a public as possible and educate it according to their own ethical ideology, used every literary form which would popularize their works. This desire for a wider public made the use of stories, fables, legends, exempla, hagiographies, anecdotes, epigrams, imperative within the framework of ethical literature. As a result, many ethical works became treasure houses of all sorts of Hebrew fictional writings as well as the different literary genres devoted to the story exclusively.
Jewish philosophy, the first movement to develop Hebrew ethical literature (written mainly in Arabic and later translated into Hebrew), contributed little to the development of the story. Its authors were hostile toward narrative literary forms, going so far as to voice contempt for the narratives in the Bible itself. "Bahya b. Joseph ibn Paquda in the preface to his Hovot ha-Levavot ("Duties of the Heart"), one of the most famous and influential philosophical-ethical works, explains that the narratives in the Bible were included by God to distinguish between the wise who will disregard them and study the wisdom in the Bible, and the fools, who will follow the narratives and thus reveal themselves as fools. The attitude was widely held by many Jewish medieval intellectuals, and even the "Zohar used the same fable that Bahya did to demonstrate his contempt of the biblical narratives and narrative literature in general.

Despite their hostile attitude, the medieval philosophers did use the story, mainly in the form of long and well-developed fables and short anecdotes; philosophical-ethical writings, therefore, became another means through which the body of Jewish literature was enriched with anecdotes, epigrams, and fables. Many of them were taken from Arab philosophical and moralistic writings whose origin, as often as not, was in Indian literature. Views, too radical to be plainly stated, were often couched in fables; the wide disparity between the fable and the author's explanation served as an indication of the real views of the radical thinker. Bahya himself often used this method in his work.

While philosophical-ethical literature did not contribute a great deal to the development of the Hebrew story, the two other main schools of Jewish medieval thought, the Hasidei Ashkenaz and the kabbalists, in their theological and their ethical works, were the main outlet for the fictional narrative which was to become inherent in popular Jewish culture.

The story, in Ashkenazi-Hasidic Literature
The writings of R. "Judah b. Samuel he-Hasid (d. 1217) and his disciples, both theological and ethical, are one of the main sources of the Hebrew narrative in the Middle Ages. The reason for this is at least partially theological. The Hasidei Ashkenaz believed that God's will and presence were not to be found in common phenomena of the everyday world and in laws of nature, but in miraculous wonderful happenings. If a Hasid, therefore, wanted to learn God's ways and essence, he had to look for unusual phenomena and deduce God's power from them. This attitude, naturally, caused the Hasidei Ashkenaz to write down and preserve stories and anecdotes about the exceptional, which was to them theological truth.

Most of these stories have some demonological elements and many describe meetings between men and witches, werewolves, demons, spirits, and ghosts. These supernatural powers did not represent any evil to the Hasidim; they regarded them as a part, though a dangerous and mysterious one, of the world created by God. Their theology made the Hasidim look for "true" stories which they could believe had actually happened. This is the reason that the literary element was neglected and most of the stories are "eyewitness" anecdotes. Consequently also 12th- and 13th-century German demonology is depicted and not traditional Jewish demonology and superstition. Many of the stories, told by the Hasidim as short anecdotes in the 12th century, were collected and developed 700 years later by the Grimm brothers as main stories of German mythology and folklore.

The second motive for the use of the story in Ashkenazi-Hasidic literature was the ethical fanaticism of the Hasidim, as it is reflected in Sefer Hasidim, the major ethical work of Hasidei Ashkenaz. The extreme demands made by the Ashkenazi Hasidim on their followers were demonstrated in hundreds of exempla in which stories are told about men who succeeded in achieving the nigh impossible ethical standards set by the hasidic teachers. The latter, in turn, became heroes of cycles of legends (see "Legend; "Hagiography), written in the 13th, 15th, and 16th centuries and translated into Yiddish, in which supernatural deeds are attributed to them. Some of the later hagiographical legends sprang from original Ashkenazi-Hasidic stories in which the heroes were anonymous.

Ashkenazi-Hasidic ethical literature was one of the main influences on later Jewish ethics whose exponents made extensive use of Sefer Hasidim and other Ashkenazi-Hasidic writings. The narratives of the Hasidei Ashkenaz were thus preserved long after the movement had died out (late 13th century), and this body of stories became one of the standard sources of later Hebrew fictional writing.

The Narrative in the Kabbalah
The Kabbalah, which flourished in Provence and Spain in the 12th century (reaching its maturity at the end of the 13th century), developed the medieval Hebrew narrative in three different forms:

(1) The hagiography. The teachers of the Kabbalah were treated by their disciples and followers as men of God who possessed secret knowledge and supernatural powers. Contemporaries of these sages and the following generations created hagiographical cycles of stories about them. The kabbalistic sages themselves also wrote hagiographies, often attributing their works to tannaitic sources, and describing the tannaim hagiographically. Works like the "Zohar, Sefer ha-"Kanah, and others include countless stories about the early sages.

(2) The mythological story. By introducing mythological elements into Jewish theology, the kabbalists opened many new possibilities to the Hebrew story (see "Kabbalah). The idea that processes in the divine spheres and the war between the divine powers of good and evil could be told in a narrative manner led the kabbalistic imagination to endow the saintly being with power to intervene in the divine spheres. The literary genre of the mythological story came to the fore only in later centuries, e.g., the story of R. "Joseph Della Reina (first recorded in 1519, published in 1913), and the stories and legends about "Shabbetai Zevi, who was regarded as having divine power by his believers.
(3) The mystical story. Mystical elements in the Kabbalah led kabbalists to describe their divine revelations and visions, through which they acquired mystical knowledge, in narrative form (see *Visions). The characteristics of the narrative were influenced by the individual kabbalist author: how he viewed his experience and his attitude to the form, Kabbalistic mysticism thus developed the aspect of the individual visions in the story.

The Kabbalah, between the 12th and 15th centuries, did not try to reach a wide public, and its exponents usually kept their knowledge and revelations a secret. Only at the end of the 15th and in the 16th centuries did the Kabbalah begin to reach wider and wider circles in the various Jewish communities and, therefore, it is in the later Middle Ages that the influence of the Kabbalah on the Hebrew narrative became predominant. It is in 16th-century Jerusalem, Safed, and Italy, and 17th-century Eastern Europe that the kabbalistic story came into its own.

The Hebrew Story in the Italian Renaissance

The Hebrew story in 16th-century Italy was influenced not only by the spirit of Italian Renaissance art and literature, but also by the catastrophe of the expulsion of the Jews from Spain and Portugal at the end of the 15th century. The combination of these two influences is reflected, for instance, in the dialogues found in Shevet Yehudah, a fictional-historical work by Solomon Ibn Verga. It is devoted mainly to historical descriptions of the various catastrophes which befell the Jewish people since the destruction of the Temple. The originality of the work lies in the fictional dialogues between Christian kings, bishops, and scholars, sometimes also involving Jewish scholars and ordinary persons. Ibn Verga’s views as to the causes of the catastrophes are unusual for his time. He states that the Jews themselves are to blame for their misfortunes which occurred because of their arrogance, fanaticism, and intolerance. The shock of the expulsion is fused here with the spirit of tolerance of the Renaissance to produce a work whose views were not again to come to the fore before the 19th-century Reform movement in Judaism.

The shock of the disaster of Spanish Jewry gave birth to messianic literature; the most famous examples are the autobiography of David Re’uveni who styled himself as an emissary of the Lost Ten Tribes to the Pope and kings of Europe, and the autobiographical sketches and kabbalistic visions of Solomon *Molcho who felt that it was his destiny to announce the coming of the Messiah. Many more messianic stories were written in that period.

One of the most important literary contributions of the period to the Hebrew story was the art of autobiography (see *Biography and Autobiography). Hayyei Yehudah by Leone *Modena is one of the most intimate and revealing autobiographies written in Hebrew during the Middle Ages. Abraham *Jagel (Caliko) in one of the stories in Gei Hizzayon (“The Valley of Vision”) relates how the spirit of his dead father visited him in prison and took him to the heavenly spheres. On their way, father and son met many spirits, good and wicked, who told their stories, and Abraham also told what had happened to him after his father’s death. This literary form bears the mark of the Italian novella of that age, and the stories themselves were only slightly Judaized.

This period is marked by two conflicting developments in the Hebrew narrative. On the one hand, there is a closer connection and mutual influence between Hebrew and Italian cultures which benefited the Hebrew story. On the other hand, the Jewish situation of the time caused the Hebrew story to reflect the growing messianic hopes, resulting in a tendency toward isolation from outer influences. The Hebrew story thus came to express the emotions and tensions of a people torn between catastrophe and messianic hope.

The Hebrew Story in Palestine in the 16th Century

Concurrent with the Hebrew renaissance in literature in Italy, there was a Jewish literary and mystic renaissance in Palestine, especially in Safed. Kabbalistic thought, which prevailed in Safed at the time, filled the hearts of almost all the Jewish scholars with messianic expectations. At the beginning of the 16th century, from Jerusalem, came the first version of the story of Joseph Della Reina who tried to bring about the redemption through magic and Kabbalah. Here attention was focused on Nevu’at ha-Yeled (“The Prophecy of the Child” in Jacob Ḥayyim Zemah’s Nagid u-Mezavekh, Constantinople, 1726), a story about a wonder child who revealed in obscure Aramaic prophecies the time of the redemption.

In Safed, stories were told about various sages who had performed unusual deeds and undergone all kinds of torture, in order to repent for the sins of all Israel, and in this way hastened the coming of the Messiah. In Safed also appeared R. Isaac *Luria whose teachings revolutionized the Kabbalah and gave it messianic direction; there the first body of hagiographical stories, preserved in various versions (see *Hagiography, *Toledot ha-Ari), was created around Isaac Luria and his school; and there Luria’s foremost pupil, R. Ḥayyim Vital, wrote his Sefer ha-Ḥezyonot (“Book of Visions”) in which he describes his dreams of glory, believing Luria to be the Messiah who was to be a descendant of Joseph, and himself, the Messiah who was to be a descendant of David.

Many other kabbalists and non-kabbalists contributed to the development of the Hebrew story in Palestine at this period. At the beginning of the 17th century, their works began to spread to Eastern Europe, where most of the Jews and most of the more important communities were then located. Unlike the Hebrew literature of the Italian Renaissance, the literature of Safed had an enormous influence in shaping the culture of the Jewish communities in Eastern Europe. Therefore, the further development of the Hebrew story in the 17th and 18th centuries was a direct continuation of the Safed revival and not of the new forms supplied by the Hebrew renaissance literature in Italy.
The Hebrew Story in the 17th and 18th Centuries

Two major processes paved the way for the development of the Hebrew narrative in this period. The first was the spreading of the Lurianic Kabbalah throughout the Jewish world; the hagiographical cycle of stories woven around Luria was repeated in many versions, in many works, with similar stories told about other sages, most of them kabbalists. The second was the Shabbatean movement, which, although it did not produce much narrative literature, did lay the foundations for a new kind of legend: the messianic legend about Shabbetai Zevi who had styled himself as the Messiah. Some legendary biographies of Shabbetai Zevi and his prophet, Nathan of Gaza, were preserved, but there was probably much more narrative material which was either lost or suppressed by the opponents of Shabbetanism. This had some delayed influence on hasidic literature.

Another change marking the development of the Hebrew story in Eastern Europe in this period was the wider use of Yiddish which had become the spoken, and often the written, language of the Jews. While sacred works in the field of halakha and Kabbalah were always written in Hebrew, popular works, like stories and ethical literature, were either written only in Yiddish, or in Hebrew with a Yiddish translation. From this period on, it is impossible to distinguish between the development of Hebrew and Yiddish stories. Many originally Hebrew stories were written down in Yiddish, and many popular stories, which were told in Yiddish, were written down in Hebrew.

The wide use of printing also affected the field of narrative literature, and old and new stories were collected and published in small booklets and sometimes in larger collections. Attempts to collect medieval stories have been made by scholars in the East and West. Ḥayyim Joseph David Azulai, an eastern rabbi, wrote down and compiled the stories he had heard throughout his long life and wide travels. Unfortunately, he usually gave only a short description of the story and seldom went into details. Other eastern rabbis in the 18th and early 19th centuries collected hundreds of medieval stories; these, however, have remained in manuscripts until this very day. In the West, collections of stories were published more often; the largest and most important of them being the Oseh Pele (“Wonder Worker”). Modern scholars have taken an interest in this rich mine of narrative literature, and the greatest modern collection, which includes also a full bibliography of earlier collections, is M.J. Berdyczewski’s Mi-Mekor Yisrael (1966).

The Hasidic Story

The Hebrew narrative in its medieval form continued to develop in the modern period. Hasidah literature did not serve as a substitute for continued creative effort in the old types and forms of Hebrew narrative writing; on the contrary – the Hebrew story, in its medieval form, reached its zenith with the emergence of Hasidah literature. This phenomenon is due to the modern hasidic movement, founded by *Israel Ba’al Shem Tov (late 18th century) from which the medieval narrative drew new life.

Though Ḥasidism began much earlier, hasidic narrative literature as a written art came to the fore only at the beginning of the 19th century when *Shivhei ha-Besht and the stories of Ḥ. *Nahman of Bratslav were published (Berdichev, 1815). Later, hundreds of hasidic tales were compiled and published. They very often included not only hasidic material but also stories about medieval sages. The sanctity accorded to the story in Ḥasidic life and ideology helped to preserve not only the hasidic story itself, but countless medieval narratives which would have been lost had the authors of hasidic narrative anthologies not looked for them and saved them from oblivion. The hasidic narrative and the medieval stories that were drawn into the body of Ḥasidic literature did not use the wide range of literary forms which came into being in the Middle Ages and have been described above. The modern form almost exclusively belongs to the field of hagiography, and the stories were sometimes used as exempla. The other literary forms ceased to be a vehicle of expression; their place and possible development in Hebrew literature form part of the history of modern Hebrew literature, and not Ḥasidic literature. For later developments see *Hebrew Literature.

[Joseph Dan]

**FIEDLER, ARTHUR** (1894–1979), conductor and violinist. Fiedler was born in Boston, where his father was a violinist with the Boston Symphony Orchestra. Violinists or “fiedlers” had been in the family for three generations. As a boy, he studied the violin, the piano, and conducting at the Hochschule fuer Musik, Berlin. He made his debut there at 17 as a violinist, but returned to the U.S. on the outbreak of World War I and joined the Boston Symphony Orchestra as a viola player. In 1924 he founded the Boston Sinfonietta, an orchestra of 22 players. From 1929 he organized the successful outdoor series of Esplanade Concerts at Boston. A year later (1930), he was appointed conductor of the Boston Pops Orchestra, which...
he directed until his death. Fiedler extended the orchestral repertory to include show-tune medleys and arrangements of popular songs in a variety of styles, which brought him a wide reputation at home and abroad. From 1957 he also made international appearances as a guest conductor.

[Israel Stein (2nd ed.)]

FIELDS, LESLIE AARON (1917–2003), U.S. author and critic. Born in Newark, New Jersey, Fiedler taught at the University of Montana (1941–64) and, from 1965, was professor of English at the State University of New York at Buffalo. He wrote books of short stories, such as Pull Down Vanity (1962), and novels, including The Second Stone (1963), Back to China (1965), and The Last Jew in America (1966). He is however, best known for his literary studies and critical essays, which include a contribution to Leaves of Grass: 100 Years After (ed. by M. Hindus, 1955), in honor of Walt Whitman; an edition of Simone Weil’s Waiting for God (1959); The Art of the Essay (1969); Love and Death in the American Novel (1960); a contribution to The Continuing Debate (1964); and various articles in Encounter, Preuves, and Partisan Review. Fiedler tended to regard a literary work as the expression of an author’s psychosexual desires, minimizing the importance of its structure and linguistic texture. Though not at first prominent in his works, Jewish themes played an increasing part in Fiedler’s writing, notably in his Image of the Jew in American Fiction (1959) and The Jew in the American Novel (1966), where he saw the Jew as the eternal alien and dissenter. Fiedler on the Roof: Essays on Literature and Jewish Identity appeared in 1991. Nude Croquet (1969), a volume of collected stories, is a bleak, guilt-ridden anthology, including much of Jewish interest. Fiedler was active in American-Jewish life.

[Israel Henry Hindus]

FIELDS, JACKIE (1904–1974), U.S. lyricist and librettist. Born in Allenhurst, New Jersey, Fields was the youngest of four children of the famous comedian Lew Fields. She and her two brothers, Herbert and Joseph, became writers in the entertainment field. In the 1920s Fields began a songwriting partnership with composer Jimmy McHugh that lasted almost a decade. Their first songs were written for shows performed at the famous Harlem night spot, the Cotton Club. Their greatest stage hit was Blackbirds of 1928, one of the longest-running Broadway shows with an all-black cast. In 1929 Fields and McHugh moved to Hollywood. Their most popular songs included “I Can’t Give You Anything But Love” and “On the Sunny Side of the Street,” both written for Broadway revues, and “Don’t Blame Me” and “I’m In the Mood for Love,” written for Hollywood films. In Hollywood in the 1930s Fields began working with other composers including Oscar Levant and Fritz Kreisler. Her favorite collaborator, and close friend, was Jerome Kern. Kern and Fields wrote the scores for The Joy of Living, I Dream Too Much, and her best movie musical, Swingtime, which included the song, “The Way You Look Tonight,” for which Kern and Fields won an Academy Award in 1936. In the 1940s, in collaboration with her brother Henry, Fields produced the books for four Broadway hits, Let’s Face It, Something for the Boys, and Mexican Hayride, which had songs by Cole Porter, and Annie Get Your Gun, which had songs by Irving Berlin. Other composers with whom she worked included Sigmund Romberg, Arthur Schwartz, Morton Gould, Albert Hague, Harold Arlen, and Harry Warren. After the deaths of her husband and her brother Herbert in 1958, Fields stopped writing for more than five years. She bounced back with one of her most popular stage plays, Sweet Charity, written with Cy Coleman in 1966. Her final work, also written with Coleman, was Seesaw.

Fields won the Antoinette Perry (Tony) Award in 1959 for her work on Redhead and was elected as an inaugural member of the Songwriters Hall of Fame in 1971. Unlike earlier female lyricists, who worked in the field of operetta and tended to write songs of elevated sentiments, Dorothy Fields showed from the start a gift for the vernacular and an ear for the most up-to-date speech and slang. She is admired for her meticulous craftsmanship and her ability to combine clear-eyed sentiment with humor.

CHARLOTTE GREENSPAN (2nd ed.)

FIELDS, JACKIE (Jacob Yonkel) Finkelstein; 1908–1987), U.S. welterweight boxing champion 1929–30 and 1932–33, featherweight Olympic Gold Medal winner, member of the Boxing Hall of Fame. Fields was born and raised in a Jewish neighborhood in Chicago, “where you had to fight your way to the swimming pool because the Italians, the Polish, the Irish, the Lithuanians were there.” He began fighting at 14 at the Henry Booth Settlement House under the tutelage of one-time featherweight fighter Marty Fields, whose name he eventually adopted. After Fields’ father, Morris, a butcher, contracted tuberculosis, the family moved to Los Angeles. Fields won 51 of 54 amateur bouts, and captured the Olympic Featherweight Gold medal at the 1924 Olympic Games at age 16, the youngest man ever to win an Olympic boxing crown. His first pro fight was February 2, 1925, and seven fights later, on November 12, 1925, Hall of Famer Jimmy McLarnin knocked him out in the second round, the only time Fields was stopped by a KO.

Fields won the National Boxing Association (NBA) Welterweight Championship on March 25, 1929, with a decision over Young Jack Thompson. Four months later, on July 25, he
captured the unified world championship against Joe Dundee. The defending champion was knocked down five times in the second round, and was then disqualified after crawling on his hands and knees across the ring and punching Fields full-force in the groin, knocking him out. Thus Fields became the only fighter to ever win a title while flat on his back.

Fields lost the world title to Thompson on May 9, 1930, but regained it a second time on January 28, 1932, with a decision over Lou Brouillard, who had taken the crown from Thompson. He lost the title to Young Corbett III on February 22, 1933, and retired after one more fight, having lost his vision in one eye in an automobile accident a year earlier. Widely regarded as scientific boxer with tremendous stamina and a solid punch, Fields’ record was 72 (30 KOs)–9–2. In 1965, Fields coached the U.S. boxing team at the Maccabiah Games in Israel.

[Ellis Wohlgernter (2nd ed.)]

FIG (Heb. תֵּאֵנָה, teėnah), one of the seven species with which Erez Israel was blessed (Deut. 8:8). It is mentioned in the Bible 16 times together with the vine as the most important of the country’s fruit. The saying “every man under his vine and under his fig tree” depicts an era of peace and security in the past and the vision of an ideal future (1 Kings 5:5; Micah 4:4; cf. Joel 2:22). On the other hand the prophets repeatedly warn against the destruction of the vines and the fig trees (Jer. 5:17; 8:13; Hos. 2:12; Hab. 3:17). The fig is also mentioned as a curative. A fig compress (develah) was used by Isaiah in the cure of King Hezekiah (11 Kings 20:7; Isa. 38:21).

The cultivation of the fig in Erez Israel goes back to very early times. Excavations at Gezer have uncovered remains of dried figs from the Neolithic Age, while an ancient Egyptian inscription refers to the destruction of the country’s fig trees by its conquerors (Jeremias, Alte Test, 139). The spread of the fig in Erez Israel is attested by place-names associated with the word teėnah or develah. The fig served as a basic food, possessing a high nutritional value, largely by virtue of its honey. The expressions “honey out of the crag” (Deut. 32:13) and “honey out of the rock” (Ps. 81:17) apparently refer to the honey of figs, the trees of which grow in rocky places (cf. Yal., Va-Era, 184). Similarly, the sages identify “honey” in the passage “a land flowing with milk and honey” with the honey of figs (Ket. 111b).

The fig tree sheds its leaves in winter, at the end of which, even before the tree is covered with leaves, the paggim (“green figs,” Song 2:13) begin to develop in the form of small fruits, which are really tiny flowers covered with a soft skin, and which continue to grow during the summer months. Hosea 9:10 compared the young nation of Israel in the heyday of its glory to bakkarot (“first-ripe figs”), which are delicious and eagerly sought after (Isa. 28:4; Jer. 24:2). Not all the paggim reach the ripened stage, some falling off or withering (Isa. 54:4). Figs that ripen at the end of summer have an inferior taste (Micah 7:1), as do those that burst when overripe (Jer. 29:17). Figs were dried in the sun and were either left whole or cut up and pressed (develah, 1 Sam., 25:18; 1 Chron. 12:40). The word kavye (11 Sam. 16:1–2; Jer., 40:10, 12), which may refer to summer fruits as a whole, signifies primarily dried figs (cf. Isa. 16:9; Tosef., Ned. 4:1–2).

The importance of the fig in mishnaic and talmudic times is evidenced by the fact that more than 70 expressions connected with the fig occur in the literature of the period. Various strains of fig are mentioned: white and black (Ter. 4:8); those that ripen early and those that ripen late (ibid., 4:6; Shev. 9:4). The paggim of certain strains were pierced or smeared with oil to make them ripen early (ibid., 2:5). Other strains required caprification: to ensure the pollination of the fruit, branches bearing the fruit of the wild fig (Ficus carica caprificus) were hung up on the trees. These were infested with insects, which alone can pollinate the fruit of the cultivated fig (Ficus carica domestica; cf. Tosef., ibid., 1:9; 71, ibid., 4:4, 35b).

At present, fig trees are cultivated in Erez Israel mainly by Arabs, their economic value being limited in modern Jewish agriculture in that their fruit, not ripening simultaneously, must be picked almost daily by many hands (Num. R. 12:9). The fig tree has many branches, large leaves, and widely spread boughs. Large, shady fig trees are to be found in Israel, especially on the banks of streams and near springs, and are among the most beautiful trees in the country. The fig figures prominently in the aggadah, the consensus, on the basis of Genesis 3:7, being that the Tree of the Knowledge of Good and Evil was a fig tree (Ber. 40a; Gen. R. 15:7).

[Jeḥuda Feliks]

FIGO (Picho), AZARIAH (1579–1647), Italian rabbi and preacher, born in Venice. In his youth he devoted himself largely to secular studies, but later, regretting the time he had spent “loving the handmaiden” and “neglecting the mistress,” he applied himself wholly to rabbinic studies. At the age of 28, he was appointed rabbi of Pisa. There he wrote Giddulei Terumah (Venice, 1643), a casuistic commentary on the Sefer ha-Terumot of Samuel *Sardi. After the burning of the Talmud in 1553, copies were very scarce, and when Figo wrote his book he possessed only the tractates Bav a Kamma, Shevü’ot, and Nazir and had to borrow the other tractates from the neighboring communities. He completed the book in Venice, where he returned in 1627, and became preacher to the Sephardi community. Figo leaned toward a strict interpretation of Jewish law. He opposed the establishment of a theater in the ghetto of Venice and criticized the members of his community for usury, flaunting their wealth, internecine wrangling, laxity in ritual observances, and sexual irregularities, Figo was active in redeeming Jewish captives, and defended the Marranos, declaring them to be Jews. His most important work is his Binah le-Ittim (Venice (?), 1648), a collection of sermons delivered in Venice. They are based on the festivals and fasts of
the Jewish calendar, and also include sermons based on Avot on such topics as charity and education. Since its first publication, it has been reprinted 50 times. Some of his responsa are found in the Devar Shemuel (1702) of Samuel Aboab. Figo died in Rovigo.

On his homiletical works, see *Homiletics.

[Chayim Reuven Rabinowitz]

FILDERMAN, WILHELM (1882–1963), Romanian Jewish leader. Born in Bucharest, in 1909 Filderman became a doctor of law in Paris. He returned to Romania and after teaching for two years at the high school of the Jewish community of Bucharest, started his law practice in 1912. In 1913 he was elected to the central committee of the Union of Romanian Jews. Filderman was an officer in the Romanian army during World War I and after the war became the acting leader of the Union of Romanian Jews. At the Versailles Peace Conference he was a member of the *Comité des Délégations Juives. He demanded the total emancipation of the Jews as an inalienable right and the inclusion of this principle in the peace treaty with Romania.

In 1920 Filderman became the representative of the *American Jewish Joint Distribution Committee (JDC) in Romania and in 1923 was elected president of the Union of Romanian Jews. Between the two world wars, he fought antisemitism, and worked for the effective realization of full citizenship for the Jews. Filderman also published a number of books against antisemitism. He was opposed to a national Jewish policy and a separate Jewish party. In 1927 Filderman was elected a member of the Romanian parliament on the Liberal Party list. He was also the president of the Jewish community of Bucharest (1931–33), and in the same period he became president of the Federation of Jewish Communities. In 1937, during the period of King Carol II's dictatorial reign, when all political groups were dissolved, the Federation of Communities also took over the functions of the political representation of the Jews. When the enlarged *Jewish Agency was constituted (1929), he was elected by the Federation of Communities as a non-Zionist delegate to its founding congress in Zurich.

After September 1940, when Ion *Antonescu took over the leadership of the country, Filderman intervened with him as a representative of the Federation, several times obtaining the revocation of serious measures, such as the wearing of the yellow badge, the deportation of Romanian Jews to Nazi camps in Poland, etc. At the beginning of 1942 the Federation of Communities was dissolved. Although Filderman no longer had an official status, he continued to address personal memoranda to the Romanian authorities denouncing the racial measures. He was a member of the underground Jewish Council, formed of representatives of the principal Jewish trends. When he expressed his opposition to the special tax of four billion lei demanded of Romanian Jewry by the Antonescu regime, he was sent to “Transnistria (March 1943), returning after three months through the intervention of the papal nuncio and the Swiss and Swedish ambassadors. Back in Bucharest, he immediately reported to the Romanian government on the terrible situation of the deportees in Transnistria and asked for their return, which was obtained at the end of the same year.

After the war, he again became president of the Federation of Communities and of the Union of Romanian Jews and representative of the JDC. Soon afterward, however, he came into conflict with the Jewish Communists, who wanted the Jewish institutions to affiliate with their party's policy. As a result of their instigations, Filderman was arrested in 1945 and liberated only after a five-day hunger strike. Afterward he was kept under house arrest for three weeks. He was increasingly attacked in the Communist press. In 1948 he secretly left Romania, after being informed that he would once again be arrested (this time on charges of spying for Britain), and settled in Paris. According to his will, his archives were transferred to Yad Vashem.

[Theodor Lavi]

FILENE, family of entrepreneurs, social reformers, and philanthropists in Boston. Progenitor of the family in America was William Filene (1830–?) who emigrated to the United States after the German revolution of 1848, and became owner of two stores in Lynn, Mass. In 1881 William Filene founded William Filene's Sons Company, a department store, in Boston. He turned over control of his stores to his sons in 1890, and together they built a multimillion-dollar merchandising empire. Edward Albert. (1860–1937) and A. Lincoln Filene (1865–1957) were innovators in merchandising techniques and employer-employee relations. They introduced the idea of the “bargain basement” where goods were sold at reduced prices. They pioneered in establishing minimum wage scales for female employees, employee welfare plans, paid winter vacations for employees, employee purchasing discounts, profit sharing, health clinics, insurance programs, and credit unions. Filene's was the first department store in Boston to establish a five-day, 40-hour week.

Edward Filene was born in Salem, Mass. Entering his father's dry goods business in 1880, he became president of Filene's department store in 1908. He was a leading member of the Boston Chamber of Commerce, which he helped organize; later he was a founder of the United States Chamber
of Commerce and the International Chamber of Commerce. As chairman of Boston’s Committee on Industrial Relations, Edward played a pivotal role in the passage of Massachusetts’ first workmen’s compensation law in 1911, the first form of institutionalized social insurance in the United States. Edward believed that cooperative private enterprise and higher wages were necessary to raise consumer purchasing power and thereby avert economic depressions. He favored paying workers a “buying” wage instead of a near-subsistence “living” wage. In 1909 he secured enactment of the first credit union law in America in Massachusetts. In 1914 he organized the Credit Union National Association and donated $1,000,000 for its work. He also gave $1,000,000 to the Consumers Distribution Corporation to organize a national chain of cooperative retail stores. Throughout his life Edward took an active part in the world peace movement. In 1915 he joined the League to Enforce the Peace. After World War I he backed the League of Nations. In 1919 he founded the Twentieth Century Fund, which conducts investigations of social and economic problems with an emphasis on finding solutions. He wrote Speaking of Change (1939).

A. Lincoln Filene was born in Boston. He became treasurer and chairman of the board of Filene’s in 1941, and was long active in civic and communal affairs, Lincoln believed that mass purchasing by department stores, and research to improve their efficiency, would benefit the consumer by allowing lower prices. He himself was a leader in the development of scientific methods of retail store management. In 1937 he established the Lincoln and Therese Filene Foundation, which funded the first educational television station in Boston in 1955. Lincoln Filene wrote Merchants’ Horizon (1924).

Both brothers were social reformers who believed that capitalism had to operate more efficiently to avert radical reforms and advance the welfare of the individual. Both Edward and Lincoln Filene actively backed President Franklin D. Roosevelt’s New Deal. At a time when most American employers attacked Roosevelt for being too radical, the Filene brothers helped prevent a complete split between the president and the business community.

[Robert Asher]

**FILIPOWSKI, ZEVI HIRSCH** (Herschell Philip; 1816–1872), Hebraist, editor, actuary, and mathematician. Born in Virbalis, Lithuania, Filipowski was instructed secretly by a Polish schoolteacher in mathematics and languages. In 1839 he emigrated to London, where he taught at a Jewish school while continuing his studies. Filipowski’s first work, *Moed Moaidim* (1846), deals with the various calendars of the Jews, Karaites, Christians, and Muslims. He was the editor of the Hebrew annual *Ha-Asif* (2 vols., London, Leipzig, 1847–49), to which he contributed essays on Hebrew literature and mathematics. Later Filipowski, while working as an actuary in Edinburgh, pursued his interest in mathematics, publishing *Anti-Logarithms* in 1849. In addition, he translated Napier’s *Canon of Logarithms* from Latin into English (1857) and edited Baily’s *Doctrine of Life Annuities and Assurance* (1864–66). In 1851 Filipowski founded a Jewish antiquarian society, “Meorerei Yeshenim” (a forerunner of the “Mekize Nirdamim”), for the purpose of publishing medieval Hebrew texts. Among the important works which he edited and published for the society (in type designed by himself) are Solomon ibn Gabriol’s *Mivhar ha-Peninim* (1851), Azariah dei Rossi’s *Maqef la-Kesef* (from the author’s own manuscript), Menahem ibn Saruq’s *Mahrberet* (1854), Dunash b. Labrat’s criticism of Saruq’s work (1855), and Abraham Zacuto’s *Sefer Yuhasin ha-Shalem* (1857). This edition of the *Yuhasin* is still the best available; it was reissued by A. Freimann with an introduction, indices, etc. (Frankfurt, 1924; Jerusalem, 1963). In 1862 Filipowski printed a pocket edition of the prayer book, including his own English translation, for which he designed a special Hebrew type in which the vocalization is attached to the letters. In 1867 he founded the *Hebrew National*, but the journal ceased publication after six months. His last work was a pamphlet called *Biblical Prophecies* (1870) discussing the Jewish view of prophecy and messianism.

**FILLER, LOUIS** (1911–1998), U.S. historian. Born in Cincinnati, Ohio, Filler served as a research historian for the American Council of Learned Societies (1942–44), and as a historian for the War Department (1944–46). He joined the faculty of Antioch College, where he was appointed professor of American civilization in 1946. He was a fellow of the Social Science Research Council and American Council of Learned Societies (1953–54).

[Ruth Beloff (2nd ed.)]

**FIMA** (Reuytenberg), **EFRAIM** (1916– ), painter. Fima was born into a Russian Jewish family in Harbin, China. His father, Alexander, had left Russia in 1904 with his wife, Sofia
Fishman. In 1934 Fima moved to Shanghai, where he started to learn painting in IZO, a Russian Academy of Art. He also began to study Chinese calligraphy and became passionately interested in Chinese philosophy. Fima immigrated to Israel in 1949. The revelation of the other side of the world and the exposure to Israel induced a period of doubt. Fima destroyed most of the canvases he had created up to that point. As with immigrants, he experienced difficulties. His working conditions were poor and he painted during the night. He married twice and in both cases the marriage ended in divorce. In 1958, after some one-man exhibitions in Israel, he began to sign his name Fima, shortening his Russian first name Yafim. In 1961 Fima and his wife Rama settled in Paris, coming to visit in Israel from time to time. After Rama’s death he married Kaa-rina Jokinen in 1967. He had many exhibitions in Israel and in the United States and he taught at Haifa University. He lived and worked in Jerusalem and Paris.

The typical style of Fima was Abstraction. His paintings recall Abstract Expressionism and the Geometric Abstract but a closer examination of his works reveals that Fima is not interested in intellectual analysis. His outlines are not sharply defined, but are rather soft, misty, hazy and fluid. It seems to have been influenced by Chinese Taoism (Red Calligraphy, 1962, Israel Museum, Jerusalem).

When Fima focused on an object, whether it was a portrait, a flower, or beards, he described it in a general way with a background of one color. Nonetheless, the objects are vivid and appear in characteristic attitudes (Self Portrait, 1980, private collection).

The international influence on Fima’s painting overshadows his Israeli Identity. Fima pointed out that only when he traveled on the canvases did he feel at home.

FINALE EMILIA, town near Modena, north-central Italy. Jews settled there in 1541 or even earlier; at first they were moneylenders but later they engaged in commerce in brandy and feed or in small industry, one of them producing mercury chloride from 1678. A first synagogue already existed in 1600 and another one was erected in 1630 (restored in 1839), and in the 1620s there was already an active Gemilut Hasadim confraternity. It was only in 1736 that the Jews were confined in a ghetto, where 201 Jews lived in 1799. Although there were 162 Jews still living in Finale in 1854, the community as such gradually dissolved between the 19th and 20th centuries. In the 1880s the commercial importance of Finale diminished and many families left and moved to other cities. The community was revived as a private association in 1878, but by then numbered only 50 members and before long ceased to exist. In the 1920s eight families lived in Finale and the Jewish community was attached to the Jewish community of Modena. In 1932 the synagogue was closed. The community of Finale died out completely in the second half of 20th century. In the 1990s the ancient cemetery with the most ancient tombstone from 1584 was completely restored by the Municipality and the Jewish community of Modena.

BIBLIOGRAPHY: [Attilio Milano / Federica Francesconi (2nd ed.)]
idea of physical elimination in the context of shattered plans for large-scale population resettlement (including the “Madagascar plan”) and megalomaniac hopes of imperial aggrandizement in Eastern Europe. American scholar Christopher Browning notes that “a ‘big bang’ theory” fails to adequately describe German decision making; instead, the process was prolonged and incremental, driven by “a vague vision of imminent genocide.”

If there was a caesura towards the implementation of the Final Solution through mass murder, it is marked by the German “war of destruction” waged against the Soviet Union from June 22, 1941. Provided with instructions that called for the rapid pacification of conquered areas and that stressed the “sub-human” nature of broad strata of the population as well as the need for drastic measures to fight the deadly threat posed by “Judeo-Bolshevism” to the Nazi grand design, German soldiers, ss-men, and policemen murdered Jews from the first days of the campaign. Regionally different patterns of persecution unfolded until the end of 1941; its most prominent feature – the broadening scope of the killings from male Jews of military age (Heydrich’s notorious letter to the higher ss- and Police heads in the occupied Soviet Union dated July 2, 1941, listed “Jews in party and state positions” and “other radical elements” among those to be executed) to women and children – underscores the absence of a central order and the preference of the Berlin authorities for controlled escalation.

The murderous events in the occupied Soviet Union had – as envisaged in a directive by Alfred Rosenberg’s Reich Ministry for the Occupied Eastern Territories – provided the German leadership with experiences on how to arrive at a “solution to the overall problem” (“für die Lösung des Gesamtbildes sind hinreichende Erfahrungen gesammelt worden”) that could be applied elsewhere. On July 31, 1941, Goering signed a document that charged Heydrich with “making all necessary preparations with regard to organizational, practical and material aspects for an overall solution (‘Gesamtlösung’) of the Jewish question in the German sphere of influence in Europe” and to draw up a plan “for the implementation of the intended final solution (‘Endlösung’) of the Jewish question.” By the time of the Wannsee Conference held on January 20, 1942, the term Final Solution had become a common phrase among German government and party officials. Now reduced in its actual meaning to mass murder, its geographical scope expanded beyond German-dominated Europe: the protocol of the conference listed 11 million Jews in different countries to be engulfed in the “Final Solution of the European Jewish question,” including England and neutrals like Sweden and Switzerland. The culmination of the Final Solution in mass deportations from various parts of Europe to the killing centers and death camps in Eastern Europe resulted, like earlier stages of the process, not from one single top-level decision, but from a complex mix of factors, with the Berlin center reacting as much as it was actively shaping events.

Its historical significance makes the term Final Solution the most important example of the ability of Nazi language to integrate potentially different if not divergent approaches towards the so-called Jewish question into a conceptual frame of reference that helped facilitate systematic mass murder and to hide the Third Reich’s genocidal policies behind technocratic abstractions, thus providing legitimization for perpetrators and enabling bystanders to claim not to know what was going on. Despite its inherent problems, most notably in evoking the illusion of coordinated planning and systematic implementation, the term Final Solution remains crucial for recognizing the process character of the Holocaust as a key element in a broader history of state-sponsored mass murder during the Nazi era.

[Jürgen Matthäus (2nd ed.)]

**FINALY CASE**, a cause célèbre after World War II in the struggle for the return to Judaism of two Jewish children rescued by non-Jews. A young Viennese Jewish doctor, Fritz Finaly, had fled to France with his wife after the 1938 Anschluss and settled in Grenoble, where they had two sons, Robert and Gerald, born in 1941 and 1942, respectively. Their father circumcised the boys on their birth. When the deportation of French Jews commenced, the Finalys entrusted the children to the care of a municipal school in Grenoble, in order to hide them from the Nazis. In February 1944 the parents were deported to Eastern Europe; they did not return. Friends of the family handed the children over to Notre Dame de Sion, a Catholic institution, which in turn put them in the hands of Antoinette Brun, the director of a municipal children’s home in Grenoble. After the war, she wanted to keep the orphaned Finaly boys in her custody.

Fritz Finaly was survived by three sisters who made attempts to ascertain the fate of their brother and his family. The eldest sister succeeded in tracing the children to Brun and on contacting her, she was informed that the children were well and were being raised as Jews. At the same time, Brun obtained from the French authorities formal custody of the children and arranged for their conversion to Catholicism. The sisters, who were not aware of this development, agreed among themselves that the children should be brought up by the youngest, Hedwig Rosner, a resident of Gederah in Israel. In 1948, having failed in their attempts to obtain the children from Brun, the sisters resorted to legal action. The case lasted for five years, during which the children were moved from place to place and from one Catholic institution to another. The trial aroused great interest in France and abroad, and the arousing of public opinion, especially among teachers and intellectuals, had a great influence on the eventual outcome. A minority of the Catholic public in France accused the Jews...
of ingratitude and argued that the children were French citizens so that their transfer to Israel would be tantamount to kidnapping. However, even Catholic opinion was divided. François Mauriac, the author, initially took an anti-Jewish stand on the issue, but subsequently reversed it. At the height of the controversy the boys were smuggled out of France and handed over to Basque monks, and for a while their whereabouts remained unknown. In June 1953 France's highest court rejected Brun's claim; in July, the children were brought back to France and delivered to their aunt, who took them to Israel to be raised in her home.

---

**FINANCES, AUTONOMOUS JEWISH.**

**Internal Taxation**

The public finances of the autonomous Jewish *community in the Middle Ages and early modern times were conditioned by the need to support communal institutions as well as to meet sudden and often huge demands for money in order to defend communities or individuals against attacks and libels (see also *Blood Libel; Desecration of the *Host). The provision of *charity by the communal purse also became urgent following massacres and expulsions. The methods of internal taxation adopted were often influenced, for better or worse, by the fact that the community was held collectively responsible for the collection and apportionment of taxes levied on Jews by the state, this being one of the main features of Jewish communal *autonomy. They were also shaped to a large extent by the methods of taxation of the gentile town where the community was located.

Under the *geonim and *negidim in the eastern countries and in Muslim Spain, up to the end of the 11th century and even beyond, local tax levies and allocations were mostly directed by the central leadership through local appointees. The finances of the Babylonian academies and the court of the *exilarch were regulated and their expenditure was covered by the levy of fixed imposts on the Jewish population, as well as by voluntary donations and income from landed property owned by these institutions.

In countries and periods in which the leadership was less centralistic, various methods of financial management were developed. *Takkanot ascribed to *Gershom b. Judah, but in reality drawn up around the 12th century, envisage a case where “if the kahalnas established an ordinance to help the poor... with the agreement of the majority, the minority may not refuse to obey it” (L. Finkelstein, *Jewish Self-Government in the Middle Ages* (1924), 132); this is the first overt indication of a local system of taxation for charity within the framework of the medieval community.

In *takkanot of Jacob b. Meir *Tam of the 12th century the period of residence before having to contribute to the charity fund is laid down: “to come under the herem to ‘bring the tithe to the treasure house’ [Mal. 3:10] one must be but one month in the city. Members of a community who cannot give charity may compel others who can afford to give” (op. cit., 185–6; see also 209–10). This concept of the tithe (*ma’aser* as a contribution to charity—whether enforced or voluntary—was to be one of the financial pillars of Ashkenazi communities. Thus certain medieval forms of internal Jewish taxes were based on and defined by ancient terminology and ideology.

In Christian Spain the communities largely covered their needs by an indirect consumption tax mainly on wine and meat, but combining this with direct taxation in the *cisa system, subject to changes and variations of time and place.

In Poland-Lithuania, the intensive internal taxation and spending (cf. the various takkanot and budgets in the *Pinkas Medinet Lita* and *Pinkas Va’ad Arba Arazot*; and see *Councils of the Lands*) were not sufficient to cover needs, in particular as the harsh and irregular exactions of state dignitaries and the despotic nobility mounted. Eventually the Councils of the Lands as well as individual communities had to rely increasingly on loans. As their debts increased, higher interest rates were charged by Christian noblemen and churchmen, as well as by Jews. In several Polish communities of the 18th century the cost of defrayment of debts amounted to 40% of their annual budgets. In some instances these loans were of 150 years’ standing. Separate collections were often made for the salaries of rabbis and preachers. The financial problems and methods of expenditure of a large community with a relatively secure

and legal position are shown in the budget of Poznan Jewry for 1637–38. (See Table: Poznan Jewry Budget.)

The much more detailed original Hebrew text of the budget (ibid., no. 138, Heb. pagin. 57–60) shows very interesting items of expenditure. The highest-paid official of the community was the *shadlan who received 300 zlotys a year, while the rabbi was paid only 150 zlotys in salary and an allowance of 100 zlotys for living expenses. The main preacher was paid 156 zlotys while a separate collection for this purpose would bring in “approximately 107 zlotys.” Six Jewish guards received 150 zlotys among them, while three Christian guards were paid 108 zlotys for the winter period only. Expenses for water pipes amounted to 400 zlotys. The main Christian dignitaries and the various Christian religious orders not only received fixed amounts of money but also spices and carpets on credit. To its foreseen outlay the community had to expend within the period 1637–38 to 1641–42 two payments on “tumults” and “all this in addition to various expenses amounting to thousands of zlotys given to the wojewoda [provincial governor], the general, and other dignitaries.”

From about the middle of the 17th century local communities of Poland-Lithuania developed the *korobka (basket tax), a system of indirect consumption tax frequently collected in dues for *shehitah. It was later broadened under Russian and Austrian rule mainly in the form of a candle tax (on candles for Sabbath and the like). Synagogues also gained an income from pew-selling. Scholars and the very poor were exempt in principle from most taxation.

With the advance of emancipation, the power of tax enforcement was gradually removed from communal jurisdiction, and all internal needs had subsequently to be financed on a voluntary basis.

The gap between the medieval kehillah and the modern fund-raising agencies was filled by the *hevrah which assumed the function of activating voluntary giving as well as operating the social welfare and other institutions of the community. The most viable among these associations was the hevra kaddisha, the burial society, which by its monopolistic and lucrative ownership of the community’s cemetery plots was sufficiently solvent not only to operate many social welfare, cultural, and educational enterprises, but also to help other associations maintain their services. As late as the 20th century, the dukes of Central and South American burial societies financed communal activities. Sometimes the hevra kaddisha there assumed the functions of a kahal (e.g., in *Buenos Aires), In the 20th century the stupendous needs created by two world wars, the Nazi Holocaust, and the restoration of Israel prompted Jewish communities in Western countries to develop highly efficient fund-raising techniques. Thus the medieval system of compulsory financing was effectively converted into voluntary giving in modern times.

Methods of Tax Collection for the State

When having to act as collectors or farmers of state tax, the individual communities, Councils of the Lands, *federations of communities, *Landesjudenschaften, or government-appointed rabbis (see *Kazionny Ravin) each had to develop their own methods of tax collection and apportionment according to circumstances as well as to try diplomatic means at negotiating an equitable tax load as far as possible. State imposition was usually mechanical. Taxes were generally imposed per capita, or according to the estimated combined wealth of the Jews of the given unit. The communal or other appointees in the Jewish leadership usually tried to calculate a just and equitable distribution of this burden among its members. Thus to assess the means of members they appointed special officers (Heb. shamma’im), and committees whose composition gave rise to class tensions in the larger and socially variegated communities. The assessment of taxes also involved problems of social justice and definitions of services and duties. In Christian Spain and Poland-Lithuania especially, the methods employed and principles involved were frequently called in question. An instructive example of application of these principles in Christian Spain is summed up by Y.E. Baer:

The tax statute of the aljama [Jewish community] Huesca of the year 1340 opens with a paragraph dealing with the poll tax and exemptions from it. Among the groups exempted were members of the community whose wealth amounted to less than 50 sueldos, scholars ‘who study day and night, having no other occupation,’ the poor supported by charity, and servants. The communal leaders were authorized to exempt certain needy members from payment of this tax, provided the total sum involved in these exemptions would not exceed a certain specified figure. Then there followed a complex system of taxes of varying rates, levied upon both property and business transactions. A tax of one-half of one percent (½%) was levied on the value of houses and gardens adjoining them: and another, of one percent (1%) on fields, vineyards, and gardens not adjoining the owner’s house. There was a tax of one and half percent (1½%) on the amounts of direct loans of money and of commercial credits (commendae) in kind-grain, oil, honey, textiles, etc.-extended to Christians and Muslims. The tax on loans to fellow Jews was much lower, only five-thousandths of one percent (½2%), since these bore no interest. Loans extended to aljamas, servants, and students and the sums involved in betrothal and marriage contracts and in wills went untaxed. There were taxes on mortgaged real estate, on rented homes and stores, on the purchase and sale of land, textiles, grain, foodstuffs, gold and silver, furs and other merchandise, as well as on the purchase of clothes and various other necessities. Finally the daily earnings of an artisan, if they were above a certain amount, were taxed. Teachers and the readers and sextons of the synagogues were exempted (Baer, Spain, 1 (1966), 206–7).

[Isaac Levitats]
FINBERT, ÉLIAN-J. (1899–1977), Jaffa-born author. Originally a camel driver and Nile boatman, Finbert published an anti-military novel, Sous le règne de la Licorne et du Lion (1925), for which Herni Barbusse wrote a preface. Un homme vient de l’orient (1930), the prizewinning Le fou de Dieu (1933), and Le destin difficile (1937) are novels on Jewish problems. Finbert edited a volume of essays, Aspects du génie d’Israël (1950) and wrote Israël (1955), a travel guide, and Pionniers d’Israël (1956).

*FINCH, SIR HENRY* (1558–1625), English philo-Semite and precursor of Zionism. Finch was a member of parliament and distinguished jurist whose legal writings were studied for two centuries after his death. He was also an accomplished Hebraist and profoundly interested in theology. His Exposition of the Song of Songs (London, 1615) discussed the New Jerusalem. In his anonymous The World’s Great Restauration, or Calling of the Jews (London, 1621) – one of the classics of Christian pro-Zionist literature – he invited the Jews to reassert their claim to the Promised Land, and Christian monarchs to pay homage to them. Although this was to be accompanied by the conversion of the Jews to Christianity, his views aroused much criticism. James I resisted the suggestion that he should pay fealty to the Jews and the work was suppressed as derogatory to royal dignity. The author and the publisher were imprisoned until they expressed contrition for this “unadvised” writing.

FINCI, ELI (1911–1980). Yugoslav editor and author. Born in Sarajevo, Bosnia, Finci first wrote for the literary magazine Književnost. He founded and published a review, Brazda, in 1935, and translated literary works from French into Serbian. Later, in Belgrade, he served as department head in the publishing house “Geca Kon” and as a director of the Yugoslav Dramatic Theater. His published books include Dva lika (“Two Profiles,” 1950) and Više I manje yivota (“More and Less than Life,” 1954), Stvarnost i iluzije (“Reality or illusions,” 1957). He also translated from French and published a study on Diderot. He was also prominent as a theatre critic.

FINE, REUBEN (1914–1992), U.S. chess master and psycho-analyst. Fine was born in New York City, where he studied at City College. Growing up in the East Bronx in a poor Russian-Jewish family, he first learned to play chess from an uncle at the age of eight. After winning several American tournaments as a youth, he turned to international competition. His important victories took place at Zandvoort, Amsterdam (1936), where he won an equal first prize with Flohr; Stockholm (1937); Moscow and Leningrad (1937); and Margate (1937). In the two top tournaments in the U.S.S.R., he was the first foreigner ever to come in first. At Nottingham in 1936 he was a joint third behind Capablanca and Botvinnik. In the Avro Tournament of 1938, Fine tied for first place with Keres, and came in ahead of Capablanca, Alekhine, Botvinnik, Euwe, Reshevsky, and Flohr. Considered the second greatest American chess player, second to former world champion Bobby Fischer, Fine competed in several U.S. championships but never won. But such international chess greats as Capablanca, Flohr, and Botvinnik could not beat him. Fine’s chess style was logical, precise, and energetic, and he was equally at ease both strategically and tactically. According to most players, Fine’s only weakness was his volatile temperament.

The American Chess Magazine (1930)

Soon after World War II, unable to properly support his family as a chess professional, Fine abandoned tournament chess to study psychology at the University of Southern California. He served with the United States Veterans Administration from 1948 to 1950 and at the Post-Graduate Center for Psychotherapy. He was professor of psychology at City College of New York from 1953 to 1958. Despite his preoccupation with his professional work, Fine continued to excel in “lightning” chess and won prizes in the American championships.

FINE, SIDNEY (1920– ), U.S. historian. After serving as a Japanese language officer in the Navy (1942–46), Fine received his Ph.D. from the University of Michigan in 1948. That year, the university offered him a teaching position; he was appointed professor of history in 1959. His fields of research were the intellectual regions of 20th-century American reform and the automobile industry. Fine was active in Jewish communal affairs.
He retired in 2001 as the Andrew Dickinson White Professor Emeritus, History, College of Literature, Science, & the Arts. Having taught for 53 years, Fine is credited with having the longest active teaching career at the university and for leaving a lasting impression on his students. Recognized as an outstanding educator and historian, Fine was awarded the highest faculty honor, the University of Michigan's Henry Russel Lectureship, as well as the Golden Apple Award. Students select the Golden Apple recipient for excellence in teaching; the faculty chooses the Russel winner for national distinction in research and publication. Fine is the first professor to have received both these awards. He also received three honorary degrees; was named Professor of the Year for the state of Michigan in 1986 by the Council for Advancement and Support of Education; was named an International Man of the Year for 2000–1 by the International Biographical Centre of Cambridge, England; and eight of his books have won awards.

[Ruth Beloff (2nd ed.)]

**FINEBERG, SOLOMON ANDHIL** (1896–1990), U.S. rabbi and communal leader. Born in Pittsburgh, Penn., Fineberg served in the U.S. Marine Corps during World War I and then entered the University of Cincinnati and the Hebrew Union College, where he was ordained in 1920 along with Joseph L. *Baron, Bernard *Heller, and Jacob Rader *Marcus, a distinguished graduating class. He received his Ph.D. from Columbia University and later was honored with a D.D. from Hebrew Union College.

His first career was as a rabbi, serving congregations in Niagara Falls, N.Y. (1920–24), and then returning to Pittsburgh (1924–26). He moved to White Plains, N.Y. (1926–29), and then to Temple Sinai in nearby Mt. Vernon (1929–37), and for half that time simultaneously served as national chaplain of the Jewish War Veterans before joining the American Jewish Committee as National Community Relations Consultant. There he became, in the words of a colleague Isaiah Terman, "the foremost theoretician, strategist, practitioner, and adviser to Jewish community and intergroup organizations and to government agencies in the United States and abroad."

He is the author of several books including *Biblical Myth and Legend in Jewish Education* (1932) and *Overcoming Antisemitism* (1943), written at a critical time in the American Jewish experience. He wrote *Punishment without Crime* (1949), which both explores the sources of prejudice and suggests preventative programs to strengthen human relations. He took issue with the then current efforts of the American Jewish community to answer the charges of antisemitism, suggesting that they spread the libel. Instead he proposed an affirmative portrayal of the Jews. An anticommunist, he published *The Rosenberg Case* (1953), which demonstrated their guilt and suggested that the Jewish community not defend them, positions deeply unpopular with rank and file Jews. His work *Religion behind the Iron Curtain* brought attention to the plight of Soviet Jewry.

After formal retirement from the American Jewish Committee, he became a consultant to the National Conference of Christians and Jews for more than a dozen years (1965–78), working assiduously on race relations in New York at a time of great tension.

[Michael Berenbaum (2nd ed.)]

**FINEMAN, HAYYIM** (1886–1959), U.S. educator and Zionist worker. Fineman, who was born in Russia, was taken to the United States by his parents in 1890. He became head of the English department at Temple University in Philadelphia in 1911. Throughout his life Fineman was active in *Po'alei Zion*. He was one of the founders of the American organization in 1904. In 1919–20 he was secretary of the Po'ale Zion Commission sent to investigate conditions in Palestine, and on his return he became president of the organization. In 1929 Fineman took up a teaching position in Palestine, resuming his professorship at Temple University in 1933. He helped to establish the *Jewish Frontier* (1934), of which he was an editor. At a time when the majority of the leaders and members of Po'ale Zion belonged to the Yiddish-speaking community, it was Fineman's special role to present its standpoint to English-speaking Jews, particularly in the academic world. His son *Daniel* (1915– ) settled in Israel in 1953 and after teaching in the English department at the Hebrew University, Jerusalem, was appointed head of the English department at Tel Aviv University (1964–69) and was dean of the Faculty of Arts from 1966–69.

**FINEMAN, IRVING** (1893–1976), U.S. novelist. Born in New York, Fineman served in the navy during World War I, and worked as an engineer until 1929, when he turned to writing. His first two novels, *This Pure Young Man* (1930) and *Lovers Must Learn* (1932), dealt with American themes. His third, *Hear, Ye Sons* (1933), recreated the past from which his
hasidic parents had come; Doctor Addams (1939) dealt with the dilemma of a successful scientist who is completely ineffective in dealing with personal and social problems. Of his later novels, Jacob (1941) and Ruth (1949) had biblical subjects, His biography of Henrietta *Szold, Woman of Valor (1961), aroused controversy because of its frank portrayal of a revered figure.

FINER, HERMAN (1898–1969), U.S. political scientist. Born in Herța (Gersta) Bessarabia, Finer was taken to England as a child and graduated from the London School of Economics where he lectured on public administration from 1920 to 1942. He was actively involved in Labour Party politics and London local government work as a member of the London School of Economics group of academics centered around Sidney and Beatrice Webb and Harold *Laski. From 1946 to 1963 he was professor of political science at the University of Chicago. Finer was one of the first to introduce comparative politics and public administration as academic subjects in universities. His massive Theory and Practice of Modern Government (1932) was a model for textbooks on comparative politics and served as an introduction to a generation of political scientists. He acquired fame by his Road to Reaction (1945), a polemical answer to Hayek's Road to Serfdom. Written in Finer's characteristically pungent style, this book defended national planning and the welfare state as not inconsistent with democracy. His other works include English Local Government (1935), The Presidency: Crisis and Regeneration (1960), and Dulles Over Suez (1964).

[Edwin Emanuel Gutmann]

FINES (Heb. תשלוף, kenasot) are distinguishable from *damages in that they are not commensurate with the actual amount of damage suffered, whether such damage has been sustained by tortious act or by breach of contract or by an offense (see also *Obligation, Law of; *Torts). However, in cases where for a particular tort only half of the sustained damage is recoverable, or where the law prescribes more than the full damage to be paid (e.g., in case of theft: Ex. 21:37), such payment is classified as a fine (Maim. Yad, Nizkei Mamon 3:7–8). Of the four instances of fines prescribed in biblical law, three are unliquidated amounts (30 shekels of silver: Ex. 21:32; 100 shekels of silver: Deut. 22:19; 50 shekels of silver: Deut. 22:29), and one is unliquidated ("silver in proportion to the bride price for virgins": Ex. 22:16). The Talmud asserts that while the payment of damages commensurate to the damage caused is rational by law (min ha-din) the imposition of fines was something novel (hadash) decreed by heaven (Ket. 38a, Rashi ibid.), so that fines are not to be regarded as law proper but rather as royal (divine) commands (ibid.). Not being the normal compensation for the actual damage suffered, fines have a quasi-penal character ("penalties"), and hence can only be recovered on the evidence of two witnesses, and not on the *admission or *confession of the defendant (Ket. 42b–43a; Shev. 38b; Yad, loc. cit. and Genevah 3:8). Another consequence of the quasi-penal character of the fine is that it is merged in any graver penalty prescribed for the same act since not more than one penalty can be inflicted for the same offense; where *capital punishment or *flogging are prescribed for any offense, these alone will be inflicted and no fine imposed (Mak. 4b; Ket. 32b, 37a; BK 83b). The only exception to this rule is the case of wounding, where the payment of a fine and damages is to be preferred to any other punishment (Yad, Hovel u-Mazzik 4:9).

In talmudic law, the sanction of fines was introduced for a multitude of causes: e.g., where the damage is not visible to the eye (as where A ritually defiled B's food) and is not liable according to the law of the Torah (Git. 53a; Yad, loc. cit. 7:1–3); where it is doubtful which of several claimants is entitled to stolen goods (Yev. 118b; Yad, Gezelah ve-Avedah 4:9); for the alienation of immovables which cannot be the subject of theft (Tj, BK 10:6, 7c); for selling slaves or cattle to heathens (Git. 44a); for slander (BK 9a; Yad, Hovel u-Mazzik 3:5–7); where a tortfeasor is not liable in damages because of a supervening act of a third party (Tj, Kil. 7:3, 3a; see *Gerama and Garma); et al. In some cases, the amount of the fine is fixed by law (e.g., in certain cases of slander and assault: Tj, BK 8:6, 6c; BK 8:6; for rape: Deut. 22:29; Ket. 3:1); in most cases, however, it is left to the discretion of the court in the exercise of its expropriatory powers (see *confiscation; MK 16a; Yad, Sanhedrin, 24:6; HM 2:1 and Rema ad loc.). Even where the amount had been fixed by law, instances are recorded in which the courts imposed heavier fines, e.g., on recidivists (BK 96b). Fixed tariffs have the advantage of assuring equality before the law (Ket. 3:7); and even where the amount of the fine was to be assessed according to the dignity and standing of the person injured, a great jurist held that all persons were to be presumed to be of equal rank and status (BK 8:6).

Contractual fines (see *contract) which a person undertook to forfeit in the event of his default were enforceable unless tainted by *asmakha (bb 168a). While formal jurisdiction for the imposition of fines ceased with the destruction of the Temple (see *bet din), it was in post-talmudic law that fines became the standard sanction for minor (i.e., most) criminal offenses. Opinions are divided as to whether the present jurisdiction extends only to fines not fixed in the Bible or in the Talmud (Hagra to HM In. 1) or whether fines fixed in the Talmud are included in this jurisdiction (Piskei ha-Rosh to Git. 4:41; Rema to HM 1:5); but there is general consensus that in matters not covered by biblical and talmudic law, courts have an unfettered discretion to impose fines (cf. Resp. Rosh 101:1) – a talmudic authority being invoked to the effect that fines may be imposed not only by virtue of law but also by virtue of custom (Tj, Pes. 43:30d).

A few examples of the many newly created offenses for which fines were imposed are: resisting rabbinical authority (Resp. Rosh 21:8–9); accepting a bribe for changing one's testimony (ibid. 58:4); refusing to let others use one's books (ibid. 58:4).
Fines

93:3); instituting proceedings in non-Jewish courts (Resp. Maharam of Rothenburg quoted in Mordekhai, BK 195); frequenting theaters and other places of public entertainment, as well as *gambling (S. Assaf, Ha-Onshin Aharei Hatimat ha-Talmud, 116 no. 126); taking a dog into a synagogue (ibid., 95, no. 12); and many similar contraventions. But fines were also imposed for receiving stolen goods (ibid., 137, no. 163), fraudulent business transactions (ibid., 133 no. 157), and unfair competition (ibid., 127, no. 141). Fines were also the alternative punishment for floggings, where these could not be imposed or executed (Rema to HM 23; Darkhei Moshe ad loc., n. 5; resp. Ḥatam Sofer ḤM, 181), as, conversely, flogging was imposed where a fine could not be recovered – although the standard sanction for the nonpayment of fines was *imprisonment (Zikhron Yehudah 36).

The greatest reform in post-talmudic law in respect of fines however concerned the nature of the penalty. While both in biblical and talmudic law it was the person injured (or, in the case of a minor girl, her father) who was entitled to the fine and no fines were payable into any public fund, later courts ordered fines to be paid to the injured person only where he insisted (Yam shel Shelomo BK 8:49), but normally would order fines to be paid to public charities, at times giving the injured person a choice of the particular charity to be benefited (Resp. Maharyu 147). More often than not, the charity was left undefined, and the fine was then recovered from the debtor by the community treasurers in charge of collecting for general charities (cf. YD 256:1). But there are also instances of fines being imposed for named charities, such as the study of the Torah (Resp. Rosh 13:4); the maintenance of Torah students (hospakah; Takkanot Medinat Mehrin, 46 (no. 139), 47 (no. 140)); the poor of Jerusalem or of the Holy Land (ibid. 39, no. 117). A frequent destination of part of all fines recovered was the governor or government of the city or country in which the Jewish court was sitting. In many such cities or countries, the privilege of internal jurisdiction was granted to Jewish courts only on condition that part of all fines recovered would be paid into the official treasury (ibid. 39, no. 117; Resp. Rosh, 21:8–9). Whatever the destination was, however, it was the strict rule that the courts or judges were not allowed to appropriate any fines to themselves (Assaf loc. cit., p. 43); and there are detailed provisions for accounts to be kept for the distribution of all fines imposed, recovered, and distributed (Takkanot Medinat Mehrin, 24, no. 74). Whether or not the fine was paid to the injured person, the court always insisted that the defendant did everything in his power to pacify him even to the extent of proclaiming a *herem on him until he did so (Rif, Halakhot BK 187; Piskei ha-Rosh BK 2; Yad, Sanhedrin 51:17; Shulḥarei Zedek 41:19). This rule applied even where the fine was irrecoverable owing to lack of jurisdiction; and where a man had possessed himself of a fine he could not recover in the courts, he was held entitled to retain it (BK 15b).

See also *Extraordinary Remedies.

[Haim Hermann Cohn]

Middle Ages and Early Modern Times

The power to fine – an important feature of Jewish *autonomy – was exercised by the *Councils of the Lands and *synods, the local *community, the law court, or the *heverah. According to talmudic law (i.e., before the fifth century when *ordination ceased), only a court of fully ordained judges was empowered to impose the fines prescribed for bodily injury. However, the principle was gradually established that the Jewish community had the right to decide fines and confiscate property as a deterrent or punishment. The proceeds of these monetary penalties went variously to *charity, the *kahal heads, the *court, the association, the guild, or the injured party, several of these very often sharing the sum. Fines were frequently imposed with other sanctions, or as a consequence of them, for instance, as the corollary of a *herem.

To prevent self-seeking by judges, the Lithuanian Council (see *Council of the Lands) adopted a resolution in 1662 that “no rabbi shall share in any way in the revenue from amercements he will impose himself or jointly with the leaders of the community.” In some countries a portion or all of the fines were set aside for the royal or seigniorial treasury, either by demand or in order to act as a powerful impetus to their enforcement. From the 10th or 11th century there is reference to fines imposed by a *guild; it is stated: “each and every one of us [the injured members] will be free to give this fine to any ruler or official of his choice” (*Judah b. Barzillai al-Bargeloni, Sefer ha-Sheetarot, no. 57). In the 13th century a synod of the Rhine communities decided: “Whoever transgresses any of these *takkanot shall be under the excommunication of all the communities, and if he remains obdurate for a month, his property may be denounced to the king” (Finkelstein, Middle Ages, 239). The minute books of the many organs of self-government abound in statutory and penal fines of all kinds, imposed for various reasons, serious or petty. In 1563 the Lithuanian Council threatened the heads of the communities with heavy fines for the benefit of the poor of Ereẓ Israel, since they had failed to make proper collections for this fund. The Moravian Council in 1650 set an amount to be paid into the regional treasury by anyone whose appointment to a community office was secured on the order of the feudal lord. Fines imposed by Sephardi communities in the West on members refusing to undertake communal duties led in early modern times to desertion from the community, as in the case of Isaac *D’Israeli. The *hevrot were particularly prone to controlling their members through a system of statutory fines for violation of the rules – a Mishnah *heverah in a Russian township adopted an ordinance that “if a member is in town and does not report to a class, he is to be fined one Polish grosz per day, unless he has an adequate reason.” Guilds were equally strict with their members and exacted money payments for charity for violation of rules.

[Isaac Levita]

Fines during the Period When There Is No Ordained Bet Din (Semikhah)

The fines established as punishments for various offenses detailed above were imposed by virtue of the authority invested
in the court (bet din) or in community leaders to impose monetary punishments, whether by expropriation of an individual's assets on behalf of the community or by requiring payment of a fine to the injured party. By contrast, as stated above, these courts were not authorized to impose the fines stipulated by the Torah or those established in talmudic or geonic times. This point requires further detail.

The rule cited in the Babylonian Talmud is that cases involving the imposition of fines may not be adjudicated by anyone other than judges who have been ordained as judges (semikhah) (see *Bet Din). During the period of the Babylonian Talmud, there were still some remaining sages in the Land of Israel who had received semikhah, whereas in Babylonia they no longer received it. Thus, in cases involving the requirement to impose a fine to be paid for damages caused by one party to another person, such as cases of "half-damages" (see torts), the courts in Babylonia could not adjudicate or impose the appropriate fine. There were two solutions to this problem. One was for the injured party to bring suit against the tortfeasor in Erez Israel and, if the defendant failed to appear in court, a ban could be imposed on him (see *herem).

The second solution was for the injured party to seize some of the tortfeasor's assets, and the court would refrain from confiscating them from him (BK 15b). The significance of the seizure remedy is based on a dispute among decisors and commentators in the post-Geonic era. According to rabbenu *ram (Tos. to BK 15b), the injured party may only seize the particular asset of the tortfeasor used by him to inflict the injury, but if he were to seize any other of the tortfeasor's assets, the court would wrest it from him. Rabbenu *Asher, however, was of the opinion that the injured party could seize any of the tortfeasor's assets, and if the property seized was of greater value than his losses, the court, after adjudication, could require the injured party to forfeit the additional amount. The rationale for this is that the seizure itself is a rabbinc act; accordingly, judicial deliberation regarding the value of seized property vis-à-vis the value of the damage does not constitute adjudication of a fine, but adjudication of a seizure under the terms of a *takkanah. The Rif goes even further. In his opinion, the court may adjudicate the original suit for damages and assess the value of the damage, without any requirement to wait until after the aggrieved party's seizure of the other's property.

In practice, during the post-talmudic period, when there were no judges with semikhah even in the Land of Israel, the geonom enacted that, even though fines could not be collected in Babylonia, a tortfeasor could be subjected to a ban (see *herem) until he settled accounts with his victim, whether by payment or by agreement, or until he repaid the value of the damage (Rif on BK 30b). The rationale is that "a sinner should not be rewarded, nor damage-doing rampant among Israel" (Piskei ha-Rosh, BK 8:3, in the name of Rav Natronai Gaon).

*Maimonides ruled that the imposition of a ban is not only in order to exert pressure to pay for damages, but also to encourage the tortfeasor to go with the injured party to Erez Israel for adjudication, as specified in the above-cited talmudic passage (Yad, Sanhedrin 5:16). In Maimonides' day, unlike the talmudic period, there were no longer ordained judges. Consequently, there are those who explained Maimonides' statement to mean that because, in his opinion, the semikhah of judges could theoretically be reinstituted at any ordination time, this is sufficient to argue that a court is empowered to order the banning of the tortfeasor should he refuse to litigate the case in court, thereby pressuring him to indemnify the injured party (Bet Yosef, Tur, H.M. 295). By contrast, Rabbi Eliezer Waldenberg, one of the outstanding decisors of our times, rules on the basis of Maimonides' statement that, even in our day, courts in the Land of Israel may adjudicate cases in which the punishment is a fine, despite semikhah having fallen into desuetude (Resp. Ziz Eliezer 15:69).

Rabbi Joseph *Caro, in Shulhan Arukh H.M. 420:41, provides a detailed list of standardized payments for bodily damages, all of which are fines. Further on, he cites the monetary values of those payments in the currency of his time. It may be inferred from this that, even though in his opinion one cannot adjudicate cases requiring the payment of fines in the absence of judges with semikhah in Erez Israel, a court is not entitled to refrain from adjudicating cases in which questions of damage arise for which recourse is the imposition of a fine, but must instead impose a ban until the tortfeasor pays the injured party the appropriate amount, or allow the seizure of the former's property by the injured party (Sh. Ar., H.M. 1:5).

[Menachem Elon (2nd ed.)]

FINESHRIBER, WILLIAM HOWARD (1878–1968), U.S. Reform rabbi. Fineshriber was born in St. Louis, Missouri.
After ordination from Hebrew Union College in 1900, he was rabbi in Davenport, Iowa, for 11 years, and then served in Memphis, Tennessee, for 13 years. In 1924 Fineshriber was called to Philadelphia as rabbi of Reform Congregation Keneseth Israel and became rabbi emeritus in 1949. Fineshriber served on various community and government committees and was active in the American Council for Judaism, among other organizations.

[ Abram Vossen Goodman]

[William D. Rubinstein (2nd ed. )]

FINESTONE, SHEILA (1927– ), Canadian politician and Jewish community worker. Finestone was born in Montreal, Quebec, daughter to Minnie and Monroe Abbey, a lawyer and former president of the Canadian Jewish Congress. Finestone earned a bachelor of science degree from McGill University, but it was human need not the study of science that was her passion. She began a long career in public service by volunteering in the Montreal Jewish community. By the mid-1970s she was actively engaged by issues in the larger public forum. Among her many community positions, Firestone was a founding member of the Alliance Quebec and from 1977 to 1980 she served as first Anglophone president of the 130,000-member Fédération des Femmes du Quebec. Deeply concerned with issues of community development and women’s and minority rights, she was a member of the Board of Trustees of the Allied Jewish Community Services of Montreal and was outspoken on a wide range of social fronts.

She first entered the political arena in 1979 when she joined the Yvette Movement, the women’s movement dedicated to keeping Quebec in Canada. She was the only woman to serve on the “No” Committee during the Quebec sovereignty referendum of 1980. In 1984 Firestone was elected to the federal Parliament for the Liberal Party in Montreal’s heavily Jewish riding of Mount Royal, Pierre Trudeau’s former seat. She was re-elected in each of the next three federal elections. In 1993 Firestone was appointed to the federal Cabinet as secretary of state for multiculturalism and the status of women. In this capacity she led the Canadian delegation to the 1995 United Nations World Conference on Women in Beijing. Leaving electoral politics, she was appointed to the Canadian Senate in 1999 where, along with her support for Israel, she took a special interest in the campaign to eliminate the use of landmines. Sheila Finestone retired for the Senate when she turned 75, the Senate’s mandatory retirement age.

[Richard Menkis (2nd ed.)]

FINGERMAN, GREGORIO (1890–1976), Argentinean psychologist. Born in Bogopol, Russia, and taken to Argentina as an infant, Fingerman trained in medicine and then turned to education and finally to psychology. He was head of the National Institute for Secondary Education in Buenos Aires, and in 1934 was appointed director of the Institute for Professional Orientation. He also served as professor of psychology at the Escuela Superior de Comercio de la Nación. Among his several books are Lecciones de Lógica and Lecciones de Psicología. He was drama critic for La Nación and was a frequent contributor to the Jewish press in Buenos Aires.

FININBERG, EZRA (1889–1946), Soviet Yiddish poet. Ukrainian-born Fininberg made his literary debut in 1920, when his first poems were published in a Kiev Yiddish daily. His first volume of poems, Otem (“Breath,” 1922), attracted immediate attention, and his second, Lider (“Poems,” 1925), strengthened his position as one of the most popular Soviet Yiddish poets. While his early poems expressed a great deal of Jewish feeling and an appreciation of Jewish values, he later closely adhered to the Communist Party line. In his play Yungene (“Youngsters”), produced in Kharkov in 1927, he dramatized a number of important events of the Russian revolutionary movement; in his book Galop (“Gallop,” 1926) he described the civil war in the Ukraine. Jewish themes recurred in his World War II poems, which were also filled with patriotism. In 1926–27 Fininberg belonged to the Boy (“Construction”) literary group, which was later accused of Trotskyism. At a conference of the Yiddish writers of the Ukraine held in Kharkov in April 1931, this group was denounced and Fininberg alleged his ignorance of its having been organized by Trotskyists. He died in Moscow of wounds received in World War II. Among the major literary works which Fininberg translated into Yiddish are Victor Hugo’s The Year 93 and Goethe’s Faust. His own works include Fun Shlakht-feld (“From the Battlefield,” 1943); In Rizikn Fayer (“In the Great Fire”); Gekilibene Lider (“Selected Poems,” 1948).

[ Elias Schulman]

FINK, JOSEPH LIONEL (1895–1964), U.S. Reform rabbi. Fink was born in Springfield, Ohio, and ordained at Hebrew Union College in 1919, which also awarded him an honor-
ary D.D. in 1949. He earned his B.A. from the University of Cincinnati in 1915, his M.A. from the University of Chicago in 1918, and his Ph.D. from Niagara University in 1919. He served first as rabbi of United Hebrew Congregation in Terre Haute, Indiana (1919–24), where as a civic leader, he incurred the wrath of the Ku Klux Klan, which at one point abducted him; he made such an impression on his captors, however, that after they released him and donated $1,800 to the local Community Chest, of which Fink was chairman.

In 1924, Fink was en route to Germany to pursue graduate studies when he stopped over in Buffalo, N.Y., and was instead persuaded to remain as rabbi of Temple Beth Zion. Over the course of the subsequent 40 years (34 as rabbi and six as rabbi emeritus, until his death), Fink was to become known as the leading spokesman for that city's Jewish community, as well as a radio personality and community affairs activist. His weekly broadcast, "The Humanitarian Hour," was a popular show for more than a generation of listeners (1930–56). He initiated interfaith dialogue with Catholic and Protestant clergy, served as chaplain of the Buffalo police force and fire department, and was called in as a mediator of civil disputes. Fink founded the local Board of Jewish Education, was president of the Buffalo B' nai B'rith Lodge, and a board member of many civic bodies, including the Community Chest, the Board of Community Relations, and the University of Buffalo. He was appointed to state commissions by the governor of New York, and engaged in public debates with Eugene V. Debs and Clarence Darrow.

A strong proponent of the separation of church and state, Fink for many years chaired the CCAR's Committee on Church and State and wrote position papers on religion and state for the rabbinic organization. He served on no fewer than 12 CCAR committees, chairing four of them. After having served as corresponding secretary (1928), member of the Executive Board (1948–50), member of the Liberal Judaism Education Board (1950), and vice president (1950–52), Fink was elected president of the *Central Conference of American Rabbis (1952–54). During his tenure as president, he initiated the publication of the *CCAR Journal: A Reform Jewish Quarterly, and strengthened the ties between the recently merged *Hebrew Union College – Jewish Institute of Religion. Immediately after his term of office, he was elected president of the *World Union for Progressive Judaism (1952). He identified himself completely to the dissemination of Torah in his own yeshivah and elsewhere, revealing a talent as teacher, spiritual guide, and administrator. His great abilities were particularly manifest when the yeshivah was destroyed by fire in 1911. Within a short time he succeeded in rebuilding and extending it. His preaching and influence reached people in all sections of society. On the outbreak of World War I, he had to leave Mir and wandered throughout Russia, everywhere gathering students around him. In 1922 he accepted an invitation from the heads of the Mir yeshivah to return as its chief spiritual director. Thousands of students flocked there, making it one of the greatest in the world. When World War II broke out, he again was obliged to move from place to place with his students, finally settling in Jerusalem. There he was active in "Mir" and "Hebron" yeshivot and was esteemed as the "zekan rashi yeshivot" (the senior rosh yeshivah). The leading rabbis of his generation, including the Ha'efez Hayyim and Hayyim Ozer *Grodzinski, gave him every support and encouragement. His monumental work Divrei Eli'zer (1963) on the Talmud made an impression in scholarly circles.

[Mordechai Hacohen]

**FINKEL, JOSHUA** (1904–1983), U.S. Orientalist and scholar. Finkel was born in Warsaw, Poland, and was taken to the United States in 1913. He was ordained at the Jewish Theological Seminary. He studied the relationship of Islam to Judaism. Part of his research included Persian, Egyptian, and Arabic texts in manuscript. He spent the years 1924–26 in research in *'Egypt, where he procured the manuscripts of the three Arabic epistles of al-Jahiz (c. 776–868), a celebrated Muslim...
polygraph, which he published in *Cairo in 1926. From 1937 he taught Semitic languages at Yeshiva University. His later interest in psychoanalysis produced some studies in which he applied psychoanalytic theories to Jewish cultural phenomena.

Among his published works are Three Essays of ... al-fahiz (1926); "Jewish, Christian, and Samaritan Influences on Arabia" (in The Mac-Donald (Duncan Black) Presentation Volume (1933), 145–66); "Maimonides' Treatise on Resurrection" (in PA PAIR, 9 (1938/39), 57–105); "Old Israelith Tradition in Koran" (ibid., 2 (1931), 7–21); and "The Arabic Story of Abraham" (in HUA, 12–13 (1938), 387–409).

[Abraham Solomon Halkin]

FINKEL, NATHAN ZEVI BEN MOSES (1849–1927), rosh yeshivah and one of the leaders of the *Musar movement. Born in Raseiniai, Lithuania, Finkel was orphaned at an early age and brought up in his uncle's home in Vilna. At the age of 15 he was already acknowledged as a rabbinic scholar. A chance meeting in 1871 with Simhah Zissel b. Israel *Broida, known as the "Sabbah [grandfather] of Kelme" and one of the outstanding disciples of Israel *Lipkin (Salanter), founder of the Musar movement, had a profound effect upon Finkel. He was so struck by the forcefulness of Simhah Broida's personality that he became his most devoted follower, dedicating his life to the dissemination of the doctrine of *musar. Finkel first assisted Broida in directing his well-known yeshivah, Bet Talmed, which had recently transferred from Kelme to Grobina and aimed at combining the traditional method of Talmud study with that of musar. Because of a difference in views, however, Finkel left the yeshivah and established a *kolel for young married men, the first of its kind in *Slobodka. He also exerted a spiritual influence over the kovel *perushim of Kovno, established in 1879 and directed by Isaac Elhanan *Spector, rabbi of the city. In addition to these activities Finkel was the overseer of the yeshivah Or ha-Hayyim.

In 1882 Finkel established in Slobodka his own independent yeshivah, Keneset Israel, where hundreds of rabbis and talmudic scholars were educated. Finkel himself refused to accept any salary from the yeshivah. Supported from the proceeds of a small store managed by his wife, he was able to live with his students. In 1897 Finkel set up a branch of his yeshivah in Slutsk and also assisted in the founding of yeshivot in Telz, Bransk, Stutsin, Shklov, Lodz, and Grodno, as well as many minor yeshivot. At the outbreak of World War I the yeshivah of Slobodka was moved to Minsk and in 1916 to Kremenchug in the Ukraine, where it remained until 1920. In 1921 Finkel reestablished a kovel, Bet Yisrael, with 20 young married students, in Slobodka, and entrusted its administration to his son-in-law, Eisik Scherr. When in 1924 it was decided to establish a branch of the yeshivah in Ereẓ Israel, in Hebron, Finkel followed in 1925 and played a prominent role in its spiritual leadership. As a mark of the deep admiration which his students felt for him they dubbed him the "Sabbah from Slobodka" in the manner of the title previously given to his own teacher, and it was thus that Finkel was best known.

Finkel, an outstanding pedagogue and educator, based his ethical system upon the eminence of man. "A soldier," he said, "who does not aspire to the rank of general is not even a soldier." He stressed the need for perfection and love of truth and for spirituality in one's daily life to justify the fact that "everything created was created for the sake of man." In 1881 he anonymously published Ez Peri, containing essays by Israel Lipkin and Isaac Elhanan Spector, with an introduction by Israel Meir ha-Kohen, author of the Ḥafez Hayyim. In his regular talks with his pupils he stressed the greatness of man and the profound compassion of God toward His creatures, which demands a similar compassion on their part. Man's purpose in the world is to attain such perfection that he imitates the characteristics and ways of God.

Finkel left no manuscripts. His discourses and way of life were summarized after his death in the Or ha-Zaftun (1928, 1959–683), arranged according to the weekly portions of the Book of Exodus. These discourses were compiled from copies of the "musar talks" he delivered in Slobodka and Hebron. In most cases those who noted them did so in the manner in which they were delivered. At times, however, the editors expanded the contents and put the ideas in a more acceptable literary form. A collection of his discourses, Sihat ha-Saba mi-Slobodka, was published by Z. Kaplan (1955). At present there exist numerous yeshivot founded by his disciples where his system is studied. Of his sons, Moses was principal of the Hebron yeshivah, Eliezer Judah of the Mir yeshivah, and Samuel one of the promoters of the Grodno yeshivah.

[Itzhak Alfassi]

FINKEL, SHIMON (1905–1999), actor. Finkel was born in Grodno, Belorussia. He appeared on the local stage as a boy and later joined a Yiddish theatrical group. In 1922 he proceeded to Berlin, where he was accepted in the Max Reinhardt School of Dramatic Art. In 1923 he joined a group of actors who came from Ereẓ Israel to complete their studies in Berlin, with the aim of establishing a Hebrew theater in Ereẓ Israel. His first appearance in Hebrew was as Daniel in Menahem Gnessin's production of Belshazzar in Berlin in 1924. Emigrating to Ereẓ Israel in that year, he appeared in various productions of the Israel theater founded at the end of the year, and in 1927 joined Habimah, his first appearance being as Menashe in The Dybbuk. He toured in many countries and represented the Israel theater at various congresses of the International Theatrical Institute (1921). In 1961–62 and 1971–75 he was artistic director of Habimah. In all, he wrote 11 books about the theater. He was awarded the Israel Prize for arts in 1969.
FINKELSTEIN, ARTHUR (1945– ), U.S. political consultant and campaign director. Born in Brooklyn to East European immigrant parents, Finkelstein was a graduate of Queens College. He served as a demographic analyst in Richard Nixon's 1972 reelection campaign and worked as a political consultant exclusively for Republican candidates, ranging from Jesse Helms, who in 1978 won a brutal race where the religion of his Jewish opponent was at issue, to Alfonse D'Amato.

Finkelstein worked in the 1980 presidential campaigns of Ronald Reagan and Senator Robert Dole. Finkelstein's campaigns have a style all their own. He avoids the limelight, never giving interviews or press conferences, seldom if ever being photographed. He tries to tag the political opponent as liberal. His own Jewish identity and pro-Israeli leanings do not restrain him from pointing out the non-Christian religious beliefs of political opponents. He helped orchestrate Alfonse D'Amato's successful primary victory over veteran liberal Republican Senator Jacob *Javits in New York, where he successfully exploited Javits' ill health – he had a degenerative muscular disease – without alienating voters or creating sympathy for the hitherto popular senator. He then skillfully positioned D'Amato to win the Senate seat in a three-way contest against two Jews, Representative Liz Holtzman and Javits, who stayed in the race as the Liberal Party candidate. He was to repeat his giant-killing ability in 1994 when he advised George Pataki in his race against three-term incumbent Mario Cuomo for governor of New York.

With the Americanization of Israel in the 1990s, this style of campaigning was introduced into Israeli politics by both the left and right. Labor candidates imported Democratic pollsters and strategists such as James Carville and the Likud, most especially Binyamin *Netanyahu, called in Arthur Finkelstein. He helped orchestrate Netanyahu's come-from-behind victory over veteran liberal Republican Senator *Shimon Peres. His string of victories was broken in 1998 when Senator D'Amato lost his reelection bid to Charles *Schumer and Senator Launch Faircloth of the 2006 reelection bid of Senator Hillary Clinton, he was the mastermind behind a Stop Her Now Political Action Committee seeking to weaken an expected 2008 Presidential bid.

Deeply private, even reclusive, about his personal life, Finkelstein surprised many Conservative admirers by marrying his long-time male companion in Massachusetts, the only state where such unions are permitted. They have adopted two children.

[Michael Berenbaum (2nd ed.)]

FINKELSTEIN, CHAIM (1911–2000), educator and Zionist leader in Argentina. Born in Brest Litovsk (Brisk), Poland, he studied in a secular Jewish school of *CYSHO and in a secondary Tarbut school. Member of the Borochov youth movement, at 17 he became its local secretary. Without pedagogical training he started to teach children and gave evening courses for young people. Failing to obtain a certificate of immigration to Palestine, he immigrated in 1930 to Argentina. In 1931 he started to work as a teacher in one of the Borochov schools in Buenos Aires.

When in 1932 the Federal Police closed the Borochov schools that were suspected of communism, Finkelstein was arrested together with other teachers and activists. After being released from jail he started to promote the establishing of an organization of modern Jewish secular, left and Zionist schools. In January 1934, *TZVISHO – Tzentral Velttech Yiddish Shul Organizatzie was founded as a new central secular and Zionist school organization. Tzvisho and the schools Sholem Aleichem that it established, identified with Left *Po'alei Zion.

At the end of the 1930s Finkelstein convinced the school activists that a new and modern building was needed for the school. With the economic support of large Jewish sectors and of the Hevra Kadoscha (the Ashkenazi Community), they built a new school that was inaugurated in 1942 – the first modern Jewish school in Buenos Aires with its own new building. Finkelstein opened a teacher-training course with officially accredited teachers and formed a team that elaborated a new study program in Yiddish. Finkelstein introduced the study of Hebrew in 1947 in the upper classes of the primary school, and it gradually expanded to all the grades. In the 1960s it became the main language for Jewish studies. Finkelstein and his colleagues established as part of Tzvisho a summer camp, Kinderland; student clubs; and other enrichment programs. In the 1960s they also established the first Tzvisho day school – Ramat Shalom.

Finkelstein was secretary general of the Ahдут ha-Avodah – *Po'alei Zion party in Argentina. From 1946 he participated in the Zionist Congresses and from 1950 he was member of its Va'ad Ha-Po'el (General Council). Following his election as head of the Department of Education and Culture in the Diaspora and the Executive of the World Zionist Organization (1966–1978) he settled in Israel. He also headed the Beit ha-Tanakh Ha-Olami (World Bible House, 1978–1994) in Jerusalem and Beit Rishonei Po'alei Zion in Tel Aviv.

[Efraim Zadoff (2nd ed.)]

FINKELSTEIN, HEINRICH (1865–1942), German pediatrician. Finkelstein was born in Leipzig where he studied medicine. From 1894 to 1901 he was assistant at the children's clinic of the Charité Hospital in Berlin. In 1901 he took over the management of the Berlin City Orphanage and in 1918 became director of the Kaiser und Kaiserin Friedrich children's hospital. He held this position until the Hitler regime forced him to emigrate. He went to Chile, where he died. As head of the Berlin orphanage, Finkelstein made a detailed study of the causes of diarrhea in newborn babies and came to the conclusion that many infant alimentary disorders are due to metabolic disturbances rather than to bacteria. This led him on to research which resulted in the discovery that carbohydrate and salt in milk are the principal causes of diarrhea in babies. He introduced “albumin milk,” and thereby succeeded...
in substantially reducing infant mortality at the orphanage. Finkelstein proceeded to make a new clinical classification of alimentary disorders based on metabolic disturbances, dyspepsia, and alimentary toxication. He made studies of several other children’s diseases, particularly those connected with the skin. His Lehrbuch der Säuglingskrankheiten (1905) covered his findings in this field. He also published Hautkrankheiten und Syphilis im Säuglings- und Kindesalter (1924).

[Suessmann Munter]

**FINKELSTEIN, ISRAEL** (1949– ). Israeli archaeologist, specializing in the Bronze and Iron Ages. Born in Tel Aviv, Finkelstein received his high school education in Petah Tikva, before serving in the army. He undertook his graduate studies at Tel Aviv University in Archaeology and Near Eastern Studies, and in Geography, completing his M.A. in 1978, and writing a Ph.D. on the Izbet Sartah excavations in 1983. Finkelstein began teaching in various institutions from the late 1970s, serving as an associate professor at Bar-Ilan University (1987–90) and at the University of Chicago (1987), before taking up a full-time position at Tel Aviv University in 1990 and as a full professor (from 1992), becoming the director of the Sonia and Marco Nadler Institute of Archaeology between 1996 and 2003 and the incumbent of the Jacob M. Alkow Chair in the Archaeology of Israel in the Bronze and Iron Ages from 2002. Finkelstein has been the mentor and guide for many of the younger generations of Israeli archaeologists.

Having participated from the early 1970s in major archaeological excavations at Tel Beer Sheva, Tel Aphek and in surveys in Sinai, Finkelstein became the field director of the Izbet Sartah excavations between 1976–78, and later the director of excavations at Shiloh (1981–84), the director of the Southern Samaria Survey (1980–87), and more recently a co-director (together with D. Ussishkin and B. Halpern) of the important excavations at Megiddo. Finkelstein is a prolific writer with more than 130 articles to his credit, and numerous books, notably *The Archaeology of the Israelite Settlement* (1988) and *Living on the Fringe: The Archaeology and History of the Negev, Sinai and Neighbouring Regions in the Bronze and Iron Ages* (1995). In a key article published in 1996 titled “The Archaeology of the United Monarchy: An Alternative View” (*Levant* 28: 177–87), Finkelstein suggested lowering the conventional dates for the Early Iron Age by 75–100 years, thereby sparking off an important debate amongst scholars on matters relating to the absolute chronology of the Iron Age. Finkelstein’s controversial views were summed up in his book *The Bible Unearthed: Archaeology’s New Vision of Ancient Israel and the Origin of its Sacred Texts* (2001; co-authored with N.A. Silberman).

In 2005 Finkelstein was made laureate of the prestigious Dan David Prize in the Past Dimension – Archaeology.

[Shimon Gibson (2nd ed.)]

**FINKELSTEIN, JACOB JOEL** (1922–1974), U.S. Assyriologist, specializing in cuneiform law. Born in New York to Orthodox Jewish parents his early education included yeshivah training, but Finkelstein himself later moved far away from Orthodoxy. Though he graduated with honors from high school, full-time college was not within his means and he went to work as a presser. In World War II he served in the U.S. Army Air Corps, and at the war’s end resumed his studies at Brooklyn College (B.A., 1948), and then at the University of Pennsylvania (Ph.D. 1953) where he was strongly influenced by his teacher, E.A. Speiser. After graduating, he was a research assistant with A. Goetze in the Near Eastern Languages Dept. at Yale University from 1953 to 1955. From 1956 to 1965 he taught Assyriology at the University of California in Berkeley, and in 1965 was appointed professor of Assyriology and Babylonian Literature at Yale University.

Finkelstein was the author of studies in Mesopotamian history, historiography, and law, but his interest focused increasingly on the last. At the time of his premature death of heart failure, he was preparing a fuller exposition of the contrast between biblical and Mesopotamian law based on an analysis of the “goring-ox rules” (cf. p. 269, n. 308 of “The Goring Ox” in the *Temple Law Quarterly*, 46:2 (1973), 169f.), which is a programmatic fragment of the intended work. His lasting contribution, however, will likely be his numerous copies of cuneiform texts, mainly from the collections of the British Museum and Yale University, which testify to his skill as an interpreter of tablets.

[Aaron Shaffer]

**FINKELSTEIN, LOUIS** (1895–1991). U.S. Conservative rabbi, scholar, and educator. Finkelstein was born in Cincinnati. His father, an Orthodox rabbi, supervised his early Jewish education. He graduated from the College of the City of New York
(1915) and took his Ph.D. at Columbia University (1918). Ordained at the *Jewish Theological Seminary in 1919, Finkelstein served for more than ten years as rabbi of Congregation Kehilath Israel in New York City, but his close association with the seminary continued. A year after his ordination he began teaching Talmud there, and in 1924 he began teaching theology; from 1931 he was professor of theology. He rose to prominence early. He was president of the *Rabbinical Assembly from 1928 to 1930 at the age of 33. He was gowned by Cyrus Adler as his successor. He also assumed more and more administrative responsibility, as assistant to the president (1934), provost (1937), president (1940), and chancellor (from 1951–1972).

Under his leadership the seminary attained national prominence in both Jewish and interfaith activities, expanding its academic scope by initiating the Institute for Religious and Social Studies, for example, and its public education work through the *Jewish Museum and the radio and television program The Eternal Light, among other innovations.

Finkelstein was generally acknowledged to be the leading personality in the Conservative wing of Judaism and put his stamp on the movement, in general vigorously supporting more traditionalist segments, often over the initial opposition of the Seminary’s alumni. The only other leader of Conservative Judaism who ever wielded such power and influence was Solomon *Schechter, but then the movement was small and its resources meager. In the Finkelstein era, the Conservative movement was the largest religious movement in American Judaism and the Seminary was the home of great scholars such as Louis *Ginzberg and Saul *Lieberman in Talmud and H.L. *Ginzberg in Bible. He recruited Abraham Joshua *Heschel to the Seminary Faculty in 1945 after Hebrew Union College had saved him from the Holocaust by sponsoring his immigration to the United States in 1939. The Seminary was a place of diverse views and differing ideologies. Kaplan and Heschel, Lieberman and Finkelstein coexisted and struggled for the loyalty of the students. Talmudic knowledge was most revered of all. The professors were described as cardinals, secure in their learning and stature, at a distance from their students and from the rabbis they had ordained.

Finkelstein oversaw attempts to create a Conservative movement-trained leadership and not to rely on recruiting the sons of Orthodox Judaism who sought entry into a wider American world. Leadership Training Fellowship was begun in 1946; Camp Ramah was inaugurated in 1947 and provided the leadership of the Conservative Movement for the next two generations.

Finkelstein became one of the most famous Jewish leaders of his age, at home with presidents and prime ministers. President Roosevelt in 1940 appointed him presidential adviser for Judaism on steps toward world peace; Finkelstein pronounced the prayers at the inauguration of President Eisenhower; President Kennedy appointed him to the U.S. delegation to the coronation of Pope Paul VI in 1963; President Nixon invited him to preach at special religious services in the White House. He was on the cover of Time Magazine.

At his core, Finkelstein remained a working scholar. He rose early and studied daily. He wrote and edited many books and articles on general problems in religion, sociology, culture, and ethics. He edited the widely used Jews: Their History, Culture, and Religion (1949, 1960) as well as many of the publications of the seminary’s Conference on Science, Philosophy and Religion and the seminary’s Institute of Religious and Social Studies. He not only stimulated and assisted the research of other scholars but continued his own primary research and publication. Despite his manifold administrative and communal obligations, Finkelstein’s central preoccupation remained what it was in his student days: study and research in the history and literature of classical Judaism. He published more than a hundred critical investigations of fundamental documents of Judaism, exploring the historical and social conditions reflected in liturgical texts, for example in the prayers Shema, Amidah, Birkat ha-Mazon, Hallel, and proving their antiquity, dating some of them very early, possibly as biblical; exploring the composition of several of the tannaitic Midrashim; and investigating the principal teachings and doctrines of Pharisaism, His social and economic studies of the Pharisees, especially his Pharisees (2 vols., 1938, 1966), roused controversy because of his assertions that economic and social conditions influenced the formation of Pharisaic ideology. These studies lifted the discussion of historical problems from the parochial or purely doctrinal to the broad plane of social history. Finkelstein’s Jewish Self-Government in the Middle Ages (1924, 1964) remained an important source for medievalists and students of post-talmudic halakhah and institutions. He also edited Commentary of David Kimhi on Isaiah (1926, repr. 1969) and wrote Akiba – Scholar, Saint, Martyr (1936, 1962); Ha-Perushim ve-Anshei Keneset ha-Gedolah (“Pharisees and the Great Synagogue,” 1950), which carried on in depth the investigation of his Pharisees; and New Light from the Prophets (1969), in which he traced certain Pharisaic emphases and sayings in the early Midrashim to the time of the prophets. He was drawn to the early classical treatises, which gave him insight into some of the earliest halakhic trends in Jewish Palestine. He also published the Assemani Codex Manuscript of the Sifra (1956, reissued 1970); Sifrei (1939, repr. 1969); and Mavo le-Massekhtot Avot ve-Avot de-Rabbi Natan (1950), an introduction to these talmudic treatises.

In all his scholarly work Finkelstein exhibited a fastidious attention to detail, particularly to textual variants in manuscripts, early printed editions, and citations in geonic and post-geonic literary works, and an awareness of what is central in each period. In both his scholarly and his administrative activities, he made enormous contributions to the understanding and acceptance of the values and insights of talmudic-rabbinic Judaism.

[Judah Goldin / Michael Berenbaum (2nd ed.)]

FINKELSTEIN, NOAH (1871–1946), Zionist leader and Yiddish newspaper publisher, born in Brest-Litovsk. An active Zionist from the time of the first Zionist Congresses, at first in Brest-Litovsk and later in Warsaw, Finkelstein was among the supporters of the *Uganda project, and later became a *Territorialist. He belonged to the *Benei Zion circle of Zionist intelligentsia connected with the Shalarei Zion Synagogue in Warsaw, which became a center of the Territorialists. In 1906, with his brother Nehemiah and his friend Samuel Jacob Jackan, Finkelstein began publication of Yidishes Tagblat, a newspaper which gained readers from groups who until then had not been attracted to the Hebrew or Yiddish press. Two years later, in 1908, they founded the daily *Haynt, which became the most popular Zionist newspaper in Poland. Although Finkelstein was responsible for administration, he considerably influenced editorial policy. In 1912, during the elections to the Fourth *Duma, he was one of the most energetic organizers of Jewish defense against the violent anti-Semitic propaganda and *boycott proclaimed by the Polish right wing against the Jews in Warsaw, whose vote for the socialist candidate had caused the defeat of the right-wing nominee. After the amalgamation of Haynt with the Zionist organ Dos Yidishe Folk, Finkelstein left for Paris. From 1926 to 1940, also with the same partners, he began to publish the newspaper Der Parizier Haynt, which had to contend against opposition from Bundist and Communist immigrants who had arrived in France from Eastern Europe.

[Michael Berenbaum (2nd ed.)]

FINKIELKRAUT, ALAIN (1949– ), French author and thinker. After a short academic career in which he taught in France and the United States, Finkielkraut devoted himself to writing books, articles, and radio programs, many of which deal with issues of contemporary Jewry. His books delineate the problems of the Jew in the Diaspora from the cultural and social aspects as well as the problem of his link to Jewish history and to Israel as a central issue (Le Juif imaginaire, 1980; The Imaginary Jew, 1994). He has dealt with antisemitism, the revisionist historians who have distorted the history of World War II (L'avvenir d'une negation; 1982; The Future of a Negation: Reflections on the Question of Genocide, 1998 ), and incitement against the State of Israel (La réprobation d’Israël; 1983), using a system close to that of the “New Philosophers” of France. His thought was also influenced by that of the Jewish philosopher Emmanuel *Levinas: La sagesse de l’amour (1984; The Wisdom of Love, 1997) gave a tangible dimension to Levinas’ concept of the relationship to otherness as the constituent element of humanity.

In 1986 Finkielkraut became the youngest recipient of the prestigious prize of French Jewry, the Prix de la Fondation du Judaïsme Français. In La défense de la pensée (1987; The Defeat of the Mind, 1995), Finkielkraut sharply denounced the rise of relativism in Western liberal societies. The book had a great impact and got him labeled a “conservative” thinker. Two years later he published his reflections on the collective memory of the Jewish genocide and on the idea of crimes against humanity in the context of the Klaus Barbie trial (La mémoire vaine, du crime contre l’humanité, 1989; Remembering in Vain: The Klaus Barbie Trial and Crimes against Humanity, 1992). In 1992, after an intellectual portrait of early 20th century French author Charles Peguy (Le mécontemporain: Charles Pe-
guy, lecteur du monde moderne), he published a selection of his writings relating to the Yugoslavian fighting of the early 1990s, during which he had supported the Croats (Comment peut-on être croate?, 1992; Dispatches from the Balkan War and Other Writings, 1999). In 2002, the Second Intifada in the Palestinian-Israeli conflict and the rise of new forms of antisemitism led him to broadcast a weekly program on a Jewish radio station. While supporting a two-state solution and criticizing some aspects of Israeli policy, Finkielkraut took a strong stand against the penchant of intellectuals to call into question the legitimacy of Zionism and of Israel as the state of the Jewish people. In his 2002 chronicles (L'imparfait du présent) and his 2003 essay Au nom de l'autre, sur l'antisémitisme qui vient, he described how current hatred of Jews has adopted the fashionable Western dogma of radical universalism. Jews, asserts Finkielkraut, are no longer criticized for their cosmopolitanism: they are conversely accused of having replaced their supposed universal fate with what these new progenitors of antisemitism perceive as anachronistic and harmful efforts to persist as a specific human group, either as communities or in the framework of a nation-state. Finkielkraut came to be considered the most significant of young French thinkers who deal with current issues of Jewish existence.

[From Encyclopedia Judaica]
press during the 1880s. While the Swedish intelligentsia demanded reforms, the reactionary Finnish press obstinately opposed any change in the status of the Jews. The antisemites Meurman and Kihlman were opposed by Prof. Runeberg, son of the celebrated Finnish poet, by Bishop Alopaeus and by Barons Alfthan and Wrede. A law authorizing Jews to reside in the cities of Helsinki, Turku, and Vyborg was enacted in 1889. At that time there were 1,000 Jews resident in Finland.

At the beginning of the 20th century, mainly after the Russian revolution of 1905, signs of sympathy toward Jews were manifested by the nascent socialist movement in Finland. However in 1908 the restrictions still remained in force. The Danish-Jewish author Georg "Brandes, who went on a lecture tour in Finland that year, stated ironically in an interview with the Finnish press before he left: "I have committed three serious sins here. As a Jew, I was permitted to stay in your country for only three days, however I have stayed here for four consecutive days; as a Jew, I was permitted only to trade in rags, however here I lectured on world literature; and as a Jew, it is forbidden for me to marry here, but in spite of all this no one prohibited me from courting in your country....." In 1906 the third convention of Russian Zionists met in Helsinki and adopted the Helsingfors "Program. In 1909 the liberal elements in the Finnish parliament overcame the opposition of the extreme conservatives and by a majority of 112 to 48 a law was accepted abolishing the restrictions. However, the Russian government delayed its ratification and the Jews did not receive full civil rights until 1917 when Finland became independent.

Between the two world wars the Jewish population increased to 2,000 as a result of emigration from Russia during the early period of the revolution. Many of the Jewish youth studied in universities, and Jews entered the liberal professions as physicians, lawyers, and engineers. Others turned to industry and forestry, but the majority continued in the textile and clothing business. With a few isolated exceptions the Jews did not take part in internal party politics or join any political movement. The author and Mizrahi leader Simon "Federbusch officiated as chief rabbi of Finland from 1930 to 1940.

During the Finnish-Russian War of 1939–40, Jews fought alongside the Finns. When Viipuri (Vyborg) was annexed to the Soviet Union, the Jews (about 300 persons) evacuated the city along with the Finns. During World War II (1941–44) Finland fought on the German side against the Soviet Union, but, despite strong German pressure, the Finnish authorities, headed by Field Marshal Mannerheim refused to enforce anti-Jewish legislation. 160 Jews who did not possess Finnish nationality found refuge in neutral Sweden. At one stage the Finns yielded and allowed the Gestapo to deport 50 Jews from Finland who had arrived as refugees from Austria and the Baltic countries before the Nazi invasion. However, after the dispatch of the first transport of eight of the refugees, only one of whom survived, Mannerheim and the Finnish authorities refused to continue the operation. The peace treaty between the Allies and Finland prohibited racial discrimination and thereafter Jews again enjoyed full civil rights.

The Jewish community in Finland has always been deeply conscious of its Jewish traditions, and Yiddish is still used to some extent by the older generation. In 1968 the Jewish population numbered 1,750 (approximately 1,330 in Helsinki, 350 in Turku, and 50 in Tampere), dropping to around 1,100 at the turn of the century. The community was represented by a community council of 32 members. In Helsinki, a Jewish kindergarten (founded in 1953) and a comprehensive Jewish school (1918) with nearly 100 students were in operation, along with a full range of religious, cultural, and social services and active Zionist organizations. The rate of intermarriage was high. Twenty-nine Jewish youths from Finland fought in the Israel War of Independence, and over 100 Finnish Jews settled in the State of Israel, mostly in the agricultural sector. In 1979, Ben Zyskowicz became the first Finnish Jew to be elected to Parliament.

[Yehuda Gaulan]

Relations with Israel

In 1948 formal relations were established between Finland and Israel, first by reciprocal appointment of honorary consuls. In February 1951, Israel appointed Abraham Nissan, its minister in Sweden, as its nonresident minister in Helsinki. In 1953 a regular Israel legation was established in Helsinki, headed by a chargé d'affaires. In 1960 with the expansion of political and cultural ties between the two countries, a resident Israel minister was appointed in Finland and a Finnish minister in Israel. In 1962 both missions were elevated to the ambassadorial level. At that time Prime Minister David Ben-Gurion visited Finland on the invitation of its government, as part of his tour of Scandinavian countries, and was warmly received by the public and government officials. In May 1967 the prime minister of Finland, Raphael Paasio, reciprocated with an official visit to Israel. In 1968 Foreign Minister Abba Eban visited Helsinki on the invitation of the Finnish foreign minister.

The Six-Day War (1967) aroused great emotion in all sectors of the Finnish people. There were numerous expressions of support for and identification with Israel as a small nation fighting against great odds, reminiscent of the experience of the Finnish nation. Internationally its neutral status and proximity to the former U.S.S.R. dictated a cautious approach; its policy with regard to Israel has been neutral but sympathetic.

Cultural ties have developed between Finland and Israel. Many years ago a movement was established, mainly religiously based, called "Carmel," aimed at bringing to Israel annually a group of youngsters for a few months' training in the Hebrew language and acquaintance with Israeli life. Tourism from Finland to Israel increased, especially from 1968. In 1954 a League for Finnish-Israel friendship was established, with past Prime Minister K.A. Fagerholm as president. Finland's trade with Israel has increased steadily over the decades. The first trade agreement was signed in 1950, involving $7,000,000 in both directions. The major Israeli export to Finland was...
citrus and textiles, while Finnish exports to Israel comprised paper, cellulose, and paper products. In 1955 mutual trade reached $17,000,000. At the beginning the balance was in Israel's favor but later it shifted to Finland's favor. In 2003 bilateral trade between Finland and Israel amounted to €268 million. Whether for political-economic or other reasons, many Finnish products were shipped to Israel through a third country and therefore registered as trade with that country and thus unrecorded in the balance of trade between the two.

[Moshe Avidan]

**FINLAY-FREUNDLICH, ERWIN** (1885–1964), astronomer. Born in Biebrich, Rhineland, Finlay-Freundlich became professor at the University of St. Andrews, Scotland. Prior to his activities as director of the St. Andrews University Observatory (1939–59), which he built up, he held the directorships of new institutes at Potsdam (1924–33), Istanbul (1933–36), and Prague (1936–39). Finlay-Freundlich was a versatile scientist and pursued research in celestial mechanics, stellar astronomy, theoretical physics, theory of relativity, solar research, and instrumental design. He equipped and directed several successful solar-eclipse expeditions, including two to Sumatra, in a determined effort to provide empirical tests of the theory of relativity through an exact verification of the minute effects of the gravitational light-deflection and the red-shift of spectral lines. He was one of the first pioneers in propagating the astronomical importance of Albert Einstein's concepts.

[Arthur Beer]

**FINLEY, SIR MOSES** (1912–1986), American-born British historian. Born Moses Finkelstein in New York, Sir Moses was educated at Syracuse and Columbia Universities and changed his name to "Finley" in 1936. In 1954, fearful of McCarthyism, he migrated to England, becoming a British subject in 1962. There, his distinguished academic career was spent at Cambridge, where he was professor of ancient history from 1970 to 1979. Finley was one of the most productive and highly regarded historians of the ancient world of his time, whose interests centered especially on the economy and society of ancient Greece. Among his best-known works are *The World of Odysseus* (1956) and *The Ancient Economy* (1973). Finley received many academic honors and was knighted in 1979.

[William D. Rubinstein (2nd ed.)]

*FINN, JAMES* (1806–1872), English philo-Semite, served as British consul in Jerusalem from 1845 to 1862. A pioneer for the resettlement of the Jews in Erez Israel, Finn was a devoted friend of the Jews and often protected them from the Ottoman authorities. He was also active in promoting the idea of labor and agricultural development, and even invested funds in experiments to help organize his projects. After some time he went bankrupt. At the same time Finn engaged in missionary activities and tried to settle some Jewish converts to Christianity in the village of Artas (the biblical En-Etam) near Bethlehem, but this project was abandoned in 1864. When his appointment as consul ended, the leaders of the Jerusalem Jewish community and others addressed messages of appreciation and admiration to the British Government and to Finn himself for his services to the Jewish population. In assisting the Jews of Jerusalem, he had sometimes overlooked the instructions of his superiors and it has been suggested that this precipitated the end of his service in Erez Israel.

After his death, his wife, Elizabeth Anne (née McCaul, 1825–1921), edited and published his book *Stirring Times* (1878), which contains detailed descriptions of the situation of the Jews in Erez Israel at that time. Finn was also a pioneer in bringing to the knowledge of the Western world the Jews of "Kai Feng in his two works *Jews of China* (1849) and *The Orphan Colony of the Jews of China* (1872). Apart from this he wrote a superficial work on the Sephardim (1841). His wife assisted him in all his activities on behalf of the Jewish population of Erez Israel. She wrote three books on Erez Israel as well as memoirs on her life in Erez Israel, under the title of *Reminiscences of Mrs. Finn* (1929), published posthumously.

[Abraham David]

**FINNISTON, SIR HAROLD MONTAGUE** (Monty; 1912–1991), British metallurgist and industrial administrator. Finniston was born in Glasgow (whose accent he retained), educated at Glasgow University, and became a lecturer at the Royal College of Science and Technology, Glasgow. He then became a metallurgist in industry and served in the Royal Naval Scientific Service during World War II. He was chief metallurgist at the United Kingdom Atomic Energy Authority, Harwell, from 1948 to 1958, and managing director of the International Research and Development Company from 1959 to 1967. He joined the board of the recently renationalized steel industry (British Steel Corporation) as deputy chairman (technical) in 1967, becoming chief executive in 1971 and chairman from 1973 to 1976. From 1976 he was active as chairman or director of industrial companies and from 1980 as a business consultant. Finniston was involved in many fields of research and in...
the Jewish community. He was chairman of the independent “think tank” of the Policies Institute from 1975 to 1984, chancellor of Stirling University, and pro-chancellor of the University of Surrey. He was knighted in 1975, had 15 honorary doctorates conferred upon him, and in 1969 was elected a Fellow of the Royal Society, of which he was later vice president in 1971–72. Sir Wally MacFarlane, the nationalized industry chairman portrayed in the popular British television comedy Yes, Minister, was based on Finniston.

[Vivian David Lipman]

FINZI, Italian family which can be traced back to the second half of the 13th century; the origin of the name is unknown. The first recorded members were loan bankers in Padua. Subsequently, the family spread to many other towns; some of them added the name of their city of origin to their family name (Finzi of Ancona, of Recanati, of Bologna, of Mantua, of Ferrara, of Reggio-Heb, ״ניצ״ – not Arezzo as usually transcribed). In Venice some of them became known as TeDESCO-FINZI to emphasize their German origin. Other Finzis may be traced in the Balkans and in Jerusalem and later in England. Some of the most noteworthy members follow in chronological order.

MORDECAI (ANGELO) B. ABRAHAM (d. 1476), a versatile scientist, physician, and banker, who lived in Bologna and Mantua. He was known mainly for his mathematical and astronomical works, which included Luhot, tables on the length of days (publ. Mantua, c. 1479, by Abraham Conat), and an astronomical work entitled Nativ Hokhmah (unpublished). He translated into Hebrew three important works by the Arab mathematician Abū Kāmil (850–930). He also translated into Hebrew various works on astronomy and geometry and wrote commentaries on some of them, described and explained recently invented astronomical instruments, and wrote treatises on grammar and mnemonics. SOLOMON B. ELIYAKIM, rabbi in Forli (1536) and Bologna (1552). He wrote a methodological work, Mafteaḥ ha-Gemara (Venice, 1622). It was reprinted in 1697 in Helmstedt with a Latin translation and notes by C.H. Ritmeier, and again reprinted in Clavis Talmudica Maxima (Hanau, 1714, 1740). GUR ARYEH HA-LEVI, rabbi in Mantua in 1665. He wrote a remarkable commentary on the Shulḥan Arukh, published (Mantua, 1721–23) by his great-nephew, Gur Aryeh b. Benjamin (d. 1754). SAMUEL (d. 1791), pupil of Isaac Lampronti, was a famous preacher and rabbi at Ferrara. His homilies are collected in Imrei Emet (1841). ISAAC RAPHAEL B. ELISHA (1728–1812), of Ferrara, was a widely esteemed preacher, some of whose sermons were published. He was a member of the French Sanhedrin in 1806 and was elected its vice president. JOSEPH (1815–1886), born in Mantua, was a patriot of the Italian Risorgimento. A confidant of Mazzini, Garibaldi, and Cavour, he took an active part in the risings against Austria from 1848 to 1853 and was entrusted with the funds for the Garibaldi’s expedition to Sicily in 1860. From 1860 onward, he was a member of parliament for about twenty-five years and he was elected senator in 1886. The jurist MARIO (1913–1943) from Bologna was active in the Italian Resistance during World War II and he assisted Italian and German Jews from 1938; he was captured in 1943 during an attempt to help a Jew. GERALD (1901–1956), English musician and professor of composition at the Royal Academy of Music, wrote choral, orchestral, and chamber music.

[Attilio Milano / Federica Francesconi (2nd ed.)]

FINZI, GIUSEPPE (1815–1886), Italian patriot and parliamentarian. Finzi studied in Padua from 1831 to 1835. In 1834 he joined the secret organization Giovane Italia. In 1844, he met with Giuseppe Mazzini in London, who entrusted him with the nationalist propaganda in both Switzerland and Lombardy. In 1848, Finzi fought behind the barricades in Milan. After serving for a time in the army of Charles Albert, he organized a regiment consisting of Mantuans. He first fought in Novara against Austria, and afterward in Rome against the papal troops. Having been taken prisoner, as a close friend of Mazzini, he was brought before an Austrian court-martial in Mantua. While many of his friends were condemned to the gallows, he was sentenced to 18 years imprisonment at Thereisenstadt and Josephstadt but an amnesty of 1856 set him free.

When Lombardy was freed from Austrian domination, Finzi was appointed royal commissary for the province of Mantua. He became the confidante of Giuseppe Garibaldi and was entrusted with the funds for the expedition to Sicily. The voluntary contributions not being sufficient, Finzi appealed to Count Camillo Benso di Cavour for more funding. Cavour supplied him with funds from the state treasury, under the strictest secrecy. Cavour urged Finzi to revolutionize Naples while Garibaldi was in Sicily. Accordingly, Finzi made his way there with others but had little success. He nevertheless paved the way for Garibaldi’s entry later. Ill health compelled Finzi to resign the office of director general of public safety for the southern provinces, to which he had been appointed. He sometimes mediated between Garibaldi and Cavour, when their relations became strained. For about 25 years – from 1860 on – Finzi was a member of the Lower House, and highly esteemed by all parties. He was a man of unflagging energy but was not an orator. On June 7, 1886, he was made a senator, but died shortly thereafter.

FINZI-NORSA CONTROVERSY, Italian Jewish cause célèbre in the early part of the 16th century. Immanuel Norsa
of Ferrara, reputed to be the second wealthiest Jew in Italy, was partner in a loan bank with Abraham Raphael Finzi of Bologna, who had suffered serious reverses in his other business interests. Although relations between the two men were strengthened by marriages between their children, it was still charged by Finzi’s friends that directly or indirectly, Norsa had caused Finzi the loss of 5,000 gold florins. Since his partnership with Norsa was Finzi’s only asset, he was compelled to dispose of it to satisfy his creditors. The wealthy Samuel da Pisa, Norsa’s brother-in-law, agreed to buy out Finzi’s share. However, due to Norsa’s opposition, he reneged on the proposed transaction.

The creditors continued to press Finzi, who realized that Norsa would thwart any advantageous sale; Finzi was forced to accede to Norsa’s conditions and let him have all the partnership rights at his own price. It is claimed that Norsa paid him only one-sixth the actual value. However, before Finzi went to Ravenna to conclude the sale, he made a modaaḥah (“declaration”) at Bologna before witnesses, on February 28, 1507, that he was only selling to Norsa under duress, and that all the statements he would make to Norsa to the effect that the sale was carried out with good will and without compulsion were in consequence null and void. He also retained all rights to sue his former partner in court at a more opportune time. About 12 years later, this document was submitted to a court of three rabbinical judges in Bologna. Finzi brought five witnesses to prove the power of Norsa in Ferrara and the impossibility of getting judgment against him in the latter’s home town. The court granted him a change of venue and decided that the case should be tried before an impartial court outside Ferrara. Norsa refused to abide by this decision and insisted upon having the litigation in his city.

A vehement and vituperative controversy soon ensued solely on the validity of venue granted to Finzi. Norsa was supported by his local rabbis, particularly David Pizzighetone and by Abraham *Minz; Finzi was supported by almost all the Italian rabbinate, including Bendit Axelrod b. Eleazar, the head of the Venetian rabbinate, Israel b. Jehiel Isserlein of Rome, and Jehiel Trabotto b. Azriel of Pesaro. Above all, the famed Jacob *Pollak of Poland backed Finzi and finally communicated Abraham Minz for his role in aggravating the controversy. Finally, Norsa had to yield and appeared before an impartial court. No record of the decision reached on the monetary issue has been preserved.

Aaron Rothkoff

**Fioghi (Fiocchi), Fabiano** (16th century), Roman Catholic theologian. Born a Jew in Monte Salvino, Fioghi was baptized in Rome, where he was active as teacher and catechist of the Jewish candidates for conversion at the House of *Catechumens*. Fioghi published a missionary tract in Italian, entitled *Dialogo fra il Cathecumino et il Padre catechizante*... (Rome, 1582); a second edition, *Introduttione alla Fede fatta in forma di Dialogo*, appeared in Rome in 1628. Even 200 years later R. Joshua Benzion *Segre attacked the anti-Jewish introductory and concluding poems of this book. A Hebrew poem by Fioghi, addressed to Pope Gregory XIII, is to be found in the Vatican Library, together with a Latin translation.

Jefim (Hayyim) Schirmann

**Fiorentino, Salomone** (1743–1815), Italian poet. Fiorentino was born at Monte San Savino, a village in Tuscany where the Jewish presence went back at least to 1421. Son of a merchant, he studied traditional Jewish subjects in Siena, attending at the same time — as an external student — a Catholic school, where he distinguished himself. He had a shop selling cloth in Cortona and read Italian poetry and works of philosophy intensively. Starting to compose verse, he kept up a correspondence with outstanding Italian poets like Metastasio, Cesaretti, Monti, and Alfieri. The premature death of his beloved wife in 1789 was a turning point both in his private life and in his literary career; the three elegies he composed on this occasion won him a certain celebrity, so that Fiorentino was admitted to the important Accademia Fiorentina and named by the Grand Duke of Tuscany “poet laureate.” In 1799, during the French occupation, the violence of the populace against the Jews (seen as Allies of the “heretic” French) forced Fiorentino, like many of his coreligionists, to leave his small villages and live in Siena, then in Florence; as a consequence of the riots, he lost all his property in Cortona and Monte San Savino. From 1800 to 1815, with the return of the French army, he could devote himself to literary activity and wrote moral poems, epitaphiums, poems in praise of the Habsburg emperors, as well as an Italian translation of the Sephardi prayer book of Livorno (Leghorn). His collected poems were printed several times. From 1801 to 1808, Fiorentino lived in Livorno, earning his living as a teacher of Italian in the local Jewish community; from 1808 to 1815, stricken by paralysis, he lived again in Florence, where he died. His poetry, though belonging to the Italian literary tradition, shows many Jewish elements: biblical references, a deep religiosity drawn from Jewish sources, even the centrality of family affection that had no poetical importance at the time. Fiorentino probably influenced the Italian poet Giacomo Leopardi, who inserted two of his elegies in his important anthology *Crestomazia italiana*.

Alessandro Guetta (2nd ed.)

**Fiqh**, the science of Islamic law. In the course of the eighth century, the term, which originally meant “knowledge” or “un-
derstanding,” took on the meaning of Islamic jurisprudence on its two levels: certain knowledge, transmitted by the text of the Koran or a tradition relating to the Prophet (suna); and legal conclusions derived by legal reasoning. The purpose of legal reasoning (ra'y), generally through analogy (qiyās), is to determine the ratio legis (motivation) for a legal rule. Consensus (ijmā‘), the fourth source of Islamic law (after Koran, sunna, and qiyās), purports to ensure the truth of a rule or conclusion derived from textual sources. Those lawyers who deal with fiqh are known as fuqahā.

While sharīca is a general term for the totality of instructions and regulations in Islamic law, fiqh concentrates more on the legal aspect, though it too encompasses all areas of human behavior, religious as well as both private and public law. Accordingly, Islamic law recognizes five religious-ethical categories of human behavior (al-ahakah al-khamsa), ranging from obligatory (fard) to forbidden (haaram), with three intermediate categories: recommended (mandāb), reprehensible (makrūh), and indifferent (and permitted; mubahā). Parallel to this scale of religious-ethical qualifications is a scale of legal, rather than religious, validity of an action. While in theory the rules of fiqh, known as branches (furu‘), are derived from the sources of Islamic law (usūl-fiqh) by the methodology prescribed in the usūlī-fiqh literature, some such rules actually stem from the customary law of pre-Islamic times (jāhilīyya) or the influence of other legal systems (Persian, Greek, Roman, Byzantine) or religions (Judaism, Christianity), whose full impact on Islamic law and its development have yet to be fully determined. Islamic law assimilated such influences in various ways, but not by way of custom (curf, cāda), which Islamic law in its initial phase did not recognize as an independent source of law; such recognition came at a later phase in the development of Islamic law.

One of the most salient characteristics of fiqh is its development by religious scholars (fuqahā, cumalā) rather than judges. This at times led to divergences between theory and reality, with which the fuqahā had to deal by the application of, inter alia, legal devices and evasions (hiyal), as well as other legal principles, such as istihlās (discretionary decisions), or istiṣlah (consideration of the public interest). In some cases a special legal effort (ijtihād) was necessary to rule the law on the basis of the roots of the law, mainly by means of legal pronouncements (fatwā, sing. fatwa) by high-ranking lawyers (mufīfī) — a phenomenon characteristic of the casuistic nature of Islamic law. In the mid-eighth century (758), ‘Abdullah ibn al-Muqaffa’ proposed to the Caliph Al-Mansūr to draw up a codification of Islamic law, but his plan never came to fruition.

The legal oeuvre of the fiqh began to develop in the second half of the eighth century, beginning with the usūl al-fiqh literature. In addition to treatises devoted to detailed descriptions of specific areas of law, ranging from cabādat (ritual) to mucamalat (pecuniary transactions), other literary genres of fiqh literature included works on differences between jurists and schools (ikhtilāf), which were a constant feature of Islamic law from its beginnings; legal formularies (shurūt); and works on legal devices (hiyal). The earliest work of usūl al-fiqh was the Risāla (that is, “epistle”) of Idris Shāfi‘i (820), generally considered the founder of Muslim legal theory, which defined its terms and set its limits against the background of a controversy that broke out in the early Middle Ages between two currents of opinion: supporters of legal tradition (ahl al-hadīth) and supporters of legal reasoning (ahl al-ra‘y). The first work of fiqh was the Muwatta’ ("paved path") of Mālik b. Anas. In parallel to the official system of Islamic law, a secondary system of criminal law, known as al-nazar fi‘l-mażālim ("investigation of complaints") developed as an alternative to the rigid system of evidence and procedure of official Islamic law.

Islamic law recognizes the existence of different opinions, granting them equal status. Accordingly, several different legal schools emerged in the main centers of Islamic law: Medina, Kufa, and Syria. Through the second half of the ninth century and the early tenth century, these ultimately became the main legal schools (madhhab), each named for prominent early scholars of the law: The Ḥanafī school, after Abū Hānifa (767); the Mālikī school, after Mālik b. Anas (795); the Shāfi‘i school, after Muḥammad ibn Idrīs al-Shāfi‘i (820); and the Ḥanbalī school, after Ahmad ibn Ḥanbal (855). A few other schools were formed but did not survive. Some of the differences between these schools reflect the legal traditions of a specific locality and time as well as prevailing social conditions (mainly the Maliki and Hanafi schools); others reflect a different attitude to the sources of law or to other legal principles. Each school created its own fiqh literature and summarized its legal outlook in a work known as Mukhtasar ("compendium"). Each school dominated a certain geographical region of the Muslim world. There may have been some connection between the formation of the schools and the anthropologization of hadiths (the documentation of the sunna) and development of the science of hadith criticism, since the two developments are related in subject matter and contiguous in time: The anthologies were drawn up during the ninth century, and soon after them came the consolidation of the schools. Probably also the transition from ijtihād (legal struggle or effort) to taqlid is related to the appearance of the schools, since the taqlid (reliance on legal tradition) expresses loyalty to the legal heritage of a particular school and its leader. The evolution of legal terminology may also have been influenced by the emergence of the schools, since it expressed a certain hierarchy of opinions and in a way functioned as a substitute for legal decision rules, which Islamic law lacks. Common to the schools was their acceptance of the legal theory of usūl al-fiqh, but this did not prevent the schisms of the seventh century, when the Shi‘a split from the Sunna and the Khawārij seceded from mainstream Islam.

Muslim recognition of legal pluralism and the equal status accorded the legal schools created a degree of flexibility in Islamic law; thus, litigants were even permitted to shift from

ENCYCLOPAEDIA JUDAICA, Second Edition, Volume 7
one school to another in a court composed of judges representing the four schools, and a judge could appeal to the ruling of a school other than his own. In modern times, Islam permits legislators to combine doctrines of more than one school in relation to specific clauses of the law (tahkhayyur), mainly in the context of protection of women's rights; this phenomenon blurs differences between the schools and promotes the unification of Islamic law.

Some characteristics of *fiqh* influenced Jewish law during and after the period of the geonim, in such areas as literary creativity, borrowing of legal terminology, and assimilation of legal principles and sometimes even of specific laws.

[Gideon Libson (2nd ed.)]

**FIRE** (Heb. אֵשֶׁת).

**In the Bible**

Once humans discovered that fire could be maintained and exploited for their needs, it became one of their most important assets. Fire was used for light, warmth, cooking, roasting, baking, in waging war, and in various crafts, for sending messages, and for ritual purposes. Greek myth relates that fire was originally restricted to the gods before it was stolen by Prometheus and given to humans. Fire is one of the central elements of theophany. At the covenant with Abraham “a smoking oven and a flaming torch,” representing the divine presence passed between the halves of the animals (Gen. 15:17). God appeared to Moses from the burning bush (Ex. 3:2); He went before Israel in a pillar of fire to guide them by night on their way out of Egypt (Ex. 13:21–22; 14:24; Num. 9:15–16 et al.); on the occasion of the giving of the Tablets of the Law, Mount Sinai is described as being covered in smoke, “for the Lord had come down upon it in fire” (Ex. 19:18). In Deuteronomy 9:3 Yahweh is described as “consuming fire.” Yahweh breaths smoke, flames, and fire (11 Sam. 22:9 [= Ps. 18:9]; Isa. 30:27; 33:65:5). In cultic practice special importance was attributed to fire as a means of purification and cleansing: “any article that can withstand fire—these you shall pass through fire and they shall be clean” (Num. 31:23). Fire was used in several ways in worship: (1) a fire was lit daily in the temple (Ex. 27:20; Lev. 24:2); (2) a perpetual fire for burning sacrifices was maintained on the altar (Lev. 6:5, 6); (3) a fire was used for roasting sacrifices for human consumption; (4) a fire for burning incense was placed so that the smoke diffused throughout the shrine (Ex. 29:18; Lev. 16:13; et al.; see *Sacrifice*). The power of fire both as a positive and destructive force is expressed in the poetic portions of the Bible: “and you call on the name of your god and I will call on the name of the Lord, and the God who answers by fire He is the God” (1 Kings 18:24). God punishes the wicked by sending down fire from heaven: “the Lord rained upon Sodom and Gomorrah sulphurous fire from the Lord out of heaven” (Gen. 19:24). Fire is also an expression of great anger: “for a fire has flared in my wrath and burned to the bottom of Sheol, has consumed the earth and its increase, eaten down to the base of the hills” (Deut. 32:22).

[Ze’ev Yeivin / S. David Sperling (2nd ed.)]

**In Talmudic Literature**

Fire figures prominently both in the halakkah and the aggadah. In the former it occupies a central place in civil law as one of the four tortfeasors, the four principal categories of damage (see *Avot Nezikin*). It also occupies a special role with regard to the Sabbath; although kindling a fire is one of the main 39 categories of work forbidden on the Sabbath (Shab. 7:2), it is also specifically mentioned as a separate prohibition: “Ye shall kindle no fire throughout your habitations on the Sabbath day” (Ex. 35:3). There is a difference of opinion in the Talmud as to the reason for this distinctive mention. According to one opinion the reason is to make this particular prohibition a mere negative commandment, incurring the punishment of flogging, whereas violation of the others invokes *karet*. According to the other opinion it is specifically mentioned to establish the rule that a person is liable separately for each and every infringement of the prohibitions of the Sabbath (Shab. 70a). The rabbis, in contradistinction to the Sadducees (and later the Karaites) interpreted the verse to apply only to the actual kindling of a fire on the Sabbath but not to its existence. Therefore a fire lit before the Sabbath is permitted to continue to burn on that day (if no fuel is added during the day), permitting the distinctive feature of the home celebrations of Sabbath, the Sabbath lights on the table. This fire, according to some opinions, could be used to keep pre-cooked food warm on the Sabbath, and according to other opinions, it could also be used to allow partially cooked foods to continue cooking by themselves on the Sabbath itself. Among the forms of work forbidden on Sabbath and permitted on festivals, lighting a fire is one of only two such forms (along with carrying) which is permitted even if one does not use the fire to prepare food, in line with the principle that “once it was permitted for the need [of cooking] it was permitted when there is no such need” (Bezah 12b).

Fire is extensively referred to in the *aggadah*. According to one account it was created on the second day of creation (P4RE 4) but according to another, it was created after the conclusion of the Sabbath, by Adam through the friction of two stones (Pes. 5:4a; Tj, Ber. 8:6, 12b). The fire of the altar came down from heaven (cf. Yoma 21b) and remained burning from the time of Moses until it was transferred to the Temple of Solomon (Zev. 6:6b), and it continued to burn until the reign of Manasseh (Yalkut, Kings 187). On the other hand the fire in the Second Temple was human fire (Yoma loc. cit.); nevertheless that fire was never extinguished by the rain. The “strange fire” which Nadab and Abihu, the sons of Aaron, offered up on the altar (Lev. 10:1) was “common” or human fire (Num. 2:23). Indeed, all that which is regarded as coming directly from God is said to have been given in fire. The Torah was given in a frame of white fire and the letters were engraved in...
black fire (TJ, Shek. 6:1, 48d). When God told Moses to institute the half-shekel, He showed him “a coin of fire” (ibid., 1:6, 46b). Simultaneously with earthly fire was created the fire of Gehinnom, and earthly fire is one-sixtieth of that fire (Ber. 57b). Out of primordial fire was created light: “The fire became pregnant and gave birth to light” (Ex. R. 15:22).

Six kinds of fire are enumerated (Yoma 21b) and some such division is responsible for the formula of the blessing over light at the *Havdalah ceremony. According to the school of Shammay the formula should be, “Who created the light of the fire.” The school of Hillel, however, maintained that since there are many colors of fire, it was necessary to say, “Who created the lights of fire” in the plural (Ber. 52a) and the haka-khah was established accordingly. The rabbis accepted the legend that the salamander was created out of fire (Hag. 27a; Tanh. Va-Yeshev 3, Ex. R. 15:28) and that its blood protected a person from the ill effects of fire. Fire beacons placed on the mountaintops were used to announce the arrival of the New Moon (R.H 2:2–4).

FIRKOVICH, ABRAHAM (Even Reshef; 1787–1874), Karaite public figure in Eastern Europe. Firkovich was born in Luck (Lutsk), Poland. After his marriage in 1808 he worked as a miller. In 1813 he began to study Torah with the Karaite scholar Morekhai *Sultanski. In 1822 he moved from Lutsk to Evpatoria (Crimea) and was appointed hazzan of the local community. In 1825 he submitted a memorandum to the Russian government in which he suggested resettling Rabbanite Jews from the border areas in order to prevent them from smuggling and force them into agriculture.

In 1830 the Karaite hakham Simhah *Babovich hired him as a tutor for his children and as his secretary to accompany him in his pilgrimage to the Land of Israel. During their visit to Jerusalem, Hebron, and Cairo Firkovich bought and copied many ancient books. In 1831–32 he moved to Istanbul, where he served as hazzan, shohet, and melammed. Following a conflict with the community there he returned to Evpatoria (Gozlow), where he organized a society for the publication of Karaite books. In 1834 he was appointed head of the Karaite publishing house there and published his biting anti-rabbinic book *Hotam Tökhnt*, accusing Rabbanites of crucifying Jesus and killing ‘Anan ben David.

In 1839 M. Vorontsov, the governor general of the Novorossya region and the Crimea, addressed a series of six questions to Babovich, who had become head of the Karaite Spiritual Council. These dealt with the origins of the Karaites and the time of their settlement in the Crimea, their character traits, occupations, important personalities, historical sources about their origins, time of their separation from the Rabbanites, and the differences between them. Babovich then recommended Firkovich investigate these questions and the latter initiated his archaeological and other expeditions in the Crimea and the Caucasus, uncovering ancient tombstones and manuscripts in order to produce an account of Karaite history. His main work, *Avnei Zikkaron* (1872) describes his travels and contains a collection of tombstone inscriptions with several pictures of these tombstones appended. In the course of his work Firkovich created a new concept of the origins of the Crimean Karaites, according to which they settled in the Crimea in 6 B.C.E.; therefore they could not share the responsibility for the crucifixion of Jesus. Firkovich wished to convince the authorities that the Karaites were a separate nation which differed historically, culturally, and anthropologically from the Rabbanites. He was the first Karaite author to apply a "scientific" research methodology to ameliorate the legal status of his congregation. To substantiate his claims Firkovich fabricated colophons and falsified some of the tombstone inscriptions. He changed the real dates on the tombs to earlier ones. He also "invented" some great figures of Karaite history, such as Isaac Sangari (identified in a late medieval source as the sage ("haver") who in Judah Halevi’s account in the *Kuzari* converted the king of the *Khazars to Judaism). In Firkovich’s version, Sangari converted the Khazars to the Karaite version of Judaism and died in Chufut-Qaleh.

Yet within a year of Firkovich’s death, a controversy raged over the authenticity of the Firkovich material. Such prominent scholars as A. Harkavy, H. Strack, P.F. Frankl, and A. Kunik claimed that Firkovich’s collections abounded in forgeries and fabrications. Even D. Chwolson, his most sympathetic critic, had to admit the general unreliability of Firkovich’s manuscripts. Nevertheless, the manuscripts that he amassed were used or published by several well-known scholars in their studies about the Karaites. (S. Pinsker’s *Likkutei Kadmoniyot* (1860) was based on Firkovich’s materials; Fuerst and Graetz also unhesitatingly used this material.) Discussions of the authenticity of his materials stimulated the development of Jewish studies in Russia and Western Europe.

His manuscript collection is considered to be one of the most valuable collections of Hebrew manuscripts worldwide. Firkovich sold his first collection containing over a thousand Rabbanite, Karaite, and Samaritan manuscripts and Torah scrolls from the Crimea, Caucasus, and Middle East to the Imperial Library in St. Petersburg in 1862 and in 1870. His second collection, containing over 15,000 items, was sold after his death (1876). Most items originated in the Genizah of the Karaite synagogue in Cairo, which Firkovich visited in 1864. It is the largest selection of its kind in the world. These collections and his private archive, which are housed in the Russian National Library in St. Petersburg, were opened to researchers only after the breakup of the Soviet Union. Most of the material is available in microfilm at the Jewish National and University Library in Jerusalem.

Firkovich had six sons and five daughters. He died in Chufut-Qaleh and was buried in the cemetery in the Jehoshaphat valley.
FIRSTBORN.

In the Bible

Primogeniture is a persistent and widespread institution whose legal, social, and religious features were reflected in the norms of ancient Israelite society. Biblical legislation gave the firstborn male a special status with respect to inheritance rights and certain cultic regulations. The latter, a part of a complex of cultic requirements, also applied to the first issue of the herds and the flocks, which, in the popular consciousness, were considered particularly desirable as sacrifices. Abel pleased God by offering Him firstlings of his flock (Gen. 4:4). The requirements of the cultic codes were based on the notion that the God of Israel had a claim on the first offspring of man and beast, which were to be devoted to Him in some manner. This notion also governed the prescriptions regarding the offering of the first fruits (see *First Fruits*).

In biblical Hebrew usage the term bekhor, “firstborn [male],” and its derivatives, are somewhat ambiguous. The characterization of the human bekhor as reshit on, “the first fruit of vigor” (Gen. 49:3; Deut. 21:17; cf. Ps. 78:31; 105:36), stresses the relation to the father and adumbrates the firstborn’s status of principal heir and successor of his father as head of the family. At the same time, the specification that the bekhor be “the first issue of the womb” (peter rehem; Ex. 13:2, 12, 15, etc.; cf. Num. 8:16), which reflects the religious significance of the first products of the procreative process in human and animal life, stresses the biological link to the mother. Whereas it was usually possible to ascertain the paternity of human beings, this clearly did not hold true of animals, and there was never any attempt to base animal cultic regulations on considerations of specific paternity.

Two rather distinct conceptions can be made out: a socio-legal one, which assigned exceptional status to the first male in the paternal line; and a cultic one which assigned special status to the first male issue of the maternal line. The socio-legal conception was preserved in legislation governing inheritance. In cultic legislation, the bekhor of the legal tradition was required — in order for the cultic regulations to apply — to be also the first issue of his mother’s womb.

According to Deuteronomy 21:15–17, a father was obliged to acknowledge his firstborn son as his principal heir, and to grant him a double portion of his estate as inheritance. (Pishenayim means “two-thirds” [see Zech. 13:8], but the intention of the text is that the firstborn shall get whatever fraction a double portion may come to; in the case posited in the text, where there are only two sons, it is two-thirds, but where there are three sons, it is one-half, and so on; cf. the correct inference drawn in 8:123a from 1 Chron. 51ff., which expressly terms Joseph’s status as “firstborn” — Joseph received twice the portion of any of his brothers [Gen. 48:5, 22; ef. Rashbam to 8:123a].) This obligation was to apply irrespective of the status of the son’s mother in a polygamous family. The inheritance right is termed mishpat ha-bekhorah, “the rule of the birthright” (Deut. 21:17), and the legal process by which the firstborn son was so designated is expressed by the verb yakkir “he shall acknowledge.” Undoubtedly the acknowledgment involved certain formal, legal acts which are not indicated in biblical literature. In a different context, God acknowledged Israel as his firstborn (Ex. 4:22; cf. Jer. 31:8). A son, addressing his father, might also refer to his own status as firstborn son (Gen. 27:19, 32).

It is evident from the composition of biblical genealogies that the status of bekor was a pervasive feature of Israelite life. In many such lists there is a formula which specifies the status of the first-listed son. For example, Numbers 1:20: “The sons of Reuben, the firstborn of Israel, were…” (cf. e.g., Gen. 35:23; 36:15; Ex. 6:14, and frequently in the genealogies of 1 Chron.). Even in genealogies which do not specifically indicate the status of the first son listed, it is clear that he is the firstborn. There are suggestions in the Bible that primogeniture carried certain duties and privileges in addition to the estate rights (see Gen. 27; 48:13; Judg. 8:20; Chron. 26:10, etc.). The second in line was termed ha-mishneh (1 Sam. 17:13; 11 Sam. 3:13; 1 Chron. 5:12).

The status of the firstborn in royal succession is not clearly defined. The Israelite kings were often polygamous, and the relative status of several royal wives figured in determining a succession, making the Deuteronomic law cited above appear more like an ideal than a reality so far as the king was concerned. A king might, for a variety of reasons, also be disposed to officially reject one of his sons, Accordingly, there were instances where the first in the royal line of succession did not, in fact, succeed his father. It is not known whether the firstborn in families of the high priests had a special status. From the exception noted in 1 Chronicles 26:10 it is inferable that the firstborn of a levitical clan was normally placed in charge of his brothers. There is some evidence that the firstborn daughter (bechorah) was customarily married off before her younger sisters (Gen. 29:16ff.; 1 Sam. 18:17ff.).

In the Genesis narrative one sees how primogeniture was disregarded in the clan of Abraham. The son most suited to carry on the line of Abraham — with its attendant responsibility for transmitting the clan’s unique religious belief — was acknowledged as the head of the family even if it meant passing by the firstborn; indeed even if it entailed banishing him from the household (Isaac was preferred to Ishmael, ch. 21: Jacob to Esau, ch. 27).

The terminology employed in Genesis, when compared

[Haggai Ben-Shammai (2nd ed.)]
Redemption of the Firstborn

Rabbinic sources discuss at length methods of exchange and redemption ( Mishnah, Bekhorot and Temurah). Neither kohanim nor levites need redeem their firstborn (Bek. 21a). However, the firstborn son of a marriage between a kohen and a woman forbidden to him (e.g., a divorcee) does not have priestly rank and must be redeemed (Sh. Ar., yd 305:19), although the father may, in this case, keep the redemption money himself (R. Asher to Bek. 47b). In all cases the criterion is primogeniture from the mother's womb. A child is not regarded as a firstborn if his mother previously miscarried a fetus more than 40 days old (Sh. Ar., yd 305:23). Ordinary Jews whose wives are the daughters of kohanim or levites need not redeem their firstborn, but the son of a kohen's daughter and a non-Jew must be redeemed because his mother has forfeited her status. The firstborn son of a levite's daughter born under the same circumstances does not need to be redeemed (Bek. 47a). If there is a doubt regarding the primogeniture of a child, the child need not be redeemed (Sh. Ar., yd 305:22–25). The duty of redeeming the firstborn falls in the first instance upon the father. If he neglects to do so or if the child is an orphan, the son redeems himself when he reaches maturity (Kid. 29a). At one time a small medallion bearing the inscription ben bekhor was hung around the neck of such a child (Isserles to Sh. Ar., yd 305:15). It later became customary, however, for either the rabbinical court (bet din) or one of the child's male relatives to redeem him.

The Bible fixes the redemption fee at five silver shekels (Num. 18:16), and the father may choose any kohen to perform the ceremony by paying him this sum (in medieval times two Reichsthaler, today five U.S. dollars). It must be given in coins, but not money equivalents, such as securities, shares, etc. (Sh. Ar., yd 305:4). Special “redemption coins” are now minted in Israel for this purpose by the Bank of Israel and distributed by the Israel Government Coins and Medals Corporation. The kohen may return the money to the child's father (as did some rabbis in talmudic times, Bek. 51b), although the practice is condoned only when the father is very poor (Sh. Ar., td, 305:8). On the other hand, the choice of a poor kohen (so as simultaneously to fulfill the mitzvah of charity) is approved.

The redemption ceremony (pidyon ha-ben) is held in the presence of the kohen and invited guests, and takes place on the 31st day after the birth. This is due to the fact that the child is not considered as fully viable until he survives the first 30 days of his life. Even if circumcision has not yet been performed (e.g., for health reasons), there should be no delay. Only if the 31st day is a Sabbath or festival is the ceremony postponed to the following weekday (ibid., 305:11). During the ceremony, the father presents his son, often on a specially embellished tray, to the kohen who asks him, in an ancient Aramaic formula, whether he wishes to redeem the child or to leave him to the kohen. In some sources the formula is given in Hebrew. The father, in reply, expresses the desire to keep his son, hands the redemption money to the kohen, and recites one benediction for the fulfillment of the commandment.

[Baruch A. Levine]
of redemption, and another of thanksgiving (She-Heḥeyanu). The kohen, three times pronouncing “your son is redeemed,” returns the child to the father. This dialogue is purely symbolic. A declaration by the father that he prefers the money to the child would have no legal validity. Finally, the kohen recites a benediction over a cup of wine, pronounces the priestly blessing on the child, and joins the invited guests at a festive banquet (ibid. 305:10 and Isserles ad loc.).

According to halakhah the biblical laws commanding the sacrifice of firstborn “clean” animals and the redemption of firstborn he-asses (Ex. 13:2.12–15; 34:19–20) should also be observed today. However, because of the suspension of the sacrificial system after the destruction of the Temple, the firstborn clean animals have to be given to a kohen after they have attained the age of 30 days (for sheep or goats) or 50 days (for large cattle). He keeps them, without deriving any benefit from them, either until they die a natural death – when the carcass may be used – or until they suffer a blemish which would have made them unfit as a sacrifice – when they may be eaten or used for any other purpose (Tir Sh. Ar., YD 313:20). It is, however, forbidden to inflict a blemish deliberately (Sh. Ar., YD 313:1). A firstborn he-ass should be redeemed from the kohen by giving him a sheep or its equivalent value in money (Tir Sh. Ar., YD 321).

Fast of the Firstborn
Fast of the Firstborn (Heb. תַּנִּיָּה בְּכֹרוֹת, ta’anit bekhorot), fast observed by primogenital males on the 14th of Nisan i.e., the day before *Passover. This traditional custom seems to stem from the desire to express gratitude for the saving of the firstborn Israelites during the tenth plague in Egypt (Ex. 13:1ff.). According to talmudic sources (Soferim, ed. by M. Higger (1937), 211) the custom was already observed in mishnaic times. Another source mentions that R. Judah ha-Nasi fasted on this day; his fasting, however, is explained by some as a wish to stimulate his appetite for the mazzah (unleavened bread) at the seder meal (TJ, Pes. 101:37b and compare Soferim, loc. cit.). The fast became an accepted traditional custom obliging all males whether firstborn to their father or only to their mother, and in some opinions even firstborn women, to fast (Sh. Ar., OH 470:1). If a child is too young to fast (under the age of 13), his fatherfasts instead of him; if the father is firstborn, the child’s mother fasts in lieu of the child (Isserles to OH 470:2). Should the first day of Passover be on a Sabbath, the fast is observed on the preceding Thursday; according to a more lenient ruling, it is suspended (ibid.). However, since one is permitted to break this fast in order to partake of a se’udat mitsvah (a meal accompanying a religious celebration, such as a circumcision) it was laid down that the celebration of the hadran constituted such a meal. The custom thus evolved to finish the study of a Talmud tractate on the morning before Passover, at which occasion a festive banquet is arranged in the synagogue, at which firstborns participate, and they need not therefore fast. Through this device, the Fast of the Firstborn is practically in desuetude (see *Fasting and Fastdays).

Legal Aspects Concerning the Firstborn
DEfinition of Primogeniture. The sole difference in the status of the firstborn son as compared with that of his brothers is his right to a greater share in their father’s inheritance. This status is known as bekhor le-nahalah (firstborn or primogeniture as to inheritance) and derives from the verse “he must acknowledge the firstborn the son of the unloved one, and allot to him a double portion of all he possesses; since he is the first fruit of his vigor, the birthright is his due” (Deut. 21:15–17). The firstborn in this context is the first son born to the father, even if not so to the mother, since it is written, “the first fruits of his vigor” (Bek. 8:1 and see commentators). Even if such a son is born of a prohibited union, e.g., the son of a priest and a divorced woman, or a mamzer born as first son to his father – he is included, on the strength of the words “he must acknowledge the firstborn, the son of the unloved one” (Deut., loc. cit.), the term a “loved” or an “unloved” wife being interpreted as relating only to the question whether the wife’s marriage was “loved” or “unloved,” i.e., permitted or prohibited (Yev. 23a and see Rashi and Posekim ad loc.). The prerogative of the firstborn never extends to a daughter, not even in a case where she has a right of inheritance (Sif. Deut. 215; see *Inheritance). A son born to a proselyte to Judaism, who had sons before he became a proselyte, does not enjoy the prerogative of a bekhor le-nahalah, since he is not “the first fruits of his vigor” (Yev. 62a; Bek. 47a; Posekim ad loc.;) on the other hand, if an Israelite had a son by a non-Jewish woman and thereafter has a son by a Jewish woman, the latter son does enjoy the prerogative, since the former is called her, and not his, son (Maim. Yad, Nahalot 2:12). A first son who is born after his father’s death, viz., if the mother gives birth to twins, is not considered a bekhor le-nahalah since it is written “he must acknowledge” (Deut. 21:17) and the father is no longer alive to do so (BB 142b; Rashbam and Posekim ad loc.).

Proof of Primogeniture. In determining the fact of primogeniture reliance is placed upon the statements of three persons – the midwife, the mother, and the father. That the midwife is relied upon immediately after the son’s birth (where twins are born) is derived from Genesis 38:28 (see TJ, Kid. 42:65d); the mother is relied on during the first seven days after childbirth, since the father has not yet succeeded in “accepting” or recognizing the child, as he does not pass out of his mother’s hands until the circumcision; thereafter the father’s determination is accepted at all times, since he “must acknowledge his son” – i.e., recognize the child as his firstborn son personally and before others. The father’s determination is relied upon even if he thereby assails the status of his other sons, as may happen if he acknowledges as his firstborn the youngest of several sons borne by his wife after they married each other – thus characterizing the other sons as mamzerim (Yev. 47a; Kid. 74a and Posekim ad loc.; see also Mamzer). However, the father is not believed in this last-mentioned case if the disqualified son already has children of his own, as the disqualification would also affect their status – for which
purpose the law does not authorize reliance on his words (Yev. 47a and Posekim; Ozar ha-Posekim, EH, 1 (1955), 192, sec. 4:37).

4TH BIRTHRIGHT PREROGATIVE. The firstborn is entitled to a “double portion,” that is, he takes twice the portion due to each of his brothers from their father’s inheritance. Thus if the father has left a firstborn and two other sons, the former takes one-half and the latter one-quarter each of the estate (bb 122b–123a and Posekim). The prerogative does not extend to the mother’s estate (bb 111b, 122b and Codes).

The firstborn takes a double portion only of the present and not of the contingent assets, i.e., only of the assets in the father’s possession at the time of his death and not such as were due to come into his possession thereafter. Thus, if the father predeceased any of his own legators, the father’s share in their estate passes through him to his own heirs, the firstborn taking only the share of an ordinary heir. This rule embraces debt still owing to the father at his death, even if under deed or bond, since the debt is considered an asset still to fall due and not yet in possession. If, however, the loan was secured by a pledge, or mortgage, the firstborn takes a double portion since in Jewish law the creditor acquires a right over the pledged property (Git. 37a) and a loan thus secured is therefore considered as an asset in possession (see generally Bek. 51b–52a; BB 125b; commentators and Posekim ad loc.). For the same reasons the firstborn does not take a double portion of improvements or increments from which the father’s estate has benefited after his death, except with regard to natural increments – as for instance in the case of a sapling which has become full-grown (ibid.).

OBSERVANCE OF PREROGATIVE-PEREMPTORY ON THE FATHER. The above-mentioned underlying biblical injunction precludes the father from depriving the firstborn of his particular right of inheritance. Consequently, any form of testamentary disposition (see *Wills) by a father purporting to bequeath to the firstborn less than his prescribed double portion of the inheritance is null and void. This rule only applies, however, where the father has clearly adopted the language of a testator, since a father cannot change the laws of inheritance as such (Maim., Yad, Nahalot 6:1). Consequently, if the father has expressed himself in terms of making a gift, his disposition will stand (although “the spirit of the sages takes no delight therein,” bb 133b and see Posekim), since he may freely dispose of his assets by way of gift. Since the exercise of the birthright involves a corresponding greater liability for the debts of the estate, the firstborn may escape such additional liability by way of renouncing his prerogative before the division of the estate (BB 124a; Sh. Ar., HM 278:10).

STATE OF ISRAEL LAW. The Law of Inheritance 5725 – 1965 of the State of Israel does not include any prerogative of the firstborn.

[Ben-Zion (Benno) Schereschewsky]

FIRST FRUITS, that portion of the fruits of each year’s harvest that following the biblical injunction was to be taken to the Temple in Jerusalem.

In the Bible
The Hebrew term bikkurim and related terms for the “first fruits” derive from the same root as bekhor, “firstborn (see *Firstborn). On the same general principle that the firstborn of man and beast belonged to the God of Israel and were to be devoted to Him, the first fruits, including the first grains to ripen each season, were to be brought as an offering to God. Every Israelite who possessed the means of agricultural productivity was under this obligation (Ex. 23:19; 34:26, Num. 15:17–21; 18:12–13; Deut. 26:1–11). A frequent synonym for bikurim is reshit, “the first [fruits].”

Deuteronomy 26:1–11 contains detailed procedures for the offering of the first fruits, including the text of a liturgical recitation incumbent upon any who offered their first fruits in the sanctuary. The manner of oblation prescribed in that passage represents a distinctive mode, whereby the substances involved were not burnt on the altar but were merely displayed, and later assigned to the priests as part of their cultic income (cf. Num. 18:12–13; Deut. 18:3–5). On the other hand, Leviticus 2:14 speaks of minhat bikkurim, “a grain offering of first fruits,” prescribing that part of it be burnt on the altar. It would seem, therefore, that at least some of the grain brought as first fruits was disposed of in that manner, although the prescription of Leviticus may reflect the tendency to accommodate older forms of sacrifice to the particularly Israelite practice of the burnt offering. It is difficult to identify this minnah within the context of first fruit offerings. It has been identified with the “grain offering of fresh grain” (minnah hadashah) of Leviticus 23:16; but that poses a problem, since the rule was that no leavened dough could be brought up on the altar, and the offering of fresh grain mentioned in that passage was to be baked from leavened dough. The offerings of first fruits were both an individual obligation and a part of public festival celebrations, particularly the celebration of Shavuot, also called Hag ha-Bikkurim, “the first fruits festival” (Ex. 23:16; 34:22; Lev. 23:16–17; Num. 28:26).

A sheaf of the new barley harvest (*omer) was offered on the second day of the Passover festival (Lev. 23:10–11, 15–16). According to the Mishnah (Bik. 1:3, 6, 9), in Second Temple times the pilgrimage to the Temple for the purpose of offering the first fruits could be undertaken anytime between Shavuot, in the late spring, and *Sukkot, in the fall (but see
below), but the festival of Shavuot was the first date for this offering. A rite notionally related to the offering of first fruits was the bringing of the fruit of trees during their fourth year of fruit bearing (Lev. 19:23–25). In both cases, an offering was required to release the fruit, as it were, for consumption by its owners. According to Leviticus 23:17, the offering of fresh grain was to be presented in the form of two loaves of baked, leavened bread.

There are no specifications as to the amounts or percentages of seasonal yield required for the offering of first fruits, but there does exist, on the other hand, a text for the recitation which was to accompany the offering, in Deuteronomy 26:5–10. A part of it has been incorporated in the Passover Haggadah. It consists of a review of Israel’s early history, tracing Israelite origins to the pre-Egyptian period, and expressing gratitude to God for the redemption from Egypt. It culminates in an acknowledgment that as an Israelite, the one reciting the declaration is thankful for having been brought to the rich Promised Land, in recognition of which he is offering the first fruits of the land as a sacrifice. Only a few such recitations are preserved in the Torah, another being designated for the bringing of a type of tithe (Deut. 26:13–15).

Typologically, the offering of first fruits would seem to represent a very ancient practice, and yet it is not referred to in the historical books of the Bible, in descriptions of cultic activity, and most references are limited to the Pentateuch, post-Exilic literature and the Book of Ezekiel. The celebration mentioned in Judges 9:27, in connection with the grape harvest, may be related to the offering of first fruits, and a possible reference may be Judges 1:29. The Book of Proverbs (3:9) refers to the practice as a prerequisite to securing God’s material blessings. As noted above, certain problems remain in reconciling the codes of Leviticus and Deuteronomy, and generally speaking, the biblical evidence leaves some gaps in understanding precisely how the rites connected with the first fruits operated.

[Baruch A. Levine]

In Halakakh
According to rabbinc interpretation the duty of bringing first fruits was confined to the seven distinct species growing in Erez Israel, i.e., wheat, barley, grapes, figs, pomegranates, olive oil, and dates (“honey”). The fruits were given to the priests after the donor had recited the confession (Deut. 26:1–11) acknowledging God as the one who redeemed the Israelites from the Egyptian bondage, and expressing gratitude to God who brought them to the Promised Land. The bikkurim were brought between Shavuot (hence its designation as Hag ha-Bikkurim – “the first fruits festival”) and Sukkot. They could be brought as late as *Hanukkah, but after Sukkot no declaration was made.

If the fruits were stolen or became unclean or unfit for consumption, others had to be brought. A proselyte also had to offer the first fruits but he did not recite the confession as he could not say “which the Lord swore unto our fathers to give us” (Deut. 26:3). An Israelite (i.e., one who was not a priest or levite) was strictly forbidden to eat the first fruits; if he consumed them in error, a fifth of their worth in money had to be added as restitution (penalty). The Mishnah (Bik. 3:2–9) gives a vivid account of the first fruit offering ceremony in the period of the Second Temple. In the early morning hours, the people gathered in the open squares of the district towns and started their journey to Jerusalem, singing “Arise ye and let us go up to Zion, unto the Lord our God.” The people walked in procession headed by an ox whose horns were wreathed with gold and silver, and his head with olive branches. The pilgrims were accompanied by musicians playing the flute. Rich people took the first fruits in baskets of silver and gold, while the poor carried them in wicker baskets made of peeled willow branches (which they gave to the priests together with the first fruits). The baskets contained the choicest fruits and had pigeons perched on top; these were sacrificed at the Temple. At the outskirts of Jerusalem, the procession was met by the Temple prefects and treasurers, and the pilgrims were escorted amid the cheers of the populace to the Temple Mount. There the choir of the levites welcomed them with the chanting of Psalm 30. Originally, everyone who could recite the confession did so by himself. However, in order not to shame those who did not know the text (and might, therefore, refrain from offering the first fruit) it was ordained that all people repeat the confession as it was read to them by the priest.

Those who lived close to Jerusalem brought fresh fruit and those who lived far, dried fruits. The minimum quantity of first fruits that could be offered was 1⁄60 of the harvest. The first fruit had to be brought only from the harvest of the soil of historic *Erez Israel. According to rabbinc law, however, this included also some parts of Transjordan and southern Syria.

The first-fruit offering was accompanied by other shelaimim (“peace offerings”) and the pilgrims were bound, out of respect for the Temple, to stay in Jerusalem overnight before returning to their villages (Deut. 16:7). Like all terumah (“heave offerings”), the first fruits were consumed by the priests. A priest in mourning for a relative was, however, forbidden to eat them. With the destruction of the Temple, the duty of first-fruit offerings was suspended. The description of the first-fruit offering in the Mishnah Bikkurim is corroborated by Philo (Spec. 2:215–222).

In modern Israel, the kibbutzim hold bikkurim celebrations on Shavuot which are evocative of the ancient Temple ritual. The children participate in a procession in which agricultural products are carried and donations are made to the Jewish National Fund for land reclamation.

FIRT (Fuerth), JULIUS (1897–1979), Czech journalist and publisher. Born in Sestrouň near Sedlčany (Bohemia), he be-
came director of the Borový and Lidové Noviny publishing houses in 1936 and during the 1920s and 1930s attended the Pátečníci gatherings (see *Fischer, Otokar). He escaped from Czechoslovakia to England, where he worked for the Czechoslovak government-in-exile. Back home, from 1945 to 1948 he served as a deputy in Parliament and was in charge of the Melantrich publishing house. During his second exile, after 1948, he was director of Radio Free Europe in Munich.

Firt became well known for his book *Knihy a osudy (“Books and Fates”) published in exile and smuggled into Czechoslovakia, where it was published only in 1991. It presents a picture of the spiritual and cultural atmosphere of Masyk's First Republic as well as a wealth of information about Czech writers, poets, and journalists such as Josef and Karel Capek, Ferdinand Peroutka, Karel *Poláček, Ivan *Olbracht, Vítězslav Nezval, Karel Teige, Bedřich Fučík, the actor Hugo Haas, etc. Firt also contributed two articles about the role of Jews in the First Republic to *Die Burg (1973–74; "The Castle"). His *Záznamy (1985; "Notes") appeared posthumously describing Czechoslovakia's political situation in 1948 and his exile in London during World War II.

[Milos Pojar (2nd ed.)]

**FÍRÚZ,** Karaite family, probably of Persian origin, prominent from the 12th to 19th centuries. Its members were authors, physicians, poets, envoys, copyists, and bibliophiles. Approximately 50 members of the family can be traced. They include: AL-SHAMS AL-KARĪM IBN, head of the Karaites in Cairo in 1465 and court banker; and MOSES BEN ISAIAH, Karaite scholar active in Damascus, 1630–45. An engraver by profession, Moses b. Isaiah is referred to as "Jerushalmi," indicating that he had made a pilgrimage to Jerusalem. Possibly he should be identified with Moses b. Isaiah Firúz, the *hazzan* in Damascus, a translator from Arabic into Hebrew, mentioned in the itinerary of the Karaite *Samuel b. David.* His son DANIEL BEN MOSES, author and physician, active 1663–1700, wrote *Kitāb al-Murshid,* an Arabic compendium of the *Duties of the Heart* of *Bahya b. Joseph Ibn Paquda.* Firúz included in this a Karaite chain of tradition. He is probably the author of an Arabic introduction to the Karaite prayer book according to the Damascus rite published by Margoliouth. Poznański listed Firúz' liturgical poetry and also published his polemical poems directed against *Shabbetai Zevi* and *Nathan of Gaza.*

[Isaak Dov Ber Markon]

**FIRZOGERIN,** Yiddish word for “foresayer” or “precentor”; also *zogerke.* It came to refer to the woman who led prayers in the women's section of the synagogue. Since women were separated from men during worship, sometimes in a separate room, they needed a leader to help them follow the proper order of the service. This leader, reciting vernacular translations, enabled less educated women, who did not know Hebrew and often were illiterate, to pray in their own language. The *firzogerin* was probably not an official position in the Jewish community until late in the 16th century, and it was not firmly established as an East European institution until the 18th century. However, there is evidence that women functioned in that capacity during medieval times, especially in Germany. According to a poetic eulogy written by her husband, *Elezar ben Judah of Worms,* in the late 12th century, *Dul- cea of Worms* was said to know "the order of the morning and evening prayers. . . . In all the cities she taught women, enabling their pleasant intoning of songs." The 13th-century Richenza of Nuremberg is described in a contemporaneous martyrology book as a leader in the women's synagogue, and the gravestone of Urania of Worms, a cantor's daughter, calls her a prayer leader who "officiated before the women to whom she sang the hymnal portions." In the 14th century, Guta bat Nathan was "... the important young woman who prayed for the women in her gentle prayers." Ashkenazi Jews migrating into Italy in the 15th century may have brought this custom with them. Sixteenth-century documents describe Anna d'Arpino leading women's prayers in the synagogue in Rome on Saturdays and holidays, a job for which she was paid (although this was not always the case). The poet Deborah *Ascarello,* a Sephardi woman living in Rome, may also have been a prayer leader. She knew Hebrew and translated many parts of the Sephardi service into Italian, especially for women.

As Jews moved into Eastern Europe, the female precentor became an accepted institution. Often, the *firzogerin* was the rabbi's wife or daughter; she was likely to be the most learned woman in the community and often had some knowledge of Hebrew. Some later *firzogerins* wrote their own Yiddish translations of the psalms and prayers, sometimes adding heart-felt appeals that related to women's lives. Beginning in the 17th century, many of these prayers had kabbalistic overtones and some revealed a high level of Jewish scholarship.

By the 18th century, a number of well-educated women were serving as *firzogerins;* some wrote petitionary prayers called *tkhines* for women to recite both in the synagogue and at home. The 18th-century pseudonymous Sarah *Bas-Tovim* was a prolific writer of *tkhines.* After her death male writers appropriated her name to ensure the popularity of their own vernacular prayers. The figure of the *firzogerin* or *zogerke* continued into the 20th century; she is described in the anthropological study of the shtetl, *Life Is With People,* as a woman who “unlike most of them, is able to read and understand Hebrew. She reads the prayers and they repeat it after her, following each syllable and intonation...” A few of these women prayed leaders immigrated to the United States in the large migration of Jews that began in the 1880s, but by the second half of the 20th century, the *firzogerin* had disappeared in both Europe
and the Americas, made obsolete by the Sho'ah and an almost universal standard of literacy for women.

[Emily Taitz (2nd ed.)]

**FISCH, HAROLD** (Aharon Harel Fisch; 1923– ), author and critic. Fisch was born in Birmingham, England, where his father was rabbi. He studied at the University of Sheffield and at Oxford and in 1947 was appointed lecturer in English at Leeds University. In 1957, he emigrated to Israel, where he was appointed associate professor of English literature and head of the English department at Bar-Ilan University. He became full professor in 1964 and served as rector of the university from 1968 to 1971. He served as the Encyclopaedia Judaica departmental editor for English literature. His publications include *The Dual Image: The Figure of the Jew in English and American Literature* (1959, 1971), *Jerusalem and Albion: the Hebraic Factor in Seventeenth-Century Literature* (1964), *Hamlet and the Word: The Covenant Pattern in Shakespeare* (1971), S.Y. Agnon (1975), and *The Zionist Revolution* (1978).

He has also translated a number of works, including the Jerusalem Bible (1969). Fisch has been prominent in the Land of Israel Movement (*Ha-Tenu'ah le-Ma'an Erez Israel ha-Shelema*). In 1971, he founded the Institute for Judaism and Contemporary Thought, of which he is chairman. This institute holds an international colloquium each year and conducts study groups on aspects of contemporary Jewish experience.

**FISCHEL, ARNOLD** (1830–1894), religious leader, historian, and advocate for the American Jewish chaplaincy. Born in Holland, Fischel began his career in 1849 as a speaker on Hebrew literature in Brighton and Portsmouth, England. He published essays on such themes as “The Cosmogony of Moses” and “The Laws of Israel as Represented by the Greeks and Romans,” and translated Maimonides’ *Mishneh Torah* (Guide for the Perplexed) from the Arabic original. In 1851, he was engaged as lecturer by the Old Hebrew Congregation of Liverpool.

In 1856, Fischel accepted the invitation of Shearith Israel of New York City, the oldest Jewish congregation in America, to become its first permanent lecturer. He was welcomed by both the Orthodox and Reform press, and was active in the Hebrew Benevolent Society, Chevra Bikur Cholim VeKadesh, and Touro Literary Institute, among others. His synagogue sermons stressed Orthodox beliefs and praised the United States as a haven for Jewish freedom. In his Thanksgiving Day sermon of 1860, he supported the Union in the Civil War as more sympathetic to the Jews than the individual states.

Fischel sought to give positive portrayals of Jewish history to Christian audiences, commencing with his address on the Holy Land to the American Geographical and Statistical Society in 1858. He established his reputation as a pioneering historian of American Jewry with his address on “the history of the Jews in America” at the New York Historical Society in 1859 and again in 1861. He correctly authenticated Medieval Spanish Jewish coins discovered in Ohio in his 1861 talk at the American Ethnographical Society.

In 1861, Congress had enacted a law requiring that all military chaplains be Christian ministers, and the first Jew to be elected a chaplain, Michael Allen, was forced to resign. As a challenge to the law, Fischel applied for a chaplaincy and was refused because of his religion. With the authorization of the (Orthodox) Board of Delegates of American Israelites, Fischel traveled to Washington, D.C., to lobby for a change in the law while serving as a civilian chaplain for Jewish soldiers in the region.

Fischel secured a meeting with President Lincoln on December 11, 1861, gained the president’s support, and proceeded to lobby members of Congress. Christian views were divided between advocates of religious pluralism and Christian fundamentalists. After a broad public debate, the law was amended by Congress in July 1862 to accept chaplains of all religious denominations.

The Board of Delegates applied for a chaplaincy for Fischel, but the request was denied as unnecessary for the small number of Jewish soldiers in his region. Discouraged by this, and by a lack of support for other projects he envisioned on behalf of Jewish soldiers, Fischel returned permanently to Holland in 1864.

[Mark L. Smith (2nd ed.)]

**FISCHEL, HARRY** (1865–1948), U.S. businessman and philanthropist. Fischel was born in Meretz, Russia, and emigrated in 1885 to the United States, settling in New York City. There he entered the construction and real estate business and built up a sizable company employing largely Jewish builders, to whom he granted both Saturday and Sunday as paid days off at a time when the six-day week was universal in the trade. Fischel also soon became involved in Jewish communal affairs, concentrating on a number of institutions with which he remained associated in various capacities for the remainder of his life, particularly the Hebrew Immigrant Aid Society (after 1890), Beth Israel Hospital (after 1900), and the American Jewish Committee (after 1906). Shortly after the Balfour Declaration, he was active in the establishment of a number of development companies in Palestine. In 1932 he retired from business and devoted himself entirely to his philanthropic endeavors, which included the endowment of the Harry Fischel Foundation for Research in Talmud in Palestine (1933), and large donations.
to Yeshiva University during the depression of the 1930s. His attempts to get the New York Sabbath laws to recognize Saturday as the official Jewish day of rest are recorded in the biography of him by his son-in-law, Herbert Samuel *Goldstein, Forty Years of Struggle for a Principle* (1928). Fischel died in Jerusalem, where he spent the final year of his life.

**FISCHEL, WALTER JOSEPH** (1902–1973), scholar of Oriental Jewry. Fischel was born in Frankfurt on the Main. From 1926 to 1945 he was a member of the faculty of Oriental studies in the Hebrew University of Jerusalem, taking part in several expeditions to all countries of the Near and Middle East and India. From 1945 he was professor of Semitic languages and literature at the University of California, Berkeley. After his retirement in 1970 he was appointed professor of Jewish studies and history at the Santa Cruz campus of the University of California. Fischel's publications centered around two major research areas: medieval Islamic civilization and Jewish civilization. In the former field, his major publications include *Ibn Khaldun and Tamerlane-Their Dramatic Meeting in Damascus in 1401* (1952), *Ibn Khaldun in Egypt* (1967), and *Jews in the Economic and Political Life of Medieval Islam* (1937; reissued with an essay as *The Court Jew in the Islamic World*, 1969). He wrote on economic aspects of medieval Islam. In his research on Jewish civilization, he stressed the history and literature of the Jewish Diaspora in the Orient, especially *Iraq, Kurdistan, Persia, Afghanistan, Bukhara, and India*. He discovered many significant documents in Dutch, Portuguese, and Indian archives. His works on Persia include *The Bible in Persian Translation, Israel in Iran—A Survey of the Judeo-Persian Literature, and History of the Jews in Persia and Central Asia and Their Literature*. On the Jews of India he wrote many monographs including a comprehensive work in Hebrew, *Ha-Yehudim be-Hoda* (1960). Fischel served as departmental editor of the *Encyclopaedia Judaica* for the history of the Jews in Persia, Afghanistan, Central Asia, and India.

**FISCHELS, MEIR BEN EPHRAIM** (also known as Meir Fischels; 1703–1769/70), rabbi and talmudist. He was born in Bunzlau, and was a descendant of Judah Leib b. Bezalel (“the Maharal”) of Prague and a contemporary of Ezekiel Landau. His father is mentioned under the name Ephraim b. Meir Bums (Bimes) Margolioth of Bunzlau. Meir Fischels served for 40 years as head of the *bet din* and the yeshivah in Prague until his death. Of his work nothing has remained apart from a few responsa collected by his son and by his contemporary Eleazar Fleckeles, all his manuscripts having been burnt in the great fire that swept Prague in 1754, except for his novellae on *Bava Batra* and *Berakhot* that were still extant in 1905. He was a signatory of the ruling given in 1754 of the *Alloyei ha-Khillalah* (“leaders of the community”) with regard to the settlement of the disputes that arose in consequence of the conflagration. His name appears as Mayer Feischel Buntzl in the list of those who suffered loss through the fire. Ezekiel Landau refers to him as “enlightening me as well as halakhic scholars” (responsa *Noda bi-Yhudah*, YD, no. 82), makes appreciative reference to his erudition and capacity (no. 72), and mentions his halakhic decisions (nos. 81, 83, 89).

[Yehoshua Horowitz]

**FISCHER**, Czech family. MOSES (1759–1833), son of Meir Fischels, was active in the *Haskalah movement in Prague. Fischer signed with Raphael *Joel a petition (1790) to allow Jews to serve in the army, stating that fulfillment of military service was more important than the mitigous observance of religious commandments. He corresponded with Moses Mendelssohn on his commentary on the Pentateuch, among other subjects, and was a member of the *Gesellschaft der jungen Hebraer*. Later he became Orthodox and from 1816 served as rabbi in Vienna and as *kashrut* supervisor. In 1829 he settled in Eisenstadt.

Moses' son MARCUS (Meir, Maier; 1788–1858) moved from Vienna to Prague around 1810 and became a clerk in the Bohemian Jewish tax administration. Influenced by Baruch and Ignaz *Jeteles, Marcus began to write in both Hebrew and German on historical themes. In 1812 he published two parts of a history of Rome in Hebrew, *Korot Yemei Kedem* (the published parts covering the period until the fifth century B.C.E.), which he stated could teach devotion to duty, heroism, and patriotism. In 1817 Fischer published in Hebrew a history of Moroccan Jewry between the seventh and the ninth centuries based on historical material written in several languages.

Marcus falsified a manuscript, the so-called Ramshak or Wallerstein chronicle. He put German "translations" from the Aramaic and Yiddish sections that it allegedly contained at the disposal of Moses Wolf *Jeteles who incorporated them in Zikkaron le-Yom Aharon* (1828). These quotations show that there were good relations between Jews and gentiles during the *Hussite period, and attest to the existence of customs which the Prague *maskilim* were then intending to introduce. Fischer's falsification was apparently influenced by the nascent Czech national ideologies, which led the Czech patriot priest Wenceslas Hanka around the same time to falsify old manuscripts in order to demonstrate the antiquity of Czech literature. Fischer also published the *Historisches Taschenbuch fuer Israeliten und Israelitinnen* (1811), as well as a collection of poems, and several articles in *Sulamit*. His writings reflect his sympathies for republicanism, his appreciation of *Joseph II, and his opposition to the French Revolution.

[Meir Lamed]
FISCHER, ANNIE (1914–1995), Hungarian pianist. Born in Budapest, Fisher studied in the Liszt Academy of Music with Arnold Szekely and Dohnani, and made her début in 1922, playing Beethoven's First Concerto. In 1922 she made her European début playing in Zurich. Fischer won the Franz Liszt international Competition in Budapest in 1933 with a mature and brilliant performance of Liszt's B minor sonata. She embarked on an international career, interrupted by the war years, which she spent mainly in Sweden. She made her American début in 1961 and appeared at the Salzburg festival in 1964. Although she toured throughout the world as a concert pianist and recitalist, she remained essentially a European-based artist.

In 1949, 1955, and 1965 Fischer received the Kossuth prize, Hungary's highest cultural award. In 1965 she was made honorary professor at Budapest's Academy of Music and in 1974 received the Red Banner Order of Labor. Fischer established a reputation as a pianist of unique and visionary intensity. Her range of keyboard color was wide, from a tender crystal sound in Mozart, through a restrained and colorful Schumann, to a stormy and vigorous rendition of the Beethoven sonatas. As a profound pianist her interpretation was noble and intelligent, with a formidable command of structure. Fischer played music from Bach to Bartók. Mozart, Beethoven, and Schumann were central to her repertory, but she could equally master Chopin, Schubert, and Brahms. Inspirational and unpredictable, she made few recordings.

FISCHER, BERNARD (b. 1821), Austrian rabbi and author. Fischer was born in the village of Budikau, in Bohemia. He received his Ph.D. degree from the University of Prague in 1850. Fischer served as the rabbi of various small congregations in the district of Eger. He prepared new editions of Buxtorf's rabbinic lexicon (1873) and Wiener's Chaldaic grammar (1882). He also edited Bikkurei Ha-Ittim, an illustrated Hebrew monthly, in Leipzig in 1863.

FISCHER, CAROLUS (Karl; 1755–1844), Christian Hebraist. Fischer was librarian of Prague University and served as government-appointed censor of Hebrew books and translator in Prague from 1788 (see *Censorship*), the first layman to serve in this capacity. Fischer was on friendly terms with Eleazar Fleckles. His query about the validity of a Jew's oath to a gentile appears in Fleckles' Teshuvah me-Ahavah (no. 26). He wrote notes to Moses *Landau's Aramaic-German dictionary and an introduction to Leopold *Dukes' German translation of Rashi's commentary on the Pentateuch. In 1813 he submitted to the authorities a memorandum concerning the use of the term nokhri in talmudic literature; he left a summary of his opinions on Jewish problems based on his experiences in censorship (dated 1814). Fischer's Gutmei-

FISCHER, EDMOND (1920– ), U.S. biochemist. Fischer was born in Shanghai and from age seven was educated in Switzerland where he graduated in biology and chemistry from the University of Geneva and obtained his D.Sc. in chemistry under the direction of Kurt Meyer. After research appointments at the Rockefeller Institute, New York, and the California Institute of Technology, Pasadena, he joined the department of biochemistry of the University of Washington, Seattle (1953), where he was appointed professor (1961) and professor emeritus from 1990. Fischer’s main research discoveries relate to protein phosphorylation, the process involved in vital metabolic activities such as providing energy from stored sugar in active muscles. He and his colleagues helped to elucidate the enzymes controlling phosphorylation and the regulation of these enzymes. He was awarded the Nobel Prize in Physiology or Medicine (1992) jointly with Edwin Krebs. Subsequently he made important contributions to elucidating the way in which protein phosphatases help to orchestrate the response of cells to external stimuli. His many honors include the Werner Medal of the Swiss Chemical Society, the Senior Passano Award, and election to the American Academy of Arts and Sciences (1972) and the U.S. National Academy of Sciences (1973). He is an accomplished pianist who contemplated a career in music before turning to chemistry.

FISCHER, GYULA (Julius; 1861–1944), Hungarian scholar and rabbi. Born in Sárkeresztur, Fischer studied at the Budapest rabbinical seminary and was appointed rabbi of Györ (Raab) in 1887, Prague in 1898, and Budapest (1905) where he was chief rabbi (1921–43). In 1905 he became lecturer in rabbinic literature and Midrash at the rabbinical seminary, and for a time was acting director of the seminary. A man of wide Jewish and general erudition, Fischer wrote a monograph on Judah ibn Tibbon (1885) and translated into Hungarian Philo's Life of Moses (1925). He contributed many articles and essays in German and Hungarian to Jewish and
general periodicals. Fischer was a gifted orator and one of the first Hungarian Neolog rabbis to support the rebuilding of Erez Israel.

[Baruch Yaron]

**FISCHER, JEAN** (1871–1929), Zionist leader in Belgium. Born in Cracow, Fischer emigrated to Belgium in his youth and became a prominent diamond merchant. He was an active supporter of Herzl's political Zionism. During World War I he initiated the transfer of the *Jewish National Fund office to the Hague and, together with Jacobus *Kann, Nehemiah *de Lieme, and Julius *Simon, was a member of the committee established to run the activities of the Zionist Organization. Active in all spheres of Jewish public life in Belgium, Fischer headed the Zionist Federation for many years. In addition to many articles on Zionist matters, he published *Das heutige Palästina* (1908), a book about his 1907 visit to Erez Israel. The moshavah Kefar Yonah in the Plain of Sharon is named after him.

[Getzel Kressel]

His son Maurice (1903–1965) was an Israeli diplomat. Born in Antwerp, he settled in Palestine in 1930 and was a founder of Kefar Yonah. In 1931 he founded the Mattaʾei ha-Sharon Agricultural Development Company. During World War II he served as an officer in the Free French Army and was twice decorated. In the crucial years of 1947–48 Fischer, then in France, served as official delegate of the Jewish Agency Political Department. Later he served in France as Israel's diplomatic representative, and eventually ambassador, until 1953. At the same time he headed the Israel delegation to UNESCO. In 1948 he was cosignatory of the Fischer-Chauvel Agreement, which defined the status of French institutions in the newly founded State of Israel. From 1953 to 1957 he was minister to Turkey, and from 1960 until his death ambassador to Italy.

[Netanel Lorch]

**BIBLIOGRAPHY:** Tidhar, 2 (1961), 3750–51; *Haolam* (1929), 1037; (1930), 15.

**FISCHER, JOSEF** (1871–1949), rabbi, historian of Danish Jewry. Born in Hungary, Fischer served as dayyan and librarian of the Copenhagen Jewish community from 1893, and was in charge of its welfare work from 1901 to 1932. He was a leading member of the Mizrahi movement in Denmark. Fischer wrote extensively on the genealogy of Jewish families in Denmark and the history of Danish Jewry in general; some of his studies were translated into English and German. He edited the *Tidsskrift for Jødisk Historie og Litteratur* ("Journal for Jewish History and Literature") in 1917–25 and contributed to the *Dansk Biografisk Leksikon*. His son Leo became president of the Copenhagen Jewish community in 1964.

[Bent Melchior]

**FISCHER, LOUIS** (1896–1970), U.S. author and journalist, authority on Soviet Russia. Fischer, who was born in Philadelphia, worked first as a teacher. In 1917 he enlisted in the Jewish Legion recruited by the British in World War I to fight in Palestine. The war was over by the time he arrived in Palestine, but he stayed on to familiarize himself with the country and to become acquainted with Jewish leaders. In 1922 he went to Russia where he remained for 14 years. No foreign journalist then or later came to know so many of the top leaders of the Revolution. *Oil Imperialism* (1926) was Fischer's first book on the Soviet Union. Permitted by the Foreign Commissariat to study their archives, he wrote the highly authoritative two-volume study, *The Soviets in World Affairs* (1930). With the Stalinist purges in the mid-thirties, when many of his close friends were sent to concentration camps or shot, Fischer left the Soviet Union and went to Spain. There he enlisted in the International Brigades and, after the collapse of the Republican regime, went on a tour round the world. He took a particular interest in India, where he became a close friend of Mahatma *Gandhi and Jawaharlal Nehru. Later Fischer became disillusioned with Communism and he participated in *The God that Failed* (1950), a symposium of noted writers who had abandoned their belief in Communism. His books include: *Why Recognize Russia?* (1933); *Soviet Journey* (1935); *The War in Spain* (1937); *Stalin and Hitler* (1940); an autobiography, *Men and Politics* (1941); *Dawn of Victory* (1942); *Gandhi and Stalin* (1947); *The Life of Mahatma Gandhi* (1950); *The Life and Death of Stalin* (1952); *Russia, America and the World* (1961); and *The Life of Lenin* (1964). In 1959 he became a member of the Institute of Advanced Study at Princeton University, and later a research associate and lecturer at the Woodrow Wilson School of the university.

[Maurice Gerschon Hindus]

**FISCHER, MORITZ VON** (1800–1900), Hungarian porcelain manufacturer. Fischer's porcelain company in Herend, Hungarian, rendered distinguished service to the country's industry and art. He was compelled to struggle against innumerable difficulties before he succeeded in developing his small factory in 1839. Because of the company's skills and talent, it became a veritable art institute, comparing favorably with the established porcelain establishments such as those in Berlin and Meissen. The company was represented at a large number of international exhibitions, and invariably was awarded first prizes. In recognition of his services, Fischer's grandson, Eugène von Fischer, was raised to the nobility by Emperor Francis Joseph I in 1869.

**FISCHER, OTOKAR** (1888–1938), Czech writer, poet, playwright, translator, and critic. Fischer, who was born into an assimilated Jewish family in Kolin, Bohemia, became professor of German literature at Prague's Czech university. He edited the literary reviews *Kritika* and *Jeviště*, contributed to other important Czech periodicals, and served as the director of the Prague National Theater. One of the outstand-
ing exponents of Czech culture between the two world wars, Fischer was a prolific writer. His voluminous series of essays and monographs include two volumes on Heine, studies of Kleist and Nietzsche, and two collections of essays entitled Duša a slovo (“The Soul and the Word,” 1929), and Slovo a svět (“The Word and the World,” 1937). His works include more than a dozen volumes of poetry. In spite of his assimilated background, Fischer was always conscious of his Jewish spiritual roots and was tortured by a perpetual need for self-analysis. His second book of poems, Ozářená okna (“Lit Windows,” 1916), proclaims his origin, and in the collection Léto (“The Summer,” 1919), he again sees himself as a descendant of the *Wandering Jew. It was, however, only in the verse collection Hlasy (“Voices,” 1923), which marks his maturity as a poet, that Fischer accepted the inescapability of his Jewish heritage. It was indeed no mere chance that Fischer’s work on Heine (1922–24) was written at the same time as Hlasy; and in his translation of the Poèmes juifs of André *Spire, Fischer included a letter from Spire in which a parallel is drawn between the two poets. While both Heine and Fischer began writing not only in the language but also in the spirit of their environment, Spire notes, they could not in the end help returning to the Jewishness so deeply lodged in their souls. A number of Fischer’s dramas – notably *Přemyslovci (“The Přemysl Dynasty,” 1918), Herakles (1919), and *Otroci (“The Slaves,” 1925) – were Czech stage successes. His outstanding translation from German literature is his version of Goethe’s Faust. He also translated Heine, Kleist, Nietzsche, Schiller, Bruekner, Hofmannsthal, and Wedekind, as well as many other world-famous authors. He attended the informal Pátečníci gatherings (“Friday’s visitors”) which convened regularly every Friday on the initiative of the Czech writer Karel Čapek in the years 1924–1937, including President T.G. Masaryk and Foreign Minister E. Beneš. Fischer’s younger brother JOSEF FISCHER (1891–1945), philosopher and sociologist, was executed by the Nazis.

FISCHER, RUTH (née *Eisler,* also known as *Elfriede Golke* or *Friedlaender,* 1895–1961), Austrian Communist. Born in Leipzig, Ruth Fischer studied philosophy, politics, and economics at the University of Vienna where her father, Rudolph *Eisler,* was a professor of philosophy. She was a sister of Gerhardt *Eisler* and Hans *Eisler.* She became co-founder of the Communist Party of Austria in November, 1918 and settled in Berlin during the following year. A leading figure in the German Communist Party, she was a member of the presidium of the Communist International and was elected to the Reichstag in 1924. In 1926 she was suspended from the party but continued to sit in the Reichstag until 1933, when she fled to Paris; she also remained a member of the Reichsrat from 1924 to 1928. In 1941 she immigrated to the United States, where she developed a more critical stance regarding Stalinism. After 1955 she returned to Paris, where she died in 1961. Ruth Fischer published several works on international Communism including: Stalin and German Communism (1948), Von Lenin zu Mao; Kommunismus in der Bandung-Aera (1956), and Die Umformung der Sow etgesellschaft, Chronik der Reformen 1953–1958 (1958).

FISCHER, SAMUEL (1859–1934), German publisher, Fischer, who was born in Liptőszentmiklós, Slovakia, went to Berlin in 1881 and began trading there as a bookseller. In 1886 he founded the Fischer Verlag, specializing in the publication of foreign naturalist literature and of as yet little-known German authors. From 1898 onward, the character of the publishing house was largely determined by Moritz *Heimann,* who was later succeeded as literary adviser by the poet Oskar Loerke. Fischer lent enthusiastic support to the “Freie Buehne,” which sought to revitalize the German theater, and in 1889 began publishing its mouthpiece, the monthly *Die Neue Rundschau.*

Until the Nazi seizure of power in 1933 the Fischer Verlag was Germany’s leading literary publishing house. Fischer himself encouraged successive generations of aspiring young authors and secured the rights to publication of books by an impressive array of major writers, including Thomas *Mann,* Arthur *Schröter,* Jacob *Wassermann,* Hugo von *Hofmannsthal,* and Sigmund *Freud.* Loerke, a staunch anti-Nazi, tried vainly to save the company under Hitler, and courageously delivered Fischer’s funeral oration in 1934. Two years later, however, the publishing house was forced to move to Vienna and from there it was subsequently transferred to Stockholm (1938) and then to New York (1940). Gottfried Bermann-Fischer, the founder’s son-in-law, assumed control of the firm in 1934 and maintained its activity abroad. In 1972 Gottfried Bermann-Fischer and his wife Brigitte, the daughter of Samuel Fischer, resigned from the Board of the Fischer Verlag and retired from all publishing activities.

In 1950 the Fischer Verlag resumed its publishing operations in Frankfurt. The well-known Fischer Buecherei, which specializes in paperback editions, was founded in 1952. S. Fischer und sein Verlag by Peter De Mendelsohn, giving a complete history of the publishing house, appeared in 1972.

**BIBLIOGRAPHY:** G. Berman-Fischer, Der Fischer Verlag (1967).

FISCHER, STANLEY (1943– ), international economist and governor of the Bank of Israel. Born in Lusaka, Zambia, Fischer came to the United States in 1966 and was naturalized in 1976. He received both a bachelor and masters degree of science in economics from the London School of Economics
and a Ph.D. in economics from MIT (Massachusetts Institute of Technology). He served as assistant professor of economics at the University of Chicago until 1973, after which he served as associate professor and finally professor at MIT’s Department of Economics. During this time he was a visiting professor at the Hebrew University of Jerusalem and the Hoover Institution at Stanford. His ties to Israel are deep.

Fischer moved into international finance and economy in the business world in 1988 as vice president, development economics, and chief economist at the World Bank, then becoming the first deputy managing director of the International Monetary Fund from September 1994 through August 2001. Fischer then held several positions at Citigroup beginning in February 2002. In January 2005 Fischer agreed to become the next governor of the Bank of Israel after nomination by Prime Minister Ariel *Sharon and Finance Minister Binyamin *Netanyahu and a recommendation by the Israeli cabinet. He was appointed to the five-year term on May 1, 2005. While some criticized the appointment of a non-Israeli to the position, Finance Minister Netanyahu defended the decision, stating that Fischer is knowledgeable about Israeli economy and society. “The fact that a man like him is ready to finish his affairs at Citigroup, immigrate to Israel, and become the central bank governor here is a golden opportunity for the Israeli economy,” Prime Minister Sharon said in a statement. Fischer’s appointment meant a substantial pay cut, a long-distance move, and the necessity to become immersed in learning more of the Hebrew language, which he already spoke fairly well.

A Guggenheim Fellow, Fischer is also a Fellow of the Econometric Society and the American Academy of Arts and Sciences. His memberships include the Council on Foreign Relations, the G-30, the Trilateral Commission, and designation as research associate of the National Bureau of Economic Research. He served on boards for the Institute for International Economics, the International Crisis Group, Women’s World Banking, and the International Advisory Board of the New Economic School in Moscow.

Fischer’s lengthy list of published works includes extensive writings for scholarly and economic journals. He also held positions as associate editor, editor, and member of editorial advisor boards for a number of economic journals. Books authored or edited by Fischer include *Macroeconomics,* (co-author, 2004); *IMF Essays from a Time of Crisis: The International Financial System, Stabilization, and Development* (2004); *The Economics of Middle East Peace* (co-editor, 1994).

**FISCHHOFF, ADOLF** (1816–1893), Austrian politician; one of the leaders of the 1848 revolution. As the first to suggest solutions to the problems of the Hapsburg monarchy by placing its various nationalities on an equal footing, he influenced the formulation of Jewish *Autonomism. Born in Budapest, Fischhoff went to Vienna in 1836 to study medicine. After the outbreak of the revolution, he became head of its highest governing body, the security council (Sicherheitsausschuss) and was active in various administrative capacities and in parliament. Fischhoff remained to face trial after the failure of the revolution. Acquitted in 1849, he was nonetheless deprived of political rights which were not restored to him until 1867. He practiced medicine in Vienna, but lost his assets in the stock-market crash of 1873. Subsequently he settled in Emmersdorf, Carinthia, where Austrian politicians came to consult the “sage of Emmersdorf.” In collaboration with Joseph *Unger, he published anonymously Zur Losung der ungarischen Frage (1861) outlining the compromise reached in 1867. In Oesterreich und die Buergschaften seines Bestandes (1869) he suggested the introduction of municipal autonomy, decentralization, and representative institutions, in conjunction with a conciliatory attitude toward the nationalities and their rights, a nationality law, and a court of national arbitration. In 1875 he published a pamphlet in favor of disarmament, Zur Reduktion der kontinentalen Heere. He was unsuccessful in an attempt in 1882 to found a Deutsche Volkspartei to rally liberals from all nationalities, the chief opposition coming from the Jewish leaders of the Vienna German liberals. Fischhoff’s ideas were fundamental to the development of Jewish national policy in the Hapsburg domains. Joseph Samuel *Bloch tried to apply Fischhoff’s ideas on relationships in the multi-national Austro-Hungarian Empire for the benefit of Galician Jewry. The *Juedische Volkspartei formulated its program along the lines of Fischhoff’s Deutsche Volkspartei. Fischhoff was rarely active in Jewish affairs, but in 1841 he drew up, at the request of Leo *Herzberg-Fraenkel, a statute of association for Jewish agricultural colonization in Galicia. He signed the request to permit the founding of a *Kultusverein in Klagenfurt. He corresponded with some of his friends in Hebrew script. It was Fischhoff’s express wish to be buried in the Jewish cemetery.

**FISCHHOFF, JOSEPH** (1804–1857), Austrian pianist and composer. In 1813, Fischhoff began to study at the lyceum in
Brünn, at the same time receiving instruction in music from the pianist Jahelka and the bandmaster Rieger. After completing his studies at the lyceum, he went to the University of Vienna to study philosophy and medicine.

The sudden death of his father in 1827 changed Fischoff’s career. He decided to devote himself from that time entirely to his art, and in 1833 became professor at the conservatory of music in Vienna. He was one of the most popular pianists in the Austrian capital, distinguishing himself particularly by his rendition of the compositions of Bach, Beethoven, Mendelssohn, and Chopin. He published a string quartet, many piano pieces, variations for the flute, and songs.

FISCHMANN, NAHMAN ISAAC (c. 1809–1878), Hebrew writer. A member of the young Hasalker group in Lemberg, Fischmann published his first book of poetry, Eshkol Anavim, in 1827. He was one of the group which published the Ha-Rokh pamphlets that sharply criticized the studies by Italian (Reggio and S.D. Luzzatto) and Galician (mainly S.J. Rapoport) scholars with the stated purpose of defending “Jewish traditions.” Fischmann wrote two didactic biblical plays, Sisera (1841) and Kesher Shewna (1870), and published a second volume of poetry, Ha-Et ve-ha-Meshorer, in 1870. He left many unpublished poems and talmudic studies, some of which appeared later in various periodicals.

FISCHER, HAROLD (Harold; 1923– ), literary scholar specializing in general literature and the mutual relationship between

BIBLIOGRAPHY: J.L. Landau, Short Lectures in Modern Hebrew Literature (1938), 262–70; S. Bernfeld, Toledot ShIR (1899), 98ff. [Getzel Kressel]

FISICUS JUDAICUS, a fund of the Roman Empire into which was paid the money from the special tax levied on the Jews by *Vespasian after the destruction of the Temple (Jos., Wars 7:218; Dio Cassius 66:7, 2). This imposition, a poll tax of two drachmae, was officially paid to Jupiter Capitolinus and took the place of the half-*shekel* which the Jews throughout the world had contributed to the Temple while it stood. There is evidence to show that this tax was levied in Egypt from 71–72 C.E. onward. In these documents it is called “the Jewish tax” and a great deal is known about it, particularly from ostraca from Edfu. It is clear that in Egypt even women and children as young as three were liable, although they had been exempt from the half-shekel. The tax was probably paid in Egypt only until the age of 62. In Rome itself a special procurator called procurator ad capitularia Judaeorum was in charge of the fiscus (H. Dessau (ed.), Inscriptiones Latinae Selectae, 1 (1892), 330, no. 1519). In addition to the financial burden it imposed, the tax was humiliating for the Jews. During the reign of Domitian (81–96) the methods of collecting the tax were strengthened and apparently the Roman authorities became much more rigorous in determining who was liable for taxation. It was imposed on those who had been born Jews as well as those who concealed the fact that they were Jews, and on proselytes to Judaism. In various ways this opened the door to possibilities of calumny, causing suffering to many residents in Rome, and possibly beyond. Suetonius (Vita Domitiani, 12) relates that when he was young an old man of 90 was examined to see whether he was circumcised, which shows that during this period the tax was levied even on those above the age of 62. After the murder of Domitian in 96, the atmosphere changed for the better as is seen from the coins of Nerva which bear the inscription fisci Iudaici calumnia sublata. The levy of the tax continued. The latest documentary evidence is a papyrus from the village of Karanis in Fayyum, upper Egypt (Tcherikover, Corpus, 3 (1964), 17–18, no. 460, line 7, dated 146 C.E. or 168 C.E.). Literary sources indicate that the tax was still in existence in the first half of the third century (Origen, Ad Africans, 14). It is not known when the tax came to an end, but some attribute a decisive role in its abolition to "Julian the Apostate."

Jewish and non-Jewish culture in literature. Fish was born in Birmingham, served as an officer in the British army, and fought in World War II. He graduated in 1946 from Sheffield University, and in 1948 he received his B.Litt. from Oxford University, doing research on Bishop Josef Hall. From 1947 to 1957 he was a lecturer at Leeds University. In 1957 he immigrated to Israel and joined the faculty of Bar-Illan University, becoming a professor there in 1964. In 1968 he was named the rector of the university, a position he held until 1971. In 1971 he founded the David and Batya Kotler’s Institute for Judaism and Contemporary Thought. From 1981 to 1987 he was chairman of the Lechter Institute for Literary Research. He published hundreds of articles and eight books, including (in Hebrew) *The Biblical Presence in Shakespeare*, *Milton and Blake and New-Old Stories: Biblical Patterns in the Novel from Fielding to Kafka*. In 2000 he was awarded the Israel Prize for literature.

[Shaked Gilboa (2nd ed.)]

**FISH, STANLEY** (1938– ), U.S. literary theorist. Born in Providence, Rhode Island, Fish earned his doctoral degree in English literature from Yale University in 1962. He taught at the University of California, Berkeley, and at Johns Hopkins University, before becoming professor of English and of law at Duke University (1985–98). He also served as the executive director of the Duke University Press from 1993 to 1998. Fish was then dean of arts and sciences at the University of Illinois at Chicago from 1999 to 2004.

Considered a leading scholar on John Milton, Fish is a well-known and sometimes controversial literary theorist. His first published work, *John Skelton’s Poetry*, appeared in 1965, but he rose to prominence with the publication of his second book, *Surprised by Sin: The Reader in “Paradise Lost”* (1967). Here Fish first presented his theory of “reader-response criticism,” in which he argues that reading is a temporal phenomenon and that the meaning of a literary work is located within the reader’s experience of the text. His *Self-consuming Artifacts* (1972) elaborated and developed the notion of reader response into a theory of interpretive communities, in which a reader’s interpretation of a text depends on the reader’s membership in one or more communities that share a set of assumptions. *Is There a Text in This Class? The Authority of Interpretive Communities* (1980), a collection of Fish’s essays, established his position as one of the most influential literary theorists of his day.

**FISH AND FISHING.**

In the Bible and Talmud

The Bible says that humans are to exercise dominion over the fish as well as over all other subhuman life (Gen. 1:28). Fish are divided into clean and unclean by biblical dietary laws: “These you may eat, of all that are in the waters. Everything in the waters that has fins and scales … you may eat. But anything in the seas or the rivers that has not fins and scales … is an abomination to you” (Lev. 11:9–11). Water creatures lacking fins and scales are an abomination because they move like land animals, transgressing the boundaries of creation (Douglas in Bibliography). Similarly, certain fish were avoided because they looked like snakes (Firmage in Bibliography). When the Hebrews complain to Moses about their diet of manna, they recall the fish of Egypt, which they refer to as “meat” (Num. 11:4–5). Egypt was known for its abundance of fish, and as such they are mentioned as victims of the first plague (Ex. 7:18, 21). The likeness of any fish is included in the general prohibition of graven images in Deuteronomy 4:15–18.

In the ancient period fishing served as a significant means of support and as an important economic factor both in Egypt and Babylonia, but probably less so in Israel. For most of the biblical period the southern Mediterranean coast was controlled by the Philistines and the north by Phoenicians. Natives of Israel would have fished in the Jordan and the Sea of Galilee (Firmage in Bibliography). Whereas *Hammurapi’s* laws 26–32 are devoted to fishermen in royal service (cos 11, 338–39), no regulation of fishermen is found in biblical law. While Ashurnasirpal’s banquet served 10,000 fishes (Wiseman in Bibliography), fish are absent from the delicacies of Solomon’s table (1 Kings 5:2–3). The Bible mentions “the Fish Gate” in Jerusalem (Zeph. 1:20; Neh. 3:3; 11 Chron. 33:14), which was named after the fish market nearby. Tyrian fish merchants selling their wares on the Sabbath in Jerusalem are mentioned in Nehemiah 13:16. The abundance of halakhot and aggadot about fishing and fishermen in both the Babylonian and Palestinian Talmuds and in various Midrashim indicates a considerable fishing industry in the periods of the Second Temple and the Talmud. This is also evident from the Gospels, as the first disciples of Jesus were fishermen on the Sea of Galilee. Josephus frequently refers to Jews engaged in that livelihood, as well as to a fleet of fishing vessels on the
Sea of Galilee. A Greek inscription from the second century C.E. about a family or band of Jewish fishermen has been found in Jaffa.

Although the Bible does not provide the name of any specific fish, it does mention many fishing implements: rod (Isa. 19:8), net (ibid., and Hab. 1:15), trap (Eccles. 9:12), fishing net (Ezek. 26:5), spear (Job 40:31), and small fishing boats (Amos 4:2, according to the Targum). The word reshet (“net”), frequent in the Bible in other contexts, appears only once as a device to catch fish (Ezek. 32:3).

The Bible’s most famous fish is the large one that swallowed Jonah and kept him in his belly for three days and nights (Jonah 2:1), and who, according to the New Testament, foreshadowed the shadow of the cross, under which Jesus would spend three days and nights.

The Babylonian and Jerusalem Talmuds both mention the fishing rod and a variety of traps and nets (akon, from the Greek o(n)kînos, “hook,” Kel. 23:5; koffa, “net,” Makhsh. 3:12; pitis, from the Greek πῖθος, TJ, Shab. 13:5; lehi, kore’i ve-oharei in Shab. 18a, Git. 60b–61a, MK 11a; harmei, the net-fishers of Tiberias, TJ Pes. 4:3, 30d). From the different fishing devices (such as snares in Kel. 23:5), it is possible to learn about other methods of fishing at that time (see Kid. 72a and BM 12b). The Midrash makes a reference to fishermen repairing their nets (Tanha., Va-Yelekh 2). According to the Testament of the Twelve Patriarchs, Zebulun “who shall dwell at the shore of the sea” (Gen. 49:13) was the first fisherman, and a detailed description of fishing is put into his mouth (Test. Patr., Zeb. 5:5–6, 8).

Fishing in the Halakhah

According to the Talmud the granting of fishing rights to all of the tribes around the Sea of Galilee was included in the “Ten takkanot of Joshua, the son of Nun,” enacted by Joshua on the conquest of the land, even though that body of water was completely within the boundary of the tribe of Naphtali. “It is permitted to fish with an angle in the Sea of Galilee provided that no sail is spread, as this would detain boats” (BK 81a–b). Fish in the sea are considered ownerless property and whoever catches them has the right to keep them. It is stated that according to biblical law, this applies even to those fish already netted as long as the net has not been drawn from the water. “In the interests of peace,” however, the rabbis ruled that the fish belong to the owner of the net (Git. 5:8). Details are given with regard to the prohibition of fishing on Sabbaths and festivals including the spreading of nets and the regulations concerning fishing on the intermediate days of festivals (Bezah 31a–2; TJ, Pes. 4:1, 30d; Shab. 17b; Yoma 84b; MK 11a).

Fish in the Halakhah

In Jewish tradition only fish that have scales and fins are permitted for consumption (see *Dietary Laws). They need not be slaughtered ritually (*shehitah) and their blood is not prohibited. According to a belief held in talmudic times, the eating of fish together with meat was considered harmful and predisposed the body to leprosy. In accordance with the rule that considerations of health are as important as ritual prohibitions, the rabbis consequently forbade the cooking or eating of fish together with meat (Pes. 76b). No interval before eating meat, however, is necessary (Sh. Ar., YD 116:2–3); it is enough to rinse the mouth or to chew something after eating fish. Fish are parve (considered to be neither meat nor milk). It may be consumed or cooked with milk. Fish, as a favorite dish for Shabbat, is mentioned in the Talmud (Shab. 118b) and by the Roman poet Persius Flaccus (*Satires, 5, 180 ff.). The abundance of fish in the Babylonian rivers and canals, making it a food available to the poor, may be one possible reason. A more homiletical reason is found in the words “and God blessed them” which occur in the biblical account of the creation of fish on the fifth day (Gen. 1:22), as well as in the subsequent account of the sixth day (Gen. 1:28) and the Sabbath (Gen. 2:3).

Fish, man, and the Sabbath are thus connected in a threefold blessing. Moreover, the Sabbath is said to be an anticipation of the messianic era which will be inaugurated by the eating of the legendary fish *Leviathan. Fishing from a river or pond is forbidden on Sabbath and on holidays; however, fish kept in a storage pond may be taken out (Bezah 31a–2). Fish were thought to bring good luck because they are the zodiac signs of Adar, the month of Purim. Representations of fish are widespread in the Orient as amulets, and in Eastern Europe some boys were called Fish as a good omen against the evil eye (see Ber. 20a; cf. Jacob’s blessing of his grandchildren, Gen. 48:16).

Fish was a favorite Sabbath food for Eastern European Jews living in poor economic conditions. This was presumably due to the abundance and cheapness of fish and to the special tax on kosher meat Jews had to pay to the government in the 18th century. Cooked, smoked, or salted fish was served as the main dish at the Third Meal (*Se’udah Shelishit) on Saturday afternoon, at the farewell meal (*Melavveh Malkah) on Saturday night at the end of the Sabbath and at communal dinners (see *Se’udah and *Siyum. (See also *Food.)

FISHBANE, MICHAEL (1943– ), U.S. scholar of Bible and Midrash. Born in Cambridge, Massachusetts, after early studies in philosophy and Jewish thought in America and Israel he became a student of Nahum M. *Sarna and Nahum N. *Glatzer and earned his M.A. and Ph.D. degrees from Brandeis University (1967 and 1971). He held a number of academic appointments in the Department of Near Eastern and Judaic
Studies at Brandeis University (1969–90). He served as the Nathan Cummings Professor of Jewish Studies in the Divinity School, the Committee on Jewish Studies, and the College of the University of Chicago (from 1990), where he was also a lecturer in the Law School.

Fishbane's initial work deals with literary and intertextual themes from the Hebrew Bible. In *Text and Texture: Studies in Biblical Literature* (1979), he demonstrates how biblical authors and redactors utilize stylistic and compositional devices in narratives and narrative units in speeches and prayers and in themes and motifs in order to convey the historical, cultural, and theological message of the Bible. In *Biblical Interpretation in Ancient Israel* (1985) Fishbane explores the existence and function of diverse forms of exegesis and interpretation in the Bible itself (scribal, legal, theological, prophetic-oracular). He thereby shows that not only is Hebrew Scripture the primary document for the exegetical tradition of Judaism and Christianity, but that it is an exegetical work in its own right. His *Biblical Myth and Rabbinic Mythmaking* (2003) is a study of myth in the Hebrew Bible and mythmaking in classical rabbinic literature and medieval Jewish mysticism. He demonstrates that certain types of myth are endemic in Jewish theology and are not contradictory to aspects of monotheism, diametrically opposing the contention that there was no myth in the rabbinic age (Ephraim E. Urbach), and that it is a late and foreign implant in medieval Spanish Kabbalah (Gershom Scholem).

Fishbane’s point that textual interpretation explicates the plain-sense of primary sources in their original cultural, historical, and social settings, while also generating new values and explications in subsequent eras, is found in his *The Garments of Torah: Essays in Biblical Hermeneutics* (1989). This interpretative process informing Jewish religious thought also illuminates his *The Exegetical Imagination: On Jewish Thought and Theology* (1998), a series of essays dealing with the role Scriptural exegesis plays in Jewish speculative theology as well as ritual practice. His *The Kiss of God: Mythical and Spiritual Death in Judaism* (1994), awarded the National Jewish Book Award for Jewish Thought, explores selected rabbinic, philosophic, and mystical texts on the passion for religious perfection expressed as the love of God unto death itself, including acts of martyrdom and ritual replacements for actual death. Fishbane is also the author of the first full-length commentary on the Sabbath and festival *Hafurat* (2002).

Fishbane’s published articles and reviews in scholarly books and journals range from ancient biblical thought to the existential theology of Martin Buber and Franz Rosenzweig; and show how Jewish culture is permeated and regenerated by exegetical creativity. He served as editor-in-chief of the Jewish Publication Society Bible Commentary (for Prophets and Writings). Fishbane’s life’s work in tilling sacred texts and tracing subsurface traditions has led him to new explorations in the history of exegesis and theology and to projects involving cultural pedagogy and interreligious dialogue.

[Fred Rosner]

**FISHER, MAURICE** (1872–1934), U.S. physician and physical anthropologist. Born in Russia, Fishberg emigrated to the U.S. in 1889. He became clinical professor of medicine at the New York University and Bellevue Hospital Medical College. He served as chief physician and director of the tuberculosis service of the Montefiore Hospital and other institutions, and as medical examiner of the United Hebrew Charities of New York City. Fishberg became a recognized authority on pulmonary tuberculosis, and wrote a standard textbook on this subject, *Pulmonary Tuberculosis* (1916; 2 vols., 1925). He was a pioneer in the use of pneumothorax treatment for this disease, and helped to stimulate a campaign for the prevention of the malady by his demonstration of its high incidence among New York City schoolchildren. The other focus of his intellectual concern was the scientific study of the anthropology and pathology of Jews, in which field he made extensive investigations not only in the United States but also in Europe and North Africa. His various investigations culminated in the summary volume *The Jews; A Study of Race and Environment* (1911), in which he maintained the heterogeneity in racial composition of modern Jews. As anthropological consultant to the Bureau of Immigration and on behalf of a U.S. Congressional Committee, he visited Europe in 1905 and 1907 to study aspects of the immigration problem. His report was published by the U.S. government at the direction of President Theodore Roosevelt. He also served as chairman of the anthropology and psychology section of New York Academy of Science and as vice president of the Academy (1909–11).

[Ephraim Fischhoff]

**FISHEL (Fischel)**, wealthy family prominent in Jewish society in *Cracow-Kazimierz, Poland, at the close of the 15th and first
half of the 16th century; named after Ephraim Fishel with whom the family arrived in Cracow from Bohemia. He and his four sons had commercial dealings with the Polish nobility. After initial friction with earlier-established Cracow Jews, the Fishel family took a leading place in the community, and two of its members were among the signatories of an agreement between the community leaders and the municipal council in Cracow in 1485. By 1475 Ephraim Fishel senior had died and his extensive business had been taken over by his sons. Of them Moses (d. c. 1504), a banker and one of the community leaders, mentioned first in 1477, was principally engaged in the lease of customs duties and other royal revenues. In 1499 he was accused of extortion in collecting the poll tax from the Jews of the region of “Gniezno. In 1503, with his brother Jacob, Moses leased the royal customs revenues in the provinces of Great Poland and Masovia for an annual payment of 2,500 Hungarian florins, 24 kg. of saffron and 120 kg. of black pepper. His wife Rachel (Raszka Możyeszowa) engaged independently in moneylending from 1483. She was in contact with the courts of kings Casimir IV, John Albert, and Alexander. As creditor of Polish kings, she received compensation in an interesting way from King Alexander. In 1504 he annulled the crown debts due to her and her late husband and ordered the mint to mint coins from her silver bars; the coins were worth 1600 florins more than the bars, being 1000 as repayment of principal and 600 for interest. Of their daughters, Esther married Jacob Pollak, Hendel married the kabbalist Asher Lemel, rabbi of Kazimierz, and Sarah married David Zehner of Buda, and he was ennobled, taking the name Powidzki. His descendants, still known as Powidzki, owned large landed estates in the 18th century. The relations between Stephan Powidzki and his Jewish kinsmen were strained, and on several occasions resulted in lawsuits. In about 1510, he befriended the notorious apostate Johannes *Pfefferkorn.

Moses’ son, Ephraim Fishel (late 15th and early 16th century), known as Franczek, a banker, tax and customs farmer, and communal leader, also engaged in many financial transactions with the Polish aristocracy. He was the first agent of Elizabeth (wife of Frederiek, prince of Silesia), the sister of King Sigismund I (1506–1548). In about 1512, he was appointed by the king, with “Abraham Judaeus Bohemus, as chief collector (exactor) of Jewish taxes throughout the kingdom, and was directly active in Little Poland and the province of “Russia,” an appointment that gave him a central role in Jewish communal life there. His exceptional status was strongly opposed by the leaders of the communities and he had serious difficulties in collecting the taxes. In 1515 his failure to perform these offices became evident and he left Poland for a while. After a number of years, he returned to Cracow, and in 1524, with his wife Chwalka (Falka), he was appointed servus regis to Sigismund I and Queen Bona.

The son of Ephraim (Franczek) and Chwalka, Moses died as a martyr in 1542. He was a pupil of Jacob *Pollak and studied medicine at Padua. After his return to Cracow, he practiced medicine as his sole occupation, achieving fame and becoming physician to state dignitaries. In consideration of his competence and achievements, the king exempted him from the payment of Jewish taxes in 1520. That year he signed the herem (“ban”) issued by Jacob Pollak against Abraham *Mintz. In 1532, on the death of Asher Lemel, Moses was appointed rabbi of the Polish community of Cracow (to be distinguished from that of the Bohemian Jews). At the end of 1541, in accordance with the Jewish policy of King Sigismund I, Moses was appointed, with “Shalom Shakhna b. Joseph of Lublin, as leader of the Jews (senior generalis) for Little Poland with authority extending over one quarter of the territory. The Jews, however, regarded this as an infringement of their autonomy and opposed the appointment. In 1541 Moses became involved in a false charge and appeared in a harsh trial concerning proselytes to Judaism. He was imprisoned and died soon afterward.

[Arthur Cygielman]

**FISHELS, ROIZL OF CRACOW** (16th century), printer/publisher. In 1586 Fishels printed a book of Psalms translated from Hebrew into Yiddish by R. Moshe Standl; this volume also included her own autobiographical Yiddish poem, which was printed at the front of the book. In this poem, the principle source of information about her life, she indicates the date of the printing and relates part of her genealogy as the granddaughter of Yuda Levy, who ran a yeshivah in Lodmir for 50 years. She modestly describes her father, Yosef Halevi, as having “not a bad reputation among the levi’im,” but her husband, whom she calls simply R. Fishels, is only named twice, without any description of his activities or accomplishments. All the male relatives she mentions were already deceased in 1586. At the end of the book Fishels again gave the date of completion and signed her name as “Roizl the Widow, daughter of R. Yosef Halevi.”

Fishels offers no further personal details in her poem, but she does write that she “taught [the psalms] to all who wanted to know / Until they began to come, one and all, to me.” This suggests that Roizl Fishels was a teacher, most likely of girls and women. Another line of the poem, “Here in the holy city of Hanover I donated [the psalms]” implies that she funded the printing of this Yiddish book so that it would be
available “in our own mother tongue.” Based on the frequency of Hebrew words in her writing, and her allusions to biblical characters, it is clear that she had at least some knowledge of Hebrew and was educated in Bible.

[F. Emily Taitz (2nd ed.)]

FISHER, CARRIE FRANCES (1956– ), U.S. actress and author. Born in Beverly Hills, Calif., to singer Eddie *Fisher and actress Debbie Reynolds and raised by her mother and shoe retailer Harry Karl following her parents’ highly publicized divorce, Fisher attended the Professional Children’s School in Los Angeles. She dropped out of Hollywood High School to join the Broadway musical Irene (1972) and made her film debut in Shampoo (1975), opposite Warren Beatty. She went on to study at the Central School of Speech and Drama in London for 18 months. After an audition with George *Lucas, Fisher landed the leading role of Princess Leia in the blockbuster film Star Wars (1977) as well as the next two films in the series, The Empire Strikes Back (1980) and Return of the Jedi (1983). Her connection to the original cast of the comedy TV show Saturday Night Live led her to take a small part as the jilted girlfriend of John Belushi’s character in The Blues Brothers (1980) and a role as Chevy Chase’s love interest in Under the Rainbow (1981). She appeared in smaller roles in such films as The Man with One Red Shoe (1985), Hannah and Her Sisters (1986), and When Harry Met Sally (1989). Fisher married singer Paul *Simon in 1983 after a seven-year relationship, but the couple divorced 11 months later in 1984. In 1985, Fisher nearly overdosed after wrecking with a Percocet addiction. At that time she entered a detox clinic and has remained drug-free since. The experience would later turn up in her 1987 bestselling novel Postcards from the Edge, which won the Los Angeles Pen Award and was adapted as a feature film in 1990 by director Mike *Nichols and starred Meryl Streep and Shirley Maclaine. Postcards was followed by the novels Surrender the Pink (1990), Delusions of Grandma (1994), and The Best Awful There Is (2004). Fisher continued to work in Hollywood as a script doctor and took on small parts in such films as Austin Powers: International Man of Mystery (1997), Scream 3 (2000), and Charlie’s Angels: Full Throttle (2003). In 2004, Fisher launched Conversations with Carrie Fisher, a cable TV talk show on the Oxygen network.

[Adam Wills (2nd ed.)]

FISHER, DONALD (1928– ), U.S. entrepreneur, merchant. Fisher, a native Californian, was a real estate developer until he was 41. Then, frustrated at not finding a pair of jeans that fit properly, he and his wife, Doris, decided to open their own clothing store in San Francisco. That was the beginning of Gap Inc., a company that grew into the biggest specialty store chain in the U.S., with thousands of units in North America, Europe, and Japan. After earning a B.S. from the University of California in 1950, Fisher went into real estate development. He found his true calling in 1969 when, dissatisfied with the jeans he purchased, he launched his own business. The then popular phrase “generation gap” inspired the company name. At first, Gap sold only Levi’s jeans as well as discounted record albums and tapes to lure younger customers. By the mid-1970s, Gap – which then had about 200 outlets – began adding private label merchandise, as did many other retailers. The company continued to open more stores, but it was apparent to Fisher that he needed someone with a merchant’s eye to make the stores more compelling. In 1983, he hired Millard S. *Drexler as his deputy and Gap’s fortunes began to soar. The same year, Fisher acquired Banana Republic, a chain of clothing stores specializing in safari looks. When that concept fell out of fashion, Banana Republic was restructured. In 1994, Gap launched another division, Old Navy, a discount chain that became an instant hit. The following year, Fisher stepped down as Gap’s chief executive officer and gave the post to Drexler, whose merchandising acumen had propelled the company to unprecedented heights. A soft economy and increased competition hurt Gap’s performance in the late 1990s and at the beginning of the new millennium, but a turnaround started in 2002. Fisher remained chairman until December 2003, relinquishing the title to his son Robert, a former Gap executive. At the time, Gap was a 3,070-unit retailing giant with annual sales of some $15 billion, and the Fishers’ initial investment of $65,000 in 1969 had made them billionaires several times over. Fisher was named to the California Board of Education in 2001.

[F. Mort Sheinman (2nd ed.)]

FISHER, DUDU (1951– ), Israeli singer and cantor. Fisher was born in Petah Tikvah. He displayed his singing prowess at a very early age when he would entertain his fellow yeshivah high school students at parties with hits from abroad with the original English language lyrics replaced by a text of a far more religion-friendly nature. He spent his military tour of duty as a soloist in the choir of the IDF Chief Rabbinate and, after his release, began to work as a cantor in the Great Synagogue in Ramat Gan and Tel Aviv. He subsequently took his cantorial talents to South Africa and began to perform regularly for Jewish communities around the world. Alongside his cantorial duties, Fisher began to perform a wide range of material in Yiddish. The venture proved highly popular and he recorded his first album of Yiddish songs, Goldeyn Lieder – Die Beste Yiddische Lieder (Golden Songs – The Best Yiddish Songs) in 1986. The following year he competed unsuccessfully for the right to represent Israel in the Eurovision Song Contest. Fisher’s contribution to Yiddish, hasidic, and cantorial music – both his recordings, such as Mammamanyo, and his numerous concerts around the world – were recognized by his award of the Shalom Aleichem Prize.
In 1987 Fisher auditioned for the Cameri Theater's Hebrew version of the musical Les Misérables. Despite the fact that the theater managers preferred a big name for the lead part of Jean Valjean, both the director and the producer of the show opted for Fisher, who was yet to become a star. The gamble proved successful and the show was a hit. Meanwhile, Fisher's recording work continued unabated and, in September 1988, he released two albums of hasidic and Yiddish songs. Fisher's international career really took off in 1993 when he starred in the English-language version of the Broadway production of Les Misérables, later playing the lead role when the production went to London's West End, where he performed in the presence of the Queen of England.

In 1989 Fisher performed in a show called Over the Rainbow, which included favorites from well-known musicals such as Porgy and Bess, The Wizard of Oz, and Cats. He subsequently released an album with material taken from the show. Fisher followed this with a production called Steps to Heaven in which he sang original and Hebrew-language versions of romantic hits performed in the 1960s by the likes of Paul Anka and Elvis Presley. Around this time Fisher cemented his lofty international status when he recorded an album of hits from musicals with the London Symphony Orchestra.

As an observant Jew, Fisher managed to keep his lead role in Les Misérables despite not taking part in the Friday evening or Saturday performances. In 1999 Fisher solved that logistical problem his own way when he put on a successful one-man off-Broadway show, aptly entitled Never on Friday.

[Fisher, Edwin Jack: FISHER, MAX M. (1908–2005), U.S. industrialist and community leader. Fisher was born to Russian immigrant parents in Pittsburgh, Pennsylvania, and was raised in Salem, Ohio. He attended Ohio State University on a football scholarship, but after an injury he worked his way through college and graduated in 1930 with a degree in business administration. He then moved to Detroit, where he entered the oil business. He was a pioneer in the development of Michigan's oil industry and in the successful introduction of new oil-refining processes in the 1930s and 1940s. Fisher helped found the Aurora Gasoline Company and was chairman of the board until 1957. He also dealt in finance and real estate and was a board member of various prominent corporations. In 1954 he made his first visit to Israel. From then on, he spent much of his life raising money for the Jewish state. He was also credited with leading and reorganizing every major Jewish organization in the U.S. Fisher raised hundreds of millions of dollars for Israel as well as for many charities, the city of Detroit, and the Republican Party.

A leading figure in the Republican Party in Michigan, Fisher was also a member of the Republican National Committee. Long interested in urban affairs, he was chosen chairman of New Detroit, Inc., a commission drawn from the city's industrial and business leadership to cope with the problems exposed by the 1967 summer riots. Soon after President Nixon's election (1968), he was appointed special presidential advisor on urban and community affairs. Fisher was active in Jewish life, serving as president of Detroit's Jewish Welfare Federation and chairman of its Allied Jewish Campaign, as general chairman of the United Jewish Appeal (1965–67), and its president (1967–71). He was chairman of the national border of Israel. Despite the fact that he was a highly publicized affair that damaged his career. His third wife was singer-actress Connie Stevens.

In addition to his many TV guest appearances, Fisher performed in three movies. He had a small part in the classic film All about Eve (1950). In 1956 he co-starred with Debbie Reynolds in the romantic comedy Bundle of Joy; and in 1960 he appeared in the drama Butterfield 8 with Liz Taylor, a film that won her an Academy Award.

In 1961 Fisher recorded the live album Eddie Fisher at the Winter Garden for his own label, Ramrod. He returned to RCA in the mid-1960s to record the albums Games That Lovers Play; People Like You; and You Ain't Heard Nothin' Yet. He did not record much during the rest of his career, but he continued to perform on concert stages and in nightclubs around America.

Married five times, Fisher has four children, all of whom are in show business: Carrie Fisher and Todd Fisher (with Debbie Reynolds); and Tricia Leigh Fisher and Joely Fisher (with Connie Stevens).

Fisher has written two autobiographies, namely Eddie: My Life, My Loves (1981), and Been There, Done That (1999).
FISHER, SAMUEL, BARON FISHER OF CAMDEN

(1905–1979), English communal worker. Samuel Fisher was born in London and from his youth was active both in Jewish communal affairs and in local politics. In 1953 he was elected mayor of the Borough of Stoke Newington, the first Jew to hold the office, and in 1965 of the newly created borough of Camden. His many public offices included chairmanship of the Metropolitan Water Board and of the Association of Labor Mayors. In the Jewish community he was one of the leading figures of the Jewish Friendly Society Movement, and in 1973–79 served as president of the Board of Deputies of British Jews. He was created a life peer in 1974 as Baron Fisher of Camden.

Fisher was an outstanding example of the new generation of Jewish communal leaders, whose roots were in the East End of London and who rose to the pinnacle of Jewish communal leadership without the advantage of birth or wealth but by hard work and a genuine concern for their fellows.

FISHER, SIR WOOLF (1912–1975), New Zealand industrialist and philanthropist. Born in Paraparaumu, he founded with his brother-in-law, M. Paykel, the firm of Fishel and Paykel, which developed into one of the largest manufacturers of refrigerators and home appliances in New Zealand. Fisher became one of the Dominion’s leading industrialists. In 1959 he was appointed by the government to lead the New Zealand trade mission to Australia. From 1960 he headed New Zealand Steel Ltd., a vast enterprise, manufacturing steel from iron sands. Fisher helped to found the New Zealand Outward Bound Movement for the physical and moral training of youth. Among his other philanthropic undertakings was the establishment of the Woolf Fisher Scholarship Trust enabling New Zealand teachers to travel overseas. He was also a bloodstock breeder and owner of some of New Zealand’s finest racehorses. Fisher was knighted in 1964 for his contributions to business life and philanthropy.

FISHMAN, JACOB (1878–1946), Yiddish editor and U.S. Zionist leader. Fishman was born in Poland and emigrated to the United States where he became active in pre-Herzl Zionist societies and later helped found the Zionist Organization of America. He wrote for and coedited the New York Yiddish dailies Tāgeblat (1893–1914) and Varhayt (1914–16), and from 1916 made his impact on the American Jewish scene as columnist and managing editor of the Jewish Morning Journal.

BIBLIOGRAPHY: Rejzen Leksikon, 3 (1939), 108ff.; LNYL, 7 (1968), 394–5. [Sol Liptzin]

FISHMAN, JOSHUA AARON (1926– ), U.S. educator, social psychologist, and sociolinguist. Born in Philadelphia, Fishman received his Ph.D. in social psychology from Columbia University in 1953. He was professor of social sciences at Yeshiva University (New York) from 1966. Fishman served as dean of the Ferkauf Graduate School of Humanities from 1960 to 1966 and as Yeshiva University’s vice president of academic affairs from 1973 to 1975. He then served as the distinguished university research professor emeritus of social sciences of Yeshiva University.

An international leader in his field, Foreman did pioneering research in sociolinguistics, which explores the social concomitants of language behavior and behavior toward language. Within this field, he specialized in national language planning and in determining the circumstances of language maintenance and shift, and established techniques for measuring and describing patterns of societal bilingualism. He was also an internationally recognized authority on language policy in developing countries. Fishman’s book Language Loyalty in the United States (1966) is a monumental work on the language maintenance efforts of non-English-speaking immigrants. His Yiddish in America (1965) is a significant study describing the efforts of American Jews of Eastern European origin to maintain their vernacular. In 1973 Fishman founded and became the ongoing general editor of the International Journal of the Sociology of Language. He also served as the editor of Vivo-Bleter from 1973 to 1977. He
was appointed a Fellow of the Institute for Advanced Study at Princeton in 1975.

Among other books published by Fishman, the following have some Jewish content: Language and Nationalism (1972); Language in Sociocultural Change (1972); Bilingual Education (1976); Language Planning Processes (1977); Advances in the Study of Societal Multilingualism (1978); and Advances in the Creation and Revision of Writing Systems (1979), while Studies on Polish Jewry: 1919–1939 (1973) and Never Say Die: A Thousand Years of Yiddish in Jewish Life and Letters (of which he was editor, 1980) are entirely of Jewish content. Subsequent books by Fishman include Ethnicity in Action (with M. and R. Gertner, 1985), Readings in the Sociology of Jewish Languages (1985), Ideology, Society & Language: The Odyssey of Nathan Birnbaum (1987), The Influence of Language on Culture and Thought (1991), In Praise of the Beloved Language (1996), Can Threatened Languages Be Saved? (2001), and Reversing Language Shift (2001).

Fishman was active in Yiddish cultural efforts. As a founding member and first chairman of the Research Planning Committee of the *YIVO Institute for Jewish Research in New York, he helped to develop a program for training new scholars in the social sciences and humanities as they relate to the Jewish field.

[Michael Denman (2nd ed.)]

**FITCH (Feiczewicz), LOUIS** (1889–1956), Canadian Zionist. Born in Suceava, Bukovina, Fitch was taken to Canada in 1891 by his parents, who settled in Quebec. He was associated with Samuel W. Jacobs, who became a member of the Canadian parliament in 1917, in the Ortenberg trial. In this trial Jewish citizens of Quebec laid charges of libel against antisemitic agitators who had stated that the Talmud permits Jews to harm Christians. In 1919 he was one of the founders of the Canadian Jewish Congress, of which he was the first secretary. In the early 1920s he was chairman of the schools committee of the Montreal Jewish Community Council, which was fighting for a separate Jewish school system in Quebec; the case reached the Privy Council in London. He later became president of the Canadian ORT. In 1938 he was elected to the Quebec Provincial legislature, representing the Union Nationale Party, but was defeated the following year. Fitch published a number of historical works. He traveled extensively in Spain, North Africa, Mexico and Central America to research various aspects of the history of the Jews in Spanish-speaking countries, and made a special study of the Golden Age of Hebrew Literature in Spain.

Fitch remained an active Zionist throughout his life. He was vice president of the Zionist Organization of Canada from 1921 to 1940.

**FITELBERG, GRZEGORZ** (Gregor; 1879–1953), conductor and composer. Born in Dvinsk, Latvia, Fitelberg became conductor of the Warsaw Philharmonic Orchestra (1906–11), the Vienna Opera (1912–13), and, between 1914 and 1920, the Petrograd Musikalnya Drama Orchestra, the Moscow Bolshoi, and Diaghilev Ballet orchestras. He then returned to the Warsaw Philharmonic and formed the Polish radio’s symphony orchestra. He spent World War II mainly in the U.S., and returned to the same orchestra, which he conducted until his death. Fitelberg’s compositions include two symphonies (1905 and 1907), two overtures (1905 and 1906), and two orchestral rhapsodies. His son, Jerzy Fitelberg (1903–1951), also a composer, was born in Warsaw and died in New York. He wrote mainly chamber and orchestral music in a neoclassical style, sometimes using Polish folk idioms.

**FISHMAN, WILLIAM HAROLD** (1914–2001), biochemist. Fishman was born in Winnipeg, Canada, and became a U.S. citizen c. 1942. He graduated from the University of Saskatchewan (1935) and got his Ph.D. in biochemistry from the University of Toronto (1939). After postdoctoral research at the University of Edinburgh (1940) and Cornell University Medical School (1941), he joined the Bowman–Gray School of Medicine in Winston-Salem, North Carolina, followed by the University of Chicago (1945) and Tufts University, Boston (1948–76), where he became professor of pathology and first director of the Tufts Cancer Research Center (1971). In 1976 he and his wife and colleague Lillian Fishman founded the La Jolla Cancer Research Foundation (now the Burnham Institute), where he worked for the rest of his life. Fishman’s research concerned the relationship between normal cell development and cancer (oncodevelopmental biology), and identifying markers for diagnosing cancer. His honors included the annual award from the International Society for Oncodevelopmental Biology and Medicine (1994), which recognized his pioneering role in this field.

[William D. Rubinstein (2nd ed.)]

**FISHMAN, WILLIAM** (1921– ), British historian. Born to Russian immigrant parents in London’s East End, Fishman left school at 14 to become a clerk and was involved in the “Battle of Cable Street” in 1936. After World War II he received a degree from the London School of Economics and became probably the first British professionally trained historian of his immigrant background to study the Jewish East End. From 1972 Fishman was Barnett Shine Senior Research Fellow at Queen Mary College. His best-known work, East End Jewish Radicals, appeared in 1975, and he has also written several other pioneering studies of the East End working class. Fishman has been very influential in broadening the traditional “meliorist” focus of Anglo-Jewish history from its elites to the inclusion of post-1880 immigrants and of radical groups. A Festschrift for Fishman, Outsiders and Outcasts: Essays in Honour of William Fishman, edited by Geoffrey Alderman and Colin Holmes, appeared in 1993.

[William D. Rubinstein (2nd ed.)]

**FITELBERG, GRZEGORZ** (Gregor; 1879–1953), conductor and composer. Born in Dvinsk, Latvia, Fitelberg became conductor of the Warsaw Philharmonic Orchestra (1906–11), the Vienna Opera (1912–13), and, between 1914 and 1920, the Petrograd Musikalnya Drama Orchestra, the Moscow Bolshoi, and Diaghilev Ballet orchestras. He then returned to the Warsaw Philharmonic and formed the Polish radio’s symphony orchestra. He spent World War II mainly in the U.S., and returned to the same orchestra, which he conducted until his death. Fitelberg’s compositions include two symphonies (1905 and 1907), two overtures (1905 and 1906), and two orchestral rhapsodies. His son, Jerzy Fitelberg (1903–1951), also a composer, was born in Warsaw and died in New York. He wrote mainly chamber and orchestral music in a neoclassical style, sometimes using Polish folk idioms.
FITERMAN, CHARLES (1933– ), French politician. Born in Saint Etienne, France, Fiterman, a qualified electrician by trade, made his way to the number two position in the French Communist party, the second largest communist party in the Western world. In the first Mitterrand administration (1981–1984) he was one of the four communist ministers and was in charge of transport. Fiterman is a cool, moderate politician who follows traditional party lines.

His unsuccessful challenge to the leadership of the Communist party by Georges Marchais led to his exclusion from central positions in the party and he became one of the leaders of the “reformers” wing demanding reform and modernization of the remaining traditional communist parties in the world.

[Gideon Kouts]

FIVE SPECIES, the varieties of seed to which the halakhah concerning the agricultural produce of Ereẓ Israel apply. The Mishnah lists the five species as hittim, se‘orim, kusmin, shibbolet shu‘al, and shippon (Hal. 1:1). They are known in literature by the generic names tevah (“produce,” “increase”); Hal. 1:2) and dagan (“corn,” i.e. grain). In the Bible, however, both terms have a wider meaning; tevah denotes the “increase” of the threshing floor and the winepress (Num. 18:30), the vineyard (Deut. 22:9), and the corn (11 Chron. 32:28); and dagan (often juxtaposed to “wine” and “oil”) denotes the blessings of the earth. The term bar occurs only in the Bible, and applies to corn from which the chaff has been winnowed (Jer. 23:28; et al.). The exact definition of the five species is problematical. Feliks maintains that three of the five are species of the genus Triticum (“wheat”), and identifies (1) hittim as hard and bread wheat (Triticum durum and vulgare); (2) kusmin as rice wheat (Triticum dicoccum); (3) shippon as spelt wheat (Triticum spelta); the last two are species of the genus Hordeum (“barley”); (4) se‘orim is six- and four-rowed barley (Hordeum sativum and vulgare); and (5) shibbolet shu‘al is two-rowed barley (Hordeum distichum). All five species grew in Ereẓ Israel in ancient times, as was not the case with oats (the usual translation of shibbolet shu‘al) or rye (that of shippon).

According to the halakhah these five species are subject to the laws relating to the blessings said before and after meals (see *Grace after Meals), to hallah (the separation of a portion of dough to the priests; Hal. 1:1), to the laws concerning leavened and unleavened bread on Passover (Hal. 1:2), and to the prohibition against harvesting or eating produce until the omer has been offered (Hal. 1:1). With respect to the law of kilayim (the prohibition on mixing heterogeneous plants in a field), kusmin and shippon are regarded as one species, and se‘orim and shibbolet shu‘al as another (Kil. 1:1). As regards combining different doughs to form the minimum quantity liable to hallah, in which taste is the determining factor, hittim and kusmin are reckoned as one species (Pes. 35a).

The Talmud records an important dispute between Johanan b. Nuri and the sages. The former maintained that rice, too, was a species of grain and, like the five species mentioned above, was subject to the laws of Grace after Meals, hallah, and unleavened bread. He also included as liable to hallah, karmit (Pes. 35a), apparently a plant of the order Gramineae which grows in swamps – the Glyceria fluitans. Although Johanan b. Nuri’s view was not accepted as halakhah, there were places in Babylonia where hallah was separated from dough made of rice, since it was their staple food (Pes. 50b–51a). However, since rice is usually sown after Passover and does not ripen until the end of summer, Johanan b. Nuri is not reported as claiming that the laws of omer apply to it, since this would mean that it could not be eaten until the following spring.

[Lea Roth]

“FLACCUS, AVILLIUS AULUS, prefect of Egypt 32–38 C.E.

Until the death in 37 of Tiberius, to whom he owed his appointment, Flaccus discharged his duties with devotion and ability. However, with the accession of Caligula and the consequent uncertainty of his position, his attitude toward the Jews of Alexandria changed for the worse. He withheld their expression of homage to Caligula on the latter’s accession, permitted the mob to jeer at the Jewish king Agrippa when he visited Alexandria, allowed them to place idols in the local synagogues, and issued an edict declaring the Jews to be aliens. He arrested and maltreated members of the gerousia (the local community council) and ordered Jewish homes to be searched and any weapons found to be confiscated. When the Jews were attacked and many of them killed by the Alexandrians, Flaccus made no attempt to restrain the mob. Suddenly arrested, he was sent to Rome and there banished to Andros, and later executed. Philo, who describes the entire episode in his In Flaccum, saw in his fate the hand of Providence.

[Lehuda Feliks]
thx that unlike "Josephus, who states that the Temple was destroyed against the wishes of Titus, Valerius Flaccus extols its destruction (although he refers generally to Jerusalem and not specifically to the Temple); this suggests that Josephus' description is an attempt to minimize the initiative taken by Titus in the destruction of the Temple. There is no reason to assume that the proem was composed immediately after the destruction or even during the reign of Vespasian; the conquest of Jerusalem was well remembered for many years. Scholars differ as to the date of the proem, some placing it in the reign of Titus, and others in that of Domitian.

[Menahem Stern]

FLAG. There are indications that banners or emblems were in use among the Israelites even in biblical times (see "Banner"). The expression הַנְּדִבָּתָםּ אֲבֹת לְבֵית הַשָּׁרוֹן – "the banner (or ensign) or their patriarchal house" (Num. 2:2) – appears to denote the physical emblem of a tribe, a patriarchal house, or a family, and it was thus understood in the Midrash (Num. R. 2:7), which gives the following description of the flags of the 12 tribes, with proof verses where the reason is not immediately obvious:

There were distinguishing signs for each prince; each had a flag (mappah) and a different color for every flag, corresponding to the precious stones on the breastplate (lit. "heart") of Aaron. It was from these that governments learned to provide themselves with flags of various colors. Each tribe had its own prince and its flag whose color corresponded to the color of its stone. Reuben's stone was ruby; the color of his flag was red, and embroidered thereon were mandrakes. Simeon's was topaz and his flag was green, with the town of Shechem embroidered thereon. Levi's was sapphire (emerald) and the color of his flag was a third black, a third red; embroidered thereon were the Urim and Thummim. Judah's was carbuncle and the color of his flag was like clarified wine of a not very deep red; on it was embroidered a camp. Naphtali's was an amethyst and the color of his flag was similar to sapphire; embroidered on it was like a wolf. Joseph's was onyx and the color of his flag was black like stibium; embroidered thereon were the sun and moon. Zebulun's was an emerald and the color of his flag was white, with a ship embroidered thereon. Dan's was jacinth and the color of his flag was similar to sapphire; embroidered on it was a serpent. Gad's was an agate and the color of his flag was neither white not black but a blend of black and white; on it was embroidered a camp. Naphtali's was an amethyst and the color of his flag was like clarified wine of a not very deep red; on it was embroidered a hind. Asher's was a beryl and the color of his flag was like the precious stone with which women adorn themselves; embroidered thereon was an olive tree. Joseph's was an onyx and the color of his flag was jet black; the embroidered design thereon for both princes, Ephraim and Manasseh, was Egypt because they were born there. A bullock was embroidered on the flag of the tribe of Manasseh. Benjamin's stone was a jasper and the color of his flag was a combination of all the twelve colors; embroidered thereon was a wolf.

The word nes, mentioned in the Prophets (Isa. 5:26; 62:10; Jer. 4:6; Ps. 60:6), is also close to the modern "flag," standing as it does for a signal which may flutter in the breeze raised on a high place. It is also used to denote a sail (Isa. 33:23, also in the Mishna, B. B. 5a). Murals depicting Jewish ships, as found in Bet She'arim tombs and "Jason's tomb" in the Revahiah quarter of Jerusalem, reveal that the ships bore emblems. From Targum Jonathan to Numbers 2:3 it becomes apparent (see Num. R. 2:7; *Midrash Aggadah* *Buber* ed. 79 *Arugat ha-Bosem* (Urbach ed.), A, 129/7) that during the time of the Targum colored flags, made of silk, were already known.

The term degel used in the Bible, especially in the description of the order in which the people of Israel pitched their tents and their battle array (Num. 2:1–3, 10–18, 25), was thought to have its present-day meaning – "flag." In fact, the term as employed there denotes a division of the people's army. This is the sense of Akkadian daglu (from dagalu; "to see" or "behold"), Aramaic degel of the fifth century B.C.E. "El-elephantine papyri, and this is also the sense in which the term is mentioned in the Midrash (e.g., Num. R. 2:7; Song R. 6, 10); the Arabic word dajjala also means a very large group of men. Rashi (to Num. 2:2) explains degel in accordance with the examples he saw among the military formations of his time – a colored symbol identifying a military unit.

In the Dead Sea Scrolls – e.g., the "War of the Sons of Light with the Sons of Darkness" – the term degel is used in its biblical sense: an organizational unit, a battalion (*ibid.,* ed. Yadin 1955, p. 274; for other attestations *DCH II*, 415). The same scroll, however, devotes two chapters (ibid., pp. 274–282, 284), to a description of the *otot* (*אֹתוֹת* "(the customary symbols of the entire community"), which appear to have been actual flags. These symbols were of considerable sizes, depending on the size of the unit which they served, and contained various inscriptions: לא יש degel ("the People of God"); יש קרשא אכרא השם ושם יועד שמיני השם יעדא שלמה; ("the name of Israel and Aaron and the names of the twelve tribes of Israel in the order of their birth"); לא יש degel (the penant of God); יש נש היעס עננמי degel (the name of the prince of the tribe); etc. To those who went into battle an order was issued "to inscribe on their symbols, as they went forth to war" further inscriptions, and, "when they returned from war" as victors, to add appropriate inscriptions (see *DCH II*, 166). If the scroll is not a literary fiction but reflects reality, there is here a description of the important role, very similar to that of the modern flag, ascribed to physical symbols in the organization of the community.

In the Diaspora, where there was no Jewish army or panoply of state, there was no room for flags in Jewish public life. In the late Middle Ages instances are known of the award of flags to individual Jews of communities by the secular rulers. In 1254 the emperor Charles IV granted a flag to the Jews of Prague; it was red in color and displayed the six-pronged star, which later became known as Shield of David. In 1592 R. Mordechai Meisel, also of Prague, was given permission to display in his synagogue "the flag of King David, similar to the flag in
the Great Synagogue.” In 1648 the Jews of Prague were again awarded a flag – still to be found in the Prague synagogue, the Alte Neusohul – in recognition of their part in the defense of the city against the Swedes; the flag is red and in the middle there is a yellow Shield of David with a Swedish star in its center. When the Jews of Ofen (= Buda) in Hungary welcomed King Matthias Corvinus in 1460, they carried a red flag containing two Shields of David and two other stars.

Jewish flags as an expression of national awakening appeared in the campaign of David *Reubeni among the Jews and the Christian rulers. His deportment was that of a prince and he used flags extensively as an expression of Jewish sovereignty. His flags were white, with the Ten Commandments or verses and names (according to one version, the letters of the word “Maccabee”) embroidered on them in gold. Reubeni carried a flag of this kind when he appeared with Solomon *Molcho before Charles V in Regensburg in 1532. Molcho also signed his letters and writings by drawing a flag above his name (see illustrations under “Autographs”).

The Shield of David acquired its status as a recognized Jewish symbol only as late as the middle of the 17th century. Official use of it was first made by the heads of the Jewish communities of Prague and Vienna, spreading from these places all over the world. The aristocratic Jewish families of Rothschild and Montefiore incorporated it in their family arms. The early *Hibbat Zion societies used it as a national emblem (e.g., in their official seals), generally inscribing the word *Zion in it.

Theodor Herzl, who was not aware of the emblems used by the Hibbat Zion movement, made the following entry in his diary (June 12, 1895): “The flag that I am thinking of – perhaps a white flag with seven gold stars. The white background stands for our new and pure life; the seven stars are the seven working hours: we shall enter the Promised Land in the sign of work.” This was also the flag that he proposed in The Jewish State (1896). Under the influence of the Zionist societies he accepted the shield of David as the emblem of the movement, but he insisted that the six stars should be placed on the six angles of the shield of David, and the seventh above it. In this form, with the inscription “Aryeh Yehudah” (the Lion of Judah) in the middle, the Shield of David became the first emblem of the Zionist Organization.

The combination blue and white as the colors of the Jewish flag is first mentioned in the latter part of the 19th century. In his poem “Zievi Ereẓ Yehudah,” written about 1860, the poet L.A. *Frankl declaims:

- All that is sacred will appear in these colors:
- White – as the radiance of great faith
- Blue – like the appearance of the firmament.

The Zionist flag in its present form – two blue stripes on white background with a Shield of David in the center – was first displayed in Rishon le-Zion in 1885. This, however, was not known to the delegates of the First Zionist Congress, and it was David Wolfsohn who created the flag of Zion on the model of the *tallit, which, as he pointed out, was the traditional flag of the Jewish people, adding the Shield of David. In 1933, the 18th Zionist Congress decided that “by long tradition, the blue-and-white flag is the flag of the Zionist Organization and the Jewish people.” This was also the flag which, by a special order issued by Winston Churchill, became the official flag of the Jewish Brigade Group in World War II.

**Flags of the State of Israel**

As soon as the State of Israel was established, the question of its flags and emblems arose. Public opinion was unanimous in favor of proclaiming the flag of the Zionist movement as the state flag, but there was some apprehension lest this might cause problems to foreign members of the movement. The Provisional Council of State therefore decided only on flags of the navy and the merchant marine, and it was not until six months after the state had been proclaimed that the form of the national flag was officially determined; it was to be the flag of the Zionist movement, consisting of a white rectangle, with two blue stripes along its entire length and a Shield of David in the center made up of six stripes forming two equilateral triangles. In the original resolution, the color of the stripes and the Shield of David was described as “dark...
sky-blue," but this was later changed to "blue" for better visibility at sea.

The flag of the Israel navy is a dark blue rectangle, with a white isosceles triangle, with the vertex in the center of the rectangle and the base coinciding with its inner side, and a blue Shield of David inside the triangle. The flag of the Merchant Marine is a blue rectangle with a white oval with a blue Shield of David in its center.

The official emblem of the State, which was decided on in 1949, is the menorah, or candelabrum, the ancient symbol of the Jewish people, in the form seen in relief on the arch of Titus in Rome. The menorah is surrounded by olive branches, linked at the bottom by the inscription "Israel." The president's pennant is a square blue flag, with the state emblem in silver inside a silver frame. In the course of time more flags and pennants have been adopted: the flag of the Customs and Excise, a blue rectangle, with the national flag in its upper quarter and the inscription "בליון" (Customs & Excise) inside a circle in the lower outer quarter.; the flag of the Israel Defense Forces, a blue rectangle with a thin gold stripe along three of its sides and in the lower outer quarter the badge of the IDF, consisting of a Shield of David in outline with a sword entwined with olive leaves inside it, and a strip bearing the inscription "לארו מֶכֶס" (Israel Defense Army) at the bottom; the prime minister's pennant, a blue rectangle with the national flag in its upper quarter and the state emblem, superimposed on the IDF badge, in gold, in the lower outer quarter; the defense minister's pennant, similar to the prime minister's, but smaller by a quarter, and with the emblem in silver; the pennant of the chief of staff, the allufim (generals), the commander of the navy, the senior officer in a flag, the active service pennant, hoisted on naval vessels on active service; the flag of the air force; and the civil aviation pennant.

[Michael Simon]

**FLAM, HERB** (1928– ), U.S. tennis player. Born in Brooklyn, New York, and raised in California, Flam started playing at the age of 10 under the tutelage of his father and won his first tournament at 12. He first gained attention in 1943, when he won the U.S. Lawn Tennis Association (USLTA) Singles Championship as a 15 year old. As a Beverly Hills High School junior in 1945, he captured the USLTA Interscholastic titles in Singles and Doubles, with Hugh Stewart. The pair repeated their Doubles success in 1946. Flam earned national prominence in 1948, when as an undergraduate at UCLA, he entered the USLTA Singles Championships unseeded and reached the semifinals, earning him a No. 9 U.S. ranking. He won the USLTA Intercollegiate Singles and Doubles with Gene Garrett in 1950, and then reached the finals of the U.S. Singles championship, becoming the first Jewish tennis player ever to advance to those finals. Flam won the U.S. National Clay Court Singles that year, and teamed with Art Larsen to win the Clay Court Doubles crown as well. He reached the final eight of the Wimbledon Singles three times, and the semifinals in 1952. Flam also reached the quarterfinals of the U.S. Singles six times. After serving in the Navy in 1953–54, Flam won the 1955 U.S. Hard Court Championship, and in 1956 he won his second U.S. Clay Court title. He competed for the United States in Davis Cup matches starting in 1951, winning 12 of 14 matches through his final appearance in 1957. Flam was ranked No. 6 in the world in 1951, No. 10 in 1952, No. 7 in 1956, No. 5 in 1957 by World Tennis Magazine, and No. 4 in 1957 by the dean of British tennis writers, Lance Tingay. His U.S. rankings were as high as No. 2 in 1950, 1956, and 1957. Up until his time, Flam earned more world rankings than any other Jewish player.

[Elli Wohlgelehrer (2nd ed. ]

**FLANAGAN, BUD** (1896–1968), British comedian. Born Chaim Reuben Weintrup, Flanagan teamed up with Chesney Allen after World War I. "Flanagan and Allen" toured the world and came to prominence in 1930 in George Black's "crazy" show at the London Pavilion. After World War II they were part of the "Crazy Gang," whose shows ran for many years at the Victoria Palace. Flanagan led the gang until it broke up in 1962. Most famous of Flanagan and Allen's song hits was "Underneath the Arches," a song of the depression of the 1930s. Flanagan sang the title song of the popular British television series Dad's Army. He wrote an autobiography, My Crazy Life (1962).

**ADD. BIBLIOGRAPHY:** ODNB online.

"**FLAVIUS, CLEMENS** (d. 95 C.E.), son of *Vespasian's* elder brother, T. Flavius Sabinus. His sons were designated as successors to the childless emperor Domitian. In 95 C.E. he served as consul together with the emperor. Domitian, however, formally accused Clemens and his wife Domitilla, herself a granddaughter of Vespasian and a niece of *Titus and Domitian*, of atheism (άθεοτης) which resulted in the execution of Clemens and the banishment of Domitilla. The earliest source, Dio Cassius (67:14, 1–2), expressly describes this heresy as a conversion to Judaism. Some scholars connect Flavius' conversion with the journey to Rome of R. *Gamaliel* and his followers while others have depicted the couple as Christian martyrs.

[Isaiah Gafni and Uriel Rappaport]

**FLAX** (Heb. פִּישָׁת, pishtah, in the Bible; פִּישַׁת, pishtan, in talmudic literature), plant cultivated in Erez Israel. It is mentioned only once in the Bible. The "stalks of flax" mentioned
in Joshua 2:6 are undressed flax fibers. Evidence of the cultivation of flax in Erez Israel at the beginning of the period of the kingdom is to be found in the "Gezer Calendar, which mentions פָּרָשׁ הָעֵד גָּדוֹל, that is, "the month of the uprooting of flax," which is followed by "the month of the barley harvest." In the Bible there is frequent reference to flax products.

The cultivation of flax played an important role in ancient Egypt. The Bible states that during the plague of hail in Egypt, flax (which ripens early) was damaged (Ex. 9:31). Isaiah (19:5–9) describes the havoc caused to the Egyptian economy by the drying up of the Nile, the consequent withering of the flax, and the resulting ruin of the industries associated with it. Flax was, together with wool, one of the necessities of life (Hos. 2:7, 11). The Torah prohibited the wearing of a garment spun of both materials (Deut. 22:11; see "Sha'atnez"), a prohibition which the Midrash (Pārē 21) connects with the episode of Cain and Abel, the former having brought an offering of flax seeds, the latter of wool. Some contend that the prohibition reflects the antagonism between the farmer and the shepherd.

The Akkadian for flax is kitannu, from which are derived the biblical ketoneth and the talmudic kitna. The sages differed on the interpretation of the phrase "garments (kotnot) of skins," with which Adam and Eve were clothed, one view being that it referred to flax "from which the [human] skin derives pleasure," another that it referred to wool, that "grows from skin" (Sot. 14a). Linen from c. 135 C.E. was discovered in Nahal 'Hever.

There are many references in talmudic literature to the growth and cultivation of flax. The quantity of flax produced was apparently subject to considerable fluctuations, there having been times when it was necessary to import hempen garments (Kil. 92a). These, however, were no longer in demand in the amoraic period when flax was extensively grown (TJ, Kil. 9:5, 232d). Flax was attacked by plant diseases, and public prayers were offered up for their riddance (TJ, Tann. 3:6, 66d), but after Hiyya and his sons came from Babylonia (to Erez Israel), flax was free from disease (TJ, Ma'as. Sh. 5:8, 56d). Flax was regarded as a crop that impoverishes the soil and so was planted in the same field only once every three or seven years (BM 9:9; Tosef., BM 9:31). It bears beautiful blue flowers, which are followed after a few days by pods. Although grown mainly for its fiber, it was also cultivated for its seed, which was used as food and for medicinal purposes (8b 93a–b).

The Mishnah and the Talmud give many details about flaxen products and different kinds of cloth. A garment made of flax was usually a popular, strong, and very cheap form of clothing. When R. Judah ha-Nasi 11, wearing a flaxen garment, came out to meet R. Johanan, he was told that it was more proper for a patriarch to wear clothes made of wool (TJ, Sanh. 2:8, 20c). There were, however, also fine, excellent clothes made of flax, a wealthy high priest having worn a flaxen garment which cost 20,000 zuzim (TJ, Yoma 3:6, 40d). Although expensive flax material was imported (8m 29b), a high quality flaxen cloth was produced in Erez Israel at Beth-Shean (Gen. R. 20:12); that made at Arbela was of a cheaper quality (ibid. 19:1 beginning). The flax in the Bible and in talmudic literature was the cultivated variety, Linum usitatissimum, of which there are many strains, some used in the manufacture of fiber, others for the extraction of oil from their seeds. Flax is hardly grown in Israel, but the wild flax of the species Linum angustifolium, which some regard as the original of the cultivated flax, grows extensively.

**FLEA** (Heb. פָּרֶשׁ, parosh). The flea symbolizes an insignificant, loathsome creature (1 Sam. 24:15; 26:20). Nevertheless, the ancients did not refrain from calling themselves "parosh," and this was the name of a Judahite family that came with Ezra to Erez Israel from Babylonia (Ezra 2:3), as well as of a Moabite prince (Neh. 10:15). The common flea, *Pulex irritans*, is a parasite living on human beings and other mammals. Another species is the *Chenopsyslla cheopis*, which attaches itself to rats. The flea is mentioned several times in talmudic literature where it is stated that contrary to several insects regarded as formed through spontaneous generation, its propagation is sexual (Shab. 107b). In modern times the flea has disappeared almost entirely from the inhabited regions of Israel.

**FLECHTHEIM, ALFRED** (1878–1937), German art collector, art dealer, and publisher. Flechtheim was born in Muenster/Westphalia into a prosperous family of grain dealers. After leaving school, he went to Geneva and Paris to complete his education. While working in the family business, he already engaged in collecting and participated in an art exhibition in Duesseldorf in 1906. Flechtheim was a co-founder of the Duesseldorfer Sonderbund in 1909, which assisted young contemporary artists by offering them the possibility of exhibiting their works. Today, the fourth exhibition of the Sonderbund in Cologne in 1912, which had a direct impact on the New York Armory Show of 1913, is considered the most important presentation of European modern art prior to World War I. In the same year, Flechtheim opened his own gallery in Duesseldorf. Drafted into the army in 1914, Flechtheim had to dispose of his gallery and parts of his collection. However, he reopened it in 1919 and managed to open a second gallery in Berlin in 1921 and a third in Frankfurt-on-the-Main in 1922. Flechtheim sought out the works of contemporary French artists like Georges Braque, André Derain, Juan Gris, Pablo Picasso, and Maurice de Vlaminck but matched them with the works of contemporary German artists like Wilhelm Lehmbruck, Paul Klee, George Grosz, and Karl Hofer. As a dealer...
who introduced avant-garde art in Germany, he was in close contact with his colleague Daniel-Henry Kahnweiler in Paris, who was specialized mainly in the trade in Cubism, especially Picasso. In 1921, they joined forces and together became the most important art dealers and art patrons of the Weimar Republic. Many of his portraits, among them the famous one by Otto Dix (1926, Neue Nationalgalerie Berlin), offer vivid testimony of Flechtheim's leading position in the art world. Flechtheim was forced to close his galleries in 1933 and took refuge in London, where he continued to arrange exhibitions of modern art until his death in 1937.

[Philipp Zschommler (2nd ed.)]

**Fleck, Bela** (1958– ), U.S. banjo player, guitarist. The New York-born Fleck caught the banjo bug from hearing Homer and Jethro’s theme for TV’s *The Beverly Hillbillies* and acquired his first banjo at 15, although he was training as a French horn player at the High School of Music and Art. He spent his evenings playing with a bluegrass band, and it was in that musical genre that he first came to prominence as part of Newgrass Revival, a band that pioneered a fusion of bluegrass, jazz, rock, and country. In 1989 he joined with harmonica player/keyboardist Howard Levy, bassist Victor Lemonte Wooten, and “synth axe drumitar” player Roy “Futureman” Wooten to form the Flecktones, the band he continued to lead. The Flecktones, whose sound owes more to their leader’s enthusiasm for Charlie Parker and John Coltrane than to Doc Watson and Bill Monroe, won numerous Grammy awards and made frequent national TV appearances.

[George Robinson (2nd ed.)]

**Fleckel, Eleazar Ben David** (1754–1826), rabbi and author. Born in Prague, Fleckel studied under Meir Fischeles (Bumsla), Moses Cohen-Rofe, and Ezekiel *Landau*. In 1779 he was appointed rabbi of Kojetin in Moravia, but in 1783 returned to Prague, where he served as a member of the *bet din* of Ezekiel Landau and also headed a large yeshivah. After Landau’s death, Fleckel was appointed Oberjurist (“president”) of the three-man rabbinate council which also included Samuel Landau, the son of Ezekiel. When the Frankists made their appearance in the city in 1800, Fleckel headed the opposition to them. He was denounced by an informer and imprisoned, and on his release he wrote a pamphlet of thanksgiving entitled *Azkir Tehilloth*. Fleckel’s fame rests on his volume of collected sermons, *Olat Hodesh* (4 parts, Prague, 1785–1800). It contains both halakhic and aggadic themes. Part 11, *Olat Zikhur* includes a sermon attacking Moses Mendelssohn’s German translation of the Bible. In Part 11, *Ahavat David*, there are also included sermons against the Shabbateans and the Frankists. In these sermons, that reflect his outstanding ability as a preacher, Fleckel expressed his vigorous opposition to various reforms resulting from the spread of the “Haskalah movement, warning on the one hand against excessive pursuit of secular studies and on the other concurring in the study of Kabbalah, but only on the basis of a sound knowledge of Talmud. Of his other books the following are noteworthy: *Teshuvah me-Ahavah*, a collection of 450 responsa (3 parts, Prague, 1809–21), in which he employed a new method of arranging the responsa according to the order of the Shulhan Arukh, and at the same time adding his own comments on, and supplements to, other responsa; *Melkhet ha-Kodesh* (ibid., 1812), a guide for scribes of *Sifrei Torah*, tefillin, and mezuzot; and *Hazon ha-Moled* (ibid., 1824), 14 sermons for the month of Tishri. In the introductions to his works, he emphasizes the brotherhood of man and the duty of the Jews toward the Gentiles. In connection with the question put by the censor Karl Fischer, “whether there is any distinction between an Israelite swearing to his fellow Israelite and swearing to a Gentile,” Fleckel replied “that the force of an oath is great, and no distinction can be made between taking an oath to an Israelite and to a non-Jew” (*Teshuvah me-Ahavah*, pt. 1, no. 26). He was opposed to the hairsplitting methods of *pillup* and to “labored solutions,” and emphasized that he was not prone to stringency in his rulings (ibid., pt. 3, no. 325). He was careful to make allowance for traditional customs and gave information in his responsa about special customs that existed in various communities (ibid., pt. 1, no. 90; pt. 2, no. 229).

[Yehoshua Horowitz]

**Fleg, Edmond** (originally Flegenheimer; 1874–1963), French poet, playwright, and essayist, whose outstanding works deal with Judaism and the Jewish people. Fleg’s parents were prosperous and moderately observant Genevan Jews, but their religious compromises, together with his own secular studies, soon combined to weaken young Fleg’s Jewish allegiances. He went to live in Paris, where he became a theater critic and a successful playwright. His plays included *Faust* (1937) and Shakespeare’s *Julius Caesar* (1938). He also wrote the libretti for Ernest Bloch’s *Macbeth* (1910) and Georges Enesco’s *Oedipus* (1936). Fleg’s dramatic return to Judaism, in the full sense, dates from the spiritual turmoil engendered by the *Dreyfus Affair* (1894–1906), and the first three Zionist Congresses (1897–99). He was also impressed by the English author Israel *Zangwill*, an early supporter of Zionism. Abandoning the path of easy compromise, he devoted himself to the study of Jewish history and thought, seeking reasons for the modern intellectual’s remaining Jewish. His task was interrupted by World War I, in which he served in the French Foreign Legion. Thereafter, throughout 40 years of untiring activity, Fleg presented to the French
reader the manifold aspects of Judaism in a style that shifts effortlessly from simple narrative to lyrical grandeur or brilliant psychological analysis. One of the most significant works was his Anthologie juive des origines à nos jours (1921, 1965; The Jewish Anthology, 1925). This discriminating and wide-ranging selection of Jewish writing down the ages constitutes a valuable introduction to Judaism.

Edmond Fleg's writing may be divided into three main categories: religious poetry, biographical works, and autobiographical and other essays on Jewish themes. He is perhaps best remembered for his verse cycle Ecoute Israël, a Jewish counterpart to Victor Hugo's Légende des siècles. The cycle comprises Ecoute Israël (1913–21), L'Éternel est Notre Dieu (1940), L'Éternel est Un (1945), and Et Tu aimeras l'Éternel (1948), the titles of which were taken from Deuteronomy 6:4. In 1954 the four parts were collected in one volume, starting with the creation and spanning the whole of Jewish history down to the era of the reborn Jewish State. Fleg's lyrical themes include the Jewish people's mission, messianic yearnings, and unwavering faith in humanity despite atrocities and persecution. From the Midrash, which he knew mainly from German translations, Fleg drew material for his legendary biographies Moïse raconté par les Sages (1928; The Life of Moses, 1928) and Salomon (1930; The Life of Solomon, 1929). Moved by ambivalent emotions of fascination and fear stemming from his childhood, Fleg also wrote Jésus, raconté par le Juif Errant (1933; Jesus, Told by the Wandering Jew, 1934), using quotations from the Hebrew Bible, talmudic literature, and the Gospels. Although Fleg presented a Jesus who was neither God nor Messiah, his sympathetic treatment of the Christian savior made a dubious impression on the Jewish reader. Of his essays, the most remarkable is probably Pourquoi je suis Juif (1928; Why I am a Jew, 1929), which was translated into English also by Victor Gollancz in 1943. A subtle and moving analysis of a young agnostic's spiritual progress and eventual return to Judaism, it also demonstrates Fleg's belief that the French genius owes much to the inspiration of Israel. The portrait of Fleg himself in Pourquoi je suis Juif may be regarded as a continuation of the one he painted in L'Enfant prophète (1926; The Boy Prophet, 1928). This romanticized account of a boy estranged from Judaism and rejected by Christian society tells how the child glimpses through the gloom of the Church a Jesus who is at once victim and persecutor, and how he at last seeks to revive his old faith through messianic expectation. Messianism also provided the theme of two early plays, La Maison du Bon Dieu (1920) and Le Juif du Pape (1925), the latter based on the encounter of Clement VII and Solomon Molcho. It continued to be a keynote of Fleg's writing over the years, as in Ma Palestine (1932; The Land of Promise, 1933) and Nous de l’Esperance (1949), which, together with Pourquoi je suis Juif, was collected in Vers le Monde qui vient (1960). In La Terre que Dieu habite (1953; The Land in which God Dwells, 1955) Fleg recorded the saga of the Zionist pioneers and his hopes for Israel's spiritual revival in the new Jewish State. His other works include translations of Shalom Aleichem and the Passover Haggadah (1925) and selections from Maimonides' Guide and from the Zohar. Fleg was an active member of the Alliance Israélite Universelle and of the French section of the World Jewish Congress. In Israel, a forest was dedicated in his honor in 1952.

FLEISCHER, CHARLES (1871–1942). U.S. rabbi. Fleischer, who began his career as a Reform rabbi articulating the ideal that American Jews could be both Americans and Jews, later developed a new American religion based upon the ideals of democracy. Born in Breslau, Germany, in 1871, Fleischer came to America at the age of nine. He moved to the Lower East Side, received his B.A. from the City College of New York in 1888, and advanced degrees from Hebrew Union College and the University of Cincinnati in 1893. He served as an assistant rabbi in Philadelphia until 1894, when he was named rabbi of Temple Israel in Boston. He remained at this post until 1911, and the following year founded the nonsectarian Sunday Commons, which he led from 1912 to 1918. Fleischer moved to New York in 1922, where he served as a newspaper editor, radio commentator, writer, and lecturer. During his tenure at Temple Israel, Fleischer introduced Sunday services (1906), and shared his pulpit with Unitarians, Trinitarians, and social reformers. He believed that ethics should be based on reason, rather than the fear of God, and that Judaism should strive to combat social problems. He often spoke to New England's Jewish and non-Jewish groups about Jewish-Gentile relations. Throughout his career, Fleischer struggled with his Jewish and American identities. Early on he possessed a pluralistic vision, believing that American Jews could be both Jews and Americans at the same time. But as early as 1902, Fleischer began to suggest that America should move beyond religious sectarianism, and that democracy itself was “potentially a universal spiritual principle, aye, a religion.” In 1908 he advocated intermarriage, and when he left Temple Israel in 1911, he declared, “I am henceforth beyond… sectarianism.”

True to his word, Fleischer founded the nonsectarian group Sunday Commons. He now argued that Jewish and Christian worship ran counter to universal values, and American religion should be based upon the values of heroes like Abraham Lincoln and texts such as the Declaration of Independence. Seventeen hundred people attended his services in their early years, where “aspirations” became a substitute for prayer.

BIBLIOGRAPHY: A. Mann, “Charles Fleischer’s Religion of Democracy,” in: Commentary 17, no. 6 (June 1954); “Dr. Chas. Fleischer, Editor and Lecturer,” in: New York Times (July 3, 1942), 17. [Michael Cohen (2nd ed.)]

FLEISCHER, JUDAH LOEB (Leopold, Lipot; 1886–1955), Hungarian scholar. Fleischer was born in Ersekujvar and
founded a religious elementary school in Temesvar in 1918. He taught there and directed it until it was closed by the Communist regime in 1948. He wrote scholarly articles on Abraham Ibn Ezra, particularly the Bible commentaries, which appeared from 1912 onward in Ha-Zofeh le-Hokhmot Yisrael, Sinai, and other journals. Among his editions of Abraham Ibn Ezra are Sefer ha-Ta‘anim (1951), Sefer ha-Me‘orot (1933), Sefer ha-Olam (1937), and Ibn Ezra le-Sefer Shemot (1926). Some of his important works remain in manuscript.

His son Ezra Fleischer (1928– ), Hebrew poet and scholar, was born in Temesvar (Timisoara), Transylvania. He was imprisoned after World War II by the Romanian authorities as a result of his activities on behalf of Bnei Akiva. In 1960 he immigrated to Israel, studied at the Hebrew University, became a lecturer on medieval Hebrew literature at Bar-Ilan University, and then at the Hebrew University. His poem, “Massa Gog” (“The Burden of Gog”), written during his imprisonment and published in the Israeli literary journal Moznayim (Nisan–Iyyar, 1959) under the pseudonym Y. Goleh, caused a literary sensation and won him the Israel Prize for 1959. He published poetry (under various pseudonyms) in the Hebrew press from 1956 and also two volumes, Meshalim (1957) and Be-Hehalek Laylah (1961). Other important works include Ha-Tozrot be-Hitvatam ve-Hipathutam (1984); a study of Hebrew poetry in the Middle Ages, Shirat ha-Kodesh ha-‘Iriv bi-Yemehu ha-Beinayim (1975); Tefillah u-Minhagai Tefillah Erez Yisraeliyim bi-Tekufat ha-Genizah (1988).

FLEISCHER, MAX (1883–1972), cartoonist and producer. Born in Vienna, Austria, Fleischer immigrated with his family to New York City at an early age, studying art at Cooper Union and the Art Students League. He worked as a commercial artist and cartoonist, but his interest in mechanics led him to animation. With his brothers Dave and Joe, he founded Fleischer Studios, one of the first animation studios. They turned out some of the most inventive films of the period.

Looking to find a method to produce animation more efficiently and economically, the brothers invented the rotoscope, a device used to trace movement from live-action film. With Dave working as his live model, Max Fleischer inaugurated his own cartoon series, officially titled “Out of the Inkwell” but more popularly known as “Koko the Clown.” These short cartoons ingeniously combined animation with live action, usually in the form of an on-screen Fleischer drawing Ko-Ko before the viewers’ eyes. Another innovation of Fleischer’s was the sing-along cartoon. By “following the bouncing ball,” theater audiences sang popular tunes together as they read the printed lyrics on the screen.

When the movie industry evolved from silent films to talking pictures, the Fleischer Studio was one of the few animation producers to survive the transition. When “the talkies” were permanently established in 1929, Fleischer began releasing his cartoons through Paramount Pictures, an association that continued for more than a decade.

At the end of the 1920s, the studio’s top artist Grim Natwick came up with a new, seductive female character, Betty Boop. Fleischer also created Popeye the Sailorman and other popular cartoon characters. In 1941, Max and Dave launched the expensive Superman cartoon series. However, when the box office did not respond well, the two split up, and their animation staff was taken over by Paramount. Dave went to work at Columbia Pictures, while Max went into the industrial cartoon field.

During his career, Max Fleischer produced more than 600 cartoons and held 15 patents that were used in the motion picture industry. His feature cartoons include Gulliver’s Travels (1939) and Mr. Bug Goes to Town (1941). Books by Fleischer are Noah’s Shoes (1944), Betty Boop (1975), Betty Boop’s Hollywood Chronicles (released in 1990), and Betty Boop’s Sunday Best: The Complete Color Comics, 1934–1936 (reprinted 1995).

His son is film director RICHARD FLEISCHER (1916– ).

FLEISCHER, MICHAEL (1908–1998), U.S. geochemist. Born in Bridgeport, Connecticut, to parents who emigrated from Germany, he received his B.S. in chemistry (1930) and Ph.D. (1933) from Yale University. From 1933 to 1936 he was a research associate, Department of Chemistry, Yale University, Fleischer joined the Geophysical Laboratory of the Carnegie Institute in Washington in 1936, and from 1939 to 1978 was with the United States Geological Survey. From 1978 to 1995, he was research associate, Department of Mineral Sciences, Smithsonian Institution. He was professorial lecturer (1957–65) at the George Washington University, assistant editor of Chemical Abstracts from 1940, and an associate editor of the American Mineralogist. He served as president of the Mineralogical Society of America, of the Geochemistry Commission of the International Union of Pure and Applied Chemistry, and as vice president of the Geological Society of America. In 1959 he was appointed president of the Commission on New Minerals and Mineral Names of the International Mineralogical Association.

Fleischer contributed many papers to scientific journals, dealing with chemical and analytical mineralogy, specific minerals (particularly of manganese), and the abundance of the individual elements in the earth’s crust.

[Samuel Aaron Miller / Bracha Rager (2nd ed.)]
FLEISCHER, NATHANIEL STANLEY (Nat; 1887–1972), U.S. boxing historian, journalist, author, and member of the International Boxing Hall of Fame. Born on New York's Lower East Side, Fleischer first developed his love of boxing at age eight, when his father gave him photographs of boxers that were sold with cigarettes. He saw his first professional fight at age 11 on September 12, 1899, a bantamweight championship fight that saw Terrible Terry McGovern knock out Pedlar Palmer. It was the first time a championship bout ended in a first-round KO, and Fleischer was hooked on the sport. Standing only 5'2" and weighing 122 pounds, Fleischer wanted to be a prizefighter himself, but he was knocked out in the first round of an amateur match when he was 15, and that ended his boxing ambitions.

Fleischer first wrote about sports for P.S. 15’s monthly newspaper, and after graduating Townsend Harris High School, he was campus correspondent for two New York City newspapers while attending the City College of New York, where he organized with Dan *Daniel the school's first varsity basketball team in 1906. After graduating in 1908, Fleischer taught at P.S. 7, then took a commercial chemistry course at NYU and a forestry course at Yale, but soon realized that sports was his calling. He became sports editor at the New York Press, and continued when it merged with the Morning Sun in 1914. Fleischer proceeded to become sports editor at the Morning Herald, the Mail-Telegram, and the Evening Telegraph, but in 1929 he decided instead to devote himself entirely to a boxing magazine, The Ring, which he had co-founded with three associates in February 1922. It became the most influential publication in boxing history, earning Fleischer the moniker “Mr. Boxing.” He refereed and judged more than 1,000 fights, established the Boxing Hall of Fame and Museum, initiated boxing's rating system, encouraged television coverage to maintain the public's interest, and helped establish boxing commissions around the world. Fleischer was the world's leading ring historian and the most prolific boxing writer of all time, publishing more than 60 books – an estimated 40 million words – including his autobiography, Fifty Years at Ringside (1958). His best-known work was the annual Ring Record Book and Boxing Encyclopedia, first published in 1941, which was considered the sports’ authoritative source book. Fleischer was elected to the International Boxing Hall of Fame in 1990.

[Ellis Wohlgerlerner (2nd ed.])

FLEISCHER, TSIPPI (Tsipporah Dolgopolsky; 1946– ), Israeli composer and music education specialist, one of the Israeli women composers well known outside the country.

Fleischer earned multiple bachelor's degrees (ranging from music theory to Arabic language, literature, and history), an M.A. in music education (NYU, 1975), and a Ph.D. in musicology (Bar-Ilan University, 1995). Initially interested in popular Israeli songs, especially the Hebrew canonic folk songs by composers such as Alexander *Argov, Moshe *Wilenksy, and Naomi *Shemer, by the early 2000s, she had become an established composer of Western music (or, some would argue, composer of her unique version of World music) with a distinguished Middle-Eastern quality. She also revisited her research into the history of Israeli song in the past 120 years. From the late 1960s she taught at the Lewinsky Teachers College. Her book for music teachers, Harmonization of Songs (Hebrew), appeared in 2005.

From the 1980s she was committed to the ideology of Israeli style, first established by the founders of Israeli art music such as Paul *Ben-Haim and Mordecai *Seter. A perspective best conceptualized by Alexander *Boskovich, who held that an Israeli style can evolve only through the synthesis of ethnic local traits of Jewish and Arab music with techniques of Western classical music. In a 1986 interview she argued that her music is equally balanced between these traditions: not swaying toward the Western, with the Middle-Eastern source only an exotic flavor; nor toward the Eastern sources, when a work might not be fully artistic in Western terms.

Fleischer is a prolific composer. Her list of works includes her often-performed song-set Girl-Butterfly-Girl (1977, revised several times until the early 2000s); the cantata Like Two Branches (1989); the Oratorio 1492–1992; the collection Ethnic Silhouettes that includes four multimedia plays (1993–95, in Biblical Hebrew, Ugaritic, Old Babylonian, and Coptic); a collection of original miniatures; five short symphonies (1995–2004, illustrative symphonic poems and an ethnic collage); and two chamber operas, Medea (1995) and Cain & Abel (2002). Her music is inspired by the improvisatory quality of Arab oral traditions in music, and some of her melodies, both Arabic and Israeli, are compelling, as in her short toccata for strings, Strings – Bow and Arrow (1995).

Fleischer’s works, especially of the 1980s and 1990s, synthesizing Arabic and Hebrew texts and musical modes with Western classical instrumentation, earned her a unique name as an established Middle-Eastern woman composer. Indeed, most of her earlier works reflected a local-regional, non-religious identity, smoothly mixing Mizrahi-Jewish and Arab elements, with a marked preference to the surrounding Arab character. She is perhaps the only Western woman composer in the Middle East whose music appeared on some sixteen commercial CDs, international Israeli.

In 2004, she wrote for the first time an explicitly Jewish work: the Fifth Symphonic; Israeli-Jewish Collage for tape and accompanying orchestra, based on some of the most obvious Jewish identity markers – the shofar calls and the Kol Nidrei prayer.

FLEISCHMANN, GISI (1897–1944), Zionist women's leader in Bratislava who played a prominent part in rescue operations during the Holocaust. At the outbreak of World War II, she was in London and returned home to be with her family, which included a husband and two daughters as well as an ailing mother. She sent her two daughters to Palestine, but she herself...
remained in Bratislava, perhaps primarily for personal reasons and involved herself intensely in efforts to help the community. First she acted within the Üstredňá Židov (Jewish Council) as chief of the "Hicem department for emigration. In the summer of 1942 she became the guiding spirit of the "Working Group," a secret rescue organization for Jews that included herself and an ultra-Orthodox rabbi, Michael Weissmandel, who was related to her as a second cousin by marriage. It was rare, perhaps unprecedented, for an ultra-Orthodox rabbi and a woman Zionist to cooperate fully, and even more rare for the Zionist woman to assume the primarily leadership role. As a member of the Slovak Central Refugee Committee, she cooperated, albeit not without considerable tension, with Joseph Blum of the American Jewish Joint Distribution Committee, who later left for Hungary, and Fleischmann then became for all intents and purposes the Joint's person in Bratislava.

Fleischmann maintained a secret correspondence written in code with Jewish organizations in the free world, mainly with the He-Halutz center at Geneva and with representatives of the *Jewish Agency in Istanbul. She reported on the condition of European Jewry under German occupation and she also traveled to Hungary to collect funds for rescue activities from the Hungarian Jewish communities. It was under her leadership though at Rabbi Weissmandel's initiative that a plan was devised to bribe Eichmann's representative in Slovakia, Dieter Wisliceny, to halt the deportations of the Jews. When an initial bribe and the promise of more funds to come seemed to work and the deportations of Slovakian Jewry were halted for a time, the working group devised a bold scheme, the *Europa Plan, to rescue the remaining Jews. Historians now know that is was not the bribe to Nazi officials but to Slovakian officials that halted the deportations and the chances of any success for the Europa plan were far-fetched. In 1943 she directed rescue operations of survivors of Polish ghettos, including groups of orphans, across the Polish-Slovak-Hungarian borders. In the spring of 1944 she conveyed the first eyewitness testimony on the death camps when the Auschwitz report was compiled by two men, Rudolf Vr'ba and Alfred Wetzler, who had escaped from Auschwitz on April 7, 1944, and reconfirmed by two later escapees, Arnost Rosin and Czeslaw Mordowicz, who from Auschwitz on April 7, 1944, and reconfirmed by two men, Rudolf Vr'ba and Alfred Wetzler, who had escaped from Auschwitz on April 7, 1944, and reconfirmed by two later escapees, Arnost Rosin and Czeslaw Mordowicz, who reached Slovakia in June 1944. During the mass deportations in the autumn of 1944, she was arrested by the Germans and sent to Auschwitz with a special instruction, "Ru-Rueckkehr unerwaenscht" ("return undesirable"), and on arrival in Auschwitz she was immediately killed. Fleischmann was described as a woman of organizational talent, intellectual ability, emotional involvement, and political savvy.

FLEISCHMANN, JULIUS (1872–1925), U.S. businessman and politician. Fleischmann was born in Cincinnati, Ohio, where his father, Charles Fleischmann, an immigrant from Hungary, had established a large concern for the manufacture of compressed yeast cakes. Fleischmann entered his father's business soon after leaving school. Upon his father's death in 1897, he and his brother took over the business, which he ran by himself from 1905 on. Fleischmann's activity in local Republican politics led to his nomination for mayor in 1900. He was elected to the office and reelected in 1902. Though he declined to run for a third term, he served as Cincinnati's commissioner of parks during 1905–12, also attending several national Republican conventions as an Ohio delegate. An avid sportsman and breeder of horses, Fleischmann collapsed and died while playing in a polo game, leaving a large fortune. His financial speculations were so large that the stock market in Chicago suffered a sharp decline upon news of his sudden death.

FLEISHER, Philadelphia family originating in Memelsdorf, Germany. Members of this family and the related Liveright family arrived in the United States in the 1830s, and ultimately established prosperous yarn and clothing manufacturing businesses. Many descendants of BENJAMIN WOLF FLEISHER (1810–1845) and HANNAH TUCHNOR (1810–1903), who settled in Meadville, Pennsylvania, before moving on to Philadelphia, became leaders in Philadelphia Jewish and general affairs. Their sons SIMON B. (1840–1919) and MOYER (1842–1924) were partners in a yarn business in Philadelphia. They were both active in the Hebrew Education Society, and Moyer succeeded Moses A. Dropse as its president in 1892. A son of Simon, BENJAMIN WILFRED (1870–1946), achieved distinction in Japan where he spent 40 years, becoming dean of American journalists there before the outbreak of World War II. SAMUEL STUART (1870–1946), brother of Benjamin Wilfred, was the founder and sole supporter, beginning in 1899, of the Graphic Sketch Club. Willed to the Philadelphia Museum of Art, the club nurtured the artistic talents of more than 40,000 young people. In 1923 Samuel became the first Jewish recipient of the prestigious Edward Bok Philadelphia Award. EDWIN ADLER (1877–1959), another brother, founded the Symphony Club of Philadelphia in 1909 and created a world-famed collection of music. The collection, eventually numbering over 11,000 pieces, was donated to the Free Library of Philadelphia, of which Edwin was a trustee. He had bought a large proportion of the scores on trips to Europe in which he scoured publishers' warehouses for long-neglected compositions. The Philadelphia Orchestra and the city's music academies have frequently used the collection. Samuel and Edwin, both members of Reform Congregation Knesseth Israel, were generous contributors to Jewish philanthropies, as was their cousin, ALFRED W. (1878–1928), prominent Philadelphia realtor. A partner in the firm of Mastbaum Brothers and Fleisher, Alfred was at least once the largest individual contributor to the Federation of Jewish Charities campaign. He
was best known for his leadership in the field of progressive penology. For five years, beginning in 1923, he was president of the Board of Trustees of Eastern State Penitentiary and personally guided the construction of the prison at Graterford. Edwin's nephew, STUART F. LOUCHHEIM, carried on the family tradition as president of the Academy of Music, which he rescued from potential bankruptcy and demolition. Louchheim was not a practicing Jew.

[Bertram Wallace Korn]

**FLEISHER, LARRY** (1930–1989), head of the NBA players union from 1962 to 1988, member of NBA Hall of Fame. Born in the Bronx, New York, Fleisher graduated from DeWitt Clinton High School in 1946, New York University in 1950, and Harvard Law School in 1953, before serving in the U.S. Army from 1953 to 1955. His work as head of the NBA Players Association paved the way for pensions, minimum salaries, severance pay, and disability payments, among other benefits, and increased average yearly player’s salary from $9,400 in 1967 to $600,000, without a strike. Fleisher was involved in the eventual merger of the ABA with the NBA, and was instrumental in developing the free agent system in 1976, known as the “Oscar Robertson Settlement” and allowing players to move more freely from team to team. In addition, he helped establish an Anti-Drug Agreement in 1983, the first such policy in pro sports, which provided for counseling and severe penalties for players involved in the use of hard drugs. Fleisher also negotiated the agreement that established the NBA salary cap system.

[Elli Wohlgelernter (2nd ed.)]

**FLEISHER, LEON** (1928– ), U.S. pianist and conductor. Fleisher was born in San Francisco to Russian parents. He gave his first public recital at the age of six. From 1938 until 1948 he studied with Arthur *Schnabel in Italy and in New York. He made his New York debut at the age of 16, with Montevue, who also taught him conducting. Fleisher was the first American to win a major piano competition – the Queen Elisabeth International in Brussels (1952); he made several European tours and played highly successful recitals in South America. He gave the first performance of Leon Kirchner’s Second Piano Concerto (1963), performed many modern works, and made numerous recordings. At his peak his playing combined intellectual power, warmth of feeling, grace, taste, and sensuous beauty.

In 1964 Fleisher began to suffer from cramps in the right hand, as a result of which he became incapable of regular playing. He began to conduct and to play the piano repertory for the left hand. Fleisher became conductor of the Annapolis Symphony Orchestra (1970), was associate conductor of the Baltimore Symphony Orchestra (1973–77), and made guest conducting appearances with major U.S. orchestras. In 1982, after surgery and many treatments, Fleisher returned gradually to the standard piano literature. He was appointed artistic director of the Tanglewood Music Center (1985–97), where in 1994 he gave the première of *Foss’s Piano Concerto for left hand. From 1959 he was professor of piano at the Peabody Conservatory, Baltimore, where he later held the Andrew W. Mellon Chair in piano; he was also a visiting professor at the Rubin Academy of Music in Jerusalem.

[Max Loppert / Naama Ramot (2nd ed.)]

**FLESCH,** family widely distributed throughout Central Europe. It originated in Frankfurt where a house named “Zur Flasche” (“The Flask”) was built by Jacob of Prague in 1530. His son, AKIVA BEN JACOB FRANKFURTER (d. 1597), was a liturgical poet, and rabbi and preacher of the Frankfurt community. Another son, ABRAHAM VON SCHLESINGEN, with his sons, continued to live in the “Zur Flasche” house. Later descendants were merchants, *hazzanim,* and teachers in Frankfurt; they were also named Birnbaum and Flesch-Birnbaum.

A grandson of Akiva, the scholar ABRAHAM FLESCH (c. 1560–1640), was the first to bear the name in Austria, settling in Vienna in 1620. His descendants were scattered after the 1670 expulsion from Vienna.

**MORDECAI (GUMPEL) FLESCH** settled in Neu Raussnitz (Rousinov), Moravia, after 1670. One of his descendants, PHILIP (SOLOMON) FLESCH (1780–1852), founded a tannery in Brno (Bruenn). The descendants of Philip’s 16 children were active in commerce and the professions; some settled in Brno. One of them, ADOLPH (1813–1879), continued the leather business and made it highly successful. Mordecai’s great-grandson, ABRAHAM (1755–1828), was rabbi in Raussnitz, Moravia, and studied under Ezekiel *Landau. Abraham’s son, JOSEPH (1781–1841), a merchant in Neu Raussnitz, was a pupil of Baruch Jeiteles, and among those who spread Haskalah into Moravia. He translated several of Philo’s works into Hebrew and published exegetical and philological notes to Scripture (in *Bikkurei ha-Ittim, 7, 9,* and 11). He also provided the edition of the Bible published by M. *Landau with a list of Jewish exegetes and philologists, including modern scholars. Another member of the family was HEINRICH FLESCH (1875–1942), historian of Moravian Jewry. A native of Mattersdorf (now Mattersburg, in Burgenland, Austria), he was rabbi of Dolní Kounice, Moravia, from 1894 until his death. After World War I he was in charge also of the communities of Ivancice and Moravský Krumlov. He published many articles on Moravian Jewry both in the local Jewish press and in learned journals, also editing the *tikkunot* and records of several communities. He was a coeditor of Hugo *Gold’s books on the communities of Moravia (1929), of Bratislava (1932),* and Bohemia (1934). His archives are preserved in the Jewish State Museum in Prague. He also wrote a family history *Die Familie Flesch* (1914). His son JOSEPH had a Jewish bookstore.
and publishing house in Prague (the only one opened after 1918). Joseph perished in Auschwitz.

**BIBLIOGRAPHY:** L. Loew, *Gesammelte Schriften*, 2 (1890), 219–52.

**FLESCH, CARL** (1873–1944), violinist and teacher. Born in Moson, Hungary, Flesch studied in Vienna and Paris and made his debut in Vienna in 1895. After teaching at the conservatories of Bucharest (1897–1902) and Amsterdam (1903–08), he settled in Berlin, where his renown as a violin pedagogue came to equal his status as a virtuoso. From 1924 to 1928 he taught at the Curtis Institute in Philadelphia, and in 1933 left Germany, ultimately settling in Lucerne, Switzerland. He wrote the pedagogical works *Urstudien* (1910) and *Die Kunst des Violinspiels* (2 vols., 1923, 1928; Eng. trans. 1930 as well as translations into many other languages), and edited Kreutzer's and Paganini's études, the major violin concertos, and Mozart's violin sonatas (with Arthur *Schnabel*). His memoirs were published posthumously by his son Carl Flesch, Jr. (Eng., 1957; Ger., 1960).

**FLESH** (Heb. בָּשָׂר, *basar*), a word used both in the Bible and Talmud for mortal man and for the flesh of animals (for the latter aspect, see “Meat”). Eve is called by Adam “bone of my bones and flesh of my flesh” (Gen. 2:23), i.e., “my close relative” (cf. Gen. 29:4). In Genesis 6:3: The *basar* of humans is contrasted with *ruaḥ* of God, which animates them. “My breath shall not abide (?) in the human forever, for that he is also flesh; therefore shall his days be a hundred and twenty years.” Whereas God's breath is eternal, flesh is mortal. At death the flesh returns to the dust whence it came while the eternal breath returns to God (Gen 2:7; Eccl. 12:7). In Psalms 84:3 – “my heart and my flesh sing for joy unto the living God” – it designates the whole physical part of man. In Isaiah 66:16 “all flesh” is used as a synonym for mankind as a whole, while in the Alenu prayer “the sons of flesh” is used with the same connotation. In Talmud and Midrash the more comprehensive phrase *basar va-dam* (“flesh and blood”) is used, largely to indicate the mortality of man as against the eternity of God, particularly in the contrast between the frailty and ephemeral nature of a mortal king compared with the “supreme King of kings, the Holy One blessed be He.”

The corruptibility of flesh in the grave is constantly referred to. “The more flesh, the more worms” (Avot 2:7); “Know … whither thou art going, to a place of dust, worms and maggots” (*ibid*. 3:1); and the word *basar* is regarded as an acronym of *bushali* (“shame”), *seruha* (“putrefaction”) or *she'ol* (“the grave”), and *rimmah* (“worm”; Sot. 5a). At the same time, it is regarded metaphorically as the symbol of softness and pliancy in contrast with the hardness of bone (*ibid.*).

[Franz Isaak Rabinowitz / S. David Sperling (2nd ed.)]

**FLEXNER, U.S. family. SIMON FLEXNER** (1863–1946), U.S. physician and medical scientist, was born in Louisville, Ky., son of Morris Flexner, a Bohemian immigrant. He was the author of more than 350 scientific papers and monographs and joint author with his son, James Thomas Flexner, of the biography *William Henry Welch and the Heroic Age of American Medicine* (1941).

**BERNARD FLEXNER** (1865–1945) U.S. lawyer and Zionist leader, was born in Louisville, Ky., brother of Simon. After receiving a law degree from the University of Louisville (1898) and doing postgraduate work at the University of Virginia, he practiced law in Kentucky, later moving to Chicago (1911) and then to New York (1919). Throughout his career Flexner was much concerned with social welfare and labor problems. He was chairman of the Juvenile Court Board in Louisville and helped establish the first juvenile court in Chicago. Active in the National Probation Association, he served as president (1912–13) and as a committee member until his death. As a member of an American Red Cross mission to Romania in 1917, Flexner became convinced that Zionism was the solution to the problems of European Jewry. He entered actively into the U.S. Zionist movement and was counsel to the Zionist delegation at the Paris Peace Conference in 1919. When the *Palestine Economic Corporation* was organized in 1925, Flexner became its first president, later serving as chairman of the board until 1944. He was also associated with many institutions, banks, and companies fostering the growth of the Jewish economy in Palestine. Among his other activities were membership on the executive committees of the American Jewish Joint Distribution Committee and the Jewish Agency for Palestine. Flexner was joint author of *Juvenile Courts and Probation* (1914) and *Legal Aspects of the Juvenile Court* (1922).

FLEXNER, ABRAHAM (1866–1959), U.S. scholar, and one of America’s most creative educators. Flexner, who was born in Louisville, Kentucky, studied classics at Johns Hopkins University, and graduated in 1886. After teaching Latin and Greek at the Louisville High School (1886–90), he founded a unique college preparatory school which dispensed with rules, examinations, records, and reports. In 1905 he turned from the successful operation of his school to continue his studies at Harvard in psychology, philosophy, and science, with special reference to their bearing upon educational problems. During 1905–06, he studied the anatomy of the brain at the Rockefeller Institute for Medical Research, New York. He spent 1906–07 studying psychology and philosophy at the University of Berlin, where he came under the influence of Friedrich Paulsen, philosopher, pedagogue, and historian of German higher education. His review of higher education, The American College, published in 1908, attracted the attention of President Henry S. Pritchett of the Carnegie Foundation for the Advancement of Teaching, who commissioned Flexner to survey medical schools in the United States. The subsequent report, published in 1910 as Medical Education in the United States and Canada, was a critical analysis of 154 medical schools, seven of them Canadian. Although not a physician, Flexner was able to bring about a fundamental reform in all aspects of medical education in the United States. This was followed by an analysis of European medical schools during 1910–11 and the publication of Medical Education in Europe (1912). Another important study was Prostitution in Europe (1914). As a staff member and secretary of the General Education Board, 1912–28, Flexner undertook various educational inquiries and published, with F.P. Bachman as collaborator, Public Education in Maryland (1916) and The Gary Schools (1918). His A Modern College (1923) contained influential educational ideas and suggestions for the reform of secondary and higher education. His Universities: American, English, German (1930) was a severe criticism of functionalism in American higher institutions. His last major achievement was the founding, organization, and direction (1930–39) of the Institute for Advanced Study, Princeton. His other writings include: Do Americans Really Value Education? (1927); Henry S. Pritchett: A Biography (1943); Daniel Coit Gilman, Creator of the American Type of University (1946); and Funds and Foundations (1952). His autobiography, I Remember (1940), was revised, updated, and posthumously published as Abraham Flexner: An Autobiography (1960).

[William W. Brickman]
The number of 39 lashes became the standard rather than the maximum number; but in order to prevent death by flogging – which would amount to a violation of the biblical injunction of “not more” than flogging – the person to be flogged was first physically examined in order to determine the number of lashes that could safely be administered to him (Mak. 3:11). Where, as a result of such examination, less than 39 lashes were administered, and it then turned out that the offender could well bear more, the previous estimate would be allowed to stand and the offender discharged (Maim. Yad, Sanhedrin 17:2). But the offender would also be discharged where physical symptoms manifested themselves during the course of the flogging, so that he would not be able to stand any more lashes, even though on previous examination he had been found fit to stand more (ibid. 17:5). It also happened that as a result of such examination, floggings were postponed for another day or later, until the offender was fit to undergo them (ibid. 17:3).

**Offenses Punishable by this Method**

The offenses carrying the punishment of flogging are, firstly, all those for which the *divine punishment of karet* is prescribed; secondly, all violations by overt act of negative biblical injunctions (ibid. 18:1). However speech is not, as such, considered an overt act; thus, a person insulting the deaf or going about as a talebearer among the people in violation of express negative injunctions (Lev. 19:14–16) would not be liable to be flogged (Yad, loc. cit.). It is only when speech is tantamount to an act, as in vows substituting another animal for a sacred animal (Lev. 27:10), that flogging is inflicted (Tem. 3b); as it is also for swearing falsely by, or taking in vain, the name of God – “for the Lord will not clear one who swears falsely by His name” (Ex. 20:7; Deut. 5:11), but the court will, by flogging him (Tem. 3a). Flogging is also prescribed for cursing, i.e., wickedly using the name of God – because failure “to revere this honored and awesome Name” is expressly given as the cause of the infliction of makkot, a term meaning lashes as well as plagues (Deut. 28:58–59). Even though the offense is committed not just by speech but also by an overt act, it does not always result in a flogging; thus, where reparation must be made by money, as for the crime of stealing (Ex. 20:13; Deut. 5:17), the payment of *damages and fines is preferred to flogging*; and as two punishments may not be inflicted for the same offense, the rule is that he who pays is not flogged (Mak. 1:2; 4b; Ket, 32a). For the same reason, no flogging can be inflicted where the offense carries capital (as distinguished from divine) punishment (Tosef., Mak. 5:17). Where the negative injunction is coupled with a positive one, as for instance: “thou shalt not take the dam with the young, thou shalt let the dam go, but the young thou mayest take” (Deut. 22:6–7), liability to be flogged only ensues if the negative injunction is violated and the positive disobeyed as well (Mak. 3:4; Hul. 12:4).

Floggings were administered with a whip made of calf-skin on the bare upper body of the offender – one third of the lashes being given on the breast and the other two thirds on the back. The offender stood in a bowed position with the one administering the beating on a stone above him and the blows were accompanied by the recital of admonitory and consolatory verses from Scripture (Mak. 3:12–14; Yad, loc. cit. 16:8–11). If death ensued, even though the flogging was administered according to law, the executioner was not liable; but if the law had not been faithfully observed by him, he would be obliged to resort to a city of *refuse as in the case of any other accidental homicide* (Yad, loc. cit. 16:12).

**Disciplinary Floggings**

There are reports in the Talmud of several extralegal floggings being prescribed (see *Extraordinary Remedies*), for example, for having marital intercourse in public (Yev. 90b). In many cases, the flogging appears to have been sanctioned as a legal punishment, even though not falling within the categories set out above; for example, where a man and a woman seclude themselves (Kidd. 81a), or for taking unreasonable vows (Yev. 71, Suk. 5:2, 55b), or for falling asleep during watch duty in the Temple (Mid. 1:2); but these cases may also be regarded as instances of disciplinary rather than punitive measures, Disciplinary flogging (makkat mardut) was an innovation of the talmudic jurists. While the violation of a negative injunction calls for punishment, the act of violation being a matter of the past, the failure to obey a positive command calls for coercive measures calculated to enforce such obedience. Accordingly, while punitive floggings may (indeed, must) be restricted to a maximum number of blows, disciplinary floggings must be unrestricted – to be continued until the offender performs his duty. The maximum number of 40 lashes applies only where there has been a violation of a negative injunction, but in the case of positive commands, “as when they say to him: build a sukkah – and he refuses, or: take a lulav – and he refuses – he is flogged until his soul departs” (Ket. 86a–b). In the case of payment of a civil debt, which is also a positive command imposed by law, the question arose whether such payment could be enforced by a disciplinary flogging (ibid.); the better opinion appears to be that it could not, at any rate for so long as the debtor had any property attachable in execution proceedings or if he claimed to have no property only when he was attempting to avoid payment (Piskei ha-Rosh, Ket. 9, 13).

Disciplinary floggings were also resorted to where an offender was not liable to punishment for formal reasons, for example for lack of previous warning (Yad, loc. cit., 18:5). It was this innovation of the idea of a disciplinary flogging that enabled the courts, in post-talmudic times, to make use of the penalty of flogging for the maintenance of law and order and for the observance of religion. It is found to have been applied in an unlimited variety of cases and in different modes of execution. The flogging was mostly carried out in public, so as to have a deterrent effect: sometimes in the courthouse (Hai Gaon, comm. to Kel. 22, s.v. safsal), sometimes in the synagogue (Yam Shel Shelomoh, BK 8:48, and Resp. Maharshal 28; Resp. Maharam of Lublin 46), and sometimes in the square outside the synagogue or in other public thoroughfares (Resp.
Flohr, Salo (Solomon Mikhailovitch; 1908–1983), Russian chess prodigy. Flohr, who was born in the Ukraine, escaped from a pogrom at an early age and found refuge in Czechoslovakia, which he represented in chess matches. He won several masters’ tournaments between 1929 and 1939, went to Moscow during World War II, and became one of the leading Soviet grand masters and a chess writer of distinction. As he developed his game he changed his style from a brilliant incisive to a cautious one, and became a “drawing-master.” Regarded at one time as the likely successor to Alekhine, Flohr was eventually displaced, notably by Botvinnik.

[Ferald Abrahms]

FLOOD, THE, deluge (Heb. mabbud) described in the Book of Genesis and brought by God to destroy humankind because of its sinfulness. Outside of the Noah tales in Genesis mabbud occurs only in Psalm 29:10. In Isaiah 54:9 the great flood is called “waters of Noah.”

The Biblical Narrative (Gen. 6:5–9:17)

As punishment for the corruption and injustice rife on earth, God decided to bring a universal inundation to wipe out civilization. Alone of humankind, a blameless and righteous man named *Noah, together with his family, was to be saved. God informed him of His decision and gave him detailed instructions for the building of an ark and its provisioning (see *Ark of Noah). Noah was to take aboard the members of his family, together with male and female representatives of the animals, birds, and creeping things. When all the preparations were completed, the flood waters inundated the earth, blotting out all earthly existence, and the ark rose above the highest mountain peaks. Then the rains ceased, the waters subsided and the ark came to rest on the mountains of *Ararat. Noah waited forty days and then sent out a raven, which, however, returned to the ark. Seven days later he released a dove, which came back bearing an olive leaf. After a further delay of seven days, he again dispatched the dove which did not return, and Noah knew it was safe to disembark. This he did on receiving instructions from God, and he thereupon offered sacrifices to Him. God, in turn, promised to restore the rhythm of the times and seasons and undertook never again to destroy humankind, setting his (war)bow in the sky as an everlasting symbol of this promise. He blessed Noah, his offspring, and everything on earth.

Extra-Biblical Accounts

Legends of a great inundation submerging much or all of the earth's surface are found in the traditions of a number of peoples. They are especially common among the Indians of the Western Hemisphere, the Aborigines of Australia, and the islanders of the Central and Southern Pacific, and also abound in the southern regions of Asia. Chinese and Japanese versions exist, but with the deluge circumscribed in extent. A few legends are found in Europe; that of Iceland depicts a flood of catastrophic proportions produced by blood gushing from the wounds of a giant. However, the accounts closest to that of the Bible are those emanating from southern Mesopotamia. The ancient Greek flood stories also may have been influenced by the earlier Mesopotamian diluvial traditions. There are no grounds for assuming that all or most of

[Haim Hermann Cohn]
The Epic of Atrahasis

The First Tablet

The Epic of Atrahasis is divided into eleven tablets to which a twelfth, consisting of a literal translation from a Sumerian source, has been added. The fragments so far pieced together leave relatively few gaps in the epic. Tablet x1, in which the mortalized hero of the flood, usually called Utanapishtim ("He-Found-Life"), though occasionally also Atrahasis, relates the story of the flood to his mortal descendant Gilgamesh, is virtually intact, thus providing the most complete version of the deluge story in cuneiform script. The flood narrative in the Gilgamesh Epic is not part of a history of the world, as is the case in the epics of Ziusudra and Atra-

The second tablet relates that the world’s population had increased so substantially that humans had become a nuisance to the head of the pantheon, Enil. Provoked by the disruption of celestial serenity, Enil announced before a divine convocation his intention to retaliate against human beings with a series of plagues, including a drought and famine. Obviously not satisfied with the results of these measures, the chief god then decided to destroy humanity by means of a flood. Humankind had a friend, however, in the wise god Enki (= Ea), who was permitted to be in charge of the inundation. The third tablet relates how Enki warned King Atrahasis. He spoke to the wall of the monarch’s residence, rather than directly to the ruler, perhaps to avoid the appearance of revealing the gods’ secrets to a human. Atrahasis was told to destroy his house and build a ship by which he would be able to save his life. Although much of the tablet is broken, the building of the ship, the loading of the animals, and the flood itself are documented. The gods ultimately decide that a more effective method of population control than a great flood is to create categories of women who cannot bear, and demonic baby-snatchers.

Parallels between the Epic of Atrahasis and the biblical Flood narrative may be cited, but even greater similarities to the Genesis account are present in another Babylonian epic whose hero bears the name Gilgamesh. (Thanks to the biblical similarities, the publication of this work in the late 19th century created a great stir in religious circles.) This epic skillfully and creatively blends several borrowed Sumerian literary motifs into what has come to be regarded as one of the masterpieces of world literature. It most likely came into existence around the beginning of the second millennium. Important sections written in classical (or Old) Babylonian are extant today, as are later recensions extending over a millennium.

The Epic of Gilgamesh is divided into eleven tablets to which a twelfth, consisting of a literal translation from a Sumerian source, has been added. The fragments so far pieced together leave relatively few gaps in the epic. Tablet x1, in which the immortalized hero of the flood, usually called Utanapishtim ("He-Found-Life"), though occasionally also Atrahasis, relates the story of the flood to his mortal descendant Gilgamesh, is virtually intact, thus providing the most complete version of the deluge story in cuneiform script. The flood narrative in the Gilgamesh Epic is not part of a history of the world, as is the case in the epics of Ziusudra and Atra-

Later. The composition is now called the Epic of Atrahasis (cos 1, 450–53) after its hero, whose name means “Exceeding Wise.”

The first tablet begins in primordial times when the lesser gods were so burdened with toil that they engaged in the first-ever documented work-stoppage, and demonstrated against the great god Enil. The dispute was resolved when it was decided that the midwife of the gods, Mami (also known as Nintu, Belet-ili, and Aruru), would create humans to work in place of the gods. One of the lesser gods was sacrificed and from an admixture of earth with his blood and flesh, humankind was brought into being. The second tablet relates that the world’s population had increased so substantially that humans had become a nuisance to the head of the pantheon, Enil. Provoked by the disruption of celestial serenity, Enil announced before a divine convocation his intention to retaliate against human beings with a series of plagues, including a drought and famine. Obviously not satisfied with the results of these measures, the chief god then decided to destroy humanity by means of a flood. Humankind had a friend, however, in the wise god Enki ( = Ea), who was permitted to be in charge of the inundation. The third tablet relates how Enki warned King Atrahasis. He spoke to the wall of the monarch’s residence, rather than directly to the ruler, perhaps to avoid the appearance of revealing the gods’ secrets to a human. Atrahasis was told to destroy his house and build a ship by which he would be able to save his life. Although much of the tablet is broken, the building of the ship, the loading of the animals, and the flood itself are documented. The gods ultimately decide that a more effective method of population control than a great flood is to create categories of women who cannot bear, and demonic baby-snatchers.

Parallels between the Epic of Atrahasis and the biblical Flood narrative may be cited, but even greater similarities to the Genesis account are present in another Babylonian epic whose hero bears the name Gilgamesh. (Thanks to the biblical similarities, the publication of this work in the late 19th century created a great stir in religious circles.) This epic skillfully and creatively blends several borrowed Sumerian literary motifs into what has come to be regarded as one of the masterpieces of world literature. It most likely came into existence around the beginning of the second millennium. Important sections written in classical (or Old) Babylonian are extant today, as are later recensions extending over a millennium.

The Epic of Gilgamesh is divided into eleven tablets to which a twelfth, consisting of a literal translation from a Sumerian source, has been added. The fragments so far pieced together leave relatively few gaps in the epic. Tablet x1, in which the immortalized hero of the flood, usually called Utanapishtim ("He-Found-Life"), though occasionally also Atrahasis, relates the story of the flood to his mortal descendant Gilgamesh, is virtually intact, thus providing the most complete version of the deluge story in cuneiform script. The flood narrative in the Gilgamesh Epic is not part of a history of the world, as is the case in the epics of Ziusudra and Atra-

the widespread legends are related. It is apparent that many of them are rooted ultimately in man’s fear, based on terrifying experiences, of being annihilated by violently surging water. Most of them developed quite naturally from memories of unusually disastrous floods. The alluvial plain of southern Mesopotamia was vulnerable to widespread flooding. In the Old Babylonian period in particular, catastrophic flooding was frequent, so that the myth of the ancient flood (abiδu) had special significance (Cole and Gash apud George, 509).

Ancient memory blended with contemporary experience to produce tales of universal inundation. None of the flood accounts has received wider distribution than the biblical story. At the time it was incorporated into Jewish traditions, however, it was already countless centuries old. The earliest extant version of this tradition is known from a Sumerian clay tablet discovered at Nippur, the holy city of ancient Sumer. Unfortunately, only the lower third of the tablet has survived. Since the publication of the text by Arno Poebel in 1914, no additional fragments of the Sumerian flood story have come to light. Although the Sumerian text is badly broken, enough remains to give inklings of the content of the missing portions. The text, now known as “The Eridu Genesis” (cos 1, 513–15) as a whole seems to provide a general history of humankind, in which the main episode is the deluge. Among the subjects touched are the creation of humans, the rise of kingship, and the establishment of cities. One of the deities declares his intentions of saving humankind from a destruction decreed by the gods. The coming of the flood is made known to King Ziusudra, who was noted for his receptiveness to divine revelations: “A flood will sweep over the temples. The decision, the declaration of the assembly of the gods, is to destroy the seed of humankind.” The next section of the composition is missing but most likely contained instructions for Ziusudra to build an immense ship by which he might rescue himself from a watery grave. The lacuna is followed by a description of the inundation and the eventual reappearance of Utu the sun god, to whom Ziusudra offers sacrifices: “All the tempests attacked as one, very powerful. Simultaneously the deluge sweeps over the temples. After the flood had swept over the land for seven days and seven nights and the huge boat had been tossed about by the windstorms on the expansive waters, Utu the sun god who illumines heaven and earth came out. Ziusudra opened a window of the ship and heroic Utu shone into the great vessel. Before Utu, King Ziusudra prostrated himself; the king kills a steer and slaughters a sheep.” Again there is a gap in the text, after which it is told that the king was granted eternal life and given a place of abode in a land called Dilmun, where the sun god rises. There the hero was to share immortality with his gods. The hero’s name survived as Xisuthros in the flood story as retold in Greek by the Babylonian priest Berossus in the third century B.C.E.

The Sumerian account inspired a similar history of humankind written in the Old Babylonian dialect of Akkadian on three clay tablets, dated to around 1700 B.C.E., with fragments of two other versions inscribed about a thousand years later. The composition is now called the Epic of Atrahasis (cos 1, 450–53) after its hero, whose name means “Exceeding Wise.”
Much of the epic is devoted to the heroic expeditions of Gilgamesh and his companion Enkidu. These episodes lead ultimately to the central theme, viz., the inevitability of death. Enkidu’s demise by divine decree, after the two adventurers had insulted the gods, brings Gilgamesh face to face with the one factor before which every person must yield. He then devotes himself completely to seeking a way to escape the destiny of all flesh. It is this confrontation with death that impels Gilgamesh to make his way to the person who was the Babylonian counterpart of the biblical Noah, a man named Utanapishtim, who, with his wife, had been blessed by the gods with immortality after surviving the diluvial catastrophe. From him Gilgamesh hopes to gain the secret of eternal life. After an arduous and perilous journey, Gilgamesh reaches the distant Utanapishtim and asks how he had obtained life without end. In reply, the ancient man recounts in detail the story of the deluge.

Utanapishtim relates to Gilgamesh how he was residing in Shuruppak, an urban center on the bank of the Euphrates, when he was warned of an impending disaster. For no stated reason, the gods, under the leadership of the warlike Enlil, felt compelled to bring a deluge of proportions sufficient to wipe out the human race. However, the god Ea, counterpart of the Sumerian Enki, made known the supernal counsel by speaking to the wall of the reed house in which Utanapishtim lived. Utanapishtim was told to tear down his house and build a ship, into which he must bring representatives of all living creatures. The boat was to be equal in width and length, with a covering over the top. At once, Utanapishtim confessed his desire to comply with the god’s wishes, but also asked how he should explain his actions to the people of his community. Ea advised him to say that he has learned that he was to be the object of Enlil’s hatred and, lest his presence in their midst bring disaster upon them, he must go into exile, journeying to Ea’s dwelling-place in the marshlands near the Persian Gulf. (cf. the explanation given by Yahweh to his shipmates (Jonah 1:10) that his sea voyage is in flight from YHWH.) It was by this ruse that Utanapishtim obtained the assistance of the people of Shuruppak in constructing the ship. The finished vessel, a perfect cube of 120 cubits, had seven levels, each divided into nine compartments. Supplies were loaded onto it, including whatever silver and gold Utanapishtim had in his possession. His family and relatives came aboard and animals, craftsmen, and a boatman joined the company. When all was ready, the onset of the tempest was heralded by an evening of rain, Utanapishtim studied the storm apprehensively, then entered the ship and closed the door. At daybreak on the following morning, a black cloud rose from the horizon and subsequently darkness enveloped the landscape. The storm raged so fiercely that even the gods cowered in fear. For six days and nights the tempest assailed the earth, but on the seventh day it ceased and the tossing sea grew calm. Utanapishtim opened a window, and upon seeing the scene of death, wept. After the storm, the ship approached a peak called Mount Nimush (or Nisir) as it emerged from the subsiding water. The ship ran aground and could not free itself from its resting place. Six days elapsed and on the seventh day, Utanapishtim tested the situation by releasing a dove, It flew away and then returned without finding a place to land. A swallow was next let loose, but with the same result. Subsequently, a raven was released and did not return, for the water had abated. Utanapishtim interpreted this as a sign that the flood was over. He prepared a sacrificial offering “on top of the mountain”, and burned incense to the gods, who, attracted by the sweet odor, “gathered like flies.” Enlil arrived later than the others and was filled with rage when he saw that mortals had survived, but EA soothed his wrath, explaining that it was through a dream that Utanapishtim had learned the secret plan of the gods, Thereupon Enil boarded the ship, took the man and his wife on board, and, touching their foreheads as they knelt on either side of him, formally conferred immortality on them.

The Biblical-Mesopotamian Parallels
No parallels between the biblical and extra-canonical accounts are more remarkable and impressive than those between Utanapishtim’s story and that of Genesis. At the same time, there are important and basic differences between the two sources.

In the Genesis story the flood marks a turning point in history. While this does not figure in the Gilgamesh Epic, the concept is apparent in other Mesopotamian sources, which divide epochs into “before the flood” and “after the flood” (cf. Ps. 29:10; see Cohen and Hallo in Bibliography). In both accounts the flood is a result of divine decision and one individual, a deity’s favorite, is chosen to be saved by constructing a large vessel, whose dimensions, together with building instructions, are divinely communicated. In each case the vessel is called inside and out with a tar-like substance to render it seaworthy. Animals and birds are taken aboard in both narratives. Both traditions describe the utter devastation of the flood, and both have the ship coming to rest on a mountain peak, with the hero shortly thereafter sending forth birds to determine if the earth was again hospitable. Finally, in both narratives the hero offers sacrifices on emerging from his vessel, and receives a divine blessing.

In spite of these unmistakable and striking parallels, many details are not shared by the two accounts. Some of the dissimilarities are obviously due to the fundamental difference in religious orientation. The Book of Genesis is essentially monotheistic, while the Gilgamesh Epic and its predecessors are consistently polytheistic in outlook. Utanapishtim is elevated to the status of a god, while Noah remains human. In further contrast, the God of the Bible establishes a covenant with all humankind after the deluge, a concept alien to Mesopotamia.

While Noah is not identified with a particular city, Utanapishtim is said to be a citizen of Shuruppak. The former is told
explicitly and directly that the flood will come, while Utana-
pishtim must deduce the course of events from a carefully
worded warning obliquely delivered to the wall of a reed hut.
Furthermore, Ea's warning is given without the knowledge of
Enlil, who had insisted on destroying all humankind with-
out exception. In the monotheistic framework of the Bible, how-
ever, the author of the Flood intentionally provides for a
surviving remnant, though unlike the Babylonian version in
which a considerable number of people were spared (Utana-
pishtim's relatives and a crew), in the Genesis story only Noah
and his wife, sons, and daughters-in-law enter the ark. The
ships in which Noah and his Babylonian counterpart ride out
the storm differ considerably in size and shape, the craft of
Utanapishtim having a displacement about five times that of
Noah's vessel. It is highly significant that the Mesopotamian
hero needed a boatman to navigate his ship, while that of Noah
needed neither rudder nor sail nor any other navigational aid.
The building of an ark, rather than a ship, is intended to at-
tribute Noah's deliverance solely to the will of God, and not
to any human skill.

In the Gilgamesh Epic there is no indication of when
the deluge began and ended, but in one of the sections of the
biblical account precise dates are given. As for the duration of
the storm, the accounts are widely divergent: six days in the
Gilgamesh Epic as against forty according to one of the fig-
ures in Genesis, and no fewer than 150 according to another.
The site at which the biblical ark came to rest after the Flood
is identified as Ararat, a range northeast of Lake Van near the
40th parallel. Utanapishtim's ship, however, grounded far
to the south on Mount Nimush/Nisir, near the 35th parallel.
From the latter vessel a dove, a swallow, and a raven, in that
order, were released, whereas Noah first turned a raven loose
and then twice sent out a dove.

In Genesis there is no doubt that the reason for the Flood is
divine punishment for human injustice, lawlessness, and
social unrighteousness, and that the salvation of Noah is
solely conditioned by his moral worthiness. The same notion
is not fully articulated in the Gilgamesh epic, but is, nonethe-
less, implicit in the god Ea's criticism of the god Enlil. Ea in-
sists that only sinners should suffer for their crimes, whereas
the flood caused by Enlil had punished the innocent as well.

Sacrifice is significant in both stories to the point of
striking verbal similarity. According to Genesis 8:21, YHWH
smelled the pleasing odor of the sacrifice, while Gilgamesh X1,
161 reads: "The gods smelled the savor, the gods smelled the
sweet savor." The writer continues with "the gods gathered
likes flies around the sacrificer," a formulation that the bibli-
cal writer could hardly have tolerated." Nor could he have de-
scribed the biblical god in terms of a swarm of hungry flies.
At the same time, the biblical story goes so far as to credit
sacrifice with maintaining what would later be called the
world (olam) a view still held, if attenuated in the Mishnah
(Avot 1:2).

While it is clear that the biblical account is dependent on
the much earlier Mesopotamian material, the numerous dif-
f erences between the two versions may be due either to Isra-
elite reworking of earlier sources or to an intermediary recen-
tion. The text was widely known even outside Mesopotamia,
including Akkadian fragments from *Emar in upper Syria,
*Megiddo in Israel and Hattusa, the Hittite capital in Turkey.
Hattusa has also yielded Hittite and Hurrian adaptations.

When the deluge story became part of the Hebrew reper-
tory, it was developed in more than a single tradition. Subse-
quently the products were carefully interwoven, but without
eliminating some contradictions and duplications. The biblical
narrative emerges, nonetheless, as a consistent moral indict-
m of the human race, designed to reveal the character of
Israel's God and His ethical demands. It is this aspect of the
Genesis diluvial presentation which makes it significantly dif-
ferent from its Mesopotamian analogues.

[Dwight Young / S. David Sperling (2nd ed.)]

In the Aggadah

God mourned for seven days for the world that He had cre-
ated before He sent the Flood (Gen. R. 32:7). One view is ex-
pressed that the Flood did not cover the Land of Israel (Zeb.
113a). On the other hand, it is stated that the olive tree from
which the dove took the leaf that provided evidence that the
Flood had subsided was from a tree on the Mount of Olives
(Har Ha-Mish'ha); it is also stated that when the Canaanites
heard of the exodus of the Children of Israel, they adopted a
"scorched earth" policy and cut down all the trees (Ex. R.
20:16) which were, however, ancient and gnarled, since they
had been planted after the Flood (Eccles. R. 311. no. 2.). The
gigantic "Og, king of Bashan, survived the Flood (Nid. 61a).

FLORENCE

(It. Firenze) city in Tuscany, central Italy. There is no
evidence of a Jewish community in the Roman City of Flo-
rentia. Early medieval documents preserved in the Florence
Archives mention names that can be Jewish. The first evidence
of a Jewish presence is dated to the 13th century. However, only
in 1366 did the Commune of Florence allow Jews to practice
banking in the city and therefore to settle there.
Representatives of the Jewish communities in Italy, assembled in Florence in 1428, obtained a letter of protection from Pope Martin V. In 1430 the municipal authorities invited Jewish bankers to set up shop, as they believed that they would be easier to control than their Christian counterparts. The first loan license was granted in 1437. Soon various Jewish families, such as the Da Pisas, Da Rietis, and Da Tivolis settled in Florence. Generally, the Jews met with hostility from the populace, while the aristocracy, especially the Medici family, protected them. The obligation to wear the Jewish *badge was frequently enforced and then suspended. Jews lived mainly on the other side of the Arno. A Via dei Giudei still exists in the area. There, until World War II, was possible to see the remains of a synagogue. The Jewish cemetery, within the city walls, was situated on the present Lungarno della Zecca. There were anti-Jewish demonstrations in 1458 and 1471. Further threats of violence were restrained with difficulty when Bernardino da *Feltre preached in Florence in 1488, and he was escorted from the city. However, the Medici often protected the Jews. In 1477 Lorenzo the Magnificent successfully stopped an attempt to expel the Jews from the city. On Lorenzo's death in 1492, the Jews of Florence faced new difficult times under the Republic. After the triumph of Savonarola a Monte di *Pietà was established, the Jewish bankers were compelled to transfer there their loan-bank licences. Later the Jews were expelled. In 1493 a Jew, falsely accused of having damaged the face of Giovanni II, the successor of Cosimo I, who became Grand Duke in 1519, was brutally executed.

The Medici returned to Florence in 1512, and in 1514 Jewish moneylenders were recalled. In 1527 the Medici were again banished, and the Jews received orders to leave, their expulsion being delayed. On the accession of Alessandro de Medici as duke (1531), the anti-Jewish enactments were abolished. However, only with Cosimo I (1537–74) and his wife Eleonora of Toledo, who were on friendly terms with the *Abrabanel family of Naples (afterward of Ferrara), did the Jews of Florence enjoy a long period of peace. It was on Jacob Abrabanel's advice that the duke authorized an appeal, directed primarily to Jews, promising wide privileges to merchants willing to settle in Florence. In 1551 Cosimo made an official proclamation which granted various concessions to Levantine Jews. However, years later Cosimo consented to the burning of the Talmud in the cities within the duchy (1553). On the other hand, he offered refuge to many Jews who left the papal states as a result of Pope Paul *IV's repressive measures, which he refused to implement in Florence. Cosimo modified his attitude when seeking to obtain the pope's agreement to his assumption of the title of grand duke. Under Pius *V, he introduced the badge (1567) and established a ghetto (1571), both in Florence and Siena, the only two cities where Jews were authorized to live. The ghetto of Florence was planned by no less a personage than Giannozzo *Manetti, Marsilio *Ficino, Girolamo Benivieni, and Pico della *Mirandola were thus introduced to Hebrew language, literature, and philosophy. The 15th and 16th centuries were a fruitful period for Jewish literature and poetry, and other branches of Jewish learning, even though the community did not number much more than 100 families. The establishment of the ghetto terminated this renaissance. The number of Jews in Florence substantially increased, however, as they were forced to leave the provincial towns of the duchy and reside in the capital.

The legislation of 1571 restricted Jewish trade to second-hand goods and strictly enforced the ghetto system. Ferdinand I, the successor of Cosimo I, who became Grand Duke in 1587, granted a series of privileges to Levantine Jews and they were allowed to live outside the ghetto. Italian Jews, however, were not only confined to the borders of the ghetto but were also excluded from the city's guilds. In 1670 a fire destroyed the northern area of the ghetto. The damaged Italian synagogue was partly rebuilt. Under the rule of Cosimo III, the ghetto was extended to accommodate a growing population. In general the position of the Jews was more favorable than their legal status warranted.

In 1737 the Habsburg-Lorraine inherited the Grand Duchy of Tuscany from the defunct dynasty of the Medici. The situation of the Jews soon changed for better. Thus in 1750 the community was allowed to purchase the two buildings housing the synagogues. Certain civic rights were conferred on the Jews by the Grand Duke Leopold I (1765–90), one of the champions of the Enlightenment in Europe, including the right to vote for the municipal council (1778). The first solely Hebrew printing press in Florence operated from 1734 to 1736, when Francesco Mouecke published a number of liturgical items. Isaac b. Moses di Pas printed there from 1744 to 1755. G. Campiapi printed a number of Hebrew books between 1778 and 1838, as did Rabbi G.V.A. Coën around 1828. When widespread popular disturbances broke out in 1790 against the reforms introduced by the ruler, the ghetto was attacked.

The Jews of Florence received their complete emancipation with the entry of the French Revolutionary army (March 25, 1799), which was subsequently forced to depart. In 1800 the French returned and the Jews regained their freedom. Florence, as well as Tuscany was annexed to Napoleonic France. Thus in 1808 a decree established consistories to govern the
life of the Jewish communities in Tuscany, as in neighboring France.

After the restoration of the grand dukes (1814), Jews continued to enjoy wide toleration, albeit with some discrimination. Jews were permitted to own real estate and to work as physicians and pharmacists, but were barred from the legal profession and were excluded from military service. In this period various Jews, mainly from the Pontifical States, immigrated to the more tolerant Florence. Florence Jews as well as the Jews of the rest of Tuscany attained equality in 1848 under the constitution granted by Grand Duke Leopold II. Finally, in 1859, when Tuscany was incorporated in the Kingdom of Sardinia (from 1861 the Kingdom of Italy), the Jews were recognized as equal citizens of the new kingdom. In 1859 two Jews, the D’Ancona brothers, held prominent positions in the provisional government of Farini before Tuscany was annexed to the Kingdom of Italy.

In 1864 Florence became the capital of Italy (until 1870). This probably influenced the community’s decision to build a new synagogue. The building was erected in 1872, in the new district of the Mattonaia, in Via Farini 4. It was a building in the Moorish style, crowned by a huge dome. The original planner was the architect Marco Treves, later joined by Mariano Falcini and Vincenzo Micheli. The synagogue was twice visited by royalty: by Umberto I in 1887 and by Vittorio Emanuele III in 1911. Not all of Florence’s Jews lived in the area. Thus in 1882 two small synagogues were opened in Via delle Oche 4. In 1899 the Collegio Rabbinico Italiano was transferred from Rome to Florence and placed under the guidance of Samuel Hirsch *Margulies. Through him and his pupils the community became the center of Hebrew culture in Italy. In 1931, 2,730 Jews lived in the community.

Hebrew Printing
The first solely Hebrew printing press in Florence operated from 1734 to 1736, when Francesco Mouecke published a number of liturgical items. Isaac b. Moses di Pas printed there from 1744 to 1755. G. Campiagi printed a number of Hebrew books between 1778 and 1838, as did Rabbi G.V.A. Coën around 1828. Publications appearing in Florence included Rivista Israelttica (1904–15), and Settimana Israelitica (1910–15), and the newspapers Israel (from 1916) and Rassegna Mensile di Israel (from 1925); both later appeared in Rome.

Holocaust Period
The German occupation of Florence occurred on September 11, 1943. The perilous situation of the Jews immediately caused Rabbi Nathan Cassuto, son of the famous scholar Umberto *Cassuto, to seek assistance from the local clergy, and especially from the archbishop of Florence, Cardinal Elia Dalla Costa. Cassuto was concerned not only for the Florentine Jews but also for those refugees, mostly of East European origin, who after the announcement of the armistice between the Italians and the Allies on September 8, had followed the Italian Fourth Army occupying southeastern France on its retreat back into Italy. Many of the refugees were women and children. The Jewish-Christian relief committee that was born following the contacts between Cassuto and Dalla Costa became operative at the end of September 1943. This relief committee consisted of Cassuto himself; Father Cipriano Ricotti, prior of the Monastery of San Marco; Don Leto Casini, priest of Varlungo; Matilde Cassini (Rabbi Cassuto’s young assistant, who attended to the contacts with the Florence monasteries and convents where the Jewish refugees were lodged); Eugenio Artom, a lawyer; Giuseppe Castiglioni, a lawyer; Guido De Angelis; Prof. Aldo Neppi Modona; and Giuliano Treves. Vital support to the relief committee was provided by Raffaele *Cantoni, who was in Florence following the dismissal of Mussolini as prime minister on July 25, 1943. Cantoni provided the committee with money, food, and clothing that were later distributed among the Jewish refugees lodged in the monasteries and convents. Giorgio La Pira, mayor of Florence after World War II, helped greatly in the search for monasteries and convents willing to take in the Jewish refugees.

The refugee committee was active for two months, from the second half of September to the second half of November 1943. The German raids against Jews in Tuscany began early in November 1943. On November 5 they took place in Siena and Montecatini. On November 6 the SS broke into the synagogue in Florence, seizing the custodian and a few refugees just arrived from France. They were deported to Auschwitz on November 9. On the evening of November 26, the SS invaded the premises of the Aziene Catolica, an Italian Catholic organization situated in Via dei Pucci, where a meeting of the Jewish-Christian relief committee was taking place, seizing Nathan Cassuto and other committee members. That same night, an SS unit with the active cooperation of a squad of Fascist soldiers invaded three monasteries in Florence: the convent of the Franciscan Missionary Sisters of Maria in the Piazza Carmine, where they seized 30 women and many children; the monastery of the Ricreatorio di San Giuseppe in Via Domenico Girillo, where they arrested about 20 men; and the convent of the Sisters dell’Apparizione in Via Gioberti, where they seized additional women and children. On the evening of November 29, as a result of betrayal, the Nazis apprehended, in the Piazza della Signoria, Anna Cassuto, the rabbi’s wife; Saul Campagnano, Cassuto’s brother-in-law; and Raffaele Cantoni. Most of the Jews arrested during the raids of late November 1943 were taken to the San Vittore prison in Milan, from where, on January 30, 1944, they were deported to Auschwitz. Cantoni managed to escape from the train, but the others arrived on February 6, 1944.

The relief activities of the Jewish-Christian committee continued clandestinely, but on a reduced scale, until the liberation of Florence in August 1944. About 243 Jews were deported from Florence, of whom only 13 returned. Eight Jews were murdered in circumstances related to their arrest, and four died while fighting with the partisans.
Contemporary Period

At the end of the war, 1,600 Jews were left in Florence. This number was reduced by 1965 to 1,276 out of a total of 455,000 inhabitants as a result of the constant excess of deaths over births. In 1962 the two oratories in Via delle Oche were sold. In 1970 there were approximately 1,250 Jews in Florence, including some in the surrounding area. By the turn of the century the number had dropped to around 1,000. In the floods of 1966, the muddy waters of the Arno River inundated the beautiful synagogue, causing great damage to the sacred objects and library. Today the synagogue is of the Sephardi rite, but there is also an Ashkenazi prayer house. The community had a kindergarden, an elementary school, and a high school as well as a rest home for elderly people, and a kosher restauant. A review, Ebrei d’Europa, is published irregularly.

FLORENTIN, MEVORAH (1895–1963), Venezuelan pioneer in the education of the blind. Florentin was born in Salonika, Greece. He lost the sight of one eye at the age of seven and his sight gradually deteriorated. In 1923, he settled in Caracas, Venezuela, and devoted himself to the study of Spanish until 1934 when, convinced that he would soon go completely blind, he turned to the study of Braille and the welfare of the blind. In 1936, he founded the Society for the Friends of the Blind, and after passing examinations in Braille and in typology (the scientific study of blindness) in Paris, he established a printing press for the publication of scholarly texts in Braille. In 1959, he founded the Eye Bank of the Venezuelan Institute for the Blind and the first School of Telephonists for the blind. In recognition of his services he was decorated four times by the Venezuelan Government, including the Order of Francisco de Miranda. After Florentin’s death, the street in which the institute for the blind is located was named in his memory, and different educational institutions for the blind carry his name.

FLORETA CA NOGA, 14th-century Spanish physician. A document from 1381 indicating that Na Floreta Ca Noga of St. Coloma de Queralt was paid fifteen gold florins for her successful treatment of Sibila, Queen of Aragon, is among several records of royal payments for her services. She is one of a number of known female physicians of the medieval period, many of whom specialized in diseases of the eyes.

[Judith R. Baskin (2nd ed.)]

FLORIDA, most southeasterly U.S. state, with a warm climate and long coastlines on the Atlantic Ocean and Gulf of Mexico. This combination creates a desirable quality of life that has attracted large numbers of people of all ages, among them many Jews. Florida (in 2005) boasted more than 17 million residents and had diversified its economy to become an important center of tourism, beef cattle, citrus, and space technology. Much of the growth in the Sunshine State since the end of World War II has been in its southern portions and South Florida had the third largest concentration of Jews in the U.S. after the New York and Los Angeles metropolitan areas.

Florida was discovered by Ponce de Leon for Spain in 1513 (21 years after the Spanish Inquisition) and some *Conversos may have come with him, as they did with Columbus. America’s first permanent settlement was in St. Augustine in 1565. There are Sephardi names among those who lived there and evidence suggests that Pedro Menendez Marques, the third Spanish governor of Florida (1577–89) may have been a Converso. The perception that Jews were late arrivals in Florida parallels the belief that ascribes the founding of the U.S. to the pilgrims of Plymouth Rock. Current documentation shows that Jews have been allowed to live in Florida for nearly 250 years.

Until the mid-18th century Florida was for Catholics only. The Treaty of Paris (1762), which concluded the French and Indian War, gave Florida to the British and Louisiana to the Spanish. Jews living in Louisiana had to move. In 1763 three Sephardi Jews came from New Orleans to Pensacola: Samuel Israel, Joseph de Palacios, and Alexander Salomon. (Alexander Salomon may have been related to Haym *Salomon, who helped finance the American Revolution.) Although Florida was returned to Spain following the American Revolution (1783), the Spanish needed settlers in
the territory, so they tolerated a tiny Jewish presence. From the mid-18th century until Florida achieved statehood in 1845, Jews continued to trickle into northern Florida. The “Architect of Statehood” was a Jew, David Levy *Yulee, a son of pioneer Moses *Levy.

Eighty-one years before the First Zionist Congress in Basel, Switzerland (1897), Sephardi Jew Moses Elias Levy embarked on his own “Zion” plan to resettle oppressed European Jews in Florida. Born in Morocco in 1782, Moses Levy descended from one of the many Jewish families who, having been expelled from the Iberian Peninsula at the end of the 15th century, found refuge in northern Africa. Raised in Gibraltar, Levy made his way to St. Thomas, v.t., in 1800. There he worked in the lumber business, accumulating a considerable fortune. He became interested in Florida and, in 1819, purchased 92,000 acres in the north central region.

Envisioning a haven for persecuted Jews, Levy called his settlement in Micanopy “Pilgrimage Plantation.” He hired Frederick *Warburg, a member of the noted German Jewish banking family, to help him recruit Jewish settlers. Young Warburg, along with at least five other German Jewish families, lived on the Plantation. Included among them was Levy’s son David, who became Florida’s first U.S. senator. Moses Levy built a plantation house and houses for the settlers’ families, as well as a blacksmith shop, stable, sugar mill, sawmill, and corn house. He brought in sugar cane, fruit trees, and seeds. In an effort to create a utopian Jewish settlement, Levy included among his projects a plan for the abolition of slavery, public schools, and a Jewish school.

The 1,000-acre plantation lasted from 1822 to 1835, when it was burned down by the Seminoles at the outbreak of the Second Seminole Indian War. Sustaining the plantation had been a challenge; in early 19th century Florida, it was virtually in the middle of nowhere. And the urban backgrounds of most of the Jewish settlers made adaptation to a rural outback difficult. As Levy said, “It is not easy to transform old clothes men into practical farmers.”

Moses Levy left Florida a lasting legacy. Divorced, he had brought with him to Florida two of his four children, Elias and David. Elias was sent to Harvard; David boarded with the Moses Meyer family in Norfolk to get his Jewish education and then came to Florida by 1827 to manage some of his father’s properties. He pursued law and was admitted to the Florida bar in 1832. David Levy became extremely active in politics. He helped draft Florida’s constitution and eventually was sent to the U.S. Congress as the representative of the Territory of Florida (1841), where he argued for statehood. Being the first Jew to serve in the U.S. Congress, Levy faced discrimination when John Quincy Adams referred to him as the “alien Jew delegate.”

With less than one hundred Jews in the state, David Levy established a residence in Fernandina, where, in the 1850s, he organized and planned Florida’s first railroad linking the Atlantic and Gulf coasts. On March 1, 1861, the first cross-state train of the Atlantic & Gulf Railroad left Fernandina at 7:15 a.m. and reached the outskirts of Cedar Key at 4 p.m., with eight stops in between.

Yulee resigned from the Senate when Florida seceded from the Union in early 1861. During the Civil War he served in the Confederate Congress. The war took a heavy personal toll. Union forces burned Yulee’s plantation in Homosassa, his railroad lay in ruins, and, after the war, he was briefly imprisoned by the Union. Following his release, Yulee rebuilt his railroad, its operation continuing until the 1930s. Yulee moved to Washington, D.C., in 1880. He died six years later and is buried in Washington. Scholars contend there is no evidence that David Levy Yulee converted from Judaism, even though he married a Christian. Florida’s Levy County and the town of Yulee (Nassau County) are among the places in Florida named for him.

Until 1822, Jews who lived in Florida came from somewhere else. The earliest known Jewish births are a girl (Virginia Myers) in Pensacola in 1822 and a boy (George Dzialynski) in Jacksonville in 1857. In that same year (1857), also in Jacksonville, Jews built the first Jewish cemetery in Florida. And in 1874 B’nai Brith had a chapter in Pensacola.

Florida’s first synagogue was constructed in Pensacola in 1876. By the end of the 19th century, there were six Jewish congregations and five Jewish cemeteries in Florida. Floridian Jews served on both sides of the Civil War. Following the Civil War, Jews began migrating south, settling in Tampa, “Orlando, Ocala, and even Key West. The west coast city of “Fort Myers, founded in 1886, was named for a Jew – Abraham C. Myers, a West Point graduate and a descendant of the first rabbi of Charleston, South Carolina. Myers had served as quartermaster during the Second Seminole Indian War.

In 1879 German Jew Henry Brash was elected mayor of Marianna in north Florida, the first known of more than 150 Jews to serve their communities in this capacity. David Sholtz, a Russian Jew, became Florida’s governor in 1933. Miami’s Richard Stone became the state’s second Jewish U.S. senator in 1974 after serving as Florida’s secretary of state. Scores of Jews have served in the state legislature and in the U.S. Congress. In 2005 Florida was represented in Washington by Debbie Wasserman Schultz and Robert Wexler. More than 250 Jews have served as judges in Florida.

In 1915 Jacksonville Jew Ben Chepenik wrote his relatives in Massachusetts, “Sell everything; come quickly to Florida, the land of milk and honey; you can walk down the streets and pick citrus.” And many did come. For Jews, Florida offered a variety of occupational opportunities. Some transferred their traditional dry goods businesses to Florida; others used the state’s resources to develop or expand new ideas. In Florida, Jews became ranchers, farmers, cigar makers, architects, developers, hoteliers, artists, writers, scientists, retailers, educators, doctors, lawyers, civic leaders, and more.
Jews owned the largest shade tobacco-packing factory in Quincy, near Tallahassee. Saul Snyder, a Russian Jew who immigrated to St. Augustine in 1904, founded the Florida Cattlemen’s Association at a time when cattle was the state’s major industry. The first Miss Florida was Jewish (1885). Much more recently, Marshall *Nirenberg of Orlando was awarded the Nobel Prize in medicine and physiology for breaking the genetic code (1968) and Isaac *Bashevis Singer – routinely associated with New York City but a Florida resident as well – received the Nobel Prize in literature in 1978. Four Jews have served on the Supreme Court of Florida, including as chief justice: Ray Ehrlich, Arthur England, Gerald Kogan, and Barbara Pariente.

Prior to the 20th century, most Jewish settlement in Florida was in the north or Key West (Key West was a port of entry for some European immigrants). But the development of railroads made accessible southern regions, and Jews headed south. Jewish migration throughout the state increased, but numbers increased exponentially after World War II, especially in Miami-Dade County. Air conditioning made Florida comfortable for year-round life.

The first South Florida community to host Jews was Quincy, near Tallahassee. Sixteen percent of the American Jewish community lived in Florida in 2005. In the 1890s the Florida Jewish population was about 2,500; by the 1950s, the population had grown to 70,000; in 2005 it was nearly 850,000, about 5% of the general population, and still growing. Outside of South Florida, communities with noteworthy Jewish populations include Orlando, 35,000; Tampa, 25,000; St. Petersburg-Clearwater, 20,000; Sarasota, 17,000; Jacksonville, 13,000; Ft. Myers, 8,000; Naples, 6,000; Cocoa, Rockledge, Titusville, 6,000; Daytona, Ormond and environs, 5,500; Tallahassee, 4,400; Pensacola, 900 and Key West, 550. (See separate entries on other Jewish communities.)

In 2005 there were more than 350 congregations, 14 Federations that raised $82 million annually, 15 Jewish community centers, six university Judaic Studies programs, five Jewish homes for the aged, and eight Jewish newspapers. In Miami Beach were the Jewish Museum of Florida, a nationally recognized Jewish hospital (Mt. Sinai), and a major Holocaust Memorial. There was Florida Holocaust Museum in St. Petersburg as well as other Holocaust memorials and documentation and education centers around the state. The March of the Living and the Alexander Muss High School in Israel, two programs with international implications, began and are based in South Florida. There were nearly 100 kosher restaurants. And there was the full array of Jewish organizations, from the American Jewish Committee to the Zionist Organi-
zation of America. Few would deny that this was a significant American Jewish community.

[Marci Jo Zerivitz (2nd ed.)]

*FLORUS OF LYONS* (c. 860), successively secretary to the bishops *Agobard* and *Amulo*. Florus supplied no more than the literary material for the two bishops’ anti-Jewish writings, which have often been wrongly attributed to him. However, he alone was responsible for two anti-Jewish compilations. The first, *De coertione Iudaorum* (“On Forcing the Jews,” c. 820), was in defense of Agobard, who was accused of using force in bringing Jewish children to baptism. The second, *De fugiendis contagis Iudaorum* (“On the Avoidance of Jewish Pollution,” before 826), was included in a memorandum addressed to the emperor by Agobard and some of his colleagues.

[Bernhard Blumenkranz]

**FLOSS,** village in Bavaria, Germany. In 1685 a group of Jewish cloth merchants received a charter to settle and build on an unoccupied hill. Four houses were built in 1687 and the Jewish “colony” (juedische Kolonie), as it was called then, had 12 houses by 1712. In 1721 a synagogue was built. The community (referred to as “Judenberg” by contemporaries) retained its rights of self-government and jurisdiction well into the 19th century. When the government in 1819 ordered the incorporation of the Jewish community within the village according to the 1813 Bavarian edict (see *Bavaria*), the Christian villagers protested, and in 1824 the Jewish community was again separated. It was totally incorporated in the village in 1869. There were 200 Jews living in Floss in 1799, 391 in 1840, 205 in 1871, and 19 in 1933. Floss served as a religious center for the Jews of the neighboring villages. On *Kristallnacht* (November 1938) the synagogue (consecrated in 1817) was burned down and the rabbi’s house and communal center were ransacked. No Jews returned after the war. Yehoseph *Schwarz*, pioneer Jewish geographer of Erez Israel, was born in Floss.

**FLOWERS.** Almost all the very rich and variegated flora of Erez Israel are flowering plants (*Phanerogamae*), and most of them have an attractively colored corolla. In Israel flowers bloom all year, in the cold and rainy season as well as in the burning heat of summer, but mainly during the spring. In this respect Israel differs from those countries where plants almost entirely cease blooming in winter and burst forth in spring in a blaze of flowers and greenery. The biblical “month of Abib” (“spring”; Ex. 13:4; et al.) refers to the time when the grains of corn in the ear are still tender. In point of fact, there are two seasons of the year in Israel: “Cold and heat, summer and winter” (Gen. 8:22); “Thou hast made summer and winter” (Ps. 74:17). The winter season begins after the early rains have fallen (October–November). Shortly afterward the ground is covered with a blanket of green grass. Appearing soon after the early rains, the first flowers bloom, mainly those of bulbous plants such as species of colchicum with their pinkish-white flowers and the crocus and saffron with their white ones. Masses of yellow dandelions and calendula appear a few weeks later. Once more the color of the fields changes, this time to the bright pink of the thousands of silene. In January the fields are covered with the blood-red flowers of the anemone, other colors of it – white, pink, and violet – growing in Galilee and on the Carmel. Their red is replaced shortly after by the fiery red flowers of the ranunculus, and here and there are to be seen the beautiful red blooms of the tulip, which in the 1930s and 1940s dominated the landscape of the Sharon and the mountains but have been greatly diminished as a result of ruthless picking. The red species of poppy, however, which bring the season of abundant flowering to a close, have not been affected in this way.

Such is the main cycle of the landscape’s changing hues in Israel’s Mediterranean areas until the arrival of summer. In addition to these there are hundreds of species of other flowers, some of them the most beautiful in the country, as well as several endemic species that are among the prettiest in the world, such as the cyclamen, conspicuous by its delicate flowers and picturesque leaves, which appears among the rocks as early as December. The fragrant narcissus is found in the valleys and prominent in March–May are many species of terrestrial orchids, not inferior in beauty despite their small flowers to their conger, the tropical epiphytic orchids. This period is rich in the blooming of floral species of the Iridaceae family, such as those of the gladiolus and iris, as well as flowers of the Liliaceae family, to which the *Lilium candidum* belong. Because of expanding agricultural settlement and the intensive picking of blooms, the areas of these beautiful flowers have been greatly reduced, but their number has been increasing year by year since the passing of the State of Israel’s nature protection laws.

In the desert areas of Israel – the Negev and Aravah – flowering begins after the first rain and here also are many splendid flowers, particularly of the Liliaceae and Iridaceae families as well as species of the *Salvia* and crucifers. To the last belongs the desert *Mantar* which in winter covers the rocky hammada with a purple carpet of millions of flowers. The flowering period of the desert flora is short. Annuals have a brief existence, the entire life cycle of some – sprouting, growing, flowering, and seeding – lasting no more than ten weeks. In this way desert flora ensure their survival before the advent of the long, dry summer months. The Mediterranean single-season flora, too, have a brief span of life. Taking advantage of the rainy season, they grow rapidly, and flower for a few days, only to disappear suddenly with the coming of the first hot *sharav* (“sirocco”) winds of spring. This phenomenon has found expression in many metaphors, such as those describing the end of man’s life: “The grass withereth, the
flower fadeth” (Isa. 40:7), and his short life: “In the morning it flourisheth, and groweth up; in the evening it is cut down, and withereth” (Ps. 90:6). The wicked, too, are likened to masses of single-season flowers that suddenly flourish in all their brilliance but with the coming of the hot sharav wind disappear without a trace (ibid. 92:8).

Besides wild annuals or bulbous and tuberous flora, there are many wild perennials – beautiful flowering shrubs and trees. Cyclical changes mirrored in the blossoms’ hues on the dominant shrubs and trees can be distinguished in the color of the landscape. The first tree to bloom in Israel, when forest trees are still shedding their leaves is the *almond, covered with a white mantle of blossoms (some strains of the cultivated almond have pinkish flowers). Shortly after, in January, with the blossoming of the Calycotome shrub, the prevailing color of the woods changes to yellow. Next the rockrose (Cistus) shrubs bloom with their large pink and white flowers. The purple flowers of the Judas tree (Cercis) are conspicuous in the woods in March. Then yellow, the color of the spartium shrubs, once again becomes the predominant hue, to be replaced by the white of the flowers of the styrax and the hawthorn (Crataegus). The great majority of the country’s shrubs and trees blossom in winter and spring, and only a few of them in the dry summer – the season when the eucalyptus flowers. Soon after the rains the various species of citrus bloom, and the air is filled with the scent of their blossoms.

The end of summer, with the approach of the rainy season, sees a revival in some species of flora known as “the harbingers of winter”; prominent among these is the *squill with its white flower, like an erect candle, which comes out of the bulb during the last months of summer. The Pancratium – “lily of Sharon” – blooms in this season, its large, fragrant flowers visible from afar in the desolate landscape. Two species of the colchicum flourish at the end of summer. It is, at first sight, surprising that the Bible and talmudic literature seldom refer to the use of flowers for decorative purposes, but in ancient times the emphasis was laid on aromatic flora, and it is their fragrance which is emphasized. The picking of flowers is referred to in the Bible only once: “My beloved is gone down to his garden, to the beds of spices, to feed in the gardens, and to gather lilies” (Song 6:2). The Mishnah, too, speaks of the picking of lilies, but in a cemetery (Toh. 3:7). Mention is made of a “rose garden” which existed in Jerusalem since the days of the prophets (ibid. 82b). According to the Mishnah, figs grew there (Ma‘as 2:3). But here, too, it is doubtful whether this garden was for decorative purposes or whether the fragrant roses were not used in the preparation of perfumes (see *Rose). The flowers mentioned in the Talmud, such as the saffron, jasmine, and narcissus, are chiefly mentioned as aromatic and medicinal flora.

The flower was a common motif in ancient Hebrew art: the ornamentation of the candlestick was in the form of “a calyx and petals” (Ex. 25:33). On the brim of the “sea” in the Temple were embellishments “like the brim of a cup, like the flower of a lily” (1 Kings 7:26), while the boards of cedar in it were “carved with knops and open flowers” (ibid. 6:18). Josephus tells that the crown worn by the high priest was in the form of the calyx of the Hyoscyamus flower. Apparently the passage, “Woe to the crown of pride of the drunkards of Ephraim, and to the fading flower of his glorious beauty” (Isa. 28:1), alludes to floral wreaths. In apocalyptic literature it is stated that virgins wore floral chaplets, as did those celebrating Tabernacles and the victor in battle (II Bar. 10:13; Jub. 16:30; 1V MacC. 17:15).

The Talmud refers several times to chaplets of roses (Shab. 152a; BM 84a). It is also related that bridegrooms wore wreaths of roses and myrtle (Sot. 9:14; Tosef. 15:8) and that non-Jews garlanded the idols on their festivals with crowns of roses and corn (Av. Zar. 4:2; T1, Av. Zar. 4:2, 43d).

Flowers of the Bible

Only three flowers are mentioned by name in the Bible, the shoshan or shoshannah (“lily” or “rose”), shoshannat ha-amakim (shoshannah “of the valleys”), and havazzelet ha-Sharon (“rose” or “lily” of the Sharon (Valley)). The complex question of the identification of the shoshon or shoshannah has provoked more studies than any other flora mentioned in the Bible, there being scarcely a beautiful flower found in Israel (and even beyond its borders) that has not been suggested. Symbolizing in the Bible beauty and fragrance, it is most probably to be identified with the Lilium candidum – the white (madonna) lily. Abraham Ibn Ezra (in his commentary on Song 2:1) had this flower in mind when he stated that shoshon, shoshannah is derived from shesh (“six”), “since it always has six white petals as well as a pistil and long stamens which likewise number six.” On the basis of this identification and doubtless also because of its delightful smell, Ibn Ezra declared, contrary to the generally accepted view, that the expression “his lips are as lilies” (ibid. 5:13) refers “to scent and not to appearance,” that is, not to the red color of the lips but to their sweet odor. The other descriptions of the word in the Bible fit in with “lily” (Song 6:2–3; 4:5; 5:13; 7:3). Previously doubt was cast on this identification on the grounds that it was not proved that in ancient times the lily grew wild in Erez Israel, but this large, beautiful, and scented bloom is to be found in woods in the Carmel and Galilee areas. To see the lily’s lovely fragrant flowers blooming at the beginning of summer among the various thorns that then dominate the landscape is an enchanting experience, and hence “as a lily among thorns, so is my love among the daughters” (Song 2:1–2). It is this passage that was responsible for the incorrect identification of shoshannah as a rose, having been explained as referring to a rose amid its thorny stems. The rose was not found in Erez Israel in biblical times, however, and although two species of rose grow wild in the country, they are neither beautiful nor fragrant, nor do the name shoshan and its biblical description fit the rose. It must, however, be pointed out that its identification as a rose already appears in the Midrash which speaks of the “red shoshannah” and of “a shoshannah of a rose” (Lev. R. 23:3; Song R. 7:3, no. 2).
Although the identification of shoshan/shoshannah as a lily is almost certain, it is difficult to identify the shoshannat ha-amakim mentioned with it in the Song of Songs since the white lily does not grow specifically in valleys. Of the many suggestions put forward in identifying it, the most likely appears to be the narcissus (Narcissus tazetta), a fragrant flower with six enveloping petals that flourishes particularly in valleys with a heavy soil. Havazzelet ha-Sharon is mentioned in the same verse (Song 2:1) and also in the vision of the flowering of the desolate land which shall “blossom as the havazzelet” and to which “the excellency of Carmel and Sharon” shall be given (Isa. 35:1–2). The havazzelet, as also the shoshannah, is identified by the Septuagint as κρίνον, that is, a lily. The Targum on Song of Songs identifies it with a narcissus, while various exegetes have identified it with the country’s beautiful flowers, such as the iris or rose (Ibn Ezra), the colchicum (Loew), the tulip, as well as other flowers of bulbous plants, since the word is very probably connected with bazal (“bulb”). It is generally accepted that havazzelet ha-Sharon is to be identified with the Pancratium maritimum, a bulbous plant with white, highly scented flowers which blooms at the end of summer in the coastal lowland; thus it appropriately symbolizes the flowering of the desolate land and its transformation into “the excellency of Carmel and Sharon.”

Jehuda Feliks

Ceremonial Use

Man's awareness of the fragrance of flowers is an occasion for him to say the blessing, “Blessed art Thou, O Lord … who create fragrant plants” (Ber. 43b). Yet flowers and plants were not generally used in synagogue or Jewish home ceremonies. On *Shavuot, however, it is customary to decorate the synagogue with fragrant grass, flowers, and branches. A threefold reason is given for this custom: the branches are a reminder that Shavuot is also the “Day of Judgment” for trees (RH 1:2); the fragrant grass is symbolic of the people of Israel assembled around Mount Sinai for the giving of the Torah (Ex. 34:3); and the flowers are a symbol for the betrothal of Israel to the Torah. The decorating of synagogues with flowers on Shavuot was opposed by some authorities on grounds of its similarity to the Christian practice (see *Hukkat ha-Go). In modern times on Shavuot, synagogues are sometimes also adorned with sheaves of wheat, etc., symbolic of Shavuot as the festival of the wheat harvest and the offering of the “first fruits (bikkurim; see also Bik. 33). In the U.S. the custom has grown of having flowers at most family events, On Simhat Torah in some congregations, a huppah (“bridal canopy”) made of plants and flowers is placed on the bimah (“platform”), and on Sukkot, the sukkah is embellished with fruits, flowers, and plants. Traditional Jewish mourning customs admit neither wreaths nor flowers at funerals or on tombstones (although in modern times, this custom is frequently disregarded). The planting of trees and shrubs around the synagogue building was the cause of heated debates a century and a half ago. Orthodox rabbinical authorities strongly objected to the landscaping of synagogue grounds, based on Deuteronomy 16:21 (see also Maim. Yad, Avodat Kokhavim 6:9). This objection, motivated by fear of innovation and reform, subsided in the course of time and yielded to the desire for an aesthetically appropriate setting for the synagogue.

FLUSSER, DAVID (1917–2000), scholar of comparative religion; professor at the Hebrew University of Jerusalem beginning in 1962. Flusser’s researches were devoted to Christianity, with a special interest in the New Testament; to Judaism of the Second Temple Period, and in particular to the *Dead Sea Scrolls; to the *Josippon Chronicle, and certain associated areas. Of great prominence were his researches into the Dead Sea Scrolls and the sect which produced them, especially as the Scrolls relate to the New Testament. His article “The Dead Sea Sect and Pre-Pauline Christianity” (Scripta Hierosolymitana, 1958) is central to any consideration of these problems. He has published over 1,000 articles in Hebrew, English, German, and other languages, distinguished by a great sensitivity to currents and types of religious thought as well as by their philological analysis. His published work also includes “Blessed are the Poor in Spirit,” in: IB, 10 (1960), 1–12; Die konsequente Philologie und die Worta Jesu (1963); De joodse oorsprong van het Christendom (1964); Yosippus: Kanteres le-Dugma (1947); Jesus in Selbstzeugnissen und Bilddokumenten (1968) and Jesus (1969, 2001); and translations into French and Dutch as well as “Jesus in the Context of History” (in: The Crucible of Christianity (1969), 225–34, ed. A. Toynbee). Later books include Judaism and the Origins of Christianity (1988) and Judaism of the Second Temple Period (2 vols., 2002). In 1980 he was awarded the Israel Prize for Jewish studies.

FLY (Heb. זְבוֹז), which occurs in an analogous form in other Semitic languages, refers mainly to the housefly (Musca domestica) A dead fly turns foul anything it falls into (Eccles. 101). Among the visitations against which public prayer was offered up was a plague of flies (Taan. 14a). The Palestinian amora, Johanan, warned against flies as carriers of disease (Ket. 77b). One measure of a man’s fastidiousness is how he reacts when a fly falls into his drink (Tosef., Sot. 5:9). One of the miracles that occurred in the Temple was that “no fly was seen in the slaughter house” (Avot 5:5). Rav reported from observation that “no fly is a year old”; in other words, that it does not live more than six months (cf. Deut. R. 5:2). Despite the repulsiveness of the fly, its existence was considered important in the balance of nature (TJ, Ber. 9:3, 13c). The people of Ekron worshipped an idol called Baal Zebub (“lord of the fly,” see “Baal”), perhaps regarded as a protector against the plague of flies (1 Kings 15:2). Besides the housefly, there are to be found in Israel stinging, blood-sucking flies, as well as carrion and fruit flies. Carrion flies (Lucilia) lay their eggs in carrasses. From the eggs hatch maggots (referred to in biblical passages as rimnah ve-tole’ah), which cause the decom-
position of the corpse (Isa. 14:11; et al.). The maggots of fruit flies (*Drosophila*) feed on fruit and sweet food (cf. Ex. 16:24); the olive fly (*Dacus olea*) causes the fruit to fall from the ol-

Deut. 28:40).

Zome'ah, 224.

[Jehuda Feliks]

**FOA** (generally *Foà* in Italy), Italian family well-known from the 15th century; in the 18th century it became established also in Amsterdam, Constantinople, and France, where the forms *Foi* or *Foy* were adopted in due course. The origin of the name is unknown, but it may derive from Foix in southern France, where there was a Jewish community in the Middle Ages. A. Yaari (*Meḥkeret Sefer* (1958), 325–44) assembled the names of 100 distinguished members of the family. The family badge shows the Shield of David over a palm tree flanked by two li-

ons. This was used as their distinctive *‘printers’* mark by suc-

cessive members of the Foà family from the middle of the 16th to the 19th century (see below).

**ELIEZER NAHMAN** (d. after 1641), rabbi and kabbalist, a disciple of Menahem Azariah da *Fano. He lived at Reggio Emilia where he became chief rabbi of the duchy of Modena. He was at the head of the pious association Ḥevrat ha-Alu-

vim which sponsored the printing of the commentary on the Passover Ḥaggadah, *Midrash be-Hiddush* (Venice, 1641; com-

plete ed. Leghorn, 1809). He also left a diffuse philosophic and kabbalistic commentary on the Pentateuch, *Goren Ornan*

(Ms. in Mortara, Almanzi, and Ghirondi collections). **MOSES BENJAMIN** (1729–1822), bibliophile and bookseller of Reggio Emilia, supplied books to the ducal library at Modena and later became one of the most celebrated booksellers in Italy. He purchased the library of Israel Benjamin *Bassano, which he later presented to the Jewish community at Reggio. He wrote a Hebrew grammar and copied expertly several Hebrew man-

scripts. **ELIA EMANUEL** (d. 1796) founded a Jewish school in Vercelli which attained a high standard and continued to flourish for over a century.

In more recent times, the following should be mentioned: **CESARE** (1833–1907), born at Sabbioneta and later rabbi in Soragna. He translated into Italian works by *Judah Halevi, Moses *Zacuto, and Jacob Daniel *Olm. Pio* (1848–1923), a pathologist, was born in Sabbioneta. He became a professor at the universities of Modena and Turin, and wrote a standard treatise on pathological anatomy. An ardent Italian patriot and in his youth a follower of Garibaldi, he was made a sena-

tor of the kingdom. His son *CARLO* (1878–n.a.), a physiolo-

gist, worked on the function of the glands of internal secre-

tion, and was lecturer at various Italian universities. He was

prize winner and later member of the Accademia dei Lincei. A member of another branch of this family was *SALVATORE* (1885–1962), born in Turin, who wrote several monographs on the history of the Jews in Piedmont. The French branch of the family produced well-known explorers, writers, and phi-

lanthropists. One of these, *EDOUARD* (1862–1901), explored the interior of Dahomey in 1886 and in 1894–97 crossed Af-

rica from the mouth of the Zambesi on the Indian Ocean to Libreville in Gabon on the Atlantic Ocean, His books include *Le Dahomey* (1895) and *De l’Océan Indien à l’Océan Atlantique* (1900), and *Résultats scientifiques des voyages en Afrique d’Edouard Foà* (published posthumously, 1908).

[Giorgio Romano]

One section of the family devoted itself to Hebrew printing. **TOBIAS BEN ELIEZER** (16th century) set up a Hebrew printing press in his house in *‘Sabbioneta in 1551. In its last years, Tobias’s sons ELIEZER and MORDECAI headed this enter-

prise, which had to close after difficulties with the censor, the last works on the press being finished in *‘Cremona and *‘Man-

tua. Tobias started the fashion of printing special copies, often on parchment, for wealthy patrons. **NATHANIEL BEN JEHIEL**

began his printing activity as a hobby in Amsterdam in 1702, prompted by his uncle and brother-in-law Joseph Zarefati. Most of the works he issued (12 up to 1715) were written by emissaries from Erez Israel or were manuscripts which they had brought with them. **ISAAC BEN GAD** (b. c. 1700), physi-

ician and one of the leaders of the Venice Jewish community, ventured into Hebrew printing about the time of the birth of his son *GAD* (1730–1811) and produced mainly liturgical items until 1739. From 1741 Isaac was in the book trade proper. In 1742 he entered into partnership with his kinsman *SAMUEL, who was also father of a son *GAD, the two Gads later taking over the business. Gad b. Samuel appears as the sole printer between 1775 and 1778; he moved to *‘Pisa in 1796, producing

13 books at his own press or at that of David Cesna. His last major production, in association with Eliezer Saadun, was a 

handsome Hebrew Bible of 1803. Gad b. Isaac resumed printing in Venice in 1792 until 1809. Among the few major works produced by the Foàs of Venice are the first four volumes of Isaac Lampronti’s talmudic encyclopedia *Pahad Yizhak.*

**FOA, ESTHER EUGÉNIE REBECCA** (1799–1853), French author. Born in Bordeaux, Esther Foà was the first Jewess to make her name as a French writer. Under various pen names, including Edmond de Fontanes, she wrote novels and stories on Jewish themes for juveniles. Among them are *Le Kiddou-

chim ou l’anneau nuptial des Hébreux* (4 vols., 1830), *La Juive, histoire du temps de la Régence* (1835), and *Le vieux Paris, con-

tes historiques* (1840). She later abandoned Judaism.

**FOA, RAIMONDO** (1877–1940), Italian army officer. Born in Casale Monferrato, Foà was commissioned in 1899 and fought in the Italo-Turkish War (1911–12). He was an artillery com-

mander in World War I and in 1919 worked in the technical service of the artillery. Foà became director of the Terni Ord-
FODDER

ENCYCLOPAEDIA JUDAICA, Second Edition, Volume 7 93

rance Arms factory in 1927. He was promoted to the rank of lieutenant general in 1937.

FOCSANI (Rom. Focșani) town in E. Romania founded in the 17th century. Jewish settlement there dates from the second half of the 17th century; there were 20 tax-paying families by 1820. The community numbered 736 in 1838, 1,855 in 1859 (19.2% of the total), and 5,954 in 1899 (25.2% of the total), 4,301 in 1930 (13.2% of the total), and 4,935 in 1941 (10.5% of the total). Since this was a wine-growing area many of the Jews were vintners. Focșani was a center of anti-Jewish hostility. The oath “More Judaico” was introduced there for the first time in 1818. In 1859 there was a case of libel soon exposed as crime committed for gain. The antisemitic newspaper Paznicul was published in Focșani from 1900. The Romanians’ Union, an association founded in 1910, proclaimed a boycott of the Jewish merchants. In March 1925 the trial was opened in Focșani of Corneliu Zelea Codreanu, head of the Iron Guard, accused of murdering the chief of the police in Jassy. Antisemitic gangs took the opportunity to pillage 300 Jewish houses, among them the school and the great synagogue. On the eve of World War II the community had eight synagogues, the oldest dating from the 18th century, two primary schools, a kindergarten, a medical dispensary, and three cemeteries. Focșani was a center of early Zionist activity, and the first conference of the Yishuv Erez Israel movement took place there on Jan. 11–12, 1882, with representatives from 32 localities. Rabbis of Focșani include the Hebrew author Jacob Nacht (1872–d. in Israel 1959), who officiated there from 1900 to 1919, and through whose influence Focșani became the center of Zionist cultural activity in Romania. The Hebrew writer Israel Teller, teacher at the Jewish school, also lived in Focșani. Solomon Zalman *Schechter, discoverer of the Cairo genizah, was born in Focșani. Avram Moise Schwartz, known as *Cilibi Moise, the first Jewish writer in the Romanian language, was also born in Focșani.

Holocaust Period

In 1941 there were 3,953 Jews living in Focșani out of a total population of approximately 37,000. At the beginning of the *Antonescu regime, the Jewish merchants were forced to hand over their shops to the Iron Guard; those who refused were sent to concentration camps at Târgo-Jiu and Caracal. Three of the synagogues were blown up by military engineers on the pretext that the earthquake of November 1940 had damaged their foundations, making them dangerous constructions.

When the war with the Soviet Union broke out (June 1941), all Jewish males aged between 16 and 60 were imprisoned. A few weeks later they were released, except for 65 hostages including the rabbi and community leaders. Three months later the number of hostages was reduced to ten; each was held for a while and then relieved by other Jews. The number of Jews in Focșani increased considerably with the arrival of Jews who had been driven out of the villages and towns in the district, as well as Jews from "*Ploesti. They were cared for by the local community which also aided a group of 400 Jews from southern Transylvania who had been brought to the district as forced labor. A number of Jews from Focșani were also sent away on forced labor. In the spring of 1944, 210 Jewish orphans from "*Transnistria were brought to Focșani and put under the care of the local community. On May 12, 1944, the local military commander mobilized all male and female Jews aged between 15 and 55, to dig anti-tank ditches for the defense of the town against the approaching Soviet forces.

In the postwar period the Jewish population, which numbered 6,080 in 1947, decreased to 3,500 by 1950 as a result of emigration. By 1970 continued emigration had reduced the number further to about 150 families. One synagogue remained open. In 1994, 80 Jews lived in Focșani, dropping to 70 in 2004.

[Theodor Lavi / Lucian-Zeev Herscovici (2nd ed.)]

FODDER (Heb. מִיסְפָּד, mispo, AV, JPS, “provender”), most often mentioned together with teven ("chaff," AV, JPS, “straw”) as feed for camels and asses (Gen. 24:25; 43:24; Judg. 19:19). Teven, which was the most important food of domestic animals, was made from the bits of straw left after threshing. To it was usually added grain or pulse to produce belil (AV, JPS, “provender”), much loved by animals (Isa. 30:24; Job 6:5). The principal fodder, as also the customary ingredient of belil, was barley, which is suitable as feed for single-hoofed animals, horses, asses, and mules, and is mentioned as such for the horses and swift steeds in Solomon’s stables (1 Kings 5:8). Barley was unsuitable for ruminants, yet the Tosefta (Nk 1:8) speaks of “an ass that ate barley and a cow that ate bitter vetch (Vicia ervilia).” The latter species is not mentioned in the Bible, but was clearly an ancient crop, seeds of it having been found in excavations at Gezer dating from the beginning of the monarchy in Judah. The “carob, although similarly not mentioned in the Bible, was likewise used as fodder in ancient times, particularly for goats (Shab. 155a, et al.).

In addition to the fodder consisting mainly of grains or pulse, animals were given dry hay or green grass (hagir) that grows in winter in uncultivated fields (Ps. 147:8–9) and in summer alongside sources of water (1 Kings 18:5; Isa. 44:4). In places where there is no water the grass dries up in spring (Isa. 37:27, et al.). In the rainy season animals graze in fields and eat natural grass. Sometimes the owner of a field cuts the green
cereal and feeds it to his animals, and the cereal continues to grow "and does not diminish its grain" (Sif. Deut. 43, on the verse: "And I will give grass in thy fields for thy cattle"). Most often the grass was cut and dried as fodder (cf. 1 Kings 18:5), the usual talmudic term for green fodder being shahat (Pēnah 21a, et al.), and for dried amir ("a sheaf", in the Bible). For the latter, two species of legumes were specially sown, fenugreek (Trigonella foenum-graecum; see *Sifra, 7:1), and more particularly cowpea (Vigna sinensis) for its green pods and dry seeds, or for drying fodder (Shem. 2:8, et al.). To a limited extent vetch (Vicia sativa) was grown for fodder. In Babylonia, alfalfa (Medicago) was also sown.

*Judah Feliks*

**FODOR, ANDOR** (1884–1968), Israeli biochemist. Fodor was born in Budapest, Hungary, and in 1922 became professor of biochemistry at the University of Halle, Germany. In 1923, at the invitation of Chaim *Weizmann*, he went to Palestine to establish a department of chemistry for the projected Hebrew University of Jerusalem. Before leaving Europe, he purchased the equipment and apparatus for this project, and himself supervised the actual building of the Institute of Chemistry on Mount Scopus. Fodor was the first professor appointed to the university, and held the chair of biochemistry and colloid chemistry for 28 years. Elected first dean of the faculty of science, he was responsible for training an entire generation of Israeli scientists. He did experimental research into protein structure and the action of enzymes, and was the author of *Dispersoidchemie* (1925) and *Das Fermentproblem* (1922, 1929).

*Samuel Aaron Miller*

**FOERDER, YESHAHAYHU** (Herbert; 1901–1970), Israeli economist and banker. Foerder, born in Berlin, studied law and joined the Zionist student organization, *Kartell jüdischer Verbindungen*. He was secretary of the German Zionist Organization from 1924 to 1926. Settling in Palestine in 1933, he was one of the founders of the Rassco Rural and Suburban Settlement Company (see *Israel, Housing*), serving as its managing director until 1957. During the Mandate period Foerder represented Aliyah Hadashah, a party consisting mainly of German immigrants, in the Vād Leummi. In 1949 he was elected to the Knesset by the Progressive Party, which he represented until 1957. From 1957 he was chairman of the board of directors of Bank Leumi le-Israel and of the General Mortgage Bank. Foerder was the author of numerous publications on Zionism and on economic problems.

*Kurt Loewenstein*

**FOGELBERG, DAN** (1951– ), U.S. composer and recording artist. Born in Peoria, Illinois, Fogelberg studied the piano from the age of 14, switched to guitar and played at local coffeehouses while majoring in art at the University of Illinois. Fogelberg’s first album, *Home-free* (1972), attracted little attention. His second album, *Souvenirs* (1974), however, proved to be one of the finest collections of songs written in the 1970s. In 1975 Fogelberg was chosen as pop music’s newcomer of the year and since then has recorded a number of best-selling albums including *Captured Angel* (1975), *Twin Sons of Different Mothers* (1979) with Tim Weisberg, *Phoenix* (1980), and *The Innocent Age* (1981). During the 1980s, none of his albums were platinum, but they continued to sell well among hardcore fans. During the 1990s he made several albums: *River of Souls* (1993), *No Resemblance Whatever*, a collaboration with Tim Weisberg (1995), *First Christmas Morning* (1999), and *Something Old New Borrowed and Some Blues* (2000).

*Jonathan Licht / Israela Stein (2nd ed.)*

**FOIGHEL, ISI** (1927– ), German-born conservative politician. Foighel came to Denmark in 1932 and became a professor of law at Copenhagen University in 1964. From 1965 to 1971 he was president of the Danish Refugee Help organization and had considerable influence on refugee-related legislation. In 1972–73 he was president of the Jewish Community and subsequently head of the commission that prepared home rule for Greenland. In 1982–87 he was minister of taxation in the Danish government and in 1984–87 a member of Parliament. In 1988–98 Foighel was a judge at the European Court of Human Rights in Strasbourg, and in addition, in 1991–95, he was chairman of the board of Denmark’s National Radio.

*Bent Lexner (2nd ed.)*

**FOIX**, formerly independent county, now part of Ariège department, southern France, with a capital town of the same name. During the Middle Ages there were Jews living in several localities of the county, notably in Foix itself, in Mazères, *Pamiers*, and Troyes-d’Ariège. In 1292, Roger-Bernard, count of Foix, obtained the agreement of Philip the Fair to exempt the Jews of the county from paying the royal poll tax. The count may also have protected the Jews in his domains from the French decree of expulsion of 1306. In 1321, several new Jewish communities are mentioned there which appear to have escaped the *Pastoureaux massacres*. In 1394, the count refused to implement the decree of expulsion issued by Charles V and at least succeeded in delaying its execution. At the end of the 14th century, four or five Jews figured among over 600 taxable inhabitants of the town of Foix.

*Bernhard Blumenkranz*

**FÖLDES, JOLÁN** (1903–1963), Hungarian author. After leaving Hungary in the 1920s, Jolán Földes published the novel *Mária jól érett* (1932; *Prelude to Love*, c. 1938), but was forced
to earn her living in menial occupations. She achieved fame with her prize-winning novel A halászó macska utcája (“The Street of the Fishing Cat,” 1936), which portrayed the life of émigrés in Paris. She died in London.

“FOLEY, FRANCIS” (1885–1958), British army officer and Righteous Among the Nations. British lieutenant Francis (commonly known as Frank) Foley arrived in Berlin in 1919 as an intelligence officer to check out the activities of Communist-led organizations. As a cover for his spy work, his official capacity was Chief Passport Control Officer in the British embassy, where he was given wide latitude to decide on the admission of foreigners into areas of the British Empire. With the Nazi rise to power in 1933, Foley’s attention shifted to the rearmament of Germany, and he simultaneously began to be more preoccupied with helping Jews emigrate from Germany, a need which became urgent after the Nazi-staged pogrom of November 9–10, 1938, known as “Kristallnacht (“Night of the Broken Glass”). Foley utilized legal means whenever possible, or exploited loopholes in British immigration laws. British regulations at the time forbade the issuance of entry visas to persons liable to compete with professional workers in England, as well as to the very old, the sick and handicapped, and persons associated with the Communist Party. As for entry to Palestine, £1,000 in hand was required to get a “capitalist” visa. This was a sizable sum at the time, and unavailable to many Jews whose bank and other assets had been frozen by the Nazi authorities. In the case of Elisheva Lernau (born Elsbeth Kahn), who could produce only £10, Foley decided that the balance of £990 would be available to her the minute she landed in Haifa, and on the strength of this issued her a visa for Palestine. Foley similarly bent the rules very liberally in the case of Wolfgang Meyer-Michael, accepting his cousin’s guarantee in writing that the sum would be available once Wolfgang had crossed the border into the Netherlands. In this work, Foley was co-opted by Hubert Pollack, a Jewish community worker who brought to Foley’s attention persons in desperate need of help to leave the country. In the case of Gunter Powitzer, jailed in Sachsenhausen for violation of the Nuremberg laws and having intimate relations with a non-Jewish girl, which produced a child, Foley personally went to Sachsenhausen to hand him an exit visa for Palestine, which included Gunter’s semi-Jewish son, and both left Germany in February 1939. In the matter of a 20-year-old woman imprisoned because of her membership in the outlawed Community Party, Foley ruled that since she was 18 years old at the time of her arrest, her membership in the Party was to be viewed simply as “youthful fervor” and he granted her a visa. Others who gave accounts of being helped by Foley include Zeev Estrecher, Willi Preis, Heinz Romberg, Adele Wertheimer, and David Arian’s aged mother. After the war, Pollack testified that “the number of Jews who were saved in Germany would have been ten thousand times – yes, ten thousand – less, if a ‘competent official’ had occupied that post instead of Captain Foley.” Benno Cohn, head of the Zionist Federation in Germany, testified at the Eichmann trial in 1960 that immediately after Kristallnacht, he frantically called his superiors in Jerusalem to find ways to save the Jews of Germany, adding: “Nevertheless we succeeded in getting a sizable number of Jews to Palestine. That was thanks to a man who is to my mind to be counted among the Righteous Gentiles … Captain Foley [who] did all he could to enable Jews to immigrate to Palestine…. One may say that he saved thousands of Jews from death.” Foley’s wife, Katharine, also related that during the Kristallnacht pogrom period, Jews were temporarily hidden in their Berlin home. During World War II, Foley’s intelligence work included the interrogation of Rudolf Hess, Hitler’s close aide who landed in Scotland in May 1941 hoping to strike a deal between Germany and Britain. In 1999, Yad Vashem awarded the late Francis Foley the title of Righteous Among the Nations.

**FOLIGNO, HANANEL (Da),** apostate and anti-Jewish agitator in Rome in mid-16th century; his name after baptism was Alessandro Franceschi. Foligno was one of three apostates whose slandering of the Talmud to Pope Julius III resulted in its burning in 1553. When in 1555 the Jews of Rome were accused of a ritual murder (*Blood libel*), Foligno insisted on their guilt. After a public confrontation between him and representatives of the Jewish community, Pope Marcellus ordered the reconsideration of the charge. In due course, the true culprit was discovered and punished.

INTRODUCTION

Jewish folklore can be defined as the creative spiritual and cultural heritage of the Jewish people handed down, mainly by oral tradition, from generation to generation by the various Jewish communities. The process of oral transmission took place alongside the development of normative, written literature.

Jewish folklore may be classified according to the three main vehicles of transmission:

(1) Audio-oral, including the various branches of folk literature and folk music (discussed in the article on *Music*);
(2) Visual, including arts, crafts, costumes, ornaments, and other material expression of folk culture;
(3) Cogitative, including popular beliefs, most of which find their expression in customs and practices.

The science of folklore (“folkloristics”) is a discipline which studies the historic-geographic origin and diffusion of folklore institutions, their social backgrounds, functions, intercultural affinities, influences, changes, and acculturation processes and examines the meanings and interpretations of the institutions’ individual components.

Folklore is not transmitted through a single medium. Most folklore combines the three categories, one of which, however, usually predominates. Thus, for example, the cogitative background of the commemoration of the Exodus from Egypt is expressed through rites, customs, and manners within the framework of the Passover festival. The main literal expression of the festival, however, the Passover Haggadah, is intertwined with audio-oral songs and legends and is recited at the seder which calls for special garb and ritual vessels, e.g., the cup of *Elijah. These constitute the visual elements of the Passover ritual which is comprised of many folk components.

The national cultural heritages of the gentile neighbors among whom the Jewish people has lived throughout its wanderings and dispersions have been assimilated into Jewish folklore. While mutual intercultural contacts are evident in many realms, Jewish folklore has certain specific features common to Eastern and Western Jews which are characteristic of the creative folk ego of the Jewish people. The Judaization and adaptation of universal traditions bear witness to the qualities, trends, and hopes of the Jewish transformers. Through a comparative study of neighboring cultures, normative Jewish religion, and folk evidence which is substantiated by the transmission of many generations and culture areas inhabited by Jews, the special character of Jewish folk tradition may be apprehended. This article is written from the viewpoint of comparative folklore, which frequently reaches conclusions and interpretations at variance with those traditionally held.

AUDIO-ORAL TRANSMISSION (FOLK LITERATURE)

Jewish oral literature (in Hebrew and in the various Jewish languages: Aramaic, Yiddish, Ladino, etc.) has been transmitted alongside the written literature, and both have exercised a mutual influence. Biblical literature (including the narrative tales in the Pentateuch, the legends interwoven into the fabric of the historical books, independent short stories such as the Books of Esther and Ruth, the gnomic (wisdom) literature, and the poetic literature) imbued much from the oral heritage of the entire Near Eastern culture area. In sanctioning a written document (the Holy Scriptures), the sages differentiated between the holy writings and traditions which were regarded as *Oral Law. Exodus 34:27*, “… for after the tenor of these words I have made a covenant with thee… “, was interpreted as (Git. 60b): “That which is by word of mouth, thou shalt not commit to writing.” It was only with the failure of the Bar Kokhba revolt (135 C.E.), and the authoritative decision taken in the generation of Rabbi Akiva and his pupils, that the prohibition of committing to writing the oral traditions was revoked. The talmudic-midrashic literature of the tannaim and the amoraim is a mine of information of ancient Jewish folklore (mainly in Aramaic, which was then the spoken language of the people) handed down by word of mouth for hundreds of years before it was formulated. Rich folkloric material has also been preserved in postbiblical literature which was not transmitted in Hebrew: the Apocrypha and Pseudepigrapha, the works of Philo and Josephus, the New Testament, and the writings of the Church Fathers.

The various genres of Jewish folk literature are (1) folk narrative, including folktales, legends, jokes, and anecdotes transmitted mainly by word of mouth; (2) folk songs, usually performed or directed by a folk singer, whose music or musical interpretation has the approval and social sanction of the audience and whose text, music, and often gestures (hand-clapping) and folk dance movements constitute an integral whole between whose components it is hard to distinguish;
(3) proverbs and folk sayings which are part of gnomic (wisdom) literature and are perpetuated by a large section of the population, including the common people, in their daily speech; (4) riddles, usually woven into the fabric of a prose narrative (folktales), but constituting an independent literary genre; (5) folk dramas, performed on an improvised stage on specific (festive) occasions by either professional or amateur groups, and composed of several literary folk genres (listed above: stories, songs, etc.), but constituting a genre in themselves, evaluated according to folk transmission techniques.

Folk Narrative
The main kinds of universal folk narratives are also extant in the Jewish oral tradition, though the quantitative proportion between the various kinds differs in comparison with the respective proportion in the neighboring non-Jewish cultural areas. Thus the didactic story, and not the magic tale, is dominant in the Jewish folk narrative; similarly the legend in Jewish lore is a much more popular vehicle of expression than in general folklore.

Folk narrative research in recent decades has, by and large, solved the main classification problems through index systems subscribed to by folklorists. Those systems are general and ethnic (local): type indices and motif indices which are appended to the folktale (Maerchen), legend (Sage), myth, and humorous lore of various cultural areas. Thus the genres of Jewish folk narrative should be defined and described according to the accepted general division, mainly based on Aarne-Thompson’s (AT) Type-Index and on Stith Thompson’s Motif-Index:

**MYTH (“A” MOTIFS).** Myths constitute the imaginative answers to man’s queries about the universe (cosmogony and cosmology), the creation and ordering of human and animal life, his own past, etc. They are basically etiological folktales which try to explain various life and nature phenomena and their plot is set in the remote past, at the beginning of creation. The main heroes are supernatural beings (gods, demigods, and cultural heroes) who perform supernatural deeds.

Most of the biblical narratives may, by this definition, be regarded as ancient Hebrew myths which, even after they became part of the “Written Law,” continued to influence Jewish legendary lore, although most of the etiological elements were suppressed or omitted by normative monotheistic Judaism. The narrative elements in the Bible should be analyzed in the light of the rich repertoire of ancient Near Eastern mythological texts. Archaeological discoveries, text collections, and studies on the ancient cultures and religions of the Near East (T.H. Gaster, S.H. Hooke, E.O. James, S. N., Kramer, J.B. Pritchard, G. Widengren, and others) have shed fresh light not only on ancient Hebrew oral literature, its transmission through storytelling, and on the prebiblical dissemination of its narrative elements, but on ancient Hebrew folk religion, folk life, folk culture, and on the diffusion of their components.

C.H. Gordon’s thesis that “Greek and Hebrew civilizations are parallel structures built upon the same Eastern Mediterranean foundation,” stressing the Mediterranean diffusion by different oral vehicles, has not been accepted by biblical scholarship. The premise of general oral relationships between the Jewish and the Greco-Roman oral lore during the Hellenistic and talmudic periods serves as a basis for any comparative approach to the myths as preserved in the apocryphal, pseudopepigraphic, and talmudic-midrashic literatures. Many etiological motifs in later Jewish folktales are remnants of ancient myths. In most cases they sanction newly invented or imported and Judaized customs, by stressing their antiquity and dating their origin and first observance to the creation, Noah’s ark, the patriarchs, etc. Thus, for example, a midrashic etiological tale (PdR 20) relates the custom of looking at the fingernails during the Havdalah ceremony (Sh. Ar., Oh 298:3) to Adam, who, endowed with God-like wisdom, brought down fire and light from heaven. The resemblance between this legend and Greek (Prometheus) and cognate myths on the origin of fire (Motif A 1414) by means of theft – a culture hero steals it from its owner (Motif A 1415) – is evident (Ginzberg, Legends, vol. 5, 113 n. 104). Similarly, most of the prevailing Jewish etiological stories explaining the origins of fascinating and strange phenomena and of established customs lacking authoritative, written explanations, are elaborated biblical narratives which are based on universal mythical concepts. The process is also manifest in European folklore. Thus the original midrashic story (Tan, Noah 13; Gen. R. 363–4; cf. Ginzberg, loc. cit., 190 n. 58) of Noah planting the vineyard with the help of Satan was transformed in European folklore into a typical etiological tale explaining the characteristics of wine (Motif A 2851). Its four qualities, as well as those of the drunken man, stem from the characteristic traits of the four animals sacrificed by Satan while planting the vineyard: the lamb, the lion, the monkey, and the pig. In Jewish and non-Jewish variants of the story some of the above animals are replaced by the peacock, the billy goat, etc. Unlike most of the non-Jewish variants, which are of an etiological character and not of a moralistic nature, the Jewish variants are didactic, severely condemning intoxication – the cause of all sins and the ruin of individuals.

**ANIMAL TALE (AT 1–199).** Many of the literary and oral Jewish fables were originally actual animal tales which reflected imaginative contemporaneous views on animal and plant life. (Animal tales which serve to illustrate daily life and to solve actual contemporary problems are transformed into moral fables by the added moral lesson.) The animal tale as an independent narrative genre is at present alive only among Jewish Oriental raconteurs, but even there it is based on the talmudic-midrashic fable and the beasts represent human traits. The main heroes are the lion and the serpent; usually human beings are also involved. The fox from whom the talmudic-midrashic name of the genre, “fox fables,” is derived, does not play an important role.

**ORDINARY TALE (AT 300–749).** These stories are centered around supernatural beings who possess extraordinary knowl-
edge and qualities enabling them to perform magic transformations and to rule the powers of nature. They are set neither in time nor in place. Folktales served as entertainment during all stages of Jewish history. Motifs characteristic of folktales (cf. Gunkel) are found in many of the biblical stories: Samson, David and Goliath, Jephthah’s vow (Motif S 241), but especially in the aggadic lore of the Palestinian rabbis who adopted them from oral local (Greek) tradition.

Jewish raconteurs were both writers and disseminators of folktales:

Writers. Some of the best-known universal folktales are assumed to be of Jewish origin. Folktales were derived from Jewish written sources: thus the story of King Solomon’s judgment (1 Kings 3:16–28) influenced the cycle of folk stories about clever acts and words (AT 920–929) and the Tobias story influenced the “Grateful Dead” cycle (AT 505–508). In many cases the Jewish origin at first is not obvious and has been suggested only after penetrating analysis (Anderson, Goebel), for example (a) AT 331, “The Spirit in the Bottle”: a man frees an evil spirit imprisoned in a bottle, but instead of receiving the promised reward he is endangered by the spirit whom he then tricks back into the bottle (cf. Grimm no. 99); (b) AT 332, “Godfather Death”: Death endows a poor man, or his son, with the power to forecast how a sick person will fare according to the position of Death at the bedside, whether he is standing at the head or foot of the bed; Death is tricked, but avenges himself (cf. Grimm no. 44); (c) AT 922, “The King and the Abbot”: a shepherd substitutes for the priest and answers the king’s questions (cf. Grimm no. 152); and many other tales focusing on religious problems (see below, Religious Tale); on cleverness: wit (“outwitting the witty”), humor, answering riddles, performing great feats, and being put to severe tests; and on wise conduct.

Disseminators. The main Jewish contribution to the folktale was in the diffusion and dissemination of narratives from the East to the West. According to Thompson (cf. The Folk-tale, p. 17) the stories were brought by Jewish merchants from the East to Europe and became known first to the Jewish communities scattered throughout Europe.

Disciplina Clericalis (about 1110), a Latin work by Petrus Alphonsi, contains the earliest Eastern folktales in Western literature. Alphonsi, whose Hebrew name before his conversion to Christianity was Moshe Sefardi, was well versed in Eastern and Jewish traditional lore. The motifs in his work are found not only in medieval European folklore, but also in international narrative folklore (still extant today).

Medieval Jewish scholars translated *Kalila and Dimna and Sindbad into European languages, the oral translations for narrating purposes preceding the literary written translations (see *Fiction). According to B.E. Perry the Book of Sindbad (*Sindhar) originated in Persia from which it passed to India and was assimilated into the rich Hindu folk literature. Leading folklorists of the 19th century (following Benfey) considered India to be the home of the European folktale. Modern scholarship however has shown that a direct chain of oral and written transmission links the Middle (including Persia) and Near East with Europe and that Jewish translators and storytellers were the main transmitters of Eastern (Islamic) culture to the Christian world. In modern scholarship there is full agreement between scholars of literature, both Jews (Epstein, Flusser, Peri, Schwarzbaum) and non-Jews (Holbek, Maeso, Quinn, Thompson), that Near Eastern folktale may have reached Europe directly through Jewish intermediaries and was not transmitted via India.

Religious tale (AT 750–849). Playing a most important role among Jewish folktales, the two main themes of the religious tale are theodicy (“God’s justice vindicated”) and reward and punishment. Several of the widespread universal religious folktales are of Jewish origin; among the best known are AT 759, “The Angel and the Hermit,” which is representative of the theodician tale, and AT 757, “The King’s Haughtiness Punished” or “The King in the Bath,” which exemplifies the reward and punishment theme. In AT 759 an angel commits many seemingly unjust acts which arouse deep astonishment and strong words of protest from his companion the hermit; the hermit, however, upon learning the truth is convinced that each of the strange deeds was just. In many Jewish “legendarized” versions of AT 759 God, or the Prophet Elijah, plays the role of the angel, whereas the companion who learns his lesson (“The Rock, His work is perfect, for all His ways are justice,” Deut. 32:4) is a hero in Jewish legend concerned with social justice: Moses (cf., Moses addressing God in Ex. 32:22 “Blot me, I pray Thee, out of Thy book”), *Joshua b. Levi, or Abraham “Ibn Ezra. Folktales starting with the hero’s (a hasidic rabbi) enigmatic smile, whose significance is revealed as the plot unravels, also belong to this pattern of theodician tales.

In AT 757 a supernatural being (demon, angel, Elijah) takes the boasting king’s place (or form) either by depriving him (in the bath) of his clothes or through other means. The wandering king (Solomon, Roderigo, Jovinian) is humiliated and rejected by all as a crazy liar; he is restored to the throne only when he repents of his haughtiness. According to Varnhagen this folktale is of Hindu origin, but the talmudic-midrashic Asmodeus-Solomon legend (Git. 68b; TJ, Sanh. 2:6, 20c; Piskei Ḥakhamim 169a) has influenced most of the Jewish oral versions.

The anonymous, often innocent, simpleton, around whom many religious tales originally centered, tends to be replaced by a historical, famous (talmudic, medieval, or local) sage, martyr, or scholar. The tales thus became part of the Jewish hagiographic lore. In their transitory stage many of the folktales are about one of the “Lamed-Vav Zaddikim, the 36 anonymous and mysterious pious men, to whose humility, just deeds, and virtues the world owes its continued existence.

The Novella or Romantic Folktale (AT 850–999). The novella in Jewish lore stresses the problem of fate. As marriages are decided in heaven (Gen. R. 68:3–4; Lev. R. 8:1), even before
the bride and bridegroom were born, the question arises: Is this heavenly decision irrevocable or can it be changed? Thus the universal stories about heroes finding their way to each other, after overcoming often insurmountable obstacles, tend to become an integral part of Jewish matrimonial lore.

REALISTIC TALE (AT 1200–1999). Best known and the most widespread among the Jewish folklore genres, the realistic tale is mostly comprised of jokes and anecdotes depicting the comic aspects of life, especially as seen through Jewish eyes. The main heroes are fools, wits, misers, liars, beggars, tricksters, and representatives of various professions. The point of the Jewish joke, seemingly concluding it, is often followed by a “hyperpoint” – some clever and sophisticated addition to the humorous story, stressing a new, often specific Jewish aspect. Though the humorous motifs are universal, there is less of visual (situational) humor in Jewish jokes than in universal jests, and there is more of verbal humor, consisting of clever retorts, wordplay, “learned” interpretations of words and sentences, jests, and witty noodle stories. In most Jewish jokes the realistic background is typically Jewish, as are the heroes – well-known local wags (Hershele *Ostropoler, Motke Ḥabad, Froiyim Greidinger, Jukha, etc.) whose fame has spread far beyond the border of their original place of activity. There are also “wise” places as, for example, “Chelm in Poland, Linsk (Lesko) in Galicia, etc., whose “wise” inhabitants (in fact, fools) perform the same deeds as their “wise” colleagues – the inhabitants of Abdera (Greece), Schildburg (Germany), Gottham (England), and other “cities of the wise.”

Among the droll characters of the Jewish jokes, typical “Jewish” professions and types of socioeconomic failures are well represented: schnorrers (“beggars”), shadhanim (“match-makers”), cantors, preachers, but mostly schlemiel and schlimazel. Social misfits, their gawkishness, clumsy actions, and inability to cope with any situation in life make the listener enjoy his own superior cleverness (the feeling is often subconscious). A witty folk-saying distinguishes between the two characters: “A schlemiel is a man who spills a bowl of hot soup on a schlimazel.” Whereas the word schlimazel seems to be a combination of the German word schlimm (“bad”) and the Hebrew word mazal (“luck”), the origin of schle-miel is obscure and has given rise to many German-Yiddish folk etymologies. It is first mentioned outside of Yiddish in Adalbert von Chamisso’s famous German story *Peter Schlemihls wundersame Geschichte* (1813) whose hero sold his shadow to the devil. Many Jewish stories try to identify these types; stories are thus told about Moyshe Kapoyr (“Moses Upside-Down”) – the hero of a comic strip in U.S. Yiddish newspapers in the early 1920s – and about similar heroes who are placed in a definite geographic-historical framework. Many of Shalom Aleichem’s folk types, Teyve the Milkman and Menahem Mendel, have been given the traits of an irresistible daydreaming schlimazel. Benyamin the Third, a character out of the world of Mendele Mokher Seforim, is similarly portrayed.

The undertone of sadness and frustration underlying many Jewish jokes is probably rooted in the ceaseless struggle for survival in an anti-Jewish society; the laughter is thus often through tears. While the jokes and anecdotes carry a note of satirical (sometimes even biting) self-criticism, they are a means of consolation as well, either through minimizing troubles and hoping for a happy end (“a Jew will find his way out”; “the troubles of many are half a consolation”), or by relating stories about rich, successful, and influential Jews (the Rothschilds, Baron Hirsch, and Jewish dignitaries “a (person) close to the (royal) court,” etc.), with whom the poor Jewish listeners identify.

JEWISH LEGEND. Many Jewish folktales bear an exclusively Jewish national religious character, and their plot has no parallel in general folklore. They include stories about the Ten Lost Tribes living in their own Jewish independent kingdom on the other side of the miraculous river *Sambaton*, and about travelers who have been there (*Eldad Ha-Dani, David *Reuveni, etc.); stories of attempts to find the Ten Lost Tribes and to identify them in remote parts of the world, especially among strange Jewish communities (the *Bene Israel, *Beta Israel, *Khazars); tales of blood libels and other false anti-Jewish accusations; imaginative descriptions of the Messianic age and attempts to hasten the coming of the Redeemer (through kabbalistic means, by prompting Elijah the Prophet to herald the Messiah); stories about the eternal longing for and aspiration to get to the Promised Land (through a miraculous subterranean passage, by “the jump of the way,” etc.); tales about proselytes and the extraordinary circumstances of their conversion to Judaism.

The legendary plot, which usually takes place in a definite period and in a specified place, dominates Jewish folk fiction. Besides an extension of the biblical and the talmudic midrashic story, mainly through translating it in terms of contemporaneous circumstances of the storytelling society (by means of many anachronisms), this type includes many local legends. Its heroes are universal-Jewish characters (biblical, talmudic, and medieval: Elijah the Prophet, King Solomon, Rabbi Akiva, Maimonides, and Rashi) and local figures (*Judah Loew b. Bezalel (the Maharal) of Prague, R. Hayyim Pinto of Morocco, Abdallah Somekh of Baghdad, R. Shalem Shabazi of Yemen, etc.). The dominant narrative motive is supernatural: the miraculous salvation of a Jewish community by the folk hero who is a sage not only versed in the Bible, Talmud, and Jewish law, but can also perform miracles and is learned in practical Kabbalah. Over the past few generations, some of the local heroes have become universal Jewish heroes, such as R. *Israel b. Eliezer Baal Shem Tov, the founder of the hasidic movement, who initially was legendary in Eastern Europe only; and R. Hayyim b. Attar (“Or ha-Hayyim”), whose legend originated in Morocco where he was born, and about whom legends were also woven in Jerusalem where he died. Certain heroes have become narrative stereotypes: King Solomon is the wise judge; Hershele Ostropoler, “the learned
wag” who finds clever solutions for every problem and trial; Jukha, the innocent simpleton; and so forth. Many legends of the neighboring culture areas, revolving around non-Jewish figures (Harun al-Rashid, Nāṣir al-Dīn, Baron Muenchhausen, etc.) became a setting for Jewish heroes. Gentile characters in Jewish legends are mostly anonymous and referred to by title: king, vizier, etc. If named, they form a historical substantiation to the supernatural motifs. There are, however, non-Jewish heroes who play a dominant role in legends stressing the Jewish-gentile confrontation and conflict. One of them is Napoleon who recurs in about 150 Yiddish legends, folk songs, sayings, etc. (cf. Pipe).

The Jewish legendary folk hero is depicted as a pious and righteous man who “does justly and loves kindness” (cf. Micah 6:8) and his folk biography thus follows the international pattern (miraculous birth, dangerous exposure, growth in an alien environment, unintentional revelation of divine qualities, etc.). There are many common motifs between Jewish folk legends and tales revolving around biblical and aggadic exemplary heroes: Abraham, Joseph, Moses. The hero’s good and “hearty” intention (kavanah) are of utmost importance (“God requires the heart”), and he is therefore “holy” enough to perform (even willingly) miracles for the sake of the needy and oppressed. Many medieval legends which originated in Jewish oral tradition, as for example tales about a Jewish pope (Eilhanan), or the “Golem of Prague, etc., have not survived in this medium, but since the end of the 19th century have been incorporated in chapbooks. On the other hand, many hasidic wonder tales which were first written found their way to raconteurs and became an integral part of Jewish oral literature.

Folk Song (Lyrics)

Songs whose lyrics are in Jewish languages and were transmitted orally from generation to generation are defined as Jewish folk songs. The classification may be according to (1) the folk language of the culture area in which the song was written (Yiddish of East Europe, Ladino of the Mediterranean area, etc.); (2) its musical style (Western, Oriental, etc.); (3) the text (contents). Most of the Jewish folk song collections and studies have adopted the last classification, yet the text of the folk song and its music are so intrinsically intertwined in Jewish folklore that no clear-cut division can be made.

Religious Folk Songs and Folk Music. The biblical books, especially the psalms and their “musical directions,” influenced Jewish music, song, and dance and stressed their divine origin. The biblical names and actions associated with singing and playing music (Jubal, David playing before Saul, and his miraculous self-playing harp in the aggadah, Elisha feeling God’s hand upon him while the minstrel played, the playing and singing prophets and levites, etc.) generally have a pleasant, positive connotation; thus the song (lyrics and melody) has always been part of the Jewish ritual. Throughout the ages this religious role has been extended from the limited realm of the synagogue (prayer melodies, biblical cantillation, etc.) to all aspects of Jewish religious and sociocultural life.

The singing of the whole assembly strengthened the feeling of unity and of the values which were the common heritage of all Jews. Most songs of a religious nature stem from written Hebrew liturgical texts of the siddur or mahzor. Many of them are, however, either bilingual (combining the Hebrew text and the Jewish vernacular) or sung in the vernacular only. Often the folk song expands or interprets the liturgical text. Thus, for example, the Hebrew verses of Yismah Moshe are interspersed with Yiddish queries, and the song becomes a Hebrew-Yiddish dialogue whose lyrics are Yismah Moshe bemattenat ḥelko. Vi hot men em gerufr? Ki eved ne’eman karata lo. Ven iz dos gevezn? Be-omeleto lefaneikha al har Sinai, etc. (“Let Moses rejoice over the gift of his portion. How did they call him – A faithful servant You called him. When did this happen? When he stood before You on Mount Sinai . . . “). The difference between the refrain (Yismah Moshe), repeated by the audience, and the single strophes, sung by individuals, is emphasized by their melodic distinction. Many of the religious and devotional folk songs, sung as a part of the zemirot home ritual, became table songs for festive ritual meals at weddings, circumcisions, etc. They stress the close relationship between God, His Chosen People, the Torah and its precepts, and the Sabbath and festivals. As these were sung in the vernacular, all – the learned and the uneducated, young and old, women and children – could actively participate.

Although the melody of the religious folk song is strongly influenced by the artistic idiom of the ḥazzan, the folk singers and the audience that often joined them considered the lyrics the main feature of the song. On the other hand, many sophisticated groups (especially among the Ḥasidim) regarded the words (even when in Hebrew) a limitation of the divine nature of the song and stressed the value of the “pure” (without text) niggun (see Ḥasidism, Musical Tradition). Many of the melodies, showing traces of local non-Jewish folk tunes, in their Jewish adaptation are characterized by a meditative mood. Traditional biblical cantillation motifs and later Oriental Jewish liturgies led to considerable changes in the adapted and “Judaized” folk tune, and this process was similar to that which had influenced the words.

Secular Folk Song. In spite of the negative attitude of normative rabbinic Judaism toward communal secular singing by both sexes, stemming from the talmudic saying kol be-ishah ervah (“a woman’s voice is a sexual incitement”), the secular folk song was part of the life of the individual, the family, and the society on many occasions. The lyrics are very diverse and cover all aspects of Jewish life: the biblical past, the Messianic future, the year cycle, the lifespan (“from the cradle to the grave”), problems of livelihood, work and frustration, social protest, national hope, love, separation, luck, and misfortune.

Texts of the East European (Yiddish) folk song have been collected (An-Ski, Bergevski, Cahan, Ginzburg-Marek, Idelsohn, Prilutski, Rubin, Skuditski), popularized (Kipnis,
Rubin), studied, and analyzed (Cahan, Idelsohn, Mlotek, Weinreich) more than any other Jewish folklore genre. Recent annotated collections (Cahan, ed. Weinreich; Pipe, ed. Noy), as well as attempts at scholarly synthesis (see in bibl. Cahan’s Studies; Rubin’s Voices; Mlotek), see the Yiddish folk song as a well-defined artistic folk genre, both in its melodic (cf. Idelsohn, Sekuletz) and in its poetical form and contents. The lyrics are emotional, tender, and introspective, even if some of them, especially children's rhymes, are at times coarse, satirical, and comic. The melody is, almost always, in a minor key infusing the most joyous and even frivolous words with a touch of tenderness and sadness. According to Y.L. Cahan, the oldest among the Yiddish folk songs, going probably back to the European Renaissance period, are love and dance songs. Older Hebrew influences, stemming mainly from the Song of Songs and from remnants of love songs as preserved in talmudic literature (cf. Taan. 4:8–15) of Av song; Ket. 17α – a song “Before the Bride in the West,” Palestine) are also evident.

Only a few collections and studies deal with the non-Yiddish, Oriental-Jewish folk song. Comparatively great attention has been paid to the folk song of the Yemenite Jews (Idelsohn, Ratzhabi, Spector) and to the romance and the copla (Spanish ballad or popular song) as sung in Ladino-speaking Sephardi communities dispersed all over the world: Tetuan, Spanish Morocco (Alvar, Armistead-Silverman, Palacín); Salonika, Greece (Attías); Atlanta, Georgia, U.S. (MacCurdy-Stanley); etc. (cf. also Avenary, Ben-Jacob, Gerson-Kiwi, Molho, Pelayo, Shiloah). The study of the Judeo-Spanish romancero (“a collection of ballads or romances”; Katz), is a very young branch of Jewish ethnomusicology (cf. *Ladino Literature).

Modern Palestinian and Israel folk songs are currently alive in Jewish folklore. The Holocaust put a tragic end to the Yiddish folk song which has become a subject for social-historical (Dvorkin), linguistic (Hrushovski), and folkloristic (Mlotek, Noy) studies, but no longer exists as a living tradition. The assimilation and emigration of Oriental Jewish communities, uprooted from their places of birth and traditional folkways, led to a similar process with regard to the Oriental-Jewish folk song transmitted in Ladino, Aramaic (by Kurdish Jews; cf., Rivlin), and Judeo-Arabic dialects. Even if these non-Hebrew languages are still spoken by some young Jews, they are not their sole language of expression. Thus it would seem that only the Hebrew Jewish folk song, alive in a Hebrew-speaking society, is likely to survive.

The Palestinian folk song is characterized by two main traits: (1) the Hebrew lyrics; (2) the main theme, which is national. The central idea in the folk song focuses on the return of the Jewish people to their old-new homeland. The hope for the return is variously expressed and the trials and tribulations undergone are as diverse as the songs. Most of the songs were written by Palestinian authors and composers between the two world wars. Many others, dating back to the beginnings of the Jewish national revival and to the rise of the Zionist movement in 19th-century Russia, are strongly influenced by the songs of composers and bards like A. *Goldfaden and E. *Zunser. Some of the themes are: the yearning for Zion, the virtues of physical labor, self-defense, and pioneering in order to rebuild the land into a national home for the wandering Jew.

The Palestinian folk song celebrates the struggles of the young and ardent halutz in his homeland: defense and standing guard (hagannah and Trumpeło'or songs); road building (“Hahk Pattitsh”); and agricultural work (Sabba Panah Oref) and love songs (Sahaki Sahaki Al ha-Halomot) were imbued with idealistic paths alluding to national duties and hopes. Many of the Palestinian folk songs served as accompaniment (with or without words) to the various folk dances. The main musical influences on Palestinian folk songs (and folk dances) have been hasidic-Slavic, Oriental-Sephardi, Palestinian-Arabic, and Jewish-Yemenite (*Music in Erez Israel).

The destruction of the East European Jewish communities, the establishment of the State of Israel, the War of Independence, the 1967 Six-Day War, and other heroic deeds and achievements inspired many songs, but it is doubtful whether most of these will survive either orally or in folk memory during the coming generations. The songs (see Katsherginski in bibl.) written and sung in the ghettos and extermination camps during World War II were disseminated by oral transmission over wide areas, but their lifespan was limited. In the light of the above definition of a folk song, all songs composed and popular in Israel would be called chansons or folk-styled songs (pizmonim). On the other hand, many Yiddish, Ladino, and other Jewish folk songs, which were adapted for use in Erez Israel (the text translated verbally or with modifications and the music also adapted), started a new folk lifespan in their Hebrew garb.

The establishment of musical research institutes by universities in Israel and the development of the study of liturgical poetry and music into scholarly disciplines, mainly in the training centers for cantors of the Jewish Theological Seminary, the Hebrew Union College, and the Israel Institute for Religious Music led to the study, analysis, and elaboration of many aspects of music and song in folk traditions. Data are collected and research is being continued in the field of East European Jewish musical folklore, stressing the role of folk musicians (klezmerim) and folk jesters (badhānim). Other aspects emphasized are the social role of folk music, the interrelationship between sacred, liturgical, and hasidic music and religious folk songs (Geshuri, Vinaver), the music of the various Oriental-Jewish ethnic groups and the interrelationship of Jewish and non-Jewish folk music (Gerson-Kiwi; Idelsohn’s Thesaurus; Tunisia-Lachman; Sephardi-Algazi; L. Levy). Many works on Jewish music and musicians (Avenary, Gradewitz, Fater, Holde, Idelsohn, Robinovitch, Werner) include studies on the lyrics of the folk song and on folk music.

The influence of Jewish folk songs on Jewish and non-Jewish modern composers is still to be investigated. Jews are among the most important composers of American jazz and the Jewish folk heritage might have had a considerable effect on their compositions. Many Yiddish folk songs entered the main popular musical stream of the U.S. and are sung by lead-
ing performers and millions of people (*Bei Mir Bist Du Schein*, *Joseph-Joseph*, etc.): through their penetration into a foreign setting, they have become alienated and disconnected from their original Jewish tradition (see also Music and Musical Life in Israel in *Music, and the various articles on the different ethnic communities*).

**Folk Proverb**

A gnomic statement current in tradition, the folk proverb usually suggests a course of action or passes judgment on a situation. Originally, “the wit of one,” it becomes in oral folklore “the wisdom of many” and thus is part of the didactic oral folk heritage. The folk saying is genetically related to proverbial lore. Most of the Jewish proverbs have been handed down (since the Book of Proverbs and other Hebrew wisdom literature) in written collections, and in many cases the oral character of the transmitted verse is doubtful. There are however more than one hundred talmudic-midrashic proverbs (cf. Sever) which begin with the statement: *haynu deamerei inshē* (“this is what people say”), indicating that the saying had prevailed in oral tradition. Proverbial lore was also deeply rooted in ancient Israel and the ancient Near East and there are many parallels of single biblical proverbs found in cuneiform proverbial texts (cf. Gordon, pp. 532 f.); in the Egyptian gnomic literature attributed to Amen-em-Opet; in the story (teachings) of *Ahikar*; and in others which testify to the wide diffusion and the oral transmission of many biblical proverbs.

Most of the Jewish proverb collections are compilations of single statements, aphorisms, and dicta, excerpted from the talmudic-midrashic and medieval literatures, or from specific post-biblical gnomic treatises, which have been transmitted in writing. The tannaic *Avot*, for example, inspired many similar compilations. The classification and arrangement of the material is mostly in alphabetic order following the first word or the “catch word” rather than the subject matter. Only in recent decades have genuine collections of folk proverbs, committed to writing from the living oral tradition of the various Jewish communities, been published. The most comprehensive among them is I. Bernstein’s collection of Yiddish proverbs, followed later by paroemological collections and studies of Ayalti, Beem (Jewish-Dutch), Einhorn, Hurwitz, Kaplan (World War II death camps and ghettos), Landau, Mark, Rivkind, Stutshkov, and Yoffie. Other culture areas and ethnic groups represented in the various proverb collections and studies are: Judeo-Arabic (Yahuda); Judeo-Spanish (Besso, Kayserling, Luna, Saporta y Beja (Salonika) Uziel, Yahuda); Bukharan (Pinhasi); Neo-Aramaic from Iraqi Kurdistan (Rivlin, Segal); North African (Attal); Samaritan (Gaster); Yemenite (Goitein, Nahum, Ratzhabi, Shealtiel); Palestinian-Hebrew as current in the new kibbutzim and villages (Halter).

Jewish paroemiology has mainly been concerned with the written proverb, especially the Jewish and Arabic sources of the medieval collections and compositions of gnomic folklore as, for example, the 14th-century rhymed *Proverbia Morales* compiled by R. Shem Tov b. Isaac (*Santob de Carrion de los Condes*) for King Pedro the Cruel of Castile (1350–1369); Solomon ibn *Gabriol*’s *Mivhar ha-Peninim* ("Choice of Pearls"), and *Samuel Ha-Nagid’s Ben Mishlei* (cf. the studies of Ashkenazi, Braun, Davidson, Habermann, Rat- zhabi). Only a few monographic studies have been devoted to particular proverbs, folk sayings, definite (Jewish) themes (Attal, Avida, Galante, Jellinek, Ratzhabi), and to proverbial lore in the writings of famous authors as, for example, in the work of Agnon and Shalom Aleichem (Toder). Any collection of Jewish proverbs and sayings in oral tradition shows strong biblical and talmudic-midrashic influences. Thus many Hebrew and even Aramaic literary proverbs and sayings penetrated the oral lore of the Yiddish and Ladino-speaking Jew.

In many proverbs, extant in the vernacular, the Jewish allusions and references are so dominant that the proverb cannot be understood by a gentle without adequate explanation. Universal proverbs in their Hebrew form often acquired an original "Jewish touch." The Hebraization of the maxim “in vino veritas” (*nikhmas hayin yaza sod*, "wine entered, secret left") is based on the numerical value (*gematria*) of the words "secret" and "wine" (*yayin, י"ע* = *sod* 70 = חסוי). Several recent Hebrew proverb compilations have used a comparative approach in their study of Jewish and foreign proverbs on the same theme (Blankstein, Cohen, Sharftstein).

**Riddle**

In ancient Jewish literature the riddle formed part of the narrative plot, as Samson’s riddle in Judges 14:14 (Noy, Tur-Sinai, Wuenesch), as well as the midrashic riddles through which the Queen of Sheba “came to test Solomon” (I Kings 10:1ff.; cf. Ginzberg, Legends, 4 (1913), 145ff.; Schechter). In medieval Hebrew literature the riddle is however an independent genre and the riddles of Abraham Ibn Ezra, *Judah Halevi*, and Judah *Al-Harizi are sophisticated aphorisms which were never part of the living oral tradition. Side by side with the tradition of literary riddles which were often rhymed and multistrophed, there were short and simple oral folk riddles. In the folk riddle proper the story in the question was always paralleled by the same or another relevant tale in the answer (solution), and the two parts could have existed independently. “Catch” questions and witty queries cannot be regarded by the folklorist as folk riddles, although informants and collectors often tend to term them as such.

There are only a few collections of Jewish riddles stemming from oral tradition in East Europe (An-Ski, Bastomski, Einhorn) and Yemen (Ratzhabi), as the genre was never popular with Jewish adults in those culture areas. Many of the riddles refer to biblical events and demand a knowledge of Hebrew and Jewish law and lore of the solver.

**Folk Drama**

Before World War II Jewish folk players put on folk dramas in many East European towns and villages, especially on Purim, or during the whole month of Adar. In most places, including yeshivot and *klaus*, the taboo on playing, deco-
(3) death, through traditional attire and various special objects of the *hevra kaddisha including wine cups for the society's traditional annual festival of the *Sabbath and the festivals.

Ceremonial Jewish Year Cycle

Most of Jewish ceremonial art centers around the occasions of the *Sabbath and the festivals.

SABBATH. The kindling of the Sabbath lights inaugurates the Sabbath in the Jewish home. In Western Europe star-shaped hanging oil lamps were used; these became so typical for the Jewish home that they were called Judenstern ("Jewish star"). Since the 18th century, the suspended oil lamps have been replaced by candles and candlesticks which have become precious family heirlooms.

The holiness of the Sabbath is proclaimed by the ancient Kiddush benediction (dating back to the Second Temple period) which is made over a cup of wine. The cup thus became a symbol of holiness, solemnity, and happiness in family life and is frequently made of silver, though it may be of other metals and even of glass. Usually in the form of an inverted dome, preferably with a stem and base, it became customary to inscribe the Kiddush cup with biblical quotations referring to the Sabbath, the festivals, light (Isa. 24:15; Prov. 6:33; 20:27), and the wine blessing. Special tablecloths, plates, and embroidered covers for the two Sabbath loaves are used. The Havdalah ceremony which concludes the Sabbath and each festival includes wine, spices (besamin), and a twisted candle. The spice container, hadas, one of the most popular ceremonial artifacts ("no other ritual object shows as many variations," Kayser, p. 89), has many forms. The most common, the tower, originated among West European Jewish communities. It is reminiscent of the city hall tower where, in medieval times, spices and aromatic plants, which were then very precious, were stored. Other forms are: pear-shaped containers, turrets, boxes, fruits, windmills (Holland), fish (North Africa).

PASSOVER SEDER. The most important domestic event among all the Jewish festivals is the Passover seder. The table is festively set following certain prescriptive requirements: symbolic food (*mazoz, *maror, etc., recalling the fate of the people of Israel in Egypt and their meal on the eve of their liberation) which are served on special plates and dishes; a cloth-covered tray, or a three-tiered plate for the three matzah symbolizing the priests, levites, and common Jews; the wine cups of glass or silver used for the drinking of the obligatory four cups during the Passover meal; and a special cup, usually the most precious, the cup of Elijah. The plates and other vessels are richly wrought with floral patterns, formalistic ornaments, and biblical scenes.

The Haggadah, the ceremonial text of the seder night, since it is only used in the home and not in the synagogue, was not subject to normative scrutiny and therefore has become the most illuminated of all Hebrew ceremonial prayer books. Most of the illustrations are traditional, transmitted
from generation to generation by folk artists, copyists, and printers. Other Passover ceremonial items include an inscriptively embroidered cover for the mazzot and decorated "omer scrolls used in the synagogue for counting the 49 days (seven weeks) between the second day of Passover and Shavuot (cf. Lev. 23:15–16).

SHAVUOT. The paper cuts used for window decorations are the folk art characteristics of Shavuot. As most of them have designs of roses, symbolizing Israel (cf. Song 2:2,16, and the exegetical Midrashim thereto), they are called by the Yiddish folk term reyzele ("little rose").

HIGH HOLIDAYS. The main ceremonial object of the High Holidays, the *shofar has many interpretations in Jewish ritual, the most common being its role as a reminder of the sacrifice of Isaac. It also calls man to repentance and spiritual regeneration. As the horn of any animal of the sheep or goat family may be used for the shofar, it has various shapes depending upon the local fauna. While it is forbidden to embellish the shofar, either through painting, or by covering its mouthpiece with metal, it may be carved and on several old specimens inscriptions (biblical sentences referring to the shofar, Ps. 81:4, 5; 98:6, etc.) were found.

The traditional garb for the High Holidays is the kitel, a loose garment of white linen, reminiscent of the shroud and reminding the congregation of death and the last judgment. It is held together at the waist with a belt whose silver buckle is inscribed with a biblical verse relevant to the occasion or a quotation from the "Day of Atonement service.

SUKKOT. The only significant ritualistic object used during the *Sukkot festival is the box in which the etrog is kept. Generally assuming the shape of the fruit, there are also other forms. Another kind of folk art, especially folk painting, concentrates on the decoration of the sukkah. Besides fruits, vegetables, and the seven "kinds" the Holy Land has been blessed with, the sukkah is also embellished with pictures, verses and proverbs, trimmings, cutouts, and other ornaments.

HANUKKAH. The main ritual characteristic of the eight-day Hanukkah festival is the kindling of lights. The Hanukkah lamp, containing eight oil burners or candlesticks (the shamash – the auxiliary candle – is not counted), developed in the West from a simple Roman oil lamp into very elaborate forms. Two definite types can be distinguished: (1) "the bench type," which is usually small, has a back wall, and is often richly and symbolically ornamented; (2) the standing form (candelabrum) which developed during the Middle Ages and is reminiscent of the menorah in the Temple, with the main difference that instead of seven branches, the Hanukkah lamp has eight (with the shammash making up the ninth). In the synagogue, the Hanukkah menorah is placed to the right of the ark, corresponding to the location of the golden menorah in the Temple. The smaller Hanukkah menorah for the Jewish home was developed from the seven-branch standing cande-
well as scenes from the narrative. Here too the triumph of Mordecai is the most popular motif.

**Varia: Synagogal and Home Ceremonial and Non-Ceremonial Objects.**

Many ceremonial objects, whose origin (secular or religious) is often very vague, center around the synagogue and the Jewish home. The mezuzah (doorpost, cf. Deut. 6:9; 11:20), for example, is undoubtedly a Jewish home ceremonial object. A parchment scroll on which are sacred Pentateuchal portions, it is placed in a special metal or wood container and fixed on the upper part of the right doorpost of the house or occupied room (cf. Landsberger). The mezuzah has however many of the characteristics of the *amulet* intended for protection. Most of the Jewish sages and rabbinic authorities did not approve of amulets being worn for purposes of protection against sickness, the “evil eye,” and misfortune, and condemned the “magic” texts placed inside the amulet as non-Jewish superstition. The amulet could however be worn as an ornament, and it was particularly common among the Jewish population of the Mediterranean countries and of the Islamic culture areas. The ornaments on these amulets were often of a purely religious nature (priestly crowns, the tablets of the law, seven-branched candlestick) which did not hint at the protective qualities of the ornament.

**PRAYER BOOK.** The prayer book links the Jewish home, where it is usually kept as a family treasure, and the synagogue, where it is mainly used. The covers and bindings, often made of silver, gilded, or engraved, and inscribed with a biblical quotation and the owner’s name or initials, are the prayer book’s main adornments.

**DECORATIONS IN THE SYNAGOGUE.** The main synagogal ornaments and ritual objects are often part of the synagogue’s architecture. Thus, for example, the laver (particularly used by the kohenim before the ceremony of blessing the congregation), often decorated, is built into the wall of the synagogue at the entrance, while the shiviti (the first word in Ps. 16:8: “I have set the Lord always before me”) and mizrah (“East,” designating the direction of prayer) are movable objects (plates or paper cutouts) hung on the wall facing Jerusalem or put on the cantor’s stand which also serves as a sounding board.

The religious-ceremonial center of the synagogue is the holy *ark* containing the Torah scrolls. Since the synagogue is compared to “… a little sanctuary in the countries” (Ezek. 11:16), the holy ark is reminiscent of the Holy of Holies (Kodesh ha-Kodashim) in the Temple. All objects associated with the Temple and the Torah were particularly cherished: the ark is ornamented with the two tablets of the Law, often wrought with inscriptions, rampant lions, and priestly (blessing) hands, etc.; the ark’s curtain is made of costly brocade, velvet, or silk, frequently inscriptively embroidered (silver and gold) with the names of the donors; the wooden or metal (silver) case in which the Torah is kept among Eastern Jews, and the Torah mantle among Western Jews, are adorned with biblical and liturgical quotations surrounded by formularistic, traditional designs (floral or the seven “kinds” the Land of Israel is blessed with).

The *Torah* ornaments consist of a crown (silver, often partly gilded and set with precious stones) wrought with biblical scenes and inscribed with donors’ dedications; two finials (*rimmonim,* pomegranates) to which small bells are attached; the silver pointer used in the Torah reading so that the parchment is not touched by hand; a richly decorated and inscribed breastplate denoting the occasion of the usage of the Torah for congregational reading (Sabbath, a specific festival). The two columns of the sacred portal of the ark (*Jachin and Boaz*) are the main symbol that associates the ark with the ancient Temple (cf., Goldman).

**FOLK DRESS AND COSTUME.** The Jewish folk dress and costume are part of the secular folk culture, if it is assumed that the origin of dress has its roots in man’s desire to adorn himself. According to the Midrash (Tanah. B., Lev. 76) “God’s glory is man and man’s glory (ornament) is his clothes” (cf. Shab. 113a, 145b; Ex. R. 18:5; A. Jellinek, Bet ha-Midrash, vol. 4, p. 86); thus all Jewish ethnic groups have concentrated on a particular type of dress. Most data about Jewish costumes of the past were gleaned from illustrated minhagim books or illuminated Haggadot, anti-Jewish Christian pamphlets, and travelers’ accounts. Ethnographical fieldwork on extant folk dresses of Jewish communities is a very young discipline in the realm of Jewish ethnography and folkloristics (see *Dress*).

Until the establishment of the State of Israel and the “in-gathering of the exiles” from the various culture areas, the main interest of Jewish art “scholars” centered around ceremonial art and European specimens. Thus the first Jewish museums established in Germany (end of the 19th century) contained less than one percent of non-European material. With the growth of Jewish ethnography, the intensive study of folklore, sociology, and acculturation of the “tribes of Israel,” and the establishment of specific ethnographic and folklore museums in Haifa and Tel Aviv there has been a rapid increase of interest in secular Jewish folk art in general, and in that of the non-European Jewish communities in particular. While pre-World War II folk art scholarship was mainly interested in historical roots (influence of Temple objects and symbols on the *Dura Europos* synagogue and on later synagogue art; relation between traditional literary sources and ceremonial art, etc.), modern ethnographers are more interested in material culture in general (including secular folk art) and in ethnocultural and geographical comparisons. The folk museum collections and their various inventory and exhibition catalogs are still the most important source of knowledge of Jewish folk art in the past. These are often verified and substantiated by the testimonies of eyewitnesses or recollections of those who can delve into their own past or have memories of what they were told.
COGITATIVE FOLKLORE

Folk beliefs and customs constitute one creative complex. Belief, stemming from subconscious fears and desires and from a longing for psychological security, generates the wish to fight the causes of those fears which are man’s hidden enemies. The strategies and tactics of man’s warfare against his own fears which proved their “efficiency” and were transmitted (usually approved by social convention) from one generation to the next became folk customs. The customs continued to exist even after the beliefs that served as their basis had long been forgotten. Sometimes beliefs which have become detached from the customs that grew out of them, or from the phenomena which they explain, are regarded by the “progressive” society as “superstitions,” due to changes in the society’s view of the world and to a new interpretation of the phenomena in question. The novel explanation is in tune with the technological era whose society is fighting the old “superstitions” and “etiological folktales” lacking empirical proof.

Any period of transition, whether renewal and change of status in the cycle of the year (the summer and winter solstices, the vernal and autumnal equinoxes, etc.) or in the human life cycle (passage from embryo to child, from life to death, the first menstrual period, etc.) is always fraught with sociopsychological “crises” around which fears, anxieties, and inhibitions concentrate. These crises give rise to customs and rites which evolve in order to overcome the evil forces hostile to mankind that these crises seemed to set into motion. Thus ritual complexes, ceremonies, and festivals develop.

According to this interpretation the Jewish rites of passage in the life and year cycles manifest an interaction between universal beliefs, stemming from the realm of nature, and Jewish religious and national beliefs originating in the sphere of Jewish thinking and culture. The customs revolving around these rites would thus be rooted mainly in sym pathetic magic which gradually adopted its Jewish character, mainly from the historical traditions related to the period of the nation’s consolidation. Folkloristic research into Jewish customs and the folk beliefs underlying them therefore involves a study of their universal “prehistory” and their “Judaized” history. In universal practice the pouring of water on a stone, a sympathetic magic device to ensure rain and with it the fertility of the earth, animals, and mankind, is paralleled by a ritual performance of the sexual act. Judaized, the water libation rite as found in the Jewish normative books of laws and customs is a sacred ritual which was an integral part of the Sukkot celebrations (Simḥat Beit ha-Shōʾevah, Feast of Water Drawing) in the Temple.

Most of the folk beliefs and customs concentrate on the life and year cycles and are usually considered according to these two groupings. Another category includes beliefs and customs not associated directly with one of the cycles – folk medicine, social beliefs, and social customs. The beliefs and customs which center around the Jew’s life cycle, constituting the Jewish rites of passage, and around the general year cycle, comprising the Sabbath and the festivals, have throughout the ages undergone the same process of adoption and adaptation as other aspects of Jewish folklore. Thus the life-cycle “crises” in Judaism have universal-biological (*birth, coming of age, *marriage, menopause, death) and corresponding Jewish ritualistic (*circumcision, *bar mitzvah, *wedding, *burial) implications, as have the Jewish festivals and commemorative days.

The customs and their underlying folk beliefs discussed below are considered mostly from the point of view of their origin and function. The classification is according to their primary nature and to their similarity to the practices of hostile confrontation extant in prehistoric societies and in primitive intertribal warfare. Hostile confrontation may thus be divided into three main types: (1) direct (face-to-face) combat; (2) compromise (agreement and treaty); (3) deceptive stratagem.

Common to the three types of warfare is the belief that a person endowed with occult powers can, at propitious moments, compel and overcome supernatural, hostile, and harmful powers (*demons, mazzikim) and force their submission. Jewish literature never associates (ta’amei minhagim) Jewish folk customs and normative customs with their primitive and universal origin which gave rise to the magical elements inherent in them. Only customs of other peoples, usually pagan – neighboring culture or those rejected and fought against – are called magical and superstitions (darkhei Emori, “the Ways of the Amorites”). However, despite the legitimation of Jewish practices through association with biblical verses, hermeneutically explained or Judaized by other means, the belief in evil spirits (see *Demons) has remained basic to Judaism, and in many folk customs their magic nature is still clearly evident. As the existence of demons was presupposed, even in Jewish normative legislation (cf. ruʿah in Shab. 2:5; Er. 4:1, etc.), belief in them was not limited to the uneducated classes. This holds especially true in culture areas where the belief in evil spirits, which are hostile to mankind, was deeply rooted among the non-Jewish neighbors.

Direct (Face-to-Face) Combat

Some of the means with which spirits may be combated are specific colors (white, red) light, sound, and objects (iron, salt).

Demons usually dwell in dark places, ruined buildings (Ber. 3a, b), at the bottom of wells (Lev. R. 24:3), caves, dark and shadowy recesses (cf., the word ḥe[1]-valat, originally meaning “darkness,” as for example in Jer. 13:16; or in Job 12:22, interpreted as ḥe[2] valat “shadow of death”). They shun the light and therefore act at night. The Talmud (cf. Ber. 43b) commands that a person should not walk unaccompanied in the dark, but by the light of a torch or by moonlight. Similarly, the wedding, as well as other festive processions, was accompanied with torches and candles because of envying and hostile spirits. The Jewish traditional explanation (cf., A.I. Sperling, Taʿamei ha-Minhagim (1957), p. 407, no. 959) gives it an exclusively Jewish character: the gematria value of the
two candles carried by the two best men is 500 (double \( n[e]r + n[e]r \)), which is equal to the numerical value of God's first blessing to Adam and Eve \( זר זר \) (peru \( u-revu \), "be fruitful and multiply" = 500), Another explanation (ibid. no. 960) associates the wedding candles and torches with "the thunderings and the lightnings" at the revelation at Mount Sinai (Ex. 20:18), comparing the earthly ties of the human pair with the eternal bond of God and the Torah. A national modification of this wedding custom may be seen in the Jewish-Italian custom recorded at Pesaro and Modena (cf. D. Kaufmann, in \( עז \), 24 (1892), 289; Gaster, \( The Holy and the Profane \), 110) where the bridegroom used to be accompanied by a man carrying a torch to which were attached six more lights, three on each side of the main flame. The allusion is to the seven-branched \( menorah \) in the Tabernacle and Temple, giving the wedding a Jewish-national character.

Spirits may be confronted with a white object since the color white frightens them away. This notion gave rise to many customs; for example, the white garments of the bride and bridegroom. The Jewish explanatory tradition, which regards the white nuptial attire as a symbol of innocence and penitence (cf. Isa. 1:18), since the espoused are on the threshold of a new "chapter in life," is a relatively late and sophisticated explanation (cf. Sperling, no. 957) of the universal white, as the statutory color of festive attire (cf. Cicero, \( De Legibus \), 2:18–45: "White is the color most acceptable to gods"). The Roman custom harks back to the more ancient folk belief. The Jewish explanation associating the wedding day, a day of joy, with that of death, when the deceased is buried in white shrouds, is also a late interpretation (Kolho no. 75). The custom of dressing the dead in white was common in ancient Greece (cf. Pausanias 4:13:41), but there the white was to guard the dead against the powers of darkness and not a means of purification and a sign of penitence. The universality of the usage (Gaster, op. cit., 11–12), however, indicates that only powers who live under the cover of darkness may be subdued by light.

Spirits may be frightened away by sound. Their abodes are thus placed in the bed or under the pillow of a woman in confinement and later in the child's cradle. In P.C. Kirchner's childbed scenes in \( Juedisches Ceremoniel \) (1734), a sword is prominently displayed beside the bed.

The circumcision knife especially is regarded as an effective weapon against demons. According to folk belief the night before the circumcision is the most critical for a mother and child, and a vigil, a "night of watching" (Yiddish: \( vakhnakht \)), is usually observed. Children of the \( heder \), accompanied by their \( rebbe \), keep watch at the bedchamber and chorally chant prayers, mainly \( Kariat *Shema \) and Jacob's blessing to Ephraim and Manasseh (Gen. 48:16). The circumcision knife is often kept under the mother's pillow throughout the night.

The common usage of the sword as a real weapon against invisible demons (Gaster, op. cit., 3–11) led to many compendia of spells and magical formulae being entitled "the Sword" plus the name of a famous hero and wizard. \( Habba de-Moshe \) ("The Sword of Moses," ed. M. Gaster, 1896) is one of the most famous and oldest Jewish collections of inscriptions of charms. In the folktales of Kurdistan Jews and in other Central Asian Jewish legends, the heroes go on quests to find the sword of Moses with which the redemption may be hastened (cf. D. Noy, \( Sippurim mi-Fi Yehudei Kurdistan \) (1968), 44–47, 59–60 and the aggadic details on the magic sword of Methuselah, in Ginzberg, Legends, 5 (1947), 165f.). In Afghanistan the iron sword is replaced by a cane called "Elijah's staff" (cf. \( Yeda-Am \), 25 (1962), 64) not only because the Jews were forbidden to use swords but also to give a Jewish character to universal magic objects.

Iron is also used as a direct weapon to combat demons during the \( tekufah \) (the solstice or the equinox) when, according to folk belief, the waters may be poisoned by a drop of blood spilt by evil spirits from above (cf. Trachtenberg, \( Jewish Magic and Superstition \) (1961), 313, no. 12). Pieces of iron are placed on all vessels containing water and kept in the house to avert this danger. In Jewish lore the use of iron (Sperling, loc. cit., no. 900) is associated with the \( *notarikon \) of the Hebrew word for iron \( ברז \) (BaRZeL), standing for the four mothers of the 12 tribes: Bilhah, Rachel, Zilpah, and Leah, who (and not the iron) avert all danger. Another explanation (\( Yseod Emunah \), p. 384) changes the original text of Deuteronomy 8:9 from \( רארא אברא אברא אברא (!! \) thus adding to the \( notarikon \) the letter \( ꯐ \) to include the two other matriarchs, Sarah and Rebekah (the \( Cf \) standing both for Rachel and Rebekah).

Salt, a symbol of mortality, is also an effective “weapon with which demons may be repulsed" (cf. Ezek. 16:4; Shab. 129b). Other means to ward off demons and evil spirits are such symbols of life, health, and regeneration as herbs, honey, and oil. These usually play an important role as magic objects in folktales (cf. Thompson \( Motif Index \), vol. 6, s.v.) and as helpful remedies in folk medicine.

Some of the demons are identified by name. Thus the child-snatching witch in Jewish folklore, *Lilith (often regarded as Satan’s wife), seizes newborn babies and kills or in-
jures their mothers. She also represents the “dream girl” who consorts with men in their sleep, because she is not impregnated through the sexual dream, the embittered and frustrated spirit takes her revenge upon the lawful wife and mother. In Jewish legend she was the first wife of Adam but after a quarrel deserted him. She was, however, overpowered by three angels (Sinoi, Sinsinoi, Samengeloj) sent by God to bring her back, and she never enters a house in which their names are written. This story, with its emphasis on the three names, is found in most of the written or printed Hebrew amulets (known in Western countries as the *kimpetsettel* (corruption of the German *Kindbettzetel*, “childbed-charm”)) which were hung in the lying-in chamber. Another kind of *kimpetsettel* is called *Shir ha-Ma’alot* ("Song of Ascents"), because it contains Psalm 121 (including verse 6, “The sun shall not smite thee by day, neither the moon by night”), which is one of the verses of the *Shir ha-Ma’alot* of the Book of Psalms (chs. 120–134).

**Compromise (Agreement and Treaty)**

Many Jewish customs go back to the notion that the vital and essential can be preserved by giving up the marginal and less important. In many cases the original offering (sacrifice), intended to appease demons, became highly institutionalized religious customs and rites in which God’s or his representatives’ holiness and superiority is acclaimed and exalted (cf. *circumcision*, which is a direct “sign treaty” between God and man; *terumot*, to the priests, *ma’aserot*; etc.).

Similarly, the custom of shaving a bride’s head may also be explained as a sacrifice of a part in order to keep and to protect the whole. In many cultures, hair is regarded as a life index (Thompson, *Motif Index*, D 991, E 174, 12) which possesses an independent soul and is the seat of the vital spirit (cf. the Samson story). The belief in the magic power of hair as the seat of the “life force” may have given rise to the taboos on cutting hair during the first year (or three years) of an infant’s life, and the shearing of *pe’ot* (sidecurls). According to ritual (“halaga”) the hair is cut after a year or three and is burned; in Jewish folklore the ritual takes place usually on *Lag ba-Omer*, at the grave of Rabbi Simeon bar Yoḥai in Meron.

**Deceptive Stratagem**

Many customs stem from the notion that a wise and learned man can deceive the demons, who are stronger but more stupid than mankind, and thus gain the upper hand in a struggle with them. Various customs are therefore aimed at effecting an artificial change in a man’s identity so that he may not be recognized by evil spirits or their representatives and messengers (the “Angel of Death”). While in most customs the change is merely that of the name, this may exercise a profound influence on the person’s ego, personality, character, and destiny. Meaningful changes of name often foreshadow the course of human destiny and reflect cosmic changes, evidence of which is already found in the Bible (Abraham and Sarah, Gen. 17:5; Jacob, Gen. 32:29; Joshua, Num. 13:16). In a talmudic story (Yoma 85b) Rabbi Meir refused to pass the night in an inn because the innkeeper’s name, Kidor, was homonymic to a “negative” verse in the Bible (Deut. 32:20, *ki dor tahpukhot hemmah* – for they are a very forward generation, children in whom is no faith) and thus forebode trouble. A divine decree may be altered by changing a person’s name. The well-attested custom of changing a sick person’s name in order to bring about his speedy recovery (cf. *Sefer Hasidim* (1957), 245) is still a common practice among all Jewish ethnic groups. The evil forces may also be deceived by “selling” sick children to others so that they assume the buyer’s name (see MGJV, 5 (1900), 18). The naming of the newborn child after a strong beast, a lion (*aryeh*) or a bear (*dov*), or a harmful animal, the bee (*devorah*), is also in many ways meant to deceive the evil spirit who is thus frightened away. Many of the naming practices (bestowing theophoric names or the name of a relative who passed away, so that the original name bearer may protect the newborn) stem both from the deceptive and from the compromising concepts. The compromise basis to the custom denotes homage to the supernatural forces as an inducement for their protection and to pacify and appease them through tributes.

Customs relating to sympathetic magic and contagious magic stem from a combination of the compromise and the deceptive trends. Thus by imitating the deeds of a supernatural power man admits its superiority and through his imitation pays tribute to the spirit. At the same time man incites the evil forces to act in his favor by challenging their power of action. The foolish spirits in trying to prove themselves play into man’s hands.

Compromise and deceptive elements are also basic to the use of magic objects through which attempts are made to cause transformations in nature or in man. Man in using an object (part of an animal, plant, etc.) which the spirits have endowed with magic power imitates the evil powers and thereby shows his humility and submissiveness. On the other hand, he often uses his newly acquired power to combat the spirits from whom his own power now emanates. Many devices have thus been invented to overcome sterility and barrenness presumably imposed on man by malevolent supernatural forces who are strong enough to prevent sexual intercourse from resulting in conception. Plants or animals which were thought to have fertilizing properties were commonly used as aids to conception. Among the plants eaten were mandrakes and apples; the most popular animals were cocks and fish. Remedies such as touching a woman already with child, swallowing the foreskin of a newly circumcised infant, drinking the water with which a corpse has been washed (thereby transferring to the womb some of the life which has departed from the dead), and crawling under a gestating mare are based on contagious magic. They presuppose man’s admission of the superiority of the object which originates from supernatural forces. These cures for barrenness (collected from Jewish informants, cf. Patai, “Jewish Folk-cures for Barrenness” in *Folklore*, vol. 4, p. 248; idem, “Birth in Popular Custom,” in *Talpioth*, 9 (1965), 238–260; Gaster, op. cit., p. 4), which are
not attested in normative Jewish halakhah, but are strongly opposed by it, still reflect general usage. In general folk culture and beliefs, the mandrake, for example, is regarded as a peculiarly potent aphrodisiac and, as such, it is referred to in the Bible (Gen. 30:14ff.; Song 7:14), probably because its root strikingly resembles the human form. Similarly the meat of fish was thought to induce fertility because of its pronounced philoprogenitive tendencies (cf. Gen. 48:16). Crawling under a mare was a means through which a woman could absorb some of the fertility of the mare which gestates for ten months.

Besides Judaized explanations and interpretations, there are many magic objects which are peculiarly Jewish. The sight of the ritual circumcision knife or a bowl of water placed under Elijah’s chair at the circumcision ceremony drives spirits away. In folk medicine water in which the kohanim washed their hands before blessing the congregation, especially on the Day of Atonement, is a powerful cure for barrenness and other misfortunes. A uniquely Jewish practice or its explanation may sometimes have linguistic origins. Thus, for example, willow leaves which form part of the Hoshana Rabbah rite induce conception not only because of their sympathetic magic qualities, paralleling the fertility of nature (prayer for rain) with human fertility, but because the willow (זֶרֶךְ – aravah) and the word seed (זֶרֶן – zera) have the same numerical value (277).

Many general practices are Judaized merely by the use of Hebrew (usually biblical verses), the holy tongue, which is believed to be the language of the Creator and the heavenly hosts and as such is a potent weapon against demons. It is often used by Christians and Arabs in their incantations.

A Jewish folk ceremony usually combines with many local non-Jewish magic practices and objects. Thus, for example, among German-speaking Jews a child is given a secular name on the fourth Sabbath after birth at the Hollekreisch ceremony. The invited guests, men in the case of a male birth and women in that of a female, range themselves in a circle (German Kreis) around the cradle. The baby is lifted thrice into the air while the guests call out each time Holle! Kreisch! and while appropriate biblical verses are recited. The magic circle wards off Frau Holle, a succubus in German mythology who attacks children. (Jewish folk etymology associates the word Kreis either with קֶרֶס, “call” or קֶרֶס, “tear.”) The lifting is a survival of the concept that newborn babies must also be delivered from the womb of Mother Earth who gave birth to Adam, the first man (Gen. 2:7) and from which, according to folk legends, children emerge (cf. Midrashim and Rashi to Job 5:23 and Ginzberg Legends, vol. 5, page 50 note 148). It is also reminiscent of the concept that infants are symbolically sacrificed to the heavenly powers. On the other hand the biblical verses from Ecclesiastes 5:14 (“As he came forth of his mother’s womb, naked shall he go back as he came”) and Job 1:21 (“Naked came I out of my mother’s womb and naked shall I return thither”) endow the lifting custom with symbolic and ethical meaning through its counterpart practice, to deposit the dead in the ground soon after death.

A Jewish adaptation of a universal custom often also comprehends the national character of the Jewish people, stressing the everlasting bond between the nation and the Land of Israel. To plant a tree at the birth of a child (a cedar for a boy and a pine for a girl) is a Jewish birth custom which fell into desuetude, perhaps because the people became alienated from the soil and the Land of Israel. The two trees were cut down at marriage and used in the construction of the huppah or bridal bower (cf. Git. 57a). The original universal custom stems from the general concept of the “external soul” (Thompson, Motif E. 710) which associates the life of man with some far-away object. This is a deceptive means whereby the hostility of the spirits may be diverted from their real targets. The Jewish interpretation stresses the Jew’s roots in the Holy Land.

The specific Jewish character is also evident in the practice of placing a sachet of earth from the Land of Israel into the coffin of a Jew. The sachet serves as a substitute for actual burial in the Holy Land and ensures the earlier awakening of the dead on the Day of Resurrection. Since the resurrection will start in Zion, the buried need not roll to Zion before being resurrected. The dead are nevertheless buried with their feet toward the East so that they may be immediately on their way to the Land of Israel after resurrection. (This custom is also rooted in the basic concept of deception in which a part sanctifies the whole – pars pro toto.)

Judaizing tendencies exist especially with regard to customs and folk beliefs which are fundamentally contradictory to Jewish ethical teaching and thus threaten the Jewish ethnic ego. The pronounced Jewish character of betrothal and wedding ceremonies resulted from their refinement of the purely sexual relationships between man and woman. Nevertheless the Jewish rites of marriage have throughout the ages in all the culture areas where Jews have lived been accompanied by popular general practices aiming to ward off the evil spirits who envy man and want to abort his propagation (see *Lilith). The customs were, however, not adopted mechanically, but imbued with distinctive Jewish characteristics by incorporating Scriptures into the audio-oral prayers accompanying the rite, and in the Judaized explanation of the origin of the customs. Thus, for example, the bride and bridegroom must wear special wedding dresses and ornaments which originally were intended to protect them against evil spirits who abhor specific colors (white) and specific objects (iron). These have however acquired symbolic and aesthetic values. The clothes worn at the wedding are usually new and appropriate to the new phase of life; the bride’s veil is not meant to hide her but is reminiscent of Rebekah who “took a veil and covered herself with it” (Gen. 24:65) when she first met Isaac, and is a sign of modesty. The customs of shaving the bride’s head before going to the huppah (and wearing a sheitel [wig]), and of her limping like an animal so as to seem blemished were originally intended to deceive the jealous spirits by showing them an ugly person not worth fighting for. Explanatory literature, however, invested these practices with deep ethical meaning:
man should not pay attention to outer form but inner value. Similarly, the customs of strewing ashes on the bridegroom’s head and the breaking the glass at the wedding ceremony, which also have origins in general folklore, were interpreted as “reminder(s) of the destruction of the Temple.” They were also meant to remind man of his vanity (memento mori).

In Israel, modern social life, especially in the secular sector and in kibbutz society, has stimulated the formation of new customs and the adaptation of religious ceremonies to a secular society which wants to keep the traditional, national folkways. This is evident, for example, in the bar mitzvah ceremony whose religious significance in a secular society is reduced but not eliminated. Since non-observant Jews do not “lay tefillin,” which is the most outward sign of the bar mitzvah ceremony and the Jewish initiation rite, regarding them as a remnant of an ancient religious object (a kind of amulet containing scriptural verses), attempts have been made to re-vitalize the rite with other external symbols and the concept of tefillin has been completely eliminated. Under the initial impetus of the Reform movement, the individual ceremony has been substituted by a collective “confirmation” ceremony similar to that of the Christian rite. This takes place at the “Shavuot festival, chosen because it is the traditional date of the giving of the law on Mount Sinai, and consequently the proper season for adolescent boys and girls to celebrate their initiation into full Jewish adulthood. As the Shavuot festival coincides with the end of the school year, the ceremony, at times, bears the character of a graduation. In Israel the collective bar mitzvah has been introduced in nonreligious kibbutzim. The ceremony takes place after the children have performed some task, usually socioeducational, imposed upon each individual child (or pair) by the community, school, or youth movement (e.g., a week’s stay in a new settlement with a newcomer’s family in order to help them; or in a religious yeshivah in order to learn Jewish ways strange to them). The bar mitzvah child then has to write a composition on his experiences. He further relates his adventures during the performance of the task at the “confirmation” and the lessons derived therefrom are discussed by the whole assembly. These attempts, as well as the endeavors to introduce new agricultural festivals of a secular nature: Hag ha-Gez (“the Feast of Sheepshearing”), Hag ha-Keramim (“the Feast of the Vineyard,” a “renewal” of the ancient Tu be-Av festival) have not been functioning long enough to become an integral and crystallized part of renewed or newly invented Jewish socio-cultural folkways, even in a limited segment of Jewish society. The artificial character of the new folk customs, as well as that of modern Israeli dances and folk music, is still evident.

Varia: Beliefs and Customs not Related to Cycles
A small proportion of Jewish customs and their underlying folk beliefs are not directly connected with the annual life cycle or with the crises of passage in man’s life. Among these the Jewish customs pertaining to diet, nutrition, and food (including the biblical distinction between kosher and non-kosher food; the taboos of eating meat and milk together) and folk medicine practices are the two most important clusters of customs. Attempts have been made to relate them, to regard the dietary laws as part of ancient hygiene prescription, and to consider folk medicine and food customs as means of overcoming anxieties and fears.

FOLK MEDICINE. Folk beliefs and practices (remedies) for the prevention and cure of diseases have been transmitted by Jewish communities from generation to generation, even where there were normative medicine and physicians. The Bible recommends the use of the mandrake to produce fertility (Gen. 30:14). No decisive differentiation existed between the various ways of ensuring health and fertility and of combating disease and death: asking the doctor’s advice, praying, and using folk remedies were all curative means emanating from God, the only healer (cf. Ex. 15:26). In Tobit (6:78) smoked liver, heart, and the gall of a fish are recommended as a cure for casting out a demon or evil spirit. Similar practices still prevail among Kurdish and Persian Jews and are indicative of the antiquity of many of the accepted folk cures.

Evidence of the widespread use of folk medicine in Palestine and Babylonia during the early centuries C.E. can be found in talmudic-midrashic literature. Magic practices and amulets received a Jewish “touch” through the use of biblical verses and by stressing the efficacy of relevant psalms. The tertian fever, for example, was to be cured with an amulet consisting of seven sets of seven articles hung around the neck (Shab. 67a). Amulets were also used against epilepsy (Shab. 61a); these were later sanctified and Judaized through biblical inscriptions. The concept that a cure may be effected by transferring the disease to animals, found so frequently in general folk medicine, is also present in Jewish folk medicine. According to talmudic sources the patient was recommended to go to a crossroad, pick up the first ant with a burden that he saw, and place it in a copper tube which was to be covered with lead and sealed. The tube should then be shaken and an incantation chanted: “What thou carriest on me, that I carry on thee” (Shab. 66b). Although practices of this kind were disapproved of by rabbinic authorities who regarded them as “Amorite rites” (folk practices alien to the spirit of Judaism), they persisted; most of them are based on principles of sympathetic magic. In the Middle Ages there is evidence of a more widespread use of folk medicine among Jews. There are many folk prescriptions in the Sefer Hasidim (13th century), most of them derived from the contiguous Christian culture. The remedy against premature birth was for a wife to wear a piece of her husband’s stockings or waistband (a practice of contagious magic found in German folk medicine).

There are many folk medicine manuscripts extant from the late Middle Ages (16th-18th centuries) which contain prescriptions against fever and epilepsy. The mysterious nature of these diseases seems to have attracted the special attention of folk doctors in various culture areas. Some prescriptions
deal with the improvement of family life, inducing love and fertility. Blood, a frequent element in general folk medicine, is rarely, if ever, used among Jews except in the case of nose-bleeding where the actual blood lost is sometimes baked into a cake and, following the principle prevailing in sympathetic magic, is given to a pig (Sefer Refu'ot, 14b).

Besides folk medicine, only a few customs are unrelated to any of the two main cycles of the Jewish year and life. Most of them have a distinctive Jewish character and have been based on Jewish legends and traditions. Thus, for example, feeding the birds in Eastern Europe on the winter Sabbath when the section on manna is read (Ex. 16) is associated with the legend that birds helped Moses defeat his opponents who wanted to prove that the Lawgiver had told a lie about manna. The same legend (cf. Ginzberg, Legends, 3 (1953), 46–47) also gave rise to the custom in Eastern Europe to feed birds on Shabbat Shirah when the section containing the Song of Moses (Ex. 15) was read in the synagogue.

Another social custom prevalent among Jews is to say “God bless you” (the exclamation asuta meaning “health”) to anyone who sneezes. This custom is associated with the legend that in antiquity sneezing was a sign which forebode the sneezer’s forthcoming death, but which no longer prevailed after the time of Jacob (cf. Ginzberg, Legends, vol. 5, 364, note 357). The origin of the custom, however, is not confined to Jews (Trachtenberg 1939, 306).

Jewish folklore and Jewish religion have always influenced each other. Often adapted from foreign sources, Jewish folklore was profoundly imbued with the Jewish religious spirit but in turn left its mark on Jewish religion. The religious practices extant in the various Jewish communities long ago freed themselves from their underlying superstitions beliefs and bear the character of monotheistic Judaism. However, in Jewish communities removed from the centers of learning and from religious leaders well versed in halakhah there still exist, side by side with the normative religion, complexes of popular beliefs and superstitions. Contrary to the explicit command of the Torah (Lev. 19:26; Deut. 18:9–14), beliefs in divination, the prognostic arts, interpretations of dreams, and astrology are still rooted in Jewish communities (cf. the still popular reprints of folk books like Goralot Ahitofel (“Lots of Ahitophel,” Jerusalem, 1965); Sefer Hokhmah ha-Yad ha-Shalem (“The Wisdom of Chiromancy,” Jerusalem, 1966); Sefer Hokhmatha-Parzuf (“Divination According to Features,” Jerusalem, 1967) which are widely read and used by ethnic groups). Rabbinic authorities have tried to suppress customs which they regard not of Jewish origin, but in many cases they have not succeeded. Thus, for example, the customs of kapparot (propitiatory rite performed on the eve of the Day of *Atonement) and tashlikh (symbolic casting off of sins during *Rosh Ha-Shanah) are entirely foreign and considered by many Jewish authorities as pagan practices diametrically opposed to Judaism (cf. Rappoport, *The Folklore of the Jews*, p. 112–117); however, they are still commonly practiced in Jewish communities.

(founded by Dov Noy) houses 25,000 narrative texts. An archive for
proverbs at the Hebrew University of Jerusalem (founded by Galit
Hasan-Rokem) houses 7,500 sayings. The Institute for Jewish Stud-
ies at the Hebrew University publishes the journal Jerusalem Stud-
ies in Folklore.

FOLKMAN, JUDAH (1933– ), U.S. medical scientist. Folk-
man was born in Cleveland, Ohio, and graduated with a B.A.
from Ohio State University (1953) and an M.D. from Harvard
Medical School (1957). His interest in research began while he
was still an undergraduate with the development of a novel
pacemaker. After training in surgery at Massachusetts Gen-
eral Hospital (1957–65), including service with the U.S. Navy
(1960–62), he joined the staff of Harvard Medical School,
where his subsequent senior appointments included profes-
sor of surgery (1967), pediatric surgery (1979), and cell biology
(1994), and chief surgeon at Boston Children's Hospital. Folk-
man initiated research on the importance of new blood vessels
(angiogenesis) to the growth and spread of cancers. This re-
search showed that angiogenesis is stimulated by factors pro-
duced chiefly by the specialized cells (endothelial cells) lining
the interior of the blood vessels of normal individuals and by
cancer cells. It also promotes inflammation in many other dis-
eases. Angiogenesis is inhibited by naturally occurring factors
and by drugs such as endostatin and angiostatin designed as
the result of this basic research. He has postulated that natural
angiogenesis factors are an important anti-cancer defense
mechanism. Anti-angiogenesis drugs have proved effective in
controlling experimental cancers but their relevance to clini-
cal medicine awaits the outcome of the many clinical trials
founded on this research. His achievements have been recog-
nized by many honors, including election to the U.S. National
Academy of Sciences (1990), the Gairdner Award (1991), the
Wolf Prize (1992), and the Benjamin Franklin Award (2001).
In 1999 he became a member of the International Scientific
Board of the Israel Cancer Association.

[Michael Denman (2nd ed.)]

FOLKSPARTEI (Poland), “Yidishe Folkspartei in Polyn”
(popularly known as Folkist Party), Jewish populist party
in Poland organized during World War I and active in the
interwar period; followed the ideology of the Russian *Folk-
spartei. The Folkist Party achieved its first successes among
broad sectors of the Jewish electorate during the elections to
the Warsaw municipal council of 1916. An agreement on the
distribution of seats had then been signed between the united
Jewish bloc – which comprised the Zionists, the Orthodox,
and the assimilationists – and the Polish parties in order
to break the tension existing between Poles and Jews since
the proclamation of the anti-Jewish boycott in 1912. In opposition
to this agreement a “People's Committee” (Folks Komitet) was
formed on the initiative of a group of Yiddish authors and
journalists led by the lawyer Noah *Prylucki. This presented
a separate list calling for independent Jewish politics, cultural
autonomy, and full political equality. As a result of the dissat-
sisfaction among the small tradesmen and artisan class, the
list won four seats.

The founding convention of the Folkspartei was held in
November 1918. It drew up a program in general similar to that
of the Russian Folkspartei but with the exclusive emphasis on
Yiddish as the traditional language. In social outlook, the party
was Democrat–Radical oriented, opposing the class struggle
and aiming at productivization. Culture and education were
to be of a secular character. The Folkspartei was headed by
intellectuals and communal leaders who had left the Zionist
and labor ranks (especially the Bund) like its principal leader,
Noah Prylucki, the folklorist and Yiddish philologist, Samuel
*Hirschhorn, Hillel *Zeitlin, H.D. *Nomberg, Lazar Cohen
(Kahan), S. Stupnicki, and Zemah *Shabad. The main centers
of the movement were Warsaw, Lodz, and Vilna. Its organi-
sational and ideological framework was not overly rigid, and
its leaders achieved popularity through the Yiddish press and
their efforts on behalf of individual causes.

In the elections to the Sejm (parliament) of 1919, the
Folksists returned two members (Prylucki and Hirschhorn),
but in the elections of 1922 were unsuccessful in the campaign
against the minorities bloc, which attracted the decisive major-
ity of the Jewish vote. Prylucki, who was elected as the party's
sole representative to the Sejm, did not join the circle of other
Jewish deputies. After this decline in the party's popularity, a
split occurred in 1926 with the separation of the Vilna section,
which proclaimed itself an independent faction (“Populist-
Democrat”) under the leadership of Shabad. In 1928, within
the framework of the new political regime established in Po-
land after Pilsudski's coup, the supporters of Prylucki, in con-
junction with Agudat Israel and the Merchants' Organiza-
tion, joined forces with the list supported by the government
against the second minorities bloc led by Yizhak *Gruenbaum.
This affiliation with the Polish government camp did not en-
hance the status of the Folkspartei among the Jewish pub-
lic. In 1929, an attempt was made to reunite the Folkspartei,
and a national convention was held in 1931. During 1932–33
it published a monthly, Folksittische Heftin, in order to explain
the party ideology. All these efforts, however, were unable to
compete with the growing Zionist and radical movements, es-
specially the Bund, with which the Folkspartei collaborated
in the fields of culture and Yiddish education.

dzonej, 2 (1933), 268–9; A. Levinson, Toledot Yehudei Varshah (1953),

[Moshe Landau]

FOLKSPARTEI (Russia), populist party; Jewish political
party influential in most of Eastern Europe and active from
1906 to 1939. Its founder and mentor was Simon *Dubnow,
who formulated with associates the party program on the
basis of his ideology of *autonomism. According to this, the
Jewish communal organization would serve as the secular
cell of Jewish national existence and autonomy, to be administered on democratic lines. It was to establish Jewish schools whose language of instruction would be determined according to circumstances and the parents – Hebrew, Yiddish, or the language of the country – but the spirit and aims of this education should be Jewish. The local communities were to band together in a council on the lines of the *Councils of the Lands to represent the Jews vis-à-vis the authorities, whereby the state would grant it the right to collect taxes for internal Jewish requirements. The council would establish central institutions (rabbinical seminaries, teachers’ training colleges, etc.), supervise the Jewish schools, and deal with economic and social matters (cooperatives, emigration, and welfare).

On a higher plane, Dubnow visualized a world Jewish congress that would deal with problems concerning the whole of the nation in the Diaspora, such as the struggle for *emancipation in countries where it had not yet been achieved, and care for emigration and settlement in Erez Israel and other countries. In 1911 a group of Autonomous-Socialists joined the Folkspartei. The party was led, in addition to S. Dubnow, by M. *Kreinin, I. *Yefroykin, S. *An-Ski, J.W. *Latzky-Bertholdi, Nahum *Shtif, and Joseph Tschernikho.

After the Russian Revolution of February 1917, the party organized openly. It played a role in the political struggle among Jews during this period but made no headway against the Jewish socialist parties, the Zionists, and the Orthodox groups: in the elections to the Ukrainian Jewish Council of 1918, only four of its delegates were returned out of 125. Latzky-Bertholdi served as minister for Jewish affairs in the Ukrainian government for a short while in 1918. When the Soviets gained control of Ukraine and Belorussia, the activities of the party in these areas were brought to a halt. With the granting of *minority rights in international treaties, the Folkspartei considered that its program had been given international sanction.

In Poland the founding congress of the Folkspartei met in November 1918. The program adopted resembled the Russian one, differing in that it proclaimed Yiddish the sole language for the cooperative movement and for secular education and culture. Among the leaders of the party were: N. Prylucki, S. *Hirschhorn, J. *Zeitlin, H.D. *Nonberg, and others. In the elections to the Polish parliament (Sejm) two were elected: Prylucki and Hirschhorn; in the 1922 only Prylucki, but he did not join the Jewish Circle and the minorities bloc. In 1928 he joined forces with Agudat Israel and the government and not the second minorities bloc headed by Yizhak *Gruenbaum. During the 1920s and 1930s, the party continued its activities in Poland and the Baltic countries. Its members took part in community affairs, and in conjunction with the Jewish leftist parties promoted secular Jewish schools with instruction in Yiddish (Yehuda Slutsky [Central Yiddish School Organization]), and supported the Jewish cooperative movement and relief institutions (*ORT, *OSE). The party drew most of its adherents from the intelligentsia, small tradesmen, and artisans. While operating only in limited circles, it had some influence in communal life (see *Folkspartei, Poland). In the Baltic countries, the Folkspartei continued to exist until the rise of the dictatorial regimes and the abolition of Jewish autonomy. With the growing antisemitism and nationalism in the late 1930s, the party gradually disintegrated. Many of its members and leaders abandoned it, some joining the Zionists (such as Latzky-Bertholdi), and others the Territorialists (Tschernikho).

**FOMIN, YEFIM MOISEYEVICH** (d. 1941), Soviet soldier.

In 1941 Fomin was a captain and commissar of a regiment during the Brest-Litovsk campaign. When the Germans broke through the Russian lines, Fomin conducted the defense of the Brest-Litovsk fortress for weeks after the rest of the front had retreated. Severely wounded, he was captured with the fall of the fortress and because he was a Jew, he was executed. He was posthumously made a Hero of the Soviet Union and a factory and a street in Brest-Litovsk were named after him.

**FONDANE (Fundoianu), BENJAMIN (Barbu; 1898–1944),** French and Romanian poet. Born in Jassy, Romania, Fondane studied law, then turned to literature, publishing some Romanian verse collections under his original name, Barbu Fondioianu. In 1923 he settled in France, where in common with other Romanian Jewish immigrants, such as Tristan *Tzara and Ilarie *Voronca, he made his name as a French writer. Unlike them, however, Fondane always remained a Jewish author, deeply conscious of his identity and painfully aware of the Jew’s condition as an exile. Although he wrote philosophical essays which betray the influence of Kierkegaard, Fondane is primarily remembered as a visionary poet. In the vast lyrical frescos of *Ulysse* (1933) and *Titanic* (1937) he developed the theme of the *Wandering Jew, with pathetic descriptions of the wanderer’s existence or of weary yet hopeful emigrants on the way to their Promised Land. Fondane’s poetic testament, *L’Exode; superflumina Babylonis* (1965; written 1934–42), is more restrained and taut in tone. In this semiautobiographical work the author resigns himself to the inevitable, and in bitter words prophesies the ultimate catastrophe. Even as the darkness of Nazism descended on Jewry, Fondane continued to believe in the ultimate triumph of freedom. He was deported to the concentration camp at Birkenau (Auschwitz), where he was murdered.

**FONDILLER, WILLIAM** (1885–1975), U.S. electrical engineer. Born in Russia, Fondiller was taken to the U.S. He made his career with Western Electric Company (1909–25) and Bell Telephone Laboratories, of which he became vice president and treasurer. He was a research associate at Columbia University school of engineering from 1935 to 1950, and took out patents for loading coils, transformers, cables, etc. Fondiller
FOOD

was active in Jewish and Zionist affairs and was honorary president of the American Technion Society (1950).

FONSECA, ALVARO DA (c. 1657–1742), English merchant. Da Fonseca, known in synagogue as Jacob Jessurun Alvarez, arrived with his family in England in about 1670 from Nevis in the West Indies, became a successful merchant, and was active in synagogue affairs. About 1682 he left for India. In 1683 he and two other Portuguese-Jewish merchants, Bartholomew Rodriguez and Domingo do Porto, were authorized, though they were originally interlopers, to settle in Fort St. George (Madras). During the 17 years that he was in India (1683–1700) Da Fonseca served the English East India Company in a variety of functions. In 1690 he was appointed alderman of the Madras Corporation, representing the Jewish merchant group of Fort St. George. He built a vast commercial empire in collaboration with other Jewish merchants and opened up new markets in Asia for the English trade. He invested great sums in commercial transactions to China, Burma, and Bengal. The major commodities in which he dealt were diamonds and precious stones, textiles, and timber, frequently transported on his own ships. In March 1700 he returned with a large fortune to London, where he acted on behalf of the Madras governor Thomas Pitt in the appraisal and sale of the famous Pitt diamond.

[Abraham Haim]

FONSECA, DANIEL DE (1672–c. 1740), Marrano physician and diplomat from Oporto (Porto), Portugal. His grandfather had been burned at the stake by the Inquisition; his father had escaped the same fate only by flight. Left behind in Portugal, his son was brought up as a priest. This did not prevent him from adhering to Judaism in secret. The secret reached the ears of the Inquisition and like his father he had to flee for his life, crossing the border into France. He studied medicine in Bordeaux, resided for a time in Paris, and then made his way to Constantinople, where he arrived in 1702. Once there, he openly embraced Judaism. Through his medical skill, De Fonseca soon became known in the Turkish capital, obtaining the confidence of many high officials. He showed himself an accomplished diplomat, consistently espousing the cause of France and thereby earning the dislike of the Court of Austria. He was appointed a physician to the French embassy, in which he occupied the position of confidential adviser. Subsequently, he became medical attendant to Prince Mavrocordato at Bucharest. On his return to Constantinople, he became physician to the sultan, continuing to occupy this office till 1730; and he was of great assistance to Charles XI of Sweden in his intrigues at the Sublime Porte against Russia and Poland. Finally he settled in Paris, where he mingled with the highest society of his age and earned the respect of Voltaire, who regarded him as "the only philosopher of his people."

[Abraham Haim]

FOOD

The Biblical Period

Diet in Erez Israel during the biblical period was dependent mostly on the food supply of the closed agricultural economy. Most agricultural produce came from permanent settlements, and some wild plants were gathered, while meat was mainly supplied by cattle and sheep-raising nomads. Grain constituted the bulk of agricultural produce consumed and most meat was mutton. The Bible, in speaking of the produce of Erez Israel, mentions three types of food: dagan, tirosh, and yizhar (Deut. 7:13; II Kings 18:32). Dagan ("corn" or "grain") represents the various agricultural crops, tirosh ("new wine")—wine, and yizhar-oil.

Food was made fit for eating by baking, boiling, frying, or roasting (see *Fire), or by a combination of these. Grain was prepared in two ways: roasting the kernels in order to break down their starches and soften them (Heb. kali, qali; "parched corn"); I Sam. 25:18; II Sam. 17:28; Ruth 2:14), or grinding and baking the item (see also *Bread). Cooked food was a mixture of meat and vegetables which were combined while heating (Heb. marak; "broth"); Judg. 6:19, 20; Isa. 65:4). Stew (Heb. nazid; Gen. 25:29; II Kings 4:38; et al.) was apparently a food cooked for a long time in water, most of which was boiled off. Fried foods, especially meat, were cooked in large quantities of boiling oil. Meat was also roasted over an open flame, which seared and softened it.

[Abraham Haim]
FORBIDDEN FOODS. The usual diet consisted of foods prepared from grain, wild and cultivated plants, and the meat of sheep, cattle, fowl, fish, and even certain insects. The Torah limited the meat a Jew could eat, both in terms of the animals permissible for eating, and the manner of their preparation (see also *Dietary Laws). Meat taken from a still living animal or from one found dead, and the drinking of blood were prohibited (see *Blood). Only animals specifically slaughtered for food or for use in the sacrificial service could be eaten. These animals had to have two characteristics: they chewed the cud and had cloven hoofs. An animal possessing neither or only one of these characteristics was forbidden. Some types of birds were permitted and the exceptions were specifically named (Lev. 11:13–19). The consumption of fish was limited to those possessing scales and fins. As to insects, only locusts (Heb. arbeh) could be eaten.

THE FORM OF THE MEAL. The Bible uses several terms to describe meals. Ārūnah (from the root ṭḥ, “to lodge”) appears to refer to the usual daily meal, as in “a regular allowance [ārūnah] was given him ...” (1 Kings 23:30; Jer. 52:34). It may also indicate a more modest meal, as in “Better is a dinner of herbs where love is, than a fatted ox and hatred with it” (Prov. 15:17). Zevah (from the root zbh, “to sacrifice”) generally indicates a meat meal connected with the religious worship, or with some other festive occasion (1 Sam. 20:29). Kerah was a festive meal with many participants (1 Kings 6:23). The verb s’d (“to support”) is frequently used to indicate eating: “Come home with me, and refresh thyself” (1 Kings 13:7). Lehem (“bread”) frequently refers to food or to a meal in general. Meat meals were not usual: the kerah or zevah, as noted above, was part of some festive occasion such as a general holiday or special tribal or family occasion. Many people participated in a meat meal, of which nothing would be left over in order to prevent spoilage. Such meat meals were consecrated in order to enlist God’s aid in human ventures, as a sign of thanks, or as a propitiatory offering (see also *Sacrifice). The everyday meal was eaten by the family either in the house or in the field. It was generally prepared by the woman, while the zevah and kerah were prepared by both men and women, thus emphasizing the importance of these social events. A meal was an occasion for pleasure and enjoyment. It was eaten while seated and the established customs and manners were observed before and after the meal. The upper classes might sing and propose riddles during the mealtimes.

VEGETABLES. Cereals, such as wheat (Heb. hittah) and barley (Heb. še’orah), were cultivated crops. Stew made of lentils (Heb. ‘adashim) or beans (Heb. polim) was common and was eaten after being softened by cooking. Other vegetable dishes were uncommon, most vegetables being picked wild as needed and then cooked for the daily meal. Wild melons (Heb. avat‘iqah) and cucumbers (Heb. ʾqeshu) were among the wild vegetables eaten in Erez Israel. In Egypt there were plots for the cultivation of melons and cucumbers. Sesame seeds (Heb. shumshum), also gathered wild, were used in the preparation of oil, or were eaten raw, in stews or in some other fashion. Garlic (Heb. shum) and onions (Heb. bazal) grew wild in Erez Israel and served as food, while in Egypt they were cultivated. They were cultivated in Erez Israel only in the post-biblical period.

FRUITS. The seven types of produce mentioned in Deuteronomy 8:8 include most of the fruit eaten in Erez Israel. The vine (Heb. gefen) is mentioned after wheat and barley. Grapes (Heb. ‘anavim) were used mainly in the production of wine, although they were also eaten fresh. Grapes were dried in the sun to produce raisins (Heb. zimmukim, zimmuqim), which were preserved for substantial periods of time. Grapes were also used to produce a thick liquid like honey, called the grape honey (Heb. devash ‘anavim). Even today, grape honey (Ar. dibes) is produced in parts of Israel. Grape honey was made by treading in special vats: the liquid produced was not left to ferment, but was boiled in order to evaporate the water content, leaving behind a thick liquid resembling honey. Figs (Heb. ténah) were also common and were eaten either fresh when ripe, or dried, the dried figs (Heb. develah) being strung into a chain or made into a hard cake. This cake was made of figs stuck together and dried as a block. After sufficient drying, the fig block was sliced and eaten like bread. Pomegranates (Heb. rimmonim) were usually eaten fresh, although occasionally they were used in the preparation of wine for medicinal uses. Dates (Heb. temarim), too, were eaten fresh or were sundried. Like grapes, dates were made into a sweet, thick drink called date honey (Heb. devash temarim). This was prepared by soaking the fruit in water for some time during which it would disintegrate. The liquid was cooked down until thick and sweet. Olives (Heb. zeitim) were usually used to make oil (see below), although some were eaten after being preserved in tasty and fragrant spices, which removed their natural bitter flavor. The Bible also mentions nuts (Heb. gōzim), apples (Heb. tappuhim), pistachios (Heb. botnim), and almonds (Heb. shekedim, sheqedim). Nuts were common in Erez Israel, particularly in the post-biblical period. Apples, pistachios, and almonds were not cultivated, but grew wild. They were picked for occasional home use when they were available, although most were imported as a delicacy.

SPICES. The most common spice was salt (Heb. melah); Job 6:6, there being hardly any food which was not seasoned with it. Salt served the additional function of symbolizing the making of a covenant (11 Chron. 13:5), or the destruction of a city (Judg. 9:45). It was obtained in two ways: the most common method was mining, as at Sodom, although it was also produced by evaporating sea water and removing the salts from the sediment. The raw salt was rinsed in fresh water, purified, and then crushed until fine, in which form it was used for seasoning food and for other purposes. The flavor of food was also enhanced by spices derived from plants. Garlic and onions, as well as being eaten as vegetables, were used to season cooked foods. Other spices mentioned in the Bible are coriander (Heb. gadd), cumin (Heb. kammon), and black cumin.
(Heb. kezah, qezah). More delicate spices for special feasts were imported from Arabia and India, and were considered merchandise of the highest value. Among such spices were various types of pepper (Heb. pilpel), and ginger.

**FOODS PRODUCED BY ANIMALS.** During the biblical period, wild bee honey and eggs, especially birds' eggs, were eaten.

**DAIRY FOODS.** Most dairy items were produced from sheep or goat milk, since cattle were scarce in the country. The use of cow's milk is attested by Mesopotamian and Egyptian sources, such as the "Banner of Ur" and various Egyptian steles, as early as the fourth millennium B.C.E. In Ur, cows were milked from behind and in Egypt from in front of the udder, with their rear legs tied together. Milk, connected as it was with the miracle of reproduction, was used in pagan cults, in which a kid would be cooked in its mother's milk. This practice was forbidden for the Israelites (Ex. 23:19; et al.).

Milk was one the characteristic products of Erez Israel (Ex. 3:1; 33:3; Joel 4:18). A nourishing food, it was frequently drunk cold or was cooked with other foods, as well as serving in other forms for medicinal purposes and ointments. Due to its importance, milk and its by-products served as offerings to gods and kings. The Bible mentions butter and various cheeses as milk-derived products. Butter was made by churning milk in vessels made especially for this purpose. Examples of these churns (Heb. mahbezah) have been found at Beersheba and elsewhere. The butterfat was separated as a result of the churning, and the excess liquid was evaporated in order to produce butter. In this concentrated form, it was used principally for cooking and frying. Cheese was made from soured milk. Milk was poured into special moulds in which it soured into hard lumps. These cheese lumps were dried in the sun or evaporated by cooking, producing curds (Job 10:10). A softer cheese was made in cloth bags filled with soured milk. The thin liquid filtered through the cloth while the soft cheese remained in the bag. The Hittites used cheese as an offering in their cult.

**WINE.** Most wine was produced from grapes. The vintage was brought to a winepress which was usually rock-cut. The grapes were spread on the broad upper surface of the press and tread upon by foot, in order to squeeze the liquid from them. This liquid (Heb. tirosh, "new wine") flowed down through a drainage channel into a vat in which the precipitates settled. From there it flowed to a second vat where it was collected. The drainage system was constructed so that the liquid flowed into the collecting vat only when the precipitation vat was filled. Thus, the heavier sediments such as waste matter, seeds, and skins had time to settle at the bottom of the vat, while the juice flowed into the collecting vat. The new wine was then transferred to vessels which were sealed and placed in a cool place to stand until the juice fermented by the action of the yeast in the fruit, becoming wine. There were several types of wine, some of which are mentioned in the Bible: a sparkling or foaming wine (Ps. 75:9); the wine of Helbon (Ezek. 27:18); spiced wine (Song 8:2); the wine of Lebanon (Hos. 14:8). The type of wine was determined by the grapes from which it was pressed, the time allowed for fermentation, and the age of the wine. Spices were added to improve the aroma and taste. The color was improved by steeping crushed grape skins in it. Sometimes wine was given an aroma by rubbing the winepress with wood resin. Wine was also made from raisins, dates, figs, and pomegranates.

Wine was considered the choicest of drinks. It was used in libations before gods, as payment of taxes to kings, and was highly regarded as an item of trade. It was measured by liquid measure: the bat (11 Chron. 2:9) and the hin (Ex. 29:40; Samaria ostraca). Wine was hoarded in vessels of uniform size in the treasuries of the royal and the wealthy. Erez Israel was known for its fine wines and advanced methods of production. Some indication of this may be gained from the widespread occurrence of presses in archaeological excavations throughout the country. A good example of a rock-cut winepress from the biblical period found at Gibeon has a broad surface for treading the grapes and several collecting vats. Wine was an intoxicant with a stimulating effect upon the human disposition. One who had taken Nazirite vows was therefore not permitted to drink it or to make any use of vine-derived products. The Bible mentions houses which were visited for the purpose of drinking and becoming intoxicated (Song 2:4). Another vine product was vinegar, which was produced by extra fermentation of new wine. It was used for seasoning foods, pickling vegetables, and medicinal purposes.

**OIL.** Oil was produced mainly from olives in olive presses designed for this purpose. There were three stages in its production. First, the hard olives were crushed into a soft paste. This was then squeezed, the crude oil flowing out as a result of the pressure. Finally, the crude oil was stored in vessels or vats for some time, in which the sediments and water from the olives settled and the pure oil rose to the surface. The oil was then collected in vessels for storage or use. Archaeological excavations have revealed numerous olive presses dating to the Hellenistic period. The earliest press excavated in the country was found at Tirat Yehudah near Lydda. This press has been reconstructed and transferred to the garden of the Israel Museum.

Oil was used as a condiment for various dishes, to fry foods, especially meats, and as a component in certain dishes. Specially purified oils mixed with spices were used as ointments or for medicinal purposes. Sesame oil, produced in a similar way, was particularly fine. Like wine, oil was used as an offering to the gods and for payment of taxes to kings. Oil production was advanced in Erez Israel, as is attested by much documentary evidence, and the discovery of many olive presses in various locations.

[Ze'ev Yeivin]

**Post-Biblical Period**

**CHARACTERISTICS OF JEWISH COOKERY.** In their dispersion throughout the world Jews have adopted many dishes of...
the countries in which they found themselves, adapting them to conform to the requirements of the dietary laws. Economic factors have also played their part in the culinary sphere. Sometimes glamorous dishes have been created by enhancing poverty foods, influenced by local flavors and products.

The laws regarding use of animal food and its preparation require that all meat and poultry, having been killed in accordance with the laws of *shehitah, must be entirely drained of *blood. Observance of the dietary laws precludes the mixing or cooking of meat with milk; the Jewish cook is therefore deburred from using dairy products – butter, milk, or cream, etc. – in pastries, desserts, or other dishes which are to be eaten in conjunction with meat. Parveh (neutral) foods made with neither milk nor meat may be eaten with both. These include eggs, fish, vegetables, fruit, and liquors. A parveh substitute for milk or cream has been introduced into the modern kitchen.

The two main categories of Jewish cooking may be characterized as Oriental (broadly referred to as Sephardi) and Occidental (broadly referred to as Ashkenazi). While Sephardi cookery makes much use of spices, olive oil, rice, pulses, and lamb, Ashkenazi favors beef and bland vegetables, whose flavors are brought out by fats, sugar, and onions. Both feature many similar fowl and pastry dishes, and dishes having similar historical and religious significance. Because of this latter significance there has developed in modern times a sort of “culinary Judaism,” by which many people identify with the Jewish religion mainly through this preference for traditional Jewish dishes. Indeed, assimilated Jewry in the orbit of the Hapsburg Empire from as early as the second half of the 19th century knew the conception of “Fressfroemmigkeit” for somebody whose devoutness finds its expression mainly or entirely in his eating the proper customary dishes on each holiday.

SEPHARDI AND ASHKENAZI TRADITION. Most of the foods of the Bible maintained their hold in the homes of the communities of the Mediterranean and Middle East where the same products are still grown. Grapes, dates, olives, melons, figs, mulberries, pomegranates, nuts, carobs, citrons, apricots, are still basically used in and around the Holy Land, not only as fresh fruits but as preserves such as dried apricot sheets, carob syrup (dibbs), and citron confiture. Pulses and cereals such as beans, lentils, cracked wheat (burghul), and spelt (rye) are used for Sephardi dishes as much as potatoes are in the West. The vegetables recorded in the Bible such as leeks, squash (also cucumbers of this family), and onions permeate Middle East cookery both for flavoring and as main dishes stuffed with meat. Cucumbers are preserved with dill, a herb that grows wild in Erez Israel. Mint is used for flavoring many dishes, particularly vegetable salads. Frequently used spices and herbs include garlic in meat, saffron and cumin in cakes, coriander in coffee, and cinnamon not only in desserts but in meat and poultry dishes. Lamb fat and olive oil, so popular in the Bible, continue as the main fats used in Oriental Jewish cooking. The meat of goats and sheep is still eaten in the Middle East rather than beef and poultry. Pastries – usually deep fried – are dipped in honey or syrup among Eastern communities. Some Oriental groups – such as the Yemenites – even bake the bread (called lakhıňakh or hubs) as in biblical days on the wall of a primitive earthen oven heated with embers, the fire being put out before baking, or bake it like a griddle cake on a rounded iron over embers. Bread is customarily put on the table for every meal, and also salt, symbolizing the covenant (see above).

In Eastern Europe among Ashkenazi communities milk foods and vegetables were the main fare during weekdays owing to impoverished circumstances and the shortage of kosher meat. Animals were generally slaughtered for food only for Sabbaths or festivals, or for celebrations. Figuring largely in the diet were loksheň (noodles) or other farinaceous food, potatoes, barley, peas, and beans. From time to time these were supplemented by fish. For celebrations of a circumcision or a wedding it was customary to provide fish and meat meals, and to bake festival bread and buns from cake dough, as well as sponge cake, sandwich cake, fluden (fluten), strudel, and egg cookies. In honor of the bride and bridegroom gilderner yoikh ("golden broth" of chicken soup) was served. During the summer in Eastern Europe, jams and confections would be prepared from the local fruits, which were added to tea, offered to guests, or served for the Sabbath or on festivals. The juice of raspberries, cherries, and other berries was also preserved. Preserves were made from plums and mushrooms, cucumbers were pickled, and sufficient sauerkraut was prepared for the whole year. In present-day Israel, Jewish cooking has been altered and adapted by each entry of new immigrants in the melting pot process of integration between East and West. This and the introduction of new products, such as avocado, formerly rarely known, has resulted in new trends in Jewish cooking.

Festival Cookery

SABBATH DISHES. For Sabbath and other holidays all sorts and shapes of hallah breads (called also burkhes or tatsheres) are baked. In most countries the Sabbath loaves are braided. The loaves are frequently sprinkled with (poppy or sesame) seeds to represent manna. Two loaves represent the double portion of manna gathered in the wilderness before the Sabbath. One of the two hallot on the tables of Hasidim is made of 12 rolls representing the 12 tribes, the loaf being referred to as yud-bet (= the number 12; Lev. 24:5–6). Fish is a standard food for Sabbath. The Talmud advises: “When may those who possess less than 50 shekels have the dish of vegetables and fish? Every Friday night of the Sabbath.” In Eastern Europe, where fish was costly, the Jewish housewife made gefilte (filled) fish a popular dish. For gefilte fish the flesh is ground up, and bread, egg, onion, sugar, and pepper are added: after the fish is refilled it is stewed in onions. Carp and/or other types of fish may be used. Bukharan Jews eat fried fish dipped in garlic sauce with garlic bread.
A typical Sabbath dish popular in every community because it can be prepared beforehand and cooked overnight is cholent (Ashkenazi) – Oriental hamin – generally made with beans, fat, meat, and potatoes. It is placed in a well-heated oven on Friday afternoon and allowed to cook slowly or simmer overnight until ready for the Sabbath meal. Ashkenazim may accompany the cholent with kugel (boiled pudding), stuffed helzel (neck skin), or kiske (stuffed derma), or a lokshen (noodle) pudding, sometimes made of leaf pastry, or a rice and raisin pudding. Bukharan Jews serve a rice cholent called balsh, layered with meat, liver, and vegetables, with rice and spices cooked in a bag in water: the liquid is not used. It was customary for gentiles to wait near the synagogue before prayers with kettles of boiling water; they would be given the balsh bag for cooking and return it after prayers. Bukharan Jews also bake mamossa (meat or fruit pie) for Sabbath, and eat cold meat (yachni) or kabab-pieces of meat and onion, dipped in salt and roasted on a spit before Sabbath. Kishke (Ashkenazi stuffed derma) is often eaten as a main dish for Sabbath, its Oriental equivalent being nakahoris. Ashkenazim use an onion and flour filling, and eastern communities fill the derma with ground meat, pine nuts, cinnamon, and sharp pepper. Persian Jews eat rice foods (pilaw) and a sort of meat pudding called gipa (stomach filled with rice). Often served as an appetizer on Sabbath is pitcha (also called choleodny, pilsa, fisnoga, droleys; Heb. regel kerushah) – jellied calf’s foot or jellied chicken with garlic and spices. In Yemen it is called kur’i. Other appetizers are chopped (gehakte) herring, chopped egg and onion, or chopped liver (Ashkenazi). A traditional accompaniment to the Sabbath meal in Ashkenazi homes is poultry soup – usually served with deep-fried pastas called mandeln (“almonds”) to symbolize the manna of the Bible. Side dishes include tsimes (Ashkenazi), a stew made usually of carrots, parsnips, or plums with potatoes. The Lithuanian rutabaga is turnip tsimes. Compotes of dried fruits, such as flohmen kompot made with the addition of blanched almonds and honey, are a traditional East European Sabbath dessert. Torten-sponge cakes, mandelbrot – almond cookies – and strudels-filled rolled pastries, are of Central European origin. Yemenite Jews serve a traditional Sabbath pastry, similar to kugel, cooked overnight, sometimes with cottage cheese, called ghininian, or an overnight baked yeast cake, kubaneh. Pestelas (sesame-seed-topped pastry filled with pine nuts, meat, onion, and delicately flavored) also called burekas, are often served in Sephardi homes after the Sabbath service. So as to be able to pronounce the blessings: bore peri ha-ez; ha-gefen; ha-adamah; mezonot, before the Sabbath repast and after, Yemenite Jews eat ga’le-roast peanuts, raisins, almonds, fruit, and candy. For melaveh makah on Saturday night Hasidim eat a specially cooked barley soup with meat. Wine is drunk at the Sabbath meals, and brandy. Eastern Jews drink arak.

PASSOVER. Passover foods vary in Sephardi and Ashkenazi communities. Ashkenazim exclude rice, while it is served by Sephardim. Most Ashkenazim avoid the use of pepper because it is sometimes mixed with flour and crumbs by traders. Hasidim do not eat soaked matzah on Passover except on the last day (in the Diaspora).

The several varieties of matzah include matzah shemurah, egg matzah, and sugar matzah. The exclusion of leaven from the home has resulted in a rich menu of matzah meal and potato foods for Passover, such as dumplings and pancakes. Popular are the dumplings known as kneyd (Ashkenazi) of various types made from either matzah meal or broken up matzah. Some are filled with meat or liver or fruits, used for soups or side dishes or desserts. Potato flour is largely used in cakes along with finely ground matzah meal and nuts. Popular Ashkenazi dishes are matzah brie (fried crumbled matzah with grated onion), matzah latkes (pancakes) and khremzlakh (also called crimsel or gres etles; matzah meal fritters). Wined matzah kugels (puddings) have been introduced into modern Jewish cooking. For thickening soups and sauces at Passover fine matzah meal or potato flour is used instead of flour: for frying fish or cutlets, a coating of matzah meal and egg, and for stuffings, potatoes instead of soaked bread. “Noodles” may be made by making pancakes with beaten eggs and matzah meal which, when cooked, are rolled up and cut into strips. They may be dropped into soup before serving. Matzah kleys – dumplings – are small balls made from suet mixed with chopped fried onions, chopped parsley, beaten egg, and seasonings, dropped into soup and cooked. In Oriental countries and in old Jerusalem sheep-tail fat was prepared for Passover. Oriental Passover dishes are fahth (Yemenite) – a soup stew made with matzah meal – and Turkish minas and mahmeras – layers of matzah with fillings of cheese, vegetables, or meats. In Sephardi homes haroset is served as a treat and not just as a taste. The khreynt – horseradish relish – originating as an Ashkenazi Passover dish – is popular all the year round. The radish eyngemakhts, still retained as a confiture among Ashkenazim, may have had its culinary beginnings in talmudic days when the radish was referred to as an elixir of life. A Passover beverage is mead, instead of beer, which includes leaven. Raisin wine is also used for the Four Cups at the Seder. A kasher liquor from potatoes was brewed in Eastern Europe.

SHAVUOT. Serving of dairy dishes on Shavuot is customary among Jews everywhere. In celebration of the giving of the Law from Sinai, Mount-Sinai-shaped sweets and cakes are served in many Eastern and Western communities. Ashkenazi Jews bake saffron bread, butter cookies with cheese, cheese twist or cheese hallah (in Germany called kaletsch, specially for those who have observed the sefirah-counting of the Omer). Popular Shavuot dishes are blintses (pancakes) filled with meat or cheese and sour cream, kreplokhi (dough filled with cheese, meat, groats or fruit, shaped into triangles or hearts and boiled), strudels (Germany), cheese cakes (Poland), cheese pies (United States), and knishes (yeast dough filled with meat and/or potatoes, cheese or fruit and baked (Lithuania). A dairy beet borsht with sour cream, or a cold chlodnik (cucumber soup) or shtshav (cold sorrel soup) is

encyclopaedia judaica, second edition, volume 7

119
also served on Shavuot. Some Sephardim bake a Seven Heavens cake to symbolize the “seven heavens” which God rent at the giving of the Torah. Sephardi Jews use ewe’s salted cheese and make savory dairy dishes like *shpongous* (a cheese-spinach bake). Cottage cheese, popular everywhere, is associated with legends such as the Israelites’ late return to the camp after receiving the Commandments from Mount Sinai when the milk had already soured.

**AV.** During the Nine Days between the First and Ninth of Av, no wine or meat is eaten (except on the Sabbath) as a sign of mourning for the destruction of the Temple. Both Ashkenazim and Sephardim eat farinaceous and other pastry food baked or boiled, and accompanied with cheese. The fast of the Ninth of Av is observed after a milk meal which includes a *bagel* – a crusty doughnut-shaped bun – or an egg dipped in ashes.

**ROSH HA-SHANAH.** On Rosh Ha-Shanah the *hallah* loaf is baked round or coin-shaped to signify blessings all the year round. All communities eat sweet fruits to evoke a sweet year, and honey for sweetness is added to many dishes. Until after Sukkot, bread is dipped in honey for the benediction instead of the usual salt in order to symbolize a sweet year. On the second night of New Year apples are eaten dipped in honey, also white grapes and watermelons. The *leykah* honey cake is traditional among Ashkenazim, since *lekah* means “portion” and the cake signifies the prayer “Give them a goodly portion.”

Sweetened fish dishes with raisins and honey *lebkukhen*, *leibkuchen*, are primarily eaten in Western homes (originating in Switzerland). A head of a fish served without a tail (or the head of a lamb in Oriental homes) symbolizes, according to the Shulhan Arukh, “being at the head and not the tail.” In many Sephardi homes it is served to the father of the family. All sorts of fruits and vegetables are selected for eating on Rosh Ha-Shanah because of their symbolic associations and endless possibilities of word play. Sephardim place on the table a *traskal* – a covered basket of fruit and vegetables – and as the father of the family takes out some fruit, those present repeat a suitable verse, as for the pomegranate, “May our merits multiply like pomegranate seeds.” Carrot *toses* symbolizes prosperity because the slices are coin-shaped and golden in color and is also linked with an involved play of words in German. Hasidim use beetroots or beet leaves (*selek*) in the blessings *she-yistalleku oyevenu* “to get rid of our enemies”; *bkeila*, a dish of this green leaf and beans, is popular among Tunisian Jewry. The Yemenite *hilbeh* (*fenugreek* sauce) is called *rubiya* in Hebrew and therefore eaten to signify *sheh-yirbu* (“to multiply”).

**EVE OF AND END OF DAY OF ATONEMENT.** On the eve of the Day of Atonement Ashkenazim eat ladder- or bird-trimmed bread so that prayers should rise quicker to Heaven. In the morning many communities would distribute the loaves free at the entrance to the graveyard where people visited the graves of their forefathers, and honey cakes with a glass of wine. Before the fast, atonement (*kapparah*) meat is generally eaten. Ashkenazi homes usually serve *kreplakh* in the soup of the boiled *kapparah chicken* (though in many families the chicken is given to the poor). The white-feathered bird, symbolic of purity, assumes the role of the scapegoat slaughtered as a sin offering.

The fast is broken in Central European communities by eating *barkes*, or *shneken* – buns with cinnamon and nuts and/ or raisins. To restock the body with salt, herring dishes such as chopped herring, pickled herring, or *ziezoyre* (sweet and sour) pickled jellied fish are taken. Many Sephardi communities break the fast with spiced coffee-cinnamon (Dutch), cardamon (Syrian and Egyptian), and ginger with these spices (Yemen). Some Middle Eastern communities – Turkish, Greek, Iraqi – break the fast with a snow-white almond or other seed drink called *mizzo* or *soubiya* or *soumana*, the white color symbolizing purity. Iraqi Jews eat *chadjoobadah* cardamon cakes. Italians serve *dolce Rebecca* (spiced mocha cake), and many Oriental groups eat sesame (*sumsum*) cakelets. *Bamya* (okra) in tomato sauce is an Iraqi end of Day of Atonement dish.

**SUkkOT.** Dishes traditional to Sukkot are adopted from the lands of the Diaspora, mostly because they proved convenient for serving in the *sukkah*. These include cabbage-meat *borsht* (Russian origin), Hungarian *goulash* – meat stew with paprika and onions: *kibbeh* – a Middle Eastern *burghul*-coated deep-fried meat dish served with various fillings; *kasher* Greek *moussaka* – eggplant meat casserole; *holeptes* also called *praakes*, *galuptzes* – rice and ground meat rolled in cabbage leaves – and *sarmis* – vine leaves filled with rice, pine nuts, and chopped meat filling. Still popular is the *fluden* (also known as *fladen*) – a layered dessert of dough and fruits symbolic of the harvested crops referred to in Judeo-German cooking records of the 12th century. For Hoshana Rabba, the seventh day of Sukkot, the *hallah* loaf is sometimes marked with a hand, symbolic of reaching for blessings, or key-shaped, that the door of heaven may be opened to admit prayers.

**SIMHAT TORAH AND SABBATH BERESHIT.** For Simhat Torah a round carrot sandwich (or slices) with honey symbolizes gold coins and the worth of the Torah. Sabbath Bereshit was formerly known in Vilna as the “honey Sabbath.” The wives of religious functionaries baked honey cake with the honey their husbands received as a gift from the synagogue wardens for the festivals, and sold them. The proceeds enabled them to stock up with food and timber for the winter months.

**HANUKKAH.** For Hanukkah, Jews of all communities eat pastry and potato preparations fried in oil as a reminder of the miracle of the cruse of oil at the rededication of the Temple. Ashkenazim called them *latkes*, or *fasputshes*, or *ponskes*. They are called *zalaviyye* (Yemen), *dashpire* (Bukhara), *ata-if* (Iraq), *spanzes* (Tripoli), and by Sephardim in general *birmenailes*. Hence the Israel *sufganiiyot* – doughnuts – of Hanukkah and the *levivot* (*latkes* – potato cakes) have a long tradition. A popular East European salad of this festival is
the retekh salat of radish, turnip, olives, and onions fried in goose fat with gribenes or grivin (cracklings), all the ingredients being popular in the Maccabean era. As fat for Hanukkah is rendered from the goose used for Passover, this poultry (and related game like the Dutch ganzebord) is a popular Hanukkah dish, and grivin are often served with the latkes. In Czechoslovakia a shortbread cookie is made of goose cracklings (grameln) for this holiday. Yemen Jews eat lahis gizar on Hanukkah, a sort of carrot stew, carrots being the vegetable in season.

**TU BI-SHEVAT.** As Sabbath Be-Shalah falls only a few days before Tu bi-Shevat (the Fifteenth of Shevat) many foods for this day are linked to the New Year of Trees. Dutch Jews make Be-Shallah calling it kugel met waatz to symbolize the manna and sauce for the Red Sea where the Egyptians were drowned pursuing the Israelites. Swiss French and some groups from Germany serve a wheat garnish in broth for this reason. Italians make a dish called ruota di faraone (Pharaoh's wheel). Pomerantzen - candied citrus fruits - are popular on this day.

Fresh and dried fruits are served to symbolize the harvest of the trees planted on Tu bi-Shevat in the Holy Land. The bakser - carob fruit (St. John's bread) - has found its way around the world for this festival. In Switzerland and other places 15 fruits to coincide with Tu (= 15) are eaten. Rich dried fruit strudels are often served on Tu bi-Shevat as harvest symbols.

In many Sephardi communities a home service is held at the table where blessings are pronounced over wheat, barley, grapes, figs, pomegranates, olives, and honey. Sephardim would distribute maot peret (“fruit money”). At “white-red wine” parties each child is presented with a bolsa de frutas (“bag of fruit”). Hasidic groups arrange large fruit parties for which in the Diaspora they try to obtain fruit from Erez Israel.

**PURIM.** The Purim festival has a long culinary history. Recorded in the humorous tractate Massechet Purim written by Kalonymus b. Kalonymus is the Purim menu listing 27 different meat dishes. All communities make pastries representing Haman's hats, Haman's pockets, or Haman's ears, They are known by different names but similarly filled with poppyseed (Ger. mohn – a sound resembling “Haman”). Some Ashkenazi groups also fill them with povidl – plum jam – to commemorate the rescue of Jews in Bohemia about 250 years ago when a plum merchant was saved from persecution. In Italy ciambella di Purim is a popular pastry, as are Hamantashen in Eastern Europe and mohn plaatzen – poppyseed cookies – in Western Europe. Hamani's ears (Heb. oznei haman) – a fried pastry sprinkled with sugar are called Hamansoren (Holland), Hamman-Muetzen (Germany), Schunzuchen (Switzerland and French-Lorraine), Heizenblauen (Austria), dipsles (Greece), shamlaya (Turkey), and orecchie de Aman (Italy). According to folk tradition the custom originates from the punishment of criminals whose ears were cut off before hanging.

Hamantashen are symbolic of Haman's pockets stuffed with bribe money. The Purim hallah loaf (given the Russian name keyltish) is giant-sized and braided, representing the long ropes used to hang Haman. Seaphardim fill similar pastries with meat, vegetables, or fruit. For mishloah-manot (“sending of presents”) on Purim, women in Eastern communities make sugar-starch fingers in various colors, and non-Jews in Eastern lands call Purim ’id al-sukar, the sugar festival. It was customary in Persia to distribute, after the reading of the Book of Esther, halava kashka, a pleasantly spiced dessert. All Sephardi and Eastern communities bake sweet cakes filled with almonds or other nuts, all sorts of marzipan, special purais cake containing a whole egg, and various sorts of pancakes called in Iraq zingula. In Salonika and Istanbul, women baked kulimans, barikas, or sambusach-khavsh – dough filled with meat.

**FORCALQUIERS,** village in the Basses-Alpes department, S.E. France, approximately 50 mi. (about 80 km.) east of Avignon. The medieval Jewish community, which existed at least from 1275, occupied a separate quarter and owned a synagogue. The ledger of a single merchant of Forcalquiers records 20 Jews as his customers between 1330 and 1332. In 1351, possibly still in the aftermath of the *Black Death*, anti-Jewish disorders broke out in Forcalquiers in which the population of the surrounding villages also took part. It is reported that in 1424 several inhabitants of Forcalquiers and Manosque formed a plot to kill all the Jews in the town. In 1472, a citizen of Forcalquiers was appointed guardian (conservateur) of all the Jews of Provence. The community in Forcalquiers was among the first to feel the effects of the definitive decrees of expulsion of 1486. Toward the end of the 18th century, some Jewish merchants, originating from the *Comtat Venaissin*, attempted to settle in Forcalquiers but were expelled in 1775. In 1940 there were 72 Jews in the labor camp which had been set up in the district. About 14 Jewish families, mostly assisted by refugees' organization, were registered in Forcalquiers in 1942.
FORCED LABOR

FORCED (Slave) LABOR. The term forced labor (Zwangsarbeiter) is not well defined. Forced labor is commonly understood as an employment relationship of a member of a persecuted political or a specific ideological (weltanschauliche) grouping, or an ethnic group, or a person, a relationship arisen by force, and indissoluble, that did not consider the abilities, age, or sex of the forced laborer, that meant defenselessness concerning legal rights and a high rate of mortality due to bad living and working conditions as well as National Socialist persecution. In In the German Reich after January 30, 1933, at first prisoners of the early concentration camps were recruited to forced labor, for instance, politically persecuted Social Democrats or Communists. It was then already that murder was involved. From the end of 1938 on, German Jews were next and forced labor became an element of their persecution by the NS state. It was not until the outbreak of World War II, and the occupation of Poland, that forced laborers were recruited in vast numbers, when hundreds of thousands of Polish people were deported to the Reich. Also in the occupied Polish territory itself many forced laborers were deployed. From October 1939, the Jewish residents there became liable to work. In the Reich there were considerable differences concerning the treatment of forced laborers. Subject to the most brutal conditions were the prisoners of concentration camps, including their subcamps (Aussenlager). The actual living conditions of the other forced laborers depended on the following factors:

1) Their ranking according to National Socialist race doctrine: Norwegians and Dutch were regarded as “Aryan” and “Germanic” and put on top of the hierarchy. Therefore they had to cope with less discrimination. People from the Soviet Union (but not people from the still independent Baltic States until 1940) were regarded as members of an inferior race and therefore were treated most brutally.

2) Country of origin: While people from the disintegrated states like Poland and Yugoslavia (insofar as Serbs and Slovenians were concerned) had no protection from their governments, French, Croatians, and Norwegians could at least hope for intervention by their governments, even though they were dependent on the Reich. People from allied countries, such as Bulgaria and Hungary, had conditions most similar to German workers. However, even these could not return home freely, at the earliest from 1943 onwards, and were exposed to discrimination in their German domiciles and their workplaces.

3) The work location: There were great differences depending on whether a forced laborer was deployed in rural areas or in the cities. In the country, surveillance and persecution by the NS authorities were less comprehensive and basic food was easier to come by. In the cities not only resources essential for survival like foodstuffs and clothing were hard to
get, also the oppression machinery was better developed and
the threat of air raids was much more serious.

4) The firm: The larger the company and the more im-
personal the contact between Germans and foreigners be-
came, the more probable were brutal living and labor con-
ditions. In big companies, where Germans and foreigners
hardly interacted at all, bad living and labor conditions were
more than likely.

There were roughly three phases of forced labor:
The first phase was the prewar period. Between 1933 and
1939 forced labor was of marginal importance. It was mainly
used as a way to oppress political dissidents, and, from 1938
onwards, for the persecution of German Jews.

Phase Two began with the German aggression against
Poland and ended with the turn of the year 1942. At that time,
forced labor became a mass phenomenon. With the occupa-
tion of a wider territory many people came under the sway
of the SS leaders. Therefore, even in Libya and Tunisia, Jews
had to work for the German forces (Wehrmacht).
At the same
time, against the European Jews, forced labor was used as an
element of mass murder. A similar attitude can also be ob-
erved in countries allied to the German Reich.

With the territorial changes, the Hungarians obtained
control over parts of Slovakia, Romania, and Yugoslavia,
including non-Hungarian parts of the population. In addition,
forced labor tasks for Hungarian Jews were gradually in-
creased and intensified. After the occupation of Yugoslavian
and Greek territories, Bulgaria acted on a similar basis. Here,
besides the Jews and Turks, forced labor was directed mainly
against Greeks, not the Macedonian population, as the parts
of Macedonia occupied in April 1941 (Vardar-Macedonia) were
seen as an integral part of the state by the Bulgarian leaders,
the core, of medieval Bulgaria.

The third and last phase began in 1943 and ended with
the surrender of the Reich in May 1945. With the change of
the war situation also the character of forced labor changed
distinctly. On the one hand, discrimination against East Euro-
palns with regard to labor laws and social rights were de jure
gradually toned down. On the other hand, the threat to exis-
tence, from the security forces of the SS state, became more
and more grave. In particular the change in jurisdiction con-
cerning offenses by forced laborers from the judiciary to the
Reichssicherheitshauptamt (RSHA) resulted in considerably
more brutal persecution for even the slightest infraction. The
RSHA sent many Poles and Soviet citizens (Ostarbeiter) to con-
centration camps, where most of them were murdered. Dur-
ing the last months of the war, arbitrary measures increased
and grew to real mass murder; mainly East Europeans were
the victims.

Jews and Forced Labor
The situation of Jewish forced laborers under German rule
was different from all other cases. For them, in the occupied
territories, there was special jurisdiction. At the latest from
summer 1941 onwards, the National Socialist leaders had only
one aim: the murder of all Jews. Accordingly, the phases of
forced labor that involved Jews differ from the general kind
of forced labor. For example, judicial reforms, especially for
the East Europeans, did not concern Jews. Furthermore, cer-
tain factors did not affect their living conditions: within the
Reich Jews were not designated to work in agriculture. Some
of the allied countries, like Bulgaria and Croatia, were not
interested in saving their Jewish citizens who were living in
the German sphere of influence, and therefore they exposed
them to death.

The German and Austrian Jews were the first to be sys-
tematically used for forced labor. From December 1938, all
unemployed Jews and those on welfare were subjected to
“locked-up labor” (geschlossener Arbeitseinsatz), organized
by the employment offices. Their employees were instructed
to put them in separate platoons or camps. All Jews, regard-
less of their educational background, were employed and re-
numerated as unskilled workers. In July 1939, already 20,000
Jews were in labor service working in road construction and
underground engineering, in the construction of canals, and
in dam projects, as well as on waste deposit sites.

After the war had begun, also more and more Jewish
women were seized for forced labor. From autumn 1940 on-
wards, all Jewish men and women fit for work were con-
scripted and forced to work at various jobs, mostly in indus-
try. In summer 1941, over 51,000 people were working as
forced laborers, which represented about 30 per cent of the
approximately 167,000 Jews still living in the territory of the
Reich. These had to wear a special armband for identification.
By January 1943, because of the deportation of many to the
exterminations camps, their number was reduced to around
20,000. After the end of the so-called Fabrikaktion, in Feb-
uary 1943, another 12,000 were deported, and the remaining
Jews (mostly “protected” by their intermarriage status) were
forced to work until the end of the war. In autumn 1944, also
so-called half-Jews (Mischlinge) had to work in “locked-up
labor” for the Organisation Todt (OT), and were deployed in
the Reich or in France.

In occupied Poland, the so-called Generalgouvernement,
from October 1939 on, male Jews were on labor duty between
the age 14 and 60, and later also women. This labor duty, how-
ever, did not yet lead to universal confinement of Jews in labor
camps. There were numerous free de facto working relations-
ships. Unlike the situation in the Reich, ghettos for the Jewish
population were installed in many Polish cities. Some of the
Jews detained there had to work outside, others were deployed in
ghetto workshops. They worked for municipal institutions,
for the ghetto administration, and for private firms based in
and around the ghettos.

Besides the ghettos, a system of FLCS was developed. In
summer 1942 up to 1.5 million Jews were in detention, and
about half of them were in forced labor. The FLCS were ex-
panded especially from July 1942 on, after Heinrich *Him-
mler ordered the annihilation of all Polish Jews by the end of
the year. Only those who performed forced labor in the arms
industry were to be kept alive. These FLCs were run by the SS, and therefore the living and internment conditions were comparable to those in concentration camps. But even Jews from the FLCs and from the ghettos performing essential war labor were deported to the extermination camps and murdered, or brought to concentration camps and forced to work there. The conditions were so bad that many Jews died of exhaustion after only a few weeks or months, if not selected out as "unfit for work" (arbeitsunfähig) and murdered.

In the occupied territories of the Soviet Union, after the mass shootings in 1941, similar conditions existed. The Jews there were put into labor platoons and facilities, forced to work, e.g., for the Wehrmacht, and they, as well, were detained in ghettos and FLCs. Also the majority of these Jews, even if engaged in essential war work, were murdered, and only a few were deported to concentration camps to further exploit their productive capacity.

The conditions of the Jews doing forced labor in countries allied to the Reich varied greatly. The Hungarian Jewish labor battalions, especially the ones deployed on the eastern front or at mines in Bor, Serbia, as well as the Romanian labor battalions doing road and railway construction work and the Bulgarian labor battalions that were used for the expansion of the infrastructure, some of them also working for the OT, had to suffer from horrendous living and internment conditions similar to those in the concentrations camps of the ss. However, the circumstances of Italian Jews, in forced labor from 1942 on, were better. In Italy, probably none of the Jews died there, whereas in the Hungarian labor battalions tens of thousands were killed.

In spring 1944 the Nazis again changed their policy toward the Jewish forced laborers. Even though, until then, there was no provision made for the deployment of Jewish KZ prisoners in the Reich outside the concentration camp complex of Auschwitz, now, because of lack of workers, up to 100,000 Hungarian Jews were selected in Auschwitz for labor service in the territory of the Reich. Those Jews had to labor almost exclusively in the arms industry and for the construction of production facilities underground. Due to the disastrous conditions there and the very hard labor, the death rate was enormous.

After the end of World War II forced labor was not taken into account by the compensation laws decreed by the Federal Republic of Germany between 1953 and 1965. Only the imprisonment in ghettos, FLCs, and concentration camps was compensated, but only for a select circle of survivors. Most of the surviving forced laborers originated from Eastern Europe and returned to their home countries after the war. They did not receive any compensation because West Germany refused to made payments into Eastern Bloc countries.

The German Democratic Republic refused, on principle, to pay former East European forced laborers any benefits for the crimes of the National Socialists. The New York-based "Conference on Jewish Material Claims Against the German Nation, between the 1950s and the 1960s, succeeded in getting payments for former forced laborers in a handful of West German firms, such as I.G. Farbenindustrie, AEG/Telefunken, and Siemens. However, the majority of the forced laborers could not receive any compensation payments until the creation of the "Remembrance, Responsibility and Future" Foundation in 2000. From the year 2001 on approximately 1.6 million people received up to DM 15,000 from the Foundation.

FORD, HARRISON (1942– ), U.S. actor. Born in Chicago, Illinois, the son of a Russian Jewish mother and an Irish father, Ford’s first career was as a professional carpenter. Dabbling as a film actor, he was noticed in a small role in George Lucas’ American Graffiti (1973). Four years later, Lucas picked Ford for the lead role of Han Solo in his mega-blockbuster Star Wars, and Ford became an “instant” star. Steven Spielberg subsequently chose Ford for the leading role in his Indiana Jones cinematic trilogy.

In 1986 he was nominated for an Academy Award for Best Actor in the dramatic film Witness. In 1996 the U.S. Academy of Science Fiction, Fantasy, and Horror Films awarded him a Lifetime Achievement Award. In 1998, 1999, and 2000 he won the People’s Choice Award for Favorite Movie Actor. And in 2002, Ford was presented with the Golden Globe’s Cecil B. DeMille Award, which honors a performer’s outstanding contribution to the entertainment field. In 1997 he was chosen by People Magazine as one of the 50 Most Beautiful People in the World, and in 1998 the magazine dubbed him “The Sexiest Man Alive.” Ford is credited with having the highest worldwide box-office grosses of any actor in history.

[Jonathan Licht / Ruth Beloff (2nd ed.)]

FOREIRO (Forerius, Forerio), FRANCISCO (1510–1581), Portuguese Dominican and Hebrew scholar. Foreiro evinced a marked linguistic ability at an early age and was sent to Paris to study Greek and Hebrew. He represented King Sebastian of Portugal at the Council of Trent, where he was jointly responsible for preparing the Index librorum prohibitiorum (Rome, 1564). His Latin translation of Isaiah from the Hebrew, Isaiae prophetae vetus et nova ex hebraico versio, cum commentario, was published in Venice in 1563, and he prepared a Hebrew lexicon as well as commentaries to the Prophets, Job, Psalms, and the biblical books ascribed to Solomon; all these remained unprinted.

FOREMAN, CARL (1914–1984), U.S. writer, producer, and director. Born in Chicago, Foreman saw army service during World War II, after which he began movie scriptwriting and prepared the scenarios for films such as So This Is New York (1948), Champion (1949), Home of the Brave (1949), The Clay Pigeon (1949), Young Man with a Horn (1950), The Men (1950), Cyrano de Bergerac (1950), High Noon (1952), The Sleeping Tiger (1954), A Hatful of Rain (1957), and Bridge on the River Kwai (1957). Called before a congressional committee during the McCarthy era, he declined to testify on whether he was a member of the Communist Party on the grounds of the Fifth Amendment; in 1956 he himself chose to testify before Congress, and was given what he described as “a clean bill of political health.”

From the early 1950s he lived and worked in London, and headed his own production company there. He wrote and produced Guns of Navarone (1961); wrote, produced, and directed VICTORS (1963); produced Born Free (1965), MacKenna’s Gold (1969), The Virgin Soldiers (1969), Living Free (1972); wrote and produced Young Winston (1972). He served as president of the Writer’s Guild in England (1968), board member of the British Film Institute, and honorary president of the Screen Writers Guild of Israel (where he conducted a course in screenwriting).

Foreman returned to the U.S. in 1975, where he wrote such films as Force 10 from Navarone (1978); EB (1980); and When Time Rain Out (1980). In 1958 he was a winner of the Academy Award for Best Screenplay Based on Material from Another Medium for Bridge on the River Kwai. However, as he had been blacklisted at the time and received no screen credit, the Oscar was awarded to him posthumously in 1984. In his lifetime, Foreman earned five other screenwriting Oscar nominations and a Golden Globe nomination. As a producer, he was nominated six times for a Laurel Award.

[Michael Crichton (2nd ed.)]

FOREMAN, MILTON J. (1862–1935), U.S. public official and army officer. Foreman was born in Chicago and was admitted to the bar in 1899. For the next 12 years he served on the Chicago City Council and held a number of other municipal positions. His interests, however, centered increasingly on his career in the Illinois National Guard, in which he first enlisted in 1895. Foreman served as a captain in the Spanish-American War, saw action along the Mexican border in 1916, and was a colonel with the field artillery in Europe during World War I. After the war he continued to rise in rank, retiring as lieutenant general in 1931. A prominent figure in the founding of the American Legion in 1919, Foreman was chairman of its first executive committee and later served as its national commander.

FORGERIES. Since the essential characteristic of a forgery is its intent to deceive, the pseudo-epigraphical literature, which consists of religious admonitions and prophecies ascribed to the biblical patriarchs in order to give them greater spiritual force (and similar writings found among the Dead Sea Scrolls of the same period), are not in this category. There has been
much controversy over the midrashic christological excerpts included by Raymond "Martini (13th century) in his *Pugio Fidei*. S. *Lieberman maintains that they derive from originals now lost; Y. *Baer, that they are fabrications. In the course of the scholarly discussions that followed the archaeological discoveries of the 19th and 20th centuries, many of them, e.g., the *Moabite Stone and the Dead Sea Scrolls, were denounced by some skeptics as forgeries. In 1883 M.W. Shapira attempted to sell to the British Museum for a fabulous sum certain Hebrew manuscript fragments of the Bible, purportedly from an ancient scroll of the book of Deuteronomy of the 9th or 10th century B.C.E. He was denounced at the time as a forger, but since the discovery of the Dead Sea Scrolls, some scholars have maintained that they may not have been forgeries. However, much material that passed through Shapira’s hands as a dealer was certainly fabricated or altered. The Karaita scholar Abraham *Firkovich (1785–1874), in his attempts to prove the antiquity of the Karaites and, in particular, their settlement in the Crimea, published a number of obviously forged tombstone inscriptions and manuscript colophons. In addition, in view of his sectarian enthusiasm, a certain suspicion may be entertained about the details in any of the codices that passed through his hands (as also in the case of Shapira). At the first rumblings of the Reform movement in Judaism, Saul *Berlin (1740–1794), the brilliant son of Hirschel *Levin and rabbi of Berlin, produced a collection, Besamin Rosh (1793), purporting to be responsa by the medieval scholar R. Asher of Toledo, which ostensibly favored the new tendencies; when this was discovered, Berlin was driven into retirement (see R. Margoliot, in: Aresheth, 1 (1959), 424–5, no. 1737). In 1907–1909 S.J. *Friedlander published a substantial part of the fifth order of the Jerusalem Talmud from a Spanish manuscript dated 1212, which he claimed to have discovered in Turkey. It was, however, no more than a mosaic of passages from other parts of the Talmud, and after some initial excitement the work was dismissed as a fabrication.

Eliakim *Carmoly (1802–1875), rabbi of Brussels, published in profusion documents which he claimed to have in his rich library, but since some of them were obvious fabrications and some “improved,” he undermined all confidence in what might have been genuine. B.H. *Auerbach’s (1808–1872) edition of the Sefer ha-Eshkol (1868–69) by Abraham of Narbone was also subjected to attack as a forgery. L. *Goldschmidt (1871–1850) admitted that in his youth he forged the book Baraita de-Ma‘aseh Bereshit (cf. E.S. Rimalt, in: Aresheth, 1 (1959), 484–5). On the other hand, Goldschmidt leveled accusations of forgery against collectors of Hebrew printed books who made them appear as if they were incunabula (cf. L. Goldschmidt, Hebrew Incunables (1948)). H. Lieberman (b. 1892), the bibliographer, also deals with forged title pages (xx, 31 (1955/56) 397–8). G. *Shoel and his students discovered a number of forgeries in kabbalistic literature. In recent years with the increase in collectors of Jewish ritual art, very large numbers of forgeries in this sphere have been placed on the market, many of them very ingenious. Among the favorite methods are the appending of purportedly old inscriptions to modern objects, or the skillful adaptation of secular bric-à-brac to ostensibly Jewish purposes. Forged shekels (some of them bearing modern Hebrew lettering!) have been in circulation since the Renaissance period, having a special sentimental appeal to both Jews and Christians.

**BIBLIOGRAPHY:** C. Roth, in: Commentary, 43 (1967), 84–86. [Cecil Roth]

**FORGERY.** Forgeries of documents are not, either in biblical or in talmudic law, a criminal offense: it may be an instrument for the perpetration of “fraud and come within the general prohibition of fraudulent acts (Lev. 19:35; Deut. 25:13–16) or fraudulent words (Lev. 25:14). Nevertheless, it is a recognized evil which the law is called upon to prevent, and there are detailed provisions in the Talmud for the making of legally binding documents in such a manner that they cannot be forged: thus, documents must be written on and with material that cannot be effaced (Git. 19a et al.) and is enduring (Git. 22b, 23a); precautions must be taken that no space be left between the text of the document and the signatures, so that nothing could be inserted after signing (BB 162–7). The rule evolved that a document (*Sheftar) was valid only if executed in the manner of unforgeable bills (*Ke-Tikkun Shitrei Yisrael she-Einan Yekholin le-Hizdayyef) to which nothing could be added and from which nothing could be erased (Maim. Yad, Malveh ve-Loveh 27:1).

Where a document appeared on the face of it to have been tampered with or added to, so that a suspicion of forgery arose in the eyes of the court, recourse was had to compulsory measures in order to induce the plaintiff to confess that he was suing on a false document (BB 167a). It is not clear what these compulsory measures were: literally translated, the reports say that the plaintiff was “bound, and then admitted the document to be false” (the word used for “binding” is the same as that used for the binding of a person to be flogged (cf. Mak. 3:12), as distinguished from and preliminary to the *flogging itself (Mak. 3:13); or for the functions of non-judicial officers attached to the courts, who “bind and flog people on orders of the court”; Rashi to Deut. 1:15). The binding (*Kofin) was later interpreted to mean compelling (*Kofin; Meir ha-Levi Abulafia, quoted in Beit Yosef, HM 42 n. 3–5), and the compulsion was authorized to be carried out by floggings (Tur and Sh. Ar., HM 42:3). It is, however, to be noted that these floggings – or any other compulsory measures – were not sanctions or punishments imposed for forging the documents, but only means to extort confessions of forgery: when a forgery was admitted or proved, the only sanction was that the claim based upon any such forged document was dismissed. It was only in much later times that forgers were punished by the courts, or more often – presumably because of the private law character of forgery in Jewish law – delivered for trial and punishment to the gentile courts (Assaf in bibliography, nos. 16, 112, 144). Even the notion that forgers of documents could be disqualified on that account from testifying or tak-
forgiveness, is granted solely by God, e.g., “the priest shall make atonement for him for his sin and he shall be forgiven,” i.e., by God (Lev. 4:26, and passim). Another limitation placed upon sacrificial means of obtaining forgiveness is that it can only apply to inadvertent errors (Num. 15:22–29). Blatant contempt of God cannot be expiated by sacrifice (Num. 15:30–31; 1 Sam. 3:14) or any other means (Ex. 23:21; Josh. 24:19). Moreover, contrition and compassion are indispensable coefficients of all rituals of forgiveness, whether they be expiatory sacrifices (Lev. 5:5–6; 16:22; Num. 5:6–7) or litanies for fasting (Joel 2:12–14; 1 Sam. 7:5–6).

Indeed, man’s involvement both in conscience and deed is a sine qua non for securing divine forgiveness. It is not enough to hope and pray for pardon: man must humble himself, acknowledge his wrong, and resolve to depart from sin (e.g., David, 11 Sam. 12:13ff.; Ahab, 1 Kings 21:27–29). The psalms provide ample evidence that penitence and confession are integral components of all prayers for forgiveness (Ps. 32:5; 38:19; 41:5; Lam. 3:40ff.). The many synonyms for contrition testify to its primacy in the human effort to restore the desired relationship with God, e.g., seek the Lord (11 Sam. 12:16; 21:1), search for Him (Amos 5:4), humble oneself before Him (Lev. 26:41), direct the heart to Him (1 Sam. 7:3), and lay to heart (11 Kings 22:19). The rituals of penitence, such as weeping, fasting, rending clothes, and donning sackcloth and ashes (11 Sam. 12:16; Joel 1:13; Ezra 9:3ff.; 101:6), are unqualifi edly condemned by the prophets if they do not correspond with, and give expression to the involvement of the heart (Isa. 1:10ff.; 29:13; Hos. 7:14; Joel 2:13).

At the same time, inner contrition must be followed by outward acts; remorse must be translated into deeds. Two substages are involved in this process: first, the negative one of ceasing to do evil (Isa. 33:15; Ps. 115:24ff.) and then, the positive step of doing good (Isa. 11:7; 58:5ff.; Jer. 7:3; 26:13; Amos 5:14–15; Ps. 34:15–16; 37:27). Again, the richness of the biblical language used to describe man’s active role in the process testifies to its centrality, e.g., incline the heart to the Lord (Josh. 24:23), make oneself a new heart (Ezek. 18:31), circumcise the heart (Jer. 4:4), wash the heart (Jer. 4:14), and break one’s fallow ground (Hos. 10). However, all these expressions are subsumed and summarized by one verb which dominates the liturgical terminology of the Bible, תשעֲפָה (shuv, shv; ”to turn; to return”) which develops ultimately into the rabbinic doctrine of teshuvah (“repentance”). This doctrine implies that man has been endowed by God with the power of “turning.” He can turn from evil to the good, and the very act of turning will activate God’s concern and lead to forgiveness.

What is the source of the biblical optimism that man’s turning will generate divine movement to pardon him? This confidence resides in a number of assumptions concerning the nature of God, as presumed by the unique relationship between God and Israel, the bond of the *covenant. Covenant implies mutuality of obligation, that Israel’s fidelity to God’s demands will be matched by God’s response to Israel’s needs, particularly in his attitude of forgiveness (e.g., 11 Sam. 2:414,
Forgiveness

17; cf. Ps. 25:10–11; 80; 103:17–18; 106:45). That is why in the wilderness traditions, Moses can continue to plead with God despite the lapses of his people, because of his certainty that God's forgiveness is a constant of his nature (Num. 14:18–20; Ex. 32:11ff.; 34:6ff.). Again, the profusion of idioms expressing divine forgiveness (in addition to the cultic expressions, mentioned above), e.g., look over sin (Micah 7:18), not reckon it (Ps. 32:2), not remember it (Ps. 25:7), hide his face from it (Ps. 51:11), suppress it, remove it (Ps. 103:12), throw it behind his back (Isa. 38:17) or into the sea (Micah 7:19), points to the centrality of this concept.

Another covenant image which invokes God's attitude of forgiveness is his role of Father and Shepherd. A father's love for his children (Ex. 4:22; Num. 11:12; Deut. 32:6, 19; Isa. 64:7) can lead them to hope that their sins will be forgiven (Jer. 3:19; 31:19; Hos. 11:6ff.). Furthermore, this parental relationship shows that Israel's suffering is not inflicted as retribution for their sins but as corrective discipline – “afflictions of love” so that Israel may correct its way (Deut. 8:5; Prov. 3:12).

Another component of the covenant is that God will accept the mediation of an intercessor. He is not bound to comply – in contradistinction to the coercive claims of the pagan magician – for God will reject even the mediation of the most righteous when Israel's sins have exceeded the limit of His forbearance (Jer. 15:1; Ezek. 14:13–20). Intercession is, first and foremost, the function of Israel's prophets. Indeed, the only time Abraham is called a prophet is at the precise moment when his intercessory powers are invoked (Gen. 20:7). Moses' main concern, to judge by the narratives of the Exodus and the wandering in the wilderness, is to intervene on behalf of others (e.g., Ex. 9:27ff.; 10:16ff.; 34:8–9; Num. 12:11ff.; 21:7ff.; Deut. 9:16–10:10; Jer. 15:1). The psalmist singles this out in his eulogy of Moses: “He (God) said He would have destroyed them, had not Moses, the chosen one, stood in the breach before Him” (Ps. 106:23). To “stand in the breach” is for Ezekiel the main function of the prophet (Ezek. 33:22; 33:29).

An equally significant concomitant of God's covenant is His promise to the forefathers that the people of Israel will exist forever and that they will be in eternal possession of Erez Israel. This aspect of the covenant is constantly invoked in pleas for forgiveness (Ex. 2:24; 3:6; 5:15–16; 4:5; 6:3–5; Lev. 26:42; Deut. 4:31, 37; 7:8, 12; 8:18; 9:5, 27; 13:18; 29:12; Josh. 18:3; 21:44; 1 Kings 18:36ff.; 11 Kings 13:23; Isa. 41:8; 51:2; Micah 7:20; Ps. 105:9; Neh. 9:7; 11 Chron. 30:6).

This promise to the forefathers bears a final corollary. Because of the covenant, God's honor is at stake in the world. Israel's woes will not be comprehended by the nations as divine punishment for its covenant violations but as God's inability to fulfill His covenant obligations. This argument features prominently in Moses' intercession (Ex. 32:12; Num. 14:13–16) and is mentioned repeatedly in subsequent prayers for Israel's pardon (Josh. 7:9; Ps. 74:10, 18; 83:3, 19; 92:9–10; 109:27; 143:11–12). Conversely, the argument continues, it is important for God to redeem Israel for the glorification and sanctification of His name throughout the world (Ps. 79:6; 102:16; 115:3; 138:3–5) even if Israel itself is undeserving of forgiveness (Isa. 48:9–11; Ezek. 36:22ff.).

See also "Repentance.

In Talmud and Jewish Thought

Divine Forgiveness. The theme of God’s forgiveness for man's sins is recurrent in talmudic and midrashic literature and reappears in later rabbinic writings and the synagogue liturgy. Its main theological purport is to counterbalance, and indeed outweigh, the strongly entrenched rabbinic belief in the inevitable punishment of sin. The rabbinic outlook on the subject may be most simply expressed as “God is just”; He rewards the righteous and punishes the wicked (Principle number 11 of Maimonides' 13 principles of the Jewish faith). Only the unrepentant sinner incurs His wrath; the sinner who repents is always forgiven. Thus the Talmud states, “He who sins and regrets his act is at once forgiven” (Hag. 5a; Ber. 12b) and the Midrash states, “Says the Holy One, even if they [your sins] should reach to Heaven, if you repent I will forgive” (Pes. Rab. 44:a; see Yal. Ps. 835). The Tosefta even gives a statistical figure to the matter, basing itself on Exodus 34:6–7, and says that God's quality of forgiveness is five hundred fold that of His wrath (Tosef., Sot. 41).

The idea is more picturesquely expressed in the talmudic image of God praying to Himself that His mercy should prevail over His anger and that He should deal with His children “li-fenim mi-shurat ha-din,” i.e., that He should forgive them even though strict justice would demand their punishment (Ber. 7a). The whole of Jewish thought on the subject stems from the forgiving character of God depicted in the 13 Divine attributes as revealed to Moses (Ex. 34:6–7). The rabbinic mind embroiders the fundamental biblical idea in a homiletic way, thus giving encouragement and hope to the sinner who would turn to God but is troubled by the burden of his past deeds. The liturgy of the “Day of Atonement, and indeed its very role, bear eminent testimony to the central role that the idea of God's forgiveness plays within Jewish religious practice.

Maimonides formulates the breadth of the Jewish attitude on Divine forgiveness thus: “Even if a man has sinned his whole life and repents on the day of his death, all his sins are forgiven him” (Yad, Teshuvah 2:1). Though this forgiveness is always ultimately forthcoming, for various categories of sin it only comes into effect when the Day of Atonement, or the sinner's death, or both have finalized the atonement (Yoma 85bff.; Yad, loc. cit., 1:4).

In later rabbinic literature, ideas about God’s forgiveness are variations on the original theme outlined above, though now and again, the emphasis is changed. In hasidic writings, for example, where the dominant notion of God is that of a merciful father, there is a tendency to overstress His quality of forgiveness at the expense of His quality of justice. Nahman of Bratslav, one of the early hasidic leaders, writes: “There is no sin that will not be forgiven by sincere repentance. Every saying to the contrary in the Talmud and the Zohar is not to
be understood literally” (Likkutei Ezot ha-Shalem (1913), 119). R. Naḥman is advertising here to certain categories of sinners who, it is claimed, will never be forgiven because of the nature of their crimes, however genuine their repentance. Among those said to be excluded from God’s grace are those whose sins involved a desecration of God’s name or caused an evil repute to fall on their fellow, or even those who indulged in evil language in general (TJ, BK 8:10, 66c; ARN 39, 116; Zohar, Num. 16:1a). But R. Naḥman’s interpretation is according to the tradition that no sinner was ever absolutely excluded from the sphere of God’s forgiveness (see Yad, Teshuvah, 14; RH 18a; S. Schechter, Some Aspects of Rabbinic Theology, ch. 18 and references cited). The intention of those texts that do seem to exclude certain classes of sinner can be interpreted as a way of emphasizing the gravity of the sins involved.

There are two further general points. Rabbinic literature is on the whole concerned with God’s forgiveness for the individual sinner, rather than for Israel as a nation (the latter is more characteristic of the prophetic ethos than the rabbinic, for during most of the creative period of rabbinic thought, Israel had ceased to exist as a cohesive national entity). Forgiveness is always and only consequent on repentance (the idea of an arbitrary grace is almost totally absent; but see Ber. 7a on Ex. 33:19). Similarly the doctrine of the merit of the fathers, zekhut avot, was given an ethical interpretation (Sanh. 27b).

The place of a forgiving God within the Jewish Weltanschauung has been of interest in modern times and is discussed by both Jewish and Christian scholars. The immediate causes of this interest were partly a desire to uncover the rabbinic roots of New Testament theology and partly an attempt to rectify the widespread but distorted image of the Jewish conception of God, according to which the Jewish God was seen as a legalistic and strict overlord who rewards and punishes according to man’s deeds, and the Jew was thus thought to inhabit a somber religious world devoid of Divine compassion. A more thorough acquaintance with the sources shows how wrong such a picture was.

**Human Forgiveness.** God’s forgiveness, however extensive, only encompasses those sins which man commits directly against Him, “bein adam la-Makom”; those in which an injury is caused to one’s fellow man, “bein adam le-havero” are not forgiven until the injured party has himself forgiven the perpetrator. Hence the custom of seeking forgiveness from those one may have wronged on the eve of the Day of Atonement, without which proper atonement cannot be made (Yoma 89b, basing itself on Lev. 16:30 “… all your sins before the Lord,” i.e., and not to man; Yad, loc. cit., 29; Sh. Ar., OH, 605:1; see also RH 17b; Sifra, Aharei Mot, Perek 8).

The law regarding physical injury, for example, is explicit in that even after the various compensatory payments have been made, the inflicter of the damage must seek the forgiveness of the injured party for the suffering caused (BK 92a; Yad, Ḥovel u-Mazzik 5:9; Sh. Ar., ḤM, 422). Not only must he who sins against his fellow seek forgiveness from him, but the one sinned against is duty bound to forgive. “Man should be pious as a reed, not hard like the cedar” in granting forgiveness (Taan. 20a). As the Talmud puts it: “Who act mercifully (i.e., forgivingly) toward their fellow creatures will be treated mercifully by Heaven, and all who do not act mercifully toward their fellow creatures will not be treated mercifully by Heaven” (Shab. 151b; see also RH, 17a; Meg. 28a). If the injured party refuses to forgive even when the sinner has come before him three times in the presence of others and asked for forgiveness, then he is in turn deemed to have sinned (see Tanh. Hukkat 19). He is called akhzari (“cruel”). The unforgiving man is not of the seed of Abraham (Bez. 32b), since one of the distinguishing marks of all of Abraham’s descendants is that they are forgiving. The quality of forgiveness was one of the gifts God bestowed on Abraham and his seed (Yer. 79a; Num. R. 8:4; Yad, Teshuvah 210).

The rabbis go even further in the ethical demands made upon the injured party, for not only must he be ready to forgive his injurer, he should also pray that God forgive the sinner before he has come to beg forgiveness (Yad, loc. cit.; Tosef., BK 9:29; Sefer Hasidim ed. by R. Margalioth 1957, 267 no. 360). This demand is based on the example of Abraham, who prayed to God to forgive Abimelech (Gen. 20:17). The reasons the injured party should be ready to forgive the injurer are mixed. On the one hand is the self-regarding consideration, already mentioned, that forgiveness to one’s fellow wins forgiveness from Heaven. As Philo states: “If you ask pardon for your sins, do you also forgive those who have trespassed against you? For remission is granted for remission” (ed. by Mangey, 2 (1742), 670; see also Yoma 23a). On the other hand there is the purer motive of imitatio dei. Just as it is in the nature of God to be merciful to His creatures, so man in attempting to imitate the ways of God should be forgiving toward those who have injured him (Shab. 133b; see Lev. 19:2). R. Naḥman combines both motives when he says: “Imitate God by being compassionate and forgiving. He will in turn have compassion on you, and pardon your offenses” (op. cit. 81–91).

**Forlì**, city in N. central Italy. The philosopher *Hillel b. Samuel of Verona wrote his Talmudic ha-Nefesh there about 1280. By the 14th century a number of Jewish loan bankers were established in the city and in 1373 Bonaventura Consiglio and a
partner lent 8,000 ducats to Amadeo, count of Savoy, on the security of his crown and other valuables. Representatives of the communities of central and northern Italy met in Forlì in 1418 to discuss the raising of a fund for self-defense; they also passed a series of sumptuary regulations to limit shows of luxury and extravagance. Their action was probably decisive in obtaining the protection of Pope Martin V, which he extended in the bull of Jan. 31, 1419. From the late 14th and through the 15th century several Jewish physicians lived in Forlì and a number of Hebrew manuscripts were copied there. In 1488 anti-Jewish disorders broke out: the Jewish loan banks were sacked and the loan bankers were forced to leave the city. Subsequently, however, their activities were resumed. At the beginning of the 16th century the papal government assumed the administration of the city, and in 1569 the community in Forlì ceased to exist with the expulsion of the Jews from the towns of the Papal States, though some craftsmen also lived there during the 16th and 17th centuries. A Jewish presence in the area of Romagna, and also in Forlì, is documented from the Napoleonic era. In 1938, 15 families in Forlì and 98 people in the entire province were considered Jewish. During the Nazi occupation, from 1943 until the liberation of November 13, 1944, a concentration camp operated in Forlì, where the majority of prisoners were Jews from the area or from Rome. In September 1944 the Nazis massacred 33 people at the airport of Forlì, including 19 Jews.

FORMAN, MILOS (1932– ), Czech-American film director. Forman’s early years were spent in a town near Prague, where his father was a teacher. Both his parents, including his non-Jewish mother, were murdered in Auschwitz. In 1963 he made Black Peter, in 1964, Loves of a Blonde, a film distributed and internationally acclaimed. The Fireman’s Ball (1968), a wry treatment of Czech bureaucracy, effected its own irony when it caused 40,000 firemen to quit after Novotny released the film. All were appeased when Forman offered his own critical interpretation (a parody in itself) of the film as broad satire of Czech bureaucracy, as cosmic forces – the two primary elements, which constitute intelligence, the highest of the emanated substances. Ibn Gabirol, regarding form and matter as more than just the component parts of individual substances, saw them as cosmic forces – the two primary elements, which constitute intelligence, the highest of the emanated substances. Ibn

FORMAN, PHILLIP (1895–1978), U.S. judge. Born in New York City, Forman was admitted to the bar in 1917. He attended the Temple University School of Law, where he received his LL.B. in 1919. During World War I he served in the United States Navy (1917–19). He had a private law practice in Trenton, New Jersey. In 1923 he was appointed assistant U.S. attorney for the southern district of New Jersey, and in 1928 district attorney. Forman became a district court judge in 1932, and in 1951 chief judge. Subsequently, in 1959, he was elevated to the U.S. Court of Appeals for the Third Circuit. He assumed senior status in 1961 and served in that capacity until his death.

Active in Jewish affairs, Forman was a founder of the Jewish Federation of Trenton, New Jersey, and a prominent figure in the American Jewish Joint Distribution Committee, the Jewish Welfare Board, and the American Jewish Committee. He was also a member of the American Judicature Society and the American Legion. In 1940 Forman had the distinction of presenting Albert Einstein with his certificate of American citizenship.

FORM AND MATTER (Heb. חום, hom, and כור, kér, homer), according to Aristotle, the two constitutents of every physical substance, form being that which makes the substance what it is, and matter being the substratum underlying the form. In substantial change the form is that which is changed, while the matter remains constant throughout the change. Matter is defined by Aristotle as “that which in itself is not a this,” form, as “that which is precisely in virtue of which a thing is called a this” (De Anima 2:1). Insofar as form makes the object what it is, it is equated with actuality, while matter is equated with potentiality. Insofar as form determines the nature of a substance it is likened to the species, while matter is likened to the genus.

Plotinus, the first of the neoplatonists, accepting the Aristotelian notion of form as species and matter as genus, maintained that immaterial substances, since they can be defined in terms of genus and species, are also composed of matter and form. There exists, he maintained, a spiritual matter out of which incorporeal substances are formed. Only God is not composed of matter and form.

Among Jewish philosophers those who tended toward Aristotelianism generally followed the Aristotelian notion of form and matter, while those who tended towards neoplatonism, followed the Plotinian notion.

Solomon ibn Gabirol devoted his major work, Mekor Hayyim (Fons Vitae), to a discussion of form and matter. He accepted the view that form and matter are constituent elements of corporeal and incorporeal beings alike. However, while Plotinus believed that there exist two types of matter, spiritual and corporeal, Gabirol held that matter is in itself incorporeal, and is common to corporeal and incorporeal substances. Gabirol, regarding form and matter as more than just the component parts of individual substances, saw them as cosmic forces – the two primary elements, which constitute intelligence, the highest of the emanated substances. Ibn
Gabirol is not clear concerning the origin of matter and form. At times he holds that matter emanates from God, and form, from an intermediary being, known as the divine will, while at other times he holds that both form and matter emanate from the divine will.

Joseph ibn *Zaddik, while he generally follows Aristotle in his natural philosophy, differs from Aristotle in his definition of matter and form. Matter, since it bears the form, is, for Ibn Zaddik, the one real substance, while form, insofar as it inheres in something else, has the same status as accidents (Olam Katan 1:2). For Aristotle, matter is that “which in itself is not a this.”

Abraham ibn Daud, the first of the Jewish Aristotelians, in his discussion of the concepts of form and matter, presents the example of a golden scepter, which is changed into a golden coin, then into a ring, and finally into a nose ring. He points out that gold is the matter underlying all these objects, while the scepter, the coin, the ring, and the nose ring are different forms that are imposed on the same matter. He deduces the existence of first matter and form from the reciprocal transmutation of the four basic elements. Having shown how the various elements are changed into one another he writes: “We thus know by observation that these elements are changed into one another… But it is inconceivable that the form, after passing away, should become the recipient… Hence we infer that they have a common underlying matter, which matter we call first matter” (Emunah Ramah 1:2). First matter is not in itself the matter out of which the four elements are formed, but rather first matter conjoined with the corporeal form. Maimonides, following Aristotle, maintains that “every physical body is necessarily composed of two things… form and matter…” (Guide 2, intr., prop. 22). He maintains, further, that all privation and destruction of physical objects results from matter and not from form: “All bodies subject to generation and corruption are attained by corruption only because of their matter” (3:8; see also, 117). In the case of man, body is the matter and soul, form. It is the body, therefore, which is subject to destruction, and only the soul, which can attain immortality.

[Alfred L. Ivry]

FORMIGGINI, ANGELO FORTUNATO (1878–1938), Italian publisher, editor, and writer. He was born in Modena, where his family had been court jewelers for generations and maintained their private synagogue. He was a publisher first in Modena (1908–11) and then in Genoa (1911–15) and Bologna; in 1916 he moved to Rome, where he won prominence for his innovations in publishing and the quality of his books.

Among his noteworthy publications the most important are Classici del ridere, a series of 106 volumes published from 1913 to 1938, including the best works of humorists from all countries (i.e., Giovanni Boccaccio, François Rabelais, Voltaire, Honoré de Balzac, Jonathan Swift, William Thackeray, Shalom Aleichem), and Profili, a series of 129 numbers, published from 1909 to 1937, which included brief essays on contemporary authors. Besides editing Chi è, dizionario degli Italiani d’oggi, the Italian Who’s Who (first edition 1929–30), a dictionary of contemporary Italians, Formiggini served as managing editor of L’Italia che scrive, a monthly review of Italian literary and artistic activities, bibliography, and intellectual debate. In 1923 he published in the Classici del Ridere his La ficozza filosofica sul Fascismo e la Marzia sulla Leonardo, an ironic study of contemporary society and a defense of himself against the intellectual luminary Giovanni Gentile.

Between 1919 and 1921 he founded the Italian Institute for Cultural Propaganda Abroad and in 1929 he planned and organized the World Congress of Libraries and Bibliography. When the antisemitic laws of 1938 were promulgated, he committed suicide by jumping off the tower of Ghirlandina in Modena as an act of extreme protest and rebellion. His spiritual testament Parole in libertà was published posthumously (1945).

FORMSTECHER, SOLOMON (1808–1889), German philosopher and rabbi. Formstecher was born in Offenbach. He studied philosophy, philology and theology at the University of Giesen, and served as the rabbi of the Offenbach community from 1842 until his death. He took an active part in the Reform movement and edited the periodicals Der Freitagabend and Die Israelitische Wochenschrift.

In his systematic work Die Religion des Geistes – Wissenschaftliche Darstellung des Judentums nach seinem Charakter, Entwicklungsgaeng und Berufe in der Welt (Frankfurt, 1841) Formstecher attempted to present a theoretical basis for the aims of the emancipation and Reform. Judaism is presented primarily as an idea, anchored in historical revelation and the full value of which is revealed through the gradual, progressive development of humanity. Formstecher used the philosophical categories of the German idealists Schelling and, to a lesser extent, Hegel in developing this concept.

The three central concepts of Formstecher’s system are revelation, spirit, and nature. By revelation, which is the source of the ethical monotheism of Judaism, he means the divine communication concerning the true nature of good and evil. It is not the knowledge of God’s existence that represents the true ideal, but the identification of God as a pure moral being. The God of Israel is not a supreme concept reached through philosophic understanding, but a supreme being transcending both spiritual and earthly nature. Therefore, Judaism as an idea is not a philosophic religion, but the manifestation of the

ENCYCLOPAEDIA JUDAICA, Second Edition, Volume 7 131
true absolute revelation. The classical representatives of this idea were the prophets of Israel. They understood the truth of the original revelation—based on God’s covenants with Noah and his “chosen people, symbolized by the Sinai covenant—through knowledge of the objective source of the absolute values, which was revealed to them by an immediate feeling.

Like Hegel, Formstecher meant by “spirit” the concretization of the absolute in the historic-conscious level of mankind. If, as he believed, religion in general is man’s aspiration for a universe of values, then the religion of the spirit is the aspiration for the embodiment of an absolute moral idea, the source of which is divine revelation. Judaism as a phenomenon, i.e., historical Judaism, although subject to historical circumstances, clings to the aspiration of embodying the moral idea on earth.

This aspiration distinguished Judaism from all other religions, which are fundamentally religions of nature, or physical monotheism. Following Schelling, Formstecher defined the religion of nature (paganism) as the aspiration for universal life, in which the spirit is manifested as the “soul of the world.” The philosophic pantheistic concepts, as well as speculative metaphysical thought, are therefore, the refined form of the pagan view of life. In proposing his argument Formstecher foreshadowed some of the anti-metaphysical trends in modern Jewish theology, represented by Rosenzweig and Buber, for example.

Judaism and paganism are polar phenomena, which by their very nature cannot coexist. Therefore, Formstecher rejected the concept of the mission of the Jews as the fundamental and direct heritage of Judaism. Within the framework of the dominant paganism, the isolation of Judaism among the nations is a direct result of its metaphysical nature. Nevertheless, Judaism does fulfill its mission among the nations, although not directly: it fulfills its mission through Christianity and Islam. These historical religions, in which pagan and spiritual elements are mingled, fulfill the requirement that paganism be overcome by the embodiment of the absolute moral value of the divine spirit. As the growth of the spirit and culture in modern times seemed to indicate, insofar as the human consciousness is aware of the moral source of all being, the universal human spirit will develop, and it will of itself bring about the removal of the barriers between the nations. Formstecher sincerely believed that the Emancipation was the social-political manifestation of this internal, spiritual process in the history of humanity.

[Moshe Schwarcz / Yehoyada Amir (2nd ed.)]

“FORSTER (Foerster, Vorster, Forstheinmius), JOHANN (1495–1556), German theologian and Hebraist. Forster studied under Reuchlin at Ingolstadt and later with Luther in Wittenberg. In 1539 he became professor of Hebrew at Tübingen and, ten years later, at the University of Wittenberg. He published a pioneering Hebrew-Latin lexicon, Dictionarium hebraicum novum (Basle, 1557; 1564*), which revealed the animosity of its author, a diligent Hebraist, toward the Jews. The lexicon’s subtitle stressed that it was “not based on the commentaries of the rabbis or on those of our own scholars, with a foolish imitation… but derived from the treasures of the Bible.” He was quite critical of Christian interpreters of the Kabbalah as well. Forster also published Meditationes hebraicae in artem grammaticam (Cologne, 1538). He attempted to derive the word sibyl (“oracle,” “prophetess”) from “kabula” (i.e., Kabbalah).

[Giulio Busi (2nd ed.)]

FORTAS, ABE (1910–1982), U.S. lawyer and Supreme Court justice. Fortas was born in Memphis, Tennessee, son of a cabinetmaker. A brilliant student, he graduated from Southern Council (1930) and Yale Law School (1933), where he was Law Journal editor. Upon graduation, he was appointed to the Yale law faculty. Fortas married Carolyn Agger, who also became a distinguished lawyer. In 1937 he entered full-time government service with the Securities Exchange Commission and was general counsel for the Public Works Administration. From 1942 to 1946 he served as undersecretary of the interior and also was an adviser in 1945 to the American delegation at the San Francisco Conference which founded the United Nations. During this period Fortas became friendly with Lyndon B. Johnson, the future president.

In 1946 Fortas entered private legal practice. His firm, Arnold, Fortas & Porter, became one of the most prominent and wealthy in Washington, representing many important corporations. As counsel for Lyndon Johnson, Fortas successfully countered the challenge to the validity of Johnson’s election to the U.S. Senate in 1948. In the 1950s Fortas and his firm became involved in civil liberties cases. He successfully defended Owen Lattimore, a victim of the McCarthy era communist charges. Some of his criminal cases became legal landmarks. In the Durham case, he persuaded the Federal District Court to adopt a new standard for criminal insanity, determining that an accused is not criminally responsible if his unlawful act was a product of mental disease or defect. In yet another, Fortas successfully argued that states should be required to provide free legal counsel for indigent defendants charged with major crimes. When President Johnson assumed office in 1963, Fortas became a key presidential aide and adviser. He worked out a complicated trust agreement for the
Johnson family, handled two sensitive administration scandals, aided the president in the Dominican crisis, and advised him on issues ranging from racial problems to the Vietnam War. In July 1965 Johnson appointed Fortas to the Supreme Court. As an associate justice, Fortas was known for his penetrating mind, skillful legal writing, and concern for individual rights. He generally joined the Court’s libertarian, activist majority. One of the most significant of his opinions was in the Galt case, which extended the constitutional rights to due process of law to juveniles being tried in special juvenile courts. Fortas firmly believed in the protection of personal privacy, and opposed the widespread use of civil disobedience to attain political ends. His pamphlet Concerning Dissent and Civil Disobedience (1968) presented a rational yet passionate plea for the rejection of political violence and for respect for law and the democratic process.

In the summer of 1968 Johnson nominated Fortas to succeed retiring Chief Justice Warren. Opponents of the nomination succeeded in blocking Fortas’ confirmation; they charged that he was too liberal and too close an adviser to President Johnson, and that the new appointment should be deferred until after the approaching presidential election. Moreover, while on the Court Fortas had accepted a fee for serving as lifetime consultant to the charitable Wolfson Family Foundation. When its founder, Louis E. Wolfson, was indicted for stock manipulation, Fortas returned the fee and severed his connection with the Foundation; but the disclosure of the association now aroused bitter public controversy. Fortas maintained that he had done no wrong; nevertheless, in May 1969 he resigned from the Court under heavy pressure and returned to private practice.

[Barton G. Lee]

FORTES, MEYER (1906–1983), British social anthropologist. Born in South Africa, he settled in England. From 1934 to 1938 he was a research fellow of the International African Institute, London; he lectured at the London School of Economics, and at Oxford University (1939–41); was head of the department of sociology, West African Institute, Accra, Gold Coast (Ghana), from 1944 to 1946; and from 1950 until 1973 was professor of social anthropology at Cambridge University. Fortes conducted field research in Central and West Africa and initiated modern ethnographical research in Ghana. He studied ancestor worship, the development of a generalized theory of primitive social structure, and the demographical method in preliterate societies. With Evans-Pritchard he developed the modern theory of primitive political systems, and conducted research on the theory of kinship and social organizations in primitive societies. On the basis of his expertise in this realm, he analyzed structuralist theory and methodology. Among his books were Dynamics of Clanship among the Tullensi (1945) and Oedipus and Job in West African Religion (1959); he edited African Political Systems (1940, 1950). Later he wrote Kinship and the Social Order (1969) and Time and Social Structure (1970).

[ Ephraim Fischoff]

FORTI, BARUCH UZZIEL BEN BARUCH (d. 1571), also called Hazkette (a Hebraized form of his name: hazak (forte, "strong") and -etto, a diminutive ending), Italian rabbi. Forti was ordained rabbi in 1564 in Mantua, and later served as head of a yeshivah in Ferrara. In 1554 he took part in the conference of Italian Jewish communities in Ferrara. He intervened in the affair of the Venturozzo-Tamari divorce (see Moses b. Abraham *Provencale), taking the side of Tamari. He edited Isaac *Abrabanel’s Ma’yencei ha-Yeshu’ah (Ferrara, 1551), and included his biography of Abrabanel. In this he expresses his thanks to Joseph and Samuel, Abrabanel’s sons, then resident in Ferrara, for providing him with the necessary information. He also edited Moses *Alashkar’s Hassagot on Shem Tov b. Shem Tov’s Sefer ha-Emunot (ibid., 1556) with an introduction. A responsa by Forti of 1565 is included in the responsa of Moses Isserles (Resp. Rema 36), while others are extant in the Mortara collection (at present in the Kaufmann Library of Budapest; M. Weiss, Katalog ... D. Kaufmann (1906), nos. 152,157,160) and in a manuscript in the collection of Zadok Kahn (Paris). An alphabetical index of Maimonides’ Mishneh Torah from a manuscript in Forti’s possession was appended to the Venice 1574/76 edition.

[Umberto (Moses David) Cassuto]

FORTI (Heb. Hazak), JACOB RAPHAEL HEZEKIAH BEN ABRAHAM ISRAEL (1689–1782), Italian kabbalist. Forti studied under Mordecai *Bassani in Verona and later under Moses Hayyim *Luzzatto in Padua. He became chief rabbi of Padua, and Shabbetai Medini and Ariel Alatino were among his pupils. His glosses to the four Turim of Jacob b. Asher and commentary to the Shulhan Arukh as well as a methodology of the Talmud and the posekim and a collection of sermons survived in manuscript form. Some of his many responsa were published in the works of others. The records of his halakhic dispute with the rabbis of Venice regarding the business methods of its merchants are brought together in the Mishpat Shalom (in manuscript) of Isaac b. Asher Pachico. Forti died in Padua.

**BIBLIOGRAPHY:** Ghirondi-Neppi, 148, 150.

[Samuel Abba Horodezky]
FORTIS (Heb. Hazak), ABRAHAM ISAAC (d. c. 1731), physician and communal leader in Poland. He is recorded in Poland around 1690, having come from Italy as a young man (batju). Moses *Zacuto, in the same year in Mantua, praised his wide knowledge in "Torah learning," in addition to his distinction in medicine. A clergyman who later became acquainted with him in Poland was amazed at his erudition in Christian theological literature. Fortis settled in the province of "Russia," living in Lvov, Jaroslaw, and Rzeszów (from 1706), and served as physician to Prince Lubomirski in Rzeszów, and to Count Potocki in Lezajsk, who tried to convert him. In 1710 he and another Jewish physician, who had also completed his studies in Italy, were summoned in connection with their qualifications before the crown tribunal of Lublin. Fortis also concerned himself with Jewish affairs. For many years he took part in the leadership of the Jews of the province (galil), and between 1726 and 1730 served as parnas of the Council of Four Lands. He had several sons who became rabbis or physicians.

FORTUNOFF VIDEO ARCHIVE FOR HOLOCAUST TESTIMONY. The archive began in New Haven, Connecticut, in 1979 when Laurel Vlock, a television journalist, and Dr. Dori Laub, a Holocaust survivor and psychiatrist met and recorded Dr. Laub's testimony. This initial effort led to the Holocaust Survivors' Film Project, Inc, a grassroots organization, created to videotape local Holocaust survivors and witnesses. The project was based on the belief that every survivor has a unique story to tell, that there was a diminishing window of opportunity to record their testimonies, and that video would be an effective vehicle for capturing Holocaust survivors' experiences. This initial effort recorded nearly 200 testimonies. These tapes were donated to Yale University in 1981, and in 1982 the Video Archive was established at the university's Sterling Memorial Library. Sterling Professor Geoffrey Hartmann, who had written extensively about Holocaust memory and testimony, became the faculty advisor and project director and a driving force in its development.

The archival collection has grown to over 4,300 items. These testimonies reflect the diversity of the witnesses and include accounts by Holocaust survivors, liberators, resisters, and bystanders. The tapes are catalogued and cross-referenced and are available to educators, researchers, and the public.

The Archive is an ongoing effort to preserve Holocaust memory. It works with affiliated video-testimony projects around the United States, Europe, Israel, and South America and has undertaken joint projects with the U.S. Holocaust Memorial Museums. Interviewers in affiliated projects are trained in its methodology and both the Archive and the affiliate receive a copy of the recorded testimony for their collections.

When the Video Archive was established it's interviewing philosophy was a departure from other oral history projects because it stressed the role of the witness rather than the interviewer in leading the interview. The interview is deliberately unstructured and open-ended; its content and direction determined by the witness rather than the interviewer. The latter asks questions primarily for clarification of time and place or for elaboration on a subject that the witness has already raised.

The Video Archive has an intensive training program. It is designed to prepare its interviewers both in methodology and in the background to the witnesses' experiences. The participants read and attend lectures on history, observe taped interviews, and discuss the Archive's interviewing techniques. The Archive has lent its expertise to other Holocaust organizations as well as international groups concerned preserving the memory of other genocides in the 20th century.

Education is a key to the goals of the Archive. In order to further the use of witness accounts in the classroom, it has created a library of edited video testimonies that are available to teachers and community groups. The Archive has also collaborated with educational organizations that have developed study guides using testimony. In addition, it sponsors academic conferences on Holocaust education and research.

The Fortunoff Archive for Holocaust Testimonies encourages use of its collection to the widest audience possible through its website: www.library.yale.edu. It has produced a television documentary of its own and spurred educational films.

FOSS (Fuchs), LUKAS (1922– ), U.S. composer, pianist, and conductor. Born in Berlin, he immigrated to the U.S. in 1937. He was pianist with the Boston Symphony Orchestra from 1944 to 1950. He was the youngest composer to receive a Guggenheim Fellowship (1945), appeared as soloist in his own piano concertos with a number of orchestras in the U.S. and Europe, and conducted his first symphony in Pittsburgh in 1945. He taught composition at the Berkshire Music Center and at the University of California, Los Angeles. In 1963 he was appointed conductor and music director of the Buffalo Philharmonic Orchestra where he remained until 1970, when he became a freelance conductor and was visiting professor at Harvard University. He was chief conductor and advisor of the Israel Broadcasting Authority's Jerusalem Symphony Orchestra from 1972 until 1975. A precocious talent, he had some pieces published at the age of 15. His early works are neo-romantic in nature. Among them the most important are the cantata The Prairie (1942), the cantata Song of Songs (1947), an opera after Mark Twain The Jumping Frog of Calaveras County (1950), the cantata A Parable of Death (1953), the television opera Griffelkin (1955), and Time Cycle for soprano and orchestra (1960). Then Foss turned to ultramodernism using the extreme procedures of the avant-garde, including aleatory devices of "controlled improvisation." To this period belong his Echoi for instruments (1965) and Elytres for chamber orchestra (1964). His Phorion for strings, electronic organ, and
amplified harpsichord and harp (1967) is a metamorphosis of a Bach prelude. In his later works Foss strove to combine his earlier, sometimes more conservative and sometimes specifically American, style with experiments of his modernist period (American Cantata, 1976; Renaissance Concerto for Flute and Orchestra, 1985). As a conductor, Foss always sought to popularize new music; in 1973 in Brooklyn he began “Meet the Moderns,” a series of new music concerts as well as discussions with composers.

[Fourcoeur / Yulia Kreinin (2nd ed.])

FOULD, family of French bankers and politicians. The Fould-Oppeinheim banking house was founded by Ber Leon Fould (1767–1855) and expanded by his eldest son Benoît (Benedict; 1792–1858), who succeeded his father as manager. In 1827 he was made a judge of the commercial court and from 1834 to 1842 sat in the Chamber of Deputies as conservative member for St. Quentin. An expert on financial matters, Fould was active in Jewish communal affairs and spoke in parliament in connection with the *Damascus Affair, protesting against the fact that the French consul had permitted the use of torture. Achille (1800–1867), second son of Ber Leon, shared the management of the bank with his brother Benoît, before entering public life as a member of the General Council of the Hautes Pyrénées. In 1842 he was elected to the Chamber of Deputies where he supported the conservative financial policies of the chief minister, Francois Guizot. When Guizot went...
into exile following the outbreak of the 1848 revolution, Fould withdrew from politics and wrote three pamphlets attacking the new government's financial policies. In the following year, he retired from the banking house to devote himself to politics and was made minister of finance by Louis Napoleon. He was responsible for the reform of the postal service, the abolition of income tax, and the initiation of old-age pensions. Fould was twice dismissed and twice recalled to the government; in 1852 he was made a minister of state, and was the first Jew to be appointed a senator. In 1861 Fould was appointed minister of finance for the third time to check the rising national deficit and in 1863 he reduced the floating debt by negotiating a loan of 300,000,000 francs. He retired in 1867. Though he remained a Jew, Fould married into a Protestant family and his children were brought up as Christians. Two sons Ernest Adolphe (1824–1875) and Edouard Mathurin (1834–1881) both sat in the Chamber of Deputies, as did his grandson Achille Charles (1861–7). His third son Gustave Eugène (1836–1884) was a successful playwright and producer.

**BIBLIOGRAPHY:** P. Emden, *Money Powers of Europe* (1938), index, includes bibliography.

**FOUNDATIONS.** The earliest period for which there are records of Jews having established foundations is the Middle Ages. In particular, Joseph Ephraim ha-Levi of Ecija, Castile, is known to have endowed the school of the Jewish community in 1332. In the modern period Jonas *Fraenkel (1773–1846) bequeathed the greater part of his fortune to establish a seminary, which eventually opened in Breslau. In 1866 Moses *Montefiore set up an endowment to maintain a synagogue and college near his home at Ramsgate. On his death, control passed to the elders of the London Congregation of Spanish and Portuguese Jews. The philanthropy of Maurice de *Hirsch, apart from the Jewish Colonization Association, included substantial gifts of a permanent character, e.g., 12 million gold francs for the education of Jews in Austria (1888) and the Baron de Hirsch Fund, New York (1891).

In the 1830s Alexis de Tocqueville described one of the important subtexts of late 20th century Jewish America. To understand contemporary American Jewry, one must explore the growth of Jewish foundations, their impact on communal structures, various models of foundation partnership and collaboration, and some projections for future development.

In the 1830s Alexis de Tocqueville described one of the unique attributes of American life: voluntarism. Whether due to mistrust of government or an emergence of a richer civic society, Americans strongly identified with the creation of voluntary associations aimed at improving quality of life along with fulfilling various affinity needs of the population. By the late 19th century this emerged into a serious third sector: a nongovernmental, not-for-profit sector whose existence was to improve the common good and as the 20th century tax structure developed this sector grew exponentially in recognition of the unique societal role this sector was playing.

At about the same time, led by figures such as Andrew Carnegie, John D. Rockefeller, and Henry Ford the creation of charitable foundations (many of which were to exist in perpetuity) to enhance the public good in the name of and as part of the legacy of entrepreneurs also became a component of the American scene. Philanthropy became serious business and even with increased regulations brought about by the 1969 Tax Reform Act, became a business of enormous growth. By the end of the 20th century more than 80,000 grantmakers, of which 60,000 were in the form of foundations, making over 500,000 grants, existed within the United States with assets in excess of a quarter of a trillion dollars. It is estimated that 10,000 of these are Jewish family foundations, an overrepresentation by more than eight times the Jewish representation in the population.

There are serious definitional problems in creating a taxonomy for Jewish foundations resulting in a paucity of reliable data as to both numbers, dollar values, and impact of these foundations. Among these issues are those that have to do with the definition of a Jewish foundation. Is it a foundation whose principal is/was Jewish? Whose board is primarily Jewish? Is it a foundation whose historic giving patterns were primarily to the Jewish community? Exclusively? Somewhat? Must its charter specify a Jewish purpose? Is a foundation Jewish if founded by a Jewish principal whose distributions throughout the first generation were for the benefit of Jewish causes but today is governed by the heirs who are no longer Jewish and who no longer support Jewish causes? What if that foundation gives exclusively to Israel causes? What if those Israel causes are to support the 18% of the Israeli population that is Arab?

Further, organizational definition problems also create a barrier to full understanding. Should we consider as Jewish foundations those donor-advised funds that sit either at Federations, Federation-supported community foundations, or general community foundations? These donor-advised funds are no longer the assets of an entity controlled by the donor. They are the assets of the community foundation. However, the foundation has indicated that it will generally follow the advisory role given to the donor (or his/her designees). With Federation-related foundation assets approaching $4 billion, the relevance of these questions becomes clear as one wants to understand the depth and breadth of the field.

The first two-thirds of the 20th century saw the development of the North American Federation system as the New World's replication of the European *kehilla*. While vastly different from the European model and far more voluntarily driven, the Federation became the community's address for collective responsibility of Jews one to another. Its fundraising prowess grew dramatically through the first half of the century and culminated in unprecedented support of the *United Jewish Appeal*, the central overseas arm of this movement, in 1948. On an inflation-adjusted basis, this was the most powerful fundraising year in mature communities either before
or since. For the birth of the State of Israel was the ultimate Jewish act of collective responsibility and even those who did not physically participate were prepared to fiscally contribute. The UJA/Federation campaigns were especially relevant at the most critical moments of Israel's life. The years 1956, 1967, 1973, 1982, and 1990 were significant blips on a long term donation curve showing the powerful relationship between amnkh and an Israel in trouble (or in the case of 1990 with the coming Soviet aliyah of one million people in a moment of extraordinary opportunity). Non-donors became donors and lapsed donors gave again. Yet on an inflation-adjusted basis, the decline in the UJA/Federation annual campaign revenues is clear and evident with both a real dollar decline of almost one-third every decade and a market share decline of an equally significant proportion. Outside of times of crisis, federations engaged in serious planning processes aimed at determining how best to serve the need of Jews locally and around the world as community-driven, consensus-sensitive organizations. The processes required to govern called for serious and extensive involvement. Immediate and rapid decisions could not be made. Rarely could an individual feel like (s)he as an individual, was determining the course of the future.

In many ways this corporate culture was antithetical to the successful entrepreneurs who built their businesses by making decisions and unilaterally determining the future. While the major Jewish philanthropists continued to financially support the UJA/Federation movement as well as many of the other Jewish organizational entities which emerged in North American life, many decided that they wanted more personal hands on involvement in their philanthropy and, often, shaping the Jewish world. At the same time their legal and tax advisors were encouraging them to set aside funds to meet their philanthropic obligations so as to take advantage of generous American (and less so, Canadian) tax policies in which they could forgo substantial taxes and only be required to annually spend five percent of the funds set aside in these tax exempt private foundations. By the 1990s, many of these foundations (Abraham, Bronfman, Crown, Goldman, Haas, Marcus, Schusterman, Spielberg, Steinhardt, Weinberg, Waxner) became household names in the organized Jewish world. They were the supporters of many initiatives of Jewish life.

An interesting dynamic began to occur at this time. The first was a planned initiative that was created so as to have many of these “mega” philanthropists in the Jewish community get to know one another. Following the very successful launch of Operation Exodus, the campaign to support the aliyah of Soviet Jews to Israel accompanying the opening of the Soviet Union, at which $54 million was raised at a breakfast of just a few major donors, the then-CEO of United Jewish Appeal recognized that these generous individuals did not know one another. He organized a Study Group of major foundation principals from North America and elsewhere, which came together twice a year to study together issues of contemporary Jewish life. Much of the time of the Study Group was devoted to its various members getting to know one another and to learn of each other’s interests. Not surprisingly, a number of initiatives emerged in which members of the group partnered to change Jewish life. First among these was the rescue and resuscitation of Hillel, the American Jewish entity responsible for Jewish life on university and college campuses. Other initiatives which emerged came from the energy and vision of the various Group members. The Partnership for Excellence in Jewish Education (PEJE) developed as a partnership of a number of philanthropists (and one federation) initiated by a half dozen of the Study Group members. Within a year after two of its members launched Birthright Israel, eight Group members became founders with initial donations of $5 million each, unprecedented in the scope of non capital project related startups. This effort attracted both the government of Israel and the communities of the world through the Federations, Keren Hayesod, and the Jewish Agency for Israel as partners, resulting in more than 70,000 young adults from 36 countries having their first living and learning experience in Israel.

This emerging trend did not come without concerns with entrepreneurial unilateral decision-making becoming more prevalent. Would federations be expected to pick up the pieces after foundations became fatigued while funding a program (even if worthwhile) for several years? Have we created new ethical dilemmas replacing a democratic, open Federation model with an autocratic, closed one? In smaller communities what role would emerge from local foundations whose assets and annual revenues greatly exceeded that of the community’s structures? While there was a century worth of experience in the general world of foundations, the world of Jewish foundations tends to be significantly younger, especially those with assets in excess of $100 million.

Further, the general infrastructure of Jewish family foundations is yet underdeveloped. The Jewish Funders Network, founded in 1991, became a membership organization that was designed to respond to the needs of individual Jewish funders and foundations. Its annual meeting which attracts close to three hundred has subjects ranging from a fifth generation Rockefeller’s guidance on philanthropy to the Israeli-Palestinian situation with major speakers in a variety of areas and includes donors of as little as $25,000 a year to those who are responsible for distributing as much as $50 million a year. In recent years federation endowment funds and affiliated foundations are among those who have participated in Jewish Funders Network meetings and there has been serious engagement on the many ethical and planning issues with regard to the relationship between the funders, the independent funders, and their communal organizational brethren. As the Jewish Funders Network becomes a more sophisticated setting, it is developing affinity groups with interest in areas such as Jewish education, the needy in Israel, etc.

As with American foundations in general, the overwhelming majority of Jewish family foundations have no staff and are managed by the principals, with assistance from families and or businesses. Nevertheless, 24% give away more than $250,000 a year and, increasingly, professional assistance
FOUR CAPTIVES, THE

is being sought to facilitate the management thereof. As with all American foundations, increasing attention is being paid to philanthropic impact including the evaluation of programs and projects supported by these foundations and in some cases the external evaluation of the foundation’s own performance. In the late 1990s a group was established in London which brought together European, Israeli, and North American foundations who operated multinationaly. These tended to be larger foundations and the objective of the group was to create a setting where principals and/or chief professionals in the Jewish funding arena could engage in exchanges that better met the needs of these larger multinational foundations.

The federation communal structure, in recognition of these trends, began a number of initiatives aimed at providing donors with collaborative models for giving, distinct from the historical annual campaign in which the distribution of all available funds was determined by a volunteer-driven planning and allocations process. Beginning in Washington, and then moving on to Toronto, New York, and Los Angeles, Jewish venture philanthropy funds were established to engage younger donors in collaborative funding. While many of these funds did not meet the technical terms of “venture philanthropy” they became important experiments in creating funding collaborative within the Federation structure yet outside of the formal allocations process. Similarly, several federations created Jewish women’s foundations, which brought together a different affinity group with some of the same attributes. It is highly likely that the next phase of Jewish philanthropic development will find various permutations of individual entrepreneurial and communal philanthropy as communities and donors learn from these experiences.

In addition to the challenge of maintaining the collective strength, which so highlighted the effectiveness of Jewish philanthropy, Jewish life is challenged in maintaining the interest of the most generous donors. In a study of American gifts of more than $10 million between 1995 and 2000, Jewish donors represented 18% of these “mega” gifts and 23% of the total giving in this category while being only 2% of the total population. Only 6% of this support went to Jewish causes.

In the early 21st century, Jewish American foundations will see the greatest transfer of wealth in history as those who earned great fortunes in the mid- to late-20th century bequeath their fortunes, thus creating a new generation of young philanthropists. This occurs at the same time there is a decentralization of Jewish philanthropy, moving away from the federation “central address” in favor of donor-driven programming. Simultaneously, philanthropy is becoming more hands-on with donor involvement beyond writing out checks. Donors are holding their own foundations and the community to higher standards of accountability. They seek not only greater involvement in decision-making as to the use of their support but also want to monitor the impact and effectiveness of its use. These dynamics will continue to create conflicts between systems of collective responsibility and the emerging entrepreneurial foundation generation. The evaluation of Jewish family foundations is early in its development, but already has radically altered the Jewish philanthropic scene.

See also “Philanthropy.”

FOUR CAPTIVES, THE, story circulated in Spain in the Middle Ages on the subject of four rabbis who were taken captive. According to this story, which is preserved in Abraham *Ibn Daud’s Sefer ha-Kabbalah (The Book of Tradition, ed. by G.D. Cohen (1967), 46–49, 63–67), a Muslim sea raider from Cordoba, Spain (probably Ibn Rumahis, 974) captured a ship which had set sail from Bari in southern Italy. On it were four rabbis who were on a mission (it is conjectured on behalf of the Babylonian academy) to raise funds for the dowries of poor brides. These rabbis were redeemed by Jewish communities: R. *Shemariah b. Elhanan in Alexandria, Egypt; R. “Hushiel was sold in “Africa” (i.e., Tunisia) and became the leader of the Kairouan rabbis; R. “Moses b. Hansen and his son “Hanokh were redeemed in Cordoba. The identity of the fourth captive and the place where he was redeemed was not stated.

There are various opinions among researchers as to the authenticity of this story. The principal argument against its veracity is to be found in a letter written by R. Hushiel to R. Shemariah b. Elhanan and his son Elhanan, from which it is evident that he left his country (perhaps Italy) voluntarily in order to travel to Egypt, but remained in Kairouan to await the arrival of his son Elhanan. It also appears that R. Shemariah b. Elhanan was already in Egypt, as his father was the leader of Egyptian Jewry. Another objection is chronological. On the one hand, Ibn Daud writes (ibid., 66/48) that the appointment of R. Moses b. Hanokh occurred during the lifetime of R. *Sherira Gaon in about 990, while on the other hand, it appears from his account that his appointment, as well as that of his son Hanokh several years later, occurred during the lifetime of *Hisdai ibn Shaprut, who died in about 990 (ibid., 67). The story of Ibn Daud reflects the popular tradition which was current among the Jews of Andalusia during the generation after R. Moses Hanokh’s arrival in Spain. A proof for the relative antiquity of the tradition is the fact that David *Conforte, in his Kore ha-Dorot (1846, 5a), recounts it on the authority of *Samuel ha-Nagid (993–1056). By this story Ibn Daud presumably wanted to demonstrate the historical fact of the disintegration of the spiritual center in Babylonia, its gradual removal to Spain from the beginning of the tenth century, and the end of the dependence of the Spanish rabbis on Babylonia. From the time of the arrival of R. Moses b. Hanokh in Spain the Spanish scholars became independent. Indeed, the story of R. Moses b. Hanokh’s appointment to the position of chief dayyan in Cordoba in the place of the
dayyan R. Nathan, who surrendered his position to R. Moses b. Hanokh when he became aware of the latter’s erudition, is an ancient motif which already existed in talmudic literature (in the story of *Hillel and the *Benei Bathrya, Pes. 66a). It appears that Abraham Ibn Daud and the author of Midrash Tanhuma, who brings a similar motif (Tanh. Ex. 277), drew this idea from an ancient source.

[Abraham David]

FOURIER, FRANÇOIS MARIE CHARLES (1772–1837), French philosopher and social reformer who inspired the Fourierist or Phalansterian school. Somewhat like Rousseau, Fourier pursued his aim — cure for social evils — with passionate dogmatism and intolerance. His dream of a better world went hand in hand with a phobia against foreigners, and above all Jews. For him commerce was "the source of all evil" and Jews were "the incarnation of commerce." In his earlier writings, Fourier leveled every accusation possible against the Jews. He believed that their economic activities were parasitic and rapacious and declared that there had never been "a nation more despicable than the Hebrews" (Théorie des quatre mouvements et des destinées générales (1808), 61, 253), the emancipation of slaves and Jews having been effected too suddenly. Yet, either because he saw the Jews as a nation or because he wanted them out of France, Fourier became a kind of Zionist. In his last book, La fausse industrie (1836), he no longer gave vent to antisemitic remarks and advocated the reconstitution of the Hebrew nation in Palestine around a model Jewish "phalanstère" – Fourier's own idea, a form of social organization in which goods and services were held in common – financed by Rothschild. However, Fourier's "Zionist" project remained unknown while his antisemitism was taken up by several of his followers, particularly A. *Toussenel. At the time of the Dreyfus case, the Fourierist newspaper edited by Adolphe Alhaïza was virulently antisemitic.

FOUR SPECIES (Heb. ארבעה Миימין, arba‘ah minim), the four different plants which form an obligatory part of the rite of Sukkot according to the biblical commandment "And ye shall take you on the first day [of Sukkot] the fruit of goodly trees, branches of palm trees, and boughs of thick trees, and willows of the brook, and ye shall rejoice before the Lord your God seven days" (Lev. 23:40). "Ye shall dwell in booths for seven days" (Lev. 23:42) is also enjoined. Despite the fact that it would appear that in the time of Nehemiah, the plants in the first verse were regarded as referring to the materials from which the *sukkah (see: Sukkot), mentioned in the second verse, was to be constructed (Neh. 8:15), the traditional interpretation sees it as a commandment separate and distinct from the injunction of the *sukkah.

Two of the species are given explicitly: the "branches of palm trees" are the *lulav, and the "willows of the brook," the aravot. Tradition has universally identified the "fruits of goodly trees" with the *etrog and the "boughs of thick trees" with hadassim ("myrtle"; Suk. 32b–33) but see the remarkable passage in Lev. R. 30:35). The four species are made up of three sprigs of myrtle and two of willow, which are bound to the lulav with strips of palm, the former on the right and the latter on the left of the lulav. They are held in the right hand and the etrog is held separately in the left (Suk. 37b).

During the Temple period the main ceremonial of the four species took place in the Temple. They were taken and waved during the seven days of Sukkot whereas elsewhere, the rite was confined to the first day only (Suk. 312). They were waved in a prescribed manner: toward the east, south, west, north, upward, and downward, in acknowledgment of the divine rule over nature (Suk. 37b). This took place during the recitation of Psalms 118:1–2 and 25 in the Hallel. After the Musaf sacrifice of the day had been offered, the four species were again taken, this time in procession around the altar while Psalms 118:25, or the words ani va-hu hoshi‘ah na, a popular version of that verse, were chanted. On the first six days, only one circuit of the altar was made; on the seventh day, seven circuits. After the destruction of the Temple, *Johanan b. *Zakkai ordained the Temple ceremonial as universal practice “in remembrance of the Temple" (Suk. 312); all the features of the Temple rite were included in the synagogue service (see: Sukkot, *Hoshana Rabbah).

The popularity of the ceremony during the period of the Second Temple is reflected in the fact that Hanukkah was celebrated by the Maccabees as a second Feast of Tabernacles, as well as in the incident in which the vast throng of worshipers in the Temple pelted King Alexander *Yannai with their *etrogim during the festival, in protest against his disregard of the Feast of Water Drawing (see *Sukkot) (Jos., Ant., 13:372; cf. Suk. 4:9). The remarkable hold which the four species had on the sentiments of the people during the Second Temple period, and immediately afterward, is evidenced by the fact that even during the rigors of war, Bar Kokhba took special care to see that his warriors were supplied with them (see Yadin, in *BJPS, 25 (1961), 60–62).

In the Bible no attempt is made to explain the symbolism of the four species. They probably symbolized the fertility of the land as evidenced in the harvest just concluded, and as desired for the coming season, especially with a view to the fact that the rains are due immediately after Sukkot. The Midrash gives a number of moral and homiletic interpretations (see Lev. R. 30:9–12); the most popular (ibid., 30:12) is based...
on the qualities of the four trees. The etrog has both “taste and odor,” the date (palm) only taste, the myrtle only odor, the willow none. “taste and odor” symbolize “Torah and good works”

Another interpretation depends upon the shape of the species. The lulav resembles the spine, the etrog the heart, the myrtle leaves the eye, and the willow leaves the mouth. Therefore one should submit these organs, and all the others, to the service of God, in accordance with Psalms 35:10, “All my bones shall say, Lord, who is like unto Thee” (Lev. R. 30:14). It has also been suggested that the four species represent the four agricultural areas of Israel: the lulav, the lowland; the aravot, the river; the hadassim, the mountains; and the etrog, the irrigated areas. Kabbalistic symbolism interprets the four species in terms of the doctrine of the Sefirot.

[Louis Isaac Rabinowitz]

FOX (Heb. פֶּךְ), the Vulpes vulpes. The biblical name is shu'al, as in the passage: “Take us the foxes, the little foxes that spoil the vineyards” (Song 2:15). The comparison in Ezekiel 13:4 of the false prophets to foxes may be a reference to their craftiness or to their habit of frequenting ruins. Parables about the fox’s cunning are contained in the folklore of various nations; R. Meir is said to have compiled 300 fox fables (Sanh. 38b). The word shu’al however is also used for the jackal, and the other biblical passages in which it occurs, e.g., the one in which Samson is said to have caught 300 shu’alim (Judg. 15:4), probably refer to it. The place-name Shaalbim (Judg. 15:35) or Shaalabbim (Josh. 19:42) is probably the etymology (in the plural) of the Arabic and Akkadian words for “fox,” – thu’lab and selibu, respectively.

[Jehuda Feiliks]

FOX, BERNARD JOSHUA (1885–1978), Northern Irish judge. Born in Belfast, Fox was admitted to the Irish bar in 1914 and was legal adviser to the government of Northern Ireland from 1939 to 1944 when he was given a judgeship as Recorder of Belfast. He was chairman of several government committees including the wartime Price Regulation Committee for Northern Ireland. He retired in 1960.

FOX, CHAIM-LEIB (Fuchs/Fuchs; 1897–1984), Yiddish author and journalist. Born in Lodz, Fox was at the center of its Yiddish literary life, which he described in a number of essays (e.g., “Dos Yidishe Literarishe Lodz” (“Yiddish Literary Lodz”), in: Fun Noenntn Over, 3 (1957), 189–284) and in his monograph Lodzhe Shel Mayle (“Heavenly Lodz,” 1972). During World War I Fox was a labor conscript in Germany. After a brief period in the *Bund, he joined the Labor Zionist move-
FOX (Fuchs), JACOB SAMUEL (1868–1938), journalist and educator. Born in Bialystok, Russia, he obtained his rabbinical diploma at the Berlin Rabbinical Seminary and pursued his secular studies at Berlin and Berne. Turning to journalism, he edited Ha-Maggid he-Hadash (1891–98) and (together with A. Guenzig) Ha-Eshkol (1898–1912). A research trip prompted his final move to England in 1902, after which Fox decided to foster Jewish education in Liverpool by founding a Hebrew higher grade school. He supported the establishment of the British Mizrachi and became principal of Aria College in Brighton. He was author of a monograph on Judah * Ibn Bal'am. His son, ISAAC SOLOMON FOX (1896–1971), practiced as a physician, was mayor of Chester (1932–33) and chairman of the British Zionist Federation (1955–56).

FOX, SIR JOHN JACOB (1874–1944), British chemist. Fox, who was born in London, studied at the Royal College of Science and entered government service in 1896. He was appointed government chemist in 1936 and retained this post until his death. In organic chemistry Fox obtained noteworthy results with hydroxyazo compounds. Later he turned to the application of physical methods to the solution of chemical problems and to analysis. He applied ultraviolet and infrared spectroscopy to the study of elements, and his work on diamonds was monumental. Fox was adept at improving both the procedures and the apparatus for analytical work, a major concern of the government's laboratory during both world wars. He was president of the Institute of Chemistry from 1940 to 1942 and in 1943 was elected a fellow of the Royal Society.

[Samuel Aaron Miller]

FOX, MARVIN (1922–1996), American Jewish educator. Born in Chicago, Fox received his B.A. in philosophy from Northwestern University in 1942, and his M.A. in the same field in 1946, obtained his doctorate from the University of Chicago in 1950, and completed his rabbinic studies at the Hebrew Theological College in that city. He served as a Jewish chaplain in the U.S. Army Air Force during World War II (1942–46). He taught at Ohio State University from 1948 through 1974, rising from instructor to professor of philosophy. He was appointed acting chairman of the department of philosophy from 1963 to 1964. He was a visiting professor of philosophy at the Hebrew University and Bar-Ilan University (1970–71).

In 1974 he was appointed director of the Lown School of Near Eastern and Judaic Studies at Brandeis University, chairman of the department, and in 1976 became the Philip W. Lown Professor of Jewish Philosophy. He was a founder and member of the executive committee of the Institute for Judaism and Contemporary Thought in Israel, a member of the Academic Board of the Melton Research Center of the Jewish Theological Seminary, and a member of the board of directors of the Library of Living Philosophers.

For many years Fox was active in the Hebrew Day School movement in the United States under the aegis of Torah Umesorah.

He received numerous academic awards, lectured widely at universities and at national and international academic conferences, and served as member of the National Endowment for the Humanities National Board of Consultants for new programs at colleges and universities.

A prolific writer, he was a consulting editor of the Journal of the History of Philosophy and was the author of more than 100 articles, which have appeared in scholarly journals, as well as in such general publications as Commentary, Tradition, and Judaism. Among Fox's important works are Kant's Fundamental Principles of the Metaphysics of Morals (1975), Modern Jewish Ethics and Practice (1975), From Ancient Israel to Modern Judaism: Intellect in Quest of Understanding, Volume I (1989), Interpreting Maimonides: Studies in Methodology, Metaphysics, and Moral Philosophy (1994), Collected Essays on Philosophy and on Judaism, Volume One: Greek Philosophy, Maimonides (ed. J. Neusner, published in 2003), Collected Essays on Philosophy and on Judaism, Volume Two: Some Philosophers (2003), and Collected Essays on Philosophy and on Judaism, Volume Three: Ethics, Reflections (2003).

In 1996, Dr. June Fox donated her late husband's book collections to the library of the University of Chicago. The Marvin Fox Memorial Book Collection of Philosophy and Judaica is an invaluable resource on Judaism, secularism, and textual interpretation.

[Ruth Beloff (2nd ed.)]

FOX (Fuchs), WILLIAM (1879–1952), U.S. film producer. Born in Tulchva, Hungary, Fox worked in his youth in New York’s garment center. In 1904 he bought his first nickelodeon, installed a motion picture machine, opened a chain of movie theaters in the U.S. and abroad, and started a career that led him in 1915 to the presidency of Fox Film and Fox Theater Corporations. Dissatisfied with the quality of films distributed, he began to make his own films in a rented barn. In 1917 he built studios in Hollywood. By the 1920s he had created a multimillion-dollar empire that controlled a large portion of the exhibition, distribution, and production of film facilities during the era of silent film. Fox introduced organ accompaniment to the silent films shown in his theaters and was a pioneer in designing movie theaters for the comfort of its patrons. Through a well-orchestrated use of publicity, he developed Theda Bara into the first screen vamp and the first film star. Even during the Great Depression, Fox had the foresight and the wherewithal to outfit more than a thousand theaters with equipment to make possible the advent of talking pictures. In 1927 he developed the first commercially successful sound film, the news series Movietone News.

The stock market crash of 1929 and the entry of Wall Street into the film industry involved him in years of litigation and eventual loss of money and power. Charges of stock manipulation were filed against him in 1932, and he told a Senate subcommittee he was the target of a “bankers’ conspiracy.” He declared bankruptcy in 1936, and in 1942 served five months in prison on charges of obstructing justice in his bankruptcy
claim. The Fox Film Corporation was the antecedent of Twentieth Century Fox.

**BIBLIOGRAPHY:** *Americana Annual* 1953. (1953), 259; J. Laurie, *Vaudeville* (1953), 410–1.

[Lauren Gutstein / Ruth Beloff (2nd ed.)]

**FOXMAN, ABRAHAM** (1940–), Anti-Defamation League (ADL) executive. Born in Poland in 1940, Foxman survived the Holocaust when his parents entrusted him to their Catholic nursemaid, who baptized him and raised him as her own son. After the war, which Foxman’s parents, Helen and Joseph, miraculously survived, they returned to claim him but faced several custody battles, which they ultimately won. Following their safe passage to a Displaced Person’s Camp in the American Zone in Austria, the family eventually moved to the United States in January 1950.

Three imperatives that have shaped his life are the legacy of the Holocaust, particularly his experience as a hidden child, and his belief in the necessity of working to insure the security of the State of Israel and the safety of Jews to live freely as Jews everywhere, especially the United States.

Foxman’s first assignment at the ADL was as assistant director of the Law Department, where he worked under the guidance of the legendary Arnold Forster and the leadership of the late national director Benjamin R. Epstein. His ascension through ADL’s professional staff ranks mirrored the growth of the organization itself. As the first director of national leadership, Foxman created the annual Washington Leadership Conference. He founded and directed ADL’s International Affairs Division, launching an Israel missions program that, at one point, had brought nearly one-third of all members of Congress on their first visit. When Nathan Perlmutter succumbed to cancer in July 1987, Foxman was appointed national director.

Foxman elevated the profile of ADL through a combination of passion, intuition, and intellect. Two seminal and defining events would propel him to a mantle of moral authority: the first was ADL’s response to the virulently antisemitic, anti-Catholic, and anti-white diatribe delivered in November 1993 by the Nation of Islam Lieutenant Khalid Abdul Mohammed. Among other rants, Mohammed wondered what was under the Pope’s skirt, mocking the aging John Paul II and infuriating American Catholics. ADL’s public rebuke of the NOI leader in a full-page *New York Times* ad triggered a hailstorm of condemnation, from the halls of Congress to pulpits across the country. By meeting such hate head-on, Foxman placed ADL on a stage that transcended the perceived boundaries of the organization’s public advocacy.

Shortly thereafter, ADL released its benchmark survey on the growing influence of the Christian right. Titled *The Religious Right: the Assault on Tolerance and Pluralism in America*, this book-length report, intended to be a factual and critical assessment of some of the individuals and groups within the movement and their efforts to chip away at the wall of separation between church and state, was met with near universal hostility from those whom it addressed. Nonetheless, the resulting public hue and cry, and the “summit meetings” that would follow, established Foxman as the linchpin in a major national debate, which continued into the first decade of the 21st century, of the role of religion in American national life.

In 2000, Foxman rebuked Democratic vice presidential candidate Senator Joseph Lieberman, who spoke of the need for religious values in American life, for injecting religion into the public square. Foxman did not repeat this call during the 2004 election, when religion again entered the public square, for he was still regaining his balance after a nearly year-long controversy over Mel Gibson’s controversial film *The Passion of the Christ*. Foxman’s initial private and respectful inquiries to Gibson went unanswered. Instead of following the customary American protocol and meeting with Jewish leaders in the hope of finding common ground, Gibson and his followers turned the tables and accused their accusers of being anti-Christian, a charge reiterated so often on cable television shows, in conservative newspapers, and among web “bloggers” that it became the dominant story. Some in the Jewish community would come to accuse Foxman of generating more interest in the film than it might have otherwise garnered.

[Richard S. Hirschhaut (2nd ed.)]

**FRAENCKEL, LIEPMANN** (1774–1857), miniature painter. Born in Germany, Fraenckel settled in Copenhagen in 1792. During a stay in Sweden from 1802 to 1805 he painted several members of the Swedish nobility. From 1814 he worked for the Danish court painting King Frederick V1 and members of his family. Two hundred miniatures were made before 1830. In 1826 he founded a wallpaper factory, which still exists.

**FRAENKEL** (also Frankel, Fraenckel, Frankl, etc.), family widely scattered throughout Central and Eastern Europe. The name first appears in non-Jewish records as a designation for those who had immigrated to Vienna from “Frankenland,” in the West. The family is traced back to two scholars in the Swabian town of Wallerstein in the 16th century, Moses ha-Levi Heller and Aaron Heller. Moses was the ancestor of Koppel Fraenkel ha-Levi “the rich” of Vienna (see below). Members of the family married into the patrician Teomim (called Munk in non-Jewish sources), Mirels, and Spiro families of Vienna and Prague. The name begins in Jewish use in the late 17th century, and after the expulsion of the Jews from Vienna (1670) is found throughout Central and Eastern Europe.

KOPPEL, FRAENKEL-HA-LEV (d. 1670), born in Baiersdorf, settled in Vienna around 1635 and became the richest man in the community. His sons DAVID ISAAC (Seckel), ISRAEL, and ENOCH (Hoenig) wound up the affairs of the Vienna community after the expulsion of 1670, giving 20,000 florins and the crown jewels of the principality of Moldavia (pawned to Koppel in 1665) as a security for the outstanding Jewish debts. They paid the city 4,000 florins for maintenance of the Jewish cemetery. With good conduct certificates, signed by Leopold I,
they moved to Fuerth, where David Isaac became head of the community. Israel subsequently officiated as rabbi in Holesov, Uhersky Brod, Pinsk, and Wuerzburg. Enoch taught Hebrew to Johann Christoph Wagenseil, and in 1683 sent him a letter stressing the importance of tolerance. Sons of Enoch were the ill-fated Ansbach Court Jews Elkan Fraenkel and his brother Zevi Hirsch. Gabriel and Zacharias Fraenkel, wealthy Court Jews to various south German principalities, resided in Fuerth but were not directly related to the Austrian levite branch. A son of David Isaac, Issachar Berman (d. 1708), became chief rabbi of Schnaaitach, Bavaria, *Landesrabbiner of Ansbach, and rabbi of Brandenburg. Two of his sons, Judah Loeb and Aaron Levi, who published a collection of selihot, settled in Worms, where they and their descendant were prominent in communal life. The most noted of his numerous descendants was the founder of the Breslau seminary, Zacharias *Frankel Isaac Seckel *Fraenkel, the exponent of extreme Reform Judaism, was probably a descendant, as was L.A. *Frankl, the Austrian writer. Members of the family were among the Jews originally expelled from Vienna who settled in Berlin and Brandenburg, one of whom was appointed leader (Obervorsteher) of all the newly arrived Jews. Baermann Fraenkel, another prominent communal leader, was fined 20 talers in 1705 for conducting a too-raucous Purim festival. The most famous of the Berlin Fraenkels was David ben Naphtali Hirsch *Fraenkel, teacher of Moses *Mendelssohn and rabbi of Berlin. His grandson Jonas Fraenckel (1773–1846), a wealthy Breslau merchant and philanthropist, donated the funds for the Breslau seminary. David Fraenkel’s brothers, Abraham and Moses, were partners of V.H. *Ephraim in supplying precious metals to the mint. David ben Moses Fraenkel (d. 1865), director of the Dessau Franzschule and editor of *Salamith, was a grandnephew of David Fraenkel; the wife of Leopold *Zunz was his grandniece. The Fraenkel family belonged to the upper stratum of Jewish society and through intermarriage was connected with numerous scholars and community leaders including Avigdor *Kara, Yom Tov Lippmann *Heller, Jacob *Emden, and Baruch *Fraenkel Teomim. All Jews currently named Fraenkel may be descendants of the original Vienna family, though the exact relationship is no longer traceable.

FRAENKEL, ABRAHAM ADOLF (1891–1965), Israeli mathematician. Born in Munich, Fraenkel received a thorough education in talmudic and Jewish studies in addition to mathematics. He held chairs of mathematics at Marburg (from 1922) and Kiel (1928). From 1929 to 1931 he was visiting professor at the Hebrew University, Jerusalem, and accepted a permanent chair there in 1933. Fraenkel made important contributions to set theory. His publications are listed in Essays on the Foundations of Mathematics Dedicated to A.A. Fraenkel on His Seventieth Birthday, ed. by Y. Bar Hillel (1966).

FRAENKEL, DAVID BEN NAPHTALI HIRSCH (1707–1762), German rabbi and commentator on the Jerusalem Talmud. Fraenkel was born in Berlin. He was descended from the Mirels family that originated in Vienna and was also known as David Mirel. He studied under his father who was a dayyan in Berlin and under Jacob b. Benjamin ha-Kohen *Poppers, author of Shav Yaakov. After living for a time in Hamburg, in 1737 he was appointed rabbi of Dessau, where Moses *Mendelssohn was one of his pupils. In 1739–42 his father Naphtali and his brother Solomon undertook the printing of Maimonides’ Mishneh Torah on his initiative. In 1743 he was appointed chief rabbi of Berlin. Mendelssohn followed him to Berlin and continued to study under him (particularly Maimonides’ Guide of the Perplexed) and also provided for his material needs. In Fraenkel’s letter of appointment it was expressly stipulated that he was not to act as judge or give rulings in cases where members of his family, of whom there was a great number in Berlin, were involved. Fraenkel’s jurisdiction extended to the districts of Brandenburg and Pomerania.

Fraenkel’s main achievement is his commentary to the Jerusalem Talmud which constitutes his life work. It is divided into two parts: the first part, Korban ha-Edah, following Rashī’s commentary to the Babylonian Talmud, is a running commentary aimed at elucidating the plain meaning of the text; the second part, Shirei Korban, in the manner of the tosafot, gives novellae and various notes to reconcile contradictions in the Gemara and correct the errors and inaccuracies that had accumulated in the text. At times his explanations in this commentary differ from those in Korban ha-Edah. The commentary appeared in parts: part one (Dessau, 1743) on Moed, part two (Berlin, 1757) on Nashim, and part three (ibid., 1760–62) on Nezikin. He commenced with Moed because for Zera’im there already existed the commentary of Elijah b. Judah Leib of Pulda published in 1710. His commentary has become one of the two standard commentaries to the Jerusalem Talmud. He wrote Hebrew poems following various events in Prussia – the end of the Silesian wars (1745) and the victory of Prussia in the Seven Years’ War (1757) – and published sermons that were translated, in part by Mendelssohn, into German.

[Yehoshua Horowitz]
FRAENKEL, ELKAN (c. 1655–1720), *Court Jew in Ansbach. His father became rabbi in Fuerth and Bamberg after the expulsion of the Jews from Vienna in 1670. However Elkan antagonized the Fuerth community by advocating the interests of the margrave of Ansbach against the prelate of Bamberg, the traditional guardian of Fuerth Jewry. In 1703, Fraenkel became Court Jew of the margrave displacing the *Model family in this post, who thus became his bitter enemies. In 1704, he became an elder (parnas) of Fuerth and Ansbach Jewry. Although he could exercise magnanimity, reducing a fine of 30,000 florins imposed on the community for usurious practices to 20,000 florins, he was in general despotic and apossed much opposition. In 1712 he was denounced by Essaja (Jesse) Fraenkel, the spendthrift son of a Fuerth printer and a convert to Christianity, and falsely accused of 16 charges including witchcraft, lèse-majesté, debauchery, possession of blasphemous books, and hindering the confiscation of Hebrew books in Fuerth in 1702. He was sentenced to a public whipping and life imprisonment. His possessions were confiscated and his wife and daughter expelled. His brother Zevi Hirsh (d. 1723), appointed Landesrabbiner in 1709, was accused of witchcraft and use of kabbalistic devices to further Elkan’s career. He received the same sentence and died in prison.

FRAENKEL, FAIWEL (Bar Tuviah; 1875–1933), Hebrew author and publicist. He was born in Vasilkov, in the district of Kiev. In 1893 he published his first article on Polish Jewish history in Ha-Meliz. He moved to Kiev, and in 1899 published a Hebrew translation of Pinsker’s Autoemancipation, and a Hebrew translation and adaptation of Edward Bellamy’s Looking Backward titled Be-Od Melah Shannah ("One Hundred Years Hence"). An active socialist, he was forced to leave Russia in 1901. He went to Switzerland, studied at the University of Berne, and received his doctorate in 1906 for his dissertation Buckle und seine Philosophie (Bernar Studien, 1906). He lived in Geneva (1906–12), San Remo (1912–17), and Nice. Bar-Tuviah published many articles in Hebrew literary-scholarly periodicals, including Ha-Dor, Ha-Me’orer, Ha-Olam, Ha-Atid, Ha-Tekyufah, Miklat, and Hadoar. They deal primarily with social science, Jewish studies, and socialist theory. He was the first Hebrew writer to discuss social sciences in depth. In the field of Jewish studies he investigated the economic background of the formation of sects and parties in ancient Israel. His noteworthy contribution to this subject is his unfinished Sefer ha-Nezirim, a two-part history of asceticism among the Jews (1910). His more popular articles took up, in the main, questions of socialism and nationalism, and called for the negation of the Diaspora. His selected writings were published in 1964 by G. Elkoshi, accompanied by an evaluative biographical essay (9–40) and an annotated bibliography (729–808).

FRAENKEL, ISAAC SECKEL (1765–1835), Hebrew translator and banker. Fraenkel, who was born in Parchim, Germany, was self-educated. He acquired extensive knowledge of religious and secular subjects and of ancient and modern languages. In 1798 he moved to Hamburg where he engaged in banking and became one of the community leaders, particularly in its Reform congregation. Together with M.I. *Bresselau, Fraenkel edited a prayer book for the Hamburg Reform Temple (1818), which he defended in a German tract (Schutzschrift des zu Hamburg erschienenen Israelitischen Gebetbuches, 1819) when strong opposition against the new liturgy emerged among the traditionalists. Fraenkel’s main literary project was the translation of the Apocrypha from Greek into Hebrew, entitled Ketuvim Aharonim. This work has frequently been reprinted since its first appearance in Leipzig (1830), its most recent edition appearing in Jerusalem in 1966. A bibliophile edition of the Books of the Maccabees, Sefer ha-Hashmona'im, appeared in Fraenkel’s translation in 1964.

BIBLIOGRAPHY: Kitvei Menahem Mishban ha-Hadashim (1937), 145–58; S. Bernfeld, Toledot ha-Reformayon ha-Datit be-Yisra’el (1923), 72–73 and appendix b (excerpts from the prayer book).

FRAENKEL, JONAS (1879–1965), Swiss literary historian. Fraenkel was born in Cracow, Poland, studied at the Universities of Vienna and Berne, and became a lecturer at the latter in 1908 (professor extraordinary, 1921). He devoted himself to the investigation of German-Swiss literature and was the editor of the works of Gottfried Keller (17 vols., 1926–39). Other Swiss authors who engaged Fraenkel’s attention were C.F. Meyer and his friend Carl Spitteler, whose unpublished works were bequeathed to Fraenkel for publication (Spitteler – Huldigungen und Begegnungen, 1945). In German literature Goethe and Heine were among his chief interests, and he published a new edition of Heine’s poems (3 vols., 1911–13). Several of his essays were collected in Dichtung und Wissenschaft (1954).

FRAENKEL, LEVI BEN SAUL (Schaulsohn; 1761–1815), apostate member of the rabbinical *Fraenkel family. In 1806 he was nominated by the authorities assistant of the *Breslau bet din and Oberlandesrabbiner for Silesia (excluding Breslau), despite local objections. A year later he left the city, address-
ing an open letter to the community in which he acclaimed the French *Sanhedrin, advocated the unification of all religions, and expressed messianic hopes centered around *Napoleon. His letter caused consternation. In the same year in Paris he embraced Catholicism and thereafter wandered throughout Europe, until his death in extreme poverty and neglect in a Jewish hospital in Frankfurt. He wrote a few mystical works.

**FRAENKEL, LOUIS** (1851–1911), Swedish financier. Born in Germany, Fraenkel moved to Stockholm in 1874, where in 1880 he established a successful banking firm. In 1893 he became executive manager of the Stockholm Handelsbank (now Svenska Handelsbanken), which he developed into one of the largest financial institutions in the country. Fraenkel's activity was characterized by the personal manner in which he controlled his bank at a time when bureaucratic methods were becoming increasingly prevalent.

**BIBLIOGRAPHY:** *Svenska män och kvinnor*, 2 (1944).

[Hugo Mauritz Valentin]

**FRAENKEL, OSMOND K.** (1888–1983), U.S. constitutional lawyer. Fraenkel was the general counsel to the American Civil Liberties Union from 1955. He argued cases before the U.S. Supreme Court, seeking protection for political and religious groups, aliens, individuals holding dissident opinions, or persons convicted on the basis of improperly obtained confessions. He assisted in the Scottsboro case in the Alabama and Supreme Court hearings. In 1931 he wrote *The Sacco-Vanzetti Case*, arguing the innocence of the accused and the unfairness of the legal proceedings. He was the author of books on civil liberties, including *The Supreme Court and Civil Liberties* (1941, 1960)*; Our Civil Liberties* (1944); *The Rights We Have* (1971); and *Georgetown Law Journal: Media and the First Amendment in a Free Society* (1973).

**FRAENKEL-TEOMIM, BARUCH BEN JOSHUA EZKIEL FEIWEL** (1760–1828), rabbi in Poland and Morocco. Frankel-Teomim studied under Liber Korngold of Cracow, known as “Liber Haril,” and *David Tevele of Lissa. On the death in 1778 of Naphthali Herz Margolies, the av bet din of Wisznice, he was appointed his successor and served in this office until 1802. In that year he was appointed rabbi of Be'er Sheva; in 1803 he founded a yeshivah which became renowned. Among his pupils were Ezekiel Panet, author of the *Ateret Hakhamim*, and Zalman *Margolioth* (*ibid.*, EH no. 21), and Mordecai *Banet of Nikolsburg.

Fraenkel-Teomim saw his main task in the strengthening of his yeshivah and the education of many pupils. He did not devote himself to the same extent to the writing of books, for fear of dissipating his time. Only individual pamphlets by him are extant. These were written by his pupils, who noted down his novellae and homilies. Among the first to collect his teachings and publish them were his son Joshua Hoeschel and Ḥayyim Halberstamm. They published his *Barukh Tālam* (1841), a selection of his novellae to which Halberstamm added glosses. Fraenkel is often referred to by the name of this book. Among his other works may be mentioned: (1) *Ateret Hakhamim* (1866) in two parts: pt. 1, responsa on the four sections of the Shulhan Arukh; pt. 2, novellae and *pilpulim on talmudic themes; (2) *Margenita de-Rav* (1883; 2nd ed. with additions, 1957), a work on ḥaggadah arranged in the order of the weekly scriptural readings, published by Menahem Eliezer Mahler from a manuscript in the possession of the author's grandchildren; (3) *Barukh she-Amar* (1905, 1966), novellae on many tractates and talmudic themes.

Fraenkel-Teomim left glosses written in the margin of his books of the *rishonim and aharonim*, and there is a list of 53 such works. His numerous glosses on the Shulhan Arukh (*OH*, 1836; *HM*, 1860; *YD*, 1865; *EH*, 1904) under the title *Imrei Barukh* are highly regarded. His glosses to the Babylonian Talmud were published first in the Lemberg edition of the Talmud of 1862 and thereafter in all later editions; to the Jerusalem Talmud in Vilna in 1922; and to the Mishnah under the name *Mishnot Rav* in Lemberg in 1862. His *Derashei Barukh Tālam* (edited by B.S. Schneersohn and E. Hellprin, 1965) contains homilies for the festivals, and eulogies. Other works remain in manuscript.

His responsa and *pilpulim on talmudic themes are based on the rishonim*, and penetrating deeply into their meaning he arrives at the halakhah. Although he indulged in *pilpel*, a simple answer was more important to him than casuistic exercises. Even though he showed himself in his responsa to be a great authority he mentions in various places that he "fears to give directives” (*Ateret Hakhamim*, EH 18, 22). In certain cases he did not wish to rely on his own opinion and sought the consent of other outstanding scholars for his view, stressing: “I am afraid to give expression to new ideas” (*ibid.*, YD 2:224).

[Josef Horovitz]
FRAGA, city in Aragon, N.E. Spain; information concerning Jews there dates to the 13th century. The privileges which the Jews enjoyed, later confirmed by Alfonso V of Aragon (1327–36), include the usual definition of civil rights. The maximum annual tax payable by the community was specified. The Jews were given the right to elect their representatives, who were granted a limited jurisdiction and the right to impose levies for communal purposes. They were permitted to maintain a synagogue, cemetery, and slaughterhouse, and were given the right of defending themselves against attacks. The Jews were promised that their quarter would be protected and its autonomy respected. In the 1380s there were 40 Jewish families living in Fraga. During the 1391 persecutions the synagogue was destroyed; many Jews left the town and others became converted to Christianity. In 1398 Queen Maria ordered 36 former members of the community to return to Fraga within a month, since they had undertaken not to leave without paying their share of the communal taxes. The most prominent member of the Fraga community, the physician and poet Astruc Rimoch, embraced Christianity in 1414 as Francis de Sant Jordi. In September 1414 Ferdinand I ordered a number of converts to pay the tax they owed before their conversion. By 1415 the Jewish community of Fraga had disappeared following the conversion of all its members. In 1436 John II permitted Jews to establish a new settlement in Fraga and Alfonso V promised privileges to Jews who would settle in Fraga. We have some information on the Jews in Fraga in 1451 and 1457 which suggests that the community apparently continued to exist until the expulsion in 1492.

The Jewish quarter was in the Collada, comprising one big street and several small byways leading to it.

FRAM, DAVID (1903–1988), South African Yiddish poet. Born in Panevezys, Lithuania, he was a refugee with his parents in Russia during World War I, and returned to Lithuania in 1921. From 1923 he published poems in the Kaunas Yiddish press and in 1927 immigrated to South Africa, where he issued Lider un Poemes (“Songs and Poems,” Vilna, 1931), nostalgic idylls of Jewish life in Lithuania, as well as South African poems. His later poetry dealt with South African themes, but remained rooted in Lithuanian Jewish tradition: “All the major actors on the South African stage step boldly forward in Fram’s verse” (Sherman). His writings are marked by a deep compassion for the underdog and a sensitive lyrical quality. Outstanding examples are two long 1947 poems, “Efsher” (“Perhaps”), largely autobiographical, and “Dos Letste Kapitl” (“The Last Chapter”), an elegy on his destroyed Lithuanian homeland. Between the wars, Fram was active in Yiddish cultural circles in Johannesburg, a contributor to all Yiddish publications in South Africa, and wrote the libretti for two Yiddish operettas staged in Johannesburg. His later verse is anthologized in A Shvalb oyfn Dakh (“A Swallow on the Roof,” 1984).

Relations with Israel

146 ENCYCLOPAEDIA JUDAICA, Second Edition, Volume 7
This article deals with the history of the Jews living within the territory corresponding to present-day France; the territories beyond the present frontiers (more particularly those of the north and southwest) which were subjected to the authority of the kings of France for short periods are not considered here. The provinces neighboring on the kingdom of France or enclosed within it before their incorporation within the kingdom (in particular *Brittany, Normandy, *Anjou, *Champagne, *Lorraine, *Alsace, *Franche-Comté, *Burgundy, *Savoix, *Dauphiné, the county of *Nice, *Provence, *Comtat Venaissin, *Languedoc, *Auvergne, Guienne, *Poitou) are dealt with. Those areas which formed part of these provinces, but which are today beyond the borders of France, are not included.

From the First Settlements until the Revolution

THE ROMAN AND MEROVINGIAN PERIODS. The earliest evidence of a Jewish presence in France concerns an isolated individual, perhaps accompanied by a few servants; he was *Archeclus, the ethnarch of Judea, who was banished by Augustus in the year 6 C.E. to *Vienne (in the present department of Isère), where he died in 16 C.E. Similarly, his younger brother Herod *Antipas, tetrarch of Galilee and Perea, was exiled to *Lyons (if not to a place also called Lugdunum on the French side of the Pyrenees) by Caligula in 39. A story taken as legend (intended to explain the origin of the prayer Ve-Hu Rahum) states that after the conquest of Jerusalem, the Romans filled three ships with Jewish captives, which arrived in *Bordeaux, *Arles, and Lyons. Recent archaeological findings tend to find a basis for this legend. Objects identified as Jewish because of the menorah portrayed on them have been discovered around Arles (first, fourth, and early fifth centuries), and in Bordeaux and the neighboring region (third and early fourth centuries). Written sources, previously treated with some reserve, affirm that during the Roman period Jews had been present in *Metz (mid-fourth century), *Poitiers (late fourth century), *Avignon (late fourth century), and Arles (mid-fifth century).

Evidence is abundant from 465 onward. There were then Jews in Vannes (Brittany), a few years later in *Clermont-Ferrand and *Narbonne, in *Agde in 506, in *Valence in 524, and in *Orléans in 533. After Clotis 1 (481–511), founder of the Merovingian dynasty, became converted to Catholicism (496), the Christian population increasingly adopted Catholic doctrine. From 574 there were attempts to compel the Jews to accept the prevailing faith. In 576 Bishop *Avitus of Clermont-Ferrand offered the Jews of his town (who numbered over 500) the alternative of baptism or expulsion. His example was followed in 582 by Chilperic 1, king of Neustria (the western part of the Frankish kingdom). In *Marseille, where Jews from both these areas found refuge, there was also an attempt at forced conversion. Little information is available on a similar attempt made by Dagobert 1 between 631 and 639; had this been successful, the Jews would have been excluded from almost the whole of present-day France. However, this seems to have been far from the case; though documents make no mention of Jews for some time, there is a similar lack of information about other social and ethnic groups. Little is known of the Jews of Septimania (in southwest Gaul, then a Spanish province). The Jews there were spared the forced conversions and subsequent violent persecutions which befell their coreligionists in Visigothic *Spain.

During this period the number of Jews in France increased rapidly, initially through immigration, first from Italy and the eastern part of the Roman Empire and then from Spain, especially after Sisebut’s persecutions, which began in 612. However, the increase in numbers was also due to Jewish proselytism, which found adherents mostly among the poorest classes and in particular among slaves.

At that time the Jews were mainly engaged in commerce, but there were already physicians and even sailors. In the absence of written Jewish sources, archaeological evidence once more provides information on the France of this early period. On a seal from Avignon (fourth century) the menorah is reproduced, although only with five branches. The same motif appears on the inscription of Narbonne (687/8), which also points to a scanty knowledge of Hebrew at the time; the whole text is in Latin with the exception of three words, Shalom al Yisrael, which are incorrectly spelled. Nothing at all is known of the internal organization of these Jewish groups, except for the presence of synagogues (*Paris 582; Orléans before 585), but it is known that there were contacts between them. The Marseilles community maintained relations with those of Clermont-Ferrand and Paris and even, beyond the borders, with that of Rome.

In spite of the attempts at forced conversion, relations between the Jewish and Christian populations seem to have been free, a state of affairs demonstrated by the repeated efforts of the church authorities to prohibit these relations. The main prohibition, frequently repeated, was on Jews and Christians taking meals together (Vannes, 465; Agde, 506; Épome, 517; etc.); another, aimed at separating the population further, forbade the Jews to go out-of-doors during the Easter holidays (Orléans, 538; Mâcon, 583; etc.); and finally – a measure designed to prevent Jewish proselytism – possession of not only Christian but also pagan slaves by the Jews was restricted or forbidden (Orléans, 541; Clichy, 626 or 627; etc.). Further, though at first sight negative, proof of good relations between Christians and Jews is provided by the frequent religious *disputations, discussions which were characterized by the great freedom in argument accorded to the Jews (particularly between King Chilperic 1 (561–84) and his Jewish purveyor *Priscus, 581). Another positive testimony – though this may be largely a pious invention – is to be found in the participation of the Jews in the obsequies of church dignitaries (Arles, 459 and 543; Clermont-Ferrand, 554).

FROM THE CAROLINGIANS UNTIL THE EVE OF THE FIRST CRUSADE. The reign of the Carolingians was the most favorable period for the Jews in the kingdom of France. *Agobard’s attempted forced conversion of Jewish children in Lyons and
Main Jewish communities in France in the Middle Ages and in the latter 20th century. Insert shows detail of region surrounding Paris.
the district around 820 brought the bishop into disfavor with Louis the Pious (814–840).

The important Jewish settlement in the Rhone Valley, which had been in existence during the Roman and Merovingian periods, increased and expanded through the Saône Valley. Continued immigration from Italy and Spain was a source of demographic growth, as was proselytism affecting also the higher social classes; the best-known example is *Bodo, deacon of Louis the Pious, who converted to Judaism in Muslim Spain. From the second half of the tenth century and, at the latest, from the second half of the 11th century, there was also a trend toward migration to England.

The most intensive economic activity of the Jews of France, especially in the commercial field, belongs to this period. Some were accredited purveyors to the imperial court and others administered the affairs of Catholic religious institutions. Privileges granted to the Jews by the Carolingian emperors became the model for those coveted by other merchants. Their great concentration in agriculture and especially viticulture enabled them practically to monopolize the market; even the wine for Mass was bought from Jews. The few cases of moneylending known from this period were in fact connected with this agricultural activity; they were related to deferred purchases of agricultural estates intended to round off existing Jewish estates. In view of the wealth of general information available on the Jews of this period, the paucity of evidence concerning physicians suggests that there was a great decrease in the interest of this profession. In the public services, Jews were employed both in the subordinate position of tax collector and in the most respected office of imperial ambassador (*Isaac for *Charlemagne; Judah for Charles the Bald).

The personal privileges and ordinances granted by the Carolingians assured the Jews complete judicial equality. Moreover, any attempt to entice away their pagan slaves by converting them to Catholicism was penalized; their right to employ salaried Christian personnel was explicitly guaranteed; any offense against their persons or property was punishable by enormous fines. Even more, the Jews enjoyed a preferential status, because they were not subjected to the ordeals ("judgments of God") which normally formed part of the judicial process. An imperial official, the *magister Judaeorum, who ranked among the *missi dominici, supervised the meticulous enforcement of all these privileges.

The activities of the church councils had little effect during this period. The Councils of Meaux and Paris (845–6) sought to legislate on the subject of the Jews, and a series of hostile canons concerning them were drawn up; these were in fact a kind of canonical collection and the work of *Amulo, Agobard's successor to the see of Lyons, and the deacon *Florus of Lyons, faithful secretary of both bishops. However, Charles the Bald (840–77) refused to ratify these canons. Another center of intensive Jewish settlement and powerful anti-Jewish reaction was *Chartres, where at the beginning of the 11th century, Bishop *Fulbert delivered a series of sermons to refute the Jewish assertion that, since there might yet be Jewish kings in distant lands, the Messiah had not yet come. Toward the close of the same century, *Ivo of Chartres inserted a series of violently anti-Jewish texts in his canonical collection. All of these, however, precisely by their concern to combat Jewish influences on the Christian faithful, emphasize the cordiality of the relations prevailing between Jews and Christians.

The so-called "Carolingian Renaissance" in the intellectual sphere had no counterpart on the Jewish scene, but strangely enough, subsequent tradition also attributes the impetus of Jewish learning in the West to Charlemagne (768–814). Just as he actually brought scholarly Irish monks to France, he is said to have brought the Jewish scholar Machir from Babylon. What is known of Hebrew works circulating in France derives from the testimony of Agobard, but, being a polemist, he mentions only those works he criticizes: a very ancient version of *Toledot Yeshu, a parody of the Gospels, and *Shi‘ur Komah, a mystic work. The real upsurge of Jewish learning in France began during the 11th century. In the middle of the century, Joseph b. Samuel *Bonfils (Tov Elem) was active in Limoges, Moses ha-Darshan in Narbonne, and, a little later, *Rashi in Troyes. From the outset, the scholars’ works comprised the principal fields of Jewish learning: liturgic poetry, biblical and talmudic commentaries, rabbinic decisions, grammar, and philology. The glory of Limoges and central France in general was shortlived, but Narbonne and Troyes heralded the great schools of Jewish scholars in both the extreme south and the extreme north of the country. The radical change in the situation resulted from the general upheaval which swept across the Christian West from the beginning of the 11th century and paved the way for the Crusades. Two local persecutions, in *Limoges at the end of the tenth and in the early 11th century, may be connected with the general persecution which raged through France from 1007 for at least five years. Launched by the clergy, it was rapidly supported by King Robert II the Pious (996–1031), then propagated by the general Christian population. The pretext for the riots was the accusation that the Jews of Orléans had joined in a plot against Christians with Sultan al-Hākim, who had indeed destroyed the Church of the Holy Sepulcher in Jerusalem. Thus the object of universal hatred, the Jews of France were then, if the sources are correct, either expelled from the towns, put to the sword, drowned in the rivers, or put to death in some other fashion, the only exceptions being those who accepted baptism. When one of the Jewish notables of France, Jacob b. Jekuthiel, intervened with Pope John XVIII (1004–09), the latter sent a legate to France to put a stop to the persecutions. Those Jews who had been forced to accept baptism immediately returned to Judaism. A similar situation arose in 1063: the “Spanish crusaders,” who had set out to fight the Muslims, began by persecuting the Jews of southern France. On this occasion, however, they met with the opposition of the princes and the bishops, who were congratulated by Pope *Alexander II for their stand.
FROM THE FIRST CRUSADE UNTIL THE GENERAL EXPULSION FROM PROVENCE (1096–1501). The First Crusade (1096–99) had little immediate effect on the situation of the Jews, but it was in France that the first murderous persecutions occurred, accompanied by forced conversions in *Rouen and Metz (but not in southern France, as some scholars have asserted recently). Although the brunt of the brutalities was borne by the Jews of Germany, it was in Rouen that the crusaders justified their persecutions of the Jews: “If it is our desire [so they said] to attack the enemies of God after having covered lengthy distances toward the Orient while before our eyes we have the Jews, a nation whose enmity to God is unequalled, we will then follow a path which leads us backward.” The first written legal act of a king of France which is extant is *Louis vii’s decree of 1144 in which he banished from his kingdom those Jews who had been converted to Christianity and later returned to Judaism, that is those who – from the Christian point of view – had “relapsed into heresy.” The Second Crusade (1147–49) gave rise to a controversy between *Bernard of Clairvaux and *Peter of Cluny on the question of the Jews; although they were spared the confiscation of all their belongings, as the abbot of Cluny had recommended in order to finance this expedition, they were nevertheless compelled to make a considerable financial contribution.

France’s first *blood libel occurred in *Blois in 1171, when 31 Jews – men, women, and children – were burned at the stake after a parody of a trial, and in spite of the fact that not even a body was produced as proof of the murder. A series of similar accusations followed in Loches, *Pontoise, Joinville, and Épernay. Although Louis vii declared to the leaders of the Jewish community of Paris when he appealed to him that he regarded the ritual murder accusation as pure invention and promised to prevent the renewed outbreaks of similar persecutions, popular rumors continued to indict the Jews. According to his biographer, King *Philip Augustus (1180–1223), when only six years old, learned from his playmates that the Jews were in the habit of killing Christian children. The hatred thus nurtured prevailed, and he acted upon it soon after his accession to the throne. In 1181 he had all the wealthy Jews of Paris thrown into prison and freed them only in return for a huge ransom. In the following year (1182) he decreed their expulsion from the kingdom and the confiscation of their real estate. If the number of Jews affected by this measure was comparatively small, this was the result of the small size of the actual kingdom of France and the lack of royal authority over the nobles of the neighboring provinces, where the exiles found immediate refuge. Such a haven, however, was not always safe from the tenacious hatred of the king of France. Thus, in 1190, he pursued the Jews in Champagne (in *Bray-sur-Seine or in Brie-Comte-Robert) and exterminated a whole community which had the temerity to condemn one of his subjects to death for assassinating a Jew.

Driven by financial considerations, Philip Augustus authorized the return of the Jews to his kingdom in 1198, extorting from them what profit he could. Possibly another concern was also involved: from 1182 Philip Augustus had considerably expanded his territory. In all the lands incorporated within the kingdom, he found Jews living among a population which raised no objection to their presence, and he might have seriously angered the populace by expelling the Jews. Since he tolerated the Jews in the newly acquired parts of his kingdom, their banishment from its heart was no longer justified. Two months after their readmission, the king reached an agreement with Thibaut ii, count of Champagne, on the division of their respective rights over the Jews living in their territories.

The Third Crusade (1189–92), which had such grave consequences for the Jews of England, did not affect those of France, but the crusade against the *Albigenses in southern France also spelled ruin to the Jewish communities. That of *Béziers, in particular, mourned many victims when the town was taken in 1209; the survivors crossed the Pyrenees and re-established their community in *Gerona.

During the reign of *Louis ix (1226–70), severe anti-Jewish persecutions took place in 1236 in the western provinces, in Brittany, Anjou, and Poitou, which were not subject to the direct authority of the monarch. In 1240 Duke Jean le Roux expelled the Jews from Brittany. During the same year the famous disputation on the Talmud took place in Paris. Properly speaking, it was a trial of the Talmud inspired by a bull issued by *Gregory ix in 1239. The verdict had already been given in advance: the Talmud was to be destroyed by fire, a sentence which was carried out in 1242. In Dauphiné, which was still independent of the kingdom, ten Jews were burned at the stake in *Valrées in 1247 following a blood libel. Anti-Jewish agitation which resulted in the imprisonment of Jews and the confiscation of their belongings spread to several places in Dauphiné. There is no reason to believe that Louis ix had intended to expel the Jews or that he had even issued an order to this effect. Yet his brother, *Alphonse of Poitiers, to whom the king had ceded the government of several provinces, ordered the expulsion of the Jews from Poitou in July 1249. However, the order was not rigorously applied or it took effect for a brief period only. Nevertheless, the territory governed by Alphonse was the scene of the first local expulsion: from Moissac in 1271. Louis ix and Alphonse of Poitiers railed one another in their brutal methods of extorting money from the Jews. The king, ostentatiously scrupulous of benefiting from money earned through the sin of usury, dedicated it to the financing of the Crusade. With the same pious motive Alphonse of Poitiers incarcerated all the Jews of his provinces so that he could lay his hands on their possessions with greater ease. *Philip iii the Bold, who reigned from 1270, was responsible for a widespread migration of the Jews when he forbade them, in 1283, to live in the small rural localities. The accession of *Philip iv the Fair (1285) was ushered in by the massacre of *Troyes, once more following on a blood libel; several notables of the community were condemned and burned at the stake in 1288. In 1289, first *Gascony (which was an English possession) and then Anjou (governed by the brother of the king of France)
expelled the Jews. In 1291, Philip the Fair hastily published an ordinance prohibiting the Jews expelled from Gascony and England from settling in France.

Although Philip the Fair denied the clergy in general (1288) and the inquisitors in particular (1302) any judicial rights over the Jews, this was not the better to protect them but merely because he objected to sharing his authority in any way. It was therefore probably royal judges who tried the first "host desecration" cases brought against several Jews of Paris in 1290. In order to guarantee the greatest financial gain from the expulsion order of 1306, Philip the Fair issued oral instructions only. After the imprisonment of all the Jews (July 22, 1306) and the seizure of their belongings, numerous written ordinances were issued by the royal chancellery in order to secure for the king, if possible, the sum total of the spoils. Over this very question of the Jews, the resurgent royal authority was revealed; indeed, the expulsion order won the successive support of an ever-growing number of lords until its provisions even spread to the territories of those lords who had not been consulted. As well as in the provinces which still evaded royal authority – Lorraine, Alsace, Franche-Comté, Savoy, Dauphiné, Provence with the principality of "Orange and Comtat Venaissin, the counties of "Rousillion and Cerdagne (Cerdagne) – the Jews banished from France found asylum in the present territories of Belgium, Germany, Italy, and Spain. Philip the Fair granted safe-conducts to a number of Jews to enable them to stay in his kingdom or return to it; they were to assist him in collecting the debts which had been seized. In 1311 they too were "permanently" expelled. Although the expulsion itself encountered scarcely any objections on the part of the lords, this was far from the case when the king tried to seize all the booty for himself: bitter disagreements often followed, as in Montpellier.

The recovery of all the spoils was still far from complete when *Louis X the Quarreler (1314–16), son and successor of Philip the Fair, considered allowing the Jews to return (May 17, 1315), which actually came into effect before July 28, 1315. A decree of that date, repudiating the "evil advisers" who had incited his father to expel the Jews and justifying Louis' decision to recall them because of the "general clamor of the people," defined the conditions of Jewish residence for a 12-year period. Under Philip the Tall (1316–22) anti-Jewish massacres were perpetrated by the "Pastoureaux in 1320, and the Jews of "Toulouse and areas to the west of the town suffered heavily. There the king, his officers, and the church authorities combined in efforts to suppress the movement, principally because it was a serious threat to the social order. Populace against lepers spread to the Jews in several places in 1321, particularly in "Tours, "Chinon, and Bourges (or elsewhere in Berry). Without even a legal pretext, Jews were put to death in all these places, 160 in Chinon alone. As well as the confiscation of the belongings of the Jews thus "brought to justice," an immense fine was imposed on the whole of French Jewry. The expulsion – no text of the decree ordaining it remains – took place between April 7 and Aug. 27, 1322.

In 1338 and 1347 over 25 Jewish communities of Alsace were the victims of persecutions which were limited to the eastern regions. On the other hand, the massacres connected with the "Black Death (1348 and 1349), struck Jewish communities throughout the eastern and southeastern regions, notably in Provence, Savoy, Dauphiné, Franche-Comté, and Alsace. It was only due to the intervention of the pope that the Jews of Avignon and Comtat Venaissin were spared a similar fate. In Franche-Comté, after they had been accused of spreading the plague, the Jews were imprisoned for long periods and their possessions confiscated; they were expelled in 1349, although they reappeared there at the latest in 1355. In that same year Dauphiné was practically incorporated within the kingdom of France, yet the Jews of this province continued to enjoy their former freedoms and immunities.

The crown never revealed the financial motive behind the readmission of the Jews so bluntly as in 1359. *Charles V (1364–80), regent for his father John II the Good who was held prisoner in England, then authorized their return for a period of 20 years simply in order to use the taxes to enable him to pay his father's ransom. Following the example of Louis the Quarreler, he allowed the Jews to reside in France for limited periods only, although in his case the residence periods which had been granted were more faithfully abided by. In 1360 John the Good (1350–64) ratified the authorization granted by his son.

When Charles v succeeded to the throne, he confirmed, in May 1364, the 20 years which were initially granted and prolonged the period by six years, then by a further ten years in October 1374. When *Charles VI (1380–1422) took over the government himself, in February 1388 and March 1389, he ratified the prolongations granted by Charles v; he did not ratify either the five or the six years accorded by Louis of Anjou, acting as regent for him (1380–88). Thus, after the decree of Sept. 17, 1394, stipulating that thenceforward the Jews would no longer be tolerated in the kingdom of France, the departure of the Jews became effective in 1395 (between January 15 and March 18), 36 years after the first concession for a new residence period granted by Charles v. Properly speaking, this was not actually an expulsion but rather a refusal to renew the right of residence. However, obviously it resulted in the departure of the Jews from the kingdom of France.

From 1380 the Jews were the victims of bloody persecutions, which followed in the wake of popular risings in several towns of the kingdom, especially in Paris and Nantes. There was a similar occurrence in 1382. Although the king exempted the Jews from returning the pawns which had been stolen from them on this occasion, he also granted a hasty pardon to the rioters. In 1389 the king allowed the town of Eyrieu the right of deciding for itself whether it would admit the Jews or not; although such a prerogative was subsequently granted to the towns of Alsace in general, this was at that time an exception within the kingdom. There was, however, no reason to regard this as a harbinger of the forthcoming generalized departure of the Jews. On the contrary, as late as July 15, 1394,
the king issued a reasonably favorable decree to the Jews of Languedoc. When Charles V terminated the residence of the Jews in his kingdom on September 17, he claimed that there had been “several grave complaints and outcries” concerning “the excesses and misdemeanors which the said Jews had committed and they continued to act in this manner every day against the Christians.” He added that investigations had confirmed that the Jews had “committed and perpetrated several crimes, excesses, and offenses,” particularly against the Christian faith, but such a justification for his action does not seem plausible. However, on this occasion there was no financial motive behind the expulsion, for it was not accompanied by confiscations. The move therefore remains inexplicable. This time the Jews of Franche-Comté shared the fate of their brothers in the kingdom, although the province did not then belong to the king of France.

From the second half of the 14th century, the voluntary movement of Jews from Dauphiné assumed ever greater proportions. The dauphin attempted to coax them back by offering fiscal advantages, but without success. By the early 16th century no more Jews lived in Dauphiné. In Savoy the situation of the Jews deteriorated throughout the 15th century: Jewish books were seized in 1417; there was a local expulsion from Châtillon-les-Dombes in 1429, a bloody persecution in 1466, and a general expulsion decree in 1492. In Provence, the greater part of the 15th century, especially during the reign of René I the Good (1431–80), was a favorable period for the Jews, aside from a few local incidents, for example in Aix-en-Provence in 1430. Conditions changed from 1475 on when, for the first time since the Black Death, there were anti-Jewish outbreaks in several places. Between 1484 and 1486 attacks against the Jews occurred in numerous localities (notably in Aix, Marseilles, and Arles). After Provence was incorporated in France (1481), town after town demanded the expulsion of the Jews until the last remaining Jews were hit by a general expulsion order in 1498 which was completely enforced by 1501. There were therefore practically no Jews left within the present borders of France, with the exception of Alsace and Lorraine, Avignon, Comtat Venaissin, and the county of Nice.

**The Communities in Medieval France.** Benjamin of Tudela records valuable details on the southern communities of the third quarter of the 12th century. According to his figures – confirmed for Narbonne by other contemporary sources – in six communities there were 1,240 heads of families, that is more than 6,000 souls. Another document of the same period, the list of the martyrs of *Blois, list of the very few souls there were about 30 families or about 150 souls in this community, which would have been totally unknown if it had not been for the tragedy which befell it. The greatest number and widest dispersion of Jews in France was attained during the third quarter of the 13th century. There were about 150 localities inhabited by Jews in Île-de-France and Champagne, about 50 in the duchy of Burgundy, about 30 in Barrois – in spite of its small area – and many others. From 1283, as a result of the prohibition on residing in small places, the communities in the towns grew larger. The total number of Jews continued to increase, and some have estimated that about 100,000 Jews were affected by the expulsion of 1306. Migration resulting from this banishment and the losses during the Black Death – both by the plague itself and in the persecutions which it sparked off – considerably reduced the Jewish population until the middle of the 14th century. There was a slight increase from then on, especially after the authorization to return in 1359. However, after the 1394/95 expulsion from the kingdom of France and the subsequent expulsions from the other provinces or voluntary departures due to hostile pressure combined with ever greater fiscal extortions, only about 25,000 Jews at the most remained during the 15th century. By 1501 they numbered a few thousand only. If Catholic missionary activity did achieve some tangible results – due mostly to coercion if not outright violence – this was the least factor in the demographic decline of the Jewish community.

From the 12th century onward, moneylending became increasingly prominent as a Jewish occupation. It was particularly pronounced – to the point of being sometimes their sole activity – in the places where the Jews settled at a later date or after the readmissions to the kingdom of France. In the main, these were private loans, with a multitude of creditors and a small turnover. In the east and southeast the Jews were principally traders in agricultural produce and livestock. Throughout the south, particularly in Provence, there were a relatively large number of physicians who, in addition to practicing among Jews, were sometimes also appointed by the towns to take care of the Christian population. The agriculture, and especially viticulture, subsisting mainly outside the kingdom, supplied the needs of the Jewish population and only exceptionally the general market. Petty public officials, watchmen, toll-gatherers, etc., were found especially in the south, but rarely after the 13th century (one of the few exceptions was the principality of Orange). Halfway between commerce and public office was the activity of broker, often found in Provence.

The regulations of the Fourth *Lateran Council (1215), interpreted as the compulsory wearing of the Jewish *badge, were at first imposed in Languedoc, Normandy, and Provence (by councils held in 1227, 1231, and 1234); a royal decree enforcing this in the kingdom of France was not promulgated until 1269. However, compulsory residence in a Jewish quarter dates from 1294 in the kingdom of France, although only from the end of the first half of the 14th century in Provence. Although the French crown often sought to protect the Jews from Church jurisdiction – especially that of the inquisitors – it imposed the legal disabilities or measures of social segregation which had been first advocated by the church itself. Following the example of the *magister Judaeorum of the Carolingian period, “guardians” of the Jews were often appointed; in the kingdom of France there was one for the Languedoc and another for the Langue d’Oïl which included approximately the regions situated to the north of the River Loire. Their au-
authority extended to all legal suits in which Jews were one of the parties. Jewish internal jurisdiction was increasingly limited; thus in Provence even simple administrative matters in the synagogue were brought before the public tribunal. A special form of oath (see *Oath, more judaico) was laid down for Jews who were witnesses or parties to a trial.

In the 13th century Christian polemical writings increased considerably: in practice Judeo-Christian disputations were relatively free and still quite frequent. After early warnings, followed by the explicit church prohibition on the participation of laymen in such discussions, they became increasingly rare. The Jews lost none of their sharpness in these confrontations: the most outstanding examples are the Sefer ha-Me-kanne and the polemic treatise which goaded *Nicholas of Lyra into a reply.

The Jewish communities organized themselves with increasing efficiency. Although the earliest confirmation of internal statutes dates from 1413 (Avignon), these were certainly current practice long before then. As well as these statutes—which regulated internal administration through elected officials (actual power lay in the hands of the wealthiest), financial contributions toward communal expenses, and religious obligations—sumptuary regulations were often laid down, intended to limit the ostentatious display of riches. The first synods (gatherings of communal representatives) are known from the middle of the 12th century. At the synod of Troyes in 1150, the representatives of the French communities were joined by officials from German communities. The 1160 synod, also held in Troyes, convened only representatives from the kingdom of France, Normandy, and Poitou. Therefore it is evident that this was not a firmly established institution convened at regular intervals. If, as seems apparent, these synods normally involved the attendance only of communities directly concerned, it is astonishing that the synod of *Saint-Gilles (1215) convened the representatives of the communities between Narbonne and Marseilles only to discuss a problem of the greatest importance for the whole of Jewry living in Christian countries: how to prevent the promulgation of the projected anti-Jewish canons by the Fourth Lateran Council. With the proliferation and increase of Jewish taxes, the civil authorities rapidly realized that a Jewish inter-communal organization covering the area under their authority served their interests; it became the task of this organization to assess their interests; it became the task of this organization to assess and to collect all the taxes levied on the Jews. Although some communities tried to make use of this arrangement to reach a direct, and more advantageous, agreement with the authorities, when misfortune struck an isolated community, others often spontaneously revealed their active solidarity. Thus, at the time of the tragedy of Blois, the communities of Orléans and Paris brought relief to the persecuted.

Scholarship in the Middle Ages. The leading centers of Jewish scholarship were found in Île-de-France (principally Paris, then *Dreux, *Melun, Pontoise, *Corbeil, Coucy-le-Château, and Chartres) and in Champagne (led by Troyes, then *Dampierre-sur-Aube, *Vitry-le-Brulé, *Joigny-sur-Yonne, Joinville, *Château-Thierry, and *Ramerupt); there was also a concentration of centers of learning in the Loire Valley (Orléans, Tours, and Chinon). As well as this, there were a number of schools in Languedoc (headed by Narbonne, then Argentière, *Beaucaire, *Béziers, Lattes, *Lunel, *Montpellier, *Nîmes, *Posquières, *Capestang, and *Carcassonne) and in Provence (with Arles, Trinquetaille, and Marseilles, then Salon and Aix-en-Provence). A few other provinces were also active, though on a much more modest scale; in the wake of Île-de-France came Normandy (with *Evreux and *Falaise and possibly also Rouen) and Brittany (Clisson); in the wake of Champagne, Burgundy (with *Dijon); following Provence, Comtat Venaissin (with Montceux and *Carpentras), as well as Orange and Avignon; and after Languedoc, Roussillon (with *Perpignan). Lorraine (with *Verdun, *Toul, and Metz) and Alsace (with *Strasbourg and *Sélestat) assured a link between northern France and the Rheneland. By contrast, Dauphiné (with only Vienne), and especially Franche-Comté and Savoy, hardly played any part in this intellectual ferment.

The north was principally the home of talmudic and biblical commentaries, anti-Christian polemics, and liturgical poetry. In the south scholarly activities extended to grammatical, linguistic, philosophical, and scientific studies, and innumerable translations (mostly from Arabic, but also from Latin). Of particular importance were the mystic circles which gave an impetus to the kabbalist movement. Both north and south produced decorated and even richly illuminated manuscripts.

From the Expulsion from Provence to the Eve of the Revolution. As soon as the Jews had left the southeast or been converted to Christianity and thus become permanently absorbed within the general population, the southwest witnessed the arrival of secret Jews, the "Conversos. From 1550, these "Portuguese merchants" or "New Christians" were granted letters patent by Henry II, who authorized them to live in France "wherever they desired." They settled mainly in Bordeaux and in Saint-Esprit, near *Bayonne. They were subsequently to be found in small places nearby: *Peyrehorade, *Bidache, and Labastide-Clairence, and toward the north in La *Rochelle, Nantes, and Rouen. However, of all the Marranos who arrived in France from the beginning of the 16th century, only a tiny minority remained faithful to Judaism. Since they sought to evade detection by externally practicing Catholicism while maintaining their Iberian language and customs, they were suspected in Bordeaux in 1596 of attempting to deliver the town into the hands of the Spaniards, and in 1625 their possessions were confiscated as a reprisal for the confiscation of French belongings by the king of Spain. They were also subjected to particularly severe taxes, which rose to 100,000 livres in 1723 in exchange for new letters patent; for the first time these recognized them as Jews, although they did not grant them the right to practice their religion openly. The Jews of Comtat Venaissin had taken in some Spanish refugees on a
temporary basis only, as was the case with the parents of *Joseph ha-Kohen, the author of Emek ha-Bakha, who was born in Avignon but lived there only during his early years. The communities of Comtat Venaissin were themselves threatened with expulsion on several occasions. These decrees were not finally enforced, but the Jews were nevertheless compelled to leave all towns in the Comtat with the exception of Avignon, Carpentras, *Cavaillon, and *L’Isle-sur-la-Sorgue. Even there, the quarters assigned to them were constantly reduced in area so as to limit the Jewish population.

Jews seem to have lived in Lorraine without interruption although in small numbers only. After the French crown had occupied the region, progressively greater facilities were offered to the Jews to induce them to settle there. From three families in Metz in 1656, their number increased to 96 families in 1657. In the meantime, as a result of the Treaty of Westphalia (1648), the three towns and bishoprics of Metz, Toul, and Verdun were formally ceded to France. Although theoretically the expulsion order against the Jews of the kingdom still remained in force – and it was even reiterated in 1658 – the Jews in those parts of Lorraine which had become French were allowed to remain.

This was the first time since 1394 that Jews found themselves legally living in the kingdom of France. However, they were still confined to the town, or at best to the province, in which they lived. Considerable areas of Alsace were also incorporated within the kingdom of France by the Treaty of Westphalia. There also a firmly established Jewish population was not put in jeopardy by the new French administration; on the contrary, it was more effectively protected than in the past. In 1651, Jews from Holland settled in *Charleville, which belonged to the Gonzaga dukes (they had already admitted Dutch Jews for the first time from 1609 to 1635). Jews fleeing from the *Chmielnicki massacres in the Ukraine and Poland in 1648 arrived in Alsace and Lorraine. The general demographic decline which was a result of the Thirty Years’ War (1618–48) explains the tolerance they encountered. Jews also arrived in the extreme southeast of France, where the duke of Savoy, to whom the county of Nice belonged, issued in 1648 an edict making Nice and *Villefranche de-Conflent free ports. Once more this was an indirect result of the Thirty Years’ War, a search for an effective method of filling the economic vacuum it had created. Jews from Italy and North Africa immediately profited from the settlement facilities offered by this edict, strengthening the old Jewish community which had existed without interruption from the Middle Ages. However, Italian Jews who hoped to benefit from the apparently similar facilities offered in Marseilles by the edict of *Louis XIV in 1669 were disappointed; they were compelled to leave after a few years.

From the 17th century, the Jews of Avignon and Comtat Venaissin extended their commercial activity: besides frequenting the fairs and markets, mainly in Languedoc and Provence, they also attempted to remain in those towns and even to settle there. Following complaints from local merchants, the stewards of the king intervened on every occasion to remove them and restrict their presence at the fairs and markets as much as possible. With greater success, some Jews of Avignon and Comtat Venaissin – soon followed by Jews of Alsace – exploited the facilities granted to the “Portuguese” Jews, and from the beginning of the 18th century settled in Bordeaux. There they traded in the town or its environs, principally in textiles and to a lesser degree in livestock and old clothes.

From the beginning of the 18th century, some Jews began to settle in Paris, arriving not only from Alsace, Metz, and Lorraine, from Bordeaux, and from Avignon and Comtat Venaissin, but also from beyond the borders of France, mainly Germany and Holland. They were tolerated in Paris but no more. Even though they had benefited from most civil rights in their provinces of origin, they enjoyed no such privileges in the capital. In theory, if a Jew died in Paris his estate was confiscated in favor of the king and his burial had to be quasi-clandestine. In order to protect their rights and, initially, to obtain their own cemeteries, the Jews organized themselves into two distinct groups: southern Jews from Bordeaux, Avignon, and Comtat Venaissin, and Ashkenazim from Alsace, Lorraine, and a few other places. This was an early manifestation of the split which was later evident during the struggle for emancipation and afterward.

Just before the whole of Lorraine became part of France (1766), the request of some Jews of Lorraine to be admitted to the guilds gave rise to a lawsuit in which the advocate of Nancy, Pierre Louis de Lacetelle (1756–1824), called for their recognition as Frenchmen with rights equal to those of other citizens (1775). Although this suit was lost, nevertheless it left a powerful impression on the public who, from the beginning of the century, had become aware of the Jewish problem through the pronouncements of the great thinkers of the century, beginning with *Montesquieu. In 1781, Herz *Cerf, the representative of the Jews of Alsace, had the work of Christian Wilhelm von *Dohm (1751–1820), Ueber die bürgerliche Verbesserung der Juden (“On the Civic Amelioration of the Jews”), translated into French. The first concrete result was Louis XVI’s edict, drawn up in 1783 and published in January 1784, abolishing the humiliating “body tax” which for centuries had likened the Jews to cattle. In 1785 a competition by the Metz Société Royale des Arts et Sciences on the subject “Is there any way of rendering the Jews more useful and happier in France?” reflected this new trend of opinion, while strengthening it even further. The competition was initiated by P.L. *Roederer, a member of the parlement of Metz, and the best answers were submitted by the royal librarian Zalkind *Hourwitz (who defined himself as a “Polish Jew”), the advocate Thierry, and Abbé *Grégoire. Finally, in 1788, the minister *Malesherbes, who had successfully headed the commission charged with arranging civic rights for Protestants, was entrusted by Louis XVI with a similar mission with regard to the Jews.

[Bernhard Blumenkranz]
The Modern Period

The Revolution. On the eve of the French Revolution some 40,000 Jews were living in France. Those of the "German nation" were mainly concentrated in Alsace-Lorraine or Paris, while the "Spanish, Portuguese, or Avignonese" Jews were chiefly concentrated in the south. The former who, excepting residents of Nancy, almost exclusively spoke or wrote in Yiddish, formed the vast majority (84%) of French Jewry while the latter were closer to French language and culture, less observant in religious practice, and more nearly integrated within local society. These various groups would no doubt have been fairly satisfied to obtain civic rights provided that they were consonant with the continuation of their internal communal autonomy. After much petitioning and long-drawn-out parliamentary and public discussion, the Jews of France finally became French citizens, the Portuguese Jews on Jan. 28, 1790, and the Ashkenazim on Sept. 27, 1791. The law of 1791, however, although conferring civic rights on Jews as individuals, was coupled with the abolition of their group privileges, i.e., their religious-legal autonomy.

Later the communities in France suffered from the Reign of Terror (1793–94) in company with the other religious denominations. Synagogues were closed down and the communal organization abolished as a consequence of the general tendency to suppress all religious institutions. When the synagogues reopened their doors, the character of the former communities had already greatly changed. The opening up of the ghettos and the abolition of restrictions on residence encouraged many Jews to leave their former areas of residence and to reject, either entirely or partly, the discipline imposed by their erstwhile community.

Measures of Napoleon. This anarchy, which led to complaints by former creditors of the dissolved Jewish communities, strengthened Napoleon Bonaparte's determination to provide the Jews of France with a central organization supervised by the state and loyal to it, following the example of the arrangements he had already introduced for the other religions. Napoleon wished to create a Jewish "church organization" and at the same time to "reform" the Jewish way of life and Judaism, toward which he had an attitude of barely controlled hostility. Napoleon considered that the Jews were a "nation within a nation," and their emancipation had not produced the anticipated results. The Jews would therefore have to be corrected and regenerated; in particular a solution had to be found to solve the problem of usury, still a major Jewish occupation, especially in Alsace. With this in view, therefore, in 1806 he convened an assembly to serve as the "States General of French Judaism" (the "Assembly of Jewish Notables"). Its first session was held on July 26. The Assembly had to reply to 12 questions put to it by the commissioners appointed by the government who were instructed to verify whether Jewish religious law held any principle contrary to the civil law. Having been informed of the deliberations of the Assembly and the answers it delivered, Napoleon determined on having them formulated into a type of religious code. He decided to convocate a Grand "Sanhedrin" – a gesture which was also within the framework of his European ambitions – whose religious authority could not be called in question. The Sanhedrin, composed of 45 rabbis and 26 laymen, met on Feb. 9, 1807, and dispersed two months later on March 9, having fulfilled its role by codifying "religious" decisions in the spirit of the answers to the 12 questions delivered by the Assembly of Notables. The Sanhedrin then gave way to the Notables, who continued their task with the intention of proposing the establishment of an organization of the Jewish religion and measures to control Jewish economic activities.

The Consistorial System. The proposed regulation was amended by the Conseil d'Etat and promulgated by imperial edict in 1808, inaugurating what is usually called the consistorial system. This provided that a "consistory should be established for each department of France having a Jewish population of at least 2,000. Each consistory was constituted of a council composed of a grand rabbin, another rabbi, and three laymen elected by a small number of "notables." A central consistory composed of three grand rabbins and two laymen was to have its seat in Paris. Contrary to the provisions governing the organizations for the other recognized religions, expenses for religious purposes were still to be met by Jews. Thus, the new Jewish bodies were obliged, ipso facto, as inheritors, to repay the debts contracted by the former Jewish communities, whereas the other religions had been relieved of this burden. The consistorial system partially re-created the Jewish communities, and provided them with a means of action. It also constituted the recognition of Judaism as a religion, centralizing its organization, and placing it under strict government control. While the consistory was empowered to exercise absolute and exclusive authority in Jewish affairs, it mainly concerned itself with the strictly religious aspects. The consistory was supported by the rabbinate, which according to law was responsible for teaching the Jewish religion and the decisions of the Sanhedrin, promoting obedience to the civil laws, preaching in synagogue, and offering prayers for the imperial family. Although the authority of the rabbis was limited entirely to the religious sphere, it was nevertheless channeled into the service of the state.

These administrative measures were accompanied by complementary economic regulations. A decree abrogating a postponement previously granted on May 30, 1806, to persons owing money to Jews was issued, but it also laid down a mass of restrictive regulations. All debts contracted with Jews were to be annulled or liable to be annulled, reduced, or postponed by legal means (1808). As a result, a large section of the Jewish population of France, already in difficult circumstances, was brought to the verge of ruin. Any Jew who wished to engage in trade or commerce had to obtain a license to be renewed annually by the prefect of the department in which he resided. Further measures were issued in an attempt to compel the
Jews of France to assimilate into French society by regulating their place of residence. Thus a Jew who had not previously been resident in Alsace was prohibited from settling there. A Jew might settle in other departments only if he exercised a profession regarded as useful. In order to preserve the educational value in performing military service in company with their non-Jewish compatriots, Jews drafted for the army were prohibited from procuring substitutes. Another decree which, however, confirmed an existing situation, made it obligatory for Jews to adopt surnames in the presence of an official of the registry. The central consistory was set up on July 17, 1808. Its three grand rabbins were the president and two vice-presidents of the Sanhedrin, David *Sinzheim, Joshua Benzion Segré, who died shortly afterward and was replaced by Emanuel *Deutz, rabbi of Coblenz, and Abraham Vita *Colognia, rabbi of Mantua. After the death of Sinzheim in 1812 and the resignation of Cologna in 1826, Deutz remained the only grand rabbin in the central consistory until his death in 1842. Subsequently only one grand rabbin served for the whole of French Jewry.

Official recognition. The Restoration was not received with hostility by the Jews of France. The Napoleonic regulations, while having the merit of organizing communal affairs, had nevertheless represented a step backward in revolutionary ideals. Without major difficulties they were able to ensure that the Napoleonic decree determining their activities and means of livelihood, commonly referred to by Jews as the décret infâme, was not renewed after the expiry of its ten-year time limit (1818). Soon the need for new rabbis became a matter for concern. Until the Revolution rabbis for the Ashkenazi communities had been trained in the yeshivah in Metz, in the small local yeshivot of Alsace, or otherwise drawn from abroad. The Sephardi communities in the south generally recognized the authority of the Dutch or Italian Sephardi rabbis. The closing of the Metz yeshivah under the Revolution had greatly curtailed the recruitment of rabbis. Thus, from 1820 numerous attempts were made to obtain permission for the opening of a rabbinical school in Metz to supply the needs of all sectors of French Jewry. In 1829 the Ministry of Religions authorized the opening of a central rabbinical seminary in Metz. It was transferred to Paris in 1859, where it continues to function. Judaism was placed on the same footing as the other recognized religions when the chamber of peers passed a law making the Treasury responsible for paying the salaries of ministers of the Jewish religion (from Jan. 1, 1831). Thus almost the last sign of anti-Jewish discriminatory legislation in France disappeared.

Assimilation. These political successes did not conceal the profound crisis through which French Jewry was passing. Many Jews born after the grant of emancipation were unprepared for the new world they were now facing. A wave of conversions followed, in which members of the most firmly established families left Judaism. Deutz's own son, notorious for his role in the arrest of the duchess of Berry, and his son-in-law David *Drach, who had pursued rabbinical studies and directed the Jewish school in Paris, both embraced Christianity, the latter even taking orders. The eldest son of the president of the Bas-Rhin Consistory, Marie-Theodore *Ratisbonne, became converted in 1826. He subsequently took orders and in celebration of the conversion of his youngest brother founded the order of Notre Dame de Sion to be devoted to missionary work among the Jews. The brother, who was an active member of the order, later built a monastery in Jerusalem. Although the lower ranks of the Jewish population were hardly affected by these conversions, such cases were numerous among their leaders.

The disappearance of the generation which had known the Revolution and taken part in the work of the Sanhedrin, coupled with the new spirit of liberal democracy, and the pressure in the new communities by arrivals from the rural areas of Alsace and Lorraine now necessitated a reform of the consistorial system. By an order in council of May 25, 1844, French Jewry continued to be directed by the central consistory, which was henceforth composed of the grand rabbin and a lay member from each departmental consistory. The electoral college was enlarged in 1844 and 1848, when every Jewish male aged over 25 obtained the right to take part in the elections of the departmental consistories. The Paris consistory finally obtained an increase in the number of its representatives on the central consistory because it had a large population under its jurisdiction. This system continued, apart from some minor modifications, until 1905, with the separation of church and state (see below).

Abolition of the "Jewish Oath". The final obstacle to complete equality for Jewish citizens was removed with the abolition of the humilitating oath more judaico. The various courts that had been called upon to decide whether it was necessary for Jews to take the oath in that form had rendered conflicting decisions. It was only on the advice given to the rabbis by Adolphe *Crémieux, who became a member of the central consistory in 1831, to refuse to take the oath in this form that some progress was made. The Supreme Court of Appeal decided on its abolition in 1846. In the same period the debts of the former Jewish communities were finally settled by partial repayments effected by the successor communities.

Welfare and Education. While French Jewry was concerned with defense of its rights and its religious organization, it also promoted charitable and educational activities. The local charitable committees were generally offshoots of the traditional Jewish mutual aid societies or of the hoverot (see hoveh (see hevrah), which did not surrender their independence without hesitation or declared hostility. In the educational sphere, the first real development took place under the Restoration with the opening of Jewish primary schools. From 1818 schools were opened in Metz, Strasbourg, and Colmar. A boys' school had been functioning in Bordeaux from 1817 and a girls' school
from 1831. In Paris the first Jewish boys’ school was established in 1819 and the first girls’ school in 1821. Parallel to these primary schools, the community also opened technical schools, at first in order to prepare their pupils for apprenticeship and later providing direct specialized training. The first Jewish trades school (Ecole de Travail) opened its doors in Strasbourg in 1825, and was followed by that of Mulhouse in 1842, and of Paris in 1865. This network grew in importance until the law making primary education compulsory was passed in 1882, and the church and state were separated in 1905, thus depriving it of state financial support.

PROTECTION OF JEWISH RIGHTS. The Jewish community in France was shocked into action to protect Jewish rights by the *Damascus Affair in 1840 and subsequently by the outbreak of anti-Jewish disorders in 1848. The hostile attitude shown by the French government and also by French public opinion when Jews in Damascus were accused of ritual murder, as well as the complicity of the French consul there, deeply stirred French Jewry. Crémiéux therefore joined Sir Moses *Montefiore from England in a mission to Alexandria to intercede with *Muhammad Ali on behalf of the Damascus Jews. In February 1848, the peasants in Sundgau in Alsace took advantage of the general unrest to attack the Jews, some of whom managed to escape to Switzerland. The incidents spread northward, Jewish houses were pillaged, and the army was called out to restore order. Both this and the Damascus Affair strengthened the feeling among Jews in France that in certain situations they could rely only on self-defense. The formation of the provisional government, which included two Jews, Michel *Goudchaux and Crémiéux, dispelled some of these anxieties, but Jewish concern was again heightened with the election of Prince Louis Napoleon to the presidency of the republic, and later his accession to the imperial title, since many feared that he would restore the discriminatory measures introduced by his uncle.

SOCIAL AND ECONOMIC ADVANCES. These fears proved unfounded. The Second Empire was a calm period for the Jews of France. Instances of anti-Jewish discrimination were the result of the influence of the Catholic circles surrounding the empress rather than of a determined will to start an antisemitic campaign. Jews, like other “nonbelievers,” were often excluded from the universities. The social rise of the French Jews which had begun under the Restoration also continued under the Second Empire. In 1834 Achille *Fould became the first Jew to sit in the Chamber of Deputies, soon to be followed by Crémiéux. The greatest and most rapid achievements were often through the civil service, candidates for which generally had to pass tests and competitive examinations. In 1836 Jacques *Halévy was elected a member of the Academy of Fine Arts. *Rachel, one of the greatest actresses of her time, never concealed her Jewish origin. In the commercial sphere, it was a period of success for the *Rothschild family and its head, Baron James, as well as for the *Pereire brothers to whom the Rothschilds were later violently opposed. Practically every career, including the army, was open to Jews.

NEW TRENDS IN JUDAISM. Events did not proceed without provoking the same unrest within the French community as had gripped German Jewry. The problem arose of maintaining Judaism in an open, modern society, and the influence of the *Reform movements from across the Rhine soon made itself felt. The French rabbinate was of a generally conservative frame of mind. Its members, who almost entirely hailed from the small towns of Alsace and Lorraine, were scarcely enthusiastic over the new ideas and the rabbinate found itself in retreat before the layman. A meeting of grand rabbins was held in Paris from May 13–21, 1856, to establish a common policy with which to confront the growing trend away from Judaism. The camps were clearly divided well before the meeting: the Alsatian communities, which were the most numerous, opposed the introduction of substantive reforms, for which they felt no necessity. However, since each consistory was represented by only one delegate, the majority of the representatives tended to opt for modifications. To prevent a breach, it was resolved that decisions would be taken according to a simple majority, but that the question of their application would be held in abeyance. The assembly decided to limit the number of *piyutim, to organize synagogue services for the blessing of newborn infants, to conduct the funeral service with more ceremonial, and to instruct rabbis and officiating ministers to wear a garb resembling that worn by the Catholic clergy. It was also resolved to make greater use of the sermon in synagogue, to reduce the length of services which were to be conducted in a more dignified manner, and to introduce the ceremony of religious initiation, particularly for girls, whose religious instruction was to be inspected and approved. The assembly also called for the transfer of the rabbinical seminary to Paris. Regarding the controversy which had arisen over the use of the organ in synagogue, it was decided that its use on Sabbath and festivals was lawful provided that it was played by a non-Jew. Its introduction would be subject to the authorization of the grand rabbin of the department concerned, at the request of the local rabbi. A breach in the community was therefore avoided at the price of compromises and half-measures. The different elements in French Jewry continued on good terms since the doctrinal independence of the local rabbi remained intact. Subsequently more ambitious attempts at reform were cut short by the Franco-German war of 1870–71. The French defeat cast an odium, a priori, on anything that smacked of German importation. As a result, French Jewry found itself in a state of arrested reform. Although moving away from Orthodoxy it remained firmly attached to the idea of an integrated community. To this day French consistorial Judaism has maintained great religious diversity, a situation which has always curbed the few attempts to establish dissident, Reform or Orthodox, communities. This flexibility later enabled the integration of immigrants from North Africa. The leading role still played in French communal affairs by the
Rothschild family also helped to give the community a large measure of stability.

Alliance Israélite Universelle. The "Mortara case in 1858 once again brought up the question of freedom of conscience and reminded French Jewry of the Damascus Affair and the troubles of 1848. It again demonstrated the importance of organizing Jewish self-defense, this time on an international scale. The French Jews, who had been convinced that they had succeeded in assimilation by reconciling fidelity to Judaism with the gains achieved by democracy, felt compelled to react. However, it was typical of the existing situation that action was taken outside the framework of the central consistory which had by then withdrawn into a religious and representational role. In 1860, a group of young Jewish liberals founded the "Alliance Israélite Universelle" with a central committee permanently based in Paris. The activities of this body were mainly directed to helping communities outside France and it had the great merit of again demonstrating that Jewish solidarity extended beyond modern nationalism.

Alsace-Lorraine and Algeria. The 1870 war not only revived Franco-German hostility and put an end to many of the hopes for greater unity, but cut off from French Jewry its vital sources in Alsace and Lorraine. There was also the problem of integrating the Alsatian Jews who had opted to stay in France. This immigration considerably increased the importance of the communities in Paris and that part of Lorraine which had remained French. It also led to the creation of new consistories in Vesoul, Lille, and Besancon. The effects of the war also speeded up the naturalization of the Jews of Algeria, where at the time of the French conquest there were a number of old-established communities. The French authorities took their existing arrangements into account but limited the powers of the "head of the Jewish nation" by attaching to him a "Hebrew council." The powers of the rabbinical courts were also restricted. However the Jews of Algeria officially remained part of the indigenous population with a personal status which was variously interpreted. In 1870, on the eve of the war with Prussia, and following numerous petitions by the Jews in Algeria, the imperial government was on the point of declaring the collective naturalization of Algerian Jewry.

The Government of National Defense sitting at Tours, at the pressing insistence of Crémieux, then minister of justice, proclaimed this naturalization by a decree issued on Oct. 24, 1870. Having become French citizens, the Jews of Algeria gave up their personal status and were on the same footing as the Jews of France. The consistorial system, which had been introduced in Algeria in 1845, was modified to permit a more active participation of the members of the Algerian community in the consistorial elections. The appointment of rabbis and grand rabbins was made by the central consistory.

Antisemitism. Withdrawn into itself but enriched by the Algerian accession, the Jewish community of France soon had to face a formidable test. The advent of the Third Republic was not received by Jews with unmixed enthusiasm. Concerned at the progress of secularism and of movements demanding reform, royalist and clerical circles in France attempted to create an anti-Jewish diversion. Antisemitic newspapers began to appear. In 1883 the Assumptionists established the daily "La Croix" which, with other publications, set out to prove that the Revolution had been the work of the Jews allied with the Freemasons. This trend was strengthened by the socialist antisemitism of the followers of "Fourier" and "Proudhon." The various shades of antisemitism converged in Edouard "Dumont's La France Juive" (1886), which became a bestseller. After the collapse of the Union Générale, a leading Catholic bank, the Jews in France provided a convenient scapegoat. In 1889 Drumont's ideas culminated in the formation of the French National Antisemitic League (see "Antisemitism: Antisemitic Political Parties and Organizations"). In 1891, 32 deputies demanded that the Jews be expelled from France. In 1892 Drumont was able, with Jesus support, to found his daily La Libre Parole which immediately launched a defamation campaign against Jewish officers who were accused of having plotted treason and of trafficking in secrets of the national defense. It also blamed Jews for the crash of the Panama Canal Company, creating a scandal which greatly increased its circulation. It was in this climate that Captain Alfred "Dreyfus was arrested on Oct. 15, 1894, on the charge of having spied in the interests of Germany. Many aspects of the affair are still unclear, although Dreyfus' innocence has been fully recognized. In any event, the affair went beyond the individual case of the unfortunate captain to rock the whole of France and Jews throughout the world.

In France the matter at stake was not the survival of the Jewish community: even its most virulent adversaries did not desire its physical disappearance, although cries of "death to the Jews" were uttered time and again by Paris crowds. On its part, the Catholic and right-wing press, and especially Drumont's La Libre Parole, frequently published "facts" about the machinations of a "World Jewish Syndicate" aimed at world domination. The Dreyfus case hastened the crystallization of the ideas of Theodor "Herzl, then press correspondent in Paris and a bewildered witness of the unleashing of antisemitism in a country reputed to be the most enlightened in Europe. The affair, by opposing the general trends of public opinion in France, led to a crisis of conscience rarely equaled in intensity. Its repercussions caused an upheaval in French political life with similar consequences for Jewish life.

Separation of Church and State. The disproportion between the origin of the affair and its consequences does not fail to astonish. In 1905, as a result of the victory of Dreyfus' supporters, a law was passed separating church and state. With the other recognized religions, the Jewish religion lost its official status, and state financial support was withdrawn with the abolition of state participation in religious expenses. Like the Protestants, but in contradistinction to the Catholics, the Jews accepted this resolution with goodwill. It would also have been difficult for them to oppose those who had supported
Dreyfus. At the same time Grand Rabbin Zadoc *Kahn died. His strong personality had dominated Jewish life since his election to the chief rabbinate of Paris in 1869 and a few years later to the chief rabbinate of France. His astonishing activity had revived French Judaism after the truncation of Alsatian Jewry, and he had interested Baron Edmond de *Rothschild in the colonization of Erez Israel. The central consistory, disoriented after the passing of the 1905 act, thus had to transform itself while preserving its former framework as far as possible. Synagogues built with public subsidies were nationalized, but were immediately placed at the disposal of the successor religious associations. The central consistory became the Union des Associations Cultuelles de France et d’Algérie (“Union of the Religious Associations of France and Algeria”), and its office adopted the name Central Consistory. The regional consistories disappeared, but the large communities were changed into consistorial or religious associations. Practically all the departmental consistories remained in existence when the offices of the successor associations adopted the name consistory. The internal hierarchy, sanctioned by a century of tradition, continued. The perpetuation of the system, however, did not alter the fact that the organization of the Jewish community of France rested purely on a voluntary basis and on the recognition of a central authority freely accepted. In fact the French Jewish community became a federation of local communities which maintained a few joint central services, such as the chief rabbinate of France and the rabbinical seminary. Although this system increased the possibilities of fragmentation and disruption, the force of tradition maintained the moral authority of the various consistories, which became the principal, but not the exclusive, representation of a community undergoing a fundamental demographic transformation.

**DEMOGRAPHIC CHANGES.** During the 19th century, the relative importance of the Avignon communities had greatly decreased. The four Comtat communities had dispersed, their members moving to Marseilles and the large towns in southern France. The Bordeaux and Bayonne elements had never been very numerous. The extension of the French borders toward the north and east had opened up the country to a large Jewish immigration from Holland and the Rhineland. The Jewish population of Paris in 1789 numbered 500, out of the total French Jewish population of 40,000 to 50,000. There were 30,000 Jews living in Paris in 1869, out of a total of 80,000 for the whole of France. In 1880, following the loss of Alsace and Lorraine, 40,000 out of a total of 60,000 French Jews were living in Paris. This proportion has remained substantially unchanged. The pogroms in Russia of 1881 gave rise to a wave of Jewish emigration to the free countries and marked the beginning of the Russian, Polish, and Romanian immigration into France. A second wave of immigration took place after the abortive 1905 Russian revolution. From 1881 to 1914 over 25,000 Jewish immigrants arrived in France. The Russian element was in the minority. From 1908 a large Jewish influx also began from the Ottoman countries, chiefly from Salonika, Constantinople, and Smyrna. However, for a large number of immigrants, France served as a country of transit and not of refuge.

**WORLD WAR I.** The advent of World War I halted this immigration. In uniting all the forces of the nation, the war also put a stop to the antisemitic campaigns. The necessity for maintaining a common front (union sacrée) brought all the religions together. For some Jewish soldiers the war was to be a means of rejoining their families after the reconquest of Alsace and Lorraine. The victory restored to French Jewry these most vital communities. They had preserved their former consistorial organization since they had been in German territory in 1905 when the law separating church and state was passed. The French government, following a policy of pacification and taking into consideration the strong religious attachment of the population, did not apply the law to the regained territories. Thus religious life there continued to be organized on the old system.

**INTER-WAR YEARS.** After the war, Jewish immigration from the former Ottoman countries was resumed with greater intensity. The Jews from Turkey and Greece settled chiefly in Paris and in the large cities of the south. However, the largest immigration came from Eastern Europe in the wake of the Ukrainian and Polish pogroms. Romania also provided a significant number of Jews. Once again the Russian and Lithuanian elements were not numerous. This trend increased after 1924 following the prohibition of free immigration into the United States. From 1933 many Jewish refugees from Nazi Germany passed through France en route for America or Palestine. The number remaining in France was relatively insignificant. It is estimated that there were 180,000 Jews resident in Paris in 1939, one-third of them belonging to the old French Jewish community. By then the use of Yiddish had become widespread and the “Ashkenazation” of the community had increased. The freedom of religious organization, which the law separating church and state had ratified by abolishing the official organization of religion, had enabled the different groups of immigrants to organize an appropriate framework for their religious and social life. Thus in 1923 the Fédération des Sociétés Juives de France (FSJF), a body which united the majority of Landsmanschaften, was created. However, these organizations did not impair the prestige of the old-established French Jewish communal bodies. The new bodies lost much of their meaningfulness as their members assimilated into French life, and with the progress of social security which deprived them of much of their usefulness. Many of their members subsequently joined the ranks of the established community.

**ECONOMIC, CULTURAL, AND SOCIAL POSITION.** In the economic sphere, the position of French Jewry continued to improve. After 1850, the number of Jews engaged in crafts increased considerably, and many Jews entered the technical professions. Few were attracted to agriculture. In the period
before World War I Jewish painters and sculptors had made the Paris school famous (see *Paris School of Art). Among a brilliant galaxy, the names of *Pissarro, *Soutine, *Pascin, *Kisling, *Chagall, and *Modigliani are well known. Sarah *Bernhardt, who was eventually baptized, brought luster to the French theater. Outstanding in literature and philosophy were Adolphe *Franck, Salomon *Munk, Henri *Bergson, Emile *Durkheim, Lucien *Lévy-Bruhl, Marcel *Proust, and André *Maurois.

Purely Jewish studies were not abandoned. From 1880 the *Société des Études Juives regularly published a learned periodical, Revue des Études Juives, and was responsible for the publication of the classic works of Heinrich *Gross (Galilja Judaiaca, 1897) and T. *Reinach (Textes d’auteurs Grecs et Romains relatifs au Judaïsme, 1895), and a modern translation of the works of Josephus. The French rabbinate published a magnificent translation of the Bible. On the other hand, talmudic studies in France ceased. The process of social assimilation continued, and in 1936 Léon *Blum became the first Jewish premier of France.

Simon R. Schwarzfuchs

Holocaust Period

On May 10, 1940, the Germans invaded France. *Paris fell on June 14. The armistice, which was signed two weeks later, divided France into an Unoccupied Zone in the South, and an Occupied Zone (subdivided into “general” and “forbidden” zones and several restricted areas) in the northern half of the country. The departments of Nord and Pas-de-Calais were attached to German military administration based in Brussels, while Alsace-Lorraine was annexed to the Reich. A new regime, based in Vichy, under the leadership of the World War I hero Marshal Philippe Pétain, took over the reins of government. No official figures exist on the number of Jews living in France at the beginning of the war, since Jews were not singled out in the census and the documents on official and illegal entry or departure of refugees are unreliable. It is estimated that there were about 300,000 Jews in France prior to the invasion. During World War II, the Jews in France suffered from the combined impact of the Nazi “Final Solution” and from traditional French anti-Semitism. By and large, French anti-Semitism did not tend toward violent extermination, but its existence unquestionably helped the Nazis in carrying out their scheme. A small coterie of French racist ideologues, largely in the Occupied Zone, expounded radical anti-Jewish sentiments. Most importantly, indifference to the fate of the Jews on the part of both Vichy government officials and French citizens led to callousness and disregard for the Jewish plight.

Anti-Jewish Measures and Administration. Recent scholarship has demonstrated that the Vichy regime initiated many of its anti-Jewish policies and laws without any direct orders from and often in opposition to the German occupying powers. Much of the groundwork had been laid by laws passed by the Third Republic in its last years of existence restricting and controlling foreigners. With the defeat of France in June 1940, the Vichy government took the initiative to deal with the “Jewish question.” In August 1940, it repealed the Marchandeau law, originally passed in April 1939, which had effectively outlawed antisemitic attacks in the press. The Statut des juifs, first enacted in October 1940 and then revised in June 1941, closed off top governmental positions to Jews. Its definition of Jews proved to be even more restrictive than those imposed by Nazis in Germany. Additional laws soon followed that effectively eliminated Jews from the liberal professions, commerce, the crafts, and industry. The Vichy regime also instituted a census in the Unoccupied Zone, and empowered the State to place all Jewish property in the hands of non-Jewish trustees. By late 1940, it is estimated that some 40,000 people were interned in camps, the vast majority of whom were foreign-born Jews. At the same time, German officials introduced various anti-Jewish measures in the Occupied Zone. The first Verordnung (ordinance) of Sept. 27, 1940, ordered a census of the Jews. Other ordinances soon followed, which placed Jewish property in the hands of so-called provisional administrators; extended the discriminatory category of “Jew” to individuals of Jewish origin who were not of the Jewish faith, and prohibited a number of economic activities. A proclamation issued by the German military authorities in December 1941 announced inter alia a fine of one million francs to be paid by the Jewish population, the execution of 53 Jewish members of the Resistance, and the deportation of 1,000 Jews (in fact, 1,100 Jews were actually deported on March 27, 1942, as a result of the proclamation). In 1942, German authorities established a curfew for Jews between 8 p.m. and 6 a.m., prohibited them from changing residence, and enlarged still further the scope of the definition of “the Jews.” An ordinance of May 29, 1942, ordered all Jews to wear a yellow “badge. It was soon followed by a prohibition against Jews using public places, squares, gardens, and sports grounds in the Occupied Zone were also restricted to one hour a day to make their purchases in shops and food markets.

The German Verordnungen were valid only in the Occupied Zone. Even after the Germans took control of all of France in November 1942, they were not extended to the newly occupied areas. Thus, for instance, the yellow badge never became compulsory in southern France. The statutes, laws, and ordinances of the Vichy government, on the other hand, were valid throughout the country, as was the rubber stamp Juif (“Jew”) on identity cards. Whereas German measures were directed without exception against all Jews, the Vichy measures mainly affected Jews who were either foreign nationals or stateless, and later Jewish immigrants who had recently become French nationals. French Jews of long standing were generally spared, sometimes by means of the exceptions made in favor of ex-servicemen and individuals of outstanding merit. At the same time, the various discriminatory laws strongly suggest that the Vichy regime wished to consign all Jews to a subservient role and to subject them to severe restrictions.
With an eye to coordinating policies in the two Zones, the Gestapo and specifically the Paris branch of *Eichmann’s IV b under the leadership of ss-Hauptsturmfuehrer Theodor Dannecker set about to create both a French government agency for anti-Jewish affairs and a *Judenrat, which would act as the French counterparts of the German IV b branch and the *Reichsvereinigung der Juden in Deutschland. With only minimal prompting and without prior submission to the German military administration, in March 1941 the Vichy government set up the Commissariat Général aux Questions Juives (cGQJ), headed by Xavier *Vallat, an extreme-right member of parliament. Vallat was a French politician and an antisemite in the French tradition, who believed that Jews were responsible for the very existence of democracy and the Third Republic, which had undermined France. After serving a year, he was dismissed after German authorities decided that he was too lax in carrying out anti-Jewish measures. Vallat was succeeded by the rabid antisemite Darquier de *Pellepoix. Under Darquier, the cGQJ accelerated the pace of “aryanization” of Jewish property and and forged stronger links with the German authorities. The Vichy government also created an official body called the *Union Générale des Israélites de France (UGIF) in November 1941 to represent French Jewry during the German occupation. It had two divisions – one in the Occupied Zone and one in the free one. The role of the UGIF continues to be the subject of much controversy. While helping to save many children and providing material aid to Jews in French internment camps, it generally proved unwilling to actively confront either German or Vichy authorities. Until at least 1942, leaders of the UGIF were convinced that government authorities would never betray the basic principles that allegedly underlie French society.

DEPORTATIONS AND FORCED LABOR. As the Germans accelerated their anti-Jewish activities in France after the *Wannsee Conference, held in January 1942, they recognized that though Vichy authorities were prepared to enforce the regulations to persecute “foreign” Jews, they were often reluctant to act against French Jews. For that reason, it was decided that any action taken against native Jews would be carried out by the Gestapo itself, whereas the French police would be responsible for the roundups of immigrant and foreign Jews. In June 1942, the Third Reich decided that France would supply 100,000 Jews, to be taken from both zones, for extermination. A series of roundups (“rafles” in French, “Aktionen” in German) soon followed. The most notorious roundup took place on July 16–17, 1942, in Paris and its suburbs. Carried out by French policemen and sanctioned by Premier Pierre Laval, it led to the arrest of 12,884 men, women, and children, most of whom were interned in the Velodrome d’Hiver, a large indoor sports arena in the south of Paris. Many more “rafles” took place both before and after the so-called “Grand Rafle” of the “Vel d’Hiv,” as it became known. A major roundup of foreign Jews in the Unoccupied Zone took place between August 26 and 28. The great majority of the victims had settled in the southern part of France, where they had joined several thousand French Jews who had also fled from the Germans. The cities of Toulouse, Marseilles, Lyons, and Nice thus had large concentrations of Jews. Smaller towns, such as Limoges and Périgueux, also sheltered hundreds of Jews.

With the exception of a small number of wealthy individuals, the refugees from abroad were interned either in detention camps, such as Saint-Cyprien, Gurs, Vernet, Argeles-sur-Mer, Barcarès, Agde, Nexon, Fort-Barraux, and Les Milles, or in smaller so-called Détachements de prestataires de travail, i.e., forced labor detachments. Thousands of foreign Jews who had volunteered in 1939–40 for the French army were not demobilized after the armistice, but kept for a time in similar forced labor battalions, both in France and in North Africa (Djerada, Djelfa, and on the Mediterranean-Niger railway project). Their living and work conditions were similar to those of criminals sentenced to hard labor.

Jews generally were sent from internment camps to concentration camps in preparation for their deportations east. There were two main concentration camps for foreign Jews, Pithiviers and Beauve-la-Rolande near Paris, and a few smaller ones. *Drancy, a northern suburb, was the main transit camp to *Auschwitz. Some Jews were also deported from the Compiègne camp and a few deportation trains left from Pithiviers, Beauve-la-Rolande, and such towns as Angers, Lyons, and Toulouse. Deportation came in several waves, beginning on March 27, 1942, and was largely handled by the military administration. The second deportation during the summer and fall of 1942 followed the main roundup throughout the country. A third wave during the spring of 1943 came after the clearance and destruction of the Vieux-Port quarter of Marseilles. After the Germans occupied the former Italian zone in southeast France in the fall of 1943, many Jews who had found sanctuary there after German authorities took control of all of France in November 1942 were arrested. In Nice alone, about 6,000 Jews (out of 25,000) were deported. The first deportations of foreign Jews to Auschwitz occurred in March 1942. A convoy of French Jews soon followed them. Beginning in June 1942, the deportations were accelerated, and they continued almost without interruption throughout 1943. The unification of the two zones meant that the implementation of the Final Solution could now proceed without interruption and without differentiation between foreign-born and French Jews. The last convoy departed France in August 1944. An estimated 85,000–90,000 Jews, two-thirds of whom were immigrant and non-citizens, were deported in 100 convoys, largely to Auschwitz. Barely 3,000 of these survived. In addition, a few thousand Jews were deported or executed for political and resistance activities.

RESCUE AND RESISTANCE. Jewish institutions, such as *HICEM, helped a few of the foreign Jews to emigrate overseas. The fact that that the Vichy regime never officially prohibited emigration even after the occupation of the south meant there were opportunities for Jews to escape across the
Pyrenees and the Swiss border. Traditional religious and philanthropic Jewish organizations such as the largely native Consistoire israélite de France and the immigrant Fédération des sociétés juives de France continued their activities, mainly in southern France. The French rabbinate also arranged for religious and social assistance, which carried out in part by rabbis active in the resistance movement, such as René Kappel. Other institutions cared for the social and physical well-being of the internees. As persecution became more severe and as the pace of deportations increased, mutual-aid organizations such as the Fédération des sociétés juives increasingly combined their material aid with resistance activities, such as the falsification of identity and ration cards, and of addresses; and aid to those who had escaped deportation.

The Jews of France played an important role in the resistance to Nazism, both in French movements across the political spectrum – from Gaullist to Communist and Trotskyist groups – and in specifically Jewish groups, such as those organized by the Zionists and the Communists. The active role of the Zionists and the Communists in resistance gained them entry into the established Jewish community. The Zionist youth movements established a united Mouvement de la Jeunesse sioniste and later the Armée juive. Initially, the French-Jewish scout movement, the Eclaireurs israélites de France (EIF), was attracted to the ideology of the Vichy regime and particularly to the myth of Marshal Pétain. With the onset of deportations in 1942, however, the Scouts increasingly turned to active resistance, first aiding in the hiding of hundreds of children, and then engaging in armed struggle. Together with the Armée Juive, they established the OJC (Organisation Juive de Combat) Robert Gamzon (Castor), the national director of the Jewish Boy Scouts of France, largely contributed to this evolution. Other groups that were active in aiding Jews, especially children, were the Oeuvre de secours aux enfants (OSE), and the Women's International Zionist Organization's (WIZO) office in the Paris area. Jewish communist groups, such as the Mouvement National contre le Racisme (MNCr), created in 1942, which benefited from the support of the French Communist Party, also played an active role in resistance. In contrast to other groups, which emphasized Jewish self-defense, they tended to view Jewish resistance to Nazism as part of the general struggle against Fascism.

During the course of the war, the attitude and behavior of the majority of French citizens toward Jews gradually shifted from open hostility or apathy to sympathy and support. At first, most Frenchmen approved of the discriminatory laws, especially against foreign-born Jews, as part of their general approval of Marshal Pétain’s program of national revival. In time, however, the increasing brutality of the Vichy and Nazi policies beginning in 1942, which included the deportations of native-born Jews including women and children, and the fact that roundups were no longer limited to German-occupied areas, led to growing opposition to and resentment against the régime’s anti-Jewish policies. Many individual Frenchmen hid children and adults, often at the risk of their own lives. For the first time, there were statements of opposition from established leaders. Before 1942, the French Catholic Church had remained silent in the face of Vichy’s anti-Jewish pronouncements and policies. Alerted by Jewish religious authorities, a number of Catholic prelates, such as Monsignors Jules-Gérard Salière and Pierre-Marie Théas, now strongly condemned the deportations of the Jews from their pulpits. In local areas, convents and monasteries offered shelter to Jews, particularly to children. For the most part, the Church hierarchy did not attempt to proselytize the Jewish children under their care, though some families did convert those whom they had taken in. The Protestant churches, numerically very small in France, were even more actively opposed to the persecution of Jews. Pastor Marc Boegner, president of the National Protestant Federation, denounced the Statut des juifs and the expropriation of Jewish-owned property in the Unoccupied Zone. The largely Protestant areas of the Haute-Loire, Hautes-Alpes, and the Tarnin in Central France became centers for active rescue of Jews. Of special note was the village of Le Chambon-sur-Lignon, whose efforts to hide Jews have been chronicled in numerous film documentaries and films.

[Lucien Steinberg / David Weinberg (2nd ed.)]

**Early Postwar Period**

**NATIVE POPULATION AND WAVES OF IMMIGRATION.** France was the only country in Europe to which Jews immigrated in significant numbers after World War II. In 1945, there were some 180,000 Jews in France. The community was composed of established Jewish families and immigrants from Central and Eastern Europe and Mediterranean countries. In 25 years the Jewish population tripled. Between 1945 and 1951 many Displaced Persons passed through France, and some settled there. In 1951 there were 250,000 Jews in the country. Between 1954 and 1961, approximately 100,000 Jews moved to France from Tunisia, Morocco, Egypt (1956), and Algeria. After the Bizerta incidents (in Tunisia) and the independence of Algeria (1962), immigration increased. By 1963, almost the entire Jewish community of Algeria (110,000 persons, all French citizens) had moved to France. Moroccan and Tunisian Jews continued to arrive in the late 1960s with a last peak following the Six-Day War (from the summer of 1967 to the summer of 1968, 16,000 Jews from Tunisia and Morocco sought sanctuary in France). French-speaking Jewry had undergone a new geographical distribution, diversification in occupations and social status, a change in community structure, and a fundamental reorientation in religious, ideological, and cultural trends.

Approximately 50% of the Jews who left North Africa settled in France, so that by 1968 the Sephardim were in the majority in the French Jewish community.

**GEOGRAPHICAL DISTRIBUTION.** In 1939 the Jewish population was concentrated in Paris and the surrounding region, Alsace-Lorraine, and several large towns. In 1968 about 60% of the Jewish population lived in Paris and its surroundings, about 25% in the Midi, and the rest were scattered throughout...
France. Five provincial towns supported important communities: Marseilles (65,000), Lyons (20,000), Toulouse (18,000), Nice (16,000), and Strasbourg (12,000). Between 1957 and 1966 the number of localities in which Jews lived rose from 128 to 293. The dispersal of the immigrants from North Africa, which answered the need to absorb them into the economy, resulted in the establishment of Jewish communities throughout the country. In 1968, 76 rather isolated communities contained fewer than 100 Jews, and 174 communities numbered less than 1,000 (such communities were particularly numerous in the Paris district).

**Economic and Social Status.** French Jewry succeeded in normalizing its economic status during the first two or three years following the liberation. Each successive wave of immigration, however, included a large group of impoverished persons who were forced to make recourse to social services run by the community or the state. Among both Ashkenazim and Sephardim, rapid and important changes in social status took place. Artisans from Eastern Europe or North Africa abandoned their traditional occupations in the second, if not in the first, generation in order to find jobs in modern industry, where the need for technical skills was great and through which a rapid rise on the social scale was possible. This trend was encouraged by the education offered in the seven *ort* schools, whose pupils were mainly from immigrant families. About 80% of North African Jews continued in the same occupation they had pursued in their countries of origin, and their influx into France slightly modified the distribution of occupations and social status of French Jewry. An estimated 15% of Algerian Jews were clerks employed at all levels of public administration; these were absorbed into urban administrations. Despite the resettlement loans granted by the government to repatriated citizens, some small businessmen and artisans had to abandon their previous status as self-employed persons and become salaried employees. Social advancement was rapid among North African Jews who were French nationals, as racial barriers that had seriously handicapped their advancement under colonial rule did not exist in France. Their settlement there opened new prospects for them, and many made their way in the liberal professions, commerce, and industry. The economic absorption of Moroccan or Tunisian Jews was more difficult. Nevertheless, they also chose France as their new country of residence as a result of their varying degrees of assimilation into French culture in their native countries. The social status and occupational distribution of French Jewry resembled the principal traits of the Diaspora in the West, i.e., a preponderance of members of the liberal professions, white-collar workers, businessmen, and artisans.

**Community Organization.** The period from 1945 to the end of the 1960s was a one-of-reconstruction of the community organization. The Consistoire Central Israélite de France et d'Algérie, the major religious organization, had to face numerous demands. Orthodox in orientation, it was the official representative of French Judaism, responsible for the training, nomination, and appointment of rabbis, religious instruction for young people, the supervision of *kashrut*, and the application of religious law in matters of personal status. In order to answer the new needs related to the sharp increase in the Jewish population, the Consistoire set up a program of new synagogue building projects (les Chantiers du Consistoire) and had to accompany the development of a more intense religious life (organizing the network of _shehita_ and _hashgahah_, supplying more rabbis and _talmud torah_ to teachers…). While in the 1950s the consistory synagogues generally practiced Ashkenazi rites (and a few the Portuguese or North African rituals), by the end of the 1960s a majority of the consistory synagogues had switched to North African rites. North African Jews often formed their own communal organizations, but were represented in all the consistorial organizations. After 1945, most of the pupils of the Ecole Rabbinique and the rabbinical seminary, the Séminaire Israélite de France, were of Egyptian and North African origin. The Union Libération Israélite, affiliated to the World Union for Progressive Judaism, was no less active. It had greater influence in more assimilated circles of established and North African families and trained its ministers at the Institut International d’Études Hébraïques. Lastly, there were the independent religious bodies, including Sephardi and North African communities practicing their various local rites, Poles, and hasidim and kabbalists. Despite the amount of effort expended, only a small minority of French Jewry practiced their religion. There were, however, hundreds of associations and institutions of a cultural, social, or philanthropic nature. From 1945 efforts made to coordinate and channel the rather anarchic development of such organizations met with a measure of success. On a political level, the Conseil Représentatif des Juifs de France (CRIF), founded in 1944, was an example of such an effort. Created clandestinely during the war, it meant to illustrate the unity of the French Jewish community through its various trends, religious and non-religious, old established natives and newer immigrants, etc. In 1968, it was composed of 27 important organizations of diverse trends, including religious, Zionist, Bundist, and even Communist bodies. According to its statutes, the Council’s aim was “to protect the rights of the Jewish community in France”; it also played an active role in fighting antisemitism. On the social and cultural level, the Fonds Social Juif Unifié (FSJU), founded in 1949 to centralize the various efforts of the community, rapidly became the central organizational body of French Jewry. It coordinated, supervised, and planned the community’s major social, cultural, and educational enterprises, which it financed through its unified fund-raising campaign and the contributions of the *Joint Distribution Committee. Its community services played an important role in the integration of Jewish immigrants, and its numerous community centers aimed at involving peripheral elements without religious affiliations in community life. After the Six-Day War, the FSJU and the Appel Unifié pour Israël (United Israel Appeal) coordinated their activities and formed the Appel Unifié Juif de France, a joint fund-raising
venture. Varied ideological and political orientations, from the assimilationists to the Zionists and from the left wing to the right, were freely expressed in the French Jewish community. Although the Landsmanschaften of Eastern European immigrants gradually died out, associations of immigrants from North African countries multiplied.

CULTURAL LIFE. The diverse cultural trends of French Jewry were expressed by its 40 or so weekly and monthly publications. In 1968, there were ten daily, weekly, or monthly publications in Yiddish. After 1945, due to the activities of the Coference on Jewish Material Claims, many books on Jewish and Israeli subjects were published annually by large French publishing houses; there was also a weekly Jewish radio broadcast and a regular television program. Most French Jews preferred to provide their children with a secular state education. Less than 5% of Jewish schoolchildren studied in the Jewish day schools at all levels, but the numerous youth movements and organizations tried to attract as many young people as possible. Under an agreement between the French and Israel governments, Hebrew could be taught as a foreign language in the lycées (state high schools). Ten universities included Hebrew in their curriculum, the universities of Paris and Strasbourg taught Jewish history, literature, and sociology. All the major Zionist youth movements were represented in France. The French Zionist Federation included various Zionist parties; however, it was decimated by internal feuds and its influence was weak. Nevertheless, more and more French Jews expressed their solidarity with Israel.

Despite a certain latent but rarely virulent antisemitism (research conducted by the Institut Français de l’Opinion Publique in December 1966 showed that about 20% of the French public held seriously antisemitic opinions), Jews felt well integrated into French society. The efforts of numerous Jewish organizations did not retard the rate of assimilation. After the Six-Day War (1967), the explicit anti-Israel stance of de Gaulle and his government (see below), came as a shock to French Jewry. The feeling of uneasiness increased when the anti-Israel utterances of de Gaulle, his officials and commentators assumed a half-disguised, sophisticated antisemitic quality, particularly through hints at the Jews “double loyalty.” It reached its peak when de Gaulle, at a press conference (Nov. 27, 1967), defined the Jews as “un peuple d’élite, sûr de lui-même et dominant” (“an elite people, self-assured and domineering”), thus giving a great impetus to overt expressions of latent antisemitism. This dictum aroused a wide public controversy in France and abroad. The chief rabbi, Jacob Kaplan, voiced his protest, reaffirming Jewish attachment to Israel and stressing that it did not contradict in any way the fact that the Jews of France are loyal Frenchmen. De Gaulle later told the chief rabbi that his words were not meant to be disparaging. At the same time, from the other extreme of the political scene, came the violently aggressive anti-Israel propaganda of the “New Left” and of the “students’ revolution” of May 1968, who supported Arab-Palestinian terrorism against Israel, though many of the movement’s leaders were themselves young Jews (Daniel Cohn-Bendit, Marc Kravetz, Alain Krivine, and others). This agitation was the cause of embarrassment to most French Jews, not only because of its enmity toward Israel but also because of its extremist ideology of violence (Trotskyism, Maoism, anarchism, etc.), which could have easily aroused an antisemitic reaction in the mainly conservative French middle class, to whom most Jews belong. Physical clashes between Jews and Arabs in certain quarters of Paris, mostly provoked by pro-Palestinian North Africans, added to the malaise. As a result, migration from France to Israel, by both French and Algerian Jews, considerably increased in the late 1960s.

[Doris Bensimon-Donath]

Later Developments

DEMOGRAPHY. The Jews of France maintained a stable population variously estimated at 500,000–550,000 from the late 1960s to the early years of the 21st century (the former figure being the 2002 estimate based on a study by the Israeli sociologist Erik Cohen). Another 75,000 non-Jews were estimated in 2002 to be living in Jewish households. Following the decolonization of the former French possessions in North Africa, the Jewish population of France doubled between 1955 and 1965. Afterwards immigration was numerically insignificant. However, French Jewry changed from having an Ashkenazi majority to a Sephardi one (70 percent in 2002). France has taken in only a limited number of Jews who, since 1989, have left the former Soviet Union.

By the early 1990s the second as well as the third generation was French-born and educated. They were, of course, French, but maintained a conscious Jewish identity. The demographic trends among the Jewish population of France are similar to those of most other Diaspora countries: aging, low birth rates along with significant changes of the family units. Mixed marriages are an accepted fact and there are also increased numbers of couples living together and of divorces.

Some 50 percent of French Jews lived in Paris and its suburbs. Among the provincial communities the largest were those of Marseilles, Nice, Toulouse, and Montpellier in the south, Lyons and Grenoble in the southeast, and Strasbourg in Alsace. Jews also lived scattered throughout the country while having a tendency to congregate in middle-sized cities owing to the attraction of a better organized community life. In all, 72 percent of French Jews lived in just nine of its 30 départements.

French Jewry constitutes the largest Jewish community in Europe. After the breakup of the Soviet Union and the mass emigration of Jews from there, France, in 1995, became the second largest Diaspora community (after the United States). Representing about 1 percent of the total French population, the Jews are only the third largest religious group: their number is greatly exceeded by the approximately 5 million Muslims, some stemming from the former French colonies, others French citizens. “Feujs” (young second and third generation Jews) and “Beurs” (young second and third generation Mus-
limes) live in certain sections of the large cities and their suburbs, where at times they clash and at times live amicably.

**Education and Culture.** During the 1970s there were significant developments in the sphere of all-day Jewish education. Both in Paris and in the provinces numerous primary and secondary schools, as well as kindergartens were opened. Parallel to the network controlled by the FSJU there were schools operating in accordance with the most Orthodox current, such as the Otzar Hathora. In 1976 the FSJU and the Jewish Agency created the Fonds d’Investissement pour l’Education (FIPE), which, with the support and participation of a number of religious organizations, led to a significant expansion of the network of Jewish day schools. By 1979, approximately 10,000 children attended all-day Jewish schools, the most important of them having concluded agreements with the government whereby it covered the fees of the teachers who give general education.

According to a study made by Erik Cohen in 1986/88 (see bibliography), the number of full-time Jewish educational institutions – from nursery school to high schools – doubled from 44 in 1976 to 88 in 1986/87, at which time, 16,000 children and teenagers attended full-time Jewish schools. This trend has continued: by 1992, 20–25 percent of school-age Jews attended full-time Jewish schools. If one adds the *talmud Torahs* (preparatory courses for bar mitzvah and bat mitzvah), the youth movements, and other Jewish recreational organizations, 75 percent of Jewish youth have some more or less long term formal Jewish education.

Non-practicing Jewish families had, in the 1980s, a more favorable attitude than in the past to full-time Jewish education, but, more than the others, the religious circles have the maximum commitment to Jewish education. According to Cohen’s study, in 1986/87, about one-third of the Jewish day schools were affiliated with organizations such as Lubavitch, Otzar Ha-Torah, or Or Yossef. In 1994, the FSJU opened the André Neher Institute intended to train educators who wish to work in the Jewish educational networks. This new institute stressed the recruitment of teachers of Jewish subjects who receive at the same time training in the university and pedagogical system charged with training teachers in France.

The majority of Jewish youth, however, study in public schools whose underlying principle is secularism, having as its objective the education of children and young people of every religion and every origin, with mutual tolerance. For over a century, the free, secular school has played an essential role in the integration of children born to every wave of immigration in French society. Still, the evolution of the French society by the end of the 20th century also echoed in the realm of the state schools. From the end of the 1980s, a broad public debate took place on the question of “conspicuous” religious signs worn by a few schoolchildren (mainly the Islamic veil for girls). The majority of those Jews who expressed themselves on the question strongly supported traditional French secularism as a protection for all minorities against certain over-assertive groups; nevertheless, some Jews – and among them the Consistoire Central, although for a very short period – were tempted by the idea of getting some exemptions made official, such as the exemption from school for observant Jewish children on Saturday. However, in 2004 a law finally banned all religious symbols from schools.

In the public school system, Hebrew was taught at a number of high schools as a foreign language which fulfills the matriculation requirement. In the universities, the study of Hebrew, Jewish languages, and Jewish civilization is now well represented.

The year 1992 was for the Jews of France the 50th anniversary of the beginning of the mass deportations: the Holocaust is at the heart of Jewish memory. During this decade, there was a significant increase in research studies into the responsibility of the Vichy government for the persecution of the Jews. President Mitterrand was called upon to admit officially France’s responsibility for this persecution.

The year 1994 was the 600th anniversary of the expulsion of the Jews from France by Charles VI. A scientific colloquium presented information on this tragic period of the Jewish people.

The years 1994 and 1995 were marked above all by the celebrations of the 50th anniversary first of the Liberation of France and then of the extermination camps and finally of the victory of the Allies over Nazi Germany. While President Mitterrand had kept in 1992 the date of July 16th (the day of the big roundup of Jews in Paris in July 1942) as the official anniversary of the persecution of the Jews in France, President Chirac pronounced in 1995 a memorable speech acknowledging the responsibility of the French state in the tragic fate of the Jews. Jews and Jewish organizations were obviously associated with these national and international celebrations. Remembrance of the Holocaust is broadly presented and disseminated by the media. The Jews stress not only the persecution, but also the Resistance. There are increasing numbers of works dealing with what transpired and, more specifically, survivor accounts. The *Centre de Documentation Juive Contemporaine* (CDJC) participates in an international project launched by Steven Spielberg, director of *Schindler’s List*, for collecting Holocaust survivors’ videotaped testimony.

The intellectual and cultural vitality of French Jewry is attested by artistic, literary, and scientific output. Each year, 200 to 300 works on Jewish themes are published in France. They cover the gamut of the field of Jewish studies, from the translation and interpretation of traditional texts of Jewish thought to the study of contemporary Jewish issues. At the same time, novels with Jewish themes are published and plays, movies, and works in the plastic arts are produced. The interest in Judaism and its culture is shared by the Jewish and non-Jewish public.

**Community.** The Six-Day War was to a large extent a turning point for the French Jewish community. After 1967, the role played by Israel in the Jewish self-identification became even
more central in France whereas Jewish institutions became increasingly involved in Jewish world politics. From 1970, the Conseil Representatif des Juifs de France (CRIF, which changed its name to the more precise one of Conseil Représentatif des Institutions Juives de France), expanded its range of activities. In the wake of the 1967 and 1973 wars in Israel, it took a new impulse under the dynamic leadership of Professor Ady *Steg. It played an important part in the struggle against antisemitism and was active in support of Soviet Jewry. While by 1970 the number of affiliated organizations reached 34, the CRIF became more and more active in the public life, representing the Jews as a sort of sociological – and not purely religious – group. The impulse of the 1970s was confirmed in the three following decades, with the development of a regular dialogue with the authorities, symbolized since the 1980s by the yearly dinner at which the CRIF receives the French Premier.

The last third of the century was also a period of enhanced development for the Fonds Social Juif Unifié (FSJU), the main community organization in France, which collects and distributes funds for Jewish welfare and cultural activities. After the intense effort of the post-war reconstruction and the integration of a heavy immigration in the 1960s and 1970s, the FSJU had to adjust to the end of the support it had been granted by American Jewish Joint Distribution Committee while investing heavily in the development of formal education through Jewish schools and going on playing a major part in the organization and planning of the community social services in times which were not of full economic prosperity. At the same time, the FSJU statutes underwent a reform in favor of more democratic representation. In the religious sphere the most important event of the 1980s was the retirement of the chief rabbi, Jacob Kaplan, and the election for a seven-year period of Rabbi René Samuel *Sirat as his successor in June 1980. Born in Bone (Algeria), Sirat was a Sephardi and a university graduate; he placed the main stress on Jewish education and the spiritual renewal of French Jewry. This renewal took different forms. Whereas for some it consisted of a return to religious practice, in the case of others it meant the search for Jewish identity and a renewal of Sephardi and Yiddish culture. Together they embraced a significant number of individuals and an intense renewed literary activity is manifest.

In the 1980s organized community life was characterized by the rise of ever-increasing numbers of Sephardi Jews to positions of leadership and by a certain return to religion in strong opposition to humanistic and secular initiatives. The organization of the Jewish community of France continued to reflect the ideological heterogeneity of its members.

The consistories, which are in charge of the organization of Jewish religious worship and observances, tended to extend their spheres of activities.

In 1988, Joseph Sitruk, born in Tunisia, was elected chief rabbi after René Samuel Sirat and continued in that position into the 21st century. Jean-Paul Elkann was president of the Central Consistory in the 1980s. In June 1992, Jean-Pierre Bansard was elected. Born in 1940 in Oran, Algeria, and president of a financial company, Bansard represented a new Jewish leadership. In 1995 Jean *Kahn took over.

A most significant change, however, took place in the 1990s in the Board of the Association Cultuelle Israélite de Paris (ACIP), which is the most important regional consistory in France. A new team of a stricter Orthodoxy than its predecessor, headed by Benny Cohen, was elected, calling vigorously for a return to religious practice. This new tendency is strongly opposed by some of their coreligionists who affirm their Jewish identity only in a cultural mode. There are also more Orthodox Jews: in Paris, as in other cities, ultra-Orthodox groups and notably the Lubavitch Hasidim took root during the 1980s. They have established their neighborhoods and made their Judaism “visible” through billboard campaigns at Jewish holiday times and through lighting Hanukkah candles in large public places in Paris.

At the end of 1992, the new team of the ACIP changed some of the rules governing their association. As voted on December 20, 1992, the ACIP, which became the “consistory of Paris and the Ile de France,” sought to reinforce its position as the heart of the central consistory organization and increase its powers with an eye on stricter observance of the halakhah. This transformation met with lively opposition on the part of representatives of more liberal tendencies within the consistory spheres themselves. Between 1992 and mid-1994 the debate was harsh between the more or less orthodox trends and finally a new president, Moïse Cohen, was elected who attempted to refocus the ACIP around its religious mission in a spirit open to the different trends in Judaism.

By the end of the 20th century, the CRIF had confirmed the trends that had affected it since the 1970s. It encompassed some 60 Jewish organizations, among them the most important in the country. After Alain de Rothschild, its presidents were Théo *Klein, Jean *Kahn, Henri Hajdenberg, and Roger Cukierman (from 2001). CRIF not only fought against antisemitism but also expanded its activities in the sphere of defense of human rights. In 2002 it organized a massive rally in Paris under the banner “Against Antisemitism. For Israel.” Moreover, since 1986, first Theo Klein and then Jean Kahn served as president of the European Jewish Congress (CJE) created at the initiative of the World Jewish Congress. Since 1989 CJE has developed activities involving French Jewry, directly or indirectly, on behalf of Jewish communities in the ex-communist bloc. In 1992, Jean Kahn, within the framework of his functions, took part in humanitarian actions in the territory of former Yugoslavia.

The Fonds Social Juif Unifié (FSJU) celebrated in 2001 its 50th anniversary. This is the most important organization supporting and coordinating French Jewry’s social, educational, and cultural activities. From 1982 David de Rothschild was its president.

Among the large Jewish organizations in France the Alliance Israélite Universelle (AIU), founded in 1860, plays an important role in the cultural domain. Prof. Ady Steg became its president in 1985. In September 1989 the AIU inaugurated a
new library which is now the largest Jewish library in Europe. It also has a College of Jewish Studies focusing its activities on in-depth study of Jewish thought in its various expressions. The year 2000 brought a major development in the picture of institutions in France with the creation of the Fondation pour la Mémoire de la Shoah (the Endowment for the Memory of the Shoah, FMS). Although one cannot strictly consider the FMS as a Jewish community institution, it has started to play a major role in most important fields of the Jewish life. The FMS has been granted an inalienable endowment of some 393 million euros, a sum that corresponds to the wealth left in banks, insurance companies, etc. by the Jewish families who did not survive the Shoah in France. Only the product of the endowment is to be spent. In the first years of its existence, the FMS, whose president is Simone *Veil, started an impressive program which encompasses the transformation of the Jewish Shoah Memorial in Paris into an international museum, archive and research center on the Holocaust, social programs for survivors, support to cultural initiatives such as the House of Yiddish in Paris, training programs on Judaism for teachers in state schools, and more.

This overview of the large organizations gives only a partial picture of actual Jewish life in France. There are several hundred Jewish organizations in France, some with thousands of members, others with only a few dozen. Moreover, despite the impressive number of organizations, only 30–40 percent of the Jews have relations with the so-called organized community.

Since the end of the 1980s on, some Jewish secular and humanist movements have been organized, at least among the Ashkenazi Jews, and more recently, also among Sephardim.

It may be asked if one may speak of “a Jewish community” in the case of France. Heterogeneous in origins and orientations, embedded in a social, cultural, and political environment which offer aspirations different from those presented by Judaism, the French Diaspora does not constitute a community, in the strict sense. To be sure, at the local level or as voluntary societies based on origin or ideological sector, communities can come into being; they provide a firm foundation on which to affirm one’s quest for Jewish identity. But this search exhibits different facets, even though, in France today, Jewish life is essentially crystallized around three poles: religion; culture; and the attitude to the State of Israel.

**Antisemitism.** From 1978 the extreme right increased its racist and antisemitic attacks, including the desecration of monuments and Jewish cemeteries, hostile antisemitic inscriptions, and generally xenophobia in the context of economic crisis. Those responsible were extremely small groups who openly proclaim fascist doctrines. On Friday October 3, 1980, a bomb which exploded outside the synagogue on Rue Copernic, just before the conclusion of the services, killed three persons. Although this outrage was attributed at first to the French extreme right, it became clear after a while that the source was to be found in the Middle East. The reaction was immediate. Both in Paris and in the provinces public protest meetings took place in which Frenchmen of all the political trends and opinions participated. Middle Eastern terrorism struck again two years later, in August 1982, at the popular Jewish restaurant Goldenberg. Apart from the terrorist alarms coming from the Middle East, the 1980–1990 period was also marked by different events and trends that raised the issue of a possible renewal of antisemitism in France. Apart from the well-known antisemitism of the far-right, the development of the differencialist racialism of the Nouvelle Droite drew quite a lot of attention. The 1982 war in Lebanon favored some far-leftist, “anti-zionist” discourse that was on the verge of antisemitism. In the same period a wave of so-called revisionist works and publications questioning the Holocaust, produced by the far-right, the far-left, and pro-Palestinian circles, aroused very strong emotion. Despite the strength of the legal anti-racist apparatus in France, it was brought to further completion in 1990 by the Gayssot law which repressed the questioning of the existence of crimes against humanity and the publication and distribution of racist anti-Semitic and revisionist writings. Some revisionist university workers were found guilty of questioning the Holocaust, but the suppression of antisemitic writings was insufficient.

Terrorism and antisemitic incidents marked the 1980s. At the beginning of the 1980s, a wave of terrorism raged with the bloodiest attack against Jews carried out in August 1982 against the Jo Goldenberg restaurant. At the end of the 1980s and in the early 1990s, desecrations of synagogues and, above all, cemeteries were prevalent. The most serious incident took place in Carpentras in 1990. At the end of 1992, the desecrations increased, particularly in Alsace where German Neo-Nazism and the French extreme-right cooperate. Only rarely have those guilty of these attacks been apprehended.

Other incidents were connected to the Holocaust past. In 1987 the trial against Klaus Barbie had widespread publicity. Sentenced to life imprisonment, Barbie died in prison on September 25, 1991. (See *Barbie Trial.*)

Barbie was German, but the case of French Paul Touvier is more complicated. Touvier, head of the Lyon militia and Gestapo collaborator, was arrested in May 1989. On July 11, 1991, the Paris court (Chambre d’accusation) decided to release him. On April 13, 1992, this same court gave Touvier a general acquittal. This decision was accompanied by an interpretation of the Vichy role in the persecution of the Jews, considering it as totally subordinate to German authority. This decision unleashed fierce emotion in France and was repealed, at least in part, on November 27, 1992, by the Paris High Court of Appeal. The trial against Touvier, for the murder of seven Jews in June 1944 proceeded and in 1994 he was convicted and condemned to life imprisonment.

In November 1991 the media announced that the card file of the census of the Jews made in 1940 by the Vichy police had been found by the lawyer Serge Klarsfeld in the Ministry of Veteran Affairs. For 50 years historians have searched for this card file which had been said to have been destroyed. The file...
was transferred to the National Archives where it was studied by a commission of historians. On December 31, 1992, the Ministry of Culture made public the results of its study: this card file deals only with those Jews arrested and/or deported. The census made under the Vichy government seems to have been in fact destroyed in 1948 or 1949.

There was a decrease in terms of major antisemitic events in the 1990s, although the phenomenon of the profaning of graves continued (but not only in Jewish graveyards). But by the end of the 1990s one became aware of a new disturbing situation in schools among very young people. Against the French tradition of assimilation, there seems to have developed a “community attitude” in some schools in certain areas, with an increase of violence – first verbal and a strong trend to antisemitism. With the second Intifada in Israel, an ethnic type of anti-Jewish violence seemed to be on its way, carried out by people who perceived themselves as the “true” victims, both of history (colonization, slavery) and the present (poverty, racism).

ECONOMIC AND POLITICAL SITUATION. French Jews continued actively to support Israel.

The results of the Israeli elections of May 1977, which returned Menahem Begin, caused considerable dismay. Begin was considered the classical representative of the ultra-nationalism of the extreme right, so extreme and uncompromising that his coming to power was likely to bring about a new conflict in the Middle East. Daniel Mayer, a former Socialist minister and ex-president of the League of Human Rights, ceased to write his regular column in the Zionist periodical *La Terre Retrouvée*, which he had contributed for many years, on the grounds that from now on his socialist convictions would make it impossible for him to defend the Israeli cause under the new regime.

The visit of President Sadat to Jerusalem, however, and the Camp David agreement improved the image of Begin. Many French Jews, while expressing their sympathy with the State and concern for its survival, nevertheless criticize both the internal and foreign policies of the Israeli government.

The French economy went through great changes from the 1980s to the 1990s. It became information oriented and automated, with a considerable increase in its production capacity. The battle against inflation succeeded and the currency was stabilized. The economy played an important and influential role in the creation of the European Economic Community whose borders opened on January 1, 1993, to free movement of goods among the 12 member-countries. European political union is more difficult to put into effect: in France, the September 20, 1992, referendum on the treaty of the European Union, called the Maastricht treaty, barely received a majority (51 percent); voting in favor was supported by several Jewish personalities.

This modernization of the economy had a corollary in increased unemployment. At the end of 1992, the threshold of three million unemployed was reached. Jews, too, were affected by this calamity, and social cases and problems reappeared. Poverty was also found among the Jews; in December 1992, Jewish social services launched an appeal called Tsedaka to collect funds to bring relief to 25,000 needy Jews.

From 1981 to 1995 France’s president was François Mitterrand and its various governments had a socialist majority (except for the period of “cohabitation” from 1986 to 1988 during which the right-wing government was led by Jacques Chirac). From 1995 Jacques Chirac was president. Elections at different levels of political life are held frequently in France, and Jewish voters are regularly solicited by the political parties. Following an old tradition, the main Jewish organizations do not give any directions on how to vote. Nevertheless, some of them warn against voting for the FN. Jews constitute about 1 percent of the French electorate. Their votes can only play an important role in specific localities such as Paris and Marseille. On the basis of analyses of voting behavior, it is known that the Jewish vote is spread among all parties, while within the machinery of every party Jews are active.

With the Mitterrand era coming to an end, his final “confessions” greatly troubled Jewish society which, first and foremost, appreciated his friendly relations with the Jews and the State of Israel. In fall of 1994, the book by Pierre Péan, *Une Jeunesse française*, François Mitterrand 1924–1947, confirms rumors about relations between Mitterrand and the Vichy regime after his rejoining the Resistance and especially about certain meetings up to 1986 with René Bousquet, secretary general of the police in the Vichy government, who played an important role in the deportation of French Jews in 1942. Initially condemned by the High Court of Justice in 1949, Bousquet was immediately exempted from the sentences imposed on him by this same judicial body; he reintegrated into his political and financial milieu. Accused of crimes against humanity in 1991, René Bousquet was assassinated in June 1993. The ongoing relations between Mitterrand and Bousquet became an “affair” disseminated largely by the media. Yet, President Mitterrand expressed no regrets over his meetings with Bousquet, despite the exertion of pressure on him by several well-known individuals such as Elie Wiesel. Some Jews were embittered by this “affair.” They were well disposed towards the new president, Jacques Chirac, who when mayor of Paris was known for his good relations with Jews, but they also recalled his former friendship with Saddam Hussein.

[**Doris Bensimon-Donath / Nelly Hannson (2nd ed.)**]

**Relations with Israel**

France played a major role on the Middle Eastern scene especially from World War 1 (see *Zionism; *Sykes-Picot; *Lebanon; *Syria; *Israel, State of: Historical Survey) until 1948. However, between the two world wars, France played a relatively minor role in Zionist policy, since the Zionist movement naturally directed its major political efforts toward London and Washington. Closer ties were established between the *yi-shuv* and Gaullist “Free France” during World War 1, against the background of the Nazi conquests and on the basis of con-
tact between the yishuv and the Free French in the Middle East. After the war, these ties were reinforced by their joint opposition to British policy. During the early post-war period, various French leaders provided moral and material support for the legal and "illegal" immigration of Jewish refugees to Palestine. France supported the UN partition resolution of Nov. 29, 1947, and played a decisive role in the internationalization of Jerusalem and its surroundings (mainly in order to protect the Holy sites and Christian religious institutions). France recognized the State of Israel de facto in January 1949 and de jure in May of the same year when Israel became a member of the UN. In the mid-1950s, developments paved the way for a closer cooperation between Israel and France. The tireless efforts of Shimon Peres, then director general of the Ministry of Defense, led to the conclusion in 1954 of arms agreements (tanks, artillery, aircraft) which were both beneficial for Israel's defense needs and for France's arm industries. The uprising against French colonial rule in Algeria (November 1954) gave a new impulse to the cooperation between both countries. It reached its climax with the Sinai Campaign (1956) when France, in partnership with Great Britain, coordinated their attack against Nasserite Egypt. Both countries shared a common interest in trying to weaken Egypt, because Nasser supported both the Algerian fellahas and the Palestinian fedayins. Although the Suez campaign was a political failure, Franco-Israel friendship blossomed. France became Israel's major supplier of arms during that period, and remained so until the Six-Day War (1967). In 1957, France began to help Israel build the nuclear reactor in Dimona (Negev). A whole range of technical and scientific cooperation agreements were signed which enhanced cultural relations between the two countries. They included the establishment of chairs in French language and literature at Israeli universities and in Hebrew language and literature at a score of French universities; the teaching of French as a third language in Israeli secondary schools; exchanges of scientists, students and artists, and joint scientific projects. The advent to power of the General de Gaulle (1958) did not mark an abrupt break with previous policy. Only the close cooperation in nuclear matters and between the general staffs was phased out. French arms continued to be sold to Israel which was seen by de Gaulle as a strategic asset against Soviet expansion in the Middle East. Economic links were strong. In 1966, French exports to Israel amounted to $35,000,000 (imports did not exceed $19,000,000). Tourism from France to Israel reached the figure of 40,000. The reconsideration of French policy began slowly. On the occasion of Ben-Gurion's visits to France in 1960 and 1961, de Gaulle, who called Ben-Gurion "the greatest statesman of this century," hailed Israel as "our friend and ally." However, he firmly rejected a formal military alliance which Ben-Gurion wanted to conclude in 1963. At that time, de Gaulle has already begun a rapprochement with the Arab countries. After Algeria gained independence, the French president thought it was high time to resume diplomatic relations with Arab countries. Although there was a gradual shift in foreign policy, nothing foretold the about-face position taken by de Gaulle during the crisis which ended up with the Six-Day War (June 1967). In mid-May 1967 after the withdrawal of the UN truce observers at the request of Egypt and the closing of the Straits of Tiran to all shipping to Eilat, de Gaulle stated clearly to Abba Eban, minister of foreign affairs, that the situation was not a casus belli and that Israel should not take the initiative to go to war. To prevent the outbreak of a war, France announced an embargo on arms deliveries to "all Middle Eastern states," a decision which in practice hurt only Israel. This unilateral cancellation of French commitment towards Israel was seen in the Jewish state as a betrayal. De Gaulle justified his stand by arguing that Israel was militarily stronger and that the war would have long term destabilizing effects. He deeply resented the fact that Israel did not heed his advice on the eve of the 1967 war and went so far as to describe Israel in a famous press conference in November 1967 as a "warrior State determined to become larger." The Six-Day war was a breaking point in Israeli-French relations and put an end to a close cooperation which lasted almost 15 years. This abrupt change was misunderstood by many French people in the press, among politicians (even some Gaullists), among public opinion and, of course, in the Jewish community. It even aroused certain uneasiness when de Gaulle called the Jews "an elite people, self-assured and domineering...." After 1967, French-Israeli relations steadily deteriorated. De Gaulle's resignation in 1969 did not change much. Under Georges Pompidou's presidency (1969–1974), France drew nearer to the Arab world. The growing dependence on Arab oil and the attempts to penetrate the Arab markets economically (including through arm sales) moved France further way from Israel. Pompidou stated that Israel had the right to live in peace within secure and recognized borders but was also one of the first Western leaders to speak of the "rights of the Palestinian people" and used the nascent European political cooperation to promote the French position in the EEC. Valery Giscard d'Estaing made some positive gestures towards Israel: lifting of the arms embargo, official visit of the French foreign minister to Israel.... However, these moves cannot conceal the fact that France had clear pro-Arab leanings. A PLO office was opened in Paris (1975), and France was instrumental in the adoption by the Europeans of the Venice declaration (1980) which spoke of the Palestinian right to self-determination and called for PLO participation in the peace negotiations. At the same time, France had deep reservations regarding the Camp David accords because they were seen as leading towards a separate peace between Egypt and Israel, not to a global settlement of the Arab-Israeli conflict. These political stands strained relations with Israel. The election of Francois Mitterrand as president of France in May 1981 brought with it the hope that there might be a change favorable to Israel in French Middle East policy, because Mitterrand had a liking for the Jewish people and spoke in positive terms of Israel. The official visit he undertook in Israel in March 1982 – the first ever of a French president – was highly symbolic of his attachment.
to “Israel’s unshakeable right to live” as he said during his speech at the Knesset. He welcomed also the Israeli president Haim Herzog for an official visit in 1988. However, this more cordial attitude towards the Jewish state went hand in hand with a deepening of French defense of the right of self-determination of the Palestinian people which had the right to have its own state, alongside Israel. President Mitterrand invited Yasser Arafat, in May 1989, for an official visit in Paris which aroused the opposition of the French Jewish institutions. He became more explicitly critical of Israel after the start of the first Intifada (1987) but returned a second time in Israel in November 1992. After the signing of the Oslo accords (1993), political relations improved notably. Paris became even a meeting point between Israelis and Palestinians. The economic part of the Israeli-Palestinian Interim Agreement was signed in Paris in April 1994. However, the lull was only temporary. Relations once again became strained after the advent to power of Binyamin Netanyahu in 1996 and, later on, with the start of the second Intifada in 2000. On the one hand, France denounced the re-occupation of Palestinian territories by the Israeli army and the confinement of Yasser Arafat; on the other hand, Israel denounced the alleged passivity of French authorities towards antisemitic actions undertaken, at least partially, under the false pretext of “solidarity with the Palestinians.” The uneasy situation of the French Jewish community, French foreign policy and Israeli policies in the West Bank and Gaza intermingled dangerously. The new French government (right wing), set up in 2002, tried to improve relations with Israel, with such actions as the creation of a high council for research and scientific cooperation (2003) and official visits to France by Moshe Katzav and Ariel Sharon. These measures have bettered the general atmosphere between both countries which, with sustained economic relations (economic exchanges went up from €1.2 billion in 1992 to €1.8 billion in 2003).

[Alain Dieckhoff (2nd ed.)]

FRANCES, IMMANUEL BEN DAVID (1618–c. 1710), Hebrew poet. Born in Leghorn, he was educated by his father David, his brother Jacob *Frances, and especially by R. Joseph Fermo. Immanuel’s life was filled with difficulties; not only was he forced to wander from one town to another to earn a living, but a succession of misfortunes befell him. His beloved father died in 1640, and his wife and two children in 1654. In
1657, he married Miriam, the daughter of R. Mordecai Visino, but both she and the son she bore him died in 1667. The same year saw the death of his brother, Jacob, to whom Immanuel was deeply attached, and together with whom he had fought against the supporters of Kabbalah. In his solitude, he devoted himself entirely to his literary work and to his activities as rabbi in Florence. In these he found his sole consolation for the remainder of his life.

His poetic work may be divided into three periods. The first extends from 1643 to 1660, when he was under the influence of two of Italy’s most popular poets, Tasso and Guarini. At this time he wrote his love poems and his debates on women (Vikku’ah Itti’el ve-Ukhal), and rabbis (Vikku’ah Rekhav u-Vi’anal), to which he appended satirical epigrams. The dramatic form he employed suited the literary style he had adopted to attack the corruption in contemporary Jewish society. From a traditional point of view he censured poets like Immanuel of Rome who introduced in their works frivolities and “prurient poems.” During the second period, from 1664 to 1667, Immanuel, together with his brother Jacob, waged a literary war against Shabbetai Zevi, Nathan of Gaza, and their messianic movement, in which he saw a threat to the Jewish people: mysticism was in their opinion taking the place of the Halakah. His book of satirical poems, Zevi Muddah (“The Banished Gazelle [Zevi]”), belongs to this period and is the choicest of his literary work. The poems were published by M. Mortara (in Kovez al jad, 1 (1885), 99–131). A few poems have been translated into English: see Simonsohn (1977), 609–10, and Carmi (1981), 500–4. In the final period, from 1670 until after 1685, the poet adapted his religious poetry for use in synagogue services, giving it a dramatic and recitative character. He even wrote some poems in Latin that have not been preserved. While the poet preferred to use the Spanish-Arabic meter, he also introduced into his Hebrew poetry the terza rima and the ottava rima of Italian prosody. His poetic works were edited by S. Bernstein in 1932 under the title Divan le-R. Immanu’el b. David Frances. His work Metek Sefatayim, written in 1667 during a period of residence in Algiers, deals with various aspects of poetry and rhetoric. It was published in 1892 by H. Brody and deserves a new critical edition including all the new material that is known today; most of it has been translated into Spanish (del Valle, 1988).

[Joseph Dan]

FRANCES, JACOB BEN DAVID (1615–1667), poet; elder brother of Immanuel *Frances. Born in Mantua, Jacob, a highly educated man, mastered not only Hebrew and Aramaic, but Latin, Italian, and Portuguese as well. The two brothers collaborated in their literary work, and in his book of poems Metek Sefatayim Immanuel shows great esteem for his elder brother’s talent, quoting his verses and calling him by the surname Ha-harif, “the sharp one.” After Jacob’s death, Immanuel corrected and completed some of his poems, to which he occasionally even attached additions of his own. Copyists inserted these additions into the poems without always noting that they were composed by Immanuel. At times they also attributed Immanuel’s poems to Jacob, and vice-versa, because of the similarity in style, form, and content. There is still no definitive means of determining the true authorship of some of the poems; 54 sonnets, however, can almost certainly be ascribed to Jacob. In the manner of his contemporary poets, Jacob wrote on all subjects, including friendship, polemics, ethics, love, and marriage. As was customary in poetry at that time, some of his poems have a flavor of eroticism. Jacob quarreled fiercely with members of his community, chiefly attacking the sect of Shabbetai *Zevi that arose during his time, as well as the kabbalists who were closely associated with it. He and his brother regarded them as detrimental to Judaism and considered themselves duty-bound to stop them. In this struggle he aroused the opposition of Mantua’s rabbis, who condemned a poem he published in 1660 or 1661 against the vulgarization of kabbalistic studies and destroyed almost all the copies of it (the poem was reprinted in 1704 by Samson Morpurgo at the end of his book Ez ha-Da’at), and again provoked the opposition of kabbalists like Solomon Aviad Basilea, who many years later condemned Morpurgo for having published it). Unlike his brother, Jacob held no communal post but engaged in business. He died in Florence, after having left Mantua because of his quarrel with the kabbalists. Only isolated poems were published during his lifetime. A collection of all his poems from manuscripts and printed works was published by Peninah Naveh (see bibliography). This publication has considerably changed the critical evaluation of his work,
and Jacob is now considered by many scholars as one of the very outstanding Hebrew poets of his time, if not the greatest of them. D. *Pagis wrote that he is one of the most interesting poets in the entire Hebrew-Italian school of poetry, and that his work is rich in forms, genres, and psychological moods, and fascinating by virtue of its rhetorical flexibility and stylistic innovations; T. *Carmi defined him “the last major poet before the modern period” and translated some poems into English. Jacob’s poetry clearly reveals his mastery of both the Hebrew language and Hebrew literary tradition, as well as his acquaintance with contemporary European literature. As some scholars have remarked, his poems (especially the love poems) are sometimes influenced by the style, the imagery, and the themes of Baroque poetry, and in a long poem written in ottava rima he anticipates the pastoral theme that later became very popular in both Italian and Hebrew literature of the 18th century.

[Abraham Meir Habermann / Ariel Rathaus (2nd ed.)]

**FRANCHE-COMTÉ,** region and former province in E. France, comprising the present departments of Haute-Saône, Doubs, and Jura. Since a document of 1220 mentions a Jewish quarter (vicus Judaeorum) in *Lons-le-Saunier, the Jews must first have come to Franche-Comté at a much earlier date, probably after the expulsion from the kingdom of France in 1182. From the middle of the 13th century, there is increased evidence of the presence of the Jews and the 40 or more places they had settled, including Baume-les-Dames, *Besançon, Lons-le-Saunier, and *Vesoul. Because they were a valuable source of income, the Jews were eagerly welcomed by various local lords, who granted them advantageous privileges, but they were not admitted to the Church domains. From a detailed list of the fiscal contributions of the Jews drawn up in 1296, it is apparent that by then several localities no longer permitted Jewish residence; those remaining paid an annual tax of 975 livres. Though Franche-Comté was temporarily under the control of the French kingdom at the time, the Jews were not affected by the expulsion order of 1306; however, they were included in that of 1322, though possibly it was not rigorously enforced. From 1332–33 at the latest, new immigrants joined those who had been able to remain in their homes; in a census of 86 Jewish families, 32 are described as recent arrivals. As during the 13th century, their principal occupation was moneylending.

During the *Black Death persecutions in 1348, the count appointed two commissioners, who promptly arrested the Jews and seized their belongings. They were imprisoned for many months (those of Vesoul for nearly ten months), some of them in Gray and the others in Vesoul. In spite of confessions extracted under torture, none was condemned to death but all were banished, and the regent, Jeanne de Boulogne, promised that Jews would no longer be tolerated in Franche-Comté. However, from 1355, there were Jews in the province once more, especially in Bracon and Salins-les-Bains, where a Christian loan bank was set up in 1363 so that there need be no recourse to Jewish moneylenders; the Jews were subsequently expelled from the town in 1374. In 1384, shortly after Franche-Comté was reunited with Burgundy, the duke authorized many Jewish families to settle there, but they did not escape the general expulsion from Burgundy ten years later. Many of them found refuge in Besançon, from where one Jew returned to settle in Champlitre. Driven out in 1409, he was the last Jew to live in Franche-Comté before the French Revolution.

[Bernhard Blumenkranz]

**FRANCHETTI, RAIMONDO** (1890–1935), Italian explorer. In 1910 Franchetti traveled alone through Indo-China and Malaysia. After World War I he explored the Sudan, East Africa, and Ethiopia. In Nella Dancàlia Etiòpica (1935) he described the Danakil region of northeastern Ethiopia. His sympathetic understanding encouraged many of the Ethiopian tribal chiefs to join an alliance with Italy before hostilities began in 1934. Franchetti was killed in a plane explosion near Cairo airport.

**FRANCIA, FRANCIS** (b. 1675), English conspirator. He was the grandson of Domingo Rodrigues Isaac Francia, an ex-Marrano of Vila Real (Portugal) who arrived in London from Bordeaux in 1655 and became a leading member of the London community. Francis himself was born in Bordeaux and dealt in wine. He subsequently went to London where in 1717 he was tried on a charge of treasonable correspondence with adherents of the exiled Old Pretender James. Despite the weighty evidence against him, he was acquitted. He then apparently became a government agent and betrayed his former associates.

[Cecil Roth]

*FRANCIS I,* Austrian emperor 1792–1835, last Holy Roman Emperor (as Francis II) until 1806. In 1792 Francis ordered the *Judenamt* (office for Jewish affairs) to enforce the numerous restrictions on Jewish settlement in *Vienna and raised the Bolleten* (tax paid by a Jew each time he entered the city). The preamble to his 1797 patent granted to Bohemian Jewry

172

ENCYCLOPAEDIA JUDAICA, Second Edition, Volume 7
(see *Bohemia), proclaiming equality as its ultimate aim, raised expectations which remained unfulfilled. Most of the petitions for improvement of the status of the Jews addressed to him by representatives of the Jews in the empire were unanswered, though in 1798 Francis authorized the existence of 52 communities in *Moravia. He agreed to the official use of "Mr." instead of "Jew" in reference to Jewish citizens. During the Congress of *Vienna a petition requesting partial equality presented by B. *Eskeles, N.A. *Arnstein, and L. *Herz met with no success (see also *Metternich). In Francis' Italian provinces, however, *emancipation measures were not revoked. In Galicia, Francis supported Naphtali Herz *Homberg; knowledge of his catechism *Benei Zion was made compulsory in 1810 for all Jewish couples registering their marriages. While regularly making use of Jewish finance and financial advice, Francis unhesitatingly blamed Jewish financiers for all the economic ills of the empire.

**FRANCISCANS**, Roman Catholic Order. The presence in the Middle East of the Franciscan Friars, the Order founded by Francis of Assisi (Italy), officially approved by the Pope in 1221, started in the same year. The province of *Terra Sanctae* (the Holy Land), or *Siria* or the Promised Land, was founded in the year 1217. The first provincial or superior was Brother Elia from Assisi. In the year 1219 the founder himself visited the region in order to preach the Gospel to the Muslims, seen as brothers and not enemies. The mission resulted in a meeting with the sultan of Egypt, Malik al-Kamil, who was surprised by his unusual behavior. The Franciscan Province of the East extended to Cyprus, Syria, Lebanon, and the Holy Land. Before the taking over of Acre (on May 18, 1291), Franciscan friaries were present at Acre, Sidon, Antioch, Tripoli, Jaffa, and Jerusalem.

From Cyprus, where they took refuge at the end of the Latin Kingdom, the Franciscans started planning a return to Jerusalem, given the good political relations between the Christian governments and the Mamluk sultans of Egypt. Around the year 1333 the French friar Roger Guerin succeeded in buying the Cenacle on Mount Zion and some land to build a monastery nearby for the friars, using funds provided by the king and queen of Naples. With two papal bullae, *Gratias Agimus* and *Nuper Carissimae*, dated in Avignon, November 21, 1342, Pope Clement VI approved and created the new entity which would be known as the Franciscan Custody of the Holy Land (Custodia Terra Sanctae).

The friars, coming from any of the Order's provinces, under the jurisdiction of the father guardian (superior) of the monastery on Mount Zion, were present in Jerusalem, in the Cenacle, in the church of the Holy Sepulcher, and in

the Basilica of the Nativity at Bethlehem. Their principal activity was to ensure liturgical life in these Christian sanctuaries and to give spiritual assistance to the pilgrims coming from the West, to European merchants resident or passing through the main cities of Egypt, Syria, and Lebanon, and to have a direct and authorized relation with the Christian Oriental communities.

The monastery on Mount Zion was used by Brother Alberto da Sarteano for his papal mission for the union of the Oriental Christians (Greeks, Copts, and Ethiopians) with Rome during the Council of Florence (1440). For the same reason the party guided by Brother Giovanni di Calabria halted in Jerusalem on his way to meet the Christian Negus of Ethiopia (1482).

In 1551 the Friars were expelled by the Turkish Muslim Authority from the Cenacle and from their adjoining monastery. However, they were granted permission to purchase a Georgian monastery of nuns in the northwest quarter of the city, which became the new center of the Custody in Jerusalem and developed into the Latin Convent of Saint Savior (known as Dayr al-Latin).

In 1620 the Franciscans received in Galilee, from Fakhr ed-Din, the Druze amir of Sidon, Mount Tabor and the venerated Grotto of the Annunciation in Nazareth. In the following year they could partly rebuild the church of St. John the Baptist at *Ein Kerem on the mountain of Judea, where they opened a new friary.

New churches and monasteries were built in various, already venerated sites in the 19th century above the ruins of an older church: the Chapel of the Flagellation along the Via Dolorosa in Jerusalem in 1838; a chapel at Emmaus-Qubeibah in 1872; the church at Cana (Kefer Kanna) in 1880, and a chapel in the village of Naim; a chapel at Bethfage in 1883, and a chapel at the "Dominus Flevit" in 1891, both on the Mount of Olives.

New basilicas were built at Emmaus-Qubeibah in 1901 and at Nazareth – the so-called Church of Nutrition – in 1914; the Basilica of the Agony at Getsemane in 1919–24; the Basilica of the Transfiguration on Mount Tabor in 1921–24, followed by the Chapel of the Good Shepherd in Jericho in 1924; the chapel on the west bank of the Jordan River in 1934; the Chapel of Primacy at Tabgha on the shore of the Sea of Galilee; the Church of the Visitation at Ein Keren in 1938–40; a new church at Bethany in 1952–54; a chapel in the Shepherds Field outside the village of Beit Sahur-Bethlehem; and a new chapel at "Dominus Flevit" in 1955. The new great Basilica of the Annunciation in Nazareth started in 1955 was consecrated in 1969. The Memorial of Saint Peter at Capernaum was completed in 1990. In Transjordan, the Memorial of Moses on Mount Nebo is managed by the Franciscans.

Historically, the Franciscan presence in the Holy Land resulted in a continuity with the keeping and recording of local Christian traditions. Over the centuries, in fact, the Franciscans published several important books in different languages supplying, revising, and updating a wealth of in-
formation useful for the guidance of pilgrims, as a result of first-hand experiences.

During the long period which officially started in the year 1342, they functioned as custodians of the Christian shrines on behalf of the Catholic Church, guides of the Christian pilgrims to the Holy Land, and consequently as authors of many publications about Palestinian subjects written with the intention of improving the knowledge of the Holy Land among the Christians of Europe.

Works such as Il Libro d’Oltramare (“A Voyage beyond the Seas”) by Fra Niccolò da Poggibonsi, published in 1346; Trattato di Terra Santa (“Treatise on the Holy Land”) by Fr. Francesco Suriano, written in 1485; Pianta dei Sacri Edifici (“Plans of the Sacred Edifices of the Holy Land) by Fr. Bernardino Amico, which came out in 1609; and the work in two volumes of Fr. Francesco Quaresmi, Elucidatio Terrae Sanctae (“The Illustration of the Holy Land”), which appeared in 1626, bear witness to this activity.

The restoration and the rebuilding of the sanctuaries owned by the Custody of the Holy Land during the last century resulted in the archaeological exploration of the sites and their occupational history. The scientific work was entrusted to the archaeologists of the Studium Biblicum Franciscanum (SBF), an institute founded in Jerusalem in 1933.

As a scientific institution, the Studium Biblicum Franciscanum is closely related to the history of the Franciscan presence in the Holy Land. It was officially founded as a continuation of the work done by the Franciscan Fathers during the previous centuries. The Studium Biblicum Franciscanum is today a Roman Catholic faculty of biblical and archaeological studies in the Holy Land sponsored by the Franciscan Custody of Terrasanta. It is located in the Old City of Jerusalem, in the Flagellation monastery at the Second Station of the Via Dolorosa.

As a research center, the SBF specializes in the rediscovery and exploration of New Testament sites, as well as in the study of the local early Christian Church in the Holy Land, by means of both literary sources and excavations.

Reports on excavations are published annually in the review Liber Annuus and in the series Collectio Maior and Collectio Minor. Exegetical studies on the Bible are published in the series Analecta. The archaeological collections of the SBF are illustrated in the series Museum.

As a learning center, the SBF is presently authorized to confer pontifical academic degrees of Baccalaureate, Licentiate, and Doctorate in Biblical Sciences and Archaeology.

Added to the SBF is an archaeological museum opened in 1902 in the monastery of Saint Saviour. This original nucleus of the museum was transferred to the Monastery of the Flagellation in 1931. Findings from the SBF excavations, along with liturgical Latin codices of the 14th–15th centuries, a treasure trove of liturgical medieval objects from the Basilica of the Nativity in Bethlehem, and the 18th century pots of the pharmacy of the Franciscan monastery of Saint Saviour are displayed in the museum. The collection includes a numismatic section specializing in the city-coins of Palestine, Decapolis, and Provincia Arabia.

As a center of archaeological research, therefore, the Studium Biblicum specializes in the study of the Christian presence in the Holy Land in the sanctuaries of the Late Roman, Byzantine, and Crusader periods. Historically important for the geography of the Gospel are the discoveries of the localities of Nazareth, Capharnaum, Magdala, and Bethany.

The excavations in Nazareth, started by Fr. Prosper Vaud at the beginning of the 20th century, were resumed by Fr. Bellarmino Bagatti in 1954. Along with the discovery of the ancient village, he found the first signs of the Christian presence as evidenced by the Christian graffiti scratched on plaster found under the Crusader and Byzantine Basilica of the Annunciation.

At Capharnaum, the excavations started by Fr. Gaudenzio Orfali in the synagogue in 1921 were taken up again in 1968 and have been continued into the 21st century by Frs. Virgilio Corbo and Stanisla Loffreda. They have discovered among the ruins of the houses of the ancient village the insula sacra (the sacred insula) with the domus-ecclesia (house-church) of St. Peter under the Byzantine octagonal basilica. At the same time, they have unearthed under the Jewish synagogue, structures dating to the Late Roman period.

For the first century, which is the setting of the New Testament, one may mention the excavations of the Herodion palace near Bethlehem. This work was carried out by Fr. V. Corbo during the years 1962–67. The same archaeologist directed the excavations of the Herodian fortress of Machaerus in Jordan, in which, according to Josephus Flavius, John the Baptist was jailed and murdered.

One of the main excavation and restoration projects undertaken by the Institute is the one at Mount Nebo in Jordan. The project started in 1953 under the direction of Fr. Sylvester Saller. The work was focused mainly on the Memorial Church of Moses, Prophet and Man of God. This memorial was built by the Christians of the region in the fourth century on the western peak of Siyagha. Around it a monastery developed in the Byzantine period.

Excavations were expanded to the nearby ruins of Khirbet el-Mukhayyat on the southern peak of Mount Nebo, where the Iron Age fortress and the Roman-Byzantine village identified with Nebo are located. Since 1984, the Studium has been excavating two Byzantine churches in the ‘Uyun Mousa valley, north of the mountain. At the same time, the Studium is cooperating with the Jordanian Department of Antiquities in excavating several monuments of the city of Madaba, such as the Church of the Virgin, the Hippolythus Hall, the Cathedral, and the Burnt Palace.

In the summer of 1986 work started at Umm er-Rasas, important ruins located in the steppe 20 miles (30 km.) southeast of Madaba, with the rediscovery of the ancient name of the ruins, Kastron Mefaa, in the inscriptions in the rich mosaic floor of the Church of St. Stephen built in the Umayyad period, with the biblical implications of this discovery. More-
over, a city plan of Kastron Mefaa was found along with these inscriptions. In the summer of 1989 a second plan of the city of Kastron Mefaa depicted in the mosaic floor of the church of the Lions was unearthed.

At Umm er-Rasas, as at Mount Nebo, Madaba, and other sites of the Holy Land, archaeological and historical research in the Roman-Byzantine and Arab periods (the main field of the scientific interest of the Studium) has proven to have deep historical implications with regard to the biblical world of both the Old and the New Testament, based on the continuity of life in the same land by the same populations, Jews, Christians, and Muslims.

[Franck, Adolphe (2nd ed.)]

*FRANCIS JOSEPH I OF HAPSBURG* (1830–1916), emperor of Austria 1848–1916. During his long reign he won popularity among all strata of Jewry in his empire and abroad. When he died the executive of the Austrian Zionists credited him with the betterment of the lot of the Jews in the empire, describing him as the “donor of civil rights and equality before the law, and their ever benevolent protector” (Blochs Wochen-schrift, 33 (1916), 784). Antisemites nicknamed him “Juden- kaiser.” The Jewish masses referred to him as יֵשׁוֹעַ (Yeshua), יֵשׁוֹעַ בְּרוֹא (Yeshua Bara), and many folklorist tales were told of him, among them that of his devotion to family life and charity. He several times expressed his dislike of antisemitism, and in the Lower Austrian Diet called attacks on Jewish physicians a “scandal and disgrace in the eyes of the world” (1892). He twice refused to confirm the antisemite Karl *Lueger as mayor of Vienna, and on the day he finally did so conferred an order on Moritz *Guedemann, the chief rabbi of Vienna. He ennoblled 20 Jews during his reign. After World War I many Jews of the former Hapsburg dominions looked back nostalgically to the reign of Francis Joseph as a golden age.

FRANCK, ADOLPHE (Jacob; 1809–1893), French philosopher and writer. Franck, who was born at Liocourt, studied Talmud under Marchand Ennery, and later studied medicine and philosophy. He taught philosophy at several lycées (from 1840 in Paris) and lectured at the Sorbonne. In 1844 he was elected to the French Académie des Sciences Morales et Politiques, later being appointed to the Collège de France as extraordinary professor of ancient philosophy (1849–52) and professor of natural and international law (1854–86). In 1850 he represented the Jewish faith on the Conseil Supérieur de l’Instruction Publique. He was vice president of the Consistoire Israélite and later president of the Alliance Israëlite Universelle. Franck took part in the activities of the French society for the translation of the Bible and the Sociétè des Etudes Juives (whose chairman he became in 1888). In 1870 he interceded in Bucharest with Prince Carol in favor of the Romanian Jews. Franck, who defended Judaism in several works, conceived of it as an idealistic expression of monotheism and vigorously opposed pantheism, atheism, materialism, and communism. He established and managed the journal of the anti-atheistic league, La Paix Sociale, and was coeditor of the Journal des Savants, and contributor to the Journal des Débats and the Archives Israélites. His works on general philosophy and the history of philosophy include Esquisse d’une histoire de la logique (1838); Le communisme jugé par l’histoire (1848); Philosophie de droit pénal (1864), in which Franck and others advanced the cause against capital punishment; Philosophie du droit éclesiastique (1864); La philosophie mystique en France à la fin du xviie siècle (1866); Philosophie et religion (1857); and Philosophes modernes (1879); he also edited the Dictionnaire des sciences philosophiques (6 vols., 1844–52; 1885).

Franck’s chief work is in the field of Jewish studies: La Kabbale ou philosophie religieuse des hébreux (Paris, 1843; 1892; The Kabbalah; or the Religious Philosophy of the Hebrews, 1926). This is the first attempt at a comprehensive, scientific description of the beginnings and contents of the Kabbalah in popular form. In the last (third) part Franck examines the religious and philosophic doctrines with which the Kabbalah has
some traits in common (Platonism, the Alexandrinian school, the teachings of Philo, Christianity, the religions of the Chaldeans and the Persians). Two discussions on the Hasidim and the Frankists are appended. Franck’s premises and hypotheses (early date for the beginnings of the Kabbalah; authenticity of Sefer *Yezirah; Persian influence) were strongly opposed (by Steinschneider, Jellinek, Jost, and Joel, among others). Other works of his of Jewish scholarly content are Sur les sectes juives avant le christianisme (1853); La religion et la science dans le judaisme (1882); and Le panthéisme oriental et le monothéisme hébreu (1889). His articles on Jewish subjects (all of which appeared in Archives Israélites) include: “De la Création” (1845); “Le rôle des juives dans la civilisation” (1855); and “Le péché original et la femme” (1885).

[Joseph Elijah Heller]

**FRANCK, HENRI** (1888–1912), French poet. A great-grandson of Arnaud Aron (1807–1890), chief rabbi of Strasbourg, Franck was born into a well-to-do Parisian family. He studied under Henri Bergson and became one of the circle of young French intellectuals who, in the aftermath of the *Dreyfus* affair, opposed the rising tide of nationalism and sought a new national and metaphysical ideal that would save France from fanatical individualism. Endowed with a consuming ardor for life and learning, Franck refused to spare himself and died of tuberculosis at the age of 24. His works include philosophical essays and literary criticism, but his major achievement was a magnificent 2,000-verse poem, *La Danse devant l’Arche* (1912), which secured his reputation as one of the most gifted French poets of his generation. Encouraged by his close friend André *Spire, Franck sought to harmonize biblical inspiration with the French Cartesian tradition and saw himself as a new David dancing before the Ark of the Covenant. His poem concludes on a note of disillusion because of the refusal of his fellow Jews, so proud of their attenuated Judaism and atheistic French culture, to join him. Franck’s spiritual conflict inspired his old friend and classmate, Jacques de *Lacretelle, to use him as a model for the tragic hero of his novel *Silbermann*.

[M.J. Gottfarstein]

**FRANCK, JAMES** (1882–1964), physicist and Nobel prize winner. Franck, who was born in Hamburg, studied chemistry at Heidelberg and Berlin. He then devoted himself mainly to physics. In 1920 he became a professor of experimental physics, directing the second Physical Institute at Goettingen. In 1925 he and Gustav *Hertz jointly received a Nobel prize for their discovery of the laws governing the impact of an electron on an atom, corroborating Bohr’s “obstacle” theory of spectra, according to which atoms cannot absorb any energy below a certain level. In 1933, after the Nazi regime was established, Franck moved to the United States. He became a faculty member of Johns Hopkins University and the University of Chicago and made further investigations into the structure of matter, especially the kinetics of electrons. He also developed brilliant optical methods for determining the dissociation temperatures of chemical combinations from molecular spectra, and confirmed the assumptions on which modern atomic theory rests. In addition, he carried out important investigations in photochemistry.

[J. Edwin Holmstrom]

**FRANCO, English family.** In the 18th century, JACOB DE MOSES FRANCO (d. 1777) settled in London and amassed a large fortune in the coral trade in conjunction with his brothers RAPHAEL in Leghorn and SOLOMON (see below) in Fort St. George, Madras. He played a prominent part in the affairs of the London Sephardi community and was a member of the original Board of Deputies of British Jews in 1760. In that year, the College of Heralds accepted as evidence for his coat of arms the family badge which figured in the Leghorn synagogue. His brother SOLOMON (d. 1763) arrived in Bombay about 1743 under an agreement with the English East India Company as a “free merchant,” moving to Madras in 1749. Described in his epitaph as “an eminent Hebrew merchant of Madras,” he had huge interests in the coral and diamond trade. RALPH FRANCO (1788–1854), the great-grandson of Jacob, adopted the name of *Lopes, and was the ancestor of the barons Roborough.

[Cecil Roth]

**FRANCO, AVRAHAM** (1894–1993), Sephardi leader. Franco was born and raised in Hebron where his father was a religious leader. He had a traditional religious education and succeeded his father as *shohet* of the Sephardi community. In Hebron he taught Arabic at the New Talmud Torah but went on to study pharmacy, becoming the pharmacist of the Hebron municipality.

In World War I he served in the Turkish army, and after the war was a pharmacist at the Rothschild Hospital (which became the Hadassah Hospital) in Jerusalem. He then entered government service as a translator and became secretary of the Jerusalem municipality. As secretary of the Sephardi Fed-
eration, he introduced organizational changes in Jerusalem's Sephardi Public Council.

After the 1929 Hebron riots, he was active on behalf of the Hebron refugees, in aid of whom he went to London where he raised money, enabling some of the families to return to Hebron.

In 1947, Franco, as a Jewish employee of the Jerusalem municipality, was a target for assassination by Arabs. Sometimes after escaping a bombing attempt aimed against the Jewish employees, two Arabs saved him from being stabbed by a potential assassin who entered the municipality specifically to kill him.

As secretary of the municipal council, he served as a bridge between Jews and Arabs. His experiences growing up in Hebron and living with Arabs helped him considerably in making friendships and initiating Jewish-Arab cooperation.

[Yitzhak Kerem]

FRANCO, GAD (1881–1954), Turkish lawyer. Franco was born in Milas, the son of Dardanelles Jewish community’s chief rabbi and cousin of the journalist David *Fresco. He taught Turkish and French in 1901–02 at the Milas Jewish school. He started to publish his articles in the *Izmir newspapers Ahenk and Hizmet. In 1902 he moved from Milas to Izmir and started publishing the newspaper El Nouvellista with his cousin Hizkia Franco. Gad Franco was a fervent adviser of the Committee of Union and Progress and believed in the Ottomanization of the Jews. He graduated in 1909 from the Law School of Istanbul University and then went to Paris, where he graduated as a doctor of law from the Paris Faculty of Law. He returned to *Istanbul in 1923 and opened a law office together with two other Jewish lawyers, Henri Geron and Salamoun Adamto. Franco was a member of the Secular Council of Turkey’s Chief Rabbinate and enjoyed very close relations with the Turkish Republic’s leadership. In 1942, during the enforcement of the harsh capital tax law, he was unable to pay it and was sent to the labor camp of Aşkale. His works are Muallimlere Irfan ve Terbiye Bahisleri (1910), Yunan-ı Kadinde Terbiye Nazariyeleri (1910), Conference Faite par Maître Gad Franco au Local de l’Ecole de l’Alliance à Smyrne (1910), Teţebbiat (1911), Jan Jak Rusınun Terbiye Nazariyeleri (1913), and Développements Constitutionnels en Turquie (1925).

FRANCO, MOSES (1837–1918), chief rabbi of Rhodes and later Rishon le-Zion, chief Sephardi rabbi of Ereẓ Israel from 1913 to 1916. He was born in Rhodes and brought back at the age of 45 from Milas, where he was working as a clerk, to become chief rabbi of Rhodes, which at the time was divided into factions over issues of finances and honor. In 1906, it was decided that he would serve as chief rabbi permanently. He occupied the post until 1911, when he decided to move to Ereẓ Israel. After the death of Rabbi Naḥman Batito, he was appointed acting-chief abbi (ḥakham bashi) of Jerusalem. Shortly afterwards, in 1913, the Ottoman authorities recognized his appointment. He endured the famine and misery of the period in Ereẓ Israel when Ottoman Turkey was at war with England in World War I. When the Ottoman Empire closed the borders to Ereẓ Israel and the inhabitants were restricted in their movements, and he himself was at an advanced age and unable to function in his position, he resigned, remaining in Jerusalem until he died.

His first cousin was RAHAMIM FRANCO, the “Harīf,” chief rabbi of Livorno, av bet din in Jerusalem, and chief rabbi of Hebron. His children included HIZKIYA, journalist and president of the Jewish community of Rhodes in the 1930s, and Elise Amateau of Izmir, father of Albert Jean *Amateau.

FRANCO-MENDES, DAVID (Hofshi-Mendes; 1713–1792), Hebrew poet of the early Haskalah period. Born into an esteemed and affluent Portuguese family in Amsterdam, he received an excellent education and had a command of six languages besides Hebrew. In honor of his marriage to Rachel da Fonseca in 1750, his friend Benjamin Raphael Dias Brandon composed “Keter Torah,” an epithalamium. Franco-Mendes was considered an outstanding talmudic scholar and often handed down halakhic decisions. He was a leading Hebrew poet of his time and was greatly influenced by M.H. *Luzzatto during his stay in Amsterdam (from 1735). A central figure among a group of Dutch Hebrew poets even prior to the appearance of *Ha-Me’assef in 1784, he became a member of Amadores das Musas, a Jewish literary society in 1769, and conducted an extensive correspondence with many Jewish literary personalities abroad. In the same year, he was also appointed honorary secretary of the Sephardi community of Amsterdam. A businessman, he was reduced to poverty in 1778, and compelled from then on to earn his living copying manuscripts. Franco-Mendes was one of the most zealous collaborators in the publication of Ha-Me’assef; “Aḥavat David” (Ha-Me’assef 1785, 48), an article detailing a project for an encyclopedia in Hebrew, is one of his most noteworthy contributions to the periodical.

Franco-Mendes was a prolific writer. Among his dramas, most of them written in poetic form, his best-known work, Gemul Atalyah (Amsterdam, 1770), is reminiscent of Racine’s tragedy Athalie. Many of his biographies of famous Sephardi Jews were published in Ha-Me’assef (1785ff.), and posthumously in Ha-Maggid (1860–66); some of his poems were also published in Ha-Me’assef, but the bulk survives in manuscript form. Nir-le-David, responsa from the years 1735 to 1792, was partly published in Shevilot u-Teshuvot of the yeshivah Ets Hayyim. Sefer Tikqunim is a critical work on some of the writings of Maimonides. His works on the Portuguese and Spanish Jews of Amsterdam (still in manuscript) are of historical value.

ENCYCLOPAEDIA JUDAICA, Second Edition, Volume 7 177
FRANCO, FRANCIS COLOMBIA, (pl. of Franco, the Ladino equivalent of Arabic Franji, Ifranji), term used in Muslim countries of the Eastern Mediterranean to designate all Europeans. *Benjamin of Tudela (12th century) used the term in the same sense (Massa’ot, ed. by M.N. Adler (1907), 19, 23). Since the time of the *capitulations treaties between France and the Ottoman Empire (1535), the term has been generally used for the protected (Christian) merchants who came from European countries. In later times Jewish merchants from Europe were also protected under the capitulations treaties. Consequently, one finds the name Franco in Sephardi rabbinic literature from the 16th century onward as a term for European Jews. In Eastern Europe it first came to mean a Jew who was a Turkish subject, and then a Sephardi, Ladino-speaking Jew. In modern Hebrew slang the term Franj is used with the same meaning.

[Haïm Zew Hirschberg]

FRANK, ALBERT RUDOLPH (1872–1965), German chemical engineer and industrial chemist. Born in Stassfurt, the son of Adolph Frank, he joined his father’s company, the Cyanidgesellschaft, in 1899, and was its president from 1901 to 1908. In 1905 he also joined Stickstoffwerke A.G., succeeding his father as head of this company in 1916. With his father, Nikodem *Caro and Linde, Frank worked on the production of sulfites and of hydrogen, and particularly on calcium carbide. Frank tried to make cyanides (then wanted for a process for extracting gold) from calcium carbide and atmospheric nitrogen, but instead he got calcium cyanamide, which he deduced could be used as a fertilizer. In 1914, when Germany was cut off from supplies of Chile saltpeter, calcium cyanamide became of vital importance to the country’s agriculture, and it remains of some importance to this day. Frank also investigated the use of calcium cyanamide as a chemical intermediate, and later found a way of converting it into cyanides. Frank also worked on other uses for calcium carbide (such as making acetylene black for dry batteries). He held many patents and made numerous contributions to scientific literature. The advent of the Nazis compelled him to leave Germany in 1938. He immigrated to the U.S., working for over 20 years with the American Cyanamide Company.

[Samuel Aaron Miller]
and gifted author. Yet, while it has been prized chiefly as the personal confessions of an idealistic teenager doing her best to maintain her spirits and a measure of independence in confined and severely trying circumstances, the diary is also an important historical document. For it presents, often in vivid detail, the daily reflections of a highly intelligent and keenly observant young Jew struggling against the encroaching threats of the Nazi menace. Thus, the book has both universalistic and particularistic elements, and it can be and has been read in various ways.

The Goodrich and Hackett stage version of the diary elevated what Otto Frank himself energetically promoted as his daughter’s “universal message” of goodness and hope and subordinated its darker and more specifically Jewish dimensions. Like the Hollywood film that followed it, the play features an Anne Frank who is basically cheerful, high-spirited, and ever optimistic. Its overarching “message” is summed up in words that have been broadly taken to constitute Anne Frank’s signature line: “In spite of everything, I still believe that people are really good at heart.”

The writer Meyer *Levin, who wrote an early adaptation of the diary for the theater, strongly objected to this interpretation of Anne Frank’s story and fought for years to correct what he saw as an ideological distortion and political manipulation of the diary. He was largely unsuccessful, and his stage version has rarely been performed. More recently, however, the playwright Wendy Kesselman has adapted the Goodrich and Hackett stage play and given greater emphasis to the Jewish features of Anne Frank’s story. Her version in broader circulation today than Levin’s ever was, and it may, over time, alter popular perceptions of her heroine’s fate. In addition, new biographical, bibliographical, historical, and literary studies of Anne Frank’s life and writings have appeared over the past two decades, and these have shown both the diary and its youthful author to be even more complex, interesting, and compelling than was earlier believed. At their best, these works have helped to demythologize the image of Anne Frank and to connect her more closely to the historical contexts in which she lived, wrote, and died. The meanings of Anne Frank’s book no doubt will continue to be contested for years to come, including by those on the far-right revisionist fringe who have long denounced it as a “Jewish fabrication” and a “Zionist hoax,” but the diary’s place in the canon of 20th century literature is by now assured.

tension. Political professionals rated him an outstanding legislator.

[Michael Berenbaum (2nd ed.)]

FRANK, BRUNO (1887–1945), German novelist and playwright. Born in Stuttgart, Frank studied philosophy and law at several German universities and then became a free-lance writer in Munich. After living for several years in Switzerland, he immigrated to the United States when the Nazis came to power. Frank began by writing lyric poetry, but his first published success was the novel Die Fuerstin (1915), a faithful portrait of contemporary society. He was at his best in recreating real or historical figures, as in Tage des Koenigs (1925), Trenck (1926), and Politische Novelle (1928), and in the plays Die Schwestern und der Fremde (1918) and Zweelftausend (1927). In his last novel, Die Tochter (1943), one of the leading characters was a thinly veiled portrait of his mother-in-law, Fritzi Massary, the light-opera soubrette. It was in his novels rather than his plays that Frank's artistry and vivid imagination showed to their best advantage, but between the two world wars he was one of the most successful German dramatists.

[Rudolf Kayser]

FRANK, ELI (1874–1959), U.S. jurist. Frank was born in Baltimore. He taught law at the University of Maryland from 1900 on. In 1922, after serving on several state commissions, he was appointed judge on the Baltimore Supreme Bench. He held both positions until his retirement from public life in 1944. An authority on real estate law and the author of several books on the subject, Frank was highly active in Baltimore civic life and also in local Jewish activities. He served as president of the Hebrew Hospital and the Baltimore Federated Jewish Charities, was chairman of the American Jewish Relief Fund, and was a member of the executive committee of the American Jewish Committee. In 1929 he was appointed as one of the 44 non-Zionist American delegates to the Council of the Jewish Agency for Palestine.

FRANK, EVA (1754–1816), daughter of the charismatic Shabbatean leader Jacob *Frank (1726–1791) and Hannah Kohen, his wife. Eva was born in Nikopol, Bulgaria, then part of the Ottoman Empire, into the Jewish-Muslim community of the “Doenmeh. Jacob Frank was a proponent of an antinomian anarchist approach that rejected all the prohibitions and restrictions of Jewish law, including the laws of incest. This annullment was inspired by medieval mystical traditions that the foremost expression of the messianic future would be the establishment of a new code, “the era of mercy,” replacing the halakakhah and the “era of harsh judgment.” Frank, who brought his family to Poland in December 1755, was charged by the Jewish community of Brody, Galicia, with instigating illicit practices. He was tried, imprisoned, and excommunicated along with his followers in June 1756. Originally named Rachel, after Jacob Frank's mother, Rachel Herschel of Reischa, Eva is referred to in Frankist writings as the Lady, the Virgin, or Matronita, the Aramaic name of the mystical female entity Shekhinah. She became known as Eva following her conversion of her family to Christianity c. 1760. This conversion protected the Shabbatean group, which was being persecuted by Jewish communities in Galicia and Podolia for heretical views and unacceptable sexual behavior, and enabled the members to preserve their secret rituals based on messianism and anarchy in all aspects of life. The historian Peter *Beer knew Eva Frank and discussed the evolution of her names and her family's conversion in his work on Jewish sects (1823).

Jacob Frank's autobiographical writings, preserved in Frankist circles, included a Polish text entitled “The Sayings of the Master.” This document set forth a mystical-mythical new reality in which Frank portrayed himself as a messianic figure, related to the biblical patriarch Jacob and associated with the kabbalistic entity of the divine male, Tiferet (divine glory). In this formulation, Frank's consort is portrayed as the biblical matriarch Rachel and is also associated with the mystical entity of the divine female, Shekhinah. Frank's wife Hannah, who was forced by her husband to play the public role of his mystical partner, the Matronita, died in great dismay at the beginning of 1770 when their daughter Eva was 16 years old. Frank did not allow his daughter to leave him or to marry, a prohibition he enforced on all his followers; they constituted a messianic community based on a communal sexual life with no incest restrictions or respect for marriage vows. He also demanded that Eva remain with him in prison when he was incarcerated between 1760 and 1772. Until his death in 1791, Eva played the roles of Rachel, the beloved of Jacob, and the Shekhinah-Matronita, the spouse of Tiferet-Yalakov. Her father referred to his daughter with a citation from the Zohar describing the agonized Shekhinah who responds to her lover as “a beautiful maiden who has no eyes” (Zohar, Mishpatim).

Jacob Frank saw himself as the eternal messiah and told his followers that Eva-Rachel should be recognized as the mystical royal figure of the Shekhinah who would lead them as a messianic redeemer while he was temporarily absent. Ultimately, Frank claimed, he would be reborn and united with his daughter in “the unity of Messiah and Shekhinah.” In the last decade of his life, Frank lived in Brno (Bruenn, then Austria) and in Offenbach in Germany with his daughter; he discussed Eva's messianic nature in inner Frankist circles while spreading the rumor in public that she was an illegitimate child of the Russian Empress Catherine of the house of Romanov. In 1777 Frank took Eva to Vienna where both were received at the royal palace. In that year he had portraits of his daughter sent to Frankist communities in Hamburg and Altona together with pronouncements of her messianic nature. After Jacob Frank's death in 1791, understood by his followers as a temporary disappearance, Eva led the Frankist court in Offenbach with her two younger brothers.
In 1800 Eva sent letters to hundreds of Jewish communities encouraging conversion to Christianity and enlistment in the Frankist movement (see Brawer, Galicia, pp. 270–75). Her request for financial help was supported by quotations from her father's teachings and promises of approaching messianic redemption. In 1803 the Offenbach court dismantled and the Frankists returned to Poland, where Eva conducted herself as a Romanov princess and lived as the Shabbatean-Frankist leader until her death in 1816. The anarchic aspect of the Frankist community, liberated from all restrictions imposed by tradition and taboo, did not survive her death. However, many Frankist families continued to keep a miniature of Eva Frank and honored her as a saintly woman who was falsely reviled.

**FRANK, HANS MICHAEL** (1900–1946), Nazi politician and lawyer responsible for the mass murder of Polish Jewry. A member of the Nazi Party from its inception, Frank participated in the Munich putsch of 1923. He fled to Austria for a time and then returned to Germany to finish his doctorate at the University of Kiel (1924). He left the Nazi Party for a time to protest Hitler's moderation, namely his willingness to renounce German claims over South Tyrol. During the last years of the Weimar republic, Frank was the Nazis' leading lawyer, defending hundreds of party members accused of political crimes and Hitler in his many libel cases. He also handled some other difficult assignments for Hitler, including researching his possible Jewish roots. With Hitler's accession to power, Frank proved less useful and was given seemingly important titles but little independent power. He was appointed head of the association of lawyers who were members of the Nazi party, and charged with the unification of the judiciary system of the Third Reich. His stature was reflective of two conflicting realities: his veteran status in the Nazi Party and Hitler's general aversion to law and to any limitations on his power. After the German conquest of Poland in the autumn of 1939, Frank was named governor general of the German-occupied Polish territories under the General Government. He was primarily responsible for the persecution of the population of Poland, the plundering of the country, and the murder of its Jews. Frank exhorted the Nazi leadership first of all to exterminate the Jews living in Poland. He was thus responsible for greatly hastening the program of the death camps in the East. Frank succeeded in depriving the Jews of the benefits and protection of the laws, beginning with his promulgation of a law on Oct. 27, 1939, ordering forced labor by the Jewish population and culminating in a law on Oct. 15, 1941, by which Jews were forbidden to leave their special districts under penalty of death. He confiscated their goods, forced them to wear a special insignia (the yellow badge), and concentrated them into ghettos, where they starved. His quest for power put him in conflict with the military occupation and with Hermann Goering regarding the economic use of Poles and Jews, as well as the SS. He never exercised control over the SS but did reach an accommodation with Goering and the military. His approach to the Poles general-government alternated between pragmatic stability and harsh brutality. He was stripped of his control of racial and police matters in March 1942 – prior to the deportation of the Jews from the ghettos – which were controlled by Himmler and Friedrich Wilhelm Kruger. Thus, as the major deportations began, Frank was a figurehead, deprived of all power. Hitler kept him that way, refusing all letters of resignation.

During his rule over Poland, until January 1945, Frank kept a diary in which he noted every speech and official engagement. He never concealed his plans for the “Final Solution” for Polish Jewry. Condemned to death by the International Military Tribunal at Nuremberg, after admitting his own guilt and that of Nazi Germany as a whole, Frank was hanged on Oct. 16, 1946.

**FRANK, ILYA MIKHAILOVICH** (1908–1990), Russian Nobel laureate in physics. Frank, whose father was Jewish, was born in St. Petersburg (formerly Leningrad), graduated from Moscow State University in 1930, and received his doctorate in physico-mathematical sciences in 1935. He worked in the State Optical Institute in St. Petersburg (1931–34), followed by the P.N. Lebedev Institute of the U.S.S.R. Academy of Sciences. From 1941 he was in charge of the Atomic Nucleus Laboratory, becoming professor in 1944, and in 1957 he also became director of the Neutron Laboratory of the Joint Institute of Nuclear Investigations. He was a specialist in physical optics and his early interests concerned photoluminescence and photochemistry. He was awarded the Nobel Prize in 1958 (jointly with Pavel Alekseyevich Cherenkov and Igor Yevgenyevich Tamm) for his work on the Vavilov-Cherenkov effect, which concerns light emission by radioactive compounds. Solving the physical basis for this “glow” has had important applications in plasma physics, astrophysics, and radio wave generation. His later work concerned neutron physics.

[Michael Denman (2nd ed.])
FRANK, JACOB, AND THE FRANKISTS. Jacob Frank (1726–1791) was the founder of a Jewish sect named after him which comprised the last stage in the development of the Shabbatean movement. He was born Jacob b. Judah Leib in Korolowka (Korolevo), a small town in Podolia. His family was middle class, and his father was a contractor and merchant, apparently well respected. His grandfather lived for a time in Kalisz, and his mother came from Rzesow. Although Frank’s claim before the Inquisition that his father used to serve as a rabbi appears to have no foundation there is reason to believe that he did conduct services in Czernowitz, where he moved in the early 1730s. His father is depicted as a scrupulously observant Jew. At the same time, it is very likely that he already had certain connections with the Shabbatean sect, which had taken root in many communities in Podolia, Bukovina, and Walachia. Frank was educated in Czernowitz and Sniatyn, and lived for several years in Bucharest. Although he went to heder, he gained no knowledge of Talmud, and in later years boasted of this ignorance and of the qualities he possessed as a prostak (“simple man”). His self-characterization as an ignoramus (am ha-arez) must be seen in the context of the contemporary usage of the word to mean a man who knows Bible and the aggadah, but who is not skilled in gemara. In his memoirs he makes much of the pranks and bold adventures of his childhood and adolescence. In Bucharest he began to earn his living as a dealer in cloth, precious stones, and what- ever came to hand. Between 1745 and 1755 his trade took him through the Balkans and as far as Smyrna.

Early Associations with the Shabbateans
Frank’s accounts of his earliest associations with the Sabbateans are full of contradictions, but there is no doubt that these contacts go back to his youth. Apparently his teacher in Czernowitz belonged to the sect and had promised that Frank would be initiated into their faith after marriage, as was often customary among Shabbateans. He began to study the Zohar, making a name in Shabbatean circles as a man possessed of special powers and inspiration. When in 1752 he married Hannah, the daughter of a respected Ashkenazi merchant in Nikopol (Bulgaria), two Shabbatean emissaries from Podolia were at the wedding. Shabbatean scholars like these, some of whom Frank mentions in his stories, accompanied him on his travels, and initiated him into the mysteries of “the faith.” There is no doubt that these men were representatives of the extremist wing formed by the disciples of Barukhyah Russo (d. 1720), one of the leaders of the “Doenmeh in Salonika. It was in the company of these teachers, themselves Ashkenazim, that Frank visited Salonika for the first time in 1753, and became involved with the Barukhyah group of the Doenmeh, but he followed the practice of the Polish disciples and did not convert to Islam. After his marriage it seems that trading became secondary to his role as a Shabbatean “prophet,” and as part of his mission he journeyed to the grave of *Nathan of Gaza, Adrianople, and Smyrna, and again spent a good deal of time in Salonika in 1755. Through their letters, his Shabbatean teachers and companions from Poland spread the news of the emergence of a new leader in Podolia, and finally persuaded him to return to his early home. Frank, who was a man of unbridled ambition, domineering to the point of despotism, had a low opinion of the contemporary Barukhyah sect in Salonika, calling it “an empty house”; whereas, as the leader of the Shabbateans in Poland, he envisaged a great future for himself. Although in the circle of his close friends he was given the Sephardi appellation Hakham Yaakov, at the same time he was considered to be a new transmigration or a reincarnation of the divine soul which had previously resided in Shabbetai Zevi and Barukhyah, to whom Frank used to refer as the “First” and the “Second.” At the end of the 18th century, the story that Frank had gone to Poland on an explicit mission from the Barukhyah sect was still circulating in Doenmeh sects in Salonika. In the first years of his activity he did in fact follow the basic principles of this sect, both its teaching and its customs.

Frank in Podolia
On Dec. 3, 1755, Frank, accompanied by R. Mordecai and R. Nahman, crossed the Dniester River and spent some time with his relatives in Korolewka. After this he passed in solemn state through the communities in Podolia which contained Shabbatean cells. He was enthusiastically received by “the believers,” and in the general Jewish community the news spread of the appearance of a suspected freik, which was the usual Yiddish term for a Sephardi. Frank, who had spent about 25 years in the Balkans and was thought to be a Turkish subject, actually conducted himself like a Sephardi and spoke Ladino when he appeared in public. Subsequently he assumed the appellation “Frank” as his family name. His appearance in Lan- skroun (Landskron) at the end of January 1756 led to a great scandal, when he was discovered conducting a Shabbatean ritual with his followers in a locked house. The opponents of the Shabbateans claimed that they surprised the sectarians in the midst of a heretical religious orgy, similar to rites which were actually practiced by members of the Barukhyah sect, especially in Podolia. Later Frank claimed that he had deliberately opened the windows of the house in order to compel the “believers” to show themselves publicly instead of concealing their actions as they had done for decades. Frank’s followers were imprisoned but he himself went scot-free because the local authorities believed him to be a Turkish citizen. At the request of the rabbis an enquiry was instituted at the bet din in Satanow, the seat of the Podolia district rabbinate, which examined the practices and principles of the Shabbateans. Frank crossed the Turkish frontier; returning once more to his followers, he was arrested in March 1756 in Kopyczyniec (Kopichintsi) but was again allowed to go free. After this he remained for at least three years in Turkey, first in Khotin on the Dniester, and afterward mainly in Giorgievo on the Danube. There, early in 1757, he became officially a convert to Islam, and was greatly honored for this by the Turkish authorities. In June and August 1757 he made secret visits to Rogatyn,
in Podolia, in order to confer with his followers. During this period, he went to Salonika a number of times, and also paid one visit to Constantinople.

When Frank appeared in Poland he became the central figure for the vast majority of the Shabbateans, particularly those in Galicia, the Ukraine, and Hungary. It would appear that most of the Moravian Shabbateans also acknowledged his leadership. An inquiry of the bet din in Satanow had to a large extent uncovered the Shabbatean network of Barukhyah's followers, which had existed underground in Podolia. A considerable portion of the Satanow findings was published by Jacob *Emden. From this it is clear that the suspicions concerning the antinomian character of the sect were justified, and that "the believers," who conformed outwardly to Jewish legal precepts, did in fact transgress them, including the sexual prohibitions of the Torah, with the stated intention of upholding the higher form of the Torah, which they called Torah de-azilut ("the Torah of emanation"), meaning the spiritual Torah in contradistinction to the actual Torah of the halakkhah, which was called the Torah de-beri'ah ("the Torah of creation"). The results of the inquiry were laid before a rabbinical assembly at Brody in June 1756, and confirmed at a session of the Council of the Four Lands held in Konstantynow in September. In Brody a herem ("excommunication") was proclaimed against the members of the sect, which laid them open to persecution and also sought to restrict study of Isaac *Luria's writings).

...throughout these events Frank took great care not to draw attention to himself, except to appear as a spiritual guide showing his followers the way, as it were, to draw nearer to Christianity. It should be noted that the name "Frankists" was not used at this time, becoming current only in the 19th century. As far as the mass of Jews and rabbis were concerned there was no difference at all between the earlier Shabbateans and the Shabbateans in this new guise, and they continued to call them "the sect of Shabbetai Zevi.

Even Frank's followers, when talking to one another, continued, to refer to themselves by the usual term ma'amidim ("believers").

Disputations

In the events that followed, it is difficult to differentiate precisely between the steps taken by Frank's adherents and those that were initiated by the Church and resulted from ecclesiastical coercion, although there is no doubt that M. Balaban (see bibliography) is right in laying greater stress on the latter. Shortly after the herem at Brody the Frankists asked Bishop Dembowski to hold a new inquiry into the Lanskroun affair, and they petitioned for a public disputation between themselves and the rabbis. On Aug. 2, 1756 they presented nine principles of their faith for debate. Formulated in a most ambiguous fashion, their declaration of faith asserted in brief: (1) belief in the Torah of Moses; (2) that the Torah and the Prophets were obscure books, which had to be interpreted with the aid of God's light from above, and not simply by the light of human intelligence; (3) that the interpretation of the Torah to be found in the Talmud contained nonsense and falsehood, hostile to the Torah of the Lord; (4) belief that God is one and that all the worlds were created by Him; (5) belief in the trinity of the three equal "faces" within the one God, without there being any division within Him; (6) that God manifested Himself in corporeal form, like other human beings, but without sin; (7) that Jerusalem would not be rebuilt until the end of time; (8) that Jews waited in vain for the Messiah to come and raise them above the whole world; and (9) that, instead, God would Himself be clothed in human form and atone for all the sins for which the world had been cursed, and that at His coming the world would be pardoned and cleansed of all iniquity. These principles reflect the belief of the antinomian followers of Barukhyah, but they were formulated in such a way that they seemed to refer to Jesus of Nazareth instead of to Shabbetai Zevi and Barukhyah. They constitute a blatant plan to deceive the Church which the priests did not understand, and which, quite naturally, they were not interested in understanding.
The rabbis managed to avoid accepting the invitation to the disputation for nearly a year. However, after great pressure from the bishop, the disputation finally took place at Kamieniec, from June 20 to 28, 1757. Nineteen opponents of the Talmud (then called Zoharites) took part, together with a handful of rabbis from communities in the area. The spokesmen for the Shabbateans were also learned men, some of them being officiating rabbis who had secret Shabbatean tendencies. The arguments in the accusations and the defense of the rabbis were presented in writing, and were later published in a Latin protocol in Lvov in 1758. On Oct. 17, 1757, Bishop Dembowski issued his decision in favor of the Frankists, imposing a number of penalties upon the rabbis, chief of which was a condemnation of the Talmud as worthless and corrupt, with an order that it be burned in the city square. All Jewish homes were to be searched for copies of the Talmud. According to some contemporary accounts many cartloads of editions of the Talmud were in fact burned in Kamieniec, Lvov, Brody, Zolkiew, and other places. The “burning of the Torah” had a crushing effect on the Jewish community and the rabbis declared a fast in memory of the event. Jews who had influence with the authorities tried to stop the burnings, which took place mainly in November 1757.

A sudden reversal of fortune, in favor of the “talmudists” and to the detriment of the sectarians, resulted from the sudden death of Bishop Dembowski on November 9, at the very time of the burnings. News of the event, in which Jews saw the finger of God, spread like wildfire. Persecutions of the sect were renewed with even greater vehemence, and many of them fled across the Dniester to Turkey. There several converted to Islam, and one group even joined the Doenmeh in Salonika, where they were known as “the Poles.” Meanwhile the spokesmen for the “contra-talmudists” turned to the political and ecclesiastical authorities and sought the implementation of the privilege which had been promised them by Dembowski, who allowed them to follow their own faith. They also sought the return of their looted property and permission for the refugees to come back to their homes. After some internal disagreements among the Polish authorities, King Augustus III issued a privilege on June 16, 1758, which accorded the sectarians royal protection as men “who were near to the [Christian] acknowledgment of God.” Most of the refugees returned to Podolia at the end of September, and gathered mainly in and around the small town of Iwanie (near Khotin). In December, or the beginning of January 1759, Frank himself also left Turkey and arrived in Iwanie. Many of “the believers” scattered throughout eastern Galicia were summoned there.

Iwanie

In fact, the Frankists constituted themselves as a special sect with a distinctive character only during those months when “the believers” lived in Iwanie, an episode which became engraved on their memory as a quasi-revelatory event. Here it was that Frank finally revealed himself as the living embodiment of God’s power who had come to complete the mission of Shabbetai Zevi and Barukhyah, and as “the true Jacob,” comparing himself to the patriarch Jacob who had completed the work of his predecessors Abraham and Isaac. It was here that he unfolded his teaching before his followers in short statements and parables, and introduced a specific order into the ritual of the sect. There is no doubt that it was here that he prepared them to face the necessity of adopting Christianity outwardly, in order to keep their true faith in secret, just as the Doenmeh had done with regard to Islam. He declared that all religions were only stages through which “the believers” had to pass – like a man putting on different suits of clothes – and then to discard as of no worth compared with the true hidden faith. Frank’s originality at this time consisted in his brazen rejection of the Shabbatean theology which was well-known to “the believers” from the writings of Nathan of Gaza and from the writings which were based on the extreme Shabbatean Kabbalah in Barukhyah’s version. He asked them to forget all this, proposing in its place a kind of mythology freed from all traces of kabbalistic terminology, although in fact it was no more than a popular and homiletical reworking of kabbalistic teaching. In place of the customary Shabbatean trinity of the “three knots of faith,” i.e., Attika Kaddisha, Malka Kaddisha, and the Shekhinah, which are all united in the Divinity (see “Shabbetai Zevi), Frank went so far as to say that the true and good God was hidden and divested of any link with creation, and particularly with this insignificant world. It is He who conceals Himself behind “the King of Kings,” whom Frank also calls “the Great Brother” or “He who stands before God.” He is the God of true faith whom one must strive to approach and, in doing so, break the domination of the three “leaders of the world,” who rule the earth at this moment, imposing upon it an unfitting system of law. The position of “the Great Brother” is connected in some way with the Shekhinah, which becomes in Frank’s terminology the “maiden” (almah) or “virgin” (betulah). It is obvious that he tried consciously to make this concept conform as closely as possible to the Christian concept of the virgin. Just as the extreme Shabbateans from the sect of Barukhyah saw in Shabbetai Zevi and Barukhyah an incarnation of Malka Kaddisha, who is the “God of Israel,” so Frank referred to himself as the messenger of “the Great Brother.” According to him, all the great religious leaders, from the patriarchs to Shabbetai Zevi and Barukhyah, had endeavored to find the way to his God, but had not succeeded.

In order that God and the virgin be revealed, it would be necessary to embark upon a completely new road, untrodden as yet by the people of Israel: this road Frank called “the way to Esau.” In this context, Esau or Edom symbolizes the unbridled flow of life which liberates man because its force and power are not subject to any law. The patriarch Jacob promised (Gen. 33:14) to visit his brother Esau in Seir, but Scripture does not mention that he fulfilled his promise, because the way was too difficult for him. Now the time had come to set out on this way, which leads to the “true life,” a central idea which in Frank’s system carries with it the specific connotation of freedom and licentiousness. This path was the road to
consistent religious anarchy: “The place to which we are going is not subject to any law, because all that is on the side of death; but we are going to life.” In order to achieve this goal it was necessary to abolish and destroy the laws, teachings, and practices which constrict the power of life, but this must be done in secret; in order to accomplish it, it was essential outwardly to assume the garb of the corporeal Edom, i.e., Christianity. The “believers,” or at least their vanguard, had already passed through Judaism and Islam, and they now had to complete their journey by assuming the Christian faith, using it and its ideas in order to conceal the real core of their belief in Frank as the true Messiah and the living God for whom their Christian protestations were really intended.

The motto which Frank adopted here was massa damah (from Isa. 2:11), taken to mean “the burden of silence”; that is, it was necessary to bear the heavy burden of the hidden faith in the abolition of all law in utter silence, and it was forbidden to reveal anything to those outside the fold. Jesus of Nazareth was no more than the husk preceding and concealing the fruit, who was Frank himself. Although it was necessary to ensure an outward demonstration of Christian allegiance, it was forbidden to mix with Christians or to intermarry with them, for in the final analysis Frank's vision was that of a Jewish future, albeit in a rebellious and revolutionary form, presented here as a messianic dream.

The concepts employed by Frank were popular and anecdotal, and the rejection of the traditional kabbalistic symbolic terminology, which was beyond the comprehension of simple people, called into play the imaginative faculty. Frank therefore prepared his followers in Iwanie to accept baptism as the final step which would open before them, in a real physical sense, the way to Esau, to the world of the gentiles. Even in the organization of this sect Frank imitated the evangelical tradition: he appointed in Iwanie twelve emissaries (apostles) or “brothers,” who were considered his chief disciples. But at the same time he appointed twelve “sisters,” whose main distinction was to serve as Frank's concubines. Continuing the tradition of Barukhyah's sect, Frank also instituted licentious sexual practices among the “believers,” at least among his more intimate “brothers” and “sisters.” His followers who had been used to acting in this way did not see anything blameworthy in it, but they did not take kindly to this request that they eradicate from their midst all kabbalistic books, which had been superseded by Frank's teaching, and many of them continued to use ideas from Shabbatean Kabbalah, mixing them up in their writings with Frank's new symbols.

The group remained in Iwanie for several months until the spring of 1759. Frank established there a common fund, apparently in emulation of the New Testament account of the early Christian community. During this time, when they came into close contact with Frank, people were overcome and dominated by his powerful personality, which was compounded of limitless ambition and cunning, together with a facility of expression and marked imaginative faculty which even had a tinge of poetry. Perhaps it can be said of Frank that he was a mixture of despotic ruler, popular prophet, and cunning impostor.

The Disputation in Lvov

As events unfolded, an intermingling of two tendencies became manifest. On the one hand, it became clear to Frank and his disciples that they could not remain halfway between Judaism and Christianity. If they wished to restore their position after the severe persecutions they had suffered, baptism was the only course left open to them. They were even prepared to make a public demonstration of their conversion to Christianity, as the priests required as the price for their protection. On the other hand, there were quite different interests among important sections of the Church in Poland who from the very beginning did not associate themselves with the Frankist cause.

At this time there were several instances of the “blood libel in Poland, which were supported by some influential bishops and leading clergy. The Council of the Four Lands, Polish Jewry’s supreme organized authority, was trying to act indirectly through different mediators with the ecclesiastical authorities in Rome, laying grave charges of deceit and insolence against those responsible for the promulgation of the blood libel. Their words did not go unheeded in Rome. It would appear that some priests in the bishoprics of Kamieniec and Lvov saw a good chance of strengthening their position with regard to the question of the blood libel, if Jews who represented a whole group could be found to come forward and verify this unfounded accusation. At the end of February 1759, when their position at Iwanie was at its peak, Frank's disciples requested Archbishop Lubieński in Lvov to receive them into the Church, claiming to speak in the name of “the Jews of Poland, Hungary, Turkey, Moldavia, Italy, etc.” They asked to be given a second opportunity to dispute publicly with the rabbinic Jews, devotees of the Talmud, and promised to demonstrate the truth not only of the tenets of Christianity but also of the blood libel. Without doubt, the text of this request was composed after consultation with priestly circles and was formulated by the Polish nobleman Moliwda (Ignacy Kossakowski, who had once been head of the Polish Jews of Poland, Hungary, Turkey, Moldavia, Italy, etc.) They asked to be given a second opportunity to dispute publicly with the rabbinic Jews, devotees of the Talmud, and promised to demonstrate the truth not only of the tenets of Christianity but also of the blood libel. Without doubt, the text of this request was composed after consultation with priestly circles and was formulated by the Polish nobleman Moliwda (Ignacy Kossakowski, who had once been head of the Philip-povan sect), who was Frank's adviser in all these negotiations, right up to the actual baptism. Lubieński himself was not able to deal with the affair, since he was appointed archbishop of Gniezno and primate of the Polish Church. He handed over the conduct of the case to his administrator in Lvov, Mikulski, a priest who became extremely active in the preparation of the great disputation in Lvov, which was planned to end in mass baptism and verification of the blood libel.

In the months that followed, the Frankists continued to send various petitions to the king of Poland and to the ecclesiastical authorities in order to clarify their intentions, and to ask for specific favors even after their conversion. They claimed that 5,000 of their adherents were prepared to accept baptism, but at the same time requested that they be allowed to lead a separate existence as Christians of Jewish identity: they
should not be compelled to shave their "sideburns" (pe'ot); they should be allowed to wear traditional Jewish garb even after conversion, and to call themselves by Jewish names in addition to their new Christian names; they should not be forced to eat pork; they should be allowed to rest on Saturday as well as on Sunday; and they should be permitted to retain the books of the Zohar and other kabbalistic writings. In addition to all this, they should be allowed to marry only among themselves and not with anyone else. In return for being allowed to constitute this quasi-Jewish unit, they expressed their willingness to submit to the other demands of the Church. In other petitions they added the request that they should be assigned a special area of settlement in Eastern Galicia, including the cities of Busk and Glinyany, most of whose Jewish inhabitants were members of the sect. In this territory they promised to maintain the life of their own community, and to establish their own communal life, setting up a "productivization" in contrast to the economic structure of the usual Jewish community. Some of these petitions, printed by the priests in Lvov in 1795, circulated very widely and were translated from Polish into French, Spanish, Latin, and Portuguese; they were also reprinted in Spain and Mexico and went through several editions there. The very presentation of these requests proves that Frank's followers had no thought of assimilating or of mixing with true Christians, but sought to gain for themselves a special recognized position, like that of the Doennhein in Salonika, under the protection of both Church and State. It is obvious that they looked upon themselves as a new type of Jew and had no intention of renouncing their national Jewish identity. These petitions also show that the more extreme pronouncements of Frank within the closed circle of his followers had not wholly taken root in their hearts and they were not prepared to follow him in every detail. The prohibition against intermarriage with gentiles reiterates Frank's own words in Iwaniec, yet on other matters there was apparently lively dispute between Frank and his followers. However, these isolated requests constituted only a transitional stage in the struggle which preceded the disputation in Lvov; and the spokesmen of the sect received a negative reply. The requirement of the Church was baptism without any precondition, although at this time the priests were convinced that the Frankists' intention was sincere, since they paid no heed to Jewish representatives who warned them continually about the secret Shabbatean beliefs of those who were offering themselves for baptism. The enormous publicity given to these events after the disputation at Kamieniec stimulated missionary activity on the part of some Protestant groups. Count Zinzendorf, head of "the Fellowship of the Brethren" (later the Moravian Church) in Germany, sent the convert David Kirchhof in 1758 on a special mission to the "believers" in Podolia in order to preach to them his version of "pure Christianity" (Judaica, 19 (1963), 240). Among the mass of Jews, the idea spread that Frank was in reality a great sorcerer with far-reaching demonic powers, prompting the growth of various legends, which had wide repercussions, concerning his magic deeds and his success.

The Frankists tried to postpone the disputation until January 1760, when many of the nobility and merchants would gather for religious ceremonies and for the great fair at Lvov. Apparently they hoped for considerable financial help because their economic situation had suffered as a result of persecution. The authorities in Rome and Warsaw did not regard the proposed disputation favorably and, for reasons of their own, sided with the Jewish arguments against a disputation, especially one which was likely to provoke disturbances and unrest as a result of the section on the blood libel. The raising of this subject, with all the inherent risk of organized and unbridled incitement against rabbinic Judaism, was equally sure to plunge the Polish Jewish authorities into profound anxiety. In this conflict of interests between the higher authorities, who wanted the straightforward conversion of Frank's followers without any disputation, and those groups who were concerned mainly with the success of the blood libel, Mikulski acted according to his own views and sided with the latter. He therefore fixed an early date for the disputation, July 16, 1759, to be held in Lvov Cathedral, and he obliged the rabbis of his diocese to attend.

The disputation opened on July 17, attended by crowds of Poles, and was conducted intermittently at several sessions until September 10. The arguments of both sides, the theses of the "contra-talmudists" and the answers of the rabbis, were presented in writing, but in addition vehement oral disputes took place. About 30 men appeared for the rabbis, and 10–20 for the sectarians. However, the number of the actual participants was smaller. The chief spokesman, and the man who bore the main responsibility on the Jewish side, was R. Hayyim Kohen Rapoport, the leading rabbi of Lvov, a highly respected man of great spiritual stature. Supporting him were the rabbis of Bohorodczany and Stanisławow. The tradition which sprang up in popular accounts circulating years later that *Israel b. Eliezer Baal Shem Tov, the founder of Ḥasidism, was also a participant, has no historical foundation. Frank himself took part only in the last session of the disputation when the blood libel question was debated. The sect's spokesmen were three scholars who had previously been active in Podolia among the followers of Barukh hya: Leib b. Nathan Kriska from Nodwana, R. Naḥman from Krzywicze, and Solomon b. Elisha Shor from Rohatyn. After each session, consultations took place between the rabbis and the parnasim, who drafted written replies. They were joined by a wine merchant from Lvov, Baer *Birkenthal of Bolechow, who, unlike the rabbis, spoke fluent Polish, and he prepared the Polish text of their replies. His memoirs of the disputation in Sefer Divrei Binah fill in the background of the official protocol which was drawn up in Polish by the priest Gaudenty Pikulski, and printed in Lvov in 1760 with the title Złośź Żydowska ("The Jewish Evil"). In Lvov the Frankists' arguments were presented in a form accommodated as far as possible to the tenets of Christianity, to an even greater extent than at the earlier disputation. However, even then, they avoided any explicit reference to Jesus of Nazareth, and there is no doubt that this silence served the
express purpose of harmonizing their secret faith in Frank as God and Messiah in a corporeal form with their official support of Christianity. Indeed, according to Frank himself, Christianity was no more than a screen (pargod) behind which lay hidden the true faith, which he proclaimed to be “the sacred religion of Edom.”

Seven main propositions were disputed: (1) all the biblical prophecies concerning the coming of the Messiah have already been fulfilled; (2) the Messiah is the true God who became incarnate in human form in order to suffer for the sake of our redemption; (3) since the advent of the true Messiah, the sacrifices and the ceremonial laws of the Torah have been abolished; (4) everyone must follow the religion of the Messiah and his teaching, for within it lies the salvation of the soul; (5) the cross is the sign of the divine trinity and the seal of the Messiah; (6) only through baptism can a man arrive at true faith in the Messiah; and (7) the Talmud teaches that the Jews need Christian blood, and whoever believes in the Talmud is bound to use it.

The rabbis refused to reply to some of these theses for fear of being offensive to the Christian faith in their answers. The disputation began at the behest of the Frankists with a statement by their protector Moliwa Kossadowski. The rabbis replied only to the first and second of the theological arguments. It was obvious from the outset that the main attention would be centered on the seventh proposition, whose effects were potentially highly dangerous for the whole of Jewry. This particular argument came up for discussion on August 27. In the preceding weeks Frank had left Iwanie and passed through the cities of Galicia, visiting his followers. He then waited a long time in Busk, near Lvov, where he was joined by his wife and children. The Frankist arguments in support of the blood libel are a mixture of quotations from books by earlier Polish apostates, and absurd arguments and nonsensical discussions based on statements in rabbinic literature containing only the slightest mention of “blood” or “red.” According to Baer Birkenthal the rabbits too did not refrain from using literary stratagems in order to strengthen the impression that their replies would have on the Catholic priests, and in the oral debates they all rejected all Polish translations from talmudic and rabbinic literature without exception, which resulted in some violent verbal exchanges. Behind the scenes of the disputation, contacts continued between the rabbinic representatives and Mikulski, who began to waver, both because of the opposition of the higher church authorities to the blood libel and also as a result of rabbinic arguments concerning Frankist duplicity. The debate on this point was continued in the last session on September 10, when Rabbi Rapoport made a stringent attack on the blood libel. As the disputation came to an end, one of the Frankists approached the rabbi and said: “You have declared our blood permitted – this is your ‘blood for blood.’” The confused ratiocinations of the Frankists did not achieve the desired effect, and, in the end, Mikulski resolved to ask the rabbis for a detailed written answer in Polish to the Frankists’ charges. However, the time for their reply was postponed until after the end of the disputation. In the meantime nothing concrete emerged from all the upheaval about the blood libel.

On the other hand, the conversion of many of the Frankists did actually take place. Frank himself was received with extraordinary honor in Lvov, and he dispatched his flock to the baptismal font. He himself was the first to be baptized on Sept. 17, 1759. There is some disagreement about the number of sectarians who were converted. In Lvov alone more than 500 Frankists (including women and children) had been baptized by the end of 1760, nearly all of them from Podolia but some from Hungary and the European provinces of Turkey. The exact numbers of converts in other places are not known, but there are details of a considerable number of baptisms in Warsaw, where Frank and his wife were baptized a second time, under the patronage of the king of Poland, in a royal ceremony, on Nov. 18, 1759; from then on he is named Josef Frank in documents. According to oral tradition in Frankist families in Poland, the number of converts was far greater than that attested by known documents, and it speaks of several thousands. On the other hand, it is known that most of the sectarians in Podolia, and in other countries, did not follow Frank all the way, but remained in the Jewish fold, although they still recognized his leadership. It would appear that all his followers in Bohemia and Moravia, and most of those in Hungary and Romania, remained Jews and continued to lead a double life, outwardly Jews and secretly “believers.” Even in Galicia there remained many cells of “believers” in an appreciable number of communities, from Podhajce (Podgaytsy) in the east to Cracow in the west.

The Social Structure of the Sect
Contradictory evidence exists concerning the social and spiritual makeup of the sectarians, both of the apostates and of those who remained within the Jewish fold, but perhaps the two types of evidence are really complementary. Many sources, particularly from the Jewish side, show that a sizeable proportion of them were knowledgeable and literate, and even rabbis of small communities. Frank’s closest associates among the apostates were doubtless in this category. As far as their social status was concerned, some were wealthy and owners of property, merchants and, craftsmen such as silver- and goldsmiths; some were the children of community leaders. On the other hand, a considerable number of them were distillers and innkeepers, simple people and members of the poorer classes. In Moravia and Bohemia they included a number of wealthy and aristocratic families, important merchants and state monopoly leaseholders, while in the responsa of contemporary rabbis (and also in the hasidic Shivhei ha-Besht) incidents are related concerning scribes and shohatim who were also members of the sect. In Sziget, Hungary, a “judge of the Jews” (Judenrichter) is numbered among them, as well as several important members of the community.

The uncovering of the sect, which had hitherto practiced in secret, and the mass apostasy which had taken place in sev-
eral of the Polish communities, received wide publicity and had various repercussions. The attitude of the Jewish spiritual leaders was not uniform, many rabbis taking the view that their separation from the Jewish community and their defection to Christianity were in fact desirable for the good of the Jewish people as a whole (A. Yaari in Sinaat, 35 (1954), 170–82). They hoped that all the members of the sect would leave the Jewish fold, but their hopes were not realized. A different view was expressed by Israel Ba'al Shem Tov after the disputation at Lvov, namely, that “the Shekhinah beholds the sect of the apostates, for while the limb is joined to the body there is hope of a cure, but once the limb is amputated, there can be no possible remedy, for every Jew is a limb of the Shekhinah.” Nahman of Bratslav, a great-grandson of the Ba'al Shem Tov, said that his great-grandfather died of the grief inflicted by the sect and their apostasy. In many Polish communities traditions were preserved concerning Frankist families who had not apostatized, while those who were particular about family honor took care not to marry into these families because of the suspicion of illegitimacy (see *mamzer) which attached to them through their transgression of the sexual prohibitions.

**Frank’s Arrest**

Frank’s journey to Warsaw in great pomp in October 1759 provoked a number of scandalous incidents, particularly in Lublin. Even after their apostasy Frank’s followers were continually watched by the priests who had doubts about their reliability and the sincerity of their conversion. Records vary of the evidence given to the ecclesiastical authorities of their real faith, and it is possible that these did in fact emanate from different sources. It was G. Pikulski in particular who in December 1759 obtained separate confessions from six of the “brethren” who had remained in Lvov, and it became apparent from these that the real object of their devotion was Frank, as the living incarnation of God. When this information reached Warsaw, Frank was arrested, on Feb. 6, 1760, and for three weeks he was subjected to a detailed investigation by the ecclesiastical court, which also confronted with many of the “believers” who had accompanied him to Warsaw. Frank’s testimony before the inquiry was a mixture of lies and half-truths. The court’s decision was to exile him for an unlimited period to the fortress of Czestochowa which was under the highest jurisdiction of the Church, “in order to prevent him having any possible influence on the views of his followers.” These latter were set free and ordered to adopt Christianity in true faith, and to forsake their leader – a result which was not achieved. Nevertheless, the “treachery” of his followers in revealing their true beliefs ranked bitterly with Frank until the end of his days. The court also issued a printed proclamation on the results of the inquiry. At the end of February Frank was exiled and remained in “honorable” captivity for 13 years. At first he was utterly deserted, but he quickly found ways of re-establishing contact between himself and his “camp.” At this time the apostates were scattered in several small towns and on estates owned by the nobility. They suffered a good deal until they finally settled down, mainly in Warsaw, with the remainder in other Polish towns like Cracow and Krasnystaw, and organized themselves into a secret sectarian society, whose members were careful to observe outwardly all the tenets of the Catholic faith. They also took advantage of the unstable political situation in Poland at the end of its independence, and several of the more important families demanded noble status for themselves, with some degree of success, on the basis of old statutes which accorded such privileges to Jewish converts.

**Frank in Czestochowa**

From the end of 1760 emissaries from the “believers” began to visit Frank and transmit his instructions. Following these, they became once more involved in a blood libel case in the town of Wojsłwiec in 1761, as the result of which many Jews were slaughtered. Their reappearance as accusers of the Jewish people aroused great bitterness among the Jews of Poland, who saw in it a new act of vengeance. The conditions of Frank’s imprisonment were gradually relaxed and from 1762 his wife was allowed to join him, while a whole group of his chief followers, both men and women, were allowed to settle near the fortress, and even to practice secret religious rites of a typical sexual orgiastic nature inside the fortress. When talking to this circle Frank added a specifically Christian interpretation to his view of the virgin as the Shekhinah, under the influence of the worship of the virgin which, in Poland, was actually centered on Czestochowa.

In 1765, when it was apparent that the country was about to break up, Frank planned to forge links with the Russian Orthodox Church and with the Russian government through a Russian ambassador in Poland, Prince Repnin. A Frankist delegation went to Smolensk and Moscow at the end of the year and promised to instigate some pro-Russian activity among the Jews, but the details are not known. It is possible that clandestine links between the Frankist camp and the Russian authorities date from this time. These plans became known to the Jews of Warsaw, and in 1767 a counterdelegation was sent to St. Petersburg in order to inform the Russians of the Frankists’ true character. From then on, Frankist propaganda spread once more through the communities of Galicia, Hungary, Moravia, and Bohemia, by means of letters and emissaries from among the learned members of the sect. Links were also formed with secret Shabbateans in Germany. One of these emissaries, Aaron Isaac Téomim from Horodenka, appeared in Altona in 1764. In 1768–69 there were two Frankist agents in Prague and Possnitz, the Shabbatean center in Moravia, and there they were even allowed to preach in the synagogue. At the beginning of 1770 Frank’s wife died, and thenceforth the worship of “the lady” (*gevirah*), which was accorded her during her lifetime, was transferred to Frank’s daughter Eva (previously Rachel), who stayed with him even when practically all of his “believers” had left the fortress and gone to Warsaw. When Czestochowa was captured by the Russians in August 1772, after the first partition of Poland, Frank was freed by
the commander in chief and left the town early in 1773, going with his daughter to Warsaw. From there, in March 1773, he journeyed with 18 of his associates disguised as the servants of a wealthy merchant to Bruenn (Brno) in Moravia, to the home of his cousin Schoendel *Dobruschka, the wife of a rich and influential Jew.

Frank in Bruenn and Offenbach

Frank remained in Bruenn until 1786, obtaining the protection of the authorities, both as a respected man of means with many connections and also as a man pledged to work for the propagation of Christianity among his numerous associates in the communities of Moravia. He established a semi-military regime in his retinue, where the men wore military uniform and went through a set training. Frank’s court attracted many Shabbateans in Moravia, whose families preserved for generations the swords that they wore while serving at his court. Frank went with his daughter to Vienna in March 1775 and was received in audience by the empress and her son, later Joseph II. Some maintain that Frank promised the empress the assistance of his followers in a campaign to conquer parts of Turkey, and in fact over a period of time several Frankist emissaries were sent to Turkey, working hand in glove with the Doenmeh, and perhaps as political agents or spies in the service of the Austrian government. During this period Frank spoke a great deal about a general revolution which would overthrow kingdoms, and the Catholic Church in particular, and he also dreamed of the conquest of some territory in the wars at the end of time which would be the Frankist dominion. For this, military training would be a deliberate preparation. Where Frank obtained the money for the upkeep of his court was a constant source of wonder and speculation and the matter was never resolved; doubtless some system of taxation was organized among the members of the sect. Stories circulated about the arrival of barrels of gold sent, some say, by his followers, but according to others, by his foreign political “employers.” At one particular period there were in Bruenn several hundred sectarians who followed no profession or trade, and whose sole and absolute master was Frank, who ruled with a rod of iron. In 1784 his financial resources failed temporarily and he found himself in great straits, but his situation subsequently improved. During his stay in Bruenn the greater part of his teachings, his recollections, and his tales were taken down by his chief associates. In 1786 or 1787 he left Bruenn, and, after bargaining with the prince of Ysenburg, established himself in Offenbach, near Frankfurt.

In Bruenn and Offenbach, Frank and his three children played a part, which was unusually successful for a long time, in order to throw dust in the eyes of both the inhabitants and the authorities. While pretending to follow the practices of the Catholic Church, at the same time they put on a show of strange practices, deliberately “Eastern” in nature, in order to emphasize their exotic character. In his last years Frank began to spread even among his close associates the notion that his daughter Eva was in reality the illegitimate daughter of the empress Catherine of the house of Romanov, and that he was no more than her guardian. Outwardly, the Frankists shrank from social contact with Jews, so much so that many of those who had business or other dealings with the latter refused absolutely to believe Jewish charges concerning the true nature of the community as a secret Jewish sect. Even in the printed proclamations issued in Offenbach, Frank’s children based their authority on their strong ties with the Russian royal house. There is some reliable evidence to show that even the prince of Ysenburg’s administration believed that Eva should be regarded as a Romanov princess.

The last center of the sect was set up in Offenbach, where members sent their sons and daughters to serve at the court, following the pattern that had been established in Bruenn. Frank had several apoplectic fits, dying on Dec. 10, 1791. His funeral was organized as a glorious demonstration by hundreds of his “believers.” Frank had preserved to the end his double way of life and sustained the legendary Oriental atmosphere with which his life was imbued in the sight of both Jews and Christians.

In the period between Frank’s apostasy and his death the converts strengthened their economic position, particularly in Warsaw where many of them built factories and were also active in masonic organizations. A group of about 50 Frankist families, led by Anton Czerniewski, one of Frank’s chief disciples, settled in Bukovina after his death and were known there as the sect of Abrahamites; their descendants were still living a separate life there about 125 years later. Several families in Moravia and Bohemia, who had remained within the Jewish fold, also improved their social status, had close connections with the *Haskalah movement, and began to combine revolutionary mystical kabbalistic ideas with the rationalistic view of the Enlightenment. Some of those who had converted in these countries under Frank’s influence were accepted in the higher administration and the Austrian aristocracy, but they preserved a few Frankist traditions and customs, so that a stratum was created in which the boundaries between Judaism and Christianity became blurred, irrespective of whether the members had converted or retained their links with Judaism.

Only rarely did whole groups of Frankists convert to Christianity, as in Prossnitz in 1773, but a considerable proportion of the younger members who were sent to Offenbach were baptized there. Enlightening examples of family histories from the intermediate stratum mentioned above are those of the Hoenig (see *Hoenigsberg) and Dobruschka families in Austria. Some of the Hoenig family remained Frankist Jews even after their elevation to the nobility, and some of them were connected with the upper bourgeoisie and the higher Austrian administration (the families of Von Hoenigsberg, Von Hoenigstein, Von Bienefeld), while members of the Dobruschka family converted practically en bloc and several of them served as officers in the army. Moses, the son of Schoendel Dobruschka, Frank’s cousin, who was known in many circles as his nephew, was the outstanding figure in the last gen-
eration of the Frankists, being known also as Franz Thomas von Schoenfeld (a German writer and organizer of a mystical order of a Jewish Christian kabbalistic character) and later as Junius Frey (a Jacobin revolutionary in France).

Apparently he was offered the leadership of the sect after Frank’s death, and, when he refused, Eva, together with her two younger brothers, Josef and Rochus, assumed responsibility for the direction of the court. Many people continued to go up to Offenbach, to “Gottes Haus” as the “believers” called it. However, Frank’s daughter and her brothers had neither the stature nor the strength of personality required, and their fortunes quickly declined. The only independent activity that emerged from Offenbach was the dispatch of the “Red Letters” to hundreds of Jewish communities in Europe in 1799 relating to the beginning of the 19th century. In these letters the Jews were requested for the last time to enter “The holy religion of Edom.” By 1803 Offenbach was almost completely deserted by the camp of the “believers,” hundreds of whom had returned to Poland, while Frank’s children were reduced to poverty. Josef and Rochus died in 1807 and 1813 respectively, without heirs, and Eva Frank died in 1816, leaving enormous debts. In Eva’s last years a few members of the most respected families in the sect, who were supported from Warsaw, remained with her. In the last 15 years of her life she acted as if she were a royal princess of the house of Romanov, and several circles tended to believe the stories circulating in support of this.

The sect’s exclusive organization continued to survive in this period through agents who went from place to place, through secret gatherings and separate religious rites, and through the dissemination of a specifically Frankist literature. The “believers” endeavored to marry only among themselves, and a wide network of inter-family relationships was created among the Frankists, even among those who had remained within the Jewish fold. Later Frankism was to a large extent the religion of families who had given their children the appropriate education. The Frankists of Germany, Bohemia, and Moravia usually held secret gatherings in Carlsbad in summer round about the Ninth of Av.

Frankist Literature
The literary activity of the sect began at the end of Frank’s life, and was centered at first at Offenbach in the hands of three learned “elders,” who were among his chief disciples: the two brothers Francisczek and Michael Wołowski (from the well-known rabbinc family, Shor) and Andreas Dembowski (Yeruham Lippmann from Czernowitz). At the end of the 18th century they compiled a collection of Frank’s teachings and reminiscences, containing nearly 2,300 sayings and stories, gathered together in the book *Ślowa Pańskie* ("The words of the Master"); Heb. *Divrei ha-Adon*, which was sent to circles of believers. The book was apparently written originally in Hebrew since it was quoted in this language by the Frankists of Prague. In order to meet the needs of the converts in Poland, whose children no longer learned Hebrew, it was translated, apparently in Offenbach, into very poor Polish which needed later revisions to give it a more polished style. This comprehensive book illuminates Frank’s true spiritual world, as well as his relationship with Judaism, Christianity, and the members of his sect. A few complete manuscripts were preserved in a number of families in Poland, and some were acquired by public libraries and consulted by the historians Kraushar and Balaban. These manuscripts were destroyed or lost during the Holocaust, and now only two imperfect manuscripts in Cracow University Library are known, comprising about two-thirds of the complete text. Also in Offenbach, a detailed chronicle was compiled of events in the life of Frank, which gave far more reliable information than all other documents, in which Frank did not refrain from telling lies. It also contained a detailed and undisguised description of the sexual rites practiced by Frank. This manuscript was lent to Kraushar by a Frankist family, but since then it has vanished without trace. The work of an anonymous Frankist, written in Polish about 1800 and called “The Prophecy of Isaiah,” which puts the metaphors of the biblical book to Frankist use, gives a reliable record of the revolutionary and utopian expectations of the members of the sect. This manuscript, parts of which were published in Kraushar’s book, was in the library of the Warsaw Jewish community until the Holocaust. A book was recorded in Offenbach which listed the dreams and revelations of which Eva Frank and her brothers boasted, but when two younger members of the Porges family in Prague, who had been sent to the court and been disillusioned with what they saw, fled from Offenbach, they took the book with them and handed it over to the rabbinical court in Fuerth, who apparently destroyed it.

The Frankists in Prague
Another center of intensive literary activity emerged in Prague, where an important Frankist group had established itself. At its head were several members of the distinguished Wehle and *Boni* families, whose forebears had belonged to the secret Shabbatean movement for some generations. They had strong connections with “the believers” in other communities in Bohemia and Moravia. Their spiritual leader, Jonas Wehle (1752–1823), was aided by his brothers, who were fervent Frankists, and his son-in-law Loew von Hoenigsberg (d. 1811), who committed to writing many of the teachings of the circle. This group acted with great prudence for a long time, particularly during the lifetime of R. Ezekiel *Landau, and its members denied in his presence that they belonged to the sect. However, after his death they became more conspicuous. In 1799 R. Eleazar *Fleckeles, Landau’s successor, preached some fiercely polemical sermons against them, causing riotous disturbances in the Prague synagogue, and leading to the publication of libelous attacks on the group, as well as to both denunciations and defense of its members before the civil authorities. A great deal of evidence, extracted from “penitent” members of the sect in Kolin and other places, remains from this period. The important file on the Frankists in the Prague community archives was removed by the president.
of the community at the end of the 19th century, out of respect for the families implicated in it. The disturbances connected with the appearance of the "Red Letters" (written in red ink, as a symbol of the religion of Edom) helped to maintain a small, distinct Frankist group in Prague for years, and some of its members, or their children, were later among the founders of the first Reform temple in Prague (c. 1832). A similar distinct group existed for a long time in Prossnitz. Some of the literature of the Prague circle survived, namely, a commentary on the aggadot of Ein Ya'akov and a large collection of letters on details of the faith, as well as commentaries on various biblical passages written in German mixed with Yiddish and Hebrew by Loew Hoenigsberg in the early 19th century. Aaron Jellinek possessed various Frankist writings in German, but they disappeared after his death.

On Eva Frank's death the organization weakened, although in 1823 Elias Kaplinski, a member of Frank's wife's family, still tried to summon a conference of the sectarians, which took place in Carlsbad. After this the sect broke up, and messengers were sent to collect together the various writings from the scattered families. This deliberate concealment of Frankist literature is one of the main reasons for the ignorance concerning its internal history, allied to the decided reluctance of most of the sectarians' descendants to promote any investigation into their affairs. The only one of "the believers" who left any memoirs of his early days was Moses Porges (later Von Portheim). These he had recorded in his old age. A whole group of Frankist families from Bohemia and Moravia migrated to the United States in 1848–49. In his last will and testament, Gottlieb Wehle of New York, 1867, a nephew of Jonas Wehle, expresses a deep feeling of identity with his Frankist forebears, who appeared to him to be the first fighters for progress in the ghetto, a view held by many of the descendants of "the believers." The connection between the Frankists' heretical Kabbalah and the ideas of the new Enlightenment is evident both in surviving manuscripts from Prague, and in the traditions of some of these families in Bohemia and Moravia (where there were adherents of the sect, outside Prague, in Kolin, Horschitz (Horice), Holleschau (Holesov), and Kojetin).

There continued to be strong ties between the neophyte families in Poland, who had risen considerably in the social scale in the 19th century, and there may have been some kind of organization among them. In the first three generations after the apostasy of 1759–60 most of them married only among themselves, preserving their Jewish character in several ways, and only a very few intermarried with true Catholics. Copies of "the Words of the Master" were still being produced in the 1820s, and apparently it had its readers. The Frankists were active as fervent Polish patriots and took part in the rebellions of 1793, 1830, and 1863. Nevertheless the whole time they were under suspicion of Jewish sectarian separatism. In Warsaw in the 1830s most of the lawyers were descendants of the Frankists, many of whom were also businessmen, writers, and musicians. It was only in the middle of the 19th century that mixed marriages increased between them and the Poles, and most of them moved from the liberal wing of Polish society to the nationalist conservative wing. However, there still remained a number of families who continued to marry only among themselves. For a long time this circle maintained secret contacts with the Doenmeh in Salonika. An unresolved controversy still exists concerning the Frankist affiliation of Adam Mickiewicz, the greatest Polish poet. There is clear evidence of this from the poet himself (on his mother's side), but in Poland this evidence is resolutely misinterpreted. Mickiewicz's Frankist origins were well-known to the Warsaw Jewish community as early as 1838 (according to evidence in the azdj of that year, p. 362). The parents of the poet's wife also came from Frankist families.

The crystallization of the Frankist sect is one of the most marked indications of the crisis which struck the Jewish society in the mid-18th century. Frank's personality reveals clear signs of the adventurer, motivated by a blend of religious impulses and a lust for power. By contrast, his "believers" were on the whole men of deep faith and moral integrity as far as this did not conflict with the vicious demands made on them by Frank. In all that remains of their original literature whether in German, Polish or Hebrew, there is absolutely no reference to those matters, like the blood libel, which so aroused the Jewish community against them. They were fascinated by the words of their leader and his vision of a unique fusion between Judaism and Christianity, but they easily combined this with more modest hopes which led them to become protagonists of liberal-bourgeois ideals. Their nihilist Shabbatean faith served as a transition to a new world beyond the ghetto. They quickly forgot their licentious practices and acquired a reputation of being men of the highest moral conduct. Many Frankist families kept a miniature of Eva Frank which used to be sent to the most prominent households, and to this day some families honor her as a saintly woman who was falsely reviled.

FRANK, JEROME NEW (1889–1957), U.S. jurist and legal philosopher. Frank, who was born in New York City, practiced law in Chicago and New York City before being appointed general counsel to the Agricultural Adjustment Administration by President Franklin D. Roosevelt in 1933. Subsequently, he was appointed to important executive positions with the Federal Surplus Relief Corporation, the Reconstruction Finance Commission, and the Public Works Administration. As one of the more imaginative and articulate administrators of the New Deal program of President Roosevelt, he was often embroiled in argument and litigation in its defense, especially in the use of public power. Retiring to private practice in 1937, he was recalled by President Roosevelt in 1939 as commissioner and then chairman of the Securities and Exchange Commission. There, he played an important role in reorganizing the New York Stock Exchange. He also instituted new programs for public-utility holding companies under the 1935 Act. President Roosevelt named him to the U.S. Court of Appeals for the 2nd Circuit in 1941. He remained on the bench, and lectured at Yale Law School as well, until his death.

Basically a “legal realist,” Frank developed the juristic concept of fact-skepticism, or the continuous questioning of factual assumptions to expose the realities of the judicial process. Legal philosophers, he insisted, should not think only in terms of law to determine whether justice prevails in any given case, but rather to concentrate on the processes by which facts are found and judged. Fact-skepticism led him to infer that the jury was an inept institution and that it ought to be abolished. He also warned against relying on jury verdicts to inflict capital punishment. Frank sought through fact-skepticism to liberalize and reform the trial process. He developed his thoughts in challenging and provocative books entitled Law and the Modern Mind (1930) and Courts on Trial (1949), as well as in many law review articles. In 1945 he wrote Fate and Freedom, in which he attacked Freud's deterministic psychology, Marxism, and natural-law doctrines as endangering individual freedom and moral responsibility. In If Men Were Angels (1942), Frank replied to critics of the new administrative agencies of the New Deal. In Not Guilty (1957), written with his daughter, he commented on a number of cases in which innocent people were convicted of crimes.

Julius J. Mareck

FRANK, JOSEF (1885–?), Austrian architect. Born in Baden, Frank was a progressive architect working in Austria after World War I and was best known for the Karl Marx Hof (Vienna, 1930), an ambitious workers' housing scheme which he designed with Oskar Wlach. In 1932 he emigrated to Sweden. Frank also taught at the New School of Social Research, New York (1941–44). He wrote Architektur als Symbol (1930).

*FRANK, KARL HERMANN* (1898–1946), Sudeten German Nazi politician, leader of the radical wing of the Sudeten German Party and close associate of *Himmler*. An Austrian army veteran of World War I, he became a bookseller in his native Karlsbad. In 1933 he entered local politics as propagandist to Konrad Henelein and later a Sudeten German Parliamentary delegate. In March 1939 he was appointed secretary of state to Reichsprotektor Constantin von Neurath in the Protectorate of Bohemia-Moravia. After the assassination of *Heydrich* in 1942, Frank unleashed a wave of repression against the population of the Protectorate of Bohemia-Moravia that culminated in the destruction of the town of Lidice. One hundred ninety-two men and boys and 71 women had been murdered. The surviving women were sent to concentration camps. The children were dispersed, some to concentration camps, although a few who were considered insufficiently Aryan were sent to Germany. The SS then razed the town and tried to eradicate its memory. The name of Lidice was expunged from all official records. With the appointment of Wilhelm Frick as Reichsprotektor, Frank was nominated minister of state (1943) and became the virtual dictator of the Protectorate (see *Czechoslovakia*). As SS and police officer with the rank of lieutenant-general, he was one of the persons mainly responsible for the annihilation of the Protectorate's Jewish population. Frank was hanged after the war (1946) by the verdict of a Czechoslovak court.

[Yehuda Reshef / Michael Berenbaum (2nd ed.)]

FRANK, LEO MAX (1884–1915), engineer and the only Jew ever to have been murdered by a lynch mob in the United States. Frank, who was born in Cuero, Texas, of an immigrant German family, was raised in Brooklyn, and studied mechanical engineering. In 1907 he moved to Atlanta, Georgia, where his uncle, Moses Frank, owner of the National Pencil Company, offered him a job as plant superintendent. Here he became president of the local chapter of B’nai Brith. On April 27, 1913, a 14-year-old employee of Frank’s, Mary Phagan, was found murdered in the factory basement. Frank was arrested the next day and charged with the crime. The chief witness for the prosecution at his trial, which lasted for nearly two months, was a black employee of the factory, James Conley, who was suspected by many observers both at the time and subsequently of having been the true culprit. Despite the flimsy nature of the evidence, the dubious character of many of the prosecution’s witnesses and Frank’s own eloquent testimony on Aug. 23, 1913, the jury returned a verdict of guilty.

The issue of Frank's Jewishness was first raised at his trial by his own lawyers, who claimed that he was a victim of preju-
dice, a charge that the prosecution vigorously denied. Whether or not this denial was sincere, it became clear as the trial progressed that the mobs in and out of the courtroom that continually called for Frank's blood were inspired by antisemitic passions, which undoubtedly influenced the decision of the jury. It was only when the case was already being appealed, however, that a vicious antisemitic campaign was launched around it by the ex-populist and racist politician Tom Watson, who in his weekly Jeffersonian Magazine repeatedly demanded the execution of "the filthy, perverted Jew of New York." Watson helped found the "Knights of Mary Phagan," an antisemitic society which sought to organize a boycott of Jewish stores and businesses throughout Georgia.

Frank's lawyers fought his case all the way to the United States Supreme Court on the grounds that he had not been given a fair trial, and it became a cause célèbre which enlisted the support of prominent Jews and gentiles. On May 18, 1915, however, the Court turned down Frank's final appeal. On June 21, shortly before his scheduled execution, his sentence was commuted to a life term by Governor John Slaton, who was personally convinced of his innocence. Slaton's decision, which was to cost him his political career, inflamed emotions in Georgia and did not save Frank's life for long: he was dragged from jail by a mob on Aug. 16, 1915, and lynched. There can be little doubt that Frank was innocent or that he would never have been brought to trial in the first place, much less convicted, had he not been a Jew.

In March 1986 Leo Frank was pardoned by the governor of Georgia.

[Harry Golden]

**FRANK, MENAHEM MENDEL** (late 15th–first half of 16th century), rabbi. He at first served as av bet din in Poznan, Poland, and from 1529 was rabbi of Brest-Litovsk, Lithuania. Frank was granted judicial authority by the king to assist Michael E佐ofovich in tax collection but met with opposition in Brest-Litovsk. In 1531, when Frank complained of the matter, the Jews under his jurisdiction were ordered by King Sigismund 1 to obey him and submit to any herem he imposed, being forbidden to appeal against his decisions to a non-Jewish tribunal. Encountering opposition by members of the nobility and state courts, possibly incited by Frank's Jewish opponents, in 1532 he sought the protection of Queen Bona. Upon her recommendation, the king prohibited royal officials and judges from intervening in the rabbi's affairs and declared that Frank could not be summoned to account before the throne. Decisions by Frank appertaining to divorce bills and contracts are mentioned by Shalom Shakhna b. Joseph of Lublin. According to some records Frank ended his days in Jerusalem.

[Arthur Cygielman]

**FRANK, PHILIPP** (1884–1966), philosopher and physicist. Born in Vienna, he was appointed professor of theoretical physics at the German University of Prague at 28, replacing Einstein. In 1938, he moved to the United States and taught mathematics and physics at Harvard. He established his reputation in physics by publishing with Richard von Mises, Die Differential-und Integralgleichungen der Mechanik und Physik (1925). Frank's most famous work was on philosophy of science. Following Duhem, Poincaré, Mach, and Einstein, Frank tried to clarify the philosophical foundations of the natural sciences. Frank's view is close to the positivism of the "Vienna Circle." He opposed the compartmentalization of individual sciences, stressing the unity of science. He also pointed out the neglected spheres between the individual sciences. Frank was a personal friend of Einstein and in 1947 wrote Einstein: His Life and Times. Frank opposed Mach's limited form of logical positivism and emphasized instead, relying on Einstein, that the principles of physics are the product of free human imagination and that they are symbols. These symbols are not arbitrary, but "true" ones, i.e., one should derive from them, by logical consequences, conclusions which are confirmed by experiment. This means that despite the emphasis on the empirical factor there still remains room for the researcher's productive activity. In his later years, he was especially interested in the sociological, historical, cultural, and psychological aspects of the natural sciences. Frank was a brilliant teacher and a lucid writer. A volume of Boston Studies in the Philosophy of Science (1965) was dedicated to him on his 80th birthday.

Frank's writings are an important source for the history of logical positivism and empiricism in the 20th century. They include Das Kausalgesetz und seine Grenzen (1932), Théorie de la connaissance et physique moderne (1934), Das Ende der mechanistischen Physik (1935), Interpretations and Misinterpretations of Modern Physics (1938), Between Physics and Philosophy (1941), Modern Science and Its Philosophy (1949), Relativity: A Richer Truth (1950), and Philosophy of Science: The Link Between Science and Philosophy (1957).

[Samuel Hugo Bergman]

**FRANK, RAY** (1861–1948), U.S. journalist and religious leader, the first Jewish woman to preach from a North American pulpit. Born in San Francisco (according to some sources in 1864 or 1865) to Leah and Bernard Frank, and raised in a "deeply religious home," she graduated from Sacramento High School in 1879, taught in Nevada for six years, and subsequently rejoined her family in Oakland, California. To support herself, Frank gave private lessons, wrote for several periodicals, and taught at First Hebrew Congregation, becoming superintendent of its religious school.

**Encyclopedia of Religion and Ethics**

**FRANK, RAY**
During the 1890s, Frank traveled throughout the Pacific Northwest as a correspondent for several Oakland and San Francisco newspapers. Arriving in Spokane, Washington (then Spokane Falls), in September 1890, just before the Jewish New Year, she found a small Jewish community torn apart by religious dissension. When she discovered that there was neither a synagogue nor planned religious services, she offered to deliver the sermon if a minyan could be assembled. As reported in a special edition of the Spokane Falls Gazette, Frank preached at the Opera House that evening, with one thousand Jews and Christians in attendance. She also spoke the next morning and on Yom Kippur. Moved by her plea that her coreligionists unite to form a congregation, a “Christian gentleman” offered to donate land on which to build a synagogue. Frank’s call for communal cooperation was so successful that she healed congregational squabbles and helped create Orthodox and Reform congregations throughout the western and northwestern United States.

Hailed as a “latter-day Deborah” and erroneously labeled a “Lady Rabbi,” she came to the attention of Isaac Mayer Wise, who encouraged her to study at Hebrew Union College. Enrolling in January 1893, she left after one semester, later maintaining that her intention was to study philosophy, not to become a rabbi. Wise, however, had earlier written that Frank’s avowed purpose was to enter the “Jewish ministry,” and he applauded her zeal and moral courage in breaking down “the last remains of the barriers erected in the synagogue against women.” In September 1893 Frank delivered the opening prayer and a formal address on “Woman in the Synagogue” at the first Jewish Women’s Congress, held in conjunction with the Parliament of World Religions at the Chicago World’s Fair. She later spoke at synagogues and churches throughout North America and officiated in 1895 at High Holy Day services in an Orthodox synagogue in Victoria, British Columbia. She declined a Chicago Reform congregation’s offer to become its full-time spiritual leader.

Frank’s public career ended after her 1901 marriage to economics professor, Simon Litman. She remained active in local Jewish organizations and institutions in Urbana, Illinois, led a study group, and occasionally lectured in the community and throughout the Midwest. Her papers are housed at the American Jewish Historical Society.

FRANK, ROBERT (1924– ), photographer. Born into a wealthy family in Zurich, Switzerland, Frank was 15 when war broke out across Europe. While his family was unharmed and sat out the war in neutral Switzerland, Frank later said that “being Jewish and living with the threat of Hitler must have been a very big part of my understanding of people that were put down or who were held back.” Frank took up photography as a way of breaking away from his family and Switzerland. At 16 he apprenticed himself to the photographer Hermann Segesser, who lived in the same apartment building as the Franks. He moved to New York in 1947 and soon began traveling the world, taking pictures for publications like Harper’s Bazaar and the New York Times. After several years, Frank felt constrained. Encouraged by Walker Evans, he won Guggenheim Fellowships in 1955 and 1956, which allowed him the freedom to travel throughout the United States. He set off in a car loaned to him by Peggy *Guggenheim with his wife, Mary, and their two sons to document a culture that was uniquely American. He returned a year later with 28,000 black-and-white images, 83 of which became the photographs in his monumental and now-famous book called The Americans, first published in 1958. His style was as uninhibited and innovative as Jack Kerouac’s and Allen Ginsberg’s, and his images, to many, came to epitomize the Beat Generation. In the book, which had an introduction by Kerouac, Frank’s pictures dwelt on the disenfranchised, the lonely, the disconnected, and the insecure. The images that propelled him to prominence were his signature achievement, and the photographs, taken with a small Leica, retained their impact many years later. The images rejected the assumptions of the Eisenhower era, and one critic (Michael Kimmelman in the New York Times) wrote, “Frank discovered for himself a vast nation of empty highways and empty symbols, a country whose most notable rift was not the picturesque Grand Canyon but the one that divided the races.” The photographs are considered classics of iconoclasm. They have an irreverence and a dark humor, Kimmelman wrote, whether it was the mysterious gleaming mass of a shrouded car in California or the glow of a jukebox in New York City. At the time, critics condemned his work as dark and depressing, made worse by their grainy, out-of-focus effects. In reality, they redefined street photography for a generation of American photographers.

Frank switched from photography to films in the late 1950s. His first film, the 1959 Beat classic, Pull My Daisy, was made to look improvised, but it was carefully plotted and scripted by Kerouac. His 1985 autobiographical video, Home Improvements, was a melancholy work. He returned to photography in the 1970s, but in a different style, somewhat like sculpture. He made collages combining photographs and words scratched roughly into them. To some, this work shows his grappling with tragedies in his life: the death of his daughter in a plane crash and the mental illness of his son, who eventually committed suicide. In later years, he divided his time between Nova Scotia and New York, where he lived from 1971 with the artist June Leaf after parting from his wife two years earlier. In 1990, Frank donated his vast archive to the National Gallery in Washington; it was the first time the museum ever felt constrained. Encouraged by Walker Evans, he won Guggenheim Fellowships in 1955 and 1956, which allowed him the freedom to travel throughout the United States. He set off in a car loaned to him by Peggy *Guggenheim with his wife, Mary, and their two sons to document a culture that was uniquely American. He returned a year later with 28,000 black-and-white images, 83 of which became the photographs in his monumental and now-famous book called The Americans, first published in 1958. His style was as uninhibited and innovative as Jack Kerouac’s and Allen Ginsberg’s, and his images, to many, came to epitomize the Beat Generation. In the book, which had an introduction by Kerouac, Frank’s pictures dwelt on the disenfranchised, the lonely, the disconnected, and the insecure. The images that propelled him to prominence were his signature achievement, and the photographs, taken with a small Leica, retained their impact many years later. The images rejected the assumptions of the Eisenhower era, and one critic (Michael Kimmelman in the New York Times) wrote, “Frank discovered for himself a vast nation of empty highways and empty symbols, a country whose most notable rift was not the picturesque Grand Canyon but the one that divided the races.” The photographs are considered classics of iconoclasm. They have an irreverence and a dark humor, Kimmelman wrote, whether it was the mysterious gleaming mass of a shrouded car in California or the glow of a jukebox in New York City. At the time, critics condemned his work as dark and depressing, made worse by their grainy, out-of-focus effects. In reality, they redefined street photography for a generation of American photographers.

In later years, he divided his time between Nova Scotia and New York, where he lived from 1971 with the artist June Leaf after parting from his wife two years earlier. In 1990, Frank donated his vast archive to the National Gallery in Washington; it was the first time the museum ever collected the work of a living photographer.

FRANK, SEMYON LYUDVIGOVICH (1877–1950), Russian philosopher. Frank was born in Moscow. He became an enthu-
FRANK, WALDO DAVID (1889–1967), U.S. novelist, critic, and philosopher. Born in Long Branch, New Jersey, Frank was educated in Europe and at Yale. His early travels also took him to Latin America (where his books later enjoyed particular success). His father, an American-born son of German immigrants, was a wealthy and assimilated lawyer but Waldo Frank underwent a mystical reversion to Judaism in 1920. His first published book was a novel, The Unwelcome Man (1917). He later made several outstanding experiments in poetic prose, such as Rahab (1922), City Block (1922), and Holiday (1923), the last a study of race relations in the South. A man of intellectual energy and literary skill, Frank wrote many books and essays evaluating American culture, notably Our America (1919), The Re-Discovery of America (1929), and In the American Jungle (1937). His books on other cultures include Virgin Spain (1926), America Hispana (1931), Dawn in Russia (1932), and Cuba, Prophetic Island (1961). As editor of the important, although short-lived, magazine Seven Arts (1916–17), which he founded with James Oppenheim, and of The New Republic (1925–40), Frank profoundly influenced American liberalism. His later writings were imbued with a prophetic and mystical philosophy that demanded the rejection of materialism and atheistic rationalism and the recognition of an immanent God. Frank also urged that private life should be guided by the ethical tenets of the Judeo-Christian tradition, enriched by the concepts of Marx and Freud. The Bridgroom Cometh (1938), a Marxist novel paradoxically inspired by Frank’s religious beliefs, illustrates the author’s conviction that the fundamental problem of the time was “how to transform the great traditional religious energies of Western civilization into modern social action.” Two works by Frank on Jewish subjects are The Jew in Our Day (1944) and Bridgehead: The Drama of Israel (1957). The latter insisted on Messianism as the purpose of Jewish survival and on Jewry’s mission of world redemption through the prophet Micah’s principles of justice, mercy, and humility before God.

[Richard H. Popkin]
concerned about agunot (see *Agunah) and the laws pertaining to the Land of Israel. Immediately after the *Balfour Declaration (1917) he expressed the opinion: "we have been worthy to see approaching signs of the redemption"; he began to clarify the laws of the Temple and sacrifices, and also headed the Midrash Benei Zion, an institute established for the clarification of the laws of the Land of Israel. He devised no novel procedure in halakhic ruling, but followed in the tradition of the renowned *posekim Isaac Elhanan *Spektor and Samuel Salant. He fought against the military conscription of women and yeshivah students, exclusively secular education, and the desecration of the Sabbath. His statements sometimes raised a storm, but they were always received with respect. Together with Rabbi Isaac *Herzog he entered into an agreement with Hadassah Hospital on the circumstances under which autopsies could be performed according to the halakkhah. He left many manuscripts, in particular responsa, constituting some 20 large volumes from which Har Zevi (1964), on Yoreh De'ah; Mikdash Melekh (1968); and Har Zevi (1969) on Orah Hayyim were published.

[Shabbetai Devir]

The second part of Rabbi Frank's responsa on Orah Hayyim, Har Zevi, has now been published, edited by R. Shabbetai Zevi Rosenthal under the auspices of the Makhon ha-Rav Frank. The volume consists of 132 responsa. Some of the responsa reflect the author's attitude toward the State of Israel. For instance, he regards those areas acquired in the War of Liberation as Israeli territory in every respect, legally acquired by Israel, with the result that the laws of terumah and ma'aser apply to it and vessels captured from the enemy are liable to tevilah, since they are to be regarded as legally belonging to Jews.

FRANKAU, English literary family. JULIA FRANKAU (1859–1916), novelist and critic, was a sister of the playwright James Davis (Owen Hall). Born in Dublin, she used the pseudonym "Frank Danby" for her fiction, and her first novel, Dr Phillips, a Maid Vale Idyl (1887), was a story of London Jewish life. Julia Frankau was an uneven craftsman, with an exuberant style. This is best shown in Pigs in Clover (1903), which deals with South Africans, Uitlanders, and Jews, all portrayed in lurid detail. In later life she held afternoon literary salons attended by many luminaries, including Max Beerbohm and Somerset Maugham. Her son GILBERT (1884–1952) maintained no connection with Judaism. He introduced Jews into his novels, treating them mostly in theatrical style. The Love Story of Aliette Brunton (1922) is a plea for the liberalization of English divorce law. Gilbert Frankau wrote two topical novelettes in verse, One of Them (1918) and One of Us (1919). He believed that the best antidote to the common antisemitic depiction of the Jews was Jewish patriotism, and was himself a strong right-winger. Frankau was one of the most popular British novelists of the interwar period. He wrote an autobiographical novel, Self-Portrait (1940). His daughter PAMELA (1908–1967), who became a Catholic in 1942, was also a well-known novelist and magazine writer.

[William D. Rubinstein (2nd ed.)]

FRANKEL, BENJAMIN (1906–1973), British composer. Born in London, the son of a synagogu beadle too poor to give him a musical education, Frankel left school to work as a watchmaker’s apprentice. Although largely self-educated, he managed to gain six months of piano study with Victor Benham in Berlin and Cologne as part of the exchange program after World War I. At the age of 17, he returned to London to earn his living as a piano teacher, café pianist, and jazz violinist, studying during the day at the Guildhall School of Music and eventually winning a composition scholarship there; in 1946 he returned to the Guildhall School as a composition teacher. He was a theater conductor (in, for example, Noel Coward revues) and orchestrator until 1931, when he completed his first film score; thereafter he was to write more than 100 scores for documentaries and stories such as The Man in the White Suit, The Importance of Being Earnest, and The Battle of the Bulge. As if in reaction, his “serious” works were written in a very different style from his commercial music, often being uncompromising in idiom. He wrote a violin concerto (1951) for Max Rostal in memory of “the Six Million,” eight symphonies (all in the last 14 years of his life), and four string quartets. In the String Trio No. 2 (1958) he seemed to have found a convincing solution to the problems of serialism that had interested him; thereafter most of his works showed the use of the 12-note technique. Frankel’s other works include sonatas for unaccompanied violin and cello; Sonata ebraica, for cello and harp; Élégie juive, for cello and piano; The Aftermath, for tenor, trumpet, and strings; Passacaglia, for two pianos; and many other piano pieces. He was at work on the opera Marching Song (commissioned by the Stuyvesant Foundation) at the time of his death.

[Max Loppert (2nd ed.)]

FRANKEL, HEINRICH WALTER (1879–1945), German metallurgist. Frankel worked at universities of Heidelberg, Goettingen, and Zurich before joining the Frankfurt Institute of Physical Chemistry (1913). In 1919 he became professor of metallurgy at University of Frankfurt. Nazi accession to power forced him to migrate in the early 1930s to the U.S, where he became a researcher for American Smelting and Refining Company, Barber, New Jersey. He was the author of Metallurgie: physikalisch-chemische Grundlagen (1922).

FRANKEL, HIRAM D. (1882–1931), U.S. lawyer and community leader. Frankel, who was born in Mayfield, Ohio, served in
appointive local and state government posts and was a member of the Minnesota Board of Regents. Frankel was also involved in journalistic and theatrical enterprises. He served as president of Mount Zion Hebrew Congregation in St. Paul, Minnesota, and of the Jewish Home for the Aged of the Northwest. He was a district president of B’nai B’rith, later director of the Canadian district, distinguishing himself in helping to break down barriers within the organization with Jews of East European origin. Frankel’s large and meticulously preserved personal correspondence covering Jewish life in Minnesota and throughout the U.S. in the World War I period is housed in the Minnesota Historical Society, St. Paul.

[W. Gunther Plaut]

FRANKEL, LEO (1844–1896), Hungarian socialist. Born in Ó-Buda (now part of Budapest), Frankel was a goldsmith by trade. After living for a short time in Austria and Germany, he settled in Paris in 1867, where he became an active socialist. He was imprisoned by the French Imperial government for his political activities but was released on the outbreak of revolution in 1870 and helped to organize the uprising in the Paris Commune. In March 1871 Frankel was made minister of labor of the Commune, and on its overthrow two months later fled to London, where he became a member of the council of the Socialist International. In 1875 Frankel left for Austria, where he participated in the workers’ conference at Wiener-Neustadt. He was arrested by the Austrian authorities and extradited to Hungary. He was imprisoned from 1876 to 1878, when he went back to Paris as Engels’ assistant in the Socialist International. In 1889 he represented the Hungarian Social Democrats at the inaugural conference of the Second Socialist International.

Frankel was in constant correspondence with Karl Marx, whom he much admired, but also became interested in Zionism as a result of meeting Theodor Herzl. After his death in Paris, French workers organized a campaign to raise funds for a memorial in his name. In 1951 his portrait was used on a Hungarian stamp and in 1968 his remains were transferred to Budapest for reburial in the Workers’ Pantheon.

[Yehouda Marton]

FRANKEL, MARVIN EARL (1920–2002), U.S. jurist. Frankel was born in New York City. After service in World War II, he studied law at Columbia, graduating in 1949. He served as an assistant to the solicitor general of the United States (1949–56) and then joined the New York firm of Proskauer, Rose, Goetz, & Mendelsohn, remaining until 1962 when he joined the faculty of the Columbia Law School.

In 1965 President Lyndon B. Johnson nominated Frankel to serve on the U.S. District Court for the Southern District of New York. Frankel quickly developed a reputation for great skill in handling complex federal civil litigation. He also became a leader in analysis of the administration of criminal justice. In 1974 he published *Criminal Sentences: Law without Order*, a landmark study of disparities in criminal sentencing. In 1977 he published *Grand Jury: An Institution on Trial*, a critical analysis of the history of the grand jury and abuse of the system for political ends.

He resigned from the court in 1978 and returned to the Proskauer, Rose firm for five years. In 1983 he joined the firm of Kramer, Levin, Naftalis, & Frankel, where he was the litigation director until his death in 2002. He became a champion of international humanitarian law, serving as chairman of the board of the Lawyers Committee for Human Rights. He criticized the repression of Soviet Jews, the mistreatment of political prisoners by the State of Israel, apartheid in South
Africa, and kidnappings and murders by military regimes in Argentina and Zaire.

In the last decade of his life Frankel wrote and litigated about religious liberty in the United States, but this phase of his work was not as distinguished as his advocacy for human rights. In 1994 he published an extended essay on religious freedom, arguing persuasively that officially established or preferred religion is never neutral and always entails preferences for one religious belief over another. Just before he died in 2002, Frankel argued his last case in the Supreme Court, urging the Court to invalidate a program of educational vouchers that included religious schools in Cleveland. The Court sustained this program by a vote of 5–4.

[Edward McGlynn Gaffney, Jr. (2nd ed.)]

FRANKEL, MAX (1930– ), U.S. journalist; one of the most influential journalists of the 20th century as editorial page editor and executive editor of *The New York Times*. Frankel was born in Gera, Germany, but he and his family were forced to leave Nazi Germany in 1938. They crossed into the Soviet Union, where Jacob Frankel, his father, was arrested on suspicion of being a German spy and was given the choice of Soviet citizenship or a sentence of hard labor in Siberia. Because the family’s intention was to reach the United States, Jacob refused citizenship and was sent to Siberia. Mary Frankel and her son Max arrived in the United States in 1940 and settled in New York City, where Jacob joined them after the war. Max had decided on a journalism career by the time he entered Columbia College, where he became editor of *The Spectator*, the student newspaper, and campus correspondent for *The Times*. He graduated from Columbia as a member of Phi Beta Kappa, the honorary society, in 1952 and earned a master’s degree in American government from Columbia the following year.

Although he was hired as a full-time reporter for *The New York Times* in 1952, he served in the United States Army from 1953 to 1955. Upon his return, he worked as a reporter and rewrite man. In 1956 he attracted notice with his quick and impressive article, capturing the desperation and drama of the sinking of the Italian ocean liner *Andrea Doria* off Nantucket Lightship after a collision with the Swedish ship *Stockholm*. Later that year he was sent overseas to cover stories arising from the Polish and Hungarian uprisings against Communism. From 1957 to 1960 he was a correspondent based in Moscow, where he wrote memorably about the international piano competition won by Van Cliburn, an American. He also wrote a series of colorful articles on Siberia that were described in the Soviet government newspaper *Izvestia* as coming “quite close to objectivity.” After returning to the Western Hemisphere, he covered the United Nations and the Caribbean area, including Cuba, for a year before moving to Washington in 1961 as diplomatic correspondent. He won the Overseas Press Club award for foreign reporting in 1966 and the following year became White House correspondent. From 1968 to 1973 Frankel was chief Washington correspondent and then bureau chief.

As chief of the Washington bureau, Frankel paid more attention to bureau management than his immediate predecessors, in addition to writing analyses of Washington and foreign affairs. He won the George Polk Memorial Award for “best daily newspaper interpretation” of foreign affairs in 1970, and in 1972 he accompanied President Richard M. *Nixon on his historic trip to China. He filed 24 stories and won the Pulitzer Prize in 1973 for international reporting.

In Washington, Frankel was close to many high government officials, including Secretary of State Henry A. *Kissinger, but he resisted Kissinger’s attempt to persuade him to suppress coverage of the American bombing of North Vietnam. In 1972, when some of his superiors and their lawyers at *The Times* balked at publication of the Pentagon Papers, the purloined Defense Department documents of the secret history of United States involvement in Vietnam, Frankel wrote a memorandum that helped change their minds. In the *Times’s* successful defense of its publication of the papers before the United States Supreme Court, Frankel’s memo was an important affidavit. But in contrast to its aggressive publication of the Pentagon Papers, the Washington bureau, under Frankel, lagged behind the *Washington Post* in its coverage of the Nixon administration’s involvement in the Watergate scandal.

He moved to New York in 1976 to serve as Sunday editor when the newspaper’s daily and Sunday staffs were merged. The Sunday edition then had a circulation of 1.4 million copies and accounted for half of the paper’s annual advertising lineup. As Sunday editor, he had control over the Book Review, the magazine, the Arts and Leisure and Travel sections. Frankel is credited with restyling and enlivening the Sunday edition.

He did similar restructuring when he became editorial page editor in 1977. He had a lighter and more pragmatic touch than his predecessor, John B. *Oakes, and was less doctrinaire. As editor, Frankel supervised 10 to 12 editorial writers and worked closely with the publisher, Arthur Ochs *Sulzberger, and then his son, Arthur Jr.* In 1986, when A.M. *Rosenthal, nearing the mandatory retirement age of 65, stepped down as executive editor of *The Times*, the highest-ranking news position, Frankel succeeded him. Under Frankel’s leadership, the *Times* retained its position in the top ranks of journalism, winning Pulitzer Prizes in each of his years at the helm. In 1994, when he was approaching 65, Frankel turned the reigns over to the Joseph *Lelyveld, and became a columnist for the *Times* Sunday magazine, writing on communications and the media. After he relinquished the column, Frankel wrote several books, including a memoir, *The Times of My Life and My Life With The Times* in 1999, which was a bestseller, and *High Noon in the Cold War: Kennedy, Khrushchev and the Cuban Missile Crisis* in 2004.

[Stewart Kampel (2nd ed. )]

FRANKEL, NAOMI (1920– ), Israeli novelist. Born in Berlin into a wealthy, assimilated German-Jewish family, she joined Ha-Shomer ha-Za’ir at an early age and went to Palestine in 1933. She studied Jewish history and Kabbalah, served in the

**FRANKEL, SALLY HERBERT** (1903–1996), South African economist. He was born and educated in Johannesburg, where he was professor of economics at Witwatersrand University from 1931 to 1946. He did research in maize marketing and government railway policy in South Africa, compiled calculations of the national income for the South African treasury (1941–48), and was a member of the Treasury Advisory Council (1941–43). Frankel investigated the railway system (1942) and mining industry (1945) for the Rhodesian government. In 1946 he was appointed professor of the economics of underdeveloped countries at Oxford. From 1953 to 1955 he was a member of the East African Royal Commission, and from 1957 to 1958 adviser to South Rhodesia's Urban African Affairs Commission. Frankel's publications include *Africa in the Re-Making* (1932), *Capital Investment in Africa* (1938), *Concept of Colonization* (1949), *Economic Impact on Underdeveloped Societies* (1953), *Some Conceptual Aspects of International Economic Development of Underdeveloped Territories* (1952), and *Investment and the Return to Equity Capital in the South African Gold Mining Industry, 1887–1965* (1967).

**FRANKEL, SAMUEL BENJAMIN** (1905–1996), U.S. naval officer. Born in Cincinnati, Ohio, Frankel graduated from the U.S. Naval Academy in 1929. He served on various U.S. warships in Nicaragua and in the Asiatic fleet between 1929 and 1936 before being sent to Riga, Latvia, to study Russian. During World War II he was assistant naval attaché at the United States embassy in Moscow and later assistant naval attaché for air in Murmansk-Archangel until 1944. He was sent to Pearl Harbor in 1945 to serve on the staff of the commander-in-chief of the United States Pacific Fleet and as officer in charge of the Joint Intelligence Center, Pacific Ocean Areas. In 1946 he served in the Office of the Chief of Naval Operations (Intelligence Division), assigned to the Central Intelligence Agency in Washington until 1948. He then served as naval attaché in Nanking, China. He remained in his post for a year after the Communist revolution before returning to the United States in 1950 to become director of the naval intelligence school. From 1953 to 1956 he was assistant head of naval intelligence in the Pacific fleet and was later a senior intelligence officer in the Navy Department in Washington, and promoted to rear admiral. In May 1960 Frankel became deputy director of naval intelligence and in the following year was appointed chief of staff of the Defense Intelligence Agency, a post he retained until his retirement in 1964.

Frankel was awarded the Distinguished Service Medal for his "exceptionally meritorious service" as assistant naval attaché in the U.S.S.R., in 1941–42; directing the repair and salvaging of damaged U.S. vessels; and helping in the rescue and repatriation of survivors of sunken ships. For several years Frankel served on the board of the Tolstoy Foundation, a New York-based organization dedicated to assisting displaced persons of Russian origin. In 1972 he retired to California, where he lectured on China and Russia at San Diego State University's Continuing Education Center of Rancho Bernardo.

[Getzel Kressel]

**FRANKEL, WILLIAM** (1917– ), weekly of the *Jewish Chronicle*, published in London. Born in London, Frankel began his professional life as secretary of the British Mizrachi Federation. He was subsequently called to the Bar as a Member of the Middle Temple and practiced in London and on the South Eastern Circuit. In 1955 he was appointed the general manager of the *Jewish Chronicle* and two years later became its editor, a post he held until 1977. After his retirement, he remained a member of the Board of Directors of the *Jewish Chronicle* and became chairman in 1991. In 1971 he was appointed by the queen a commander of the Order of the British Empire. He wrote *Israel Observed* (1980) and was the editor of the annual *Survey of Jewish Affairs* from 1982 through 1992. Frankel also edited *Friday Nights* (1973), an anthology of important news as reported in the *Jewish Chronicle* from 1841 until 1971.

**FRANKEL, YAAKOV** (1943– ), Israeli economist. Frankel was born in Tel Aviv. In 1966 he received his B.A. degree in economics and political science from the Hebrew University of Jerusalem. He then received his M.A. in 1969 and Ph.D. in 1970 from the University of Chicago, both in economics. In 1971 he joined Tel Aviv University as a lecturer and in 1991 he became full professor. From 1994 he held the Wiesfield Cathedral for Peace Economy and International Relations. From 1987 to 1991 he was chief economist and research director of the International Exchange Fund. He dealt with the debt prob-
Frankel, Zacharias  (1801–1875), rabbi and scholar. Frankel was born in Prague. After receiving a talmudic education under Bezalel *Ronsburg, he studied philosophy, natural sciences, and philology in Budapest (1825–30). In 1831 the Austrian government appointed him district rabbi (*Keiserrabbiner) of Leitmeritz (Litomerice) and he settled in Teppliz (Teplice) where he was elected local rabbi. He was one of the first rabbis to preach in German and express by that his positive attitude towards modernity and social integration of Jews within general society and culture. In 1836 he was called by the Saxon government to *Dresden to act as chief rabbi. The publication of his study on the Jewish *oath (see below) led to its abolition in several German states. He declined a call to Berlin in 1843, mainly because the Prussian government would not meet his stipulations (complete legal recognition of the Jewish faith – until then merely "tolerated"; denial to support to missionary activities among Jews, etc.). In 1845 he attended the second conference of Liberal rabbis in Frankfurt and advocated there a much more moderate-conservative approach than most of the participants to the issue of required reform in Judaism. He withdrew from the conference and broke his ties with Liberal rabbis once his direction was rejected and the conference adopted the idea of promoting both prayer and sermons in German rather than in Hebrew. In 1854, after having actively advocated its establishment, Frankel became director of the newly founded Juedisch-Theologisches Seminar (Jewish Theological Seminary) at Breslau, where he remained until his death.

Religious Outlook

As a theologian Frankel aimed at a synthesis between the traditional notion of Judaism as linear continuity anchored in divine revelation and based on Jewish law (halakhah) on the one hand and response to contemporary fundamental changes in the Jewish life on the other. He viewed Judaism as a dynamic balance between the Divine will, as expressed in the *Torah, and the human response of the Jewish people, as manifested in the history of the Jewish people. This balance was articulated in the title he gave to the new denomination he established within Jewish life, namely “positive-historical” Judaism. The positive pole of this formulation referred both to the revealed-legalistic nature of Judaism and to its objective eternal and unchangeable content. The historic pole expressed the role Frankel ascribed to the human, ever-changing, and contextually dependent response of the Jewish community to this Divine content. Only the combination of these two poles determines what Judaism is and what is truly a mitzvah. The duty of the rabbis, as he understood it, was to combine loyalty to halakhah with sensitivity to the voice of *kelal yisrael (the entire community or people of Israel). Frankel’s approach thus led him to a rejection of both Reform and Orthodox notions of Judaism. In the Reform movement, led by Abraham *Geiger he saw both a negation of loyalty to Jewish law and the lack of genuine dialogue with the Jewish masses. The Reform rabbis mistakenly believed that they had the authority to determine Jewish dogma by themselves without taking popular sentiment and their way of life seriously into consideration. The Orthodox rabbis, led by S.R. *Hirsch, were criticized by him for not taking in account the historic dynamics and evolution of Judaism, and the need to free Judaism from its frozen state and irrelevance to current Jewish life. Both Reform and Orthodox ignored the very life of the Volk, the real source of authority for the work of the rabbi. It should be noted, that though Frankel wished to place himself at the “center,” his critique of the Reform wing was much sharper and aggressive than that of Orthodoxy. The former were accused of transgressing Judaism altogether; the latter only of not properly relating to the current needs and concerns of the Jews. This imbalance represents the fact that it was Orthodoxy that designed for him the criteria for Jewish life, while his Reform counterparts were perceived as representing a much less urgent and acute challenge. Frankel promoted these ideas in his professional life in the way he designed the program of the Breslau seminary as well as in the kind of tendencies he developed within academic Jewish research (Wissenschaft des Judentums). The Breslau seminary was the first modern institute for rabbinical education, combining clear emphasis on rabbinical studies – mainly in a traditional manner – with the study of the wider range of Jewish studies in connection with the local university. The unique nature of the Breslau seminary was questioned by Samson Raphael *Hirsch, who challenged Frankel, upon the seminary’s opening, to state the religious principles that would guide instruction there. At the
same time, Abraham Geiger criticized the seminary's classic method of talmudic instruction.

As a scholar Frankel focused on the study of rabbinic literature, presenting it as a human activity, reflecting its historical context, and hence a dynamic and open process of hermeneutics and adaptation of the Torah. By that he presented the rabbinic discourse and authority as the center of Jewish history and essence, in contrary to the Reform theologians and scholars who emphasized the Bible and theological discourse. At the same time Frankel presented the rabbis as the creators of Jewish legal tradition, in contrary to the traditional and Orthodox understanding of them as the carriers of the Divine oral law, revealed at Sinai. The "positive-historical" ("Breslau") school influenced later the "Conservative movement in the United States and served as its theoretical basis. In the controversy over the Hamburg prayer book (1841) and in his subsequent reply to the circular of the Hamburg preacher, Gotthold *Solomon (Litteratur des Oriens, 3 (1842), nos. 23–24), he declared that only changes that were not in conflict with the spirit of historical Judaism should be permitted in the traditional ritual. He believed that the messianic belief, which expressed the "pious wish for the independence of the Jewish people" was of importance for the survival and development of Judaism, and that it brought a new spirit and vigor into the life of German Jews, even though "they already had fatherland which they would not leave." This statement and others express Frankel's deep devotion to Jewish peoplehood and national existence, a devotion not shared by Hirsch's neo-Orthodoxy or by contemporary Reform, but which was, in some ways, a precursor of later national Jewish thought. Frankel's monthly review, *Zeitschrift fuer die religiösen Interessen des Judentums* (1844–46), was a platform for his opinions. Frankel's view aroused opposition in both Reform and Orthodox quarters.

**Works**

Frankel's first work, on the Jewish oath, *Die Eidesleistung bei den Juden* (1840), arose out of a practical political need and was at the same time a pioneering attempt at scientific analysis of halakhic problems using the method of comparative jurisprudence. He further examined the question in *Der gerichtette Beweis nach talmudischem Rechte* (1846), a study of legal evidence according to talmudic law, and again in a series of articles in various periodicals: *MGWJ*, 2 (1853), 289–304, 329–47; 9 (1860), 321–31, 365–80, 406–16, 445–54; 16 (1857), 24–26, 70–72; and *Jahresbericht des Juedisch-Theologischen Seminars* (1860). Several of his works deal with the history of the oral tradition: in his first studies on the Septuagint, *Vorstudien zu der Septuaginta* (1841), he tried to show that traces of the Palestinian *halakhah* could be found in the Greek translation of the Bible; on this he based a further work on the influence of Palestinian exegesis on Alexandrian hermeneutics, *Ueber den Einfluss der palastinischen Exegese auf die Alexandrische Hermeneutik* (1851). He published his research into the methodology of the Mishnah and the Talmud in *Darkhei ha-Mishnah* (1859; with supplement and index, 1867; new ed. 1923), which exercised a decisive influence on further research on the Mishnah. On the publication of that book Hirsch attacked him in his periodical *Jeschrurun* in a series of critical essays in which he demanded that Frankel give a precise exposition of his views on rabbinical tradition and the revelation at Mount Sinai, an attack that was supported by a long line of other Orthodox rabbis. Confining himself to a brief statement in his journal, *Monatschrift fuer Geschichte und Wissenschaft des Judentums* (vol. 10 (1861), 159–60), Frankel stressed that it was not his purpose to dispute the worth of rabbinical tradition or to deny its antiquity, adding that the question as to which of its halakhic elements were to be considered of Mosaic origin was not yet resolved. Further scholarly works of Frankel are his *Mevo ha-Yerushalmi* (1870), an introduction to the Jerusalem Talmud. He also wrote *Ahavat Ziyyon*, a commentary to several tractates of the Jerusalem Talmud (*Berakhot, Péah* 1847; *Demai* 1875), and *Entwurf einer Geschichte des Literatur der nachtalmudischen Responsen* (1865), the outline for a history of post-talmudic responsa literature. In 1851 he founded the scholarly journal *Monatschrift fuer Geschichte und Wissenschaft des Judentums*, editing it for 17 years and publishing numerous articles on Jewish cultural history. In the Breslau seminary, Frankel set the standards for modern rabbinical training, and his curriculum of study and the qualifications he established for both students and lecturers were adopted by all similar institutions.

**Franken, Rose Dorothy Lewin** (1895–1988), U.S. playwright, director, fiction writer, and screenwriter. Franken was born in Gainesville, Texas, but grew up in New York City. The 450 performances of her play, *Another Language*, set a record for a first play. Burns Mantle, editor of the authoritative *Best Plays* yearbook, selected *Another Language* as one of the ten best of the 1931–32 season. Three more of Franken's plays subsequently won that distinction: *Claudia* (1940–41), *Outrageous Fortune* (1943–44), and *Soldier's Wife* (1944–45).
Franken was best known for the Claudia stories. Launched in 1939 as a series in Redbook Magazine, Claudia became the subject of seven novels, a radio series, two films, and a play. Directed by the author, it had a run of 722 performances in 1941–43. Claudia is a naive young woman who only after marriage begins to recognize her ability to cope with adult responsibilities and adversities. Claudia’s subtitle, “The Story of a Marriage,” points to Franken’s predominant concerns. Her work captures the rapidly shifting mores of American society in the World War II years, seen through the eyes of women looking anew at their capabilities and desire for independence.

Another Language is the story of a rebellious woman in a family dominated by an authoritarian mother who keeps her sons and all but one of her obedient daughters-in-law on a short leash. Although the ethnicity of the Hallam family is unspecified, their ethnocentrism, gender roles, male professions, women’s pastimes, and the materfamilias’ attitudes about eating strongly suggest that they are middle-class Jews. Franken is more specific in Outrageous Fortune. This work, daring for its time, protests antisemitism and homophobia and deals forthrightly with the discontent spawned within middle-class Jewish clannishness. In the aptly titled Soldier’s Wife, the eponym quite unintentionally becomes a successful writer during her husband’s absence. Upon his return from military service, she chooses to give up her new career in deference to the domestic lifestyle of a conventional marriage, while acknowledging that “there’s going to be a lot of money and success and independence in women that there’s never been before.”

Franken’s work reflects her personal struggle with traditional gender roles and her ambivalence about balancing domestic and career commitments. Although her heroine in Doctors Disagree (1943) overcomes both her male colleagues’ anti-feminism and other women’s anti-professionalism, Franken confided in her autobiography a preference for “a traditional physician of the masculine sex.” She often denied harboring any interests more urgent or fulfilling than home, husband, and her three sons, and claimed she wrote only for something to do while the children napped and a cake baked. She relinquished an opportunity for a Barnard College education in 1913 to marry Dr. Sigmund Franken, a dentist, who accepted into the Motion Picture Squadron of the Air Force, he discovered that his real skill lay behind the camera. He was a director for CBS television (1953–60), producing, among other programs, The Turn of the Screw and Days of Wine and Roses. He directed a total of 152 live television shows between 1954 and 1960, including such series as Climax! and Playhouse 90. Frankenheimer, who thoroughly enjoyed directing live television, was one of the first TV directors to use multiple camera angles, a moving camera, quick editing, and close-ups.

Ultimately, however, he became a successful director of feature films on the big screen. Through his movies, he used the opportunity to express his views on significant social and philosophical issues. Frankenheimer’s films include The Young Stranger (1957); The Young Savages (1961); All Fall Down (1962); Birdman of Alcatraz (1962); The Manchurian Candidate (1962); The Train (1964); Seven Days in May (1964); Grand Prix (1966); The Fixer (1968); The Gypsy Moths (1969); The Horsemen (1971); The Iceman Cometh (1973); The French Connection II (1975); Black Sunday (1977); Year of the Gun (1991); The Island of Dr. Moreau (1996); Ronin (1998); Reindeer Games (2000); and The Hire: Ambush (2001). At the same time he produced and directed such TV fare as The Rainmaker (1982); The Burning Season (1994); Andersonville (1996); George Wallace (1997); and Paths to War (2002). During his career, he won four Emmy awards and was nominated for nine others.

In 2002 he was inducted into the Television Hall of Fame.

Frankenburger, Wolf (1827–1889), lawyer and politician in Germany. Born at Obbach in Bavaria and educated in Wurzburg, where he took an active part in the 1848 agitation. He settled in Nuremberg in 1861 to practice law. Frankenburger was first elected to the Bavarian diet in 1869 and remained a member until the end of his life. From 1874 to 1878 he was also the representative for Nuremberg in the German Reichstag. The first motion he proposed in the assembly was for freedom of the press and freedom of sale of literature. Frankenburger managed to obtain the abolition of the Jewish taxes then still in force in Bavaria and also obtained a salary increase for the poorly endowed rabbinical posts. Frankenburger was an eloquent advocate of the union of Bavaria with the German Empire and received from the Bavarian king the Class 1 Michaelisorden for his activities.

[Ellen Schiff (2nd ed.)]
Frankenthaler, Helen

Frankenthaler, Helen

Frankenthaler, George

Frankenthaler, Helen
Employing thinned-down oil paint on an unprimed canvas, *Mountains and Sea* (1952) found Frankenthaler’s signature style when she was only 23 years old after several years of experimenting with Cubist- and Surrealist-inspired imagery. Influenced by Jackson Pollock, Frankenthaler eschewed the paintbrush and the easel, instead placing a canvas on the floor and pouring pigment from coffee cans on the canvas. Known as stain painting, this watercolor-like technique emphasized the flat canvas while suggesting moods that are often described as lyrical. The importance of *Mountains and Sea* transcends Frankenthaler’s own development as the canvas is well known for influencing Morris *Louis and Kenneth Noland; after seeing the painting in 1953 both artists adopted a staining technique. Although her paintings are abstract, they often find inspiration from reality; she painted *Mountains and Sea*, for example, after seeing the cliffs of Nova Scotia on a trip with Greenberg.

Her first retrospective exhibition was held at the Jewish Museum in 1960. Among the paintings shown there was *Jacob’s Ladder* (1957, Museum of Modern Art, New York), a 9½ by nearly 6-foot abstract canvas soaked with floating colors that won first prize at the First Biennale de Paris in 1959. Among other venues, retrospectives have been held at the Whitney Museum of American Art (1969) and New York’s Museum of Modern Art (1989).

In addition to painting, Frankenthaler has illustrated books, welded steel sculpture and made prints. Indeed, printmaking plays a significant yet underrated role in Frankenthaler’s oeuvre. As innovative a printmaker as a painter, Frankenthaler made lithographs, screenprints, etchings, and woodcuts. From her first published print in 1961, a lithograph appropriately titled *First Stone*, Frankenthaler integrated abstraction, mostly through fluid lines rather than the rigid marks typical of printmakers, with her vital use of color to create 235 prints between 1961 and 1995.

[Samantha Baskind (2nd ed.)]

**FRANKFORT, HENRI** (1897–1954), excavator, teacher, and author in the field of Near Eastern archaeology. Frankfort, who was born in Amsterdam, was concerned with the archaeology, culture, and religion of the entire Middle East. His wide-ranging scholarship enabled him to comprehend the ancient Near Eastern cultures in their totality, with a special awareness of their common features as well as the peculiarities of each. After studying in England with the great archaeologist W.M. Flinders *Petrie, Frankfort returned to Holland and received his Ph.D. at Leiden. He seems to have flirted briefly with Zionism but was generally uninterested in Judaism. (His mother perished in the Holocaust.) Frankfort participated in excavations at el-Amarna, Abydos, and Armant in Egypt, and at Tell Asmar, Khafaje, and Khorsabad in Mesopotamia. From 1932 to 1938 he was also professor at the University of Amsterdam and from 1939 to 1949 he was professor at the Oriental Institute of the University of Chicago. In the last phase of his career, Frankfort produced “cultural syntheses,” namely, *The Intellectual Adventure of Ancient Man, An Essay on Speculative Thought in the Ancient Near East* (with others, 1946; abridged by the elimination of the chapter on the Hebrews, republished as *Before Philosophy*, 1951). Frankfort’s wife, Henriette Groenewegen Frankfort, collaborated with him in this project: *Kingship and the Gods, A Study of Ancient Near Eastern Religion as the Integration of Society and Nature* (1948, 1955); *The Birth of Civilisation in the Near East* (1951); and *The Art and Architecture of the Ancient Orient* (1954). During this phase he returned to Europe and became director of the Warburg Institute and professor of pre-classical antiquity at the University of London. Thus, Frankfort’s development began with the treatment of excavated materials, progressed to classification and interpretation of Near Eastern archaeological remains (the *Cylinder Seals...*, 1939), and culminated in a cultural-historical-archaeological interpretation of these early civilizations.

[Penel P. Kahane / S. David Sperling (2nd ed.)]

**FRANKFURTER, DAVID** (1909–1982), student of medicine who shot a Nazi official in protest against the persecution of Jews under the Nazi regime. The son of a rabbi, Frankfurter was born in Daruvar, Croatia (Yugoslavia). While studying in Germany, he witnessed the Nazi advent to power and the initiation of anti-Jewish measures. He left Germany and continued his studies in Switzerland. On Feb. 4, 1936, he shot and killed Wilhelm Gustloff, the leader of the Swiss branch of the Nazi party. A local court sentenced him to 18 years imprisonment, of which he served nearly nine. He was pardoned after the Nazi defeat but was banished forever from Switzerland. He settled in Israel and published a book about his experience, *Nakam* (‘Vengeance,’ 1948). In 1969 the banishment order was rescinded and Frankfurter visited Switzerland. In Israel he worked for the Ministry of Defense.

**BIBLIOGRAPHY:** E. Ludwig, *Davos Murder* (1937).

[Yehuda Reshef]

**FRANKFURTER, FELIX** (1882–1965), U.S. jurist. Frankfurter, who was born in Vienna, was taken to the United States at the age of 12. His parents settled on the Lower East Side of New York, where his father, scion of a long line of rabbis, was a modest tradesman.

**Early Years**

Frankfurter graduated with distinction from the College of the City of New York in 1902; his real education, however, as he liked to recount, was derived from the books and newspapers that he devoured at the Public Library, Cooper Union,
and the coffee shops of the city. Throughout his life he had a compulsive passion for reading, and he regularly scanned the newspapers of several continents. These he absorbed in no merely passive spirit; he came to have a wide acquaintance among journalists and publishers, and frequently he would pepper them with notes of compliment or rebuke. At Harvard Law School, from which he received his degree in 1906, Frankfurter developed his deep, indeed reverent, attachment to the values of the Anglo-American system of government under law, and as the leading student in his class found new horizons of achievement opened to him. On the recommendation of Dean Ames of Harvard Law School, he was invited by Henry L. Stimson, then United States Attorney in New York, to become an assistant in that office. Henceforth his professional life was divided between public service and teaching. The association with Stimson was one of the most significant experiences in Frankfurter’s life, constituting living proof for him that the effective enforcement of the criminal law need not compromise the scrupulous standards of procedural decency that are encompassed in the guarantee of due process of law. When Stimson was appointed secretary of war in the administration of President Taft, Frankfurter became his personal assistant, with special responsibility for the legal affairs of overseas territories of the United States and the conservation of water resources. At this time his friendship began with Justice Oliver Wendell Holmes of the Supreme Court, which became a deep intellectual discipleship despite their disparity in background and temperament. Frankfurter admired not merely the style of Holmes – learning worn with grace – but his fastidiousness of mind and disinterestedness of judgment; and they shared an ardent love of country, instilled in the one by arduous service in the Civil War, in the other by the experience of seeing the vistas of opportunity opened to a gifted immigrant boy.

**Professor and Public Servant**

In 1914 Frankfurter accepted an appointment to a professorship at Harvard Law School, which he held until his appointment to the Supreme Court 25 years later. As a teacher and scholar he concentrated on the procedural aspects of law – the administration of criminal justice, the jurisdiction of the federal courts, the process of administrative tribunals, and the ill-starred use of the injunction in labor disputes. He earned a reputation as a radical reformer, but his concern was for the integrity of the law’s processes, upon which a reasoned approach to the maintenance of a just society depended. Misunderstanding of his concern – its mistaken identification with the particular causes that motivated the victims of injustice – led some observers to conclude that Frankfurter was a radical who became a conservative on the bench. During World War I Frankfurter was called to Washington as legal officer of the President’s Mediation Commission, charged with investigating and resolving serious labor disturbances. In that capacity he inquired into the vigilante action against strikers in the Arizona copper mines, finding that the companies’ refusal to accept unionism was the root cause of the troubles, and he investigated the conviction of Tom Mooney on a bombing charge in California, finding that the trial had been vitiated by improper tactics of the prosecution. These were a forerunner of Frankfurter’s involvement in the Sacco-Vanzetti murder case in Boston, the most bitter experience in his life, in which he fought unsuccessfully to have the verdict set aside on grounds of prejudicial conduct by the trial judge and prosecuting attorney, and thereby provoked against himself the burning hostility of the entrenched interests in the community. He was one of the founders of the American Civil Liberties Union, a legal adviser to the National Association for the Advancement of Colored People, and counsel to the National Consumers’ League.

**Zionist**

Frankfurter became closely associated with Louis D. *Brandeis, who practiced law in Boston until his appointment to the Supreme Court in 1916. This association brought Frankfurter deeply into the Zionist movement, and in 1919 he went to Paris with the Zionist delegation to the peace conference. Through T.E. Lawrence he met Emir Feisal, head of the Arab delegation, and in consequence of their talks he received from Feisal the historic letter of 1st March, 1919, stating that the Arab delegation regarded the Zionist proposal as “moderate and proper,” that they “will wish the Jews a most hearty welcome home,” and that the “two movements complete one another” and “neither can be a real success without the other.” In 1921 Frankfurter withdrew from formal participation in the Zionist movement, when the Brandeis-Mack-Szold group seceded over issues of organization and fiscal autonomy for American Zionism. Thereafter, nevertheless, he maintained his active interest in the upbuilding of the Jewish national home in Palestine, and in 1931, disturbed by the tendency of Britain to shirk its responsibility as the mandatory power, he published a notable and much-cited critical article in *Foreign Affairs* (9 (1931), 409–34), entitled “The Palestine Situation Restated.” Despite the break with the formal Zionist organization, his relations with Weizmann remained cordial.

**In Politics**

In politics Frankfurter was more concerned with men and policies than with party labels. He served under Stimson in a Republican administration, was an admirer of Theodore Roosevelt, and in 1924 supported Robert M. La-Follette, the Progressive third-party candidate, for the presidency. In 1928 he campaigned for Alfred E. Smith, to whom he had been an informal adviser on problems of public-utility regulation when Smith was governor of New York. In 1932, quite predictably, he warmly supported Franklin D. Roosevelt. Roosevelt, as assistant secretary of the Navy, served with Frankfurter on an interdepartmental board concerned with wartime labor relations. When Roosevelt became governor of New York, he called on Frankfurter for counsel, and upon his election as president, Roosevelt asked Frankfurter to become solicitor general, intimating that if he held this post it would be easier to
appoint him in due course to the Supreme Court. Frankfurter declined, however, on the ground that he could be more useful to the President’s program without an official place in the administration. He continued to teach at Harvard while advising Roosevelt on certain appointments and lending a hand in speech writing and in the drafting of legislation, notably in relation to the regulation of securities and the stock exchange. When, in 1938, Justice Benjamin N. *Cardozo died, there was widespread sentiment that by virtue of intellect and philosophy – not for reasons of religion – Frankfurter was the rightful successor to this chair, which had been occupied before Cardozo by Justice Holmes. Disregarding the advice of some timorous Jewish friends who pointed to the fact that Justice Brandeis was still on the Court, Roosevelt made the nomination, which was confirmed on January 17, 1939.

Supreme Court Justice
Upon assuming judicial office, Frankfurter’s roving commission in law and public affairs was ended, but the gravity of the world situation made it impossible for him to become a judicial recluse. He had recognized the menace of Hitler before most of his compatriots, and when war came, his insight, experience, and judgment were drawn upon. Perhaps his most notable service in this regard was his recommendation of his old mentor, Henry L. Stimson, to be secretary of war. As a judge Frankfurter conceived his role to be more complex than that of a teacher or publicist, since a judge on the Supreme Court must subordinate his merely personal views when judging the validity of the acts of a coordinate branch of government. He rejected the claims of absolutism for even the most cherished liberties of speech, assembly, and religious belief, maintaining that they must be weighed against the legitimate concerns of society expressed through government. When those concerns were relatively tenuous or could be satisfied in a less intrusive way, the liberty of the individual must prevail. Thus when a state attorney general conducted an investigation into the teaching of a college lecturer, Frankfurter wrote a powerful opinion upholding the sanctity of the university classroom against the threat of domination by the state (*Sweezy v. New Hampshire*, 354 U.S. 253 (1957)). When a school board introduced released-time instruction in religion in the public schools, on a voluntary basis, Frankfurter joined in condemning the program as a breach of the “wall of separation” between church and state (*Mc-Collum v. Board of Education*, 333 U.S. 203 (1948)). But when a compulsory flag-salute exercise in the public schools was resisted by Jehovah’s Witnesses as a profanation of their religious tenets, Frankfurter concluded that the government had not gone beyond permissible bounds in seeking to inculcate loyalty and national pride in schoolchildren (*West Virginia State Board of Education v. Barnette*, 319 U.S. 624 (1943)). His dissenting opinion begins with his most explicit and deeply felt statement of his judicial philosophy in the troubled area of individual freedom:

> One who belongs to the most vilified and persecuted minority in history is not likely to be insensible to the freedom guaranteed by our Constitution. Were my purely personal attitude relevant I should wholeheartedly associate myself with the general libertarian views in the Court’s opinion, representing as they do the thought and action of a lifetime.

But as judges we are neither Jew nor gentile, neither Catholic nor agnostic. We owe equal attachment to the Constitution and are equally bound by our judicial obligations whether we derive our citizenship from the earliest or the latest immigrants to these shores. As a member of this Court I am not justified in writing my private notions of policy into the Constitution, no matter how deeply I may cherish them or how mischievous I may deem their disregard…. The only opinion of our own even looking in that direction that is material is our opinion whether legislators could in reason have enacted such a law.

He joined wholeheartedly in the decisions holding legally segregated public schools to be a denial of equal protection of the laws (*Cooper v. Aaron*, 358 U.S. 1 (1958)). But in another pathbreaking action of the Court, upsetting malapportionment in legislatures, he dissented vigorously, on the ground that the courts were entering a “political thicket” that would enmesh them in party politics (*Baker v. Carr*, 369 U.S. 186 (1962)).

Retrospect
In 1962 Frankfurter suffered a stroke, and resigned from the Court. Though invalided, he was able the following year to receive the Presidential Medal of Freedom, the highest civilian honor within the bestowal of the President. The citation read: “Jurist, scholar, counselor, conversationalist, he has brought to his time. The citation suggested the many-sided liveliness of the man, but could not capture the full measure of what he liked to call the Blue Danube side of his nature: the bouncy step, the love of argumentation, the steely grip on his interlocutor’s elbow, the roars of laughter, what Dean Acheson called affectionately the “general noisiness” of the man. Nor could the citation capture his astonishing range of friendships, which embraced statesmen, scholars, artists, former students, and writers around the world. His correspondence was prodigious. He was refreshed by uninhibited communication as others are refreshed by solitude. Although not an observing Jew (“a believing unbeliever,” he called himself), he retained a familiarity with Jewish lore, and toward the end of his life he felt drawn closer to his heritage.

Writings
Frankfurter’s own talk and writings of interest to the general reader include: *Felix Frankfurter Reminiscences* (1960); *Law and Politics* (1939); *Of Law and Men* (1956); *Of Law and Life* (1965); *Roosevelt and Frankfurter; their Correspondence 1928–1945; Felix Frankfurter on the Supreme Court* (1970).

FRANKFURTER, MOSES (1672–1762), author, dayyan, and printer in Amsterdam. Moses, the son of Simeon, established a printing press in 1721 from which he issued books both in Hebrew and Yiddish. He later moved to Frankfurt where he died. Frankfurter wrote *Nefesh Yehudah* (1701), a commentary on Isaac Aboab’s *Menorat ha-Ma’or* with a Yiddish translation of the text. This very popular tract was often reprinted, as was *Sheva Petilot* (1721), an abbreviated version of the same work. Frankfurter translated into Yiddish and published his father’s *Sefer ha-Ḥayyim* (1712). From it he compiled *Sha’ar Shimön* (1714), prayers for the sick, in two parts, in the second in Yiddish. He also wrote *Zeh Yenahamenu* (1712), a commentary on the *Mekhilta de-R. Ishmael*. When Frankfurter was in serious distress he sought comfort in dedicating himself to the laborious task of correcting the text and commenting upon it. He also wrote *Toṿ Leḳhet*, notes to the law of mourning of the Shulḥan Arukh, *Yoreh De’ah* (1746); *Ba’er Heitev*, glosses to the Shulḥan Arukh; *Ḥoshen Mishpat* (1749), patterned after Judah b. Simeon Ashkenazi’s *Ba’er Heitev* (1736–42) on the other three parts of the Shulḥan Arukh. Frankfurter edited several works, the most important being a new edition of the rabbinic Bible *Mikra’ot Gedolot* (4 vols., Amsterdam, 1724–27), adding 16 previously unpublished commentaries on the various books of the Bible including his own commentary under the title *Kehillat Moshe*; another group of this compilation interpreting the whole Bible is *Komeẓ Minḥah, Minḥah Ketanah, Minḥah Gedolah*, and *Minḥat Erev*.

[Jacob Hirsch Haberman]

FRANKFURTER, SOLOMON FRIEDRICH (1856–1941), Austrian librarian, pedagogue, and classical philologist. Frankfurter was born in Pressburg and moved with his family to Vienna in 1859. In 1881 he began working as a volunteer at the University of Vienna library, where from 1919 to 1923 he served as director. In 1909 he had been appointed the first Jewish consultant on Jewish community questions to the Austrian Ministry of Culture and Education. Frankfurter was president of the Society for the Collection and Investigation of Jewish Historic Monuments, president of the B’nai Brith, and member or consultant of many boards responsible for Jewish education and religion. He served briefly as director of the Vienna Jewish Museum, but also acted as an advisor. From 1934 to 1938 he was the only Jewish member of the Austrian Bundes-Kulturrat (Federal Board for Cultural Questions). When the Nazis invaded Austria (1938), he was arrested, but was released shortly afterwards.

Frankfurter’s publications deal with archaeology; education, particularly the important role of a classical gymnasium education; biographies; and Jewish subjects. His works include *Unrichtige Buchertitel mit einem Exkurs ueber hebraische Buchertitel* (1906); *Das altjudische Erziehungs- und Unterrichtswesen im Lichte moderner Bestrebungen* (1910); *Josef Unger 1828–1887* (1917), dealing with Unger’s youth; and *Zwei neugefundene mittelalterliche hebraische Grabsteine in Wien* (1918).

U.S. Supreme Court Justice Felix *Frankfurter was his nephew.*

FRANKFURT ON THE MAIN (Heb. פְּרַנְקְפּוֹרְט יָבָאֹן, abbr. פְּרַנְקְפּוֹרְט), city in Germany with an ancient and important community.

**Early History**

Reports and legends about Jews residing in Frankfurt go back to the earliest period in the city’s history. Frankfurt was an important trading center, and Jewish merchants probably visited its annual fall fairs. In 1074 Emperor Henry IV mentions Frankfurt among the towns where the Jews of *Worms* were permitted to trade without having to pay customs dues. During the 13th century Frankfurt had an organized and flourishing community, though still numerically small. Financial transactions and tax payments by Frankfurt Jews at that time are frequently mentioned: “Elizer b. Nathan of Mainz makes repeated reference to the presence of Jewish merchants in Frankfurt. In 1241 the Jewish houses were demolished by the populace and over three-quarters of the approximately 200 Jews of Frankfurt were massacred. Among the victims were three rabbis, including the *hazzan*; many of the survivors accepted baptism. A special prayer for the martyrs has been retained in the liturgy for the Ninth of Av of the West German congregations. Subsequently Frederick I appointed a commission of inquiry, since the outbreak was an infringement of his imperial prerogative and interests. It apparently originated in a dispute over the forced conversion of a Jew. The city of Frankfurt was ultimately granted a royal pardon. The safety of the Frankfurt Jews was guaranteed and heavy penalties were ordered against Jew-baiters.

By around 1270 Frankfurt had again become a busy center of Jewish life. Two Jewish tombstones dated 1284 were found under the altar of the cathedral in 1952. During the following decades all the customary Jewish institutions developed in Frankfurt. The medieval community had a central synagogue (“Altschul”), a cemetery, a bathhouse, hospitals...
for local Jews and migrants, a “dance house” for weddings and other social events, and educational and welfare institutions. During the first half of the 14th century the financial burden on the Frankfurt community, exploited by both the city and the crown, grew steadily greater, but the profit derived from the Jews protected them against the current waves of persecution. However, the surge of bloodthirsty hatred aroused by the *Black Death engulped them along with almost all the other communities in Europe. In 1349, shortly after Emperor *Charles IV had transferred his “Jewish rights” to the city against a substantial consideration, the community was completely wiped out, many of its members setting fire to their own homes rather than meet death by the mob. In 1360 Frankfurt reopened its gates to Jews. Their economic function was still vital to the flourishing city of merchants and craftsmen. However, the terms of resettlement imposed drastic changes. Jews had to apply individually for the privilege of residence, which usually had to be renewed annually in return for payment of heavy taxes and other dues. A set of statutes (Staettigkeit) regulated relations between the city and the community. Rabbis and communal leaders of note in the 14th century included Susskind Wimpfen, who redeemed the body of *Meir b. Baruch of Rothenburg for ritual burial; and *Alexander Susslin ha-Kohen.

15th to 17th Centuries
During the first half of the 15th century, the Jewish community consisted of no more than 12 tax-paying families on the average. The expulsion of the Jews, or their relocation to a remote part of the city, was considered by the city council from the 1430s. From the 1450s the Jews were forced to wear a distinctive badge, and Christians were forbidden to visit Jewish festivities. After repeated interventions on the part of the emperor, and despite their strong resistance, the Jews of Frankfurt were finally forced to settle in a specially constructed street (Judegasse) outside the old city ramparts in 1462. Although existence in this ghetto entailed severe physical and social hardship to the community, its inner life developed even more intensively. There were 110 registered inhabitants of the ghetto in 1463, 250 in 1520, 900 in 1569, 1,200 in 1580, 2,200 in 1600, and about 3,000 in 1610. Since the ghetto was never permitted to expand beyond its original area, the existing houses were subdivided, and back premises and additional storeys were erected. The communal organization became stronger and more diversified. Religious and lay leaders (Hochmeister and Baumeister) were elected by the Jewish taxpayers, and a continual flow of takkanot laid the basis for powerful and jealously guarded local traditions in all spheres of religious, social, and economic life. Outstanding among the rabbis of the 15th century was Nathan Epstein. Johannes *Pfefferkorn confiscated some 1,500 Hebrew books from Frankfurt Jews. The Peasants’ War and religious wars of the 16th century repeatedly endangered the community, and the guilds made serious inroads into their economic activities. Nevertheless, conditions were favorable to commercial enterprise, and by means of heavy financial contributions and skillful diplomacy the Frankfurt Jews managed to safeguard their privileges. By the end of the 16th century the community reached a peak period of prosperity. It had become a center of Jewish learning, and students from far away flocked to the yeshivot of Eliezer Treves and Akiva b. Jacob Frankfurter. The Frankfurt rabbinate and rabbinical court had become one of the foremost religious authorities in Germany. Decisions were made by the presiding rabbi in conjunction with the “members of the yeshivah” (dayyanim). General *synods of rabbinic and lay leaders were held at Frankfurt in 1562, 1582, and 1603.

However, economic and social antagonisms had long been simmering between the wealthy patrician families of the city and the guild craftsmen and petty traders, many of whom were in debt to Jews. The struggle flared into open rebellion when in 1614 the rabble, led by Vincent *Fettmilch, stormed the ghetto and gave vent to their anger by plundering the Jewish houses. The Jews were all expelled from the city, but the emperor outlawed the rebels, and their leaders were arrested and put to death (1616). Subsequently the Jews were ceremoniously returned to the ghetto, an event annually commemorated on Adar 20th by the Frankfurt community as the “Purim Winz” (“Purim of Vincent”). Possibly a group of wealthy Frankfurt Jews, among them Simeon Wolf, father of the celebrated Court Jew Samuel *Oppenheimer, used their influence at the imperial court to bring about this result. Among those who did not return to Frankfurt after the Fettmilch rebellion was Isaiah *Horowitz, the celebrated author of Shenei Luhot ha-Berit, who had occupied the rabbinate from 1606. Other leading rabbis of the period included his son Shabbetai *Horowitz, Ḥayyim Cohen, grandson of *Judah Loew (the Maharal) of Prague, and Meir b. Jacob ha-Kohen *Schiff, a native of Frankfurt. Joseph Yuspa *Hahn recorded the ritual customs of the Frankfurt community in his Yosif Omez. These were a source of special pride to the Frankfurt Jews, known for their local patriotism. Joseph Solomon *Delmedigo was for some years employed as communal physician. Aaron Samuel *Koidonover and his son Zevi Hirsh *Koidonover were also members of the Frankfurt rabbinate. The community did not grow numerically during the 17th century owing to the unhealthy conditions of their overpopulated quarter and the excessive taxes imposed upon them during the Thirty Years’ War. In addition, the terms of residence were designed to keep their number stationary, allowing a maximum of 500 families and 12 marriage licenses annually. At the end of the 17th century the community made successful efforts to prevent Johann *Eisenmenger from publishing his anti-Jewish book.

18th Century
In 1711 almost the entire Jewish quarter was destroyed by a fire which broke out in the house of the chief rabbi, Naphtali b. Isaac *Katz. The inhabitants found refuge in gentile homes, but had to return to the ghetto after it had been rebuilt. J.J. *Schudt gave a detailed account of Jewish life at Frankfurt in this period. The importance of the Frankfurt Jewish community of
that era is indicated by the official recognition of its representatives (“Residenten”) in Vienna from 1718. The penetration of Enlightenment found the community in a state of unrest and social strife. Communal life had long been dominated by a few ancient patrician families, some of whom were known by signs hanging outside their houses, like the “Rothschild (“Red Shield”), Schwarzschild, Kann, and Schiff families. The impoverished majority challenged the traditional privileges of the wealthy oligarchy, and the city council repeatedly acted as arbiter between the rival parties. Controversies on religious and personal matters such as the “Eybeschuetz-”*Emden dispute further weakened unity in the community. Nevertheless, there was no decline in intellectual activity, and the yeshivot of Samuel Schotten and Jacob Joshua b. Zevi Hirsch *Falk attracted many students. The movement for the reformation of Jewish education fostered by the circle of Moses *Mendelssohn in Berlin found many sympathizers in Frankfurt, especially among the well-to-do class who welcomed it as a step toward *emancipation. Forty-nine prominent members of the community subscribed for Mendelssohn’s German translation of the Bible (1782), but the chief rabbi, Phinehas *Horowitz, attacked the book from the pulpit. When in 1797 a project was advocated for a school with an extensive program of secular studies, Horowitz pronounced a ban on it. He was supported by most of the communal leaders, though many had their children taught non-Jewish subjects privately. The ban had to be withdrawn by order of the magistrate. Some years previously, Horowitz had acted similarly against the kabbalist Nathan *Adler. Meanwhile the French revolutionary wars had made their first liberating impact on Frankfurt Jewry. In 1796 a bombardment destroyed the greater part of the ghetto walls, and in 1798 the prohibition on leaving the ghetto on Sundays and holidays was abolished.

19th and 20th Centuries
The incorporation of Frankfurt in Napoleon’s Confederation of the Rhine (1806) and the constitution of the grand duchy of Frankfurt (1810) gradually changed the status of the Frankfurt Jews, bringing them nearer emancipation. In 1811 the ghetto was finally abolished, and a declaration of equal rights for all citizens expressly included the Jews, a capital payment of 440,000 florins having been made by the community. However, the reaction following Napoleon’s downfall brought bitter disappointment. The senate of the newly constituted Free City tried to abolish Jewish emancipation and thwarted the efforts made by a community delegation to the Congress of Vienna. After prolonged negotiations, marked by the “*Hep-Hep” anti-Jewish disorders in 1819, the senate finally promulgated an enactment granting equality to the Jews in all civil matters, although reinstating many of the old discriminatory laws (1824). The composition and activities of the community board remained subject to supervision and confirmation by the senate. Meanwhile the religious rift in the community had widened considerably. Phinehas Horowitz’s son and successor, Zevi Hirsch *Horowitz, was powerless in face of the increasing pressure for social and educational reforms. He did in fact renew his father’s approbation of Benjamin Wolf *Heidenheim’s edition of the prayer book which included a German translation and a learned commentary. However, this first stirring of “Wissenschaft des Judentums could not satisfy those in the community desiring reform and assimilation. In 1804 they founded a school, the Philanthropin, with a markedly secular and assimilationist program. This institution became a major center for reform in Judaism. From 1807 it organized reformed Jewish services for the pupils and their parents. In the same year a Jewish lodge of “Freemasons was established, whose members actively furthered the causes of reform and secularization in the community. From 1817 to 1832 the board of the community was exclusively composed of members of the lodge. In 1819 the Orthodox heder institutions were closed by the police, and the board prevented the establishment of a school for both religious and general studies. Attendance at the yeshivah, which in 1793 still had 60 students, dwindled. In 1842 the number of Orthodox families was estimated to account for less than 10% of the community. In that year, a Reform Association demanded the abolition of all “talmudic” laws, circumcision, and the messianic faith. The aged rabbi, Solomon Abraham Trier, who had been one of the two delegates from Frankfurt to the Paris *Sanhedrin in 1807, published a collection of responsa from contemporary rabbis and scholars in German on the fundamental significance of circumcision in Judaism (1844). A year later a conference of rabbis sympathizing with reform was held in Frankfurt. A leading member of this group was Abraham *Geiger, a native of Frankfurt, and communal rabbi from 1863 to 1870. The revolutionary movement of 1848 hastened the emancipation of the Frankfurt Jews, which was finally achieved in 1864. The autocratic regime of the community board weakened considerably. A small group of Orthodox members then seized the opportunity to form a religious association within the community, the “Israelitische Religionsgesellschaft,” and elected Samson Raphael *Hirsch as their rabbi in 1851. The Rothschild family made a large donation toward the erection of a new Orthodox synagogue. When the community board persisted in turning a deaf ear to the demands of the Orthodox minority, the association seceded from the community and set up a separate congregation (1876). After some Orthodox members, supported by the Wuerzburg rabbi, Seligmann Baer *Bamberger, had refused to take this course, the community board made certain concessions, enabling them to remain within the community. A communal Orthodox rabbi, Marcus *Horovitz, was installed and a new Orthodox synagogue was erected with communal funds. From then on the Frankfurt Orthodox community, its pattern of life and educational institutions, became the paradigm of German Orthodoxy. The Jewish population of Frankfurt numbered 3,298 in 1817 (7.9% of the total), 10,099 in 1871 (11%), 21,974 in 1900 (7.5%), and 29,385 in 1925 (6.3%). During the 19th century many Jews from the rural districts were attracted to the city whose economic boom owed much to Jewish financial and commercial enter-
prise. The comparative wealth of the Frankfurter Jews is shown by the fact that, in 1900, 5,946 Jewish citizens paid 2,540,812 marks in taxes, while 34,900 non-Jews paid 3,611,815 marks. Many civic institutions, including hospitals, libraries and museums, were established by Jewish donations, especially from the Rothschild family. The Jew Leopold *Sonnemann was the founder of the liberal daily Frankfurter Zeitung, and the establishment of the Frankfurt university (1912) was also largely financed by Jews. Jewish communal institutions and organizations included two hospitals, three schools (the Philanthropin and the elementary and secondary schools founded by S.R. Hirsch), a yeshivah (founded by Hirsch's son-in-law and successor Solomon *Breuer), religious classes for pupils attending city schools, an orphanage, a home for the aged, many welfare institutions, and two cemeteries (the ancient cemetery was closed in 1828). Frankfurt Jews were active in voluntary societies devoted to universal Jewish causes, such as emigrant relief and financial support for the Jews in the Holy Land (donations from Western Europe to the Holy Land had been channeled through Frankfurt from the 16th century). The yearbook of the Juedisch-Literarische Gesellschaft was published in Frankfurt, and the Orthodox weekly Der Israelit (founded in 1860) was published in Frankfurt from 1906. The Jewish department of the municipal library, headed before World War II by the scholar A. Freimann, had a rare collection of Hebraica and Judaica. During the first decade of the 20th century additional synagogues were erected, among them a splendid one situated at Friedberger Anlage. In 1920 Franz *Rosenzweig set up an institute for Jewish studies, where Martin *Buber, then professor at the Frankfurt university, gave popular lectures. Two additional yeshivot were established, one by Jacob Hoffman, who in 1922 succeeded Nehemiah Anton *Nobel in the Orthodox rabbinate of the community. Others prominent in Frankfurt Jewish life include the writer Ludwig *Boerne; the historian I.M. *Jost; the artists Moritz *Oppenheim and Benno *Elkan; the biochemist Paul *Ehrlich; the economist and sociologist Franz *Oppenheimer; rabbis Jacob *Horowitz and Joseph *Horowitz (Orthodox); Leopold Stein, Nehemiah Bruell, Caesar *Seligmann (Reform); and the Orthodox leaders Jacob *Rosenheim and Isaac *Breuer.

[Mordechai Breuer / Stefan Rohrbacher (2nd ed.)]

**Holocaust Period**

After a number of attacks on individual Jews and the occupation of the famous Institut fuer Sozialforschung on March 5, 1933, the official Nazi action against the Jews began on April 1, 1933, with a boycott of Jewish businesses and professionals, followed on April 7 by the dismissal of Jewish white-collar workers, university teachers, actors, and musicians. State and party pressure subsequently resulted in the closing or “ar-

**After World War II**

After the war, a new community was organized, consisting of those who had outlived the war in Frankfurt, survivors from concentration camps, and displaced persons, totaling 1,104 in 1952. They were joined by a number of pensioners and Israelis, and the community increased to 2,566 by 1959 and 4,350 by 1970, to become the largest in West Germany (excepting that of Berlin); the average age of its members was 45.4, and two thirds were aged over 40. One of the large synagogues was rebuilt, and by 1970 five prayer rooms were also in use. The first postwar Jewish elementary school in Germany was opened there in 1965, and a communal periodical Frankfurter juedisches Gemeindeblatt commenced publication in March 1968. A 200-bed home for the aged was opened in 1968. Due mainly to the immigration of Jews from the former Soviet Union, the number of community members rose from 4,842 in 1989...
to 7,063 in 2003. The community has four synagogues. The Philanthropin was reopened as an elementary school in 2003. A Jewish museum was inaugurated in 1988 in the former palatial residence of the Rothschild family, with a branch opened in 1992 on the site of the Judengasse. The Frankfurt municipal and university library holds one of the most important collections of Judaica books and manuscripts in Germany.

[Henry Wasserman]

**Printing**
The book fairs of Frankfurt were visited by Jewish printers and booksellers as early as 1535. Some Hebrew printing was carried on in Frankfurt as early as the 16th century; in 1512 the brothers Murner published “Grace after Meals.” Hebrew printing seriously developed in Frankfurt in the 17th century. The earliest work, *Megillat Vint* (Fettmilch), was published by Isaac Langenbuch after the Fettmilch riots (see above). From 1657 to 1707 Balthasar Christian Wust and later his son (?) Johann issued a great number of Hebrew books. For this part of their work they employed Jewish printers and other Jewish personnel, and found Jewish financial backing. (As Jews could not obtain printing licenses, they used Christian firms as a front.) They printed mainly liturgical items, but also a Pentateuch with a German glossary (1662), and bibles (1677, 1694); and Wallach’s Yiddish *Kahbuch* (1672). Several other Hebrew printers published books in the late 17th and early 18th centuries. An important publisher was Johann Koellner, who in 20 years of printing was responsible for about half of the books issued in Frankfurt. Among his more important publications were the *Arbiyah Turim* (5 vols., 1712–16), and an excellent *Talmud* edition (1770–23). Soon after the completion of the latter, the whole edition was confiscated and was only released 30 years later. In the first half of the 19th century the names of seven non-Jewish printing houses are known. Subsequently Jewish printers emerged for the first time. Among them were J.H. Golda (1881–1920), E. Sloboztki (from 1855), and the bookseller J. Kauffmann, who took over the *Roedelheim* press of M. Lehrberger in 1894. Hebrew printers were active in places like *Homburg,* *Offenbach,* *Sulzbach, Roedelheim,* and others in the neighborhood of Frankfurt, because Jewish printers were unable to establish themselves in Frankfurt.

**Music**
The liturgical music and *hazzanut* of the Frankfurt community represent the archetype of the western Ashkenazi tradition. It can be traced to the 15th-century codifier Jacob *Mollin* (Maharil), and is marked by an adherence to tradition which made any deviation from the customary melodies (some of which were credited with divine origin, “*mi-Sinai*”) a religious offense. Thus the principal qualification required of cantors was a precise acquaintance with the details of musical custom (*minhag*). Liturgical poems (*piyyutim*) had a place of prime importance, especially as some of them were linked with the history of the community, and little scope was given to the cantor’s capacity for musical invention or improvisation. When at the beginning of the 16th century, the Sabbath hymn *Lekhah Dodi* came into vogue in many communities, it caused sharp controversy among Frankfurt Jews, and though finally accepted, it had to be chanted for many years by an assistant cantor in order to stress its non-compulsory character. Every special event in the Jewish year was marked by a festive, solemn, or plaintive tune, as the occasion demanded. Every month and every festival had an appropriate melody of its own, which was intoned by the cantor at the Blessing of the New Moon. Thus the liturgical music served as a “musical calendar.” When a festival or New Moon fell on a Sabbath, the cantor had to give each its musical share (“*me-iyono*”). This was achieved mainly by mingling variants of the Kaddish melodies, of which there existed more than 25. On Simhat Torah the “Year’s Kaddish” recapitulated the whole range of the “musical calendar.”

Great stress was laid on correct reading and cantillation of the Bible, and many verses of special importance were chanted to particularly solemn tunes. In spite of the strict traditionalism, many Frankfurt melodies show the influence of German folksong; the one employed for the *Priestly blessing on the High Holidays* is derived from the popular Frankfurt “*Passbaenderlied*” (Coopers’ song). The melody sung in the synagogue on the annual celebration of Purim Winz (see above) was derived from the march tune of the military escort that led the Jews back to the Frankfurt ghetto after the riots of 1616. In the 19th century the Reform movement installed an organ in the main Frankfurt synagogue, whereupon the Orthodox congregation introduced a male choir in their own synagogue with I.M. *Japhet* as musical director.

FRANKFURT ON THE ODER, city in Brandenburg, Germany. Jews were living in Frankfurt before 1294, when a dispute between Jews and the slaughterers' guild there was settled. The Jews were not permitted to own houses, and lived in rented dwellings, referred to as Judenbuden. They mainly engaged in small trading and moneylending. In 1399 the community relinquished its cemetery for a larger one. From the second half of the 15th century the local merchants made continual complaints about economic competition by the Jews and the rate of interest they charged. In 1506 the synagogue was demolished and the new university was erected on the site. The Jews of Frankfurt were expelled with the rest of *Brandenburg Jewry in 1510. They later returned, and in 1564 there were nine Jewish families living in Frankfurt, and 11 in 1567. They were again expelled in 1573. When a number of Jews were admitted to Brandenburg in 1671, a new community grew up in Frankfurt. The university there was the first in Germany to admit Jews. The first two Jewish students registered at the faculty of medicine in 1678, and others followed from all over Europe and even Jerusalem. Between 1739 and 1810 about 130 Jews studied there, and between 1721 and 1794, 29 graduated in medicine. The community numbered 592 in 1801; 399 in 1817; around 800 in the 1840s; and 891 in 1880. Subsequently it declined to 747 around 1900; 669 in 1925; and 586 in 1933.

In the 18th century many Jews from Poland attended the fairs in Frankfurt. In 1763 a conference of Polish rabbis headed by Gerson of Frankfurt settled a dispute between the printing houses of Amsterdam and Sulzbach concerning the publication of the Talmud.

Following the spread of the Reform movement in the first half of the 19th century, the Orthodox members in Frankfurt seceded from the liberals and opened a prayer hall of their own. Samuel *Holdheim served as rabbi in Frankfurt from 1836 to 1840. In 1881 the first society for the colonization of Ereẓ Israel was founded in Frankfurt by Hayyim *Lorje. The scholar Judah *Bergmann officiated as rabbi there at the beginning of the 20th century, and the leader of liberal Judaism in Germany, Ignaz *Maybaum, was rabbi of the community between 1928 and 1936. In 1933 the community had a synagogue, a cemetery, three charitable societies, local chapters of the "Reichsbund Juedischer Frontsoldaten" and a "B'nai Brith" lodge. The Orthodox members rejoined the main community in 1934.

Under the Nazis the Frankfurt Jews suffered the same fate as those in the rest of Germany. Rabbi Maybaum was arrested and confined to the notorious Columbia prison in Berlin; later the charges against him were suspended. In the November pogrom known as Kristallnacht the synagogue was burned, Jewish businesses were destroyed, and several Jewish men were sent to Sachsenhausen. By May 1939 there were 184 Jews and 122 Mischlinge in the city. Jews were deported before the outbreak of World War II and eventually transported to Lublin Reservation. Twenty-four Jews from Frankfurt were deported to "Theresienstadt on August 27, 1942, and three on June 16, 1943. The Jewish community was reestablished after the war and numbered 200 in 1958 but declined thereafter until the arrival of Jews from the former Soviet Union, who refounded the community in 1998. It numbered 222 in 2005. A memorial site (inaugurated in 1988) commemorates the destroyed synagogue. As Frankfurt on the Oder was divided after 1945 the Jewish cemetery is located in Slubice, Poland.

Printing
The earliest Hebrew book printed in Frankfurt on the Oder was a Pentateuch printed by J. and F. Hartman in 1595. Eighty years later J.C. Beckman, professor of theology at the local university, obtained a license to extend the privilege to print in Hebrew, and a Pentateuch with haftarot and the Five Scrolls, as well as other books, were published in 1677.

The most important work published there was a new edition of the Talmud (1697–99). The Court Jew Berend *Lehm-ann of Halberstadt invested in it and presented a large number of the 2,000 sets printed to various communities, battei midrash, and yeshivot. Further editions were printed in 1715–22 and 1736–39. Michael Gottschalk succeeded Beckman as manager and before 1740 Professor Grillo bought Gottschalk’s press. It continued in his family until the end of the century, and in the hands of his successor, C.F. Elsner, until 1813. Grillos’ turnover in trade of Hebrew books reached 80,000 Reichsmarks – a measure of the importance of the press for Germany and Eastern Europe. The main midrashim, Yalkut Shimonii, the Zohar, and other important rabbinic works were printed in Frankfurt on the Oder. As the result of the Prussian legislation of 1812, it was possible in 1813 for Hirsch Baschwitz, a Jew, to acquire the Hebrew printing press from Elsner. In turn, he sold the business in 1826 to Trebitsch & Son of Berlin.

[Chasid Turtel]
the treasures of the Temple (Neh. 13:5; 1 Chron. 9:29). It was burnt with the sacrifice of meal offering (Lev. 2:1) and placed upon the rows of showbread (Lev. 24:7). The frankincense on the meal offering along with a handful of the rest of its ingredients were scooped up by the priest as the "token portion (azkarah) of the offering which he deposited on the altar to go up in smoke as a "soothing odor" offered to the Lord (Lev. 6:8; cf. Isa. 66:3). Pure frankincense was one of the four ingredients of the incense of the Tabernacle (Ex. 30:34; and cf. Ecclus. 24:15). It was brought to Erez Israel from Sheba (Jer. 6:20). The maiden in the Song of Songs (3:6) came from the wilderness perfumed with myrrh and frankincense; in the erotic imagery of the Song of Songs, the lover refers to the body of his mistress as "the mountain of myrrh" and "the hill of frankincense" (Song 4:6), while the beloved is compared to "an enclosed garden" in which grow exotic perfumes including "all trees of frankincense" (Song 4:14–15). Ben Sira emphasizes its aromatic scent (Ecclus. 39:14; 50:9). Frankincense is frequently mentioned in rabbinic literature in connection with the laws of meal offerings, where it was used in the form of globules or grains (Men. 1:2). A potion of wine and frankincense was prepared for those condemned to death, "that they should not suffer pain" (Srn. 2:9; cf. Sanh. 43a). The name levonah is common in Semitic languages. It has its origin in the white color of the fresh sap, "pure frankincense." From the Semitic the name passed also into the Greek libanos.

Frankincense was extracted from trees of the genus Boswellia, of which there are two species: Boswellia sacra Flückiger (also known as Boswellia Carterii) found on the Arabian Peninsula and in North Somalia, and Boswellia frereana Birdwood found in North Somalia. These trees are still the source for the frankincense used as incense in the Catholic Church. In ancient Egypt, as in other countries of the east, frankincense was very important, and it seems that efforts were made to plant it locally. The bringing of pots of frankincense for planting in Egypt is depicted in ancient Egyptian drawings.

[Baruch Yaron]

FRANKL, ADOLF (1859–1936), rabbi, banker, and communal leader in Hungary. Born in Debrecen, he studied in various yeshivot and received his rabbinical ordination at the yeshivah of Pressburg. From 1888 Frankl was nasi of the Hungarian kolel of Jerusalem. In 1905 he was elected president of the organization of Orthodox communities and honorary president of the Orthodox community of Budapest. After the death of Koppel *Reich, Frankl was elected chief rabbi of the Orthodox community in Budapest, and sat as the delegate of Orthodox Jewry in the Hungarian Upper House (1910). He won esteem in all circles of the Jewish population of Hungary.

[Baruch Yaron]

FRANKL, LUDWIG AUGUST (1810–1894), Austrian poet, secretary of the Vienna Jewish community, and founder of the Laemel School in Jerusalem. Born in Chrast, Bohemia, Frankl was one of the first Jews to attend a Bohemian secondary school. He also received a sound Jewish education under his relative, Zacharias *Frankel. Although he studied medicine at Vienna and Padua, he devoted himself mainly to literature. The patriotic flavor of Frankl's first collection of ballads, Das Habsburgerlied (1832), brought him a reward from Emperor Francis I. It was followed by Morgenlaendische Sagen (1834), a volume of poems on Jewish themes, and by the epic Christoforo Colombo (1836), for which he was made an honorary citizen of Genoa, the explorer's birthplace. In 1838 Frankl was appointed secretary and archivist of the Vienna Jewish community. The post enabled him to publish various works of Jewish interest, including a history of the Jews in Vienna (1853), but he really made his name as editor, from 1842, of the Sonntagsblaetter, which brought him into the circle of Austria's literary elite. In later years he was to publish studies of such of his new acquaintances as the dramatist Franz Grillparzer and the poet Nikolaus Lenau, but he also encouraged new writers, notably Moritz *Hartmann and Leopold *Kompert. His use of the elegant Sonntagsblaetter in support of the 1848 Revolution led to the paper's eventual suppression. During the Revolution Frankl served as an officer in the students' legion and achieved fame with his revolutionary lyric Die Universtaet, the first uncensored Austrian publication, which was circulated in half-a-million copies and was set to music no less than 28 different times: Frankl later edited the works of the revolutionary writer Anastasius Gruen (1877), and their correspondence was published by Frankl's son, Lothar. As the representative of Elisa Herz, Frankl went to *Jerusalem in 1856 and, in memory of her father, founded the Laemel School, which offered Jewish children a secular, as well as a religious, education. This aroused violent opposition on the part of the ultra-Orthodox Ashkenazi community, whose rabbinate placed Frankl under the ban of excommunication. He described his experiences in Erez Israel in Nach Jerusalem (2 vols., 1858–60), which gives a valuable picture of the Jewish inhabitants of Jerusalem in the mid-19th century. The book was translated into Hebrew and other languages, and appeared in English as The Jews in the East (1859). A third volume, Nach Aegypten, appeared in 1860. Other works of Jewish interest are Frankl's Elegien (1842), Rachel (1842), Libanon (1855), and Ahnenbilder (1864). In 1876 he founded the Vienna Jewish Institute for the Blind, his philanthropic endeavors being rewarded with ennoblement as Ritter von Frankl-Hochwart. His memoirs appeared posthumously in 1910. His son Lothar (1862–1914) became professor of neurology at the University of Vienna in 1897.

FRANKL, PINKUS (Pinhas) FRITZ (1848–1887), German rabbi and scholar. Born in Ubersky Brod, Moravia, Frankl succeeded Geiger as rabbi of the Berlin community in 1877 and became lecturer in religious philosophy, medieval Hebrew literature, and homiletics at the Hochschule (Lehranstalt) fuer die Wissenschaft des Judentums in 1882. With Graetz he was mainly about the Karaites: *Karaische Studien* (1876); *Beiträge zur Literaturgeschichte der Karaezer* (1887); and articles in the Etsch-Gruber encyclopedia, MGWI, and others; Frankl edited some *piyyutim* by Eleazar Kallir in *Jubelschrift... L. Zunz*, 1884. A collection of his sermons, *Fest- und Gelegenheits-Predigten 1877–87*, was published posthumously (1888). In 1884 Frankl was one of the initiators of a “General Assembly of German Rabbis.”

**BIBLIOGRAPHY:** S. Maybaum, *Trauerrede gehalten am 26. August, 1887 an der Bahre des Rabbiners Dr. P.F. Frankl* (1887).

FRANKL, VIKTOR EMIL (1905–1997), Austrian psychiatrist and founder of the school of existential psychotherapy known as logotherapy (or the Third Viennese School). Already as a student, Frankl was in touch with Sigmund Freud. Later on he became an adherent of Alfred Adler's school of psychoanalysis; however, he soon became a dissident here as well. In the following years he worked as a specialist in neurology and psychiatry at the Viennese Am Steinhof Psychiatric Clinic and from 1940 to 1942 he was head of the Rothschild hospital. Then, Frankl was sent to Dachau and Auschwitz for three years. During this period he gained new insights into human nature, which he later developed into his philosophy and theory of logotherapy. In contradistinction to the Freudian theories that analyzed human behavior in terms of determinism, the sex drives, and the repressed experiences of the past, and contrary to the Adlerian school which based explanations on the human desire for power and self-assertion, Frankl's philosophy focused on the human need for purpose, self-fulfillment, and the need to attain a higher meaning in life. By observing the behavior of the Auschwitz inmates he came to the conclusion that, “The prisoner who had lost faith in the future – his future – was doomed. With his loss of belief in the future, he also lost his spiritual hold; he let himself decline and became subject to mental and physical decay.”

Having survived the Holocaust, Frankl returned to Vienna and was in charge of the neurologic Policlinic in Vienna from 1946 to 1970. Frankl's books include *Ein Psychologe erlebt das Konzentrationslager* (1946, 2005; republished as *Man's Search for Meaning*, 1964), and *Aerztlche Seelsorge* (1946, 2005; *The Doctor and the Soul*, 1955, 1965).

[Marcus Pyka (2nd ed.)]

FRANKL-GRÜEN, ADOLF ABRAHAM (1847–1916), rabbi and historian in Moravia. Born in Ubersky Brod, Moravia, he officiated as rabbi of Kromeriz (Kremser) from 1877 to 1911. Frankl-Gruen published many articles on biblical exegesis (see Gesamtindex of MGWI (1966), 18) and homiletics, and a polemic against the anti-Semitic H.S. *Chamberlain* (1901). In 1903 he completed *Juedische Zeitgeschichte und Zeitgenossen*, on the contemporary Jewish scene. His three-volume *Geschichte der Juden in Kremser* (1896–1901) and *Geschichte der Juden in Ungarisch-Brod* (1905), based mainly on documents previously unpublished, remain essential texts for the student of Jewish history in Moravia. In 1889 he became involved in a “blood libel in Kromeriz when a rumor was spread before Passover that a box containing the body of a Christian girl had been sent to him by railway.

His son OSCAR BENJAMIN FRANKL (1881–1955) studied philology at Vienna University. In 1918 he founded in Prague the German Urania Institute for adult education which he headed until 1938. He was appointed chief of the German department of the Czechoslovakian government radio and became an international authority on broadcasting. In 1939 he managed to escape to the United States through France. There he served as a researcher for Columbia University (1942–55) and was appointed lecturer at the Rand School of Social Science. His *Der Jude in den deutschen Dichtungen des 15., 16., und 17. Jahrhunderts...*, on the image of the Jew in German literature of the 15th to 17th centuries, and *Friedrich Schiller in seinen Beziehungen zu den Juden und zum Judentum*, on Friedrich Schiller's relations to Jews and Judaism (both published in 1905), are noteworthy.

FRANKLIN, English family active in communal, public, and economic life. BENJAMIN WOLF FRANKLIN (1740–1785), a teacher of Hebrew, went to England from Breslau about 1763. His youngest son, ABRAHAM (1784–1854), after spending his early life in Portsmouth, settled in Manchester and traded with the West Indies. Of Abraham’s 12 children, three gained prominence: BENJAMIN (1811–1888) was a merchant in Jamaica where he was active in public and communal life. JACOB (1809–1877), first an optician and then a West Indies merchant, was a mathematician, accountant, and writer on accountancy. A staunch advocate of religious Orthodoxy, he founded and edited the *Voice of Jacob* as a mouthpiece against Reform (it was later merged with the *Jewish Chronicle*), to which he con-

tributed as “She’erit Ya’akov”). Active in many communal organizations, he left the bulk of his fortune for educational projects, including the publication of Jewish textbooks. Ellis Abraham (1822–1909) moved from Manchester to London in 1842 and joined a banking house. Friendship with Samuel Montagu, whose sister he married in 1856, led to his joining the firm established by Montagu and his brother in 1852. A patriarchal figure, he took an active interest in many communal organizations.

Ellis’ daughter Beatrice married Herbert Samuel. His son, Sir Leonard (1862–1944), senior partner in the family banking firm A. Keyser and Company, was a Liberal member of parliament, and was also active in synagogue administration. Another of his sons, Arthur Ellis (1857–1938), besides his banking interests, was chairman of the Routledge publishing firm, president of the Jewish Religious Education Board, vice president of the Board of Guardians, and vice principal of the Working Men’s College. He assembled a memorable collection of Jewish ritual art, now in the Jewish Museum, London. His son Ellis (1894–1964) was similarly active in Anglo-Jewish communal life. Ellis’ daughter, Rosalind “Franklin (1920–1958) was a distinguished chemist, particularly noted for her work on deoxyribonucleic acid (DNA). She died tragically young, just as the importance of her research was being noted. Her life has attracted a great deal of attention in recent years as an eminent woman scientist cut off in her prime, and who was arguably denied her full credit through the sexism of the time. A commemorative plaque was placed on the building where she lived in Chelsea, London.

[Vivian David Lipman]

FRANKLIN, LEO MORRIS (1870–1948), U.S. Reform rabbi. Franklin was born in Cambridge City, Indiana and spent his youth in Cincinnati. Upon ordination at Hebrew Union College (1892), he served in Omaha, Nebraska, for seven years, then became rabbi of Temple Beth El, Detroit, in 1899, where he was a skilled organizational leader. Franklin was a proponent of classical Reform Judaism. He was president of the Central Conference of American Rabbis (1919–21). He organized the United Jewish Charities (1899) and was a founder of the Jewish Welfare Federation (1926). He led the first fight in the United States for open seating in synagogues instead of assigned seating and also fought to have his congregation provide Jewish education to all children regardless of their parents’ ability to pay, which took on added importance during the Depression era. He tackled some important local issues of antisemitism with national implications, including efforts to expose the antisemitism of Father Charles Coughlin, and he maintained relations cordial and not so cordial with Henry Ford, whose influence in Detroit was major and whose support of antisemitism was significant. Franklin held many civic positions and was active in interfaith activities in Detroit. He belonged to the anti-Zionist American Council for Judaism until 1948, when he resigned and endorsed the State of Israel. He was one of the first rabbis to reach out to campus students, working with the Jewish students association at the University of Michigan, a forerunner of Hillel. Despite the formal policies and prevalent practices of the CCAR, Franklin officiated at intermarriages. He helped found smaller congregations throughout Michigan and worked with a movement to spur Jewish farmers in Michigan. He wrote Rabbi, the Man and His Message (1938) and many articles.

[Irving I. Katz]

FRANKLIN, ROSALIND ELsie (1920–1958), British biophysicist. Franklin was born in London, England, into an upper middle class Jewish family whose ancestors had come to England from Breslau in 1763. Her uncle, Sir Herbert Samuel, was the first British High Commissioner to Palestine. In 1938 she was accepted to Newnham College Cambridge where she completed her studies in chemistry and physics and received her Ph.D. from Cambridge in the physical chemistry of carbon and graphite micro-structures (1945). During the war years she focused her research efforts on the analysis of high-strength carbon fibers, working at the British Coal Utilization Research Association (BCURA), work that later found use in the construction of carbon rods in modern nuclear power plants. She moved to Paris and lived there from 1947 to 1951, joining the Central Government Laboratory for Chemistry. Working under Jacques Mering she became proficient in X-ray diffraction analysis of coal structure. During this time, in addition to her science she perfected her French and culinary arts, embraced French fashion, and generally enjoyed the freedom and respect as a scientist and colleague, devoid of the prejudice women had to endure in England. Nonetheless, as a foreigner in France, she understood that it would be hard for her to establish herself as an independent researcher and so she returned to England and joined Kings College in London under Sir John Randall. It was here that she produced the essential basic data that paved the way for James Watson and Francis Crick of Cambridge University to propose the double helix structure of DNA, the molecule that genes are made of. At Kings College she and Maurice Wilkins independently studied DNA structure. Franklin perfected the X-ray diffraction equipment and technology to produce highly focused X-ray beams to study the fine DNA fibers she was able to extract. She soon discovered that DNA could assume two forms, which she called A and B. Through painstaking work and extreme care and patience in sample prepa-
ration she produced photographs of both A and B forms that led her to conclude that DNA was a double helical molecule in which the phosphate atoms must be on the outside of the structure and the nitrogen bases facing inside. These conclusions and Franklin's X-ray photographs enabled Watson and Crick to propose their double helix model of DNA in which base pairing created the bonds necessary to hold the anti-parallel strands of DNA together. In 1953, she moved to Birkbeck College to establish a new laboratory dedicated to the study of nucleic-acid protein complexes (when she left Kings College Sir Randall demanded that she stop working on DNA!). Franklin turned to the study of Tobacco Mosaic Virus (TMV) and with a young investigator, Aaron *Klug, discovered that TMV was an extended tube in which its proteins were arranged in helical fashion with RNA (ribonucleic acid) embedded amongst the protein molecules.

She made pivotal contributions in three areas of science; the analysis of the structure of carbon and coal, the elucidation of the structure of DNA, and the new field of structural virology as a pioneer. In 1956 she was diagnosed with ovarian cancer. Despite three operations and experimental chemotherapy she courageously continued her work on TMV and polio virus until her dying day. Four years later, Francis Crick, James Watson, and Maurice Wilkins received the Nobel Prize in medicine and physiology for their discoveries concerning the structure of DNA. In 1982 Sir Aaron Klug was awarded the Nobel Prize in chemistry for his structural elucidation of biologically important nucleic-acid-protein complexes. It is not by chance that such profound science was so intimately associated with Rosalind Franklin. At the age of 37 she died of ovarian cancer, with little recognition of her monumental contributions to modern biophysics.

[Jonathan Gershon (2nd ed.)]

FRANKLIN, SELIM (1814–1883), Canadian politician. Born in Liverpool, England, Franklin was the son of a banker and acquired considerable wealth as a financier. He went to California during the gold rush of 1849 and in 1858 he and his brother, LUMLEY (1812–1873), were among the first Jews to settle in British Columbia. As British citizens, they were able to open a real estate auctioneering business in Victoria, conducting several government land sales of historical importance. In 1860 Selim was elected to the second Vancouver Island legislative assembly, despite allegations of ballot manipulation. Further trouble arose over his eligibility to take his seat because of the oath “on the true faith of a Christian,” but the debate was ended by a ruling citing the British legal precedents of Jews and other non-Christians swearing oaths. With the right to assume his position in government recognized, Selim was a member of the assembly from 1860 to 1863 and from 1864 to 1866, when he returned to San Francisco. In 1865 Lumley Franklin became the first Jewish mayor in British North America when he was elected mayor of Victoria, taking an enthusiastic stance in favor of a political union with the mainland of British Columbia. Together, the two brothers played a prominent part in the social and cultural life of both the general and the Jewish community of Victoria. Both were gifted musicians and officers of the local Philharmonic Society. A river running into the Alberni Canal on Vancouver Island and a street in Victoria were named after Selim Franklin.

[Ben G. Kayfetz / Barbara Schober (2nd ed.)]

FRANKLIN, SIDNEY (Frumkin: 1903–1976), U.S. bullfighter. Born in Brooklyn, New York, to Russian Jewish immigrants, Franklin was the fifth of nine children. He graduated from Commercial High School and then attended Columbia University, where he studied commercial art. He opened a silk-screen poster business, but one day, after an argument with his father, he decided to go to Mexico to study Mayan history, setting sail on June 8, 1922, for Veracruz. There he opened another poster business, but after seeing his first bullfight, he was drawn to the sport and found his life's calling. Franklin debuted on September 23, 1923, losing his balance twice but killing the bull. The American was not given much of a chance in the Latin sport, but he became an admired matador, first in Mexico and then in Spain, where he moved in 1929 to become he first American ever to fight in that country. He later befriended Ernest Hemingway, who wrote in Death in the Afternoon, “Franklin is brave with a cold, serene and intelligent valor but instead of being awkward and ignorant he is one of the most skillful, graceful and slow manipulators of a cape fighting today ... He is a better, more scientific, more intelligent, and more finished matador than all but about six of the full matadors in Spain today [1932] and the bullfighters know it and have the utmost respect for him.... You will find no Spaniard who ever saw him fight who will deny his artistry with a cape.”

In his autobiography, Bullfighter from Brooklyn: An Autobiography of Sidney Franklin (1952), he wrote: “I have often been asked how I came to be a bullfighter; what there was in my background that led me into such a unique profession. Frankly, when I try to review my early life I am puzzled to find an answer to that riddle. To me, at the time, the journey from Jackson Place in Brooklyn to the Plaza de Toros Monumental in Madrid was an entirely natural though exciting one. One thing followed another and, instead of selling insurance or filling someone's teeth, I fought bulls.”

[Ellie Wohlgerlenter (2nd ed.)]

FRANKS, English family, with an important branch in Amer. BENJAMIN FRANKS (c. 1649–c. 1716), son of an Ashkenazi merchant from Bavaria, was born in London but moved to the West Indies in the last decade of the 17th century. His checkered career took him to New York and Bombay where he made a deposition which was used in the piracy trial of Captain Kidd. He returned to London in 1698 and seems to have stayed there until his death. ABRAHAM (NAPHTALI HART)
FRANKS (d. 1708–09) was a founder of the London Ashkenazi community admitted to the Royal Exchange in 1697. His son AARON (1685 or 1692–1777) attained great wealth as a jeweler, and was said to have distributed £5,000 yearly in charity without distinction of race or creed. At the age of 16, Abigail married Jacob Franks, a young merchant who also had migrated from London and lived in the Levy household. Naphtali was born in 1715, followed by at least six other children.

Thirty-five letters survive, written between 1733 and 1748. Despite minimal spelling and punctuation skills, the letters reveal that she read broadly in literature and history. Naphtali sent her works of fiction and poetry, some classics, such as Alexander Pope, as well as popular literature. When she disapproved of a book, she chastised him for sending her “trash.” She requested a two-volume history of Poland. Her letters demonstrate, as well, her interest in local government and serve as a source of information about early New York’s fractious politics. She gossiped with her son about people known to them both, often with a tart tongue. Her observations about Judaism are sharp and critical, but she admonished her son to maintain the dietary laws as well as his daily devotions. While Franks fails to mention some important events in her life, including the deaths of two of her children, she reveals her own personality and much more. She never saw her son again, and none of his letters to her survive.

---

**FRANKS, DAVID** (1720–1794), Colonial American merchant and Loyalist. Franks, who was born in New York, began his extensive mercantile career with his arrival in Philadelphia in 1738. In 1742 he entered a partnership with his uncle Nathan Levy. The following year he married a Christian and their children were baptized in Christ Church, Philadelphia. Franks, who had extensive holdings in Western lands, became an agent for the British Army in North America by 1754, along with his father. During the Revolution, Franks was deputy commissary of (British) prisoners for the Americas. However, be-
cause of dealings with his brother Moses and with England, he was relieved of his duties. In 1780, after several trials and a good deal of publicity, he was ordered out of Pennsylvania. Exiled to England, Franks vainly sought relief from the crown for his loyalty.

[Leo Hershkowitz]

FRANKS, DAVID SALISBURY (c. 1743–1793), U.S. merchant, a Revolutionary War officer, and patriot. Franks was born in Philadelphia. Three years after his registration in 1760 at the Philadelphia Academy (University of Pennsylvania), he went to Montreal as a merchant. He returned in 1776 after aiding the invading army of generals Richard Montgomery and Benedict Arnold in their unsuccessful attack on Quebec. He became an aide to Arnold, serving in the Pennsylvania line as a major. Exonerated of complicity in the Arnold treason in 1780, Franks was promoted to the rank of lieutenant colonel. In 1781 he was sent to bring government dispatches and advice to John Jay in Madrid and to Benjamin Franklin in Paris. He served as courier, consul official, and confidant to Thomas Jefferson, Robert R. Livingston, and John Adams at various times in Europe until 1787. In 1790 he was appointed assistant cashier to the Bank of the United States. Franks had served as parnas of the Congregation Shearith Israel in Montreal in 1775 and was a contributor to Milheh Israel in Philadelphia.

BIBLIOGRAPHY: Rosenbloom, Bio Dict, 39.

[Leo Hershkowitz]

FRANKS, JACOB (c. 1766–c. 1823), merchant and civic leader in Wisconsin and Michigan. Franks, who was born in England, was a nephew of David Salisbury *Franks. He immigrated to Montreal and in 1792 was sent to Green Bay, Wisconsin, as an agent for a Montreal firm. He soon purchased a large tract of land, opened his own trading post, and became one of the influential residents of the settlement, contributing much toward the development of the area. Franks moved to Mackinac, Michigan, in 1805 or earlier. During the War of 1812 Franks fought on the British side and aided in the capture of Mackinac. In 1815 he was listed as one of the “magistrates, merchants, traders and principal inhabitants of Michilimackinac and St. Josephs.” When the British withdrew from Mackinac to Drummond Island, Michigan, in 1815, the Americans destroyed Franks’ house at Mackinac. He returned to Montreal, where he became an army purveyor and was also a business associate of Henry Joseph, member of a leading Canadian Jewish family.

[Irving I. Katz]

FRANZBLAU, ABRAHAM NORMAN (1901–1982), U.S. educator and psychiatrist. Franzblau was born in New York. He began a long association with Hebrew Union College in 1923 as principal of its school for teachers in New York, serving until 1931, when he became professor of education and pastoral psychiatry at the College at Cincinnati. Franzblau received a Ph.D. in education from Columbia (1935), and then took up the study of medicine, receiving his M.D. in 1937. During World War II he was attached to the Surgeon General’s Office as colonel. Franzblau returned to New York in 1946 as professor of pastoral psychology and dean of the Jewish Institute of Religion school of education. In 1948 he became associated with the psychiatric department of Mount Sinai Hospital and in 1958 retired from Hebrew Union College to devote himself entirely to psychiatry. A pioneer in the application of psychiatric knowledge to the work of the ministry, Franzblau lectured in this field at many seminaries. Besides texts, monographs, and research studies, he wrote Religious Belief and Character Among Jewish Adolescents (1934); *Road to Sexual Maturity* (1954); *Primer of Statistics for Non-Statisticians* (1958); and (with his wife Rose Franzblau) *Sane and Happy Life* (1963).

His wife Rose Nadler Franzblau (1905–1979) was a psychologist and columnist. She was born in Vienna and wrote human relations columns for the *New York Post* from 1947 and discussed psychological problems submitted by listeners to her daily radio program. She wrote *Race Differences in Mental and Physical Traits* (1935) and co-authored *Final Report, National Youth Administration* (1944) and *Tensions Affecting International Understanding* (1950). She also wrote *The Middle Generation* (1971).

[Sefton D. Temkin / Ruth Beloff (2nd ed.)]
FRANZOS, KARL EMIL (1848–1904), Austrian novelist and journalist. Franzos’ oeuvre reflects the identity crisis of emancipated European Jewry. His writings stage this crisis as a conflict between Western and Eastern Jews, between the Haskalah ideal of a transgressive “culture” and the inbred religious traditions of the shtetl. Born in the Galician town of Czortkow and raised in Czernowitz, he was brought up within a multi-ethnic and multi-religious society. After studying law in Vienna and Graz he returned to Galicia only a few years later – as a correspondent for the influential Viennese paper Neue Freie Presse. Defining his task as “to accompany the spirit of ‘Bildung’ and of progress in its war in the east as a humble, but honest correspondent,” Franzos fleshed out various scenes of this “cultural war” in several tales and reports from the land of “darkness,” which were published in two volumes under the title *Aus Halb-Asien* (“From Half-Asia”) in 1876. His writings targeted Hasidism, considering it a harsh and brutal dictatorship of ignorance that prevented Eastern Jewry from leaving the halakhic paths and joining the process of Jewish acculturation and emancipation. On the other hand, it was Franzos’ intention to produce a detailed impression of shtetl life and therefore his descriptions are also imbued with compassion and belie his fascination with the world whose structures are supposed to be struck down by the Enlightenment. Within these constellations, Franzos created his own particular kind of narrative within the genre of the so-called “ghetto novella,” which he demonstrated first in his story collection *Die Juden von Barnow* (1877). The center of these novellas could be seen in the conflict between two laws (i.e., torot), between halakhah – as a law that has become insufficient to solve the daily problems of galat existence – and culture – as a new and superior law that is capable of making decisions that do not contradict ethical and moral values in order to find justice. The tragedy of this conflict is shaped in Franzos’ novels Moschko von Parm (1880), *Judith Trachtenberg* (1889), and his famous *Der Pojaz* (published posthumously in 1905), which tells the story of the young Eastern Jew Sender Glatteis, who tries to get on the track of German culture in order to become an actor but who is finally not able to surmount the barriers of shtetl society with its restrictions.

For a long time the double-edged sense of Franzos’ writings was overlooked, but in recent years it has become more and more clear that the crisis of Eastern Jewry diagnosed by his oeuvre mirrors the crisis of Western Jewry. The success of Franzos’ writings at the end of the 19th century therefore points to the ambivalent status of German and Austrian Jewish society at the peak of the emancipation process: the enthusiastic reception of Franzos becomes a paradigm for the secular interpretation of Judaism as representing a longing for stable cultural patterns of “Jewishness” as well.

Regarding his non-Jewish readers, Franzos saw himself always in the position of a mediator, whose mission was to explain the circumstances and conditions of East Jewish socialization, the effort it took for an Eastern Jew to bridge the gap between religious traditions and the sphere of the big humanist project which he identified with German culture. His ideal of a forthcoming German-Jewish symbiosis made him a sedulous fighter against any form of antisemitism. Franzos himself proved the value of Jewish participation in German cultural life – in 1879 he published the first edition of German Buechner’s collected works.

[Philipp Theisohn (2nd ed.)]

FRATERNAL SOCIETIES, organizations for mutual aid, fellowship, life insurance, relief of distress, and sick and death benefits, frequently modeled on the *Freemason* pattern. Jewish fraternal societies originated in the 19th century. In England the Order Achei Brith and Shield of Abraham was organized in 1888, Ancient Maccabeans in 1891, Achei Ameth in 1897, Grand Order Sons of Jacob in 1900, followed by many others. In 1915 an Association of Jewish Friendly Societies was established there. In South and Central America these societies were organized as Landsmannschaften, e.g., the Galician Farband or Bessarabian Landsleit Farein. The main society in the United States is the Independent Order *Bnai Brith*. Other bodies are the True Sisters (1846), the *Free Sons of Israel* (1849), *Achei Brith* (1859), the Independent Order *Brith Abraham* (1887), and the defunct Order Kesher Shel Barzel (1860). Many others originated as Landsmannschaften. Many small-scale Landsmannschaften later enrolled in general orders, some of which were formed along political lines: the *Workmen’s Circle* (1900) stressed socialism; the Jewish National Workers’ Alliance (1910) combined Zionism with socialism; the International Workers’ Order (1930), later renamed Jewish People’s Fraternal Order, was controlled by Communists. They established elementary and high schools with instruction in Yiddish and Hebrew and promoted adult education. With the growing popularity of commercial insurance, the commercialization of the mortuary business, and leisure time activities, the membership of fraternal orders rapidly declined.

[Isaac Levitats]

FRAUD, the prohibition against wronging another in selling or buying property (Lev. 25:14) is one of civil (see *Ona’ah*) rather than criminal law – although, since it is a negative injunction, its violation by any overt act may result in the punishment of *flogging* (Tos. and *Penei Yehoshua* to BM 61a; cf. Maim. *Yad*, Sanhedrin 181). Where reparation can be made by the payment of money, no such punishment may be inflicted in addition (cf. *Yad*, loc. cit., 2 and *Mekhira* 12:1; Ket.
The express repetition, “And ye shall not wrong one another, but thou shalt fear thy God” (Lev. 25:17), was interpreted to prohibit the “wronging” of another not only in commercial transactions but also in noncommercial intercourse: the prohibition extends to “wronging by words” as distinguished from wronging by fraudulent deeds and devices; and wronging by words includes pestering people in vain as well as offending or ridiculing them (BM 410). It is said that wronging by words is even more reprehensible than wronging by fraudulent deeds, because while the latter is an offense against property only and can be redressed by the payment of money, the former is an offense against the person and his reputation, for which money will not normally be an adequate compensation (BM 58b; Yad, Mekhirah 14:12–18; see “Slandering”). However, though not constituting a cause of action for damages, wronging by words is not punishable by flogging either, because the mere utterance of words is not considered such an overt act of violation as may be punished in this way (cf. Yad, Sanhedrin 18:2). The admonition “but thou shalt fear thy God” (Lev. 25:17) is said to indicate that even though the offender may escape human punishment, divine retribution is certain to follow (Yad, Mekhirah 14:18; Ibn Ezra to lev. 26:17).

The fact that fraud, even in the civil law meaning of the term, was in biblical times regarded as eminently criminal in character is well illustrated in Ezekiel’s discourse on individual criminal responsibility: the same responsibility attaches for wronging the poor and needy, converting property, and not restoring pledges, as for murder, robbery, and adultery (Ezek. 18:10–13), and for all those misdeeds the same capital punishment is threatened (ibid.). Fraud and *oppression are usually found in the same context as *usury (Ex. 22:20, 24; Lev. 25:14, 17, 37; Deut. 23:17, 20; Ezek. 7–8; 12–13, 17). Fraud has also been held as tantamount to larceny (see “Theft and Robbery; Tur, hM 227”). As fraud and oppression go hand in hand, their victims are often the weak and the underprivileged; hence there are particular prohibitions on fraud against strangers (Ex. 22:20), widows and orphans (Ex. 21), and slaves (Deut. 23:17). Wronging widows and orphans is so repulsive in the eyes of God that “if they cry at all unto Me… My wrath shall wax hot and I will kill you with the sword, and your wives shall be widows and your children fatherless” (Ex. 22:22–23). Wronging and vexing the poor and the stranger draws forth God’s wrath (Ezek. 22:29–31 et al.) and is a cause of national disaster (Jer. 22:3–6).

In post-talmudic times, fraudulent business practices often resulted in the courts barring or suspending the offender from carrying on business. While isolated instances of fraud would be dealt with as civil matters, repeated and notorious fraudulent business practices might be punished by the sequestration of the offender’s business, depriving him of his livelihood (S. Assaf, Ha-Onshin Aharei Hatimat ha-Talmud (1922), 43). On other aspects of fraud see also *Gerama.

In the State of Israel, the criminal law on fraud and kindred offenses has been reformed and expanded by the Penal Law Amendment (Deceit, Blackmail and Extortion) Law, 5723–1963. Fraud is there defined as any representation of fact – past, present, or future – made in writing, by word of mouth, or by conduct, which the maker knew to be false or did not believe to be true. It is made a criminal offense not only to obtain anything by such fraud, but also to obtain anything by any trick not amounting to fraud or by the exploitation of another’s mistake or ignorance. Particular instances of fraud mentioned in the Act are pretenses of sorcery or fortune-telling; forgeries and unauthorized alterations of documents and the use or uttering of the same; the fraudulent suppression or concealment of any document or chattel, and the fraudulent incitement of others to make, alter, or conceal documents; as well as the issue of a check where the drawer knew that the banker on whom it was drawn was not bound to honor it.

[Haim Hermann Cohn]

[Menachem Elon (2nd ed.)]

FRAUENSTAEDT, JULIUS (Christian Martin; 1813–1879), philosopher. Frauenstaedt, who was born in Bojanowo, Posen, became a Christian at 20. He studied theology and philosophy at Berlin. Originally a Hegelian, he met Schopenhauer in 1846 and became a student and follower of his. Frauenstaedt published the first complete edition of Schopenhauer’s works in 6 volumes (1873–74) and was his literary executor, publishing his posthumous writings. He differed with Schopenhauer on various aspects of his philosophy, especially regarding his voluntarism and pessimism. Frauenstaedt wrote extensively on religion and ethics. His best-known works are Aesthetische Fragen (1853), Der Materialismus (1856), and Blicke in die intellektuelle, physische und moralische Welt (1869). He also wrote a Schopenhauer-Lexikon (1871), Briefe ueber die Schopenhauer’sche Philosophie (1854), and Neue Briefe (1876).

BIBLIOGRAPHY: H. Berger, Julius Frauenstaedt, sein Leben, seine Schriften und seine Philosophie (1911).

[Richard H. Popkin]

FRÉDÉRIC I (1826–1907), grand duke of Baden, son-in-law of Kaiser William I, and uncle by marriage of Kaiser William II. Frederick ruled Baden from 1852 until his death and carried out many reforms in the school and voting system
based on liberal ideas and was the first and almost the only influential political figure to help *Herzl wholeheartedly. When he learned of Herzl and Der Judenstaat from his sons’ tutor, the Reverend William *Hechler, he followed Herzl’s progress with deep sympathy. It was he who arranged the meeting between the German kaiser and Herzl when the former visited Erez Israel in 1898, and he sent enthusiastic memoranda on political Zionism to the Russian czar. His efforts to arrange meetings between Herzl, the czar, and the king of England were unsuccessful, but the czar sent him a letter in support of political Zionism. Frederick received Herzl several times and they conducted an extremely friendly correspondence. The grand duke’s picture, which he sent to Herzl, adorned the latter’s study (and can be seen in the reconstruction of this room at the Herzl Museum, Jerusalem). After failures and disappointments in the diplomatic sphere, Herzl was greatly encouraged by his personal contacts with Frederick. The Zionist Organization sent a delegation (including David *Wolfsohn and Nahum *Sokolow) to Frederick’s funeral in Karlsruhe.

The grand duke’s correspondence with Herzl, the kaiser, the czar, and others in German, English, and French was found in 1959 by H. and B. Eilern, who published a facsimile edition in 1961. Later all the letters were published in the Herzl Year Book, 4 (1961–62), 207–70 by H. Zohn, together with an English translation of the letters in German and French.

*Getzel Kressel / Bjorn Siegel (2nd ed.)*

**FREDERICK II (“the Great”),** king of Prussia 1740–86. Like his predecessors, Frederick II followed the policy of allowing into the kingdom only fixed numbers of “Schutzjuden (“protected Jews”), and took pains to ensure that these remained within defined limits. In keeping with this policy, the General Regulation he issued in 1750 distinguished between “ordinary” and “extraordinary” protected Jews; hereditary residential rights – to which only one child could succeed – were granted to the former alone while the rights of the “extraordinary” Jews lapsed with their death. Prussia’s severe tax burden weighed more heavily on the Jews than other citizens. Apart from fixed “protection” money and the taxes levied in lieu of military service, they were also made responsible for the export of the state’s manufactured products, and had to purchase a specified quantity of porcelain – the so-called Judenporzellan – from the royal factory. The trades and occupations they could follow were restricted, and the oath more Judaico was reimposed in 1747. Although freethinking and a lover of art and literature, the king was prepared only after much persuasion to extend to Moses “Mendelsohn the privilege of Schutzjude – and an “extraordinary” one, at that.

**FREDERICK II (“the Belligerent”) OF BABENBERG,** duke of Austria 1230–1246. In 1244 he granted to Jews the privilege known as the “Fridericianum,” following the basic lines of the charters granted by Emperor *Frederick II of Hohenstaufen in Germany in 1236, and to the city of Vienna in 1238. The “Fridericianum,” regarded by the historian J.E. Scherer as a “sparkling star in a dark night,” served as the model for privileges granted to Jews in *Hungary in 1251, in *Bohemia in 1254, in *Poland in 1264, and in *Silesia in 1294. *Rudolf of Hapsburg confirmed it in 1278 in his capacity of Holy Roman Emperor. The charter remained valid in the territory of Austria proper, until the expulsion of the Jews in 1420 (see *Albert II; *Wiener Gesera). The “Fridericianum” granted the Jews autonomy and equality with Christians in civil law and equal rights for trading in wines, dyes, and medicaments. It prohibited forcible conversion and exempted Jews from having persons arbitrarily billeted in their houses. Jurisdiction over the Jews was transferred from the imperial to the ducal chamber. Security of their life and property was guaranteed including defense of their cemeteries and synagogues. Freedom of transit throughout Austria was permitted, including transportation of corpses for burial without paying tolls. In lawsuits between themselves Jews were entitled to judgment by their own bet din, while for settling disputes between Jews and gentiles the post of *Iudex Judaeorum was created. If a gentle was suspected of murdering a Jew but the charge could not be substantiated, the duke was ready to supply a champion to fight him on behalf of the Jew. The transition of Jewish occupations from commerce to moneylending is reflected by the fact that 22 paragraphs out of 30 in the charter deal with matters connected with moneylending, fixing a weekly interest rate of eight pfennigs on one mark, i.e., 1.733% yearly. The “Fridericianum” took over the concept of accepting the statement of a Jew on oath that he had taken a pledge bona fide if it was proved to have been stolen or lost though not through his fault, thus continuing to give the moneylender protection against malicious claims.

**FREDERICK II OF HÖHNENSTAUFEN** (1914–1250), king of Sicily (with Apulia) from 1198; Holy Roman Emperor from 1212. He was in continuous and bitter conflict with the papacy, and was considered an arch-heretic by his opponents, who even termed him anti-Christ for his pamphlet *De tribus impostoribus* (“On the Three Impostors,” i.e., Moses, Jesus, and Mohammed). However he had a lofty, if unusual, conception of the Christian religion, and of the royal duty to serve it. In
his attitude toward the Jews and his reactions to them Frederick's complicated and powerful personality displayed an individual approach. In Sicily and in south Italy he confirmed the privileges accorded to the Jews by his Norman predecessors. He also had the dyeing and silk-weaving industries in south Italy, which were crown monopolies, administered by Jewish agents, as had the Norman rulers before him, who also employed Jewish artisans in the textile manufacture. In 1221, however, the Emperor decreed that Jews must be distinguished from Christians by their clothes and their appearance, thus conforming to the decisions of the Fourth Lateran Council (1215). The Jews of Sicily were ordered to wear blue coats over their clothes and grow beards, and the women to wear a blue stripe on their cloaks and head covering to distinguish them from the Christians; but there is no evidence that these strictures were actually enforced. Frederick finalized the legal definition governing the concept of Jewish servitude, which had evolved during the 12th century, describing the Jews in grants of privileges he issued in 1236 and 1237 as *servi camerae nostrearum,* which applied to all of his domains. In Sicily, the status of the Jews, formerly modeled by the Normans on the status of the *Dhimmis* in the lands of Islam, underwent a significant change as they became *servi camerae* and the monarch's property. Muslims living in Frederick's domains were accorded similar status.

Frederick invited Jewish translators and scholars to his court: Judah b. Solomon ha-Kohen (*Matkah), Samuel Ibn *Tibbon, and Jacob *Anatoli, who took part in its lively and variegated intellectual life, discussing philosophy and disputing diverse issues with Christian scholars. The emperor also took part in these discussions: in his introduction to *Malmaud ha-Talmidim* (*A Goad to Scholars*), Jacob Anatoli referred to the emperor's own attempts at biblical interpretation.

The originality and force of Frederick's personality clearly emerged in the action he took in connection with the blood *libel.* When the bodies of children alleged to have been murdered by the Jews in *Fulda* (1236) were brought before him, he determined that he would finally settle the question. Frederick read about the problem himself and became convinced that the Jews were innocent of the charge. Being unable to obtain a clear-cut opinion or decision from the Church authorities or nobility, he had the original idea of convening a council of apostates, who as former Jews and devout Christians should be able to give a definitive answer. Frederick subsequently published their unequivocal refutation of the blood libel and prohibited the libel's circulation throughout his domains. Frederick invited Jewish translators and scholars to his court: Judah b. Frederick subsequently published their unequivocal refutation of the blood libel and prohibited the libel's circulation throughout his domains.

**FREDERICK III OF HAPSBOURG**, duke of Austria (as Frederick v), and king of Germany (as Francis iv, 1440–86); Holy Roman Emperor 1452–93. Frederick iii favored the Jews, whose enemies described him as "more a Jewish than a Holy Roman Emperor." The general charter he granted to Carinthia in 1444 contained provisions for the protection of the Jews there. He resettled the Jews in *Austria* (though not in Vienna) after their expulsion in 1421, for which he obtained a *bull* from Pope Nicholas v in 1451 permitting their return since this would provide for the "Jews' livelihood and the Christians' benefit." He confirmed this permission when emperor. Frederick resisted the frequent protests by the Estates against admitting Jews (1458–63). As emperor he intervened on behalf of Israel *Bruna* who was accused in a *blood libel in 1474, although earlier he had him imprisoned as a hostage to extort payment of a coronation tax. Frederick also intervened on behalf of the Jews in the blood libel cases of *Endingen* (1470), *Trent* (1476), and *Regensburg* (1478). He persuaded Pope Paul ii to issue a bull in 1469 ordering priests not to deny religious sacraments to officials who upheld the rights of the Jews. Jacob b. Jehiel Loans was physician to Frederick iii for many years, and according to tradition there was personal friendship between patient and physician. Frederick's attitude to the Jews was motivated both by the need to overcome his financial difficulties and to uphold the imperial authority including his jurisdictions over the Jews.

**FREDERICK WILLIAM** (Ger. Friedrich Wilhelm), name of several kings of Prussia. Frederick William iii was king of Prussia from 1797 to 1840. The defeats in the Napoleonic Wars at Jena and Au- erstäd and the peace treaty of Tilsit (1807) brought Prussia heavy territorial losses but opened the way to reform in the state system. The liberal-inspired 1812 edict (see *Prussia*) concerning the civil status of the Jews was issued by Frederick William iii, it had been forced on him by the statesmen *Hardenberg and *Humboldt. The king himself made deter-
mined efforts to exclude the Jews from participation in army service: when, after the Napoleonic wars, Jewish war veterans and invalids applied for pensions and posts, he denied even the rights of those who had received decorations. The king explicitly ordered that conversion to Christianity should be made a condition for employment in state posts, including those in universities. Frederick William gave official support to a Prussian society for propagating Christianity among the Jews, and declared conversion to Judaism illegal. He opposed the *Reform movement and had the private prayer rooms of I. *Jacobson closed down. It was with relucrance that he awarded regular advancements and decorations to Meno Burg, the first Jewish career officer in the Prussian army.

His son, FREDERICK WILLIAM IV, was king of Prussia from 1840 to 1861. Jewish hopes that he would follow a more liberal policy were soon disappointed. Imbued with a romantic-medieval concept of a Christian state, he proved even more reactionary than his father. He considered that Judaism was not a religion, but the remnant of a political constitution (see the ideas of Moses *Mendelssohn). Frederick William determined to reorganize the Jews as an independent corporaion on medieval lines, alongside but not within the Prussian body. In December 1841, he ordered that the term "civil rights" should be replaced by "rights accorded by the 1812 edict," a preliminary for a new Jewish constitution under which the Jews were to have rights within their own community only. G. *Riesser, L. *Philippson, Johann *Jacoby, and Moritz *Veit led the struggle against the royal policy, supported by various Christian liberals as well as by the provincial estates, who were in favor of general and Jewish service in the army and full application of the 1812 edict. The king's most important supporters were F.J. *Stahl and *Bismarck. Despite vigorous opposition, he carried through his Jewish constitution in 1847 with only minor revisions. The king's "corporationist" plans were made obsolete by the 1848 revolution, but on the basis of the 1847 constitution the Prussian state recognized only individual Jewish communities. In 1849 he refused the offer of the parliament of Frankfurt to be emperor of Germany because he did not wish to have any connection with the revolution.

FREED, ALAN (1922–1965), U.S. disc jockey. Born in Salem, Ohio, Freed spent two years at Ohio State University, where he played the trombone and led the Sultans of Swing, a band named after a famous group in Harlem. After two years in the Army, Freed started a career in radio playing classical music. It was a far cry from his later years as the most important figure in the early years of rock ‘n’ roll, an outgrowth of rhythm and blues usually associated with "race" music and black audiences. In 1950, Leo Mintz, the owner of a Cleveland record store, lured Freed to be host of a program on a station geared to young white listeners after he discovered that many white suburban youths were going to his store to buy recordings by black artists. Freed played those records on the show and he and the music became sensations. He called himself Moondog and in 1952, at the Moondog Coronation Ball, considered the first rock concert, 20,000 fans crashed the 10,000-seat capacity Cleveland Arena. The dance was canceled.

Moving to New York in 1954, Freed’s career took off, even as he tangled with radio stations, television networks, and the music business over playing the so-called black music. He brought rock ‘n’ roll into mainstream American society, a biographer wrote, "and he made a lot of enemies because of that. Here was this white guy bringing blacks and whites together to dance in the 1950s. It was unheard of." Freed’s popularity over the air was matched on stage during school holidays, when he took over large movie palaces in Brooklyn and elsewhere and presented rock ‘n’ roll performers to mobs of youngsters. One such show, in Boston in 1958, resulted in Freed’s arrest for anarchy and inciting to riot. The charges were later dropped. But Freed’s "big beat" music was considerably less welcome afterward and a number of cities banned him altogether.

Freed’s downfall came a few years later, when television quiz show scandals brought the subject of payola – the payment of fees by record producers to have their songs played on the air – into public view. Freed was charged with having taken bribes totaling $30,650 from six record companies for playing and promoting their releases on his program. In 1962 he pleaded guilty to part of the charge and received a six-month sentence, which was suspended, and a $300 fine. He then moved to the West Coast, where he lived quietly.

In 1986, at the inaugural ceremonies for the Rock and Roll Hall of Fame, Freed was inducted posthumously. It was not an accident that the hall was built in Cleveland.

[Stewart Kampel (2nd ed.)]

FREED (originally Grossman), ARTHUR (1894–1973), U.S. popular lyricist and producer of motion picture musicals. Freed was born in Charleston, S.C., and grew up in Seattle, Wash. He was a piano player for the music publishers Waterman, Berlin, and Snyder (see Irving *Berlin), toured the Chicago area with the *Marx brothers for several months, and later with Gus Edwards’ vaudeville circuit for a year and a half. After army service in 1917–19, Freed wrote his first popular song hit, "I Cried for You, Now It’s Your Turn to Cry over Me," with music by his partner, Nacio Herb Brown. He and Brown produced revues at the Orange Grove Theater using their own songs. Freed’s work in motion pictures began when he and Brown wrote the songs for Metro-Goldwyn-Mayer’s and Hollywood’s first musical, Broadway Melody of 1929. In 1939 Freed produced, for MGM, Babes in Arms, the first of about 50 musicals, including Strike Up the Band (1940), Cabin in the Sky (1943), Meet Me in St. Louis (1944), On the Town (1949), American in Paris (1951), and Singin’ in the Rain (1952),
the title of the last being a Freed song originally performed in MGM’s second musical, *Hollywood Revue*.

FREED, ISADORE (1900–1960), composer. Born in Brest-Litovsk, Russia, Freed was taken to the United States as an infant. He studied with Ernest *Bloch there and with Vincent d’Indy in Paris. Returning to the United States in 1934, he engaged in teaching, and was chairman of the music department of the Hart College of Music in Hartford, Connecticut, from 1944 until his death. He wrote two symphonies; violin and cello concertos; and an opera, *The Princess and the Vagabond* (1948); chamber music; and choral works. His works were of a moderately modernistic idiom, with some use of American folk themes, as in his *Appalachian Symphonic Sketches* (1946). His congregational compositions include *Sabbath Morning Service* (1950), *Hasidic Service* (1954), Psalm settings, and a selection from *Salamone de Rossi’s Ha-shirim asher li-Shelomo arranged as a service for cantor, chorus, and organ* (1954).

FREED, JAMES INGO (1930– ), U.S. architect. Born in Essen, Freed fled from Germany to France in 1938 and immigrated to the United States with his younger sister in 1939. He rose to become one America’s most distinguished architects, winning a long list of awards such as the 1997 Award for Outstanding Achievement in Design for the Government of the United States. He received his bachelor’s degree in architecture from the Illinois Institute of Architecture (1953), where he returned as dean of architecture two decades later. After serving with the U.S. Corps of Engineers and then working as an architect and planner in Chicago, Freed joined Mies Van der Rohe in New York in 1955. In 1956 he joined I.M. Pei and Partners, later known as Pei Cobb Freed and Partners. Freed taught architecture at every major architectural school in the United States. As an active participant in the public sphere, he was director of the Regional Plan Association of New York–New Jersey–Connecticut and from 1983 to 1991 served as architectural commissioner of the Arts Commission of New York City. In 1988 Freed was elected to the American Academy of Design. He was also a member of the American Academy of Arts and Letters and a fellow of the American Academy of Arts and Sciences. Among Freed’s major building designs are the Jacob Javits Exposition and Convention Center in New York City (1986) and the U.S. Holocaust Memorial Museum in Washington, D.C. (completed in 1993). To prepare himself for the design of the Holocaust Museum, Freed visited the sites of the Nazi concentration camps in Europe and memorials in Israel. He studied films, tapes, and books, keeping a bound volume of photographs in his office of what he had seen. “It has been the most moving experience of my life,” he said. “It couldn’t be just another government building . . . We want walls to speak, to impart a certain discomfort, a certain pressure, a certain evocation.” Freed decided that his design would be outside current architectural dialogues and outside questions of style. The main issue, Freed explained, was how people can be made to understand the Holocaust and keep it from happening again. Certain construction details in the building are evocative of the camps: the design of the lighting, the brick work, and cracked concrete walls. The museum is organized around a long, descending walk through the exhibits and ends in a Hall of Remembrance. In 1996 Freed designed the San Francisco Main Public Library. In 2001 he designed the reorganization of the Israel Museum complex, which includes buildings devoted to archaeology, art, sculpture, and the Shrine of the Book.

FREEDMAN, BARNETT (1901–1958), British artist and book illustrator. Freedman, who was born in the East End of London, the son of a tailor, was bedridden from the age of 9 to 12 years. He then became a draftsman for monumental masons and attended evening classes in art. In 1922 he obtained a small annual grant and admittance to the Royal College of Art. In 1940 he was appointed an official war artist to the British Army, and later to the admiralty. His most important artistic achievement was as a book illustrator. In 1927 he illustrated Laurence Binyon’s poem *The Wonder Night*, followed two years later by an edition of *Memoirs of an Infantry Officer* by Siegfried *Sassoon*. In 1935 he designed the commemorative stamp for the Jubilee of King George V. He illustrated a series of classics published by Limited Editions Club and the Heritage Club of America. His paintings of street scenes and itinerant musicians were influenced by memories of his childhood in the Jewish working-class area.

FREEDMAN, HARRY (1922– ), composer, English hornist. Born Henryk Frydmann in Lodz, Poland, Freedman was raised in Medicine Hat, Alberta, from 1925, and from 1931 in Winnipeg, where he studied painting and clarinet and became involved in big band jazz. After service in the Royal Canadian Air Force in World War II, he settled in Toronto, studying composition with John Weinzweig at the Royal Conservatory (1945–51) and with Olivier Messiaen and Aaron *Copland at Tanglewood (1949) and Ernst Krenek in Toronto (1953). From 1945 he studied oboe with Perry Bauman and played English horn in the Toronto Symphony in 1946–70. The Toronto Symphony’s first composer-in-residence (1969–70), Freedman taught and was also composer-in-residence at the Courtenay Youth Music Centre, 1972–81. In 1989–91, he taught composition and orchestration at the University of Toronto – in 1990–91 as the Jean A. Chalmers Visiting Professor of Canadian Music.

Exceptional for his prolific output in a wide variety of musical idioms and genres, Freedman has written several

In 1970 he won an Etrog Award for best music in a Canadian feature film (*Act of the Heart* starring Donald Sutherland and Geneviève Bujold). The Canadian Music Council named Freedman Composer of the Year in 1980 and he was installed as an Officer of the Order of Canada in 1984. The recording of his 1989 *Touchings* by the Esprit Orchestra and the Nexus percussion ensemble won a Juno Award in 1996, and his *BoREALIS* for four choirs and orchestra was cited for “freshness of ideas and beauty of sound” at the 1998 International Rostrum of Composers in Paris. In 1998 he also received the Canada Council’s Victor Martyn Lynch-Staunton Award.

---

**FREEDMAN, JAMES O.** (1935— ), scholar of administrative law. Freedman was born in Manchester, New Hampshire. He received his bachelor of arts degree from Harvard in 1957 and graduated cum laude from Yale Law School in 1962. He served as a law clerk to Justice Thurgood Marshall, and then practiced law with a New York firm before joining the faculty of the University of Pennsylvania Law School in 1964. He became university provost in 1978 and dean of the law school in 1979. Freedman served as president of the University of Iowa from 1982 to 1987, then as president of Dartmouth College from 1987 to 1998, the second Jew to serve in that position. Dartmouth, which is the most rural and conservative of the Ivy League campuses, had their second Jewish president well before some of the other, more Jewish populated Ivy League colleges had their first.

A prominent scholar, Freedman published *Crisis and Legitimacy: The Administrative Process and American Government* in 1978. He wrote numerous articles and reviews for academic journals, including *Iowa Law Review, University of Pennsylvania Law Review, Administrative Law Review*, and others. In his writing, as well as in his role as university president, he was an outspoken supporter of liberal arts education and its role in moral leadership. His 1996 work *Idealism and Liberal Education* sets forth the importance of a liberal arts education in preparing students for leadership. Freedman cites Czech playwright Václav Havel as an example of an engaged intellectual involved with social and political concerns.

In “*Gifts of the Past: Anti-Semitism at Elite Colleges*,” an article written for *The Chronicle of Higher Education* in 2000, Freedman discusses his decision in 1997 to address the issue of antisemitism while presiding over the dedication of the Roth Center for Jewish Life at Dartmouth. His speech, which cited documents from the archives of Dartmouth and other institutions, chronicled the existence of a Jewish quota during the 1920s, 1930s, and 1940s. Freedman called for “a continuing vigilance about discrimination” against ethnic and religious groups. The speech generated widespread interest and praise.

Freedman was actively involved with the American Jewish Committee and served on the board of Brandeis University. In 2000 he was elected the forty-second president of the American Academy of Arts and Sciences. As president, he expressed a wish that the Academy address social concerns and inequality. In 2003 Freedman was named a member of Hebrew College’s National Board.

**FREEDMAN, SAMUEL** (1908–1993), Canadian lawyer, community leader, chief justice of Manitoba. To a student who asked Samuel Freedman whether he should be addressed as “milord” or “Mr. Justice,” Freedman replied: “Call me Sam.” Sam Freedman was born in the Ukraine, the fifth of seven children. At age three he came to Canada with his family, settling in Winnipeg’s immigrant North End. He graduated from the University of Manitoba with honors in classics in 1929 and went on to law school, where he became an accomplished debater. He graduated in 1933 and entered law practice, served four years as editor of the *Manitoba Bar News*, and was president of the Manitoba Bar Association in 1951–52. He was named to the Manitoba Court of Queens Bench in 1952; in 1954–55 he headed a commission investigating railroad labor problems; during 1959–68 he served as chancellor of the University of Manitoba. In 1960 Freedman was elevated to the Court of Appeal and in 1971 was appointed chief justice of Manitoba, a position he held until 1993. On his appointment as an Officer of the Order of Canada in 1984, the governor general of Canada cited his “discriminating mind and glowing humanity [as resulting] in brilliant legal judgements....”

Freedman was also much involved in the community. During his student years he was active in the Menorah Society and later in the YMHA and B’nai B’rith. A founder of the Winnipeg Chapter of the Canadian Friends of the Hebrew University, he served as a member of the organization’s national board of governors. During 1955–58 he was division co-chair of the Canadian Council of Christians and Jews and in 1957–58 was campaign chairman for the Manitoba Heart Foundation. He was in great demand as a public speaker in Winnipeg and other centers in Canada and the United States.

His son Martin Freedman sat as a member of the Manitoba Court of Appeal in the seat once occupied by his father.

**FREEDOM.** The concept of freedom in the Bible is found in the injunction that on the advent of the "Jubilee, "liberty was proclaimed throughout the land unto all the inhabitants thereof ... and ye shall return every man unto his family" (Lev. 25:10). Thus the freedom envisaged encompassed not only the
emancipation of slaves, but the return to one's ancestral lands which had been alienated by sale. This concept is extended in Jeremiah 34, in which the prophet denounces the people for later disregarding the order given by Zedekiah "that every man should let his man-servant and every man his maid-servant, being a Hebrew man or a Hebrew woman, go free; that none should make bondsmen of them, even of a Jew his brother" (34:9). Although the Talmud also uses the word freedom in antithesis to slavery (BK 15a), in general it employs the word in a wider sense as denoting absence of subservience, and the concept that it was morally and legally wrong under any circumstances for a Jew to be dependent upon or subservient to another Jew became one of the fundamental principles of the rabbis, but to the evil of the denial of freedom to Jew by his fellow Jew was added that of the subservience of the Jew to foreign rule.

The concept of that freedom was unique in the insistence on the freedom of the individual in order that he might be free to devote himself utterly and without restraint to the service of God and the fulfillment of His will. The locus classicus of this conception is the rabbinical interpretation given to the verse “For unto Me are the children of Israel servants,” which is emphasized by the repetition “they are My servants” (Lev. 25:55), upon which the rabbis comment: “they are My servants, but not the servants of My servants.” It is the basis of the reason given by Johanan b. Zakkai for the law that a Hebrew slave who chose to remain in slavery when the time came for his emancipation had to have his ear bored (Ex. 21:6), an interpretation which is called a species of homerus (probably “an important ethical principle”) “Why the ear of all the organs of the body? God said: Because it was the ear which heard Me say upon Mount Sinai 'Upto Me are the children of Israel servants, but not servants to My servants,' yet its owner went and acquired a [human] master for himself, therefore let that ear be bored” (Kid. 22b; in the Mishneh Torah Judah ha-Nasi derives the same ethical lesson from the fact that the ear had to be placed against the doorpost).

It was in accordance with this principle of freedom from man in order to be free for the service of God that R. Joshua b. Levi stated, “No man is free but he who labors in the Torah” (Avot 6:2), which may be a protest against those who thought of freedom in purely physical or rational terms. This principle was enshrined to such an extent that the Talmud actually asks how, in view of this interpretation, it is permitted for a Jew even to be the employee of another Jew and replies that the right of the laborer to withdraw his labor at any time preserves his essential liberty (see “Labor.”) This conception of the right of the Jew to individual freedom was extended to include national freedom from foreign rule. R. Judah interprets the freedom which comes from the study of the Torah as “freedom from exile” (Ex. R. 32:1), and the theme that failure to exercise this freedom brings in its train political servitude was a favorite theme of the rabbis in the period immediately following the destruction of the Temple, when foreign rule became a grim fact. Thus Johanan b. Zakkai homiletically interprets Song of Songs 1:8, “You were unwilling to subject yourselves to heaven; as a result you are subjected to the nations of the world”; and his contemporary Nehunya b. ha-Kanah states, “He who accepts the yoke of Torah will have the yoke of foreign rule removed from him, and he who casts off the yoke of Torah, upon him will be laid the yoke of foreign rule” (Avot 3:5). The striking statement of Samuel in the Talmud (Sanh. 91b et al.) that the only difference between the present world and the Messianic age is subjection to foreign rule is actually accepted as the halakhah by Maimonides in the last chapter of the Mishneh Torah, but he also emphasizes that the “sages and prophets did not long for the days of the Messiah that Israel might exercise dominion over the world, or rule over the heathens, or be exalted by the nations, or that it might eat, drink, and be merry. Their aspiration was that Israel be free to devote itself to the Torah and its wisdom, with none to oppress or disturb it” (Yad, Melakhim 12:4).

Most extreme in their passion for liberty were the members of the “Fourth Philosophy,” the *Zealots or *Sicarii as the case may be. Josephus states of them that “this school agrees in all other respects with the opinions of the Pharisees, except that they have a passion for liberty that is almost unconquerable, since they are convinced that God alone is their leader and master. They think little of submitting to death, if only they may avoid calling any man master” (Ant. 18:23), a principle which they carried into practice with their mass suicide at “Masada rather than submit to the Romans. It has been suggested that the differences between them and the Pharisees with regard to the love of freedom was that whereas the Pharisees, while extolling the importance of liberty, did not include it among the cardinal principles for which one should suffer martyrdom rather than transgress, those members of the “Fourth Philosophy” did include it. The ideal of freedom was kept alive in the Jewish consciousness throughout the period of exile. The four cups of wine obligatory on the *seder Night of Passover, the festival of freedom (Pes. 108b), are the symbol of freedom, and in the daily liturgy in the evening prayer, the Exodus from Egypt is referred to as the emergence of the children of Israel to “everlasting freedom.”

[Louis Isaac Rabinowitz]

Freedom of Thought

Because there never was a single body of official doctrine, Jewish tradition not only permitted, but even encouraged freedom of thought. Speculation about the fundamentals of faith was held to be a desirable and meritorious activity. *Bahya ibn Paquda, the 11th century moralist and philosopher, states explicitly that, “On the question whether we are under an obligation to investigate the doctrine of God’s unity or not, I assert that anyone capable of investigating this and similar philosophical themes by rational methods is bound to do so according to his powers and capacities… Anyone who neglects to institute such an inquiry is blameworthy and is accounted as belonging to the class of those who fall short in wisdom and conduct” (Hovot ha-Levavot, “Sha’ar ha-Yihud,” ch. 3). Maimo-
nides echoes this view, as do many other major Jewish thinkers. The last major Jewish philosopher of the Middle Ages, Joseph *Albo, summarized this tradition of freedom of thought: "It is clear now that every intelligent person is permitted to investigate the fundamental principles of religion and to interpret the biblical texts in accordance with the truth as it seems to him" (*Sefer ha-Ikkarim*, pt. 1, ch. 2). This freedom is evident in the lack of any one official Jewish creed. Proposed creeds vary in content, principles, and number of articles. From antiquity to the present Judaism has found room for almost every conception of God known to civilized man so long as it is consistent with the principle of God's unity.

Alongside this tradition of freedom of thought there was also a restrictive drive which sought to limit what Jews might think and even what they might read. A Mishnah teaches that certain categories of Jews forfeit their share in the world to come, either because they hold erroneous beliefs or because they read forbidden books (*Sanh. 10:1*). This repressive aspect of the tradition receives its most extreme form in the codified rule that certain kinds of heretics may, or even must be put to death (*Av. Zar. 26b; Sh. Ar., YD 158:2*). There is, however, little evidence that such a rule was ever put into practice. David *Hoffmann argued that this rule was codified at a time of extreme Christian religious zealotry, and was intended to show that Jews were also devoted to their faith. He denied that this rule was ever intended to be enforced, adding that in modern times such a rule is a profanation of God's name. Restrictions were also enacted against the study of certain subjects. The Mishnah records the decree that "no man should teach his son Greek" which is interpreted to mean the study of Greek philosophy (*Sot. 9:14; 49b*). The study of mystic traditions as well was restricted. The Talmud relates that only one of the four sages who "entered the Garden" (i.e., engaged in esoteric speculation) departed unhurt (*Hag. 14b*). In codifying these laws Moses Isserles stated, "It is only permitted to 'enter the Garden' after one has satiated himself with meat and wine," i.e., the study of mysticism is only allowed for he who is thoroughly grounded in the study of halakhah and the details of the commandments (*Sh. Ar., YD 246:4*). In the Middle Ages bans were also imposed on the premature study of philosophy and sciences. Solomon b. Abraham *Adret proclaimed in his ban of 1305 that physics and metaphysics could be studied from the age of 25, but laid no restriction on the study of astronomy and medicine (other communities in southern France banned the study of philosophy until the age of 30; see *Maimonidean Controversy*).

Freedom of thought was also threatened by those who banned or burned books which they found offensive. An almost continuous line leads from the talmudic prohibitions against certain works to the 20th-century zealot who burned a nonorthodox prayer book in New York in 1944. Over the centuries there were bans on and burnings of the works of some *Karaites, Maimonides' Guide*, the *Me'or Einayim of Azariah de* *Rossi*, and even of some books of M.H. *Luzzatto. The rise of* *Hasidism and of the* *Haskalah generated such intense efforts to suppress their literatures that one writer asserts that* "there was no period in Jewish history in which so large a number of books ... were banned or burned."

Such practical restrictions on freedom of thought came to an end in the 19th century. They can still be found only among some minor sects of the extreme orthodox right wing, but have no effect on the life and thought of the vast majority of Jews. In a peculiar way these restrictive elements in the Jewish tradition evoked a basic commitment to freedom of thought. Those who imposed bans on books could only enforce them locally, since there was no central authority. Such bans usually evoked counter-bans so that a book proscribed in one community found vigorous defenders in another. However, the stature of those who sought to prevent a book from being read, there were always men of equal stature who came to its defense and made it available. In this way, even when subjected to severe strains, freedom of thought was preserved and protected.

[Marvin Fox]

**FREEHOF, SOLOMON BENNETT** (1892–1990), U.S. Reform rabbi, scholar, liturgist. Freehof, born in London, was taken to the United States in 1903 by his parents, who settled in Baltimore. The Freehof family name is derived from Freda, the daughter of Rabbi Shneur Zalman of Liady, the founder of Habad Hasidism. He graduated from the University of Cincinnati (1914) and a year later was ordained at Hebrew Union College, whose faculty he then joined. After serving as a chaplain with the American forces in Europe during World War I, Freehof became professor of liturgy at Hebrew Union College. In 1924 he became rabbi of Congregation Kehillath Anshe Maarav in Chicago, and in 1934 he was appointed rabbi of Congregation Rodef Shalom in Pittsburgh. He remained at Rodef Shalom until his retirement in 1966.

Freehof's scholarly endeavors were largely in two fields. The first was Jewish liturgy. In 1930 he was appointed chairman of the Reform Committee on Liturgy of the Central Conference of American Rabbis, whose work led to the publication of the two-volume *Union Prayer Book* (1940–45) and the *Union Home Prayer Book* (1951), both of which stressed relevance to modern life and the inclusion of contemporary material in the service. He served as President of the *CCAR* from 1943 to 1945. His second main interest was the development of Jewish law as displayed in the literature of the responsa and its bearing on modern Jewish practice. He was appointed head of the Responsa Committee of the Central Conference of American Rabbis in 1955. He wrote *Stormers of Heaven* (1931); *The Book of Psalms: A Commentary* (1938); *Modern Jewish Preaching* (1941); *The Small Sanctuary: Judaism in the Prayer Book* (1942); *In the House of the Lord* (1942); *Reform Jewish Practice*...
and its Rabbinic Background (1944); Preface to Scripture (1950); The Responsa Literature (1955); The Book of Job: A Commentary (1958); Recent Reform Responsa (1963); A Treasury of Responsa (1963); and Current Reform Responsa (1969). The last Responsa collection was New Reform Responsa published in 1980 at the age of 88.

Freeman, Joseph (1897–1965), U.S. author, critic, and journalist. Freeman was taken to the U.S. from the Ukraine as a boy of seven. After his graduation in 1919, he joined the editorial staff of Harper’s Illustrated History of the World War, but in the following year moved to Paris, where he worked for the Chicago Tribune, subsequently representing both the Tribune and the New York Daily News in London. In 1922 he returned to New York, where he used his journalistic talents in support of socialism, working first for The Liberator and later also for the Partisan Review. In 1926 he helped to found the monthly New Masses. He first represented the periodical in Moscow, and at various times during the 1930s was its editor. Freeman and Michael Gold were the two outstanding American writers of the Left during the years preceding World War II. Freeman’s works include Dollar Diplomacy: A Study in American Imperialism (1925), a radical assessment of U.S. foreign policy written in collaboration with S. Nearing; Voices of October: Art and Literature in Soviet Russia (1930), with J. Kunitz and L. Lozowick; and The Soviet Worker (1932). His autobiography, An American Testament: A Narrative of Rebels and Romantics (1936), is one of the most valuable source books on the radical literary politics of his time. Under the stress of the Nazi-Soviet pact of 1939 Freeman finally broke with the Communists. He later published two novels, Never Call Retreat (1943), which dealt with the frustrations of a political refugee, and The Long Pursuit (1947), set in postwar occupied Germany.

Freemasons, members of a secret society which developed out of craftsmen’s associations, originally consisting of masons proper. From the 17th century the society existed mainly as a social organization and cultivated a tradition of doctrines, passwords, and symbols, a ritual which is supposed to derive from the building of the First Temple in Jerusalem. The coat of arms of the English lodges is said to have been adapted from one painted by Jacob Judah Leon *Templ. Modern Freemasonry began in England around 1717; in 1723 the London Grand Lodge adopted a constitution formulated by the Reverend James Anderson, based on some older traditions. A printed constitution facilitated the foundation of new lodges on the basis of a recognized authority. During the next decades the lodges spread, in Britain, France, Holland, Germany, and many other countries. All the lodges regarded themselves as belonging to the same fraternity, and a Freemason appearing at any lodge with a certificate of membership was admitted to the work of the lodge and entitled to hospitality and help in case of need. The first paragraph of the constitution stated that anyone found to be true and honest, of whatever denomination or persuasion, was to be admitted. The constitution obliged the member only to hold “to that religion in which all men agree, leaving their particular opinions to themselves,” a declaration of religious tolerance based on the current Deist trend, which postulated a Supreme Being who could be conceived of by any rational being. It is not known whether the possible aspiration of Jews to be accepted in the lodges influenced the wording of the constitution; yet it is formulated in a way that includes Jews as possible members. Thus, when a Jew asked for admission in 1732, one of the London lodges accepted him. The doors of the English lodges remained open to Jews in principle, although in practice there was some discrimination.

The Deistic declaration in the constitution did not remove some traces of Christian practice, including the New Testament, playing a part in the lodges. Nevertheless in the middle of the 18th century Jews joined the lodges, not only in England but also in Holland, France, and Germany. A Jewish lodge, the Lodge of Israel, was established in London in 1793.

Masonic tolerance weakened as a result of attacks made on it by the traditional sectors of all religions, who feared its all-embracing intentions. The Catholic Church banned – and still bans – Freemasonry in a bull promulgated by Pope Clement XII in 1738. The Deism of Freemasonry was clearly contrary to Church doctrines, and conservative Protestants and Jews also felt that its rituals were in conflict with their religious beliefs. To the objection of the Churches and other conservative elements in society, the Masons reacted by an apology which, in the main, tried to prove that Freemasonry was not an un-Christian institution, an argument supported by the fact that the Masonic fraternity consisted exclusively of Christians: Jews, Muslims, and pagans were not and should not be accepted. However, in England and Holland no objection in principle to Jewish applicants existed and in France the objections were swept away with the Revolution. Here Freemasonry became a kind of secular church in which Jews could participate freely. Adolphe *Crémieux was not only a Freemason from his early youth but in 1869 became the Grand Master of the Grand Lodge of the Scottish Rite in Paris.

In Germany objection to Jewish membership persisted, remaining a matter of controversy for generations. Until the 1780s only a few German Jews were admitted to Masonry. About this time Jewish applications for admission to the Masonic lodges became frequent. Though there were some at-
tempts to open the lodges to Jews, no German Freemason of any standing at that time advocated Jewish admittance. Some German Jews became Freemasons when traveling abroad in England, Holland, and, particularly, in post-revolutionary France. In Germany itself French or French-initiated lodges were established during the Napoleonic occupation. A Jewish lodge, l’Aurore Naissante, was founded in Frankfurt, authorized in 1808 by the Grand Orient in Paris. These ventures, however, hardened the resistance of the indigenous lodges in Frankfurt and in other German towns, and some Masonic fraternities introduced amended constitutions specifically excluding Jews.

In the 1830s German intellectuals who were Freemasons protested against this exclusion, joined by Masons from Holland, England, France, and even by a lodge in New York, who resented the fact that their Jewish members were refused entrance to German lodges. By 1848 some lodges admitted Jews, if not as full members at least as visitors. The years of the 1848 Revolution swept away some of the paragraphs excluding Jews, and the Frankfurt Jewish lodges were now acknowledged by their Christian counterparts. The exceptions were the Prussian lodges, controlled by law from 1798 by the mother lodges from Berlin. In 1840 there were 164 Prussian lodges with a membership of 13,000. No Jew could ever be admitted to these, not even as a visitor, but many members, and sometimes entire lodges, wanted to reintroduce the original English constitution which excluded the attachment of Freemasonry to any specific religion. By the early 1870s most branches admitted Jews as visitors, sometimes even as permanent visitors, and in one of the branches of the Prussian lodges the restrictive paragraph was removed in 1872. A new wave of antisemitism, however, soon swept over the Bismarckian Reich, and by 1876 the lodges were already adopting an antisemitic tone. Those Jews who had been accepted by Prussian lodges left during the antisemitic outbreaks, followed by some liberal-minded Christians who were shocked by the behavior of a society ostensibly committed to the ideal of brotherhood.

Some Freemasons genuinely believed that confessing the Jewish faith was a disqualification for Freemasonry, which they regarded as a Christian institution, a view contested by those who adhered to the original English constitution and called themselves humanistic Freemasons. The struggle between the two trends continued during the 19th century.

In Germany in the 1860s Jews and Freemasons began to be identified as twin agencies responsible for undermining traditional society. This combined criticism of the two groups was transplanted to France, where a succession of books stressed “le peril judéo-maçonnique.” The notion of a sinister alliance between the two played a conspicuous part in the *Dreyfus Affair and it became an antisemitic commonplace. The Protocols of the *Elders of Zion (first published in Russia in 1904) included the idea of a Jewish-Masonic plot to control the world. In Germany up to this time, Freemasonry was still thought of as a conservative and partly antisemitic association. When the Protocols were translated into German and English in the 1920s, Jews and Freemasons were identified as the sinister agents of the outbreak of World War I and of the German defeat. The slogan Juden und Freimaurer became a battle cry of the German right wing, and was utilized by Hitler in his rise to power. During World War II, Freemasons together with “Bolsheviks and Jews” were persecuted by the Nazis. [Encyclopaedia Hebraica]

In the U.S.

Jewish names appear among the founders of Freemasonry in colonial America, and in fact it is probable that Jews were the first to introduce the movement into the country. Tradition connects Mordecai Campanall, of Newport, Rhode Island, with the supposed establishment of a lodge there in 1668. In Georgia four Jews appear to have been among the founders of the first lodge, organized in Savannah in 1734. Moses Michael Hays, identified with the introduction of the Scottish Rite into the United States, was appointed deputy inspector general of Masonry for North America in about 1768. In 1769 Hays organized the King David’s Lodge in New York, moving it to Newport in 1780. He was Grand Master of the Grand Lodge of Massachusetts from 1788 to 1792. Moses *Seixas was prominent among those who established the Grand Lodge of Rhode Island, and was Grand Master from 1802 to 1809. A contemporary of Hays, Solomon *Bush, was deputy inspector general of Masonry for Pennsylvania, and in 1781 Jews were influential in the Sublime Lodge of Perfection in Philadelphia which played an important part in the early history of Freemasonry in America. Other early leaders of the movement included: Isaac da *Costa (d. 1783), whose name is found among the members of King Solomon’s Lodge, Charleston, in 1753; Abraham Forst, of Philadelphia, deputy inspector general for Virginia in 1781; and Joseph Myers, who held the same office, first for Maryland, and later for South Carolina. In 1793 the cornerstone ceremony for the new synagogue in Charleston, South Carolina, was conducted according to the rites of Freemasonry.

The later history of Freemasonry in the United States shows a number of prominent Jewish names, but nothing corresponding to their influence in the earlier period. In 1843 the Grand Lodge in New York addressed a letter to the Mutterloge in Berlin complaining against the refusal of German lodges to accept registered Masons of the American Lodge because they were Jewish. Nonsectarianism in matters of religion has always characterized American Freemasonry, and regulations excluding Jews have not been part of their constitutions, though whether admissions policies have ever been restrictive would be difficult to establish. The apparatus of secrecy, ritual, and regalia which was a feature of *B’nai B’rith in its early years no doubt reflected the influence of Masonic practice as well as a desire to offer a substitute within the Jewish community. [Sefton D. Temkin]

In Israel

In the Masonic world Jerusalem has always been regarded as the birthplace of Freemasonry; according to its tradition,
there were Masonic lodges in the Holy Land at the time of the erection of King Solomon's Temple. Lodges are known there from the middle of the 19th century. During the Ottoman regime, six lodges were established in the country. The first regular one was founded in Jerusalem in May 1873, under the jurisdiction of the Grand Lodge of Egypt. In 1891 another was established in Jaffa under the National Grand Lodge of Egypt. During the years 1910–11 the Grand Lodge of Scotland founded three lodges. During the British mandatory regime, Freemasonry flourished under several jurisdictions, in the main those of the Grand Lodges of Palestine and of Scotland. In 1932, four lodges in Jerusalem, holding under the National Grand Lodge of Egypt, constituted themselves into the National Grand Lodge of Palestine. Later, three of other jurisdictions joined it.

With the establishment of the State of Israel, a number of changes occurred: the lodges holding under the Grand Lodge of England and one holding under the Grand Lodge of Scotland moved out of the area. The remaining lodges of foreign origin and the five holding under the German Symbolic Grand Lodge in Exile joined the National Grand Lodge of Palestine. The five remaining lodges holding under the Grand Lodge of Scotland started to negotiate with their Grand Lodge to consecrate a Sovereign Grand Lodge of the State of Israel, which would encompass all the Masonic lodges in the country. The United Grand Lodge of the State of Israel was constituted in 1953 and since its consecration is the only sovereign grand lodge in Israel. In 1970 it consisted of 64 lodges, with some 3,500 active members drawn from all communities; Jews, Muslims, Christians, and Druze. The activities of the Grand Lodge and its several lodges included a mutual insurance fund; the Masonic old age home at Nahariyyah; Masonic temples all over the country; and a museum and library. By the early 21st century the number of lodges had increased to over 80.

[Abraham Fellman]

FREE SONS OF ISRAEL. U.S. Jewish fraternal order. The organization was founded by nine men in New York City on January 18, 1849. Its purpose was to seek the deletion of clauses in the New York City charter that restricted the appropriation of land for burial purposes, in order to obtain ground for a Jewish cemetery. The order long consisted primarily of German Jews. By 1970 the Free Sons of Israel consisted of 46 self-governing lodges throughout the U.S., with approximately 10,000 men and women members. Each lodge provided membership benefits, which usually included burial, medical, and other benefits. The order consisted of an Insurance Fund and Fraternal Division and was headquartered in New York City. The order maintained a toy distribution program for handicapped children; a scholarship fund for the benefit of members and their families; a Federal Credit Union, which by September 1969, had disbursed $2,000,000 in loans; an insurance fund; travel service; blood bank; athletic association; and a newspaper, The Free Sons of Israel Reporter. Since that time it was the first organization of its kind to donate money to the Holocaust Museum in Washington, D.C., and has also contributed thousands of toys during the holidays to needy children in hospitals and care centers. On its 150th anniversary in 1999 it was commended by Rep. Carolyn McCarthy of New York in the House of Representatives.

FREE WILL, a philosophic and theological notion referring initially to the observation that man is able to choose between a number of possible courses of action, becoming, through his choice, the cause of the action which he selects. Among philosophers some accepted this observation as the true account of how men act, while others held that though man appears to be free to choose, his actions are, in fact, compelled, either by God or by laws of nature. While there were some Jewish philosophers who inclined toward a deterministic position, the majority affirmed that man, through choice, is the author of his own actions. Jewish philosophers generally considered a doctrine of free will as indispensable for accounting for man's moral responsibility for his own actions, and they considered it necessary for explaining God's justice in punishing evil-doers. Closely related to the notion of free will are those of divine providence and divine omniscience.

In Jewish Philosophy

PHILO. The question of the freedom of man's will is discussed in a number of places in the writings of *Philo, but his position on this matter is not sufficiently defined. On the one hand, he clearly posits the freedom of man's will, i.e., the ability to choose between good and evil out of a knowledge of the difference between the two. On the other hand, he expresses the notion that man's choosing between good and evil is predetermined by the struggle between his inclinations and by the influence of external forces. Thus it cannot be said that Philo rejected determinism, since he did assume that all the occurrences in the world are a result of a necessary chain of causes and effects. Again, Philo in a number of places points to the similarity between man's free choice, which was granted to him by God, and the free will of God himself. It is evident that this refers to voluntary action, which is independent of the previously mentioned causal chain. Moreover, Philo's notion of man's free will contains a certain innovation in contrast to traditional Greek philosophy, since Aristotelians, for example, tended to view man's free choice as a defect and deficiency, contingent on his material being. On this point too, however, Philo is not consistent, for he also expresses the opinion that all the activities of created beings, including man, are actually caused by God. Philo's attempts to bridge this contradiction are artificial.

In some places in his writings Philo expresses the opinion that it is impossible to attribute to God's will those sins
which are committed intentionally, while sins against fellowmen which are committed unintentionally sometimes result from natural order, and sometimes are instruments of divine punishment for the sins of the victim. In performing his good deeds, man needs God's help and divine grace, and he cannot ascribe his virtues to himself.

SAADIAH GAON. It appears that according to Philo, there is almost no connection between the notion of man's free will and the problem of divine justice. In contrast, *Saadiah, who was heavily influenced by Mu'tazilite philosophy (see *Kalam), maintains that the idea of God's justice necessarily implies the freedom of man's will. According to Saadiah, it is impossible to think that God could compel a man to do something for which he would later punish him. Furthermore, if man has no freedom of choice, both the righteous and the wicked should be rewarded equally since they would be equally fulfilling God's will. Saadiah brings another proof for free will: man feels that he can speak or be silent, that he can take something or leave it. Similarly, he feels that there is no one to deter him from doing as he wishes (Book of Beliefs and Opinions, ch. 4). Therefore, Saadiah states, in accordance with Mu'tazilite teachings, that every activity is preceded in time by the ability to carry it out or to refrain from doing so. This ability can be viewed as having a real existence, and its being prior to every action is what underlies free choice. Re refraining from performing a certain action is also to be counted as an action in this respect.

Since the notion of man's free will as held by Saadiah results, wholly or in part, from his need to justify God's actions, it necessarily rests on the assumption that man's primary conceptions of good and evil are fundamentally identical with those of God. God, too, acts and is bound to act in accordance with these conceptions and, contrary to the Aristotelians, Saadiah maintains that it is one of the major functions of the human intellect to apprehend these conceptions directly (without any intermediary aid).

Thus it follows that the human intellect is permitted to question God's actions, especially with regard to sins which serve as punishment, such as Absalom's rebellion against David. On the one hand, Absalom sinned in rebelling against his father, and this sin originated in his free will. On the other hand, Absalom's attempted seizure of his father's throne served as punishment for David's sins.

In contrast to the more extreme Mu'tazilites, Saadiah does not see any contradiction between man's freedom of activity and God's prior knowledge of what man will choose to do. This foreknowledge, according to Saadiah, does not limit man's freedom, since it does not cause his actions.

BAHYA IBN PAQUDA. Bahya ibn Paquda (Hovot ha-Levavot, ch. 3) briefly presents the ideas of those who believe that all of man's actions are predetermined by God, as well as opposing views, which maintain that man's will is free. He reaches the conclusion that whoever delves into this question must necessarily fall into error. Therefore, man must both conduct himself like one who believes that his actions are in his own hands (i.e., that he has freedom of choice), and at the same time trust in God like one who is certain that all his actions are predetermined. This view, which rejects a theoretical solution to the problem, stems from a desire to reconcile Saadiah's theodicy with total devotion to God (including the renunciation of one's freedom of action), which is characteristic of the Muslim *Sufis by whom Bahya was influenced.

JUDAH HALEVI. Like Saadiah, *Judah Halevi accepts the notion of the freedom of man's will, which he supports by means of various proofs, some of which are similar to Saadiah's. One such proof is that a man feels that he can speak or be silent, act or refrain from acting. A proof of the existence of free will is found by Judah Halevi in the fact that only those actions which proceed from free choice are considered to be praiseworthy or culpable. Unlike Saadiah, however, he develops, in his discussion of free will, a classification of causes, in which he is strongly influenced by the Aristotelian school of thought.

The first cause of everything, according to Judah Halevi, is God, who produces the intermediary causes, according to which all actions and occurrences are either natural (i.e., resulting from natural order), accidental, or voluntary (resulting from human choice). Even the first two classes are not entirely brought about by necessity, but only free choice belongs completely to the realm of the possible; before the actual deed there is no necessity that it should be done.

Like Saadiah, Judah Halevi also maintains that there is no contradiction between the notion of free choice and the view that God knows in advance what will happen. Like Saadiah, he also maintains that God's foreknowledge cannot be regarded as a cause which brings about the event. Nevertheless, Judah Halevi states that his definition of free will as an intermediary cause, which is produced by the first cause, makes it necessary to see the voluntary acts as being under the influence of divine decree.

Man must conduct himself to the best of his ability. Exaggerated dependence on God may bring him into danger, thus, the warning; "Do not try the Lord." Sometimes, however, God acts without recourse to the intermediary causes, thereby bringing about miracles, such as Moses' being saved from starvation during the 40 days he was on Mount Sinai, or the defeat of Sennacherib.

ABRAHAM IBN DAUD. Abraham *Ibn Daud stated that he wrote his book Ha-Emunah ha-Ramah for the sole purpose of discussing the question of free will. Nonetheless, only a small section of the book (second treatise, ch. 2, ed. by S. Weil, 93ff) is devoted to this problem. Ibn Daud's position with regard to free will is similar to that of Judah Halevi. He classifies causes into divine, natural, accidental, and voluntary. There are some people, he says, in whom good or evil habits are so deeply ingrained that they are actually never required to exercise their free choice; but the majority of people are between these two extremes, and must therefore choose between good and evil. When they choose the good they become worthy of
divine providence, while he who chooses evil is abandoned to his own resources. Ibn Daud is convinced that the existence of the possible in the world — and thus the non-existence of absolute determinism — is a defect. However, it should be pointed out, in this respect Ibn Daud departs from the teachings of his master, *Avicenna, whom he usually follows, since Avicenna believed that everything, including voluntary acts, is predetermined.

MAIMONIDES. In his *Guide of the Perplexed* Maimonides deals with the question of free will in connection with providence (3:17). He distinguishes between five doctrines of providence, the last of which, that of the Torah, states that man can do everything according to his free choice. The question is whether Maimonides was convinced that man's choice and will are determined by prior causes, as was held by Muslim philosophers such as Avicenna, or whether he viewed the choice and voluntary activity of man as being uninfluenced by absolute determinism. There are various passages in the *Guide* which attest to his having followed the second opinion.

God's knowledge, which is only homonymous with human knowledge, controls each and every event, for God knows, "according to the view of our Torah," which of the possible outcomes will ultimately be actualized. This knowledge does not remove the things which are known, including human actions, from the realm of the possible. In his *Mishneh Torah*, which unlike the *Guide*, was intended for a popular audience, Maimonides takes a clearer position with regard to free will: every person may choose to be good or evil. God does not determine in advance whether a particular man will be righteous or wicked. A man can carry out any action, be it good or bad. If this were not so, the entire Torah would be purposeless; the wicked person could not be punished for his sins, nor the righteous be rewarded for his good deeds. In the same way that God instituted order in the universe, so it is His will that man be responsible for his own actions, by which he will be judged. Against the argument that God knows in advance whether a person will be righteous or wicked, Maimonides states that God's knowledge, being so unlike man's, cannot be apprehended by the human intellect. What is known beyond a shadow of a doubt is that man is responsible for his own deeds, and that God neither influences nor decreees that he should act in a certain manner. This is proven not only by religious tradition, but by clear arguments of reason (Yad, Teshuvah ch. 5).

Here, as in Saadiah, there is a clear connection between free will and the notion of God's justice. Unlike Saadiah and Judah Halevi, however, Maimonides does not avoid the difficulty involved in reconciling the idea of free will with the notion of God's omniscience. Contrary to some of his successors, he does not attempt to solve this difficulty, since he believes that its solution lies outside the scope of human understanding.

LEVI BEN GERSHOM. The post-Maimonidean Aristotelians all-inclusive foreknowledge and the idea of free will. *Levi b. Gershom accepts the notion of free will (Milhamot Adonai 3:8), but offers his own solution to the difficulty by his interpretation of God's knowledge. According to him, God knows not only his own essence, but also (as does the active intellect) the general categories, i.e., the order of the universe, which is determined by the position of the stars. It is not necessary, however, that all events actually occurring in the world should correspond to his general order. By virtue of his free will man may act in contradiction to what has been predestined for him by the position of the stars. Thus, the knowledge of God and of the active intellect does not encompass those events which actually come into being, but they know only what should occur. Thus in his notion of free will Gersonides is following both the tradition of Jewish philosophy and Aristotelian Greek philosophy, which did not see absolute determinism as operating in the sublunar world.

HASDAI CRESCAS. A similar determinism underlies the idea of free will of Hasdai *Crescas (Or Adoni 2:5), which in some ways reverts to the Muslim philosophical tradition which held, following Avicenna, that man's choice is absolutely predetermined by a chain of prior causes: internal causes, based in man's character, and external causes, which are the factors influencing him. As Y. Baer has shown (in Tarbiz, 11 [1940], 188–206), Crescas was strongly influenced in this notion by *Abner of Burgos.

Crescas' notion, which is similar to that of Avicenna, is that voluntary actions are possible in themselves, but are necessary in terms of their causes. Crescas regards these actions as being necessary since they are known to God before their execution. He thinks, however, that this idea should not be made known to the masses who might use it as a justification for doing evil, since they will think that the punishment follows the sin in a causal chain of events. Despite this view, however, Crescas distinguishes between voluntary actions and acts carried out under compulsion. It is only proper, according to him, that only the former type should be subject to reward and punishment, and only in relation to this type of action can the commandments and prohibitions of the Torah act as a deterrent. Nevertheless, in this capacity, the commandments and prohibitions do not limit the activity of absolute determinism. On the other hand, man's beliefs and opinions do not depend on his own will and he should therefore not be rewarded or punished for them. [Shlomo Pines]

In Talmud and Midrash
The doctrine of free will, expressed in the idea that man is free to choose between good and evil, was at the core of the Pharisaic outlook. Josephus indeed characterizes the differences between the Pharisees and their Sadducean and Essene opponents as between those who accepted both the freedom of man and divine providence (the Pharisees), those who ascribed everything to chance, denying providential guidance (the Sadducees), and those who denied human freedom,
maintaining a doctrine of predestination (the Essenes; Wars 2:162ff; Ant. 13:171; 18:12ff.). Though some doubt has been cast on Josephus’ account because of his tendency to explain matters in terms of Greek philosophical schools (see G.F. Moore, Judaism vol. 3 p. 139), there seems no grounds for rejecting the main outlines of his characterization (Urbach, Hazal: Pirkei Emanut ve-Deot (1969), 227).

Though both the doctrine of man’s freedom and that of divine providence were adhered to by the rabbis as central to their faith, they do not seem to have been integrated in any systematic way in the talmudic texts which deal with the subject. On the one hand, one finds constant reference to the notion that nothing happens in this world which is not in some way determined from on high: “No man can touch that which has been prepared in advance for his friend” (Yoma 38b); “No man injures his finger here below unless it has been decreed for him on high” (Hul. 7b); “Never does a snake bite … or a lion tear [its prey] … or a government interfere in men’s lives unless incited to do so from on high” (Eccles. R. 10:11); “Everything is in the hands [i.e., control] of heaven except cold and heat” (Ket. 30a); “Forty days before a child is formed a heavenly voice decrees so-and-so’s daughter shall marry so-and-so” (Sot. 2a). On the other hand the whole rabbinic theological structure of reward and punishment turns on the idea that man is free to do evil or good (see Deut. 30:15–19; and Sif. Deut. 53–54). As Josephus mentions, the rabbis wished to maintain both doctrines despite the tension between them, though they were aware of this tension. Before conception the angel appointed over conception takes a seminal drop and asks God: “What is to become of this drop? Is it to develop into a person strong or weak, wise or foolish, rich or poor?” (Nid. 16b). But no mention is made of its becoming wicked or righteous, because “Everything is in the hands of heaven except the fear of heaven” (ibid.).

The combination of these two doctrines within rabbinic theology may be understood, not so much from the philosophical point of view, but rather from the practical point of view which underlies all rabbinic thinking. On the one hand it is necessary to think of the world as under the complete surveillance and control of heaven, a thought which adds to the confidence and trust of the Jew in God, and on the other the individual needs to make his choices and decisions on the assumption that evil and good are both within his grasp. The conceptual integration of these two ideas did not enter rabbinic thought forms. The philosophical problems surrounding God’s foreknowledge and man’s free will are dealt with in an equally cursory way in the texts. The most striking is the saying of Akiva, “Everything is foreseen, but freedom of choice is given” (Avot 3:15). This has been taken by some commentators – Maimonides, for example – to be a statement of the position that though God has foreknowledge of all our acts, still this does not limit our freedom (Maimonides, commentary to the Mishnah, Avot 3:15). Though such a doctrine – that God’s foreknowledge is such as not to be philosophically irreconcilable with human freedom – may have been held in some inchoate form by the rabbis, the saying of Akiva has been interpreted as an assertion that God sees all man’s acts, even those performed in the privacy of his room (see Rashi on Avot 3:15; Urbach, op. cit., 229–30).

In Modern Jewish Thought
For Hermann *Cohen, freedom of the will – in the sense of being unaffected by mechanical causes – does not exist. However, while he relates causation to the individual man, Cohen holds that freedom of the will does exist in the ethical realm when applied to the goal of mankind. We must assume an independent ethical realm of being in which man can make his own decisions in accord with the rules of that realm. The freedom of the individual depends on how far the individual acts in accord with the goal of mankind. Real freedom will exist only in the future – in the ideal society which is mankind’s goal; as of now, freedom is not given but a task to be worked at (Juedische Schriften, 1 (1924), 28).

For Martin *Buber free will is given even though in the realm I–It, causality rules. But in the realm of relation, I–Thou – real decision can, indeed must, take place: “if there were a devil it would not be one who decided against God, but one who, in eternity, came to no decision” (I and Thou (1958), 52, cf. 51f.). For Buber the main problem is not whether there is choice (in the realm of I–Thou), but the quality of the choices made – for good or evil. Since man is free to choose evil he is also free to overcome evil. Modern man because of prevalent ideologies based on scientific materialism or its counterparts (e.g., dialectical materialism) is even more of a believer in blind fate than pagan man. However, according to Buber, man is really free in his depths, and his destiny is not decreed by fate but is his true fulfillment when met in free will: “… the free man has no purpose here and means there, which he fetches for his purpose: he has only the one thing, his repeated decision to approach his destiny” (I and Thou, 66). Freewill is not without influences from outside himself, but only he can really respond to outside events and perceive the unique in each event. External events are preconditioned for his action, not determining factors in his character. The free man responds where others react. Man’s freedom lies not in the absence of external limitations but in the ability, despite them, to enter into dialogue, i.e., I–Thou relation.

A.J. *Heschel makes a distinction in external happenings, dividing them into what he calls “process,” a regular pattern, and “event,” an extraordinary, or unique thing. The essence of man’s freedom is his ability to surpass himself. To a certain extent man is enslaved by his environment, society, and character, but man can think, will, and take decisions beyond these limitations. If men are treated as “processes” freedom is destroyed. Man is free at rare moments; freedom is an “event.” Everyone has the potentiality for freedom, but only rarely achieves it. Free will, the ability to choose between two alternatives, is not the same as freedom, for though the latter includes choice, its achievement lies in the fact that one goes beyond oneself, and disregards the self as its own end.
man must choose, although he can choose even to ignore freedom – which would be to choose evil (see *God in Search of Man* (1955), 409–13; *Man is Not Alone* (1951), 142, 146).

Mordecai *Kaplan believes that the idea of free will as it was formulated in the past is out of step with the spirit of the present which looks for causality in everything. He therefore interprets the doctrine of free will as the expression of the idea that there can be no responsibility without freedom. The problem of freedom therefore becomes a spiritual one having to do with the significance of individuality and selfhood on the one hand, and liberation of personality from self-worship and desire for power, on the other (see *Meaning of God in Modern Jewish Religion* (1937), 270–296).

FREHA BAT AVRAHAM, 18th century Jewish writer. A member of the prominent Moroccan Bar Adiba family, Freha moved to *Tunis* with her father and brother to escape anti-Semitic persecutions in *Morocco*, probably some time in the 1730s. Unusually learned for a woman of her time and place, Freha was said to have been well versed in Torah and to have composed essays and poetry in Hebrew. Some of her poems survive and were first published in Tunis in the 1930s. Freha died in 1756 during the conquest of Tunis by Algerians. Her father built a synagogue in her memory and it became a place of pilgrimage for Tunisian Jewish women who revered Freha as a holy person (*kedoshah*) and invoked her name in times of distress. The synagogue stood until its destruction in 1936 when it was replaced by a new structure that also preserved Freha’s name.

[Frederick B. Andelsky]

FREIBERGER, MIROSLAV/ ŠALOM (1903–1945), last rabbi of Zagreb, Yugoslavia, before the Holocaust. Born in Osijek (Croatia). During his youth he lived in Zagreb, actively participated in Zionist groups, and was a founding member of Ahдут ha-Olim and the Federation of Jewish Youth Organizations. He studied at the Hochschule fuer Juedische Wissenschaften in Berlin, acquiring a Ph.D. in philosophy, and was ordained a rabbi.

On his return to Yugoslavia, he was appointed assistant rabbi in Osijek, then rabbi in Zagreb. He was the first locally born rabbi of the latter city. He published a new prayer book with Croatian translations and published various articles in the Jewish press, particularly in the Zionist weekly *Zidov*.

During the Holocaust, he refused to flee, not leaving his post as deportations and persecutions continued; he kept in touch with the Catholic archbishop, Stepinac (later cardinal), who promised to protect him. He was, however, deported on May 5, 1943, to Auschwitz, together with his wife and the last president of the community, Dr. Hugo Kon, all of them dying there. According to some testimonies, the archbishop tried to intervene, making telephone calls to the Croatian Ustashe police, but to no avail. In the reestablished Zagreb community the cultural association has been named after him.

FREIBURG IM BREISGAU, city in Baden, Germany. Jews were imprisoned there in 1230 by the town's overlord, and released by King Henry VII. Rudolf I of *Hapsburg levied taxes from the Jews there in 1281. In 1300 the counts of Freiburg ratified the ancient rights of Freiburg Jewry. The rights to their taxes, which had been given for a short time to a Basle burgher, were restored in 1310 to the counts' authority, who granted the Jews a privilege in 1338. About this time the Jews owned 15 houses, near the synagogue and in other streets, shared by several families. The community, except pregnant women and children, was massacred by burning after one month's imprisonment, during the Black Death (January 1349). Emperor Charles IV permitted the counts to resettle Jews in Freiburg in 1359. In 1373 a physician, master Guteleben, was admitted. In 1394 the Austrian overlord ordered that Jews should wear a special garb, with a coat and cap in dull shades; prohibited them from leaving their houses during Holy Week and from watching the religious procession; and set the weekly interest rate at 0.83%. In 1401 the Jews were expelled from the city although individual Jews were admitted from 1411 to 1423; the expulsion became final in 1424 but Jews continued to live in the nearby villages and towns. In 1453 they were prohibited from doing business in the city.

Some Hebrew works were printed in Freiburg in the 16th century as the result of difficulties with Hebrew printing in Basle. Israel *Zifroni printed a number of Hebrew books for Ambrosius Froben, among them Benjamin of Tudela's *Massaot (1583), Jacob b. Samuel Koppelman's *Ohel Ya'akov, and the first edition of Aaron of Pesaro's *Toledot Aharon (1583–84). In 1503 and 1504, editions were issued of Gregorius Reisch's *Margarita Philosophica including a page with the Hebrew alphabet in woodcut.

By the early 17th century Jews were able to enter Freiburg on business, accompanied by a constable. The first Jew received a medical degree from Freiburg University in 1791. There were 20 Jews living in Freiburg in 1846. Following the Baden emancipation law of 1862 a congregation was formed in Freiburg in 1863, and a synagogue was consecrated in 1885. It was burned down under the Nazis in 1938. The first rabbi, Adolf *Lewin, the historian of Baden Jewry, was succeeded by Max *Eschelbacher and Julius Zimmels. The legal historian Heinrich Rosen (1855–1927) was active in Jewish community life. Also of note at Freiburg University were the philosopher Edmund *Husserl, the economist Robert Liefmann, the jurist Otto Lenel, Fritz Pringsheim, the classical papyrologist, and the biochemist Siegfried Tannhauser. From 1933 to 1935, along with six other professors, they were dismissed (Pringsheim returned from England in 1945). The Jewish population numbered 1,013 in 1903; 1,320 in 1910 (1.58% of the total), 1,399 in 1925 (1.44%), and 1,138 in June 1933 (1.5%).

After the Nazi rise to power many Jews left the city. All 21 Jewish members of the faculty at the university were dismissed from their positions in 1933–35. Among those dismissed were Hans Adolf *Krebs, who later won the Nobel Prize for medicine in 1953. Jewish students were reduced in number from 183 to 54. Most Jewish businesses were Aryanized by November 1938. Polish Jews were expelled to the Polish border in October 1938 and on Kristallnacht the synagogue was destroyed and 100 Jewish men were sent to Dachau. In May 1939, 474 Jews remained. In 1940, 350 Jews were expelled from Germany and interned by the French in the *Gurs camp; another 30 were deported to Theresienstadt on August 23, 1942, as were almost all survivors from Gurs. After the war 15 survivors returned to Freiburg, and 78 displaced persons lived there in 1945. There were 58 Jews living in Freiburg in 1950, 111 in 1960, and 225 in 1968. A new prayer hall was consecrated in 1953. The university acquired the grounds where the synagogue once stood; it is commemorated by a memorial plaque. The Freiburger Rundbrief, a journal dedicated to Christian-Jewish understanding, was published in Freiburg. A new community center with a synagogue and a mikveh was inaugurated in 1982. A door from the old synagogue was integrated into the building, which was sponsored by the City of Freiburg and the Land (federal state) of Baden-Wuerttemberg. The community numbered 214 in 1989. Owing to the immigration of Jews from the former Soviet Union it increased to 700 in 2005. In 1998 the egalitarian Jewish Chawurah Gescher was founded in Freiburg. It was a member of the Union of Progressive Jews in Germany from 2004. Its membership numbered 30 in 2004.

FREIDLINA, RAKHIL KHATSKELEVNA (1906–1986), Russian organic chemist. She graduated from Moscow University in 1930 and worked until 1934 at the Scientific Research Institute of Insectofungicides. In 1935–39 and 1941–45, she served at the Institute of Organic Chemistry of the U.S.S.R. Academy of Sciences; in the intervening period she was at the Moscow Institute of Fine Chemical Technology. In 1945 she was ap-
pointed chief of the laboratory of the Institute of Organometallic Compounds of the U.S.S.R. Academy of Sciences, and in 1958 became a corresponding member of the Academy. She contributed many papers to Soviet scientific journals. Some dealt with homolytic isomerization of organic compounds in solution, and her work on telomerization led to the development of the chemical precursors of some of the synthetic fibers now being made in Russia. Most of her work was with organometallic compounds. She was the author of "Sinteticheskiiyi metody v oblasti metalloorganicheskikh soyedineniy myshy-aka ("Synthetic methods … Organonoar senic Compounds," 1945) and coauthor of Khimiya kvazikompleksnykh metalloor- ganicheskikh soyedineniy iyavanleniya tautomerii ("Chemistry of Quasicomplex Organometallic Compounds …," 1947).

[Samuel Aaron Miller]

**FREIDUS, ABRAHAM SOLOMON** (1867–1923), U.S. librarian and bibliographer. Freidus was born in Riga, Latvia. He lived in Paris, in the Palestinian agricultural settlement of Zikhron Ya’akov, and in London before going to New York in 1889. Freidus completed a course in librarianship at Pratt Institute in 1894 and began working as a cataloger. In 1897 he was appointed first chief of the Jewish Division of the New York Public Library, where he developed the classification scheme used for Judaica; it was adopted for many other large American Judaica collections as well. Because of his remarkable bibliographical knowledge, Freidus was an indispensable guide to scholars in locating materials. The editors of the 12-volume *Jewish Encyclopedia* (1901–06) were especially indebted to him.

**BIBLIOGRAPHY:** Studies in Jewish Bibliography ... in Memory of Abraham Solomon Freidus (1929), contains a list of writings by and about Freidus, xi–xvii; N. Ausubel, in: *Morning Freiheit* (Oct. 28, 1944), section 2, pp. 4–6 (Eng.).

[Simcha Kruger]

**FREIER** (née Schweitzer), **RECHA** (1892–1984), founder of *Youth Aliyah*. Recha Freier was born in Nordeney, Germany, and became a teacher and scholar of folklore. In 1932 she conceived the idea of Youth Aliyah and founded the first organization for the resettlement and agricultural training of young people in Palestine. After Hitler’s rise to power, the idea was endorsed by the Zionist Congress of 1933, and the movement became a large-scale operation. After settling in Palestine in 1941, she founded the Agricultural Training Center for Israel Children for the education of underprivileged children in kibbutz boarding schools. She founded the Israel Composers’ Fund in 1958 to foster original musical compositions, and, in 1966, established the Testimonium Scheme, a project aimed at recording major episodes in Jewish history in words and music based on authentic texts. In 1981 she was awarded the Israel Prize. She wrote the texts for two oratorios, *Massadah* and *Yerushalayim*. Her book *Let the Children Come: The Early History of Youth Aliyah* was published in 1961.

**BIBLIOGRAPHY:** Tidhar, 6 (1955), 2668–69.

[Arye Lipshitz]

**FREIFELD, ABRAHAM** (1921– ), Chilean sculptor. Born in Romania, Freifeld immigrated to Chile in 1930 where he graduated in engineering and art. As a sculptor he preferred to work in metal, which he felt allowed him to express the inner tension he strove to achieve in each piece of sculpture. In 1960 he was appointed professor of sculpture at the Fine Art School of the University of Chile. In 1969 he was named director of the Institute for the Extension of Fine Arts at the University of Chile.

**FREILICH, MAX MELECH** (1893–1986), Australian manufacturer and communal leader. Born in Lesko, Poland, Freilich went to Australia in 1927. From 1932 he was managing director of the Safre Paper industry in Sydney. An active Zionist, he was president of the Australian Zionist Federation (1953–57) and of the Australian Keren Hayesod (1942–57). He was also vice president of the New South Wales Jewish Board of Deputies and chairman of the board of governors of the King David school. He published *Twenty-Five Years of Keren Hayesod* (1946).

**FREIMAN**, Canadian family. **MOSES BILSKY** (1831–1923) was a Canadian pioneer figure and an ancestor of the Freiman family by way of his daughter Lillian. He was born in Kovno and at the age of 14 went to Montreal with his father, moving to Ottawa in 1857. In the years 1861–67 he traveled throughout North and Central America, going to the Caribou gold fields in British Columbia overland by way of the isthmus of Panama, and enlisting in the Union forces in the U.S. Civil War. He returned to Ottawa and entered the jewelry business. There he founded the Adath Jeshuron synagogue in 1895, helped found the city’s first Zionist Society in 1899, and led in community activity.

**LILLIAN** (1885–1940) was born in Mattawa, Ontario. In 1903 she married Archibald J. Freiman (see below) of Ottawa. She was identified closely with Zionist work in Canada all her life and attended the third Canadian Zionist convention in Montreal at the age of 17. From 1919 to her death she was president of Canadian Hadassah. She took the initiative in 1920–21 in bringing 150 Jewish pogrom orphans to Canada and touring her native country to raise funds and recruit foster parents. In 1918, at the time of the great influenza epidemic, the mayor of Ottawa placed her in charge of efforts to combat the disease. She played a prominent and stimulating role in a wide range of activities of a nonsectarian and Jewish nature, involving relief and succor to others, locally and overseas, Jew and gentile.

**ARCHIBALD JACOB FREIMAN** (1880–1944) was a Canadian merchant and Zionist leader. He was born in Wirballen, Lithuania, and went to Hamilton, Ontario with his parents in 1893. In 1902 he settled in Ottawa, where he established a department store. He was president of the Adath Jeshuron
synagogue from 1903 to 1929 and from 1920 to his death was national president of the Zionist Organization of Canada.

Their son LAWRENCE FREIMAN (1909–1986), a merchant, was born in Ottawa. He served twice as president of the Zionist Organization of Canada, and was honorary president of the Federated Zionist Organization of Canada, and was a member of the board of governors of the Weizmann Institute of Science at Rehovot. Freiman played a leading role in cultural activities in Canada, and was a director of the Ottawa Philharmonic Orchestra, the Canadian Festival of Arts, and the National Arts Center in Ottawa.

[Ben G. Kayfetz]

FREIMANN, family of rabbis and scholars, ISAAC FREIMANN (d. 1886), who was born in Cracow, edited from a manuscript Abraham b. Hiyya's Hegyon ha-Neffesh ha-Azuval (1860). His son ISRAEL MEIR FREIMANN (1830–1884) served as rabbi at Filehne (Wielien) and Ostrowo (Ostrow-Wielkopolski), both in Poznania, and declined an invitation to succeed Z. Frankel as head of the Breslau Jewish Theological Seminary. He prepared a critical edition of Midrash Ve-Hizhir (1875–80), and responsa of his were published in Binyan Ziyyon (1868), the responsa collection of his father-in-law Jacob Etlinger, and elsewhere. His son was Aron *Freimann, his nephew and son-in-law was Jacob *Freimann, and Abraham (Alfred) *Freimann was his grandson.

FREIMANN, ABRAHAM HAYYIM (Alfred; 1889–1948), jurist and rabbinical scholar. Freimann, born in Holleschau (Holesov), Moravia, the son of Jacob *Freimann, studied rabbinics with his father and law in Frankfurt on the Main and Marburg. He served as a magistrate at Koenigsberg and county judge at nearby Braunsberg until the Nazis took power, when he immigrated to Palestine. There he at first worked for an insurance company, but in 1944 he began lecturing on Jewish law at the Hebrew University in Jerusalem. In 1947 Freimann was appointed head of an advisory committee for Jewish law concerning personal status in the proposed State of Israel. He was murdered by Arabs who attacked a convoy taking university staff to Mount Scopus.

Freimann’s scholarly work was concerned with medieval rabbinics; later he devoted his efforts to the adaptation of Jewish law to modern conditions in a Jewish state. He was about twenty when he published two important studies on *Asher b. Jehiel and his descendants (in: JLLG, 12 (1918), 237–317; 13 (1920), 142–254). He edited a series of important responsa collections by Maimonides and members of his family: Teshuvot ha-Rambam (1934); Teshuvot R. Maimon ha-Dayyan Avi ha-Rambam (1935); Teshuvot Rabbenu Avraham ben ha-Rambam (1938); Teshuvot ha-R. Yehoshua ha-Naggid mi-Benei Banav shel ha-Rambam (1940); and Teshuvot ha-Rambam le-R. Yosef ha-Malavavi Talmid (1940); and one by Rashi, Teshuvot Rashi (1941). Freimann also prepared a second edition of Filipowski’s edition of Sefer Yuhasin by Abraham *Zacuto with an introduction and indexes (1925, repr. 1965). His major work Seder Kiddushin ve-Nissi in Aḥarei Haṭmutah (1945; repr. 1964), deals with changes in Jewish marriage laws after the talmudic period.

FREIMANN, ARON (1871–1948), German scholar, historian, and bibliographer. Freimann was born in Filehne (Wienel), Poznan, the son of the local rabbi, Israel Meir Freimann. In 1898 he began working at the municipal library in Frankfurt, and under his direction the library in Frankfurt assembled one of the richest collections of Judaica and Hebraica in the world. He retired in 1933 when the Nazis came to power and immigrated to the United States in 1938. Between 1939 and 1945 he served as consultant in bibliography to the New York Public Library.

An industrious and erudite scholar, Freimann was the author or editor of scores of books and articles. In the field of bibliography one of his most important works is a systematic catalog of the Judaica collection of the Stadtbibliothek in Frankfurt on the Main, Stadtbibliothek Frankfurt a. M. Katalog der Judaica und Hebraica (vol. 1: Judaica, 1932); unfortunately, he was unable to complete the second part of the catalog, which was to have included the Hebraica collection. In Thesaurus Typographiae Hebraicae Seculi XV (1924–31), Freimann provided a complete collection of samples of facsimiles of all known Hebrew incunabula; this work also remained incomplete, missing the introduction and the discussion of the facsimiles. A most useful bibliographical reference tool is his A Gazetteer of Hebrew Printing (1946), in which he listed all the cities where Hebrew books were known to have been printed. For many years Freimann was working on a union catalog of all Hebrew manuscripts, but this work also remained incomplete. Freimann’s handwritten cards, representing the material culled from all major and minor collections of Hebrew manuscripts, were photographically reproduced after his death as Union Catalog of Hebrew Manuscripts and Their Location (1964). Between 1900 and 1922 Freimann was the editor of the journal Zeitschrift fuer Hebräische Bibliographie, in which many of his bibliographical articles appeared.

Among Freimann’s important historical works are Geschichte der Israelitischen Gemeinde Ostrowo (1896); a history of the Jews of Frankfurt in collaboration with I. Krakauer, Frankfurt (Eng., 1929); an edition of H.J.D. Azulai’s diary, Maqal Tov ha-Shalem (1921–34); and a collection of texts relating to Shabbetai Zevi, Inyanet Shabbetai Zevi (1921; index 1931). He was coeditor of Germania Judaica, a collection of monographs on medieval German Jewish communities (2 vols., 1917–34, 1963–68). From 1929 to the Nazi take-over he was also one of the editors of Zeitschrift fuer die Geschichte der Juden in Deutschland. Of his works in other fields his edition
of L. Zunz's *Die synagogale Poesie der Juden* (1920) is particularly valuable. Freimann supplied many references and indexes to this classic work, making it much more useful than it had been previously. He also edited several Festschriften in honor of scholars, such as *Berliner Festschrift* (1903), *Brannon Festschrift* (1919), and *Simonsen Festschrift* (1923).

In addition to his scholarly activities, Freimann was active in Jewish communal life and in educational institutions. He was affiliated with the *Mekizei Nirdamim* society from 1909 to his death, serving as president and board member. He owned a private collection of rare Hebraica and Judaica, part of which he sold to the library of Hebrew Union College in Cincinnati. On the occasion of his sixtieth birthday a Festschrift was edited in his honor by A. Marx and H. Meyer (publ. 1935), which included a short poem by H.N. Bi- alik and contained a complete bibliography of his writings to that time.

[Menahem Schmelzer]

**FREIMANN, JACOB** (1866–1937), German rabbi, scholar, and editor. Freimann studied under Simon Sofer (see *Sofer*) and Akiva Kornitzer in his native Cracow, and under his uncle Israel Meir *Freimann at Ostrowo, as well as at Berlin and Tuebingen. He married Israel Meir Freimann's daughter. Jacob Freimann served as rabbi in Moravia at Kanitz (Dolni Kounice) and Holleschau from 1890 to 1913. In 1913 he succeeded Wolff Feilchenfeld as chief rabbi of Posen. In 1928 he joined the rabbinate of the Berlin Jewish community. Freimann was a member of the board of *Mekizei Nirdamim, editor of the department of rabbinics for the Eshkol encyclopaedias of Judaica in German and Hebrew, and lecturer on rabbinics and Jewish history at the Berlin Rabbinical Seminary. Freimann's scholarly interest was medieval rabbinical literature. Particularly important in this field are his editions of Joseph b. Moses *Leket Yosher* (1903–04), Nathan b. Judah's *Sefer Mahkim* (1909), *Ma'aseh ha-Ge'onim* (1909), and *Siddur Rashii* (1911) which was prepared by S. *Buber but completed by Freimann. He also contributed an introduction and indexes to the second edition of Wistinetzkji's edition of *Sefer Hasidim* (1924).

[Hirsch Jacob Zimmels / Jacob Joshua Ross]

**FRELENG, ISADORE “FRIZ”** (also known as “I.J.”; 1905–1995), U.S. animator, cartoonist, director. Born in Kansas City, Missouri, Freleng began his career in animation in his hometown, working for fellow Kansas City native Walt Disney. When Disney moved to Hollywood, Freleng followed, teaming up with experienced cartoonists Hugh Harmon and Rudy Ising. The three concocted the cartoon character Bosko, a Mickey Mouse-like hero, who became a star in Warner Brothers' new animated series *Looney Tunes*. When Harman and Ising left Warner Brothers in 1933, Freleng remained and was promoted to director. In the film *I Haven’t Got a Hat* (1935), Freleng introduced Porky Pig to the world, one of the first cartoon characters to have a distinctive personality. Except for a brief stint at MGM in the late 1930s, Freleng remained with Warner Brothers for the next decades of his career. Best known perhaps for redesigning and introducing such immortal Warner Brothers’ characters as Yosemite Sam and Speedy Gonzales, Freleng also made the beloved short film *You Oughta Be in Pictures* (1940) in which Daffy Duck convinces Porky Pig to quit Warner Brothers and find work elsewhere. Freleng himself followed Daffy Duck’s advice when Warner Brothers closed its doors in 1964 and Freleng and animator Dave DePatie opened their own operation in the San Fernando Valley, where they were commissioned to create the opening sequence of *The Pink Panther*. Freleng and DePatie came up with the iconic cool cat, whom they were able to transfer successfully to television in the years that followed.

[Casey Schwartz (2nd ed.)]

**FRENCH LITERATURE.**

**Biblical and Hebraic Influences**

The influence of the Hebrew Bible and other Jewish writings on early French literature is limited. With the exception of the 12th-century *Jeu d’Adam*, an Anglo-Norman verse-play, and the 15th-century *Mistère du Vieux Testament*, only New Testament themes appear in medieval French plays, poetry, and stories. However, there was one interesting case of “infiltration”: the *Midrash and aggadah became important sources for the French fabliaux*. Fables, parables, and didactic tales were not rare in talmudic literature, and they remained part of the Jewish literary heritage throughout the Middle Ages. Indian tales and Aesop’s fables mingled with talmudic “Fox Fables” (*Mishlei Shu’alim*), as is testified by compilations of Jewish writers such as *Berechiah b. Natronai ha-Nakdan and Isaac b. Joseph of *Corbeil. These compilations, translated into Latin by baptized Jews such as *Petrus Alfonsi and John of Capua, thus passed into the French heritage in the form of the fabliaux*. Literary transpositions also occurred, the medievalist Gustave Cohen being the first to note that the midrashic tale of the blind man and the lame (Sanh. 91a; Lev. R. 4:5) – which has a parallel in Aesop – had become the French story of St. Martin. The “Three Rings” tale was the source of the anonymous 13th-century *Dit du Vrai Aniel*, a Christian author transforming the old fable into propaganda for the Crusades. This tradition elsewhere influenced *Boccaccio and, later still, Lessing.

In the Middle Ages biblical knowledge was primarily the preserve of the clergy, and it was through churchmen that Hebrew words, biblical expressions, idioms, and proverbs found their way into the French language from the 12th century right
up to the 17th. As elsewhere in Europe, various Hebrew terms were absorbed by way of Greek and Latin. Certain French borrowings from Hebrew extend or modify the original meaning: tohu-bohu (chaos, disorder); capharnaum (lumber room); jérémiaide (lament); moise (wicker cradle); sabbat (tumult, uproar); and cabale (conspiracy, intrigue). Hebrew idioms from the Bible found their way into French, as into other European languages: trouver grâce (find favor), amis de Job (Job’s comforters), bouc émissaire (scapegoat). The inclusion of Hebraisms was given a new impetus with two versions of the Bible: the Bible Complète of the University of Paris (c. 1235) and the Bible Historiale of Guyart des Moulins (c. 1295) which was not a literal translation. Until the Reformation, these were the only full versions of the Scriptures in French.

THE RENAISSANCE. Apart from some stray references in the works of François Villon (c. 1431 – c. 1463), biblical subjects only make an appearance in French literature in the 16th century, under the combined impact of the Renaissance and the Reformation. At the same time there sprang up a widespread interest in the Hebrew language and the original biblical text. In 1530, Francis I established the Collège des Trois Langues (later renamed Collège de France) as a center of learning independent of the intolerant Sorbonne. Readers in mathematics and in Latin, Greek, and Hebrew were appointed in accordance with the humanistic principles of the Renaissance, and such was the liberalism of the era that the chair of Hebrew was first offered to a professing Jew, Elijah (Bahur) *Levita, who declined the honor because of the exclusion of his fellow-Jews from the French realm. The post was not in fact given to a Jew until the late 19th century.

Humanism blazed a trail that was also followed by the new religious trends of the 16th century – early liberal Evangelism and Calvinism. The "return to the sources" inspired new Bible translations by Jacques Lefèvre d’Etaples (1523–30), Robert Olivétan (1535), a relative of John *Calvin and Sébastien Châteillon (1551). The Protestant poet Clément Marot composed beautiful metrical renderings of 50 of the Psalms (1545, and much reprinted), which John Calvin later accepted in his reformed hymnal, and which inspired many later imitations. François Rabelais placed considerable store on the study of the holy tongue and of the "thalmudistes et cabalistes," although he himself probably knew no Hebrew.

Later in the same century, Hebrew studies were pursued in a more systematic manner, by both Catholics and Protestants. Pontus de Tyard, a neoplatonist poet and later a bishop, published a French translation, De l’Amour (1551), of the Dialoghi d’Amore by Judah *Abrabanel (Leone Ebreo). Some leading French Christian Hebraists were Guillaume *Postel; Gilbert *Génébrard; Blassé de *Vignère; and Guy *Le Fèvre de la Boderie, a Bible scholar who wrote epic French verse full of kabbalistic references and Franco-Hebraic conceits. Two outstanding Protestant poets whose works owe much to biblical inspiration were Salluste *Du Bartas and Agrippa d’Aubigné, a militant Calvinist whose dramatic and satirical epic, Les Tragiques (1577–94), describes the sufferings of the French Protestants in a series of apocalyptic visions. Likening his coreligionists to the Children of Israel, d’Aubigné prophesies God’s final vengeance on their persecutors.

Biblical drama also makes its appearance in the 16th century. Sàil le Furieux (1572) by Jean de la Taille presents the theme of man’s inability to understand the mysterious designs of Providence. Against God’s command, Saul has spared the life of Agag, king of Amalek, and must be punished. This was a direct precursor of the classic French tragedy. In Sédécie, ou les Juives (1883), a drama in the Greek style by Robert Garnier, man’s disobedience is again punished by God. Ignoring Jerusalem’s injunction, Sédécie (Zedekiah) has sought an alliance with Egypt. The country and the Temple are destroyed, the king taken into captivity and blinded. Sédécie recognizes his sins and acknowledges God’s justice. The chorus of Jewish women echoes the king’s lament in strains reminiscent of Jeremiah. Minor biblical dramas of the period include: Abraham Sacrifiant (1576) by Théodore de Bèze; Jephté (1657) by Florent Chrestien, translated from the earlier Latin Jephtes (1554) by George Buchanan (“the Humanist”); and Aman and David (both 1601) by the talented Huguenot playwright and economist Antoine de Montchrestien.

THE CLASSICAL AGE. The 17th century manifests a dual character: classical and Christian. Naturally enough, biblical or post-biblical influences are felt primarily among writers of Christian inspiration; others return to the sources of classical antiquity. Among the great dramatists, Jean *Racine, deeply influenced by his Jansenist training and sympathies, was the only one for whom the Bible provided both subject matter and poetic inspiration. Racine’s two biblical tragedies, Esther (1689) and Athalie (1691), rank among the great masterpieces of French drama. Two great French Christian writers of the century, Jacques-Bénigne Bossuet and Blaise *Pascal, were exceptionally aware of the importance of the biblical heritage. Bossuet, in his Discours sur l’Histoire Universelle (1681), presents a spiritual perspective of history in which the paths are traced by a mysterious but wise Providence. Here Israel is chosen for a particular mission to the world, and other nations of antiquity, however powerful and important they might appear in relation to the Jews, are but tools used by God to chastise or protect His chosen people. Israel is thus seen as the cornerstone of world history. Bossuet’s biblical leanings are apparent in the lyrical and grandiose eloquence of his literary style; not only did biblical rhythm and imagery strongly influence all his works (including the sermons and the Oraisons Funèbres, 1663): he consciously transposed biblical passages and adapted them to contemporary circumstances. Pascal too, in his passionate search for God, saw in the Jews an exceptional and mysterious people, appointed by Providence to preside over human destiny. The Bible was to be read, studied, and interpreted symbolically, and Pascal drew heavily on the Midrash, which he considered a key to the understanding of the Scriptures. In his Platonici Dialogues sur l’Éloquence (1718), Fénelon...
regarded the Bible as a primary source of poetic inspiration and praised Judaism's religious purity.

In the 18th century, the "Age of Enlightenment," men like Denis *Diderot found it convenient to ridicule both the Bible and the Jewish people as an indirect method of attacking Christianity. Equally if not more virulent was *Voltaire, whose attitude was also more complex. Personally unfriendly toward the Jews, Voltaire, in his *Dictionnaire Philosophique (1764), simultaneously attacked their alleged religious fanaticism and argued that Christians ought logically to practice Judaism, "because Jesus was born a Jew, lived a Jew, died a Jew, and said expressly that he was fulfilling the Jewish religion." Voltaire also condemned anti-Jewish persecution in his *Sermon du Rabin Akib (1764). Another 18th-century writer, the atheistic Baron d'Holbach, strove in his *Esprit du Judaïsme (1770) to prove that the Law of Moses was basically immoral, serving only to justify Jewish political ambitions. Although some other writers of the period, notably *Montesquieu and *Rousseau, made sympathetic references to Jews, they were not especially inspired by biblical or later Hebrew literature.

**The Romantic Age.** The 19th-century Romantic movement brought with it a revival of interest in, and sympathy for, religion and Christian values. French poets displayed a noticeable reverence for the Bible and found inspiration in the Holy Land. Thus, François René de Chateaubriand praised the Bible's uniqueness and universality in his *Génie du Christianisme* (1802). In *Itinéraire de Paris à Jérusalem* (1811), he wrote a highly romanticized account of his journey to the Orient extolling the Jews' will to survive and their tenacious adherence to their heritage. Alphonse de Lamartine, a leading Romantic poet, acknowledged his debt to the Psalms and wrote a biblical drama, *Salîl* (1818). After a grand tour which included Palestine, his *Souvenirs*, Impressions… Pendant un Voyage en Orient (1835) looked prophetically to the future: "Such a land, resettled by a new Jewish nation, tilled and watered by intelligent hands… would still be the Promised Land of our day, if only Providence were to give it back its people, and the tide of world events bring it peace and liberty."

Two other great French poets who were profoundly influenced by the Bible were Alfred de Vigny and Victor Hugo. Vigny, who knew the Bible by heart, based one-fifth of his poems on biblical themes and filled them with Hebrew images and expressions. They include "Moïse," "La fille de Jephté" (in *Poèmes Antiques et Modernes*, 1826) and "La colère de Samson" (in *Les Destinées*, 1864). Like all Vigny's heroes, the biblical figures are universal symbols - men of genius whose greatness condemns them to eternal solitude. Hugo was the preeminent biblical poet among the French Romantics. Despite his estrangement from Christian orthodoxy, Hugo constantly turns to biblical themes in such poems as "La Conscience," "Booz endormi," and "Salomon" (in *La Légende des Siècles*, 1859–83); "Le Glaive" (Fin de Satan, 1887); and "L'Aigle" (Dieu, 1891). He eulogized Isaiah and Ezekiel in *William Shakespeare* (1864); sought biblical support for his campaign against Napoleon II; and injected some basic knowledge of the Kabbalah (probably gained from his Jewish admirer, Alexandre *Wéill) into *Les Contemplations* (1856).

Of the prominent 19th-century French novelists, Gustave Flaubert, another great traveler, recreated in his last work, *Hérodiade* (the third of his *Trois Contes*, 1877), the Judea of the Roman era, the Dead Sea fortress of Machaerus, and the dramatic story of John the Baptist. Pierre Loti, a writer of Huguon descent, wrote two travel books, *Jérusalem* (1895) and *La Galilée* (1896).

**The 20th Century.** In more recent French literature, from the late 19th century onward, biblical and Christian inspiration again go hand in hand. Catholic writers such as Charles *Péguy, Léon* *Bloy, and Paul *Claudel meditate on the Scriptures, and their poetic works (whether written in prose or verse) often take on a prophetic tone as they apply the biblical prophecies to contemporary events. Two biblically inspired dramas by Jean Giraudoux are his *Judith* (1932), a psychological tragedy; and *Sodome et Gomorrhe* (in *Théâtre complet*, vol. 10, 1947). In a class of his own stands the novelist and playwright André Gide, whose drama *Salîl* (1898, publ. 1922) strips all heroism from its central character.

Some French Jewish poets of the early 20th century who rediscovered the Bible as a source of inspiration were Edmond *Fleg (Ecoute Israël, 1913, 1935), André *Spire (Poèmes juifs, 1919), Henri *Franck (La danse devant l'Arche, 1912), Albert *Cohen (Paroles juives, 1921), Gustave *Kahn (Images bibliques, 1929), and Benjamin *Fondane (L'Exode). Two important poets of the post-World War 11 era, both Catholic, both intoxicated with the Bible, were Pierre Emmanuel and Jean Grosjean. Emmanuel's mystical lyrics, reminiscent of Agrippa d'Aubigné and Victor Hugo, draw their images from the biblical text, and his vision (cf. *Babel*, 1951), like theirs, is prophetic, sometimes apocalyptic. Grosjean borrows almost all his themes from the Bible and the Kabbalah. The titles of his verse collections are eloquent: *Le livre du juste* (1952), *Fils de l'homme* (1953), and *Apocalypse* (1962). Other Jewish writers who sought inspiration in Jewish sources were Emmanuel *Eydoux, Arnold *Mandel, Armand *Lunel, Elie *Wiesel, and in Israel, three poets writing in French: Joseph *Milbauer, Jean *Loewenson, and Claude *Vigée."

**The Image of the Jew**

The appearance of Jewish characters in French literature is determined by the socio-historical role of the Jews in France, where they lived from Roman times until the expulsion of 1394. In medieval French literature, Jews generally appear in an unfavorable light. This attitude changes when they convert. Thus, in the 12th-century *Pèlerinage de Charlemagne à Jérusalem*, the Jew is presented like other "infidels" as a candidate for baptism. Confronted with the noble figure of the emperor, he readily accepts Jesus. In the 13th-century *Despoutaison de la Synagogue et de la Sainte Eglise*, a play by Clopin which may reflect the Paris disputation of 1240, the representative
of the Synagogue (i.e., the Jews) is a skillful woman debater who stubbornly refuses to acknowledge the superiority of the Church. A rare exception among medieval writers is Peter Abelard (1079–1142), who composed a dialogue between a Jewish and a Christian philosopher which was quite favorable to Judaism.

The Jew's first appearance as a figure in French society in the 13th century is reflected in the literature of the period. The satirical poet Gautier de Coinky is particularly virulent against Jews, portraying them as not merely stubborn and blind, but also as rich oppressors of the poor. Two miracle plays, Le Juif et le Chevalier and Le Miracle d'un Marchand et d'un Juif, present a stereotyped Jew, crudely anticipating Shakespeare's Shylock. In later mystery plays, the Pharisees represent the "hypocritical Jews," the "Christ-killers," filled with hatred and inspired by Satan. The performance of these plays in Paris was finally banned in 1548.

Throughout the 16th and 17th centuries the Jew is, by and large, absent from the French scene, and is virtually ignored by writers of that period. Even the liberal Michel de Montaigne (see below), a writer of partly Jewish descent who had personal contact with Jews in Italy, makes only a few random allusions to them in his Essays. Racine, however, defended the Jews in his drama Esther, where the heroine pleads their cause. The Jews, declares Racine, are peace loving, humble, and loyal to God and the king. Pascal also expresses his admiration for a Jewish philosopher, Peter the Great's agent in France, whom he calls "Roussé." He says prophetically, "until the day they have their own free state, schools, and universities, where they can speak and argue without fear. Then, and only then, shall we know what they really have to say."

The Jew in Fiction. Throughout the 19th century the Jew's growing importance in French society found its reflection in literature; but the image of the Jew in plays and novels generally lacks nuance. George Sand, in her drama Les Misérables (1866; originally Le Château des Désertes, 1851), introduces a Jewish capitalist, Samuel Bourset, who is merely a Shylock in modern dress. Jews like Gobseck and Elie Magus in the giant (17 volumes) cycle, La Comédie Humaine, of Honoré de Balzac, are largely stereotypes: bankers and art collectors, generally crafty, rapacious, and miserly, who only partially redeem themselves by their devotion to their womenfolk. Only Balzac's "beau Juif," Naphtaly, is a figure of chivalrous virtue. In Manette Salomon (1867), a novel by the Gon-court brothers Edmond and Jules, the Jewish heroine is unsympathetically treated. She is the corrupting influence who forces the artist Caridis to abandon his ideals. Les Rois en exil (1879), by Alphonse Daudet, is a variation on the same theme.

In his dramas, Victor Hugo at first sacrificed truth to popular prejudice. The Great Protector's agent in Cromwell (1827) is a grotesque travesty of the historical *Manasseh Ben Israel, and another despicable Jewish usurer appears in Marie Tudor (prod. 1833; publ. 1834). Yet Hugo's last great play, Torguemada (1882), revels the author's real sympathy for the Jewish victims of treachery and oppression – a sympathy he demonstrated publicly by presiding at a Paris rally on May 31, 1882, to protest against czarist persecution of Russian Jewry. Unpleasant Jewish types continued to make their appearance in the novels Cosmopolis (1893; Eng. tr. 1893) by Paul Bourget, Mont-Oriol (1887) by Guy de Maupassant, and Largent (1891), part of the Rougon-Macquart novel cycle by Emile Zola. Zola, however, by placing the Jewish Gundermann opposite a far more despicable Christian character, does succeed in restoring some sense of balance.

The Dreyfus Case. Some frankly antisemitic novels appeared at the turn of the century, reflecting the wave of ultranationalist feeling aroused by the *Dreyfus case. Such, for example, are L'esence du soleil (1890) by Paul Adam, Léon Cladel's Juive-errante (1897), and Léon Daudet's Le pays des
parlementeurs (1901) and La lutte (1907). In all these novels the Jew or Jewess is a rapacious intriguer, endangering the security of the nation and corrupting morals. A play in the same vein is Le retour de Jérusalem (1904) by Maurice Donnay. Bourget’s L’Etape (1902) portraying an idealistic Jew, is a happy exception. Though often cast in the role of a protagoniste, the Jewess in the short stories of Maupassant is treated sympathetically and proves herself more noble than her non-Jewish associates. Thus in Mademoiselle Fifi (1883), the Jewess Rachel alone resists the offensive Prussian officer, emerging as a symbol of French patriotism and courage. And in La femme de Claude (1873), a drama by Alexandre Dumas fils, it is the Jewess Rebecca who symbolizes feminine virtue and purity in a decadent and selfish society. The brothers J.-H. and S.-J. Rosny present a fierce and proud Jewess in La Juive (1907). The ambivalent Jewish characterization in the Erckmann-Chatrian novels of life in Alsace such as Lami Fritz (1864; Friend Fritz, 1873), Le blocus (1867; The Blockade, 1869), and “Le Juif polonais” (in Contes populaires, 1866; The Polish-Jew, 1884) stems from their joint authorship: Emile Erckmann was a pro-Jewish Protestant, and Alexandre Chatrian a Catholic antisemite. Their best-known hero, Rabbi David Sichel (in Lami Fritz), is a wholly admirable figure.

The Dreyfus case inspired not only a spate of nationalistic and antisemitic novels, but also some important works of an exactly opposite type by three great French writers. Zola’s Vérité (1903) describes the “Affaire Simon,” a romanticized Dreyfus case in which justice and secularism triumph over prejudice and clericalism. In L’Anneau d’améthyste (1899), Anatole France presents a liberal who opposes bigotry, antisemitism, and racism, but it is in his charming L’Île des pingouins (1908) that the Affaire is parodied with the most incisive wit. Society, eager to persecute the defenseless Jew Pyrot, is depicted in all its cowardice and greed. Anatole France also presents a likeable Jewish philologist, Schmoll, in Le lys rouge (1894). In Jean Barois (1933), Roger Martin Du Gard approaches the Affaire from a more philosophical standpoint. The central figure, a liberal journalist in search of truth and justice, speaks out on behalf of Dreyfus, under the influence of an admirable Jewish friend, Woldsmuth.

The Affaire also directed the attention of two great Catholic writers toward Jewry. Charles Péguy and Léon Bloy both devoted poems and meditations to the Jewish people, its destiny and mission. Paul Claudel did so too, in his drama Le Père humilié (1916), where the central figure is a blind Jewess, Pensée, who personifies the people of God. Two other writers of the period introduced Jewish figures. One was the poet Guillaume Apollinaire, who was fascinated by the figure of the *wandering Jew and used the Jew in his poems (particularly Alcools, 1913) and short stories as a symbol of exile and misfortune. The other was Marcel Proust who, in the particular universe which he created, gave an important place to Jewish characters, including his own alter ego, the half-Jew Charles Swann.

**World War I and After.** World War I marked a turning point in the treatment of Jewish characters in French literature, and they became increasingly numerous, varied, and interesting. Writers were preoccupied with the search for new social and moral values for a society shattered by war, and tended to give greater recognition to the Jew’s specific identity. The Jew was no longer merely a persecuted human being to be defended for the sake of justice, but the bearer of a cultural and spiritual tradition worthy of a place in the broader French or European heritage. Such was the view of the former anti-Dreyfusard Maurice Barrès who, despite his ultranationalism and dislike of the Jew, assigned him in Les diverses familles spirituelles de la France (1917) a role akin to that of the Breton or Alsatian among the “families” constituting the French nation. With the brothers Jérôme and Jean Tharaud, interest in the authentic Jew was transmuted into a search for the picturesque and the exotic in Jewish tradition. Even Zionism inspired a novel: Le puits de Jacob (1925) by Pierre Benoît, which deals with early pioneering in Erez Israel. But it was Romain Rolland who, even before World War I, had given Jewish values a broad and universal meaning for modern civilization. Not only had the Jew his own traditions to contribute to the French heritage, he also had a special vocation in the western world, being the bearer of “Justice for all, of universal Right.” The Jewish characters in Rolland’s serial novel, Jean Christophe, are distinguished by their selfless devotion, their passion for improving the world, their boundless energy, and determination.

The first fully developed Jewish hero of 20th-century French literature was Silbermann, in the novel of that name by Jacques de *Lacretelle* (1922). This deals with the friendship between two schoolboys, one a Christian and the other a Jew. The persecution of the brilliant and idealistic Silbermann by his antisemitic schoolmates forms the background to the story. The theme was taken up by André Gide in Geneviève (1936), which portrays a similar friendship between two girls. Henri de Montherlant, who otherwise dealt little with Jewish themes, wrote a “counterpart to Silbermann” in his autobiographical short story of World War I, “Un petit Juif à la guerre” (in Mors et Vita, 1932). The author, educated in a reactionary, antisemitic milieu, describes how he is attracted by a sensitive and intelligent young Jew whom he meets in the trenches. Georges Duhamel, in his serial novel La chronique des Pasquier (1933–41), presents a finely drawn Jew in Justin Weill, the loyal and idealistic friend of the storyteller-hero. Although the liberal Duhamel makes his Jewish hero an admirable figure, he is nevertheless presented as the perpetual stranger, alienated from both the French and the Jewish traditions. Throughout the Chronicles it is this fundamental alienation that accounts for the unsuccessful search for a Franco-Jewish synthesis. The same theme is given a slightly different interpretation by Paul Nizan in La conspiration (1938). Here the hero, Bernard Rosenthal, failing to involve the girl he loves in his own philosophical preoccupations, commits suicide. In all these works
the Jewish hero has a central role, yet he is always analyzed in terms of the non-Jew’s reactions.

To clarify the non-Jew’s attitude toward the Jew, some French novelists have created minor, but striking, Jewish characters. Roger Martin Du Gard devotes *La belle saison* (1923), the third volume of his family cycle *Les Thibault*, to the story of Antoine Thibault, a young doctor, and Rachel, his Jewish mistress, who becomes intensely real although she is only seen through the eyes of her lover. Another interesting marginal character appears in *Thérèse Desqueyroux* (1927) by François Mauriac. It is a young Jew, Jean Azévédo, who brings a breath of fresh air into the stuffy atmosphere of a bigoted small town and precipitates Thérèse’s revolt.

**The Impact of Nazism.** The rise of racialism and Nazism between the two world wars led to the appearance of such antisemitic works as *Voyage au bout de la nuit* (1932; *Journey to the End of the Night*, 1959) by Louis-Ferdinand Céline and Gilles (1939) by Pierre Drieu La Rochelle – both writers who would compromise themselves in antisemitic politics under German occupation and Vichy government. On the other hand, in 1941, Antoine de Saint Exupéry wrote to his Jewish friend, Léon Werth, the *Lettre à un otage* (*New York*, 1943) which was a unique message of comfort and encouragement from a French Gentile to a Jew. Saint Exupéry’s meditative *Citadelle* (1948) contains mystical thinking of Jewish interest.

World War II and Nazi persecution inspired few Jewish characters among French writers. Some exceptions were *La marche à l’étouil* (1943) by *Vercors; some minor characters in works like *La mort dans l’âme* (1949) by Jean-Paul Sartre; and *Le sang du ciel* (1961) by the Polish refugee Piotr Rawicz, a novel with a Jewish hero about the Nazi occupation of the Ukraine. The leading French writers of the postwar period did not introduce Jewish figures into their works, perhaps because of the irreparable mental shock caused by the war. Essays and theoretical writings on the Jewish question (by Sartre for example) were not rare, but Jewish characters and heroes became the exclusive concern of French Jewish writers.

**The Jewish Contribution**

Although Jews made no specific contribution to French literature before the 13th century, their links with French culture are more ancient. During the Middle Ages French Jews spoke Old French, which modified their pronunciation of Hebrew, and the somewhat Hebraized French dialect which they wrote in Hebrew characters is known as *Judeo-French*. A parallel dialect in the south of France was *Judeo-Provençal*. The *lazim* (glosses) which *Rashi* and other Jewish commentaries used to explain difficult Hebrew terms are an immensely valuable source for philologists and Romance specialists. Even Hebrew-Old French dictionaries have survived. In the 13th century, liturgical poems and a festival prayer book (the fragmentary Heidelberg *mahzor*) were composed in Old French, using Hebrew orthography. The most important document of the period is another fragment, the *Complainte de Troyes*, commemorating the martyrs of the *Troyes massacre of 1288* (text in: E. Fleg, *Anthologie juive* (1951), 281). Its author was probably Jacob ben Judah de Lotra, who is known to have written a Hebrew *kinah* (elegy) on the same theme. Jews also began to write secular French verse: two 13th-century Provençal Jewish troubadours, Bonfils de Narbonne and Charlot le Juif, are mentioned and attacked in works by non-Jews; while some fragments have survived of poems by the convert Mathieu le Juif, a *touvre de Arras*. With the expulsion of the Jews from France in 1394 this literary activity came to an end, although Alsace, and occasionally Provence, remained havens for Jewish refugees.

After a gap of nearly 200 years, writers of Jewish origin again made their appearance on the French literary scene. Outstanding among them were the celebrated astrologer and physician *Nostradamus* (Michel de Nostre-Dame) and the great essayist Michel de Montaigne (1533–1592). The latter’s mother, Antoinette de Louppe de Villeneuve, was a Christian descendant of Mayer Paçagon (Pazagón) of Calatayud who, after his forcible conversion at the beginning of the 15th century, took the baptismal name of Juan López de Villanueva. A skeptical humanist, more deistic than Christian, Montaigne in his *Essays* reveals a tolerant abhorrence of the Inquisition in Portugal, but only an outsider’s interest in Jewish survival. In the revived Jewish community of Provence, *Purim plays* had an honored place, a classic example being the dialect verse-drama *La Reine Esther*, written by Rabbi Mardochée Astruc and revised by Jacob de *Lunel*, which was performed at Carpentras in 1774. But in French literature proper, Jews played no major literary role until the era of Louis Philippe (1830–48). Two early writers were the minor novelist Esther Foa and the prolific biographer, critic, and kabbalist Alexandre *Weill.

**The 19th and 20th Centuries.** Few of the many Jewish writers who rose to eminence in 19th-century France showed any real interest in Jewish themes. One rare exception was the poet and educator Eugène Manuel (1823–1901), author of *Pages intimes* (1866) and some very successful plays, who was a founder of the *Alliance Israélite Universelle*. Other writers of this period were the poet and playwright Catulle *Mendès*, the poet Ephraïm Mikhaël (1866–1890), the essayist and short-story writer Marcel *Schwob*, and a host of playwrights and librettists – Adolphe Philippe d’Ennery (1823–1899); Hector Jonathan Crémieux (1811–1899) and his collaborator, Ludovic *Halévy; Georges de *Porto-Riche; Tristan *Bernard; and the stylish comedy writer Edmond Sée (1875–1959). By the beginning of the 20th century the number of Jewish playwrights had grown considerably. Notable among them were Fernand Nozière (pseud. of F. Weyl; 1874–1931) and Alfred Savoir (1883–1934), who collaborated in the writing of successful comedies and farces; André Pascal (Henri de Rothschild; 1872–1947), whose innovations at the Théâtre Pigalle included the revolving stage; the Belgians, Henry Hubert Kistemaeckers (1872–1938) and Francis de Croisset (1877–1937); Pierre Wolff...
(1865–1944) and Romain Coolus (1868–1952), two writers of popular comedies; and Jean Jacques *Bernard, son of the more distinguished Tristan Bernard, who became a Catholic. Overshadowing most of these were the social dramatist Henry *Bernstein and the converted literary critic Gustave Cohen. Prominent writers in other literary spheres were the essayists André *Suarès, Julien *Benda, and Benjamin *Crémieux. Maurice *Sachs, a deposed but talented writer, was a World War II collaborator; and the eminent biographer André *Maurois at first supported Pétain. Outstanding poets of the early 20th century include the convert Max *Jacob, who died in a Nazi concentration camp; the half-Jew Oscar *Milosz, an esoteric writer detached from contemporary trends; and Yvan and Claire *Goll.

Almost all these authors, with the exception of Henry Bernstein, were Frenchmen who also happened to be Jews; but the Dreyfus case had a profound influence in reshaping the ideas of French Jewish writers. The publicists Victor *Basch and Bernard *Lazare were both roused to action by the affair. Even the half-Jew, Marcel *Proust, prevailed on Anatole France to intervene in Dreyfus’ favor and, reassessing his own position in French society, gave a place of importance to Jewish characters in his great novel cycle _La recherche du temps perdu_.

Two leading poets who rediscovered their Judaism were the symbolist Gustave *Kahn, who became an enthusiastic Zionist, and his even more militant contemporary, André *Spire, who inaugurated an entirely new Jewish and Zionist current in French literature. They were followed by Henri *Franck and Edmond *Fleg, the poet, playwright, and anthropologist, whose rekindled devotion to Judaism led him to seek a symbiosis between the French and Jewish traditions.

In the 20th century the conflict of identity preoccupied several writers, including the novelists Jean-Richard *Bloch and Albert *Cohen. Their general approach was, however, very different. Bloch, a Communist, assigned to the Jew the role of “revolutionary ferment” in his adopted society; while Cohen, a Corfu-born poet and mystic, was strongly influenced by his Mediterranean background. The regional element is also important in the works of Armand *Lunel, who dealt primarily with Provençal culture, and Joseph *Kessel, who wrote some novels set in Israel. While Henri *Hertz, a leading French Zionist, devoted much of his attention to Jewish problems, other writers asserted their Jewishness mainly in their protests against antisemitism. Jean Finot (born Finkelstein, 1858–1922), a Warsaw-born lawyer, author of _Le préjugé des races_ (1905; _Race Prejudice_, 1906), Emmanuel Berli (1892–1976), and Pierre Morhange (1901–1972) all belong to this category. So does Pierre Abraham (1892–1975), the brother of Jean-Richard Bloch, who directed the leftist monthly, _Europe_, and only recalled his Jewish identity in response to the Dreyfus case and, some 30 years later, to Hitler. A rare example of Jewish antisemitism was René Schwob (1895–1946), a convert to Catholicism, who wrote a series of unpleasant apologies, including _Moi, juif_ (1928), _Ni grec ni juif_ (1931), and _Itinéraire d’un juif vers l’église_ (1940).

On the other hand, the themes of certain 20th-century writers, the problems they analyzed, the characters they depicted, the settings they chose were exclusively Jewish. Such were Myriam *Harry; Lily Jean-Javal (1882–1958), a novelist and poet; Michel Matvéev (b.1893), who evoked in novels such as _Ailleurs_, autrefois (1959) the tragic fate of the exiled and the persecuted; Pierre *Paraf; Josué *Jehouda; Pierre Neyrac; Joseph Schulsinger; Moïse Twersky, author of _L’épopée de Ménasché Foigel_ (3 vols., 1927–28, with André Billy), the story of a Russian immigrant in France; and Irène Némirovsky (1903–1940), recently rediscovered – whose characters, however, seem to have been influenced by antisemitic stereotypes of the time. Two other figures of note who dealt with the religious implications of Judaism were Raïssa *Maritain, a Russian Jewess who became a Catholic, and Aimé *Pallière, a Catholic who became a liberal pro-Jewish propagandist.

A phenomenon worth consideration is the large number of Romanian-born Jews who either began or resumed their literary career in France. They include the novelist and playwright Adolphe Orna (1882–1925); Tristan *Tzara; the political poet Claude Sernet (1902–1968, born Ernst Spirit); Ilarie *Voronca; Eugène *Ionesco; and Isidore Issou. Another French poet of Romanian origin was the visionary Benjamin *Fondane (1898–1944), who came to France in the 1920s and then published _Ulysse_ (1933), _Rimbaud le voyou_ (1933), and _La conscience malheureuse_ (1936) before being arrested and deported to Nazi camps.

Edmond *Jabès (1908–1991) has attracted considerable attention since the 1960s. His _Le Livre des Questions_ has become the first of a series of works which consist of persistent questioning, sometimes in the form of narratives or dialogues, sometimes in the form of apocryphal talmudic discussions between imaginary rabbis or kabbalistic letter games. The condition of the _Jew_ is for Jabès identified with that of the poet: both the creative writer and the Jew can exist only in the state of exile. The term is of course taken in a spiritual sense and has no political meaning. The title of the first volume is also the title of the whole series; the others are *Le Livre de Yukel* (1964), *Le Retour au Livre* (1965), *Yael* (1967), *Elya* (1969), *Aely* (1972) and _El_ (1973), which is the conclusion of a search for the unity of Judaism and literary creation, and at the same time a ceaseless questioning of the relevance of language. His two-volume _Livres des Ressemblances_ (1976–78) is in the same hermetic, broken poetic language as was his _Book of Questions_. In this new poetic work it is language itself which is being questioned. But the reader or the critic may query the deceptive dress of rabbinic discussion and kabbalistic tradition assumed by Jabès’ writing. However, the glaringly inauthentic garment does not contradict the strikingly Jewish tone of this endless meditation, especially apparent in the author’s philosophical essay: _L’inéfable, L’inaperçu_ (1980). _Un étranger avec_, sous le bras, un livre de petit format (A Stranger Holding a Little Book under his Arm, 1989) seeks to characterize the stranger
Jabès had, in a sense, prepared the way with an impressive collection of poems, *La mémoire et l'oubli* (To remember and to forget, 1987), a book which gathers a number of poetic texts composed between 1974 and 1980, some of which are directly or allusively tied to the Holocaust. *Le livre du partage* (The Book of Shares, 1990) appeared in English translation as the inaugural volume of a new series on religion and post-modernism at the University of Chicago Press. Whether this latest work indeed marks a new departure remains to be seen. The stricter conceptual essay form Jabès turns to is, at this juncture, dotted with apologies for the author’s inadequacies and personal self-conscious remarks, such as: “Forgive my works. They have the excuse of despair.”

**The Memory of the Holocaust.** A number of French Jewish authors wrote about the Hitler era and the Holocaust of European Jewry. Evoking the past was the main purpose of Roger *Ikor in Les eau mêlées* (1955) as well as in *Pour une fois écoute mon enfant* (1975). Manes *Sperber with his trilogies Ces temps là (1976) and Lele buisson devint cendre (1948/1990) and other novels or essays such as Etre juif (1994) advocated for a “religion of memory.” Anna *Langfus, in her semiautobiographical novels, described characters who, despite Nazi brutality (“I saw a man who stood up on another man who led on the earth”), succeeded in retaining their human dignity and moral values. One may quote *Le sel et le soufre* (“Salt and Sulfur,” 1960) or *Les bagages de sable* (“Sandy Luggage,” 1962). André *Schwarz-Bart, in the international bestseller, Le dernier des justes* (1959; *The Last of the Just, 1960*), produced an epic on the age-old Jewish tragedy, while Elie *Wiesel, who was awarded the Nobel Prize in 1986, wrote a series of haunting novels on the Holocaust and its aftermath.

Wiesel, in *Entre deux soleils* (1970), unifies his vision of man through narrations, dialogues and legends, and emphasizes his role as witness. After two volumes of portraits and legends, *La Célébration hassidique* (1976) and *Célébration bilingue* (1977) and a play, *Le procès de Shamgorod* (1979), very much in the tradition of the Yiddish theater, mixing irony and pathos, Elie Wiesel brought out a major novel, *Le Testament d’un poète juif assassiné* (1980), which bears witness to the agony and rebirth of Jewish consciousness among the young generation of Soviet writers. The book is couched in the form of a testament, written in a Soviet jail, by a Jewish poet accused of high treason and counterrevolutionary activities. Although the hero Paltiel Kossover is an imaginary figure, his itinerary closely resembles that of many a Jewish dissident. The son of a kind and pious father, he spent his youth in a Romanian shtetl. His messianic fervor took on the garb of revolutionary faith, claiming to bring salvation to mankind and Jews alike. The new Leninist religion, widely followed by young Russian Jews in the thirties, was to bring the hero to clandestine action in Nazi Germany and Palestine, and to fighting in the Spanish Civil War and the Red Army. But Paltiel, though a rebel against traditional Judaism, kept an obscure feeling of loyalty to his father, whose voice often calls out to him in the depth of night. Hardly knowing why, Paltiel carried his *tefillin* with him throughout. On the Russian front he meets Raïssa, seemingly a hardboiled communist. Though her role remains somewhat ambiguous, they will together uncover the sinister imposture of the Russian regime, and gradually Paltiel’s poetry becomes the song of his people. Together they flee with their small son, Grisha, secretly circumcised by his father. The Soviet police submit the hero to its most refined physical and moral tortures, the chief result being to strengthen and elevate the spirit of the victim, who on the threshold of death writes a poignant spiritual autobiography as a legacy to his son. Grisha, the still unknowing child, instinctively feels the presence of a potential enemy: wanting to evade the questioning of a neighbor, a supposedly well-meaning doctor and father figure, he bites off his tongue and will remain mute. A strange witness of Paltiel’s martyrdom and death is the clerk of the court, a Jew himself caught in the system, who carries the message to the mute son of the poet. Grisha will eventually reach Israel with a group of refuseniks, expecting his mother to follow. But will she ever come? The reader is carried into a dreamlike world of introspection, into the shadowy recesses of the psyche. Wiesel’s book is an emotional and convincing statement of Jewish self-assertion.

The book *L'oublié* (1989) tells the story of a father and son and moves from Auschwitz to Israel. Its characters are convincing, while the search for a buried past is the motivation and the core of the book. The concluding message is clear: Israel, the land of the prophets, will be and must be the place where memory is kept intact, the land of truth and life, the land of Jewish hope. Elhanan Rosenbaum, born in a shetl of the Carpathian mountains, survives the Holocaust and discovers Palestine. In besieged Jerusalem he falls in love with Taliá
and a son, Malkiel, is born. In New York, where he settles with Malkiel, Elhanan preserves the memory of the terrible years. But Malkiel, already an American, although close to his father, has no link with Elhanan's past. One thing only is certain: his mother Talia died in bringing him into the world. Elhanan, who has been unable to reveal his treasured nightmare to his son, becomes ill and loses the ability to speak or to remember. Soon the past will be lost forever. Elhanan will have nothing to bequeath to his son who, in turn, will be unable to know the roots of his deepest convictions and to share them with his friend Tamar. The shipwreck of memory is averted in a dramatic manner: the father suddenly starts to tell the story of his tumultuous past, thus feeding his son's memory, while his own will finally be relieved of its intolerable burden. As the old man finally sinks into the night, forgetting all, his son, strengthened by the link regained, discovers the land of his ancestors. This marks his second birth and the revelation of his deeper self. He will conquer his truth with the help of his father's truth. Will Malkiel, in turn, be able to triumph over the indifference of a world devoid of memory? Will he remember his father's deepest hope? Elhanan's most fervent prayer had been never to forget. Indeed “to forget is to abandon, to betray.” “Without memory, truth becomes a lie, a mere masking of the truth.” A Jew must bear witness, both to joy and distress.

Wiesel also published his mémoires: Tous les fleuves vont à la mer (1994; All the Rivers Run to the Sea, 1995) and Et la mer n’est pas remplie (1996; And the Sea Is Never Full, 1999).

A writer whose reputation had continued to grow into the 21st century is Georges *Percy* (1916–1982), whose stylistically dazzling masterpiece, La Vie: mode d’emploi (1978), was translated into English in 1987 as Life: A User’s Manual. Called by Italo Calvino “the last great event in the history of the novel,” it takes the reader into a Paris apartment house, examining the interlocking lives and possessions of its tenants as part of a shifting mosaic of signs and symbols. Until the end of his life he nurtured a profound memory of his parents, who died during World War II: “I am a writer because they left their indelible mark. Their tracks are writing, writing is the memory of their death and the assertion of my life.” On these themes, Percy published W ou le souvenir d’enfance (1975), Je me souviens (1978) and Récits d’Ellis Island (1980), which he made into a film with Robert Bober.

In Quoi de neuf sur la guerre (1993), Robert *Bober* evokes the post-war period and the survivors’ painful personal process of rebuilding. Berg & Beck is the story of two young Jewish boys who one day have to put a yellow star on their coats while walking together to school. Beck is arrested and murdered in a Nazi camp. After the war, Berg regularly writes to him: “It’s not because you never answer that History can do without you.”

Two dramatists of outstanding talent, Liliane Atlan and Jean-Claude Grumberg merit attention. Liliane Atlan (1932– ), born in Southern France to a Jewish family from Salonica, felt deeply the trauma of Nazi occupation. At the age of 17 she attended a Jewish communal school and after earning a diploma in philosophy, she started writing for the theater. Her early plays were Monsieur Fugue, staged in Paris in 1967 and in Israel in 1972 under the title Mar Slick; Les Messies (1969); La Petite Voiture de Flamemes et de Voix (The Small Car of Flames and Voices), presented at the Avignon Festival in 1971. She also wrote three volumes of poetry in this period: Les Mains Coupeuses de Mémoire (Hands-Cutters of Memory, 1969), Le Maître-Mur (1964) and Lapsus (1971). The same themes recur both in her poems and in her plays. The first leitmotif is the difficulty in living, borne out by the awareness of the human condition: man, trapped by evil, contracts the incurable Earth-Sickness Le Mal de terre (the phrase serves as subtitle to the first two plays.) In Monsieur Fugue the author borrows elements from reality, yet the play is no documentary. Four Jewish children are being taken in a truck in the fog to Rotten Town, or the Valley of Dry Bones. Their guards are soldiers clad in green. One of them, Monsieur Fugue, decides to accompany the children, and during the journey he tells them stories and they enter the game. They live in imagination the life which they will never know in reality: adolescence, love, marriage, old age and natural death; at which point they are killed. But the imaginary has replaced the hideous reality.

Dream here is no escape, but rather the only reality; and joy can thus spring forth out of despair. Joy is the recurrent countertheme. In Les Messies, Earth Sickness is no longer viewed from within, but from the outside or from higher up. All realistic elements have disappeared. A group of messiahs, set on an imaginary planet and representing all the ideals and hopes ever invented by mankind, await the moment to jump down and save the earth. But overtaken by dizziness caused by the Earth Sickness, they wait too long and fail. The myths of salvation are deceitful. Consolation lies not in the content of myths, as in Monsieur Fugue, but in the ability to invent them: after a dismal failure the messiahs will continue to pray and hope. La petite voiture represents a passage into subjective theater, set in a fantastic, apocalyptic universe. The two characters, Louise, an invalid in a wheel-chair pushed by Louli, are a projection of the author’s split consciousness. How to live in an evil world is the agonizing question pursued in an obstinate, sometimes frenzied, dialogue-monologue. In the end Louli-Louise, facing an apocalyptic destruction, proclaims with all her meager might: joy will be for our descendants if not for us, an inner sun will shine and that’s enough to smile for from tonight on.

The Holocaust is still prevalent in Liliane Atlan’s recent works, as may be seen in Un opéra pour Terezin (1997), which tells the true story of Jewish inmates in the Theresienstadt camp who decided to found an orchestra to play Verdi’s Requiem; or in Les Mers rouges (1999), which collects survivors’ testimonies, songs, and tales from the Salonika Jewish community mostly exterminated in gas chambers.

Jean-Claude Grumberg (1937– ) was born in Paris, the grandson of a Yiddish-speaking immigrant from Cracow. Like Atlan, he felt the wound of Nazi oppression… For him too, the resulting anguish had to be exorcised in dramatic creations. But the tone is different: aggressiveness and humor are the
dominant colors. Among his significant plays are *Amorphe d’Ottenburg* and *En revenant de l’Expo*, and above all *Dreyfus* (1974), unanimously hailed as a masterpiece. Grumberg seeks to reconcile History, and its seeming absurdity, with Man, trapped in his contradictions. History is invoked frequently, yet often treated with contempt. Man alone, in his human individual quality, really matters, with all his shortcomings. *Dreyfus* presents a potentially comical and pathetic situation. In a Vilna suburb in 1930, a group of townspeople rehearses a play about the Dreyfus Affair, written by Maurice, a young Jewish intellectual, who dreams of representing the Truth of History, of drawing a moral from past events and of creating genuine popular theater. But as the simple townspeople themselves see it, there is no historical truth; the only truth is what we see and recreate. If Maurice wants a moral, a lecture is preferable. As to popular theater, it has nothing to do with distant, foreign historical events. It must spring from experience and tradition. Michel, the cobbler, feels nothing in common with the French captain; he cannot play the role and remains wooden at rehearsals. Arnold, the barber, who plays the part of Zola, finds his text long and pompous; he would prefer a gay little Yiddish song. Motel, the tailor, sees no reason to make a blue uniform for Dreyfus, like in the pictures: he has a big reserve of red cloth. Zina, Arnold’s wife, has to cross the stage, shouting Death to the Jews; she would rather be the captain’s mother – a good Yiddische mamal! – etc. In short, the townspeople, authentically alive, refuse the lifeless construction of the dreamy intellectual. The clash creates hilarious scenes. At times, emotion and even grandeur take over, as in the scene of the drunken Poles’ attack, courageously repelled by the Jew, or the tale of the saintly hasidic rabbi who rose higher than God Himself. And finally in the last scene a taste of irony and tragic humor dominates: after the play’s failure, Maurice goes to Warsaw and joins the Polish communist party. In a letter to his friends, one savors the bitter flavor of ideologies espoused by Jewish intellectuals whether communists of the 1930s or leftists of today. As a tragic echo comes a letter from Warsaw, which presents a potentially comical and pathetic situation. The post-war generation’s need to find its Jewish roots has expressed itself in still other genres, spiritual or intellectual diaries, where remembrances either are mixed with religious, philosophical or political reflections or frankly give way to an essay commenting on insistent preoccupation with the Jewish condition in our age. In the category of essays one must mention the attempt by Alain Finkielkraut (1949– ) to analyze the state of mind of his generation in *Le Juif imaginaire* (1980). Disappointed with leftist politics, tired of resisting his parents’ recurrent “Jewish leitmotiv,” he rediscovered for himself the significance of the Jewish message. Although he is well-read, his statement is based solely on his own intuitive subjective feeling. The impact felt by the works of a group of young philosophers appears to be a more lasting one. André Glucksman (1937– ) in *Les Maîtres penseurs* (1977) and Ber-
nard-Henry *Lévy (1948–) in *La Barbarie à visage humain (1977) and *Le Testament de Dieu (1979) opened the way to a philosophical search of a Jewish view of man and God. They denounced not only fascism and Marxism, but, in a rather sweeping manner, their Western masters (maîtres penseurs), guilty of politicizing all debates on life and history, basically because they were the heirs of platonic philosophy. What emerges here is the indictment of Athens in the name of Jerusalem. Bernard Chouraqui’s (1943–) message in *Le Scandale juif ou la subversion de la mort (1979) is more flamboyant and more mystical in its condemnation of Western rationalism. The latter is accused of having stifled the limitless freedom of man’s spirit and more specifically the Jewish spirit. If permitted to fulfill its true vocation, Judaism can overcome death itself. The statement is often too grandiloquent to be totally convincing. Shmuel *Trigano (1948–) in *Le retour de la disparue (1977) and *La nouvelle question juive (1979) adopted a more restrained tone in dealing with the problem of Jewish identity. He too challenged the European humanism and rationalism, but in so doing he also condemned “Western oriented” Ashkenazi Judaism and Zionism itself. In the name of Kabbalistic tradition and Sephardi predominance he advocated a kind of revivalist Judaism, far from the Haskalah tradition. All these young thinkers, Glucksmann, Lévy, Chouraqui, Trigano, claim allegiance to the teachings of Emmanuel *Lévinas, the great Jewish philosopher.

Most of these prolific authors were disillusioned leftists. One of the most interesting was Pierre Goldman (1944–1979), a son of Polish immigrants who, after revolutionary activities, was accused of murder. He discovered his Jewishness in jail and started to study Judaism seriously. He wrote his first and best book in prison. After his release he was murdered under mysterious circumstances. In 1975 he composed *Souvenirs d’un Juif polonais né en France ("Memories of a Polish Jew Born in Poland"), a rather remarkable testimony of the discovery of his Jewish consciousness. He proclaimed himself a Jewish revolutionary, who, in anguished self-concern, expressed his identification with his people through his revolutionary convictions. His Jewish self-identification remained divorced from either religious or Zionist feelings. A second book, *L’ordinaire mé-saventure d’Archibald Rapport (1977) keeps up the same strict, ironic and desperate tone and attains the limit of poetic and metaphysical exasperation. The theme is couched in the form of a legend: the hero fulfills an angelic mission, that of exterminating all officiçaldom, because it represents a civilization responsible for Auschwitz.

A nostalgic feeling for the 1930s and the prewar period is also felt in Cyrille Fleischman’s short tales, which always take place in the Pletzl, the Jewish quarter in Paris, from *Rendez-vous au métro Saint-Paul (1992) to *Une rencontre près de l’hôtel de ville (2003).

Henri Raczymow’s (1948–) *Contes d’ exil et d’oubli ("Tales of Exile and Oblivion," 1979) are an imaginary dialogue between a grandson in search of his Jewish self and a Polish grandfather transplanted to the Paris ghetto of Belleville. The tales contained in this short volume beautifully bring to life the charm and faith of the shtetl. *Un cri sans voix (1985) tells the story of Esther who was totally obsessed with the memory of the Warsaw ghetto and committed suicide in the 1970s. Of note also is *Bloom & Bloch (1993).

Raczymow also published an intriguing essay. He turned his attention, like others before him, to Swann, the half-Jewish Proustian hero. But the approach is new. The title of the book, *Le cygne de Proust (1989), gives a clue of the direction chosen. Referring himself to one of the known models for Swann, namely Charles Haas, a dandy of the day (a German Jew), the essay pinpoints what links Swann to him and what separates Swann from his presumed model. The author’s starting point is the translation from Haas to Swann. Haas (hare in German) was both too plebeian and too German for Proust’s taste. Passing over to the English (more to the snobs’ liking) he coined the new name Swann, only subtly reminiscent to the French reader of its translation (swan – and not Swann – evoking in English the noble and mythical bird: “le cygnet”). Such is the starting point for the essay. The author then answers the secret: how did the idea suggest itself? He observed in a painting representing a brilliant social circle, that Charles Haas was standing “near the door, facing the others, though on the side, as if he hesitated to mingle with them and penetrate inside the circle.” Observing how Haas was “part of the circle, but remained on the periphery,” the author told himself: “Haas was Jewish, had no title of nobility, no prestigious heredity, no tremendous fortune.” From then on, that noble “cygne” (Swann) became less distant, almost a familiar, intimate person. One can see in this study a literary illustration of social marranism. Raczymow continued his study of Marcel Proust in *Le Paris retrouvé de Marcel Proust (2005). On the other hand, he looks into his own boyhood in *Avant le déluge: Belleville années 50 (2005) and in *Reliques (2005); in 2003, with *Le plus tard possible, he evaluates his life, and “[his] experience of absolute loneliness.”

Myriam Anissimov, born in 1943 in a refugee camp, wrote a Kafkaesque novel, *Rue de Nuit (1977), the bizarre story of a couple accused of some unknown crime. In *La soie et les cendres (Silk and ashes, 1989), Hannah, obsessed with the weight of her people’s tragic past, deceives herself into believing that she has found the truth about herself and her link with the Holocaust. She has found an original “profession” for herself: she sells *shmatte (old clothes) at the flea market. In so doing, she fantasizes that she is one with the pitiful remains (the “silk”) of the victims at Auschwitz (the “ashes”). The book tells the sad and perverse nightmare of a Jewish girl, who eventually faces up to the essential duty of living creatively. She will find salvation through music, doubtless a finer memorial to the victims. Anissimov, who also published two successful biographies (on Primo Levi, 1998, and Romain Gary, 2004), wrote in *Dans la plus stricte intimité (1992) about her childhood in a broken Jewish family after the war, from Lyon to Metz; and she also published a kind of autobiography, *Sa Majesté la Mort (1999).
The difficult dialogue between a mother and her daughter is the original subject *L’immense fatigue des pierres* (1996) by of Régine Robin (1939– ), but according to the author, the trauma of the Holocaust is at the root of linguistic hybridism and the plurality of identities. Robin had already devoted *Le deuil de l’origine* (1993) to the influence of their Jewish roots and the loss of their language (Yiddish or Ladino) on the works of several writers, such as Kafka, Celan, Freud, Canetti, and Peref. In her critical essay *La mémoire saturée* (2003) she questioned the function of the recent and widespread uses of commemoration of the past.

The memory of the Holocaust remains at the heart of some young writers’ books. The first novel of Norbert Czarny deals with the problem of memory, or rather the ability to keep alive and convey the reality of the past. In *Les vôtres* (1989) the narrator’s parents and grandparents, unlike the father in Wiesel’s book, have been feeding the child endless stories of their past. But the child, threatened with suffocation, by the burden of those recollections, transforms, almost magically, a hard and somber tale into a legend full of poetic charm. Stephanie Janicot wrote her first novel, *Les Matirochkas* (1996), about the relationship between a young German and the Jewish family he lives with in Paris in the 1980s. Gila Lustiger (1963– ), who grew up in Germany, published *L’inventaire* (1998) and *Nous sommes* (2005), telling the story of her family. In *Un amour sans résistance* (2004), Gilles Rozier (1963– ) tells the story of a Gestapo translator in Paris who saves a young Jew, and more recently, in 2005, he published *La Promesse d’Oslo* centering on the will to life of an Orthodox Jerusalem woman whose son is murdered by a terrorist; after several months, she decides to have another child through artificial insemination, with her rabbi’s consent. Cécile Wajsbrot (1954– ) is increasingly obsessed with the Holocaust and its traumatic effects on succeeding generations, as evidenced by *Beaune-la-Rolande* (2004), *La trahison* (2005), and *Mémorial* (2005).

Although of Sephardi origin, Patrick *Modiano* (1947– ) is quite obsessed by the memory of the Holocaust. He is the author of successful novels – *La place de l’Étoile* (1968), *La ronde de nuit* (1969), *Les boulevards de ceinture* (1972), *Villa triste* (1975) and *Rue des boutiques obscures* (1978) – as well as an autobiography, *Livret de famille* (1977). The German occupation, which the author never experienced, is the recurrent and obsessive theme. A search for his true identity and for the meaning of his Jewish condition runs through the first novel, where the hero lives in fantasy through a thousand lives and identities. As a Jew, he sees himself sometimes as a king, sometimes a martyr. The same quest continues in the other books, down to the haunting search for the father in the last novel. The father is a pathetic, repulsive, ghost-like figure, victim and partner of a shady gang who lives it up under Nazi occupation. The ultimate question remains: is one ever free to choose or are we nothing but puppets in the hands of blind fate? The notion of Jewish identity has lost all moral or historic meaning. It has been reduced to an almost organic search for roots. The strained narratives are put forth in a liberately flat style, conveying tragic situations in a painfully grotesque manner. Modiano was awarded the Goncourt Prize in 1978. In the 1980s, Modiano deliberately turned to writing children’s books. They included *Catherine Certitude* (1988), the charming story of a little girl who lives with her “papa” in a northern Parisian neighborhood close to Montmartre, part of a cosmopolitan world of little people who struggle as best they can, slightly out of the “real” French world. They find refuge in a world of dreams. Catherine will later realize that even the French sometimes have to escape a glittering, but cruel, reality. In fact, the “not quite French” depicted here are, in an implicit but clear fashion, Jewish immigrants, who always remain “out of it,” even when they take on a new French name. The irony of Catherine’s French surname resides in the fact that Catherine’s father has been renamed by an employee of the city registrar, unable to read or spell the immigrant’s foreign sounding name. “Certitude” had seemed to him clear and perfectly suitable! Catherine and her father eventually leave for New York, where Catherine’s American mother now lives. Later Catherine, herself a mother, will realize that something in her parents’ persistent estrangement from themselves and the world is part of their essential humanity. In this new vein of writing, Modiano, though still dealing with the hero’s search to elucidate the darker of his parents’ past, has found a lighter touch, devoid of bitterness and sarcasm. The mood is whimsical, sometimes ironic, but never cynical or nightmarish. The “happy ending” is suited to a delightful and moving children’s book.

In *Dora Bruder* (1997) Modiano attempts to pick up the trail of a teenager who was deported from Paris in 1942, but “I will never know what she was doing all day long, where she was hiding, who she was with during Winter, then Spring … It’s her secret. Her poor and precious secret that torturers, camps, History could never rob her of….” In *Un pedigree* (2005) he gave the reader the biographical keys to his work.

**THE SEPHARDI IDENTITY.** Albert *Cohen* (1895–1981) was still vigorously creative at 85, and after completing the saga of the Solals with a fourth novel, *Les Valeureux* (1969), a companion piece to *Mangeleurs*, wrote what might be called his testament, a little book, which borrows its title from Villon’s famous ballad: *O vous frères humains* (“O Ye, Human Brothers,” 1972). Though the themes in Cohen’s work – meditation on death, the universality and absurdity of human destiny, the tragic nobility of the Jewish condition – are not new, they reach to the heart of the Jewish writer’s experience. A Jewish child encounters the implacable, stupid, cruel hatred of anti-semitism and this banal and terrifying incident, prototype of all genocide, makes of him a Jew, an adult, and a poet. The bearer of this unified triple identity will have but one mission: to state the place of the Jew among the nations and send a cry of alarm to a mad world bent on hating, when love alone can save. In a poignant volume of diaries, *Carnets* (1978), the elderly writer returned to his timeless meditation. His style lost none of his brilliance, variety, sharpness, and opulence.
A group of writers, mostly Sephardi, has gradually emerged, characterized by books situated midway between the novel and the autobiography. Albert "Menni’s own search for identity takes on a radically different coloring. Cast in a sunny and intriguing decor, his two novels, Le Scorpion (1969) and Le Désert (1977), are full of old world wisdom and fancy, elegant pieces of French prose, a mixed genre between story-telling, autobiography and historical inquiry. Whereas, Le Scorpion is a sort of imaginary confession, depicting picturesque North African Jewish folk towards the end of the French protectorate, Le Désert presents a kind of Oriental tale, partly set in feudal Arab society, partly in desert Berber country (like many old Jewish Tunisian families. Menni claims to have some Berber ancestry). Both books, no matter how remote from plain realism, have a remarkable, convincing ring of truth. In La Statue de sel (1953) Menni confronted the question of his own Jewish identity.

To the same group belongs Jacques Zibi, who in Ma (1971) pays tribute to his mother. He tenderly and deftly evokes the mother’s simple gestures, the intimacy of the Arab Jewish dialect of her native Tunisia, the purity and peace of the Jewish home. In a more humorous vein, Elie-Georges Berreby in Le singe du Prophète ("The Prophet’s Monkey," 1972) takes up the Jonah theme. The modern reluctant prophet is forcefully pulled out of a quiet existence to denounce the sinful town, i.e., the nuclear city. Lucien Elia offers a painful experience of a real talent, presenting a degrading picture of his people.

In Les ratés de la Diaspora, where he depicts the ghettos of Syria and Lebanon, the simple Oriental Jews are treated with caustic humor and contempt, though the villains are ostensibly the Arabs. In a second novel, Fer blanc (1973), he presents a downright antisemitic caricature of Israel. Jacques Sabbath, in Le Bruit des autres (1974), appears as a talented short-story writer.

Naim Kattan (born in Iraq in 1928) and Albert Bensoussan (born in Algeria in 1935) similarly revive with great talent the land of their past. The first tells us of his youth in Baghdad, the second recalls Jewish life in Algiers. Kattan’s Adieu Babylone (1975) portrays the life of a young Baghdad Jew in the modern age. Still part of an ancient Jewish tradition, he is exposed to Western modes when the arrival of British troops during the Second World War breaks into the unchanged quiet of the Oriental community. The hero is then caught between several alternatives: remaining within the bounds of traditional Jewish living, becoming an enlightened Westerner, identifying with the Arab nationalist struggle (in the guise of progressive politics) or with the Zionist pioneering ideal. Kattan is also the author of La mémoire et la promesse (1979) and Le rivage (1981). Bensoussan’s two novels: Frimaldjezar (1976) and Au nadir (1978) do not deal so much with ideological choices as with the nostalgic feeling of a happy and sunny past, when an Algerian Jewish child could live in the cheerful fervent, popular milieu of a settled community. French colonial power then appeared as a permanent shield against all possible abuse on the part of the Arabs. The style, both lyrical and highly colorful, conveys the love of native surroundings where historical change was never to intrude. Around the turn of the century Bensoussan published several books, both prose and poetry, about the warm relationships between Jews, Arabs, and Christians in colonial Algeria, filling his books with colorful characters: L’Oeil de la sultane (1966), Pour une poignée de dattes (2001), and L’Échelle algérienne. Voix juives (2001).

In describing Jewish circles in Tunisia before independence or Jewish immigrants to Paris, Nine Moati (1937–) often focuses on women. In Deux femmes à Paris (1998), she describes the daily life of two neighbors in Paris, one is a young immigrant from Tunisia and the other a coquette whose lover is an extreme right-wing militant. In Villa Week-end (2003) she analyzes the evolutionary relationship between a young Jewish girl and her French friend in Tunisia in the 1930s, then under German occupation; and l’Orientale (2005) tells the story of Hannah, Duke Nessim’s daughter from Leghorn, who becomes a "queen" in fashionable Paris before falling in love with an antisemitic French aristocrat.

The need to portray the life of now extinct Sephardi and Oriental communities also inspires a group of much younger writers, several of them women, who attempt to give a specific literary coloring to their childhood recollections. In the Mémoire illétrée d’une fillette d’Afrique du nord à l’époque coloniale (1979), Katia Rubinstein portrayed the life of a Tunis quarter where traditional Jews lived side by side with various other ethnic groups. The author chose an illiterate little girl as a narrator, gifting her with a colorful and truculent language, where French is interspersed with Jewish Arab, Jewish Italian and Jewish Spanish dialects.

Paula Jacques (born in Egypt in 1949) also focuses on women in her novels about Egyptian Jewry: Lumière de l’œil (1980) and L’Héritage de tante Carlotta (1987). Les Femmes avec leur amour (1997) describes the deep friendship between a young Jewish girl and her Muslim maid in Egypt, a few months before the Suez War in 1956; expelled by Nasser in 1957, like most of the Egyptian Jews, the heroine of Gilda Stambouli souffre et se plaint (Gilda 2001) sets up house in Paris, full of vigor, excesses, and insincerity, while at the same time her daughter tries to leave her kibbutz on the Syrian border.

In Les herbes amères (The Bitter Herbs, 1989), Chochana Boukhobza (1954–) has the heroine, Jane, who has made a clean break with her past, meditates on distant events and their true meaning. Marc, her beloved, is dead. Her mother, whom Jane always hated, committed suicide. Though she was a camp survivor, Jane never granted her even "a few minutes of loving grace." As for Marc, Jane knows that illness alone did not bring on his untimely end. Death has come into her world because a dark and tragic past could neither be spoken of nor allusively approached. Jane’s inner self had created a deep gap with that past, which belonged to those closest to her. Memories must now be reconquered, if life is to go on. Still interested in women’s approach, Boukhobza describes in Un été à Jérusalem (1999) the conflicting relationship of
a young woman with Jewish tradition and with her father's rigorous authority.

The younger Karine Tuil (1967– ) is not only interested in Jewish themes, but in her third novel, *Du sexe féminin* (2002), she describes tragically-comically the powerful influence of Jewish mothers on their children.

**POEMS IN PROSE AND VERSE.** Emmanuel Lévinas himself, though a philosopher in the strict traditional sense, has also written some interesting literary studies and poetic meditations. *Noms propres.* Sur M. Blanchot (“Surnames,” 1976) is a series of short essays on writers as far apart as Agnon, Buber, Jabès, Proust and others. *Difficile liberté* (“Difficult Freedom,” 1977) is a collection of fragments (meditations, exegesis, prose poems) dealing with Jewish existence, ethics and religion. The author rejects both mysticism and pathos, and always displays a sense of the profound nature of Jewish spiritual being.

Vigée’s *Le soleil sous la mer* (The Sun under the Sea, 1972) consists of a collection of all his previous poetry, but it is preceded by an account of childhood recollections in Alsace – “the emergence… of a luminous beginning… the opening of life” – and followed by the poetic work, *Lecte du bétier* (The Act of the Ram). In his *Délivrance du souffle* (1977) the reader penetrates into the authentic realm of poetry, narration and reflection. Vigée deliberately mingles the three levels of writing, for he views poetic language as a fitting expression of his Jewish existential meditation and the narration of historic and personal experience as an indispensable adjunct to his reflection of life and Jewish destiny. The first part of this work is composed of poems which are not only inspired by Jewish themes and biblical subjects, but whose very poetic material (imagery, coloring, rhythms and sound) springs forth directly from an intimate knowledge and experience of the Hebrew language. Vigée has succeeded in creating his own poetic style, not by transposing biblical verse into typically French meter; but by speaking or rather breathing in accord with biblical poetry. In his “Diaspora Choral,” the poet deposes the fact that the French language in its “subtle flavor” and sophisticated refinement inhibits the authentic “naked word” which in Hebrew “springs forth like fire between the teeth on the living tongue.” The second part of *Délivrance du souffle* contains a moving diary of the Yom Kippur War. In sober and restrained tone in the midst of the peril threatening the nation, Vigée reflects on the meaning of Jewish destiny and of its presence in the Land. The third part of the book, “Motifs et variations,” celebrates the beauty of Eretz Israel, an eerie beauty so penetrated with history and spiritual tradition as to wash it clean of all pagan seduction. Vigée’s clear literary commitment to his Jewish heritage does not inhibit his rich contribution to Western culture, as this volume of critical essays, *L’Art et le Dé- monique* (1979), testifies.

The latest books of Arnold *Mandel and Claude Vigée, on the other hand, have persevered in the way he chose in recent years, namely the use of Judeo-Alsatian dialect to convey the true meaning of human existence. In *Le feu d’une nuit d’hiver* (“The Fire of a Winter Night,” 1989), he went further. This poetic work is divided in two parts, the first of which is based on a volume written in dialect form in 1984. Composed in Jerusalem, it is a meditation on the somber past of our generation, which now faces new unknown perils. These perils are portrayed in an Alsatian epic, tender and ironic, burlesque and sinister, which unfolds in the guise of
a country fair in the fall. The dual levels of expression in this dramatic tale bring forth our dual fate, revealing our earthly world which stands under the bright clarity of the eternal upper world. The poet says: “We have a good place elsewhere a trust well kept: in a welcoming ‘elsewhere’ the green vesperal light dies and flourishes anew in a muted spring.”

This folk epic constitutes the prelude of the book, which in fact is more than half of the work: thirteen poems in all. Only a few bear titles, at once melancholy and whimsical: La complainte du Tsigan Sékula, La foire d’après-minuit, and even more in its extension, Syllabaire de la gazelle. The poet often enters a biblical universe (“Moïse au Mont Nebo,” “Jericho”) or is in close contact with the Land of Israel (“Sel du désert,” “Tiferet”). The poet also brings reminiscences of a grandmother on Sabbath Eve and moving allusions to the Holocaust.

One should also note an important translation into French of Paul Celan’s Pavot et mémoire (1987). The great Jewish poet, born in 1920 in Bukovina, whose family was massacred by the Nazis, lived in Paris, but remained condemned to write in German, his only language. He lamented: how can I write in the language of my mother’s murderers? Haunted by the tragic feeling of being a Jew without a people, without a country, without a home, he committed suicide in Paris in 1970. His poetry dwelt on many themes, but this particular volume is, in a way, a Jewish testament. In lyrical incantation Celan evokes the death of the Jews in the gas chambers, compelling the reader to the most serious meditation on the un-speakable evil of all evils. His poem “Fugue de mort” (“Todesfuge”) is especially noteworthy.

[Denise R. Goitein / Anne Grynberg (2nd ed.)]
trated mostly in southwestern France, and perhaps 30,000 Ashkenazim in eastern France. The Sephardim had arrived there after 1500 as *Marranos. By 1776, when the last lettres patentes in their favor had been issued by the crown, they had succeeded, step by step, in establishing their status as a merchant guild, avowedly Jewish, with at least the right to live anywhere within the authority of the parlement of *Bordeaux. The leading families of the Sephardim engaged in international trade. They were sufficiently assimilated to behave like bourgeois, and some were *Deists or nonbelievers before the Revolution. The Ashkenazim in eastern France were foreign and un-French in their total demeanor. This community spoke Yiddish and was almost totally obedient to the inherited ways of life. The power of the community over the individual was much larger among the Ashkenazim than among the Sephardim, for rabbinic courts were, in Metz and in Alsace, the court of first jurisdiction for all matters involving Jews. With the exception of a few rich army purveyors and bankers, Jews in eastern France made their living from petty trade, often in pursuits forbidden to them; by dealing in cattle; and from petty moneylending. More than any other, this last occupation embroiled the Jews in conflict with the poorest elements in the local population, the peasants.

Another economic quarrel involved the Jews in several places in France, and especially in Paris, with the traditional merchant guilds. In March 1767 a royal decree was issued creating new positions in the guilds and making these new posts freely accessible to purchase by foreigners. Jews managed to enter the guilds in a few places in eastern France, and to bid for entry in Bayonne. These efforts were fought in lawsuits everywhere. The new, Physiocratic insistence on productive labor had also helped sharpen the issue of “productivization” of the Jews in these years before the Revolution.

In the intellectual realm the Jews became a visible issue of some consequence in the 1770s and 1780s for a variety of reasons. The attack of the men of the Enlightenment on biblical religion inevitably involved these thinkers in negative discussion of the ancient Jews and, at least to some degree, of the modern ones. All of the newer spirits agreed that religious fanaticism, whether created by religion or directed against deviant faiths, needed to end. The Jews were thus an issue both as the inventors of “biblical fanaticism” and as the object of the hatred of the *Inquisition. Some of the great figures of the Enlightenment, with *Voltaire in the lead, argued that the Jews had an ineradicably different nature, which few, if any, could escape. The more prevalent, less ideological opinions were those of men such as the Marquis de *Mirabeau (the younger) and the Abbé *Grégoire, that the defects of the Jews had been created by their persecutors, who had excluded them from society and limited them to the most debasing of economic pursuits, leaving them entirely under the sway of their own leaders and their narrow tradition. With an increase in rights and better conditions, the Jews would improve.

Propaganda and pressure by Jewish leadership in eastern France, led by Herz *Cerberr, the leading army purveyor in the region, had resulted in 1784 in the two last acts of the old order concerning Jews. In January 1784, Louis XVI, speaking in the accents of contemporary enlightened absolutism, forbade the humiliating body tax (see *Taxation) on Jews in all places subject to his jurisdiction, regardless of any local traditions to the contrary. In July of that year a much more general decree was published which attempted a comprehensive law for the Jews in Alsace. It was a retrograde act. A few increased opportunities were afforded the rich but no Jew could henceforth contract any marriage without royal permission and the traditional Jewish pursuits in Alsace, the trade in grain, cattle, and moneylending, were surrounded with new restrictions. The rich were given new scope for banking, large-scale commerce, and the creation of factories in textiles, iron, glass, and pottery. The Jewish leaders in Alsace fought against this decree, and especially against that part of it which ordered a census in preparation of the expulsion of all those who could not prove their legal right to be in the province. This census was indeed taken and its results were published in 1785. Nonetheless, Jews continued to stave off the decree of expulsion until this issue was overtaken by the events of the Revolution. These quarrels and the granting of public rights to Protestants in 1787 kept the question of the Jews before the central government in Paris. Under the leadership of Chrétien Guillaume de Lamoignon de *Malesherbes, the question was again discussed by the royal government in 1788. Delegations of both the Sephardi and the Ashkenazi communities were lobbying in Paris during these deliberations. The prime concern of the Sephardim was to see to it that no overall legislation for Jews resulted in which their rights would be diminished by making them part of a larger body which included the Ashkenazim. The representatives of the Jews from eastern France followed their traditional policy of asking for increased economic rights and of defending the authority of the autonomous Jewish community.

The Era of Revolution

In the era of the Revolution the Jews did not receive their equality automatically. The Declaration of the Rights of Man which was voted into law by the National Assembly on Aug. 27, 1789, was interpreted as not including the Jews in the new equality. The issue of Jewish rights was first debated in three sessions, Dec. 21–24, 1789, and even the Comte de *Mirabeau, one of their chief proponents, had to move to table the question, because he saw that there were not enough votes with which to pass a decree of emancipation. A month later, in a very difficult session on Jan. 28, 1790, the “Portuguese,” “Spanish,” and “Avignonese” Jews were given their equality. The main argument, made by Talleyrand, was that these Jews were culturally and socially already not alien. The issue of the Ashkenazim remained unresolved. It was debated repeatedly in the next two years but a direct vote could never be mustered for their emancipation. It was only in the closing days of the National Assembly, on Sept. 27, 1791, that a decree of complete emancipation was finally passed, on the ground that the Jews had to be given equality in order to complete the Revolution,
for it was impossible to have a society in which all men of whatever condition were given equal rights and status, except a relative handful of Jews. Even so, the parliament on the very next day passed a decree of exception under which the debts owed the Jews in eastern France were to be put under special and governmental supervision. This was a sop to anti-Jewish opinion, which had kept complaining of the rapacity of the Jews. The Jews refused to comply with this act, for they said that it was contrary to the logic of a decree of equality. Opinion thus had remained divided even in the last days, when Jews were being given their liberty.

This division of opinion about the status of the Jews was, to some degree, based on traditional premises. Such defenders of the old order as Abbé Jean Sieffrein Maury and Anne Louis Henry de la Fare, the bishop of Nancy, remained in opposition, arguing that the Jews were made by their religion into an alien nation which could not possibly have any attachment to the land of France. The more modern of the two, Maury, went further, to quote Voltaire to help prove that the Jews were bad because of their innate character and that changes of even the most radical kind in their external situation would not completely eradicate what was inherent in their nature. De la Fare was from eastern France, and he was joined in the opposition to the increase of Jewish rights by almost all of the deputies from that region regardless of their party. That this would occur had already been apparent in the cahiers from eastern France which, with the exception of one writer under the influence of Abbé Grégoire, were almost uniformly anti-Jewish. The most notable of the left-wing figures from Alsace in the revolutionary parliament, Jean François Rewbell, remained an uncompromising opponent. He held that it was necessary to defend “a numerous, industrious, and honest class of my unfortunate compatriots who are oppressed and ground down by these cruel hordes of Africans who have infested my region.” To give the Jews equality was tantamount to handing the power of eastern France over to counterrevolutionary forces, for the peasant backbone of the Revolution in that region would see the new era as one of increased dangers for them. The only organized body in eastern France which was publicly in favor of increased rights for the Jews was the moderate, revolutionary Société des Amis de la Constitution in Strasbourg, with which the family of Cerfber had close connections. This group argued that the peasants were being artificially whipped up and that their hatred of the Jews would eventually vanish. A policy of economic opportunity would allow the Jews to enter productive occupations and become an economic boon to the whole region. It was along this general line that the Jews, if they were regenerated to be less clannish and more French and if they were dispersed in manufacture and on the land, would be good citizens, that their friends argued for Jewish emancipation. In the first debate on the “Jewish Question” on Sept. 28, 1789, when the Jews of Metz asked for protection against the threat of mob outbreaks (there had been outbursts in Alsace that summer and some Jews had fled to Basle), Stanislas de *Clermont-Tonnerre, a liberal noble from Paris, had agreed that the existing Jews did merit the hatred against them but ascribed what was wrong with the Jews to the effects of oppression. The Jews themselves could not maintain any separatism, for “there cannot be a nation within a nation.” The emancipation of the Jews in France eventually took place on the basis sketched out by him: “The Jews should be denied everything as a nation but granted everything as individuals …” Such views were argued in the revolutionary years by the Jacobins of Paris, who were pro-Jewish (almost all the others and especially those in eastern France were anti-Jewish) and by the main body of moderate revolutionaries, who ultimately made their feeling prevail, that emancipation was a moral necessity, its purpose being to improve the Jews so that they could be part of a regenerated society.

The final decree of Sept. 27, 1791, did not end the tensions in eastern France. The structure of the Jewish community remained, and in some places in eastern France local civil powers continued, at least briefly, to enforce the taxation imposed by the parnasim for the support of the Jewish community. It soon became apparent that the revolutionary government itself needed to keep some kind of Jewish organization in being. The decree of nationalization of the property of the Church and of the émigrés (Nov. 2, 1789) had contained a provision for the assumption of the debts of the churches by the government, but it refused to assume responsibility for the debts contracted by the Jewish communities. The one in Metz was heavily in debt, largely to Christian creditors, and the issue of the payment of these debts remained a source of irritation and of repeated legal acts well into the middle of the 19th century. Those who had lived in Metz before 1789 and their descendants who had moved far away, even those who had converted from the faith, were held to be liable.

Throughout the era of the Revolution there was recurring concern about the patriotism of the Jews (their *civisme*) and about the channeling of their young into “productive occupations” and making them into good soldiers of the Republic; that is, whether the Jews were indeed “transforming” themselves as their emancipators had envisaged. During the first decade of the Revolution some economic changes were taking place. Jews did participate in the buying of nationalized property, and in particular lent money to the peasants in Alsace, who thus acquired their own farms. This splitting of the estates of the Church and of the émigré nobility into small farms gave the peasantry a stake in the Revolution, but the contribution of Jewish creditors and speculators to this trade (it was significant though not dominant) earned them no gratitude. It remained a fixed opinion, especially among Jacobins, that the Jews were usurers and that they were using the new opportunities of the Revolution to become even more obnoxious. In general, the occupational structure of the Jews changed very little in the 1790s. They continued mostly to be middlemen or peddlers; very few were beginning to work in factories or even to own land, despite much propaganda and occasional pressure on them to take up agriculture. There were some difficulties about their joining the armies of the Revolution. In many places the
National Guard refused to accept Jews; sometimes it even attacked them and made minor pogroms, and it was regarded as a matter of unusual public importance that Max Cerfberr was accepted in Strasbourg in 1790. On the other hand, most Jews tried to avoid military service because of the problems of Sabbath and holiday observance which this created for them. A few of the sons of the richest families did become officers in the army as early as the 1790s, but the major military contribution of the Jews during the Republican period was in their traditional role as contractors to the army. Jewish financiers were actually of minor importance, even here, but their visibility remained high and they were attacked with particular vehemence. Jews were involved in the military purchasing directory which was created in 1792, with Max Cerfberr as one of its directors. This body lasted just a few months, but it was at the center of much controversy during its existence, and thereafter. The Jews who were involved were subject to bitter criticism, but in this affair none was put to death for economic crimes or for treason.

The older Jewish leadership continued to dominate the Jewish community in the 1790s, but some newer forces were also arising. In southern France a group of Jewish Jacobins, whose club was named after Rousseau, became in 1793–94 the revolutionary government of Saint Esprit, the largely Jewish suburb of Bayonne. There were a few instances among both the Sephardim and the Ashkenazim of individual Jews who participated in the Religion of Reason. The overwhelming majority, however, both in the French Jewish communities and in those of the papal possessions, Avignon and Comtat Venaissin, which had been annexed to France in 1791, kept their religious traditions alive as best they could. No Jew was guillotined during the Terror (July 1793–July 1794) on the ground that his religious obduracy had made him an enemy of society, though such rhetoric was used by some of the Jacobins of eastern France in outraged reaction to the continuing practice of such traditions as Jewish burial. This was termed severely antisocial and a further expression of the supposed Jewish trait of hating the entire human race. During the Terror many synagogues and other Jewish properties were, indeed, nationalized and synagogue silver was either surrendered or hidden, as were books and Torah Scrolls. In some situations, such as in Carpentras in 1794, the Jews finally "willingly" gave their synagogue to the authorities. Nonetheless, religious services continued in hiding everywhere and after the Terror Jews were able not only to reopen many of their former synagogues but also to establish new conventicles in communities such as Strasbourg in which they had not had the right to live before the Revolution. As early as Aug. 4, 1794, within a few days after the fall of Robespierre, the Jews demanded the right to open a synagogue in Fontainebleau. There were a few cases of mixed marriage, though these remained very much the exception in the 1790s and did not become a trend of any significance until after the end of the century. The whole question of the status of Jewish acts in law remained confused, with many jurisdictions still continuing to restrict the personal freedom of Jews and the French courts still continuing to recognize Jewish law as determinant for Jews on matters of personal status, and especially marriage.

Anti-Jewish acts did not stop entirely with the end of the Terror. In November 1794, two Metz Jews were fined for carrying out Jewish burials and four years later five Jews were sentenced in Nice for building tabernacles for the Sukkot holiday. Thermidor was, however, regarded by Jews as a period in which religious persecution had ended. The problems of this period were mostly economic, for the civic tax rolls in various communities bore down heavily on Jews. From the very beginning of the Thermidor the central government ordered the protection of the Jews against agitation in eastern France. Occasional outbreaks continued and there were even some attacks on Jews for being in league, supposedly, with what remained of the Jacobins. Some angers that had been evoked by the emancipation of the Jews, and their involvement in the events of the first days of the Revolution, were evident during these days of reaction, but crucial was the fact that no change took place in the legal status of the Jews. Their emancipation was a fact and remained so; so was the economic conflict caused especially by their moneylending; so was the continued existence of their religious tradition and of their considerable communal apartness, even though the legal status of the community had been ended; so was the need of the central power to deal with the Jewish community in an organized way for many of its own purposes. All these questions, and an underlying concern about the "reform" of the Jewish religion and Jewish habits to accommodate the needs of the state, were deeded on to the next era, the period of Napoleon.

Effects Outside France

The French Revolution brought legal equality to the Jews who dwelt in territories which were directly annexed by France. In addition to its operation in the papal possessions, Avignon and Comtat Venaissin, which were reunited with France in September 1791, just a few days before the final decree of emancipation for all of French Jewry, this legislation was applied to such border territories as Nice, which was conquered in 1792.

The German regions on the west bank of the Rhine were acquired by conquest in that same year, and the French conqueror, General A.P. de Custine, announced as his troops were entering the Rhineland that winter, that equality for Jews was one of his intentions. The formal enactments did not take place until 1797, when the supposedly independent Cisrhénane Republic was created. In the intervening years Jews who had begun by being suspicious of the new regime had become partisans of the Revolution.

In the Netherlands there was a revolution in 1795, with help from the French army, and the Batavian Republic was proclaimed. A group of "enlightened" Jews had been among the prime organizers in Amsterdam of a body called "Felix Libertate. This association had as its purpose the furtherance of the ideas of "freedom and equality." There was substantial
opposition in Holland even among some of the makers of the Revolution to the granting of full citizenship for Jews. The leaders of the official Jewish community were also opposed, for they fought bitterly against the disappearance of a Jewish separatist organization in a new regime of personal rights. There was a substantial debate, which culminated in eight days of discussion (Aug. 22–30, 1796), at the first session of the new revolutionary parliament. This debate was on a higher level than those held some years before in France; it resulted in the decision that Jews were to be given equal rights as individuals but that they had no rights as a people. The view of Clermont-Tonnerre in France in 1789 was thus upheld in Holland. In law this equality remained for the Jews in the Netherlands even after the fall of the Batavian Republic in 1806.

There were almost immediate echoes in “Italy of the French Revolution, but these stirrings were repressed in all of its various principalities. In the spring of 1790 the Jews were suspect of being partisans of the Revolution, and there were anti-Jewish outbreaks in both Leghorn and Florence; a comparable riot took place in Rome in 1793. There was almost no truth in all of these suspicions. A small handful of “enlightened” individuals were for the Revolution, but the organized Jewish communities looked forward only to some alleviations of their status by the existing regimes in Italy. Radical changes did take place toward the end of the decade, in 1796–98, when Napoleon Bonaparte conquered most of northern and central Italy, including the papal territories, in the course of two years of war. Everywhere the conquering French troops announced the end of the ghetto and equality for the Jews. In Italy the physical walls behind which Jews dwelt still existed in many places and the advent of the French armies gave the signal for the actual physical breaking down of these barriers by Jews and other partisans of the new order. Trees of liberty were planted in many places, especially in the Jewish quarters. Brief and even bloody revenge was taken on the Jews during Napoleon’s absence in 1798–99 on his campaign in Egypt, as counterrevolutionary forces did battle against “Gauls, Jacobins, and Jews.” In 1800 Napoleon, now as first consul, reconquered northern and central Italy and annexed it to France, ultimately to serve as the kernel of his future Kingdom of Italy. Jewish equality was secure in Italy until Napoleon’s fall in 1815.

Elsewhere in Europe, the events of the French Revolution had enormous effects, but they did not lead to equality for the Jews. The French-inspired revolutionary Swiss regime of 1798 did not, even during its brief life, show any real desire to give the few Jews in Switzerland legal equality. In the Austrian Empire, the government was fearful of the Revolution and little was done in the 1790s that went beyond the several decrees of toleration that had been enacted in the spirit of enlightened absolutism by *Joseph II in 1781–82. The early years of the French Revolution coincided with the death agonies of independent Poland, leading to its partition and the end of Polish independence in 1795. Austria, Prussia, and Russia, among whom Poland was divided, were all either actively or passively arrayed against France throughout the 1790s. The influence of the French example, therefore, had no effect on their policy when these countries acquired among them the largest Jewish community, numbering some 800,000, in all of Europe. There was no change during the 1790s in the legal status of the Jews in any of the independent German principalities, not even those which sided with France in war. In the most important of the German states, “Prussia, despite notable and ongoing acculturation by members of the Jewish bourgeoisie in Berlin, the government refused to make any substantial changes in the regime of exclusion. A new decree that was issued at the beginning of 1790 spoke only of some future time, perhaps in three generations, when “regenerated Jews” might be admitted to civic equality. David *Friedlander answered on behalf of the leaders of Berlin Jewry that no changes at all were better than this “new imposition of chains”; what Jews wanted, he boldly added, was that such chains “be completely removed.” To be sure, he and his circle were not insisting that equality be attained immediately by all Jews. Like the more successful Sephardim of France at that moment, the men whom David Friedlander led were interested almost entirely in their own rights. They proclaimed that the Jews in Berlin had already become culturally and intellectually the equal of the highest of German society, and they were, therefore, to be treated differently from their brethren in Bohemia or Poland, who were yet to wait until they had suitably prepared themselves by westernization for freedom.

The news from France was reported extensively and with exaltation in Ha-Me’assef for 1790, the Hebrew annual that was supported by this Berlin circle and by like-minded men on both sides of the Rhine and in Central Europe. These accents were soon suppressed in the name of patriotism, as Prussia went to war against France, but the example of equality in France, and of the United States Constitution of 1787, remained an ideal. For Jews everywhere in the next century after the French Revolution, the battle for emancipation became the central issue of their lives. Everywhere disabilities and exclusions were measured by the standards of France after 1791. In relation to the Jewish question Napoleon was the heir of the Revolution, and his victories after 1800 only extended the sphere of the emancipation. When he fell in 1815 the legal equality of Jews ended in much of his former empire, except in France and in Holland – and in Prussia, emancipation of 1812 had been a domestic decision, not forced upon Prussia by Napoleon. Nonetheless, the memory of the equality that Jews once held remained. Even in the many countries where nothing favorable to Jews had happened between 1789 and 1815, the example of the French Revolution was a dominant political force. Despite attempts at reaction in the 19th century the states of Europe had increasingly to contemplate full legal equality for all of their citizens, including Jews, as a central element of their entering modernity.

FRENKEL, JACOB ILICH (1894–1952), Soviet physicist. Frenkel became an instructor at the University of the Crimea. From 1921 Frenkel lived in Leningrad. At first, he combined research work at the Physico-Technical Institute with lecturing at the Polytechnical Institute, where he headed the theoretical physics department for 30 years. He became a corresponding member of the Soviet Academy of Sciences in 1929. Frenkel’s research was related to the physics of the atmosphere (particularly atmospheric electricity), terrestrial magnetism, biophysics, astrophysics, quantum theory, and the motion of electrons in metals. He laid foundations for the understanding of ferromagnetism and presented a theory of dielectric excitation, along with important ideas relating to defects in crystal lattices. He drew attention to certain similarities between liquid and solid structures, engaged in important research on the liquid state, and presented his conclusions in his book on the kinetic theory of liquids (1945). Soon after the first artificial splitting of the uranium atom, Frenkel advanced a theory to account for the phenomenon of fission, which provided a basis for practical applications of nuclear energy. He was a pioneer in the writing of original Russian handbooks on modern theoretical physics.

[J. Edwin Holmstrom]

FRENKEL, VERA (1938–), Canadian multidisciplinary artist, video producer, poet, writer, educator. Frenkel was born in Bratislava, Czechoslovakia (now Slovakia). To escape the Nazis, her family fled to England and subsequently immigrated to Canada. Frenkel studied fine arts at McGill University and with Arthur Lismer at the Montreal Museum School of Fine Arts.

Already internationally recognized as a printmaker and sculptor, Frenkel began exploring video in 1974. At the forefront of contemporary Canadian art, Frenkel’s interest in new media led her to produce video, web-based work and multimedia installations. Deeply concerned with human dilemmas, her art has examined the tyranny of received ideas, the mythological properties of popular culture, the impact of censorship, and the bureaucratization of experience. ...from the Transit Bar (1992) explores the effects of cultural and geographic displacement. The Body Missing Project (1994 and ongoing), an interactive Internet site, originated with Frenkel’s research on the cultural policy of the Third Reich and the proposed Fuehrermuseum in Linz, Austria. As in all of her work, The Institute: Or What We Do for Love (2003 and ongoing) is an acerbic commentary on the institutionalization of contemporary society that plays documentary and fictional realities against each other.

Frenkel’s work has been exhibited in major galleries throughout Canada, Europe, and Asia. She participated in the Venice Biennale (1972, 1997 and 1999), and represented Canada in documenta IX in Kassel, Germany (1992). Her work is internationally collected by, among others, the National Gallery of Canada, the Museum of Modern Art, New York, and the Ydessa Hendeles Art Foundation.

An innovative and inspiring teacher, Frenkel taught at the University of Toronto (1970–72) and at York University, Toronto (1972–95). Among many honors, she was awarded the Canada Council Molson Prize for the Arts (1989), the Toronto Arts Foundation’s Visual Arts Award (1991), the Geresh Ishkowitz Prize (1994), the Bell Canada Award (2001), and the ccca Art Award (2004). Her writings have appeared in a range of Canadian and international journals and anthologies.

[Joyce Zemans (2nd ed.)]

FRENSDORFF, FERDINAND (1833–1931), German legal historian. Born in Hanover, Frendorf was professor of law at the University of Goettingen and became known as an authority on medieval German law. His numerous writings include Beiträge zur Geschichte und Erklärung deutscher Rechtsbuecher (1888–94), Das statutarische Recht der deutschen Kauflute in Novgorod (1886), and Das Wiedererstehen des deutschen Rechts (1908).

FRENSDORFF, SOLOMON (1803–1880), German masoretic scholar. Frendorff was born in Hamburg, the son of a rabbi. He studied with Isaac *Bernays and later at the University of Bonn, where he took up Semitic languages. A. *Geiger and S.R. *Hirsch were his contemporaries and friends. Between 1834 and 1837 he was assistant rabbi in Frankfurt; from 1837 he taught at the religious school in Hanover; and from 1848 he was head of the newly founded Teachers’ Training College there. Frendorff’s major contribution to Jewish learning consists of a series of still valuable works on the masorah. He edited Darkhei ha-Nikud ve-ha-Neginot (1847), ascribed to Moses ha-Nakdan, and the masoretic work Okhlah ve-Okhlah (1864, repr. 1969) from a Paris manuscript; the latter work had been published previously in a different version appended to rabbinic Bibles. Of a planned edition of Die Massora Magna, only the first part, an introduction, Massoretisches Woerterbuch (1876, repr. 1867), with a prolegomenon by G.E. Weil, appeared; the masorah notes are arranged alphabetically according to key words, giving the Bible passages where they occur. Part of Frendorff’s library is in the Jewish National and University Library in Jerusalem.

BIBLIOGRAPHY: Kressel, Leksikon, 2 (1967), 681; Zum Andenken an unsern Vater... Sal. Frendorff (1903), contains sermons by S. Groneman and L. Knoller.

FRESCO, DAVID (1853–1936), Turkish journalist. Fresco started his journalistic activities in Yeheskal (Isaac) Gabay’s El Telegrapho, where he worked for two years. He then moved to El Tyempo and became its last owner. El Tyempo, published in Ladino, soon became the most influential newspaper of its time, with a circulation of up to 10,000. After the Young Turk Revolt of 1908 it took a strong pro-Ottoman stance and reflected Fresco’s anti-Zionist views. He closed the newspaper on March 27, 1930, and moved to Nice, where he spent his last years together with his sons. His books include Le Sionisme (1909) and Lecture Edifiante de Morale Juive (1929).

[Rifat Bali (2nd ed.)]

FREUD, ANNA (1895–1982), psychoanalyst. Anna Freud was the youngest daughter of Sigmund *Freud, and was his companion on his vacation trips and his nurse during his pro-
longed illnesses. Her devotion to her father brought her into increasing contact with the developing thought and practice of psychoanalysis and she grew interested in child psychology. Between 1915 and 1920 she worked in her profession as a primary school teacher, deepened her knowledge in psychoanalysis, and started analysis as her father’s patient. At the age of 28 she opened her own psychoanalytic practice, right across Sigmund Freud’s treatment room in Berggasse 19. In 1927 she published a paper Einfuehrung in die Technik der Kinderanalyse (Introduction to the Technique of Child Analysis, 1928), in which she set out the analytical technique she had evolved. In 1936 she published Das Ich und die Abwehrmechanismen (The Ego and the Mechanisms of Defence, 1937) which described the ways by which painful ideas and emotions are warded off from consciousness and direct expression, e.g., by repression and replacement by the opposite idea. This book was a pioneer contribution to ego psychology and in understanding the adolescent.

She escaped from Austria with her father in 1938 and went with him to London, where Sigmund Freud died in 1939 and she continued to live until the end of her life. During World War II, together with her friend Dorothy Burlingham, she built up the Hampstead nurseries, where they took care of children separated from their families. In three books the two colleagues documented their experiences there, describing the treatment of children under conditions of war stress. They also described the development of children from narcissism to socialization, and set out the problems in the emotional life of institutional children despite their receiving advantages in physical care. These books were Young Children in Wartime (1942); Infants without Families (1943); and War and Children (1943).

The Hampstead nurseries closed in 1945. In 1947, with the help of Kate Friedlander, Freud founded the Child Therapy Course. In 1951 she became director of the clinic which was opened in conjunction with the course. Freud’s book Normality and Pathology in Childhood (1965) is a comprehensive summary of her thought. Freud’s contribution to child analytic therapy and child psychology was fundamental. She was able to demonstrate the validity of the reconstructions made by Sigmund Freud of child development and pathology through his analysis of adults. Moreover she was able to add considerably to the information by her methods of direct observation of children. Of special interest was her employment of psychological understanding in the education of children and in preventive work with the child through its parents and educators. Her contribution to the knowledge of the reaction of young children separated from their parents and deprived of emotional relationships, particularly in institutions, has had a wide effect in social policy and direct child care. From 1968 her collected works appeared under the title The Writings of Anna Freud.

[Louis Miller / Mirjam Triendl (2nd ed. )]

FREUD, LUCIAN (1922– ), English painter, grandson of Sigmund *Freud. Freud, who was born in Berlin, the son of an architect, was brought to London in 1933 with his parents. He was naturalized in 1939 and began to work full time as an artist after being discharged from the merchant navy in 1942. His Interior at Paddington won a prize at the Festival of Britain, putting him on the artistic map. In 1954 he represented Britain at the Venice Biennale. His work was often German in its influence and style, and closely resembled the later German expressionists in the Gothic intensity of his portraiture. His subject matter was largely portraits, nudes, and interiors. Freud is widely regarded as one of the greatest figurative artists of recent times, and is one of the best-known artists in contemporary Britain; his work was represented at most major galleries of modern art. He was made a Companion of Honour (CH) in 1993 and a member of the Order of Merit (OM) in 2002. He produced a book about his own work, Lucian Freud, in 1996.

FREUD, SIGMUND (1856–1939), Austrian psychiatrist and creator of psychoanalysis. Freud was born in the small town of Freiberg, Moravia (now part of the Czech Republic). When he was four his family moved to Vienna, where he graduated with distinction from gymnasium and then entered university as a medical student. As a Jewish student he encountered certain barriers, but he found a haven from the antisemitism of the university community in Ernst Brückeck’s physiological laboratory. He worked productively in research with Brückeck from 1876 to 1882, and studied philosophy with Franz Brentano and biology with Carl Claus, a follower of Darwin.

In 1882 Freud became engaged to Martha Bernays. Though his interest was primarily in research, he decided to enter clinical practice as a resident at the Vienna General Hospital in order to establish himself sufficiently to be able to marry. While working as a clinician at the hospital, he continued to pursue his neurological research as an assistant to the brain anatomist T.H. Meynert.

The work with chronic nervous illnesses of the French neurologist Jean Charcot attracted Freud’s interest, and he began to study the clinical manifestations of diseases of the nervous system. In 1885 he was awarded a traveling fellowship, which he spent studying with Charcot at the Salpêtrière mental hospital in Paris. Charcot’s demonstration that ideas could cause physical symptoms strengthened Freud’s deter-

ENCYCLOPAEDIA JUDAICA, Second Edition, Volume 7 259
mination to investigate hysterical paralyses and anesthesias. In 1886 he married, resigned from the General Hospital, and set up a private practice in nervous diseases so that he could support his new wife.

Freud had already formed a friendship with the Viennese physician Josef *Breuer, who had stumbled upon an innovative treatment for hysteria. In 1885 Breuer had begun treating a young woman who suffered from severe hysterical symptoms—the patient made famous as Anna O. In Freud and Breuer’s 1895 epoch-making collaboration *Studies in Hysteria*. Their work set out for the first time the theory that the unconscious damming up of emotions could produce symptoms of hysterical illness, and its corollary: that if, with the aid of hypnosis or some other method, patients could express this suppressed emotion and the fantasies that accompanied it, their symptoms would disappear.

Breuer was a well-established and respected general practitioner who had experimented with a new way of relieving neurotic symptoms with his patient Anna O. (what she called “the talking cure” or “chimney sweeping”). But as the treatment progressed, Breuer felt increasingly overwhelmed by the sexual nature of her behavior and symptoms; and he could not accept Freud’s growing conviction that disturbances in sexual life were fundamental causal factors in neurosis and hysteria. A year after publishing *Studies in Hysteria*, Freud and Breuer parted company.

Now working on his own, Freud gave up hypnosis and the method of cathartic discharge for a new therapeutic technique. He asked his patients to relinquish self-censorship and to tell him whatever came into their minds. This process, which he called free association, is sometimes referred to as the fundamental rule of psychoanalysis. It allowed the patients to recall forgotten events and experiences, and so helped Freud uncover what he believed lay behind their symptoms. He soon concluded that an unacceptable impulse, feeling, or fantasy and the resistance that it engendered resulted in a special order of intra-psychic conflict. While the unacceptable impulse would (unconsciously) be repudiated and disavowed, less threatening methods of gratifying it in a disguised form would be pursued. The struggle to both thwart and pursue the impulse could manifest itself in mental or physical symptoms. The task of therapy was to uncover the repression and allow the repudiated impulse into consciousness, where it could be judged, and accepted or rejected; the result of this process was that the unconscious modes of regulation that had produced the symptom were no longer necessary and lost their force. Freud called this form of therapy psychoanalysis.

In 1896, almost immediately after his father’s death, Freud began the difficult task of working through his own unconscious by analyzing his dreams. He came to the conclusion that a dream—thought is always related to a disavowed infantile (sexual) wish that emerges in the context of the dream only after passing through a mental censorship and distortion that camouflages the wish to such an extent that its expression can be tolerated. The dream thus serves as an exemplary model of the process whereby the repressed achieves expression in a disguised form. Freud articulated this theory in *The Interpretation of Dreams*, published in 1900, which he considered his most important work. He identified himself with the biblical character of Joseph, the dream-interpreter, and observed that “the interpretation of dreams is the royal road to a knowledge of the unconscious activities of the mind” (this sentence was added in 1909 to the second edition).

In 1904 Freud published *The Psychopathology of Everyday Life*, in which he showed that the numerous unconscious slips and mistakes that people make in everyday life are also the outcome of intra-psychic struggle; and that they are not merely accidental occurrences, but like dreams and neurotic symptoms have a meaning that can be discovered through psychoanalysis. In 1905 Freud’s theories on the importance, from earliest infancy, of bodily experience, desire, and the Oedipus complex were elaborated and brought together in his *Three Essays on the Theory of Sex*. From this point on he continued to develop his notions of repression, symptom formation and sexuality.

Freud’s sexual theories were no more acceptable to the medical profession at large than they had been to Breuer, and for almost a decade he was virtually ostracized by the establishment. But a small circle of colleagues interested in Freud’s work slowly collected around him, and his professional isolation finally came to an end. He became concerned that attracting non-Jews to the psychoanalytic enterprise was necessary to avoid its becoming a “Jewish national affair” and encouraged non-Jews to take a prominent role in the newly formed International Psychoanalytic Association. In 1906 he heard that a group of psychiatrists in Zurich, one of whom was C.G. Jung (1875–1961), was interested in psychoanalysis. Freud and Jung met in the following year, and the Swiss psychiatrist became his foremost disciple.

Freud applied his psychological theories to primitive cultures, and to mythology and religion. In 1907 he suggested a relationship between obsessive acts and religious rituals. In 1913 in *Totem and Taboo* he concluded that the dread of incest was universal.

In 1909 Freud and Jung traveled together to the United States and gave a week of lectures at Clark University in Worcester, Mass. During that visit, Freud delivered his “Five Lectures on Psychoanalysis” (American Journal of Psychology, 21 (1910), 181–218). Their association lasted until 1912, when Jung went on to found his own school after advancing theories that Freud considered incompatible with psychoanalysis. Jung stressed the importance of universal archetypes in place of the infantile sexual wishes that were at the basis of Freud’s view of the unconscious. In 1912 another prominent associate, the Austrian psychiatrist Alfred *Adler*, also withdrew from psychoanalysis. Adler, like Jung, also repudiated infantile sexuality; but Adler thought it was the desire for power that was at the basis of character and neurosis.

Freud proposed that infancy is dominated by the pleasure principle, which later, during maturation, is modified and
at least partially displaced by the reality principle. Under the regime of the pleasure principle immediate fulfillment and discharge of tension is demanded; while the reality principle operates in realistic terms, takes external conditions into account, includes delay and compromise, and allows the pursuit of gratification by pragmatic means. In 1911 he published "Formulations Regarding the Two Principles in Mental Functioning," which elaborated his view of these two basic principles. Meanwhile, between 1915 and 1917, he was attempting to construct a "metapsychology" by which he hoped to articulate and clarify the principal ideas of psychoanalysis. He explored these ideas in a series of influential papers that included "Instincts and their Vicissitudes" (1915), "The Unconscious" (1915), "Repression" (1915), and "Mourning and Melancholia" (1917).

After World War I Freud gave full scope to his speculative tendencies. In 1920 he published Beyond the Pleasure Principle; in 1921, Group Psychology and the Analysis of the Ego; and in 1923, The Ego and the Id. In Beyond the Pleasure Principle he brought the instincts for the preservation of the self and the species under the concept of Eros, a basic impulse toward life, love, and growth. He contrasted this with Thanatos, a death instinct. Many of his colleagues felt that the concept of a death instinct was purely speculative and not adequately grounded in empirical observation; it only found wide acceptance in the work of the later psychoanalyst Melanie Klein and her followers, who felt that the death instinct accounted for some of the self-destructiveness that seems to be part of human nature. In The Ego and the Id, Freud divided the mental apparatus into an ego, an id, and a superego: the ego supporting reason and reality, the id containing the passions, and the superego representing the internalized ethical standards of the parents.

Freud's work in understanding human psychology and mental disturbance is without parallel in history. He turned psychology's attention in a new direction. He made systematic contributions in three separate but related areas: human development (especially in childhood); the workings of the mind; and the treatment and cure of mental illness. A concern with biological and bodily processes, especially sexuality, underlay his developmental psychology. But Freud's perspective as a natural scientist was balanced by an emphasis on subjective experience and the formative relationships of childhood. Freud stressed the fundamental importance and dynamic nature of unconscious mental processes in everyday life and symptom formation: the centrality of the role of anxiety, the mechanisms of defense, and the functions of repression, sublimation, denial, and regression.

Freud's work has been faulted by many for its emphasis on sexuality and, in particular, for his belief in the universality of the Oedipal drama; on the other hand, there is no question that one of his major contributions was to open up the topic of sexuality for reexamination. Though Freud had a critical understanding of the role of culture and his psychology emphasized its importance in human development, his work has been extensively criticized for being limited by the assumptions of 19th-century science and of his Victorian social milieu. The development of psychoanalysis since Freud's death has involved the elaboration of many of his core ideas; his positions regarding the psychology of women and the contributions of the analyst to the psychoanalytic interaction are among those which have been challenged and significantly modified.

Freud's theories have had a wide and far reaching influence on our society. His contributions to other fields are almost as extensive as his contributions to clinical and theoretical psychoanalysis; and the nature of the wider impact his theories have had on our world has aroused as much interest and controversy as his psychology.

Freud and his daughter Anna *Freud, the child psychoanalyst, were hurried out of Vienna by his colleagues after the German-occupation in 1938. His other children and their families had already left; his sisters, who were old and infirm, refused to leave, and died in Auschwitz. Freud died the following year in London after a long and courageous battle with cancer.

Freud's complete psychological works in English were edited in 23 volumes by J. Strachey and others (1953–66), and his letters were published by E.L. Freud in 1961 (originally published in German 1960).

**Freud's Jewish Identity**
Sigmund Freud (born Sigismund Schlomo Freud) referred to himself as a "Godless Jew." He was a passionate atheist with a commitment to an ethical way of life and an aversion to religious ritual. At the same time, his Jewishness was a significant part of his identity, and throughout his life he felt a strong connection with the Jewish people. Both of his parents came from Orthodox homes in Galicia in the eastern part of the Austro-Hungarian empire. After Freud's birth, when the family moved to Vienna, they settled initially in the Jewish district of Leopoldstadt. It is likely that they celebrated the major Jewish holidays, and we know that Jakob Freud taught his son Bible stories; still, from the beginning, Sigmund Freud's life was also suffused with the liberal humanistic Jewish ideals of 19th century Vienna.

His gymnasium taught the classics-based curriculum of the German Enlightenment, although Jews in the school also studied the Bible and Jewish history and ethics. At a time when Austrian society allowed assimilated Jews to advance in society, Freud considered himself part of the wider German culture and, like many of his contemporaries, was ashamed of the "Ostjuden" (East European immigrants) who moved into his neighborhood in great numbers in the 1860s.

Although antisemitism was relatively quiescent in Vienna during his youth, a story his father told him of being humiliated as a young man by an antisemite left a lasting impression on the son. Freud recalled this story in his book The Interpretation of Dreams, along with his own disappointment in his father's passive response to the insult. The resurgence of antisemitism in Vienna, by the time Freud entered medical school, shattered his hopes of living a life of equality with non-Jews. When the option of assimilation was no longer
available, Freud chose to express pride in his Jewishness, thus subtly defying those who sought to marginalize, and later to annihilate, him.

Freud chose to remain a Jew at a time when conversion was the only route to career advancement; as a result his promotion at the University of Vienna to full professor was delayed by more than 20 years. In 1897 he banded together with fellow Jews in the newly formed Jewish humanitarian organization *B’nai B’rith. He presented his developing ideas about psychoanalysis in that forum at a time when he felt excluded by the academic and medical community. At the 70th birthday party that his B’nai B’rith brothers prepared for him, he made that choice clear: “That you are Jews could only be welcome to me, for I was a Jew myself, and it had always seemed to me not only undignified, but quite nonsensical to deny it.”

Freud never lost his emotional connection with Jewish culture. In private he used Jewish jokes and Yiddish folk tales and phrases to communicate with his friends and colleagues. In 1930 he accepted membership, along with Albert *Einstein and others, in the honorary praesidium of the *YIVO Institute (known in English as the Yiddish Scientific Institute) in Vilna, which was founded as a Jewish national academy in 1925 for the purpose of collecting, preserving, and studying Jewish culture and the Yiddish language.

Freud was sympathetic to the goals of Zionism, which his contemporary, Theodore *Herzl, was pursuing as a response to antisemitism. In 1930, in a letter to Einstein, he expressed pessimism over the possibility of a Jewish homeland in the Middle East. However, by 1933 he was to write a letter of support to the president of the *Keren Hayesod (the financial part of the World Zionist Organization) for his work “to establish a new home in the ancient land of our fathers.” Freud approved when his sons joined Kadima, the Zionist student association at the University of Vienna, and at the age of 80 he asked to become an honorary member himself. He was particularly proud of the Hebrew University in Jerusalem, and served on its first Board of Governors, chaired by the university’s founding father, Dr. Chaim *Weizmann.

Freud thought that religion was essentially a defensive fantasy: a primitive expression of infantile needs (Future of an Illusion, 1927) and unconscious guilt (Totem and Taboo, 1913). Although science and religion were often seen as battling for dominance in the late 19th century, Freud had contemporaries, such as the philosopher and psychologist William James, who held a much more nuanced understanding of religion. Interestingly, Freud married an Orthodox Jewish woman – Martha Bernays, the granddaughter of Rabbi Isaac *Bernays, who was the chief rabbi of Hamburg. Their marriage was a loving one, but Freud would not allow her to observe even the most basic Jewish ritual of lighting Sabbath candles.

In Freud’s final years, he wrote Moses and Monotheism (1939), an exploration of issues that had long concerned him. Although he had often expressed pride in his Jewishness, he had always had difficulty defining what, in fact, connected him so strongly to the Jewish people, and what it meant to be a Jew. In Moses and Monotheism, he speculated on the nature and transmission of Jewish identity, and the origins of antisemitism. His account of the beginnings of the Jewish people breaks radically with tradition. In it, Moses was not a Jew but an Egyptian who taught an ancient Egyptian monotheistic religion to a semitic tribe. In the desert, the tribe rebelled against Moses and murdered him.

Freud had introduced the theme of the murdered father-figure in Totem and Taboo, hypothesizing that it was at the heart of all religion. In his account in Moses and Monotheism, the suppressed memory of this murder became so powerful that it served as the source of a tenacious religion, in this case, Judaism. The adoption of monotheism, Freud claimed, made the Jews a highly ethical and intellectual people, qualities that he identified as integral to Jewishness. He also associated the murder of Christ with the murder of Moses, and developed a case for this parallel being at the heart of antisemitism. This strange book, with its many complex twists of plot, offended Jews and Christians alike. Anthropologists, historians, and biblical scholars rejected its premises. With the passage of time, however, it has been interpreted more positively, with greater emphasis on what it reveals about its author. Upon dissolving the Vienna Psychoanalytic Society in 1938 and advising its members to flee the Nazi threat, Freud had invoked the memory of Rabbi *Johanan ben Zakkai, who was able to continue the Jewish tradition elsewhere after the destruction of the Temple in Jerusalem. Freud had tremendous respect for the power of knowledge, and although he was not interested in the continuation of ancient traditions, he may have hoped that publishing Moses and Monotheism from his new home in London, would ensure the survival of two crucial components of his life: psychoanalysis and the Jewish people.

[Janice Halpern, Arnold Richards, and Sheldon Goodman (2nd ed.)]

FREUDEMANN, SIMHAI (Ephraim ben Gershon ha-Kohen; c. 1622–1669), talmudist and author. Born in Belgrade, Freudemann studied under Judah Lerma II, the Sephardi rabbi of the Belgrade community, whom, despite his Ashkenazi descent, he succeeded as rabbi. In 1660 he was appointed rabbi of Ofen (Buda) in Hungary, but a dispute soon arose in the town on the grounds of his having relatives in the community, a disqualifying factor for the appointment of a rabbi under the terms of a ban included in the takkanut of the dayyan Aryeh Shraga Feivish of Vienna. In consequence, he left Ofen after a few months and returned to Belgrade where he remained until his death.
In 1647 he published Lerma's responsa, Peletat Beit Yehudah (Venice). Ten years later, there appeared in Venice his most important work, Sefer Shemot (referred to also as Shemot ha-Gittel), based on unpublished material of earlier Ashkenazi and Sephardi authorities, giving the correct Hebrew spelling of Jewish personal names of Hebrew, Latin, Spanish, and German origin, as well as the orthography of rivers and place-names for use in drawing up Jewish bills of divorce and other public documents in which accuracy was essential.

[Samuel Rosenblatt]

FREUDENTHAL, ALFRED MARTIN (1906–1977), civil engineer. Born in Poland, his degrees in civil engineering were awarded in Prague (1929) and Lvov (1932). He worked as a structural designer in Prague and Warsaw before immigrating to Palestine and becoming resident engineer and then chief structural engineer of the Port of Tel Aviv (1935–45). For ten years he served on the faculty of Haifa Technion as professor of civil engineering. In 1947 he moved to the United States and in 1949 became professor of civil engineering at Columbia University. He later joined George Washington University’s engineering department where he taught until his death. His specialties included metal fatigue and the theory of plasticity. He wrote Verbundstuetzen fuer hohe Lasten (1933) and Inelastic Behavior of Engineering Materials and Structures (1950). In honor of Freudenthal’s exceptional contributions to research, in 1975 the American Society of Civil Engineers instituted the Freudenthal Medal, awarded to individuals in recognition of distinguished achievement in safety and reliability studies in civil engineering.

[Ruth Rossing (2nd ed.)]

FREUDENTHAL, JACOB (1839–1907), German philosopher. His scholarly investigations were in the areas of Greek and Judeo-Hellenistic philosophy and the philosophy of Spinoza. Freudenthal was born in Hanover. In 1863 he taught at the Samson School in Wolfenbuettel and from 1864 lectured on classical languages and the history of religious philosophy at the Jewish Theological Seminary in Breslau. From 1875 he also taught at the Breslau University. He married a daughter of Michael Sachs, the famous Berlin preacher and scholar. Freudenthal was a foremost authority on Aristotle and published a series of works on his philosophy. In his studies of Xenophanes Freudenthal opposed the then prevalent opinion that Xenophanes was a consistent monotheist. His writings include Hellenistische Studien (1875–79); Flavius Josephus beigelegte Schrift: Ueber die Herrschaft der Vernunft (1869); Zur Geschichte der Anschauungen ueber die juedisch-hellenistische Religionsphilosophie (1869); “Spinoza und die Scholastik,” in: E. Zeller, Philosophische Aufsatze (1887), 85–138; Die Lebensgeschichte Spinozas in Quellenschriften… (1899); Spinoza, sein Leben und seine Lehre, vol. 1 (1904), vol. 2 (1927).

[Joseph Elijah Heller]

FREUDENTHAL, MAX (1868–1937), German liberal rabbi and writer. Freudenthal, who served as rabbi in Dessau, 1893–1900, Danzig, 1900–07, and Nuremberg, 1907–35, was one of the most resolute exponents of religious liberalism in Germany. His contributions to Jewish scholarship covered both philosophy and history. In philosophy he published Die Erkenntnislehre Philos von Alexandrien (1891); in history, Aus der Heimat Moses Mendelsohns (1900); Die Familie Gompertz (in collaboration with D. Kaufmann, 1907); Die israelitische Kultusgemeinde Nuernberg, 1874–1924 (1925), which includes his autobiography; and Leipziger Messegaeste (1928). Freudenthal contributed a wealth of basic material to the study of modern Jewish history in Germany. He wrote for various learned publications, and was coeditor of the Zeitschrift fuer die Geschichte der Juden in Deutschland.

FREUND, ERNST (1864–1932), U.S. jurist and legislative authority. Born in New York, Freund was educated in Germany and the United States. Freund practiced law in New York from 1886 to 1894, but was drawn to the teaching profession, concentrating on political and social sciences. As a professor at the University of Chicago from 1902, he made significant contributions to the field of public law, particularly in administrative law and legislation. Freund stressed the importance of social science in the legislative process. He served as a member of the National Conference of Commissioners on Uniform State Law from 1908 until his death and took part in the drafting of uniform state laws relating to marriage and divorce, the guardianship of children, child labor, narcotics, and the improvement of the legal position of illegitimate children. Two important books among his writings are The Police Power, Public Policy and Constitutional Rights (1904) and Standards of American Legislation (1917).

[Julius J. Marcek]

FREUND, GISÈLE (1908–2000), German photographer and reporter. Freund was born in Berlin and became acquainted with photography at an early age when her father presented her with a Leica after she finished school. She studied soci-
ology in Freiburg and Frankfurt/Main under Theodor W. Adorno, Karl Mannheim, and Norbert Elias. After the National Socialist takeover in 1933 she fled to Paris, where she continued her studies at the Sorbonne. In her doctoral thesis she described the impact of photography on society in the 19th century. In Paris, she acquired French citizenship and started working as a professional photographer, portraying famous authors and artists. Freund used the newly developed 35-mm Technicolor film for her portraits of Walter Benjamin (1938), James Joyce (1939), Virginia Woolf (1939), and Jean-Paul Sartre (1939). In addition, she produced photojournalism for magazines like *Weekly Illustrated* and *Life*. After the German occupation she fled to Southern France in 1940 and two years later she settled in Argentina. She continued working as photographer and photojournalist and was active in the development of cultural relations between Argentina and France. After the war, Freund returned to France and went to work for the Magnum photo agency. She made several trips to America, reporting from there and lecturing on contemporary literature. After she did a piece on Evita Perón, she was banned for life from entering Argentina. The United States similarly refused her entry in 1954 on the grounds that she was a Communist sympathizer. In 1970 she published her autobiography, *Le monde et ma caméra*. In the 1980s she received several honors, such as the Chevalier de la Légion d’Honneur and the Officier du Mérite, both awarded by the French Republic. Late in life she received international recognition for her work, which was exhibited in such places as the Paris Musée d’art moderne (1968) and repeatedly in Germany, as in Bonn in 1977 (Rheinisches Landesmuseum) and Berlin in 1988 (Werkbund-Archiv).

[Philipp Zschommler (2nd ed.)]

**FREUND, MARTIN** (1863–1920), German organic chemist, born in Neisse. Freund became professor at Akademie fuer Sozial-und Handelswissenschaften (1905) and was rector there (1907–09). He was appointed head of the Chemical Institute of the newly founded Frankfurt University (1914). Some of his synthetic products became therapeutic pharmaceuticals.

**FREUND, PAUL ABRAHAM** (1908–1992), U.S. constitutional lawyer, educator, and author. Freund, who was born in St. Louis, Missouri, was appointed law clerk to Justice *Brandeis for the 1932–33 term of the U.S. Supreme Court, and served on the legal staffs of the Treasury Department and the Reconstruction Finance Corporation (1933–35), and was special assistant to the solicitor general (1934–39) and to the attorney general of the U.S. (1942–46). Freund lectured at the Harvard Law School from 1939 (named professor in 1940). He served as legal adviser to President Kennedy and to the State Department, and from 1957 as adviser to the American Law Institute on the drafting of the Restatement of the Conflict of Laws. A recognized authority on constitutional law, Freund believed that the U.S. Supreme Court in a federation has the responsibility of maintaining the supremacy of the Constitution and promoting the uniformity of law. He served as the president of the American Academy of Arts and Sciences in Cambridge, Massachusetts, from 1964 to 1967. His writings include *On Understanding the Supreme Court* (1949); *The Supreme Court of the U.S.* (1961); *On Law and Justice* (1968); *Experimentation with Human Subjects* (1970); and *Constitutional Law: Cases and Other Problems* (with A. Sutherland, 1977).

[Julius J. Marcke]

**FREUND, SAMUEL BEN ISSACHAR BAER** (1794–1881), rabbi and author of commentaries and glosses on the Mishnah and halakhic works. Born in Touskov, Bohemia, Freund was a pupil of Baruch Fraenkel-Teomim of Leipnik and Bezalel Ranschburg (Rosenbaum) of Prague. He served as rabbi in Lobositz, and afterward in Prague (1834–79), where he succeeded Samuel b. Ezekiel Landau as dayyan, or “Oberjurist.” Freund initiated the founding of the “Afike Jehuda” society for Jewish science in Prague (1869). He died in Prague.

Among his works are *Zera Kodesh* (pt. 1, 1827); novellae and expositions of the tractates *Berakhot*, *Pe’ah* and *Demai*; *Musar Av* (Vienna, 1839), a commentary on *Proverbs*; *Teshuvat Keren Shemuel* (Prague, 1841), a responsa on the subject of eating legumes, rice, and millet during Passover, his conclusion being that they cannot be permitted; *Et le-Hannenah* (1850), glosses on the order *Molod*, *Ir ha-Zedek* (1863), an abridgment of the *Sefer Mitzvot Gadol* (*Senag*) of Moses of Coucy, with glosses, novellae, and expositions; and *Amorat Tehorot* (1867), glosses to, and corrections of the works of commentators on the order *Tohorot*, together with his own *Ketem Paz* (1870), a commentary on *Avot*, and an appendix of glosses and novellae to *Berakhot*.

**BIBLIOGRAPHY:** Der *Israelit*, 22 (1881), 609, 616–8, 725; G. Klemperer, in: *HJ*, 13 (1951), 80.

[Samuel Rosenblatt]

**FREUND, VILMOS** (1846–1920), Hungarian architect. He studied architecture in Zurich. Builder of three Jewish hospitals in Budapest, his works also include the New York Palace (1892) and the “Adria” building in Fiume (Rijeka, Yugoslavia). He favored historicizing neo-Baroque and neo-Renaissance styles.

[Evic Kundor]

**FREUNDLICH, OTTO** (1878–1943), German painter, sculptor, graphic artist, and teacher. Born into a Jewish family in Pomerania. Freundlich was educated by a foster mother in the Protestant tradition after the death of his mother. He studied history of art, then art; he traveled to Italy and Paris. From 1909, the year of his first exhibition, to 1914 he had a studio in Montmartre, where he worked with Picasso, Herbin, and Gris. Beside sculpture he was interested in the art of mod-
ern stained glass. He returned to Germany at the outbreak of World War I. Strongly sympathetic to the Left, Freundlich was a contributor to Die Aktion, a revolutionary anti-war publication in Berlin. Its September 1918 issue was dedicated to him and was illustrated with his drawings and woodcuts. After the war, he joined the short-lived November Group, which vainly endeavored to narrow the gap between the masses and the artists. Later he exerted a strong influence on the Dada movement. He returned to Paris in 1924 and took part in the exhibitions of the Abstraction-Creation group from 1932 to 1935. In 1936 he tried to establish a private academy but without success. In Nazi Germany, his works featured in the "Degenerate Art" show in 1937/38, and his near-abstract sculpture Homme Nouveau (1912) was singled out as an example of "Bolshevik-Jewish" art. When France was invaded in 1940, he fled to the Pyrenees but was caught by the Nazis and deported to Majdanek, where he perished. His works – sculpture, paintings, drawings, mosaics – were either close to pure abstraction or completely nonfigurative. The sculptures, often related to architecture, consist of rolling, cloud-like masses, joined together with great subtlety.

FREUND-ROSENTHAL, MIRIAM KOTTLE (1907–1999), U.S. Hadassah leader. Born in New York City, she received her Ph.D. in American history from New York University, with a specialty in American Jewish history. She taught in the New York public high schools until 1944. From 1940, Freund-Rosenthal was a member of the National Board of Hadassah and held major positions in the organization. She was Youth Aliyah chairman (1953–56) and Hadassah national president from 1956 to 1960. She was instrumental in obtaining the services of Marc Chagall as creator of the twelve stained-glass windows in the synagogue at the Hadassah Medical Center.

Freund-Rosenthal edited the Hadassah Magazine from 1966 to 1971. She served as national education chairman, national vocational education chairman, national Youth Aliyah chairman, and national Zionist affairs chairman. Following her Hadassah presidency, she served as national Bond chairman, chairman for the Chagall exhibit, and chairman of the 1965 and 1977 national youth survey committee.

In appreciation for the work she did for Youth Aliyah to help North African Jewish children in Morocco, Youth Aliyah's Ohel Miriam in the synagogue in Ramat Hadassah Szold was named in her honor.

Freund-Rosenthal was also a founder of the Inter-Collegiate Zionist Youth Federation of America and a founding director of the Brandeis Youth Foundation. She was a national officer of the Jewish National Fund, as well as a national vice president of the Women's Division of Brandeis University. She also served as national associate chairman for the Women's Division of State of Israel Bonds. In 1991 she was elected an American regent of the International Center for University Teaching of Jewish Civilization. She also served as national chairman of library projects, as Hadassah's national historian, and as Hadassah's United Nations non-government representative.

She wrote Jewish Merchants in Colonial America (1939), Jews for a Crown (1963), and In My Lifetime: Family, Community, Zion (1989), as well as articles on Zionism and American history. She also compiled and edited the book A Tapestry of Hadassah Memories (1994). Later in life she settled in Jerusalem.

[Fadys Rosen / Ruth Beloff (2nd ed.)]

“FREY, JEAN BAPTISTE” (1878–1939), French priest and archaeological scholar. In 1925 Frey was appointed secretary of the papal Bible commission and in 1933 rector-consultor of the Congregation “De propaganda fide” (“For Propagating the Faith”). His most important publication, though incomplete, is the two-volume Corpus Inscriptionum Judaicarum (entitled in French Recueil des inscriptions juives du troisième siècle avant au septième siècle après J.C., vol. 1, Europe, 1936; vol. 2, Asie-Afrique, 1952). The second volume, despite its title, deals with “Egypt only. His other works include La théologie juive aux temps de Jésus-Christ...” (1910), Une ancienne synagogue de Galilée récemment découverte (1933), and Il delfino col tridente nella catacomba giudaica di Via Nomentana (1931). Frey also contributed numerous articles to learned periodicals, chiefly on Judaism in the time of Jesus and on Semitic epigraphy.

FRIBOURG (Ger. Freiburg), capital of the Swiss canton of that name. Jews lived in the area before 1348 in Murten/Morat (1294/99). On the outbreak of the Black Death (1348–49), the Jews in the area, like those in the rest of Europe, were accused of causing the epidemic by spreading poison. After 1356 a number of Jews received permission to settle in the city of Fribourg as citizens and to engage in moneylending. As elsewhere in Switzerland, they lived in their own part of the town, although not confined to a ghetto. The decrees of expulsion of 1428 and 1463 were not permanent. Jews were subsequently granted the right to buy houses. Until at least 1481 Jews could live in the city. In that same year, Fribourg entered the Swiss Confederation. Eight Jewish doctors resided in Fribourg and others in the town of Murten, the most famous being Ackin de Vesoul.

The next mention of a Jewish presence in Fribourg dates from 1678, but Jews may have been present earlier. Jewish cattle dealers and peddlers were permitted to visit the city's open market, but the ban on Jewish commerce issued by nearby *Berne in 1787 also affected Fribourg until 1798. Restrictions against the settlement of Jews remained in force until 1864, though some privileged Jews received residence permits after 1843.

The present community was founded in 1895 by Alsatian Jews. In 2000, Jews in the canton of Fribourg numbered...
138 persons; 66 were members of the community. The community built a synagogue in 1904 and acquired a cemetery. It was given official status in 1990/2001. The leading Nordmann family opened department stores. Jean Nordmann, president of the Jewish Community Association in 1973–80, was one of the first Jewish colonels in the Swiss army. Jewish subjects are taught at the local Catholic university.

[Uri Kaufmann (2nd ed.)]

**FRIDMAN, GAL** (1975– ), Israeli windsurfer; first Israeli ever to win an Olympic gold medal and the first Israeli to win two Olympic medals. Born in the Israeli moshav of Karkur, near Hadera, Fridman—who chose the name Gal, meaning “wave” in Hebrew—began windsurfing when he was six years old and competing at age 11, under the coaching of his father, Uri. Young Fridman competed in international competitions in the youth categories in 1989 and 1991 while attending the ORT Ha-Shomron High School in Binyaminah. Fridman won the silver medal at the 1995 and 1996 World Championships and placed second in the European Championships both years. He then won a bronze medal at the Atlanta 1996 Summer Olympics, Israel’s third medal-winner, and was named Israel’s Sportsman of the Year. Fridman won a bronze in the European Championship in 1997; silver in the European Championship in 2002; gold at the Mistral World Championship in 2002; and a bronze at the World Championship in 2003. His winning the Olympic gold medal in Athens in 2004 was an historic moment in Israeli sports history. After crossing the finish line, Fridman pumped his fist, took a victory dip and then wrapped himself in an Israeli flag when he emerged from the water. “I am happy you all got to see the race live on television,” he said to Israeli viewers in an interview. “I simply felt the entire country pushing me forward.” It was the first time the national anthem Hatikvah was played at the Olympics. President Moshe Katzav, Prime Minister Ariel Sharon, and other senior Israeli officials and politicians called Fridman to congratulate him.

[Eli Wohlgelernter (2nd ed.)]

**FRIDMAN, GAL** (1829–1891), Hungarian rabbi. Born in Hajduböszörmény, Frid was trained in the youth categories in 1989 and 1991 while attending the ORT Ha-Shomron High School in Binyaminah. Fridman won the silver medal at the 1995 and 1996 World Championships and placed second in the European Championships both years. He then won a bronze medal at the Atlanta 1996 Summer Olympics, Israel’s third medal-winner, and was named Israel’s Sportsman of the Year. Fridman won a bronze in the European Championship in 1997; silver in the European Championship in 2002; gold at the Mistral World Championship in 2002; and a bronze at the World Championship in 2003. His winning the Olympic gold medal in Athens in 2004 was an historic moment in Israeli sports history. After crossing the finish line, Fridman pumped his fist, took a victory dip and then wrapped himself in an Israeli flag when he emerged from the water. “I am happy you all got to see the race live on television,” he said to Israeli viewers in an interview. “I simply felt the entire country pushing me forward.” It was the first time the national anthem Hatikvah was played at the Olympics. President Moshe Katzav, Prime Minister Ariel Sharon, and other senior Israeli officials and politicians called Fridman to congratulate him.

[Fried, Alfred Hermann (1864–1921), Austrian publicist and Nobel peace prize winner. Born in Vienna, Fried served as an Austrian diplomat for a short time but became discouraged and went to Berlin where he became a book-dealer and publisher. After 1891 he devoted himself to pacifist propaganda and founded and edited a number of journals for this purpose, among them Die Waffen Nieder which was owned by the famous Austrian pacifist-propagandist, Baroness von Suttner. Fried was the author of more than 70 books and pamphlets devoted to the advancement of peace and of nearly 2,000 newspaper articles. A member of the Berne Bureau and the International Institute for Peace, he was also European secretary of the Conciliation Internationale, secretary general of the Union Internationale de la Presse pour la Paix, and founder of the German and Austrian peace societies. Fried won the Nobel Prize for Peace in 1911. At the time of the Hague peace conferences (1899–1907) Fried was in constant touch with Ivan *Bliokh, the man who persuaded the czar to convene the conferences. His pacifist approach led to his being accused of treason; he left Austria on the outbreak of World War I and spent the war years in Switzerland. He was a prominent figure at the international workers meeting in Berne which fought to prepare a formula for a negotiated peace. After the war he advocated a European union of states similar to the Pan-American system. Fried’s publications include Handbuch der Friedensbewegung (1905); Die Grundlagen des revolutionären Pacifismus (1908); Der Kaiser und der Weltfrieden (1910), a defense of Kaiser William II’s policies; and Der Weltprotest gegen den Versailler Frieden (1920), an attack on the Versailles peace settlement.

**BIBLIOGRAPHY:** R. Goldscheid, Alfred Fried (Ger., 1922); H. F. Peterson, Power and International Order; an Analytical Study of Four Schools of Thought and their Approaches to the War, the Peace and a Post-War System, 1914–1919 (1964). **ADD. BIBLIOGRAPHY:** E. Pistoriner, “Der vergessene österreichisch-jüdische Friedens-Nobelpreisträger Alfred Hermann Fried,” in: ZGJ, 9 (1972), 17–32; A. Schou,
FRIED, ERICH (1921–1988), Austrian poet. Born in Vienna into an assimilated Jewish family, Fried was forced to flee to Great Britain after the annexation of Austria by Germany in 1938 and spent the remainder of his life in an English-speaking environment. In the late 1940s Fried worked intermittently for BBC radio until in 1952 he got full-time employment as a political commentator. Simultaneously he made various translations into German of English literature, including texts by John Donne, John Milton, Thomas Hardy, Rudyard Kipling, and T.S. Eliot, arousing the interest of German publishers and leading to the appearance of his own work. He published his first political poems in the collection called Die Vertriebenen (1941) and broached the subject of guilt in the poems of Deutschland (1944). The poems of Oesterreich (1945) followed in the formal footsteps of expressionistic antitwar verse. From the 1960s Fried also focused on European Jewry. He wrote poems about the Holocaust in Anfechtungen (1967) and Warrigedichte (1964). These poems reflect the poet's attempts to come to terms with the Holocaust and his fear of another war. His only novel, Ein Soldat und ein Maedchen (1960), is a provocative love story involving an Allied soldier and a young female camp warden and reflects his harsh criticism of postwar Germany. In the following years Fried focused on contemporary social problems. Vietnam und (1966) contains shocking political poems using satirical elements and newspaper clippings to arouse the reader. In Hóre, Israel (1967), a collection of anti-Zionist poems, Fried extended his political criticism to Israel and provoked heated discussion, as was the case with So kam ich unter die Deutschen (1977), which sought understanding for the motives of the German Red Army Faction terrorist group (Baader-Meinhof). Fried's collection of love poems, Liebegedichte (1979), was very popular. Among his short prose works Kinder und Narren (1965) and Das Unmass aller Dinge (1982) are worthy of mention. Formal recognition came late in Fried's life. In 1973 he received the Austrian Wuerdigungspreis fuer Literatur and in 1980 the Preis der Stadt Wien fuer Literatur. Recognition from the Federal Republic of Germany came in the 1980s with the most prestigious West German literary award, the Georg-Buechner-Preis for his poetry and for his Shakespeare translations. Fried was a member of the German PEN Center and from 1986 on corresponding member of the Deutsche Akademie fuer Sprache und Dichtung.

[Ann-Kristin Koch (2nd ed.)]

FRIED, LAZAR (1888–1944), Yiddish actor. Born in Minsk, Fried sang with Cantor *Sirota in Vilna and later appeared in German-Yiddish operettas in Vitebsk. In 1908 he joined *Hirschebins company in Odessa. Boris *Thomashefsky took Fried to New York in 1913 and there he created the stage type Moishe der Greener ("Moise the Greenhorn"). From 1919 he played serious parts, joined Schwartz's Jewish Art Theater in 1923, and played leading roles in New York and on tour.

FRIED (-Biss), MIIRIAM (1946– ), Israeli violinist. Born in Romania, Fried was brought to Israel at the age of two. She studied with Alice Fenives-Rosenberg at the Tel Aviv Rubin Academy, and pursued her training with Gingold at Indiana University (1966–67), and with Galamian at the Juilliard School (1967–69). Fried won the Paganini Geneval Competition in 1968 and the Queen Elisabeth of Belgium International Competition in Brussels in 1971. She is noted for her maturity of approach and vibrant expression, intelligent and perceptive musicianship as well as spirited brilliance of technique. She appeared as a soloist with many of the principle world orchestras, as a recitalist, and as a chamber music artist. She is a member of the Mendelssohn String Quartet and has collaborated with such distinguished artists as Isaac *Stern, Pinchas *Zukerman, Garrick Ohlsson, and her husband, violinist/violist Paul Biss. In 1986 she joined the faculty of Indiana University. From 1993 she served as artistic director of the Ravinia Institute, one of the leading summer programs for young musicians.

[Uri (Erich) Toepplitz and Yohanam Boehm / Naama Ramot (2nd ed.)]

FRIED, MORTON HERBERT (1923–1986), U.S. anthropologist. Born and educated in New York City, Fried received his B.S. from the City College of New York in 1942. He served in the U.S. Army (1943–46) and, under the Army Specialized Training Program, studied Chinese at Harvard, graduating in 1944. He did his graduate work at Columbia University, where he earned a Ph.D. in anthropology in 1951. He taught sociology and anthropology at New York City College (1949–50). He then became an instructor in the department of anthropology at Columbia University from 1950 to 1953; he was associate professor from 1957 to 1961 and then became a professor, teaching at Columbia for the next two and a half decades. He also served as chairman of the anthropology department (1966–69).

Fried specialized in Asian studies and studied the Chinese in the Caribbean and Guianas (cf. his Fabric of Chinese Society [1953, 1968]), a study of the social life of a Chinese county seat. His other research interests included social kinship and social stratification in primitive society, especially China; evolution; and social and political organization, and evolution of the state. He was co-editor of Readings in Anthropology (2 vols., 1959, 1968) and Evolution of Political Society (1967).
In 1981 he was invited by the People’s Republic of China to act as a consultant to high government officials on implementing exchanges of scholars and students between the U.S. and China.

[Fried, Betty (2nd ed.)]

**FRIEDAN, BETTY** (1921–2006). U.S. writer and feminist. Born Naomi Goldstein in Peoria, Illinois, she received her B.A. in psychology from Smith College in 1942. She then held a research fellowship in psychology at the University of California at Berkeley, assisted in early group dynamics at the University of Iowa, and worked as a clinical psychologist and in applied social research. She also turned to freelance writing, contributing to various magazines.

After her marriage in 1947, her main efforts were devoted to raising her three children. In 1963 she published *The Feminine Mystique*, which focused on the plight of women and their lack of equality with men. An immediate and controversial bestseller, it is now regarded as one of the most influential American books of the 20th century. This represented the start of the women’s movement in the United States.

Friedan was the founder of the National Organization of Women (NOW) and served as its president from 1966 to 1970. The organization aimed at bringing women into full equal participation in American society, exercising all privileges and responsibilities. In 1970, she organized a march of 50,000 women through New York City. She was also a founder of the *National Women’s Political Caucus* (1971) and the National Abortion Rights Action League (NARAL). In 1973 she became director of the First Women’s Bank and Trust Company.

In 1978 Friedan chaired the Emergency Project for Equal Rights and the following year the National Assembly on the Future of the Family. Her second book, *The Second Stage* (1981), outlined new directions for the women’s movement based on shared female experience. Friedan was seen in the 1980s as one of America’s senior statespersons in the struggle for equal rights and was outspoken over what was perceived as backsliding on the issue of women’s rights under the Reagan administration. During the span of her career she became more closely identified with Jewish issues and served on the board of *Present Tense – the Magazine of World Jewish Affairs*. She also denounced antisemitism and anti-Zionism at the UN.

Friedan traveled and lectured all over the world and wrote for such diverse publications as *McCall’s*, *Harper’s*, *The New York Times*, *The New Republic*, and *The New Yorker*. She was a Visiting Distinguished Professor at the University of Southern California, New York University, and George Mason University, an adjunct scholar at the Wilson International Center for Scholars at the Smithsonian, and Distinguished Professor of Social Evolution at Mount Vernon College.

In 1993 she was inducted into the National Women’s Hall of Fame.

[Susan Strul / Ruth Beloff (2nd ed.)]

**FRIEDBERG**, town in Hesse, Germany. A community existed there by 1260 when a Gothic-style mikveh was constructed. About this time the community had a well-developed organization and tax system (*Responsa of Meir b. Baruch of Rothenburg* (1891), no. 187, pp. 204–6). In 1275 Rudolf I of Hapsburg granted a charter to the Friedberg community. The Jews there suffered persecution in 1338 and following the Black Death in 1349, the property of those who had been killed or fled was sold to the city by the imperial bailiff in 1350–54. Jews had been readmitted to Friedberg by 1360. The charter of 1275 was confirmed by successive German emperors. The right of the Jews in Friedberg to engage in the retail trade was upheld by the burgrave in 1623. In 1603 the Friedberg bet din was declared one of the five central Jewish courts. Between 1588 and 1640 the community was administered by six to ten parnasim and from 1652 the community elected an electoral committee of nine from which the parnasim and a taxation committee were elected. The Jews of Friedberg lived in an enclosed quarter near a square below the castle. In the late 18th century the gates were closed on Sundays. Jewish residence in Friedberg was subject to permission from both the burgrave and the community, and by around 1600 was restricted to persons owning 1,500 guilders. Exemptions were made during the Thirty Years’ War, and after the expulsion of the Jews from the towns of Upper Hesse in 1662. In 1540 the Jewries of 14 villages and towns formed the community of the Land (Kehillat Friedberg). Its rabbinate had jurisdiction over Upper Hesse and the adjoining principalities as far as Westphalia, and over Hesse-Kassel from 1625 to 1656. *Hayyim b. Bezalel, the brother of *Judah b. Bezalel Loeb of Prague, was rabbi there in 1566. Elijah b. Moses *Loanz (d. 1636) also officiated there. A bevat rit gemilut hasadim (charitable institution) was founded in 1687. There were about 16 Jewish families in 1536, 32 in 1550, 107 in 1609, 99 in 1617–24, 72 in 1729, 42 families in 1805, 506 persons in 1892, 491 in 1910 (5.17% of the total population), 380 in 1925 (3.44%), and 305 in 1933. The community had a very active cultural and orthodox religious life. The synagogue was burned in November 1938 and the Nazis initiated a pogrom. By summer 1939 only 58
Jews were living in Friedberg; those who did not subsequently emigrate were deported. In 1967 there were 21 Jews in Friedberg. The medieval bathhouse was restored by the municipality in 1957–58, as a historical monument, and various memorial plaques were put up in the town in subsequent years.

[Friedberg, Abraham Shalom]

**FRIEDBERG, ABRAHAM SHALOM** (1838–1902), Hebrew author, editor, and translator. Born in Grodno, he received a traditional education and also studied watchmaking. After wandering from town to town in southern Russia, he returned to Grodno in 1858. His first book *Emek ha-Arazim* (adapted from *Vale of Cedars* by Grace Aguilar) was published in 1876 and enjoyed great popularity. After the pogroms of 1881 he joined the Hibbat Zion movement. In 1883 he went to St. Petersburg and became associate editor of *Ha-Meliz* and was influential in directing its editorial policy toward Zionism. He contributed numerous articles to the journal under the heading *Me-Inyanei de-Tomah* ("On Current Events"), which were signed H. Sh. for *Har Shalom*, the Hebrew translation of Friedberg. Failing to obtain a permit to remain in St. Petersburg, he left *Ha-Meliz* in 1886 and went to Warsaw, where he contributed to *Ha-Zefirah* and *Ha-Asif* and translated many books into Hebrew. He was an editor of the first Hebrew encyclopedia, *Ha-Eshkol* (1888), and was employed by the Ahijasaf publishing house. He wrote *Toledot ha-Yehudim bi-Sefarad* ("History of the Jews in Spain," 1893) based on Graetz, Kayserling, and others, translated into Hebrew M. Guedemann's *Geschichte des Erziehungswesens und der Kultur der abend-}

**FRIEDBERG, BERNARD** (Bernhard, Hayyim Dov; 1876–1961), scholar and bibliographer. Friedberg was born in Cracow, and in 1900 moved to Frankfurt, where he worked for the publisher and bookseller Isaac *Saenger. In 1904 he set up his own firm and by 1906 had published two catalogs; in the same year he and J. Saenger founded the publishing house of Saenger and Friedberg. In 1910 the partnership broke up, and Friedberg entered the diamond trade, moving to Antwerp. When the Nazis occupied Belgium, he lost his valuable library and all his papers. In 1946 he settled in Tel Aviv, continuing to deal in diamonds but with his heart in books and his bibliographical and genealogical research.

Beginning in 1896, Friedberg published in Hebrew a number of biographies, e.g., on Joseph Caro (1896), Shabbetai Kohen (1898), and Nathan Spira (1899); family histories, e.g., Schor (1901), Landau (1905), and Horowitz (1911, 1928*); and a study on the old Jewish cemetery of Cracow, *Luhot Zikkaron* (1897, 1904*, 1969). Friedberg's first bibliographical effort was a history of Hebrew printing in Cracow, *Ha-Defus ha-Ivri be-Cracow* (1900), followed by a similar study on Lublin, *Le-Toledot ha-Defus ha-Ivri be-Lublin* (1901). In 1932 he began publishing a series of works on the history of Hebrew printing, *Toledot ha-Defus ha-Ivri*; the series included volumes on Poland (1932, 1950); on Italy, Spain, Portugal, Turkey, and the Orient (1934, 1956); on Central Europe (1935); and on Western Europe (1937). His greatest achievement was his bibliographical lexicon *Beit Eked Seferim* (1 vol., 1928–31; 4 vols., 1951–56*, the second edition listing Hebrew books published by 1950). Though Friedberg's works are not always accurate, they are indispensable bibliographical reference books.

**BIBLIOGRAPHY:** Tidhar, 5 (1952), 2268–69; Kressel, 2 (1967), 659.

[Naphtali Ben-Menahem]
FRIEDE, SHALOM (1783–1854), Dutch ḥazzan. Born in Amsterdam, he served as ḥazzan from 1809 until his death. His collection of about 200 melodies for various prayers, preserved in manuscript form at the Hebrew Union College, Cincinnati, added considerably to the knowledge of Polish cantorial and hasidic music. Of this collection, 15 melodies were published by A.Z. Idelsohn in Ozar Neginot Yisrael. His preference for Polish and hasidic chants is reflected in his own compositions.

FRIEDELL, Egon, pseudonym of Egon Friedmann (1878–1938), Austrian playwright and cultural historian. Born in Vienna, Friedell studied there and at Heidelberg. A witty and versatile bohemian, he not only wrote plays but often acted in them, particularly at Max Reinhardt’s theaters in Berlin and Vienna. Among the plays he wrote was Die Judastragodie (1920). Beside his occupation as drama critic, theater director, and cabaret artist, he wrote essays and satires for popular dailies as well as Karl Kraus’ Fackel, the Schaubühne and the Neue Wiener Journal. Friedell’s magnum opus was the three-volume Kulturgeschichte der Neuzeit (1927–A Cultural History of the Modern Age, 1931–32). Ranging from the Reformation to World War I, this highly original work is no solemn historical study but a brilliant, aphoristic, and sometimes ironic survey of world history and culture. He also wrote Kulturgeschichte des Altersums (2 vols., 1936–49) and Das Jesujsproblem (1921). Friedell, who converted to Protestantism at the age of 19, continuously displayed controversial attitudes toward Judaism until the Nazi rise to power in Germany. Refusing to emigrate, he stayed in Austria until 1938. On March 16 he committed suicide by jumping out of a window, when the SA came to arrest him a few days after the arrival of the German troops in Vienna.

FRIEDEMANN, Ulrich (1877–1949), German bacteriologist who made a significant contribution to the study of scarlet fever. Friedemann, who was born in Berlin, worked for two years as assistant to Paul Ehrlich, and then became professor of hygiene at Berlin University and head of the department of bacteriology at the Moabit city hospital in Berlin. He was also a member of the Robert Koch Institute. Friedemann left Germany soon after Hitler came to power in 1933 and, after three years as research worker at the National Institute for Medical Research in London, went to the United States. There he became chief of the division of bacteriology at the Jewish Hospital of Brooklyn, N.Y. In addition to his studies on scarlet fever, its causes and its effects, Friedemann did research on tetanus, virus diseases, latent infections and their significance to epidemiology, and the theory of anaphylactic shock.

FRIEDEMBERG, Albert Marx (1881–1942), U.S. lawyer and historian. Friedenberg was born in New York City. At the age of 19, he joined the American Jewish Historical Society and became one of its leading members; he was largely responsible for the issuance of 17 volumes of the Publications of the American Jewish Historical Society (AJHSP, nos. 18–34). Friedenberg wrote numerous papers and articles on the early history of Jews in America, immigration, historical aspects of Zionism, Jews in Masonry, and the Jewish periodical press, and also on local German Jewish history, literature, and biography. He acted as the New York correspondent of the Baltimore Jewish Comment (1902–10) and the Chicago Reform Advocate (1905–31), and as contributing editor of the New York Hebrew Standard (1907–23).

BIBLIOGRAPHY: Coleman, in: AJHSP, 35 (1939), 115–37; Friedman, ibid., 37 (1947), 461–2. [Isidore S. Meyer]

FRIEDEBERG, Samuel (1886–1957), U.S. collector of medals. Brought to New York from Poland at the age of seven, Friedenberg later built up a fortune in the textile business and numerous articles and books on Zionism and Erez Israel. His book Das Leben Theodor Herzls (1914) was the first biography of the founder of political Zionism to be published in book form. Other books are Was will der Zionismus (1903), Reisebilder aus Palaestina (1904, with illustrations by H. Struck), and a biography David Wolffsohn (1916). He was also the chief editor of the first lexicon of Zionism, Zionistisches Abc Buch (1908). He died in Amsterdam.

then in real estate, and became active in philanthropic and cultural work. Beginning with the purchase of a small collection of medals in 1935 from a German refugee, he established what became the most complete collection of Jewish medals in existence. He commissioned from artists such as I. Sors, Benno *Elkan, Paul Vincze, F. Kormis, a supplementary series of portrait medals, mainly of contemporaries. He left the collection to the New York Jewish Museum, where his son, Daniel M. Friedenberg, who wrote widely on the subject, became honorary curator of coins and medals.

[Cecil Roth]

FRIEDENWALD, U.S. family of ophthalmologists and Jewish communal leaders.

Jonas Friedenwald (1803–1893), a German immigrant who settled in Baltimore in 1831, was a businessman and one of the founders of the Hebrew Orphan Asylum and Chizuk Emunah Orthodox Congregation. His youngest son Aaron Friedenwald (1836–1902) was born in Baltimore and studied medicine at the University of Maryland. A distinguished ophthalmologist, he was the first president of the Medical and Chirurgical Faculty of Maryland and a prominent member of medical societies. In 1890 he organized the Association of American Medical Colleges. He was an active worker in local and national Jewish organizations, including the Baltimore Hebrew Orphan Asylum, Jewish Theological Seminary of America, Federation of American Zionists, and American Jewish Historical Society. He also published articles of Jewish and general medical interest.

Harry Friedenwald (1864–1950), eldest of Aaron’s five sons, was born in Baltimore. He excelled in studies at Johns Hopkins University, and after two years at the Baltimore College of Physicians and Surgeons, spent two years traveling and studying ophthalmology in Berlin. He returned to Baltimore in 1891 and began his practice, teaching ophthalmology at the Baltimore College of Physicians and Surgeons (1894–1929). Harry Friedenwald was a member of Hevras Zion in Baltimore, probably the first American Zionist society, and was president of the Federation of American Zionists, 1904–18. In 1911 and 1914 he went to Palestine, where he served as a consultant for eye diseases in several Jerusalem hospitals. He was a member of the Provisional Committee of Zionist Affairs during World War 1, and in 1919 he was chairman of the Zionist Commission to Palestine, where he spent the year.

Friedenwald wrote on medical history with special emphasis on medieval Jewish doctors and the use of the Hebrew language in medical literature; he also lectured frequently on Jews in medicine. In 1944 his collected and expanded historico-medical writings, The Jews and Medicine (2 vols.), were published. He wrote Jewish Luminaries in Medical History (1946). His son Jonas Friedenwald (1897–1955) was also an ophthalmologist.

[Frieder, Armin (1911–1946), Slovakian rabbi in the *status quo community at Zvolen and the *Neolog community of Nove Mesto had Vahom (from 1938), and an active Zionist. In 1942 he became a member of the underground "Working Group" (see *Slovakia, Holocaust) in Bratislava, set up to save the remaining Jews in Slovakia, and served as the underground’s contact with Slovak government circles. Under his influence, the Ohel David Home for the Aged at Nove Mesto became a refuge before deportations. Following the suppression of the Slovak Uprising in the autumn of 1944, Frieder found refuge in a Catholic monastery. After the war he was chief rabbi of the Jewish communities of Slovakia.

[Livia Rothkirchen]

FRIEDERMAN, ZALMAN JACOB (c. 1865–1936), U.S. rabbi. Friederman was born in Meretch (Merkine), Lithuania, in 1865 or 1866. He studied at several yeshivot in Vilna and possibly in Kovno (Kaunas) and Eishishok (Eishishkes), but the most influential rabbinic figure in his formative years was Rabbi Judah Halevi Lifshitz of Meretch. In 1890 Friederman married Dora, daughter of Jacob Halevi Lifshitz, who was the secretary of Rabbi Isaac Elhanan *Spektor and Judah Lifshitz’s brother. Shortly thereafter he was ordained as a rabbi, and during the same year, 1890, he relocated to Amsterdam to serve as a rabbi. His dissatisfaction with this job led him to immigrate to America in 1892, joining his sisters and their husbands who had immigrated earlier.

After spending a few months in New York as rabbi of congregation Kol Yisrael Anshe Polin, Friederman accepted an offer to serve as rabbi of congregation Anshe Vilkomir of Boston, to which he relocated in early 1893, notwithstanding the opposition of another local Orthodox rabbi, Moses S. "Margolies. In 1896 Margolies left Boston, and shortly thereafter Friederman was appointed as the rabbi of the Union of Orthodox Congregations of Greater Boston. In addition, he was a member of the Union of Orthodox Rabbis of the United States and Canada, as well as Va’ad Harabanim of Massachusetts, founded a *Talmud Torah in Boston, and over the years served as rabbi in several additional local congregations, such as Anshe Stonir, Anshe Zhitomir, and Sha’arei Zedek.

Friederman maintained close contacts with Rabbi Abraham I. *Kook and helped raise money for Jewish settlers in Palestine. In 1935 Friederman visited Palestine, where he died, being buried on the Mount of Olives, Jerusalem, close to Rabbi Kook.

Friederman wrote several polemic and homiletic books, all of which appeared during his lifetime: Emet Ve-Emunah (1895), Minhāt Yā'akov (1901), Nahalat Yā'akov (1914), and Shoshanat Yā'akov (1927). In addition, he published many articles in East European and American Jewish newspapers,
some of which relate to halakhic issues and others to contemporary aspects of American Jewry and Judaism, and contributed several entries to Judah *Eisenstein’s encyclopedia, Ḫazar Yisařad.

**FRIEDJUNG, HEINRICH** (1851–1920), Austrian historian. Friedjung became professor of history in 1873 at Wiener Handelsakademie and participated in Georg von *Schoenerer’s pan-German movement but parted with Schoenerer because of the latter’s antisemitism. Dismissed from his post by the Education Ministry in 1881 for his radical political publicity, Friedjung entered upon a journalistic career. He founded the Weekly *Deutsche Wochenschrift* (1883–86) and became editor-in-chief of the *Deutsche Zeitung*, the main publication of the Deutschnationalen Partei. From 1891 to 1895, Friedjung was a member of the Vienna City Council. Because of growing antisemitism he had to leave the party and subsequently focused on scholarly works on the German Confederation, the Second German Empire, and the era of Francis Joseph. His Der Kampf um die Vorherrschaft in Deutschland 1859–1869 (2 vols., 1907) went through 10 editions and spread his fame beyond the frontiers of Austria. His other works were Benedek Nachgelassene Papiere (1904), Oesterreich 1848–1860 (unfinished, 1907–12), and Krimkrieg und die oesterreichische Politik (1919). His scholarly Das Zeitalter des Imperialismus (3 vols., 1919–22) was completed after his death by A.F. Pribram. Friedjung’s Jewish origin barred him from a post at Vienna University, and, while he had little interest in Jewish affairs, he considered it undignified to buy a career through conversion.

[Herbert A. Strauss]

**FRIEDKIN, WILLIAM** (1935– ), U.S. director. Born in Chicago, Illinois, Friedkin never went to college, instead going to work at WGN TV in Chicago just after finishing high school. There he directed hundreds of live television shows and documentaries. He then moved up to network television, but only after ten years did Friedkin have the opportunity to direct a feature film, *Good Times* (1967), with Sonny and Cher. He swiftly advanced to major motion pictures with *The Night They Raided Minsky’s* (1968), and then directed a number of successful, critically acclaimed films, including *The Boys in the Band* (1970), a landmark film that introduced gay life to a mainstream audience. He directed *The French Connection* (1971), which won five academy awards, including Best Picture and Best Director. Friedkin, then 32 years old, became the youngest person to win the Oscar for directing. Friedkin followed up this triumph with *The Exorcist* (1973), revolutionizing the horror genre. His other films include *Sorcerer* (1977), *The Brink’s Job* (1978), *Cruising* (1980), *To Live and Die in L.A.* (1985), *The Guardian* (1990), *Blue Chips* (1994), *Jade* (1995), *Rules of Engagement* (2000), and *The Hunted* (2003). In 1998 he was nominated for an Emmy award for Outstanding Direction for the TV movie adaptation of *12 Angry Men*. Friedkin was married to actresses Jeanne Moreau, Lesley-Anne Down, and Kelly Lange. In 1991 he married actress/producer Sherry *Lansing.

[Jonathan Licht / Casey Schwartz (2nd ed.)]

**FRIEDLAENDER, DAVID** (1750–1834), communal leader who exercised an influence on *assimilation and a forerunner of *Reform Judaism. Born in Koenigsberg, the son of a “protected Jew,” Joachim Moses Friedlaender, a wholesale merchant, David settled in Berlin in 1770, and in 1776 established a silk factory there. As an expert in his field he was appointed counselor of the state commission of inquiry into the textile industry. In 1791 he forwarded a memorandum in the name of the manufacturers, advocating changes in the economic system against excessive government supervision over industry and the granting of protective tariffs to individual manufacturers. However, his interests ranged far beyond his business activities. Entering Moses *Mendelssohn’s circle at the age of 21, Friedlaender absorbed Mendelssohn’s ideas and became prominent among his followers. Through his marriage in 1772 with Blümchen Itzig, daughter of the banker Daniel “Itzig, he entered one of the wealthiest and most distinguished families of *Court Jews in Prussia.*

In 1799 Friedlaender sent his famous Sendschreiben (“Open Letter”) to Pastor Teller in which he expressed, “in the name of some Jewish householders,” a deistic conception of religion. For this reason he rejected Christian dogma as well as the retention of Jewish ritual precepts. According to him the eternal truths around which enlightened Jews and Protestants should unite were synonymous with the pure teachings of Moses, i.e., with original Jewish monotheism. Throughout his life Friedlaender regarded Mosaic monotheism as an ideal to be followed; it was apparently the positive factor in his decision (in which he differed from many of his circle) against conversion to Christianity. “We are destined from time immemorial to guard and teach by example the pure doctrine of the unity and sanctity of God, previously unknown to any other people,” Friedlaender wrote in 1815 in his Reden der Erbauung (“Edifying Speeches”). In his respect for biblical Judaism he was a faithful disciple of Mendelssohn, although Kant, who exercised an influence on Friedlaender, disparaged biblical Judaism. Friedlaender shared the educational ideals and belief in liturgical reform current among representatives of
the Jewish enlightenment in Berlin after Mendelssohn, giving expression to these ideas in his writings.

After the issue of the 1812 edict in Prussia he published a paper on the reforms which he deemed necessary as a result of the new organization of the Jews in Prussia (reform of the divine service in the synagogues, of teaching institutions and subjects taught, and of their manner of education in general). Above all, he proposed substituting in the prayer in place of the expression of messianic hopes: “I stand here before God. I pray for blessing and prosperity for my compatriots, for myself and my family, not for the return to Jerusalem, not for the restoration of the Temple and the sacrifices. I do not harbor these wishes in my heart.” He proposed that study of talmudic law should be replaced by study of the laws of the country. Friedlaender even wanted to enlist the help of the government in his endeavors for reform. In part as a result of his efforts, a “Jewish free school” was established in 1778; Friedlaender became the organizer and supervisor of the school, which he directed for almost 20 years, with his brother-in-law Isaac Daniel Itzig, along with the Hebrew press and bookshop associated with it. The institution aimed at putting into practice the ideals of enlightened education.

From 1783 to 1812 Friedlaender, as the representative of Prussian Jewry, fought assiduously for the implementation of its demands for equal rights. He headed the “general deputies” of the Jewish communities of Prussia who assembled in Berlin in order to submit their requests to the commission set up by Frederick William II in 1787. Under Friedlaender’s leadership, the deputies rejected the unsatisfactory “Plan for Reform” proposed by the commission. In 1793 he published the documents pertaining to these negotiations under the title Acktenstücke, die Reform der jüdischen Kolonien in den preussischen Staaten betreffend. In 1809 Friedlaender was the first Jew elected to sit in the municipal council. Continuing the struggle for emancipation, in 1810 he requested an audience with the Prussian chancellor, Carl August von Hardenberg; as an argument in favor of granting emancipation he pointed to the “wave of baptisms” which indicated the degree of assimilation of Prussian Jewry. Friedlaender’s efforts for the emancipation of Prussian Jews are especially important since in them are reflected the main dilemma of Jewish life in Prussia in the first generation after Mendelssohn: how to hold fast to a Jewish identity within a society based on universalist principles.

[Michael J. Graetz]

**FRIEDLAENDER, ISRAEL** (1876–1920), scholar, Zionist, community activist. Friedlaender was born in Kovel, Poland, and raised in Praga-Warsaw. After proving his ability at an early age to master biblical and rabbinic texts, he moved, like many promising scholars of his generation, to Berlin, where he enrolled in the Hildesheimer Rabbinical Seminary. Matriculating at the University of Berlin, he then transferred to the new German University of Strasbourg, where he earned a Ph.D. in Semitic languages under Theodor Noelleke. In his dissertation, he argued for the purity of the Arabic language in Maimonides’s Guide to the Perplexed.

Denied a German University post because of antisemitism, in 1903, Friedlaender welcomed an invitation by Solomon Schechter to join the faculty of the reorganized Jewish Theological Seminary as a professor of Bible. Two years later, he married Lilian Ruth Bentwich, daughter of the prominent British Zionist Herbert Bendwich.

Friedlaender’s scholarly oeuvre was, in large part, devoted to drawing previously ignored connections between medieval Arabic and Jewish cultures, focusing upon their similarities in the areas of messianism, sectarian heterodoxy, and folklore. His writings include “The Heterodoxies of the Shiites in the Presentation of Ibn Hazm,” in: Journal of the American Oriental Society, 27 and 29 (1907–8); “Shiitic Elements in Jewish Sectarianism,” in: Jewish Quarterly Review, n.s. 1, 2, 3 (1910–1913); and Die Chadirlegende und der Alexanderroman (1913).

From Berlin the young Friedlaender had contacted the Jewish philosopher Ahad Ha-Am and the historian Simon Dubnow. He translated their writings throughout his career, and after 1905 transmitted their ideas in essays and public lectures delivered in many North American cities.

Friedlaender developed his social thought along lines laid out by Ahad Ha-Am. His view of the diaspora was influenced by Dubnow. While his Seminary colleagues remained ensconced in their ivory tower, Friedlaender also took part in communal activity. He and his friends Harry Friedenwald, Henrietta Szold, and Judah Magnes kept the FAZ (Federation of American Zionists) afloat in the lean years before World War I. His explications of Zionist history and ideology helped to convince Louis D. Brandeis to seize the helm of the movement during the Great War.

Friedlaender aided Judah Magnes in founding the New York Kehillah and chaired its Bureau of Jewish Education. He founded together with Mordecai “Kaplan the first Young Israel synagogue where the sermon was given in English. Friedlaender was a trustee of the Educational Alliance, which helped Americanize immigrants. There he became a gadfly, advising the secularists who controlled the organization to schedule clubs, classes, and lectures with Jewish content.

The shock of war in 1914 turned Friedlaender’s attention to Jewish suffering in Eastern Europe. In 1915, he published a short popular history of that community. His translation of Dubnow’s History of the Jews of Russia and Poland appeared in three volumes between 1916 and 1920. Dubnow himself never published this work, so the English translation is the only available version. A collection of Friedlaender’s essays entitled Past and Present, was published in 1919 and reprinted in part in 1961.
Two crises marked Friedlaender's final years. In 1918 he was appointed the Jewish representative on a Red Cross expedition to Palestine. As he was preparing to depart, New York newspapers published letters by prominent Zionists Stephen S. Wise and Richard Gottheil. Unfairly citing Friedlaender's previous ties to Germany, they recommended his removal from the commission on the grounds of disloyalty. In anger and sadness, Friedlaender resigned his place in the expedition.

To assuage the disappointment, the American Jewish Joint Distribution Committee (JDC) appointed Friedlaender to a commission formed to aid Jews in Ukraine, where post-war national frustrations and historic enmity had erupted into ferocious pogroms. In July 1920, Friedlaender and Rabbi Bernard *Cantor ventured into a battle-torn area near Kamenetz-Podolski. They were murdered on a lonely road and left naked in the mud. Despite careful investigation, neither the motive nor the identity of the killers was discovered. The Jewish community of Yarmolynski, the nearest town, buried the bodies and put up a crude monument.

Denied access to the cemetery from 1922 onward until Ukrainian independence, in 2001, at the request of Friedlaender's Jerusalem family, his body was exhumed and found its final resting place in the land of his dreams.

**FRIEDLAENDER, JOHNNY** (1912–1992), French painter and printmaker. Friedlaender studied in Breslau, but after Hitler came to power, managed to immigrate to Czechoslovakia (1935) and from there to Paris (1937), where he fought until Ukrainian independence, in 2001, at the request of Friedlaender's Jerusalem family, his body was exhumed and found its final resting place in the land of his dreams. Friedlaender served first as head of the *talmud torah* school in Berlin (from 1862), and from 1865 as principal of *Jews' College, London, Anglo-Jewry's rabbinical seminary, which under his leadership first became a fully developed rabbinical seminary. He remained in this position for 45 years, and exercised a great influence on generations of graduates. He published a German translation (with commentary) of the Song of Songs (*Das Hohelied*, 1867). His illustrated *Jewish Family Bible* (Hebrew and English, 1881, 1884, repr. 1953) became very popular, as did his standard work *Jewish Religion* (1891, 1913) and its companion volume *Textbook of the Jewish Religion* (1891), which was also reprinted in many editions. Both represent a strictly traditionalist view.

He took an active part in the Society for the Diffusion of Jewish Literature under whose ægis he published his works on *Ibn Ezra* and *Maimonides. The first was an edition of Abrahám Ibn Ezra's commentary on Isaiah with an English translation together with the English translation of Isaiah, revised in accordance with Ibn Ezra's commentary, as well as a volume of essays on the latter's writings (4 vols., 1873–77; vols. 1 and 3 repr. 1964). His translation into English (with annotations) of Maimonides' *Guide of the Perplexed* (3 vols., 1881–85; repr. 1953) was an edition which owed much to S. Munk's Arabic text and translation (1856–66). A revised one-volume edition of the English translation (without the notes, 1904 and many reprints) was long the standard English version of the Guide. He took an active part in the communal and cultural life of Anglo-Jewry. His knowledge of mathematics and astronomy made him an expert on the Jewish calendar. Moses *Gaster was his son-in-law.

**FRIEDLAENDER, MORITZ** (1844–1919), writer, educator, and communal worker. Friedlaender, who was born in Hungary, studied for the rabbinate, but did not adopt it because of his liberal views. In 1875 he became secretary of the Israelitische Allianz, the Austro-Hungarian counterpart of the Alliance Israélite Universelle, and on behalf of both organizations visited Galicia to assist the immigration of Russian Jews to the United States. With the help of Baron Maurice de Hirsch and later of his widow, Friedlaender established and supervised more than 50 modern schools for boys, as well as vocational schools for girls in Galicia.

Friedlaender's scholarly interests lay in the direction of Hellenistic philosophy and the origins of Christianity. Among his published works are *Ueber den Einfluss der griechischen Philosophie auf das Judentum und Christentum* (1872); *Patristische und talmudische Studien* (1878); *Philos' Philantropie desjudischen Gesetzes, translation and commentary* (1889); *Apion, ein Kulturbild* (1882); *Zur Entstehungsgeschichte des Christentums* (1894); *Der vorchristliche juedische Gnostizismus* (1898); *Geschichte der juedischen Apologetik* (1903); *Die religio-
FRIEDLAENDER, OSKAR EWALD (1881–1940), Austrian philosopher. Friedlaender, who was born in Slovakia, taught in Vienna. Writing under the name "Ewald," he dealt with Kantianism, history of philosophy, and philosophy of religion. He opposed ethical relativism and empiricism. Friedlaender dealt with the relationship of romanticism to contemporary philosophy as well as offering an interpretation of Kant. In later writings, he sought to develop an undogmatic religion of humanity. His main works are Richard Avenarius als Begründer des Empiriokritizismus (1905), Die Probleme der Romantik als Grundfragen der Gegenwart (1904), Kant's kritischer Idealismus als Grundlage von Erkenntnistheorie und Ethik (1908), Die Religion des Lebens (1925), and Freidenkertum und Religion (1927).

[Richard H. Popkin]

FRIEDLAENDER, SAUL (1932– ), Israeli historian of the Third Reich and Holocaust. Born in Prague, Friedlaender fled with his family to France in 1939, where he was hidden in a Catholic boarding school following the German invasion of 1940. While in hiding, he developed a keen interest in Catholicism and even considered the priesthood. But when he was informed by one of his Catholic teachers about the Nazi genocide at the war's end, Friedlaender decided to reembrace his Jewish roots and moved to Israel in 1948, where he eventually embarked on a career as a historian.

Friedlaender long split his time as a historian between Europe, Israel, and the United States. From 1964 to 1987, he taught at the Institut des Hautes Études Internationales in Geneva, at first as a senior lecturer and after 1967 as professor. In that same year, he accepted a visiting professorship at the Hebrew University of Jerusalem and in 1969 was appointed professor of history and international relations. Friedlaender remained in Jerusalem until 1975, at which point he moved to Tel Aviv University, where he was named Maxwell Cummings Chair of European History. In 1987 Friedlaender was appointed to the 1939 Club Chair in Holocaust Studies at the University of California at Los Angeles, a position that he shared with his Tel Aviv post until retiring from the latter in 2000.

Friedlaender applied innovative methodologies to the study and writing of history. He began his academic career as a diplomatic historian, producing two incisive works in the mid-1960s: Hitler et les États-Unis 1939–41 (1963; Prelude to Downfall: Hitler and the United States, 1967) and Pie xiii et le IIIe Reich (1964; Pius xiii and the Third Reich, 1966). The first study examined the diplomatic relations between Nazi Germany and the administration of Franklin D. *Roosevelt, while the second critically analyzed Pope *Pius xiii’s response to the Holocaust.

Friedlaender then turned towards psychology. His book Kurt Gerstein, l’ambiguïté du bien (1967; Kurt Gerstein: the Ambiguity of Good, 1969), examined the complex motivations of a German SS officer who was involved in the Nazi Final Solution but later turned against it by attempting to inform neutral and Church figures of the gassing of Jews. His study L’Histoire et psychoanalyse (1975; History and Psychoanalysis, 1978) directly explored the virtues and limitations of psychoanalysis for historical inquiry.

Friedlaender’s interest in psychology naturally led him to the study of historical memory. Friedlaender investigated the dynamics of remembrance at the individual level in his powerful autobiographical work, Quand vient le souvenir (1978; When Memory Comes, 1979), which focused on his own traumatic childhood in German-occupied France. Thereafter, he turned his attention to the study of cultural memory in Reflets du nazisme (1982; Reflections of Nazism: A Study of Kitsch and Death, 1984), which examined the lingering psychological appeal of Nazi imagery in works of contemporary European film and literature. Friedlaender expressed the concern that the memory of the Third Reich was becoming normalized within western consciousness and defined less by moral outrage than lurid fascination. By the late 1980s, he voiced these fears in a famous debate with the German historian, Martin Broszat over the “historicization” of the Nazi era. At a time in which conservative German historians were attempting to relativize the Nazis’ crimes in an effort to create a normal sense of German national identity (the “Historians’ Debate”), Friedlaender insisted that the singular nature of the Nazis’ genocidal crimes against the Jews should prevent historians from viewing the 12 years of the Third Reich as they would any other era of German history.

In the 1990s, Friedlaender continued to explore theoretical issues while simultaneously returning to the empirically grounded and narrative-centered history of his early career. His 1992 volume Probing the Limits of Representation (based on a 1990 conference held at UCLA) explored the relevance of postmodern thought for the representation of the Final Solution. Sparked in part by American historian Hayden White’s relativistic observations about the truth claims of all historical writing, Friedlaender became deeply interested in the question of whether all methods of portraying the Holocaust were equally valid. His ensuing work of historical synthesis, published in 1997, Nazi Germany and the Jews, Volume I: The Years of Persecution, 1933–1939, examined the origins of the Final Solution from the interwoven perspective of the Nazi perpetrators as well as their Jewish victims, a pathbreaking approach that brought together narrative vantage points that had been kept apart by most previous historians. From the end of the 1990s, Friedlaender was busy completing the final volume of his two-volume study.

Friedlaender was involved in numerous other historical enterprises. Early in his career he worked closely with Nahum *Goldmann of the World Jewish Congress and with Shimon *Peres. He helped found the influential journal His-
In 1989, he served on the commission that examined the activities of the Bertelsmann publishing concern during the Third Reich and chaired the Independent Experts Commission that in 1999 issued a highly critical report on the policies of the Swiss government towards Jewish refugees during World War II. He was involved in Israeli-Palestinian dialogues and with leading Palestinian intellectuals such as Edward Said. For his outstanding scholarly achievements, Friedlaender was honored with the Israel Prize for history in 1983, the Geschwister-Scholl-Prize from the city of Munich in 1998, and a MacArthur Foundation “genius” Award in 1999.

[Gavriel Rosenfeld (2nd ed.)]

FRIEDLAENDER (Friedland), SOLOMON JUDAH (c. 1860–c. 1923), author and literary forger. Friedlaender gave contradictory biographical accounts of his life, claiming at various times to have been born in Hungary, Turkey, and Romania, but in all probability he was born in Beshenkoviči near Vitebsk, Belorussia. He supposedly studied at the yeshivah in Volozhin and afterward wandered throughout Europe. He was in Czernowitz (1880–1882), Mainz (1884), Frankfurt on the Main (1885), Mulhouse (c. 1888–c. 1895), Wizitzen (1900–1902), Naszod (1902–1906), and finally in Sztatmar, from 1906 onward. It seems that he died in Vienna. Friedlaender published a number of works of doubtful authenticity or pure forgeries. Among these were (1) Ha-Tikkun, published under the name of L. Friedland in Czernowitz in 1881. It pretends to be an authentic manual of hasidic customs, while in fact it is a crude and obscene parody of Hasidism in general and *Hasidism in particular; (2) Tosefta, Seder Zera'im and Seder Nashim, published in Pressburg in 1889 and 1890, with his commentary entitled Hosak Shelomo. He claimed to have edited a critical edition of the Tosefta text from an unpublished manuscript, but this was disputed by Adolf Schwarz and Rabbi Jacob Yanovsky of Kiev. Friedlaender responded to Schwarz's strictures in a pamphlet entitled *Kesher Bogedim (Pressburg, 1891), replete with irrelevant matters and squalid abuse of his critics; (3) an edition of the tractate *Nashim, published his collection, given the name of Bibliotheca Friedlandiana. The thousands of manuscripts which he had assembled over many years to the Asiatic Museum in St. Petersburg (now the Leningrad Institute for Oriental Studies). The controversy continued for the next few years, and as late as 1913, Friedlaender still published booklets on this issue. He also edited a periodical entitled Ha-Gan, using the name of Judah Aryeh Friedland. It seems that only one issue appeared in Frankfurt in 1885. After his death, his son, M. Friedlaender, published his Mavo la-Tosefta, in Tironovo, 1930. Friedlaender claimed at various times to have published, among others, a critical and annotated edition of the entire Tosefta, the She'ilot of Rav Aḥai Gaon, and the Sifra. No bibliographical evidence can be found to support these claims.

[Abraham Schischa]

FRIEDLAND, East European family originating in Bohemia, presumably from the Bohemian town Friedland (Frydland). During the 17th century NATHAN FRIEDLAND was known as the "head of the community and head of the province of Bohemia." During the 19th century, members of the family are found in Russia. MESHULLAM FEIVEL (1804–1854), a wealthy merchant of Slutsk, moved to Dvinsk in 1846 and was often among the delegates representing the communities of Lithuania before the authorities. His sons MEIR (d. 1902) and MOSES ARYE LEIB (1826–1899) moved to St. Petersburg, where they ranked among the wealthiest Jews and philanthropists in the community. Moses for more than 30 years was general army contractor for the Russian government. He founded a Jewish orphanage with a school of handicrafts in St. Petersburg, and erected an old-age home in Jerusalem. In 1892 he presented his collection of about 13,000 Hebrew books (including 32 incunabula) and 300 manuscripts which he had assembled over many years to the Asiatic Museum in St. Petersburg (now the Leningrad Institute for Oriental Studies). The thousands of Hebrew books already in the museum were combined with his collection, given the name of Bibliotheca Friedlandiana. The bibliographer S. *Wiener catalogued these books (up to the letter lamed) in Kohelet Moshe (8 pts., 1893–1936). The genealogy and some of the history of the family is given by I.T. Eisenstadt and S. Wiener in Daat Kedoshim (1897).

BIBLIOGRAPHY: S. Wiener, Kohelet Moshe, pt. 2 (1895), vii–xii.

FRIEDLAND, ABRAHAM HYMAN (Hayyim Abraham; 1891–1939), poet, short-story writer, and educator. Friedland, who was born in Hordok, near Vilna, immigrated to America at the age of 15. In 1911 he founded the National Hebrew School in New York. In 1921 he assumed the post of superintendent of the Cleveland Hebrew Schools, and in 1924 was...
also appointed the first director of the Cleveland Bureau of Jewish Education. He was a leading member of the Jewish community in Cleveland and a champion of the community Jewish school which featured an intensive Hebraic curriculum and included a strong emphasis on the Zionist ideal. He wrote poems, short stories, and articles, edited educational texts, and published essays in Hebrew, English, and Yiddish on Hebrew literature. His poems and stories were collected in two volumes at the end of his life, *Sonetot* ("Sonets," 1939), and *Sippurim* ("Stories," 1939), and in a posthumous volume of poems, *Shirim* ("Poems," 1940). His *Sippurim Yafim* stories designed for children, were reissued in three volumes by the Cleveland Bureau of Jewish Education (1962). His narrative sonnets deal with the pathetic side of life, and his stories mainly portray American Jewish types.

[Eissig Silberschlag]

**FRIEDLAND, NATHAN** (1808–1883), rabbi, precursor of the * Hibbat Zion movement. Born in Taurage, Lithuania, Friedland studied in various Lithuanian yeshivot. The *Damascus Affair* (1840) made a deep impression on him. He believed that the redemption of the Jewish people could be realized gradually, as a natural process, and periods of liberalism and progress should be used to achieve this. The miraculous redemption would ultimately occur with the arrival of the Messiah. Friedland was unaware that some of his contemporaries held similar views (e.g., Judah *Alkalai*), and he spread his ideas verbally in Belorussia, Lithuania, and Germany, where he met Zevi *Kalischer. In 1859 he published two parts of his work *Kos Yeshuah u-Nehamah* ("Cup of Salvation and Comfort"), in which he expounded his theories. Friedland met Adolphe *Crémieux* and Albert *Cohen in Paris, and presented petitions from Kalischer and himself to Napoleon III, who granted him an audience. Sir Moses *Montefiore, whom he met in London, refused to cooperate with him. Friedland published a new edition of Kalischer’s work *Derishat Ziyyon*, adding his own notes and essays. Friedland was an emissary of Hevrah le-Yishuv Erez Israel ("Society for the Settlement of Erez Israel"), established by Kalischer, and collected funds for it in Germany. During his visit to Holland, he handed the Dutch government a petition requesting their support for the restoration of Erez Israel to the Jews. His greatest work, *Yosef Hen*, expounding his views, was published in a shortened version (1879). At the end of his life, he witnessed the beginnings of aliya to Erez Israel from Romania and Russia. In 1882 he went to Erez Israel from London and died in Jerusalem.

[Israel Klausner]

**FRIEDLANDER, ISAAC** (1823–1878), U.S. businessman. Friedlander, born in Oldenburg, Germany, was taken to the U.S. as a child. After working in New York City and then in Savannah, Georgia, he went to San Francisco in 1849 to mine gold. Turning to business, Friedlander soon came to dominate the California flour market and in 1854 erected the Eureka Flour Mills, the largest in the state. He earned the title “Grain King” while speculating in the wheat market and by 1872 controlled nearly all California grain exported to foreign ports. A struggle by the California farmers’ organization to circumvent him and export grain independently was unsuccessful. Friedlander also financed grain elevators and an irrigation project. He was one of the first regents of the University of California and was president of the San Francisco Chamber of Commerce.

**BIBLIOGRAPHY:** Paul, in: *Pacific Historical Review*, 27 (1958), 331–49; Anon, in: *California Mail Bag*, 9 (June 1876), 17–19; Reissner, in: *YLBI*, 10 (1965), 78.

**FRIEDLANDER, KATE** (1902–1949), criminologist and psychiatrist. After having completed her general medical studies in her native Innsbruck, she moved to Berlin where she specialized in mental and nervous diseases. She also trained as a psychoanalyst and worked as a specialist at the juvenile court in Berlin. In 1933 she migrated to London along with another prominent Jewish psychoanalyst, Paula Heimann (1899–1982), who later became a prominent child psychiatrist in London. Friedlander’s main achievements were in the application of psychoanalysis to the theoretical and practical problems of dissociative character formation. Her book *The Psycho-Analytical Approach to Juvenile Delinquency* (1947, 1959) is an important contribution to the understanding and treatment of juvenile delinquents. One of her principal interests, to which she devoted much of her life, was child guidance work for the elimination of unhappiness among children (in cooperation with Anna *Freud*). She wrote many papers, most of which dealt with the emotional development of the child and were aimed at preventing juvenile delinquency and antisocial behavior in general.

[Zvi Hermon]

**FRIEDLANDER, LEE** (1934– ), U.S. photographer. Born in Aberdeen, Wash., Friedlander took up photography at 14 and moved to California after graduation from high school. In 1956, he went to New York, where he became friendly with photographers like Robert *Frank*, Walker Evans, Diane *Arbus*, and Helen Levitt, and where he supported himself by taking pictures of jazz, blues, and gospel performers for various recording companies. He seems to have been greatly influenced by Frank, whose book *The Americans*, came out in 1958. Like Frank’s photographs, Friedlander’s were interpreted as a mirror of American society. His images were less emotional, however.

He got his first solo exhibition in the George Eastman House in Rochester, N.Y. in 1963. He always worked in series:
street images, flowers, trees, nudes, the industrial and postindustrial environment, portraits, and self-portraits. Among the important series he produced in the late 1970s and early 1980s was a reportage of forgotten memorials to events in American history, portraits of North American industrial areas threatened with unemployment, and photographs of computer operators. He thus gave shape to the banality of daily life and recorded the complexity of the American social landscape from a strong appreciation of the importance of formal values. His street scenes appear to be casual but are complicated compositions. The nudes reflect an almost obsessive attempt to capture the naked female body as it really is. He did not use models, but normal, reasonably well-shaped women marked by acne, bruises, fat, etc. He was also considered a master of the frame; his photographs nearly always include more details, telling or not, than the viewer expects. He used a viewfinder 35-millimeter camera and photographed in black and white. He received three Guggenheim fellowships, five grants from the National Endowment for the Arts and was awarded a MacArthur Foundation “genius” grant in 1990. More than a dozen books of his works have been published. He had one-man shows at the Museum of Modern Art in New York in 1972, 1974, and 1991. In 2001 Moma acquired more than 1,000 of Friedlander’s prints, spanning his entire career from the 1950s to work that had not yet been made public. It was the museum photography department’s biggest purchase ever of works by a living artist.

[Friedlander was a founder of the International Conference of Social Welfare and was a member of the International Association of Schools of Social Work. He also served as chair of the Commission on International Social Work of the local chapter of the National Association of Social Workers.

Among his many honors, he received a Fulbright Teaching Fellowship at the Free University of West Berlin (1956); he won the Social Worker of the Year Award of the National Association of Social Workers, Golden Gate Chapter (1971); he was awarded the Great Cross of Merit, as well as the Marie Juchacz Medal (1976), from the German Federal Republic, for his contributions to the development of German social services; and he received the Outstanding Social Worker citation of the Oakland (California) City Council (1978). In 1984 Friedlander’s friends and colleagues created the Walter Friedlander Fund to Promote Education in International Social Welfare.

[Friedlander, Walter (1891–1984), U.S. social welfare expert and educator, born in Berlin. Friedlander was trained in law, began his career as a welfare worker among children, and later served as a juvenile court judge in Berlin. From 1931 to 1933 he was president of the German Child Welfare League. Moving to Paris in 1933, he served three years as the director of the Legal and Social Services for Refugees. Immigrating to the U.S., he lectured at the University of Chicago from 1936 to 1943 and then went to the University of California, Berkeley. Starting off at Berkeley as a lecturer in social welfare, he became an associate professor in 1948, then professor (1955) and professor emeritus (1959). After his retirement, he continued to teach as a visiting professor, first at Michigan State University (1959–60) and then at the University of Minnesota (1963–64).

Friedlander wrote a number of textbooks on social welfare, including Youth in Distress (1922) and Introduction to Social Welfare (1955). The latter has been republished in five editions, the last in 1980 (with Dr. Robert Apte as co-author). It has been translated into 10 languages and is considered to be the most widely used introductory text in undergraduate colleges and professional schools in the U.S. and abroad. Friedlander also wrote Individualism and Social Welfare (1962) and International Social Welfare (1975), and edited Concepts and Methods of Social Work (1958).

[Friedman played his first season with the Cleveland Bulldogs, for whom he threw a league-record 11 touchdown passes as a rookie, and while with the Detroit Wolverines the following season, he led the league in scoring, extra points, and rushing – to this day the only player in NFL history ever to lead the league in passing and rushing in a single season. The New York Giants then purchased the entire Detroit franchise in order to acquire the contract of Friedman, paying him a $10,000 salary.]}
as the highest-paid player in the pro ranks of his day, when most players were getting $100 a game. Friedman's first season with New York in 1929 saw him throw a record 20 touchdown passes—the next highest total was six—considered one of the greatest feats in NFL history, considering the passing rules in effect at the time and the watermelon shape of the ball. Friedman led the league in passing yards and touchdowns (11, 9, 20, and 13) his first four seasons, he was named All-Pro all four years, and his 66 career TD passes were an NFL record until 1944. He moved from the Giants to the Brooklyn Dodgers in 1932, but only played part-time for two more seasons as he began college coaching, first at Yale, and then from 1934 through 1941 as head football coach at City College of New York, compiling a 27–31–4 record. After serving as a lieutenant commander in the U.S. Navy in WW II, Friedman served as athletic director at Brandeis University from 1949 to 1963, as well as head coach of the school's football team from 1951 through 1959, when they discontinued the sport. His record was 34–32–4.

Ill health late in life left him despondent, and in 1982 he found himself in his New York apartment dead of a self-inflicted gunshot wound.

Friedman attributed his good fortune to his mother's faith in Judaism and her practice of putting 18 cents in her pushke (charity box) every Saturday on his behalf. Friedman was never injured throughout his high school, college, and pro career. "I never questioned whether it was my ability that kept me aloof from injury. I let it go that it was chai working for me."

Friedman was elected as a charter member of the College Football Hall of Fame in 1951, and was elected to the Pro Hall of Fame in 2005. He is the author of The Passing Game (1931).

[Bibliography: M. Schulz, Bruce Jay Friedman (1974).]

FRIEDMAN, BRUCE JAY (1930– ), U.S. novelist and playwright. Friedman was regarded as one of the leaders of the school of "black humor." He was a frequent contributor to Esquire, the Saturday Evening Post, and the New York Times Book Review. His fiction includes Stern (1962), Far from the City of Class (1963), A Mother's Kisses (1964), Black Angels (1966), and A Father's Kisses (1996). The last edition of The Collected Short Fiction of Bruce Jay Friedman was published in 2000. His first play, the notable comedy Scuba Duba (1967), had a long run in New York.

[Bibliography: M. Schulz, Bruce Jay Friedman (1974).]

FRIEDMAN, DEBORAH LYNN (1951– ), singer and songwriter of late 20th century American Jewish liturgical and popular music. Beginning in the early 1970s, Friedman, a native of Utica, N.Y., produced 19 recordings and seven song books of contemporary Hebrew and English music. Her compositions combined traditional Jewish texts and liturgy with newly written lyrics and melodies influenced by both American and Israeli popular music. By the beginning of the 21st century, her liturgical music had "crossed over" from its initial origins in Reform Judaism's youth movement to Conservative and modern Orthodox congregations as well as to educational and camp settings. Many Christian groups also adopted some of her English religious songs. Friedman, who moved to New York City in 1995, gave a concert at Carnegie Hall in 1996 to commemorate 25 years of singing and song writing. Despite a terrible blizzard, thousands turned out to see her performance. That year she also won the Covenant Foundation Award for her impact in Jewish education and the ASCAP Annual Popular Awards.

Friedman's music caused controversy in the Jewish community. Many standard bearers of hasidanut opposed the entry of her music into the synagogue, claiming that it, lacked nusah or any Jewish rootedness. However, the greater American Jewish community widely recognized her achievements: the National Federation of Temple Youth made her a lifetime member, and she was awarded the Jewish Fund for Justice Woman of Valor Award (1997). She was honored by the Jewish Women's Archive; received the Jewish Cultural Achievement Award in Performing Arts from the National Foundation for Jewish Culture in 2002; and received the Lion of Judah Award in 2004, among many other accolades.

[Bibliography: J. Wasserman (ed.), Dr. Friedman Dénès irodalmi munkássága (1943); List of his works; I. Hahn, Az Országos Rabbiképző Intézet Évkönyve... (1946), 23–24.]

[FRIEDMAN, DÉNES (1903–1944), Hungarian rabbi and scholar. In 1927 he succeeded L. *Venetianer as rabbi of Ujpest, and in 1935 joined the staff of the Budapest rabbinical seminary. While still a student he edited, with D.S. *Loewinger, a manuscript of the Alphabet of Ben Sira (in Ve-Zot li-Yudah, 1926). He wrote A zsidó irodalom főrányai ("The Main Trends of Jewish Literature," 1928). He prepared Bibliographie der Schriften Ludwig Blaus (1926; enlargement of Hg. ed., 1926), and biobibliographies of graduates of the Budapest rabbinical seminary (in Magyar Zsidó Szemle, 44 (1927), 340–68). When the Nazis invaded Hungary in 1944, Friedman was deported to his death after witnessing the murder of his only son.]

[Bibliography: J. Wassermann (ed.), Dr. Friedman Dénès irodalmi munkássága (1943); List of his works; I. Hahn, Az Országos Rabbiképző Intézet Évkönyve... (1946), 23–24.]

[Baruch Yaron]
FRIEDMAN, HERBERT A. (1918– ), U.S. rabbi, executive chairman of the national United Jewish Appeal for over 20 years. Born in New Haven, Conn., to immigrant parents, Friedman graduated from Yale University (B.A.) in 1938, attended Columbia University Graduate School of Business Administration, and graduated from the Jewish Institute of Religion with a M.H.L. degree. He was ordained as a rabbi in 1944. He served as a chaplain with the Ninth Infantry Division in Germany and after World War II spearheaded efforts to help Jewish survivors of the Nazi death camps, including work with "Beriḥah, while ministering to the needs of American soldiers. Later he served as assistant advisor on Jewish affairs to General Lucius D. Clay, commander of U.S. Occupation Forces in Germany, working with Rabbi Philip *Bernstein. His efforts included a visit to Kielce immediately after the July 4, 1946, pogrom that resulted in the decision to open the American sector to Jews fleeing Poland. During that period, he was secretly recruited into the "Haganah and worked in the "illegal immigration operation called "Aliyah Bet." He was subsequently decorated by the State of Israel for that service.

While serving an anti-Zionist congregation in Denver, he was active in clandestinely securing desperately needed arms for Israel. He was one of the founders of the Israel Bond organization, invited by David Ben-Gurion to the formation meeting in Jerusalem in September 1950. In 1955, he became the executive vice chairman of the UJA national campaign and executive chairman in 1970.

Throughout three decades he was present at critical moments in the life of Jewish communities in many countries: pogroms in Morocco in 1955; flight of Hungarian and Egyptian refugees in 1956; exodus from Romania in 1957. He also studied conditions in Iran, Poland, and Tunisia. Just before the outbreak of the Six-Day War in 1967, he was in Israel for talks with Jewish Agency and government leaders, which resulted in the historic Israel Emergency Fund that raised millions of dollars for Israel in the fearful days preceding the war and the immediate post-war euphoria.

He created the UJA Young Leadership Cabinet, bringing together young men and women from all over the country and instilling within them a philosophy of Judaism and a sense of commitment. He also created a peer network among the most Jewishly philanthropic young Jews. He developed the UJA Overseas Mission concept, which has escorted scores of thousands of American Jews to Israel, and many thousands to the sites of the Nazi camps. He established the Israel Education Fund, which built high schools, libraries, and kindergartens throughout the country. Friedman and his family settled in Jerusalem in 1971.

Upon returning to the U.S. in 1978, Friedman assumed the position of president of the American Friends of Tel Aviv University. At an age when many would retire, he entered an even more creative phase. He was co-founder with Leslie Wexner in 1985 of the Wexner Heritage Foundation, dedicated to the education of leadership groups in Jewish communities throughout the United States, training cadres of young and promising affluent and highly positioned Jews in a two-year seminar in Jewish history and tradition so that they are prepared to assume leadership roles.

BIBLIOGRAPHY: H.A. Friedman, Roots to the Future (1999). [Lori Baron (2nd ed.)]

FRIEDMAN, JACOB (1910–1972), Yiddish poet. Born in Mielnica, Galicia, Friedman lived after World War I in Czernowitz, except for the years 1929–32, which he spent in Warsaw. In 1941 the Romanian authorities deported him to the Bershad camp in Transnistria. Liberated in March 1944, he eventually came to Bucharest and was active in the revival of Jewish cultural life there until 1947. He tried to make his way to Palestine, but reached Israel only in February 1949 after spending a year interned in Cyprus. His poetry, which he began publishing in 1927, is often filled with religious fervor. It acquired new depth due to his experience during and after the Holocaust. His lyrical and dramatic poems, first published in various journals, were included in several collections, among them: Pastekher in Yisroel ("Shepherds in Israel," 1953), Libshaft ("Love," 1967) and the posthumous lider un poemes ("Poems," 3 vols., 1974); four volumes appeared in Hebrew translation (1970, 1972, 1977, 1983).

FRIEDMAN, JEROME ISAAC (1930– ), physicist. Friedman studied at the University of Chicago from which he received his A.B. (1950), his M.A. (1953), and his Ph.D. (1956) in physics. After working as a research associate there and at Stanford University, he joined the faculty of MIT in 1960, becoming a professor in 1967 and an institute professor in 1991. At MIT he was also the director of the laboratory for nuclear science (1980–83) and head of the physics department (1983–88). In addition, he served as president of the American Physical Society in 1999. He was co-recipient of the 1990 Nobel Prize in physics with Richard Taylor and Henry Kendall for work they had done at the Stanford Linear Acceleration Center 1967–73, which showed that protons and neutrons were composed of quarks rather than being fundamental particles. In doing so, they also proved the existence of quarks which had been regarded until then as theoretical and highly implausible by most of the physics community. Their work also established the experimental foundations for the development of quantum chromodynamics, the theory of the so-called strong force, which is responsible for binding quarks together to form all hadronic matter.

FRIEDMAN, KINKY (Richard F.; 1944– ), U.S. country singer, novelist, political activist. Friedman was born in Chicago to Minnie and Tom, who had flown 35 bombing missions over Germany during World War II. The family moved to Texas, where Friedman’s father was a speech ther-
apist and an educational psychology professor at the University of Texas. The Friedmans also ran their own summer camp for children in the Texas hill country, called Echo Hill Ranch. It was there that young Richard Friedman began life as an entertainer, originating ideas for comedy routines on camp ski nights, and writing the winning songs for bunk song night.

Friedman founded his first band while at the University of Texas, King Arthur & the Carrots, a group that poked fun at surf music and recorded one single, “Schwinn 24” / "Beach Party Boo Boo" in 1966. After graduation, Friedman served in the Peace Corps from 1966 to 1968 in the jungles of Borneo.

In 1971, Friedman founded his second band, Kinky Friedman & the Texas Jewboys, an irreverent group reflected in their name as well as in their songs, which included "The Ballad of Charles Whitman," about the Texas sniper; satirical responses to antisemitism called "We Reserve the Right To Refuse Service To You" and "They Ain’t Making Jews Like Jesus Anymore"; "Ride 'Em Jewboy," the only country song written about the Holocaust; and the politically incorrect, "Get Your Biscuits in the Oven & Your Buns in the Bed." Many Jewish-owned chain stores thought the name of the band was antisemitic or self-hating, and refused to carry the group’s first album, Sold American. The group also elicited bomb threats from the Jewish Defense League.

In 1976, Friedman and his band toured with Bob Dylan & the Rolling Thunder Revue. That same year he made his third album, Lasso from El Paso, featuring Dylan and Eric Clapton. Three years later the Texas Jewboys disbanded and Friedman moved to New York, where he often appeared solo at the Lone Star Café sporting a yellow Star of David on his guitar strap. He also began writing mystery thrillers, featuring a Jewish country singer turned Greenwich Village private eye named Kinky Friedman, who, like his creator, always wore a black Stetson and smoked Cuban cigars. To everyone’s surprise, Friedman’s fiction was well received and a new career was born, resulting in 17 books in the detective series and five million books sold— including Greenwich Killing Time (1986), Elvis, Jesus and Coca-Cola (1993), God Bless John Wayne (1995), and The Mile High Club (2000); a non-fiction work, Kinky Friedman's Guide to Texas Etiquette: Or How to Get to Heaven or Hell Without Going Through Dallas-Fort Worth (2001); and a novel, Ten Little New Yorkers (2005), which Friedman announced would be his final literary effort.

In 1999, singers Willie Nelson, Dwight Yoakam, Tom Waits, and Lyle Lovett covered Friedman’s music on the tribute album, Pearls in the Snow: The Songs of Kinky Friedman. In 2002 a documentary was made about Friedman by Simone de Vries called Proud to Be an Asshole from El Paso.

In March 2005, Friedman announced his independent candidacy for governor of Texas in 2006, with slogans such as “How Hard Could It Be?” and “Why the Hell Not?” and a campaign promise: “If you elect me the first Jewish governor, I'll reduce the speed limit to 54.95.”

—Eli Wohlgeleiter (2nd ed.)

FRIEDMAN, LEE MAX (1871–1957), U.S. lawyer, historian, and patron of learning. Friedman was born in Memphis, Tennessee, of German Jewish descent. He became a noted trial attorney in Boston and a teacher and scholar of law. He was vice president and professor of law at Portia Law School, Boston, contributing learned articles to law journals. Friedman was deeply interested in American Jewish history, and in 1903 he began his association with the American Jewish Historical Society, eventually serving as president (1948–53) and honorary president (1953–57). In 1905 he was chairman of the celebration in Boston of the 250th anniversary of Jewish settlement in the United States, and half a century later he was the main speaker at Symphony Hall, Boston, on the occasion of the tercentenary. As a historian, Friedman contributed many articles and notes to the Publications of the American Jewish Historical Society, covering a wide range of subjects that included Judah Monis, Cotton Mather, and Aaron Lopez. The volumes he published in the field of Jewish history included some of European Jewish interest: Robert Grosseteste and the Jews (1934), and Zola and the Dreyfus Case: His Defense of Liberty and Its Enduring Significance (1937); and others on American Jewish themes: Early American Jews (1934), Rabbi Haim Isaac Carigal: His Newport Sermon and His Yale Portrait (1940), Jewish Pioneers and Patriots (1942), and Pilgrims in a New Land (1948). He presented books and manuscripts to the American Jewish Historical Society, and a bequest in his will enabled the Society to establish its own headquarters adjoining Brandeis University.

Friedman’s approach to cultural, philanthropic, civic, and communal endeavors was conservative. He served in leading positions with the Boston Art Museum, Harvard College Library, General Theological Library, and Boston Public Library. He was active in Boston Jewish life and was prominent in such national bodies as the Union of American Hebrew Congregations and the World Union for Progressive Judaism.

[Isidore S. Meyer]

FRIEDMAN, MILTON (1912– ), U.S. economist. Friedman, who was born in Rahway, New Jersey, received his B.A. from Rutgers University in 1932, his M.A. from the University of Chicago in 1933, and his Ph.D. from Columbia University in 1946. He began working for the U.S. government in 1935 and taught at several American universities before becoming professor of economics at the University of Chicago (1946–76). There, he acquired an international reputation and served as consultant to national and international institutions. He also acted as adviser to President Nixon. Friedman became the leader of the “Chicago school” of economic thought, opposed to those following the generally accepted theories of John Maynard Keynes. He argued that the U.S. government relied too much on changes in taxation and government spending instead of controlling the money supply, in order to regulate the economy. In addition, he maintained that the
U.S. Federal Reserve Board repeatedly erred in the rate at which it changed the money supply and, as a result, intensified the fluctuations in economic growth. Friedman favored a simplified taxation system, floating exchange rates, and the demonetization of gold. He also advocated the abolition of the social welfare system, which he considered paternalistic, ineffective, and inefficient. In its place he wanted a “negative income tax,” which would provide ready cash for the poor to pay for their basic needs.

Friedman was awarded the Nobel Prize for economics in 1976 for “his achievements in the field of consumption analysis, monetary history and theory, and for his demonstration of the complexity of stabilization policy.” By that time he had become one of the most influential and high-profile economic theorists of his day. His theory of monetarism – which related increases in the money supply to inflation – was adopted by the English Conservative party under Margaret Thatcher, which followed his prescriptions for reducing the money supply during the early years of the 1980s.

Friedman was a member of the research staff of the National Bureau of Economic Research (1937–81). He also served on the President’s Economic Policy Advisory Board during President *Reagan’s* administration in the 1980s.

After retiring from the University of Chicago in 1977, Friedman became Paul Snowden Russell Distinguished Service Professor Emeritus of Economics at the University of Chicago and a senior research fellow at the Hoover Institution at Stanford University. In 2002 the Cato Institute in Washington established the Milton Friedman Prize for Advancing Liberty, a cash prize awarded every second year to a person who has made a significant contribution to the advancement of freedom.

**FRIEDMAN, NAPHTALI** (1863–1921), Jewish deputy to the Russian *Duma* (parliament). Born in Shauili (Shavli), Lithuania, after graduating in law at the University of St. Petersburg Friedman practiced in Panevezh, Lithuania. In 1907 he was elected to the Third Duma for the district of Kovno. He joined the Kadets (Russian Constitutional Democratic Party), taking an active part in the committees of the Duma, and with the other Jewish delegate L. *Nisselovich* several times defended the Jews from attacks by the antisemitic deputies. Many Jews and non-Jews were impressed by his defense of the Jewish victims of the pogroms at the end of the 1880s. Friedman was also elected to the Fourth Duma (1912) where he continued to represent the interests of Russian Jewry with the two other Jewish delegates, M. Bomash and E. Gurewich. After the outbreak of World War I, Friedman joined with the representatives of the other national minorities in declaring that the Jews were ready to fight alongside the rest of the Russian peoples for victory. Friedman combated the allegations of Jewish treason trumped up by military circles in an attempt to cover up their defeats at the front. After the February Revolution of 1917 he cooperated for a while with the provisional government, but after the October Revolution he returned to Lithuania and practiced law in Panevezys. He was elected to the founding Parliament of independent Lithuania. He died in a health resort in Germany.

**BIBLIOGRAPHY:** M. Sudarski et al. (eds.), *Lite* (Yid., 1951), 1411–18.

**FRIEDMAN, PHILIP** (1901–1960), Polish-Jewish historian. Friedman studied at the universities of Lvov and Vienna, and obtained his doctorate for a thesis on *Die Galizischen Juden im Kampfe um ihre Gleichberechtigung* (1848–1868), 1929. In further research on the history of Polish Jewry, mainly in the 19th century, Friedman described changes in the economic structure and the growth of the great Jewish center at Lodz. He took part in editing periodicals in Hebrew, Yiddish, and Polish, and contributed to *Miesiecznik Żydowski* (“The Jewish Monthly”). Friedman published Hebrew textbooks for Jewish high schools, and taught Jewish history at the Jewish High School in Lodz and at the Institute of Jewish Studies in Warsaw. During World War II he went into hiding in Lvov. After the liberation, Friedman moved to Lublin, where he organized the Central Jewish Historical Commission, later the Jewish Historical Institute, in Warsaw, which undertook extensive documentation on the fate of Polish Jewry. In 1946 Friedman
was appointed to organize an educational project for the Holocaust survivors in the American zone of occupation in Germany. In 1948, after the displaced persons camps were closed, Friedman immigrated to the United States, where he directed the Jewish Teachers' Institute in New York. He also lectured on Jewish history at Columbia University. Friedman was a member of the YIVO staff and director of the bibliographical series of the Joint Documentary Projects of YIVO and Yad Vashem. Almost all Friedman's postwar publications dealt with the Holocaust period, on which he became a leading expert. His writings up to 1955 are listed in *Writings of Philip Friedman. A Bibliography* (1955). His later works include *Martyns and Fighters* (1954), a collection of sources on the Warsaw Ghetto uprising; and *Their Brothers' Keepers* (1957), about non-Jews who saved Jewish lives in occupied countries. The bibliographies of the Holocaust which he edited are *Guide to Jewish History under Nazi Impact* (coeditor J. Robinson, 1960), *Bibliography of Books in Hebrew on the Jewish Catastrophe and Heroism in Europe* (1960), and *Bibliography of Yiddish Books on the Catastrophe and Heroism* (coeditor J. Gar, 1962).

[Shaul Esh]

**FRIEDMAN, SHAMMA** (1937– ), Talmud scholar. His publications over several decades constitute an important contribution to our understanding of the Babylonian Talmud and related literature. He was the first to provide clear and objective criteria for differentiating between different literary and historical strata within the text of the Babylonian Talmud, subsequently applying these criteria systematically in the form of a continuous commentary to an entire chapter of the Babylonian Talmud (Yevamot X, with a General Introduction to the Critical Study of the Talmudic Sugya (1978)). The insight that many of the difficulties which have baffled generations of interpreters of the Talmud are rooted in the tensions which exist between these different literary and historical levels led Friedman to a more fundamental and (for some) revolutionary conclusion: that these tensions and difficulties are not the result of errors in transmission, or confusion in the interpretation of earlier tradition, but rather the result of a conscious process of synthetic creative reinterpretation which inheres in every level of talmudic literature, from the earliest tannaic sources, through the statements of the amoraim, and down to the latest commentaries and additions of the savoraim. While continuing to develop and refine the methodology for analyzing and interpreting the different redactional levels within the talmudic text, Friedman went on to apply the notions of “development” and “evolution” to two other scholarly issues: the origin and significance of variant readings (especially in the manuscript tradition of the Babylonian Talmud), and the so-called “synoptic problem,” i.e., the existence of and relation among alternative versions of a given textual tradition preserved in different talmudic and midrashic works. The notion that later talmudic sages often self-consciously reinterpreted and reformulated earlier versions of a given tradition has proved to be a powerful tool in solving many formerly intractable problems in the history of talmudic halakhah and aggadah. In addition to the many scholarly articles in which these ideas and methods were developed – including numerous studies in the field of Hebrew and Aramaic linguistics – Friedman's major publications in recent years have included *Talmud Arukh, Bava Metzi' a vi: Critical Edition with Comprehensive Commentary* (1990 and 1996), published by JTS press, and *Tosefta Atikta, Synoptic Parallels of Mishna and Tosefta Analyzed, with a Methodological Introduction* (2002), published by Bar-Ilan University.

The comprehensive critical methodology which has emerged from Friedman's literary efforts has provided the foundation for a number of important scholarly projects in which he has played a leading role. In 1985, Friedman founded the Saul Lieberman Institute of Talmudic Research at the Jewish Theological Seminary of America, which encourages innovative Talmudic scholarship and provides sophisticated tools for its implementation. The Institute today, under Friedman's direction, distributes a computerized database containing the text of almost all surviving Talmud manuscripts, first printed editions and fragments, as well as a computerized page-by-page bibliography of hundreds of books dealing with talmudic literature. The product of decades of work, these resources are aimed at opening new horizons in the field of Talmud Study. In the early 1990s, Friedman established the Society for the Interpretation of the Talmud, a collaborative venture in which a group of scholars has undertaken the preparation of an edition of the Babylonian Talmud with commentary based on scholarly standards and aimed to a wide reading audience. A preliminary volume containing representative analyses of selected talmudic sugyot (*Five Sugyot from the Babylonian Talmud*) was published in 2002, and the first three volumes covering entire chapters of the *Talmud* are currently in the press, with preparations for more extensive publications well under way. Friedman also directs an Internet site at Bar Ilan University (developed together with Prof. Leib Moscovitz) devoted to bringing together all the primary textual witnesses of Tannaic literature, with Tosefta and halakhic midrashim currently represented.

Friedman is the Benjamin and Minna Reeves Professor of Talmud and Rabbinics at the Jewish Theological Seminary and teaches in the Talmud Department at Bar Ilan University. He was born in Philadelphia in 1937 and settled in Jerusalem in 1973. He has held a variety of positions at the Seminary, including acting librarian, and editor of Hebrew publications of the Schocken Institute. During the 1970s and 1980s, Friedman was the dean and director of JTS's Jerusalem campus, now known as the Schechter Institute of Jewish Studies, where he teaches. In addition to his professorship at JTS and Bar Ilan, Friedman has taught at several universities, including Harvard, the Hebrew University, and Tel Aviv University, and has sponsored
more than 25 graduate students in advanced degrees. He was elected to the Israel Academy of the Hebrew Language and the American Academy of Jewish Research, is Talmud division editor of the Encyclopaedia Judaica, and is a member of the editorial board of Jewish Studies, an Internet journal.

[Stephen G. Wald (2nd ed)]

FRIEDMAN, THEODORE (1908–1992), U.S. Conservative rabbi and scholar. Friedman was born in Stamford, Conn. He was a graduate of the City College of New York (1929) and was ordained at the Jewish Theological Seminary (1931). He received his Ph.D. two decades later from Columbia University (1952). As was common in the rabbinate of his day, Friedman moved from congregation to congregation before finding his permanent prestigious pulpit. He served as rabbi of Beth El in North Bergen, N.J. (1931–42), Beth David in Buffalo (1942–44), the Jewish Center of Jackson Heights, N.Y., during 1944–54, and from 1954 until his retirement in 1970 of Beth El of South Orange, N.J., then a growing suburb of Newark during the first great wave of suburbanization. He then moved to Jerusalem. A leader of the centrist group within Conservative Judaism, which advocates controlled change within Jewish law, Friedman served as chairman of the Law Committee, where he worked with the Jewish Theological Seminary on solving the problem of the agunah. The result was a joint Law Conference of the Seminary. He was co-chair of the Steering Committee and secretary of its bet din and of the Rabbinical Assembly for matters dealing with marriage and divorce and was president of the Rabbinical Assembly in 1962–64. During turbulent times he embraced the cause of civil rights and was an early participant in the effort to rescue Soviet Jewry. He co-authored with Morris Adler and Jacob Agus the responsum permitting the use of electricity on the Sabbath and allowing congregants to drive to synagogue on the Sabbath.

He was managing editor of Judaism, a journal of Jewish thought, during 1953–61. He was coeditor with Robert Gordis of Jewish Life in America (1955), and wrote Letters to Jewish College Students (1965), relating Jewish teachings to the concerns of contemporary college students, and of Judgment and Destiny (1956), sermons. From Jerusalem, he wrote a “Letter from Jerusalem” published in Conservative Judaism.

[Jack Reimer / Michael Berenbaum (2nd ed.)]

FRIEDMAN, THOMAS L. (1953–), U.S. journalist. Born in Minneapolis, Minn., Friedman earned a bachelor’s degree summa cum laude from Brandeis University with a specialty in Mediterranean studies, which helped prepare him for a career in writing and reporting on foreign affairs. He became known for advocating a compromise peace between Israel and the Palestinians, for modernization of the Arab world, and for globalization and laissez-faire capitalism.

During his undergraduate years, Friedman spent semesters abroad at the Hebrew University of Jerusalem and the American University in Cairo. He then attended St. Antony’s College, Oxford University, on a Marshall scholarship and received a master’s degree in modern Middle East studies. He joined the London bureau of United Press International and spent a year there as a general assignment reporter before being assigned to Beirut. He reported from Beirut from 1979 to 1981, and then was hired by the New York Times, which sent him to Beirut as bureau chief in 1982, six weeks before the Israeli invasion. Fluent in Arabic and Hebrew, he reported extensively on the war and won the Pulitzer Prize for international reporting, particularly for his articles on the Sabra and Shatilla massacres. In June 1984 Friedman became the Times’s bureau chief in Jerusalem, the first Jew to serve in that position, and worked in Jerusalem until 1988. He won another Pulitzer Prize for his reporting of the first Palestinian Intifada. He chronicled his assignment in the Middle East in the book From Beirut to Jerusalem, published in 1989. It was on the New York Times bestseller list for nearly 12 months and won the National Book Award for nonfiction and the Overseas Press Club Award for Best Book on Foreign Policy. The book has been published in 10 languages, including Japanese and Chinese, and is used as a basic textbook on the Middle East in many high schools and universities. Friedman has been attacked by right-wing Jewish organizations and individuals for his reporting from Beirut and for his support of a two-state solution a decade before the Oslo agreements. Given his background and his manifest commitments to Judaism and to Israel, they had considerable difficulty portraying him as a self-hating Jew, however much they tried.

In January 1989 Friedman was posted to Washington as the Times’s chief diplomatic correspondent. For the next four years he traveled 500,000 miles, covering Secretary of State James A. Baker and the end of the Cold War. When Bill Clinton became president, he was named White House correspondent and in 1994 his assignment became the intersection of foreign policy and economics. In 1995 he became a foreign affairs columnist for The Times.

Initially, Friedman focused on the intersection of globalization and finance, and summarized his views in The Lexus and the Olive Tree (1999). It, too, became a bestseller. The two objects in the title symbolized the interaction between globalization and local tradition. The book also discussed the role of new technology in reshaping global politics and argued that nations must sacrifice a degree of economic sovereignty to institutions like the International Monetary Fund to achieve Western-style prosperity. After the attacks of September 11, 2001, Friedman’s columns concentrated on the threat of terrorism, and he won the 2002 Pulitzer Prize for commentary. He supported the invasion of Iraq in 2003, although he had grave misgivings about the way the Bush administration waged it. Friedman also wrote Longitudes and Attitudes (2002) and The World is Flat (2005).

When the Times developed a television channel, it engaged Friedman to draw on his extensive contacts to report and write documentaries about the Middle East and other parts of the world. As such, he became a familiar figure in American homes. He also appeared frequently on television.
panels and spoke often at colleges and public forums. He was a member of the board of trustees of Brandeis and of the advisory board of the Marshall Scholarship Commission.

[Stewart Kampel (2nd ed.)]

FRIEDMANN, ABRAHAM (d. 1879), chief rabbi of Transylvania. Among the first rabbis there to introduce the preaching of sermons in the synagogue in Hungarian, he encountered strong opposition from Orthodox rabbis. When officiating in Simánd (province of Arad) in 1845 he preached in Hungarian on the occasion of the birthday of King Ferdinand I. The address, entitled Egyházi beszéd, was published the same year. Previously Friedmann published a pamphlet, also in Hungarian, in defense of Jewish rights entitled Az izraelita nemzetnek védelmére (1844). In 1845 the council of electors of the Jews of Transylvania, convened by the Catholic bishop of *Alba-Iulia, elected him chief rabbi of the grand principality. He subsequently settled in the capital, Alba-Iulia. During his period of office he also played a political role as representative of Transylvanian Jewry and became involved in bitter disputes and polemics. In 1872 his opponents obtained his removal from office. He was the last chief rabbi to hold office for the whole of Transylvania. One of his main opponents was *Lichtenstein.

[Yehouda Marton]

FRIEDMANN, ARON (1855–1936), German hazzan. Born in Szaki, Lithuania, Friedmann studied in Berlin and in 1882 was appointed chief hazzan of the Old Synagogue of the Berlin community, a post he held until 1923. He received the title of Koeniglicher Musikdirektor, Royal Academy of Art, Berlin, 1907. In 1901, he published Shir li-Shelomon, a collection of cantorial music in traditional style for the prayers of the year. He also wrote Der synagogale Gesang (1904) and Lebensbilder beruechmter Kantoren (3 vols., 1918–27), containing biographies of 19th-century hazzanim.

FRIEDMANN, DANIEL (1936– ), Israeli professor of law. Born in Israel, Friedman studied law at the Hebrew University of Jerusalem prior to his army service. He is a professor of law at Tel Aviv University, where he was also dean of the Law Faculty, 1974–78. Friedman was a member of the Commission of Inquiry (chaired by Justice M. Beiski) appointed by the president of the Supreme Court to investigate the price manipulation of bank shares. He as a member of a number of legislative advisory committees and the Advisory Committee for the Codification of Civil Law in Israel (chaired by Chief Justice A. *Barak) appointed by the minister of justice. He also served as an adviser to the Restatement (Third) of the Law of Restitution. Friedmann participated in the establishment of the Cegla Institute for Comparative and Private International Law at Tel Aviv University and was its first director. He also participated in establishing the Law School of the College of Management and was its first dean. He published numerous books on various spheres of law: insurance, contract, damages, and other topics. In 1991 he received the Israel Prize for social sciences.

FRIEDMANN, DAVID ARYEH (1889–1957), Hebrew critic and editor. After studying medicine at Moscow University, he emigrated in 1925 to Palestine, where he was a practicing ophthalmologist and active member of the medical association. Friedmann wrote many articles in the Hebrew press on medicine, literature, and the arts, most of which were published posthumously in two volumes: Iyyunlei Shirah (1964), and Iyyunrei Prozah (1966). He was an editor of Ayanot Publishing Co. as well as of En Hakore (1923); he also edited the Medical Association’s journal, Ha-Refu'ah, from 1929.

[Getzel Kressel]

FRIEDMANN, DAVID BEN SAMUEL (also called “Dovid” Karliner; 1828–1917), Lithuanian rabbi and posek. Friedmann was born in Biala and lived for a time in Brest-Litovsk after 1836. On the advice of Leib Katzenellenbogen he moved to Kamenets-Litovsk where he studied under the supervision of his older brother Joseph since 1841. In that year he made the acquaintance of the philanthropist Shemariah Luia of Mohilev, who entrusted to him the education of his brother-in-law Zalman Rivlin of Shklov. Friedmann later married Luia’s daughter. From 1846 to 1866 he devoted himself to concentrated study in the house of his father-in-law, where he compiled his Piskei Halakhot. After the death of his father-in-law in 1866 he accepted the rabbinate of Karlin near Pinsk (in 1868) where he remained until his death.

Friedmann’s renown rests upon his Piskei Halakhot (pt. 1, 1898; pt. 2, 1901), an exposition and summary of matrimonial law, with a commentary entitled Yad David, an appendix entitled She’ilot David containing responsa on the laws of “milkvot ("ritual baths"). The text of the Piskei Halakhot follows that of Maimonides. In his comprehensive exposition, Friedmann endeavors to establish clear-cut decisions. His work is distinguished by the fact that he relies to an overwhelming extent on the Babylonian and Jerusalem Talmuds and on the *rishonim, disregarding the *aharonim. He eschewed casuistry and tried to penetrate to the essence of the halakah by a logical approach. Among the rabbis who turned to him with their problems were Menahem Mendel *Schneersohn, the head of the Lubavitch (Chabad) dynasty, and David *Luria. When religious extremists in Jerusalem excommunicated the bet midrash of his brother-in-law, Jehiel Michael *Pines, because he supported the establishment in Jerusalem of an orphanage “where they would also learn a foreign language,” Friedmann attacked them in his Emek Berakkhah (1881). It consists of four essays in which he discusses the question of a ban and the regulations and conditions under which it should be imposed, emphasizing that a handful of rabbis of Jerusalem
had no right to impose such a ban. Pines wrote a long introduction to the book. Even though he tended to view with favor secular knowledge and the study of languages, Friedmann was opposed to compromise with regard to Torah education and the character of the traditional *heder and in 1913 vehemently opposed the plan of the society Mefizei Haskalah be-Russyah ("Disseminators of Secular Education in Russia") to change the accepted curriculum of the heder.

During a certain period of his life, Friedmann participated actively in the HIBbat Zion movement. From 1863 he published articles in the *Levannon which reflect his favorable attitude towards this movement, and he thus influenced many observant Jews to join it. He debated with Z.H. *Kalischer on the problems of the movement and, together with L. *Pinsker and Samuel *Mohilever, participated in the *Kattowitz conference of 1885 as a delegate of the Pinsk branch of the Hovevei Zion. In a letter to A.J. Slucki he stressed that the noble idea of the nationalist movement deserves to become dear to "our brethren who are anxious for the word of God," and he testifies of himself that "the fire of love for our holy land burns in my heart" (ed. by A.J. Slucki, *Shivat Ziyyon, 1 (1891), 18–19.

In the course of time, however, he changed his attitude and following the decision of Zionist parties to include national secular education among their activities became an opponent of the Zionist idea. His grandson SHMUEL ELIASHIV (Friedmann, 1899–1955), jurist and author, served as first ambassador of the State of Israel to the U.S.S.R.

[Yehoshua Horowitz]

**FRIEDMANN, DESIDER** (1880–1944), lawyer and Zionist leader. Born in Boskovice, Moravia, he was an active Zionist from 1898. When Vienna became the first great Jewish community in the West with a Zionist majority, Friedmann was elected vice president of its Israelitische Kultusgemeinde (Jewish community; 1920–24) and from January 1933 its president. In May 1934 Friedmann was appointed a member of the Austrian Council of State (*Staatsrat*). He was a courageous fighter for Jewish rights and enlarged the cultural, educational, and social activities of the Kultusgemeinde. The Austrian chancellor Schuschnigg dispatched him abroad in 1938, a few weeks before the annexation of Austria to Nazi Germany (the *Anschluss*), to negotiate support for Austrian currency. Immediately after the *Anschluss*, the Nazis arrested him, allegedly for his financial aid to the Schuschnigg government. On April 1, 1938, he was deported to the Dachau concentration camp with the so-called *Prominententransport* (transport of prominent people) and later to other concentration camps. In the autumn of 1944 he, his wife, and other Zionist leaders of Vienna were transferred from Theresienstadt to the gas chambers at Auschwitz.

[Josef Fraenkel / Bjorn Siegel (2nd ed.)]

**FRIEDMANN, GEORGES** (1902–1977), French sociologist, born in Paris, educated at the Ecole Normale Supérieure and the University of Paris. During World War II he organized the resistance movement in the Toulouse region. Friedmann, an expert in vocational education and the sociology of work and industry, was appointed inspector general of technical education in France in 1945 and participated in the work of the commission for educational reform. Friedmann became professor for the history of labor at the Conservatoire des Arts et des Métiers in 1946 and director of studies at the Ecole Pratique des Hautes Etudes at the Sorbonne in 1948; he was administrator of the Centre d’Études Sociologiques, 1949–51. In 1956 he was president of the International Sociological Association. His position in industrial sociology is that the psycho–physiological problems of labor in industry must be considered not only within the individual enterprise, but also in the context of the larger social structure and cannot be solved without comprehensive changes in the social order. Among his major works are *Problèmes du machinisme en U.R.S.S. et dans les pays capitalistes* (1934), *La crise du progrès: Esquisse d’histoire des idées* (1895–1935) (1936), *De la Sainte Russie à l’U.R.S.S.* (1938), *Leibniz et Spinoza* (1946), *Les problèmes humains du machinisme industriel* (1946), *Humanisme du travail et humanités* (1950), *Où va le travail humain?* (1951), and *Le travail en miettes; spécialisation et loisirs* (1956). Friedmann was editor and coeditor of *L’Homme et la machine and of Annales des Économies, Sociétés, Civilisations* and author of numerous articles on human and technological problems in industrial development. Several of his works were translated into English and German. In 1965, after an extended stay in Israel, Friedmann published *La Fin du peuple Juif?* (1965; *The End of the Jewish People?*, 1967). In this book he dealt with the present problems and future prospects of the State of Israel and the Jewish people. He held that the decline of religious orthodoxy, the growth of cultural assimilation in Israel and elsewhere, and the rise of a secular Israel nationalism will endanger the continued existence of the Jewish people in the Diaspora, as well as the Jewishness of Israelis.

[Werner J. Cahnman]

**FRIEDMANN, JANE** (1931– ), Swedish actress. She appeared in Stockholm at Dramatiska Teatern, the national theater of Sweden, and at the Stockholm City Theater. Her first great success was in the title role of *The Diary of Anne Frank* (1956). She also acted in *L’Ecole des femmes* by Molière; *Three Knives from Wei*, a Chinese story by the Swedish poet, Harry Martinson; and the modern English polemical play *Oh, What a Lovely War!* (1963). She also has a number of contemporary Swedish roles to her credit, such as in *Between the Summers* (1995) and *The Prompter* (1999).
FRIEDMANN, MEIR (pen name Ish-Shalom; 1831–1908), rabbinic scholar. Friedmann was born in Horost, Slovakia. From 1843 to 1848 he studied in Ungvar at the yeshivah of his relative Meir Asch. Between 1848 and 1858 he underwent several crises and changes. Successively, he lived as an ascetic Hasid preparing for immigration to Erez Israel, temporarily came under the influence of the Haskalah, returned to the study of the Talmud and was ordained, married, and became a farmer; his wife died, he was impoverished, and he became a maggid. In 1858 he settled in Vienna and attended the university as a non-matriculated student. From 1864 on he served as librarian, Bible teacher to adults, and Talmud teacher to the young at the bet midrash in Vienna. After 1894 he also taught at the rabbinical seminary there. Among his students were V. Aptowitzer, Z.P. Chajes, and S. Schechter.

In his lifetime Friedmann was known for his studies of and lectures on aggadah, and even earned the title mara de-aggadota (“master of aggadah”). His most important contributions are concerned with the halakhic Midrashim. He discovered lost sources, determined correct versions, and illuminated difficult passages; his writing is exceptionally erudite, profound, logical, and elegant of expression. His influence on Jewish scholarship was considerable. Many of the commentaries and interpretations of later talmudic scholars and researchers originated in his work. Friedmann maintained that “the Talmud is the foundation of Judaism and whoever abandons it is abandoning life”; this conviction affected all his creative work and activities. At the height of the Haskalah Friedmann was calling for traditional education, even drawing up plans for traditional Jewish secondary schools and universities. He was also active in the Zionist movement and founded the Association for the Dissemination of the Hebrew Language.

Friedmann edited midrashic texts with introductions and commentaries, the commentaries entitled Me’ir Ayin. The halakhic Midrashim include Mekhilta (1870), Baraita de-Melekhet ha-Mishkan (1908), and Sifre (1864); a part of the Sifra, which he had begun editing, was published posthumously (1915). He published Pesikta Rabbati (1886) and Tanma de-vei Elyahu (1902), aggadic texts; Talmud Bavli: Massekhet Makkot (1888) with a short interpretation as an example of a scientific edition of the Talmud; and a pamphlet about translating the Talmud, Davar al Odot ha-Talmud (1885). He published many works on the literature of halakhah and aggadah, its characteristics and principles, as well as books and articles on other Jewish subjects, including Bible, particularly commentaries on the Pentateuch, Judges, Samuel, Isaiah, Hosea, and Psalms; and the Targums of Onkelos and Aquila; the Holy Land; and Jewish prayer and poetry. He produced a number of sample textbooks on the Talmud and Mishnah for schools, and several of his lectures and sermons were published, although most of them can only be found incorporated into the works of his contemporaries. With I.H. Weiss Friedmann edited the periodical Beit ha-Talmud (1881–89). Most of his articles appeared in that and other publications under his pen name “Ish Shalom.”

Bibliography:

FRIEDMANN, MORITZ (1823–1891), Hungarian hazzan. Born in Hraboc, Friedmann was a noted boy soprano. When he went to Budapest as a youth, the hazzan David Broder accepted him in his choir. Later he went to Oedenburg (Sopron) and obtained a post as assistant cantor and Hebrew teacher in a nearby congregation. In 1857 he was appointed chief hazzan in Budapest, where he conducted services in the *Sulzer style, with a large choir and set psalms and prayers to music for solo and choir. His collection of Jewish synagogue songs, Irizelilita vallasos énekek… (1875), was used in the synagogues of most Hungarian communities. He also edited the paper Ungarische Israelitische Kultusbeamtentzeitung (1885–97), in which he published articles on cantorial music.

[Friedmann, Paul]

[Joshua Leib Nééman]

FRIEDMANN, PAUL (1840–?), philanthropist and author, initiator of a settlement scheme for Jews in Midian. A Protestant of Jewish descent, Friedmann was born in Koenigsberg, Prussia, but the place and year of his death are unknown. After accumulating a vast fortune, he traveled over Europe to gather material for his works, Les Dépêches de G. Michiel, Ambassadeur de Venise en Angleterre pendant les années 1554 à 1557 (1896) and Anne Boyleyn – A Chapter of English History 1527–1535, 2 vols. (1885). In 1891 he privately published Das Land Midian (Arabic for Midian), in which he described the possibilities of colonizing this land without mentioning Jews as the prospective settlers. Influenced by the Russian pogroms of the 1880s, he envisioned the unpopulated land of Midian as a haven for the victims of such persecution, and ultimately even as a Jewish state. With the assent of Sir Evelyn Baring (later Lord Cromer), Britain's representative in *Egypt, Friedmann opened negotiations with the British authorities. He simultaneously set out to enlist the first settlers and was finally able to persuade a group of 17 men, 6 women, and 4 children from Austrian Galicia to join his expedition. He acquired a yacht, which he called “Israel,” that reached Suez on December 1, 1893, with a total of 46 persons. The Prussian officer in command exercised strictest discipline, which proved unbearable, and 18 persons left the group. After one of them was found dead in the Sinai desert, Friedmann was blamed for the “murder.” Leaving the women and children in *Cairo, the group finally reached the Sinai Peninsula and prepared to cross the Red Sea to Midian. News reached them, however, that the Turks had occupied the Midianite city of Dhaba and that in accordance with Turkish law no non-
Muslim was permitted to settle in this area, which is part of the Hejaz.

A number of Friedmann's group deserted the camp and arrived in Cairo, spreading gruesome stories about the enterprise. As Friedmann's scheme had been favored by Baring, it was branded in the local press as a British attempt to occupy Midian, and bitter controversies arose between the British and Turkish authorities. Finally Friedmann was compelled to abandon his efforts. He was then a broken man, financially as well as spiritually, and although he brought successful court actions against a number of newspapers that attacked him, the litigation took many years and was, ultimately, of no avail.

[Sefton D. Temkin]

**FRIEDRICHSFELD, DAVID** (c. 1755–1810), German author. Friedrichsfeld was born in Berlin, where he was influenced by the Jewish Enlightenment movement. In 1781 he settled in Amsterdam, where he became one of the leaders in the fight for Jewish emancipation. After Amsterdam was occupied by the French revolutionary forces, he became one of the leaders of the *Felix Libertate* society. A follower of Moses Mendelssohn, he expounded his views in works such as *Beleuchtung… in Betreff des Buergerrechte der Juden* (Amsterdam, 1795), *De Messias der judden…* (The Hague, 1796), *Appell an die Staende Hollands* (Amsterdam, 1797), and *Kol Mevasser* (Amsterdam, 1802). He also wrote a work on Hebrew phonetics, *Maaneh Rakh* (Amsterdam, 1808), and contributed short articles and poems to *Ha-Me’assef*.

**FRIEDSAM, MICHAEL** (1858–1931), U.S. businessman, public servant, philanthropist, and art collector. Friedsam, who was born in New York, began working for the B. Altman & Company department store at the age of 17. He became a company partner in 1900 and a vice president in 1909. Upon the death of company president Benjamin Altman in 1913, Friedsam became president of the company and of the Altman Foundation, established to disburse the bulk of Altman’s fortune for charitable and educational purposes. During World War I Friedsam, as a New York State representative of the Federal Food Administration, participated in government efforts to regulate consumption and check profiteering. He also held the rank of colonel in the New York State National Guard. In 1925 Friedsam chaired the committee appointed by Governor Al Smith that recommended increased New York State financial aid to public schools. Friedsam willed portions of his extensive fine arts collection to the New York Metropolitan Mu-

seum of Art and the Brooklyn Institute of Arts and Sciences. In 1932, under the terms of his will, the Friedsam Foundation was established, for assisting the young and aged and for educational purposes.

[Richard Skolnik]

**FRIEND, CHARLOTTE** (1921–1987), U.S. oncologist, microbiologist. Friend was born in New York City to parents who immigrated from Russia. She finished her undergraduate studies at Hunter College, New York, and upon graduating in 1943 she served in the U.S. Navy during World War II and was second in command of the hematology laboratory at the naval hospital in Shoemaker, California. In 1950, she received her Ph.D. from Yale University. After graduation she was hired by the director of the then new Sloan Kettering Institute and was an associate professor of microbiology until 1966 when she moved to Mount Sinai School of Medicine and was appointed professor of microbiology. She remained there until she died in 1987. Friend made many important contributions to cancer research. Her first discovery was that a leukemia could be induced experimentally by a virus now known as the Friend Leukemia Virus (FLV), which at the time was received with skepticism and hostility because until then there had been no known link between viruses and cancer. Friend paved the way for a great many avenues of research. Her demonstration of inducible differentiation of leukemic cells by DMSO has served as an inspiration for evaluating the potential of therapeutic effects of differentiation-inducing agents in human cancer. Friend was a woman of strong convictions and a fighter. She openly supported the blacklisted academics and dissidents even in the McCarthy and Nixon era. She believed in the State of Israel and was a fervent supporter of the women’s movement. Charlotte Friend received many prizes and awards. In 1976 she was elected to the National Academy of Sciences.

**BIBLIOGRAPHY:** Leila Diamond, Biographical Memoirs.

[Bracha Rager (2nd ed.)]

**FRIEND, HUGO MORRIS** (1882–1966), U.S. lawyer and judge. Friend, who was born in Prague, was brought to the United States when he was two. In his youth he distinguished himself as an athlete and was a member of the U.S. team at the 1906 Olympic Games. In 1908 he was admitted to the Illinois bar and started to practice in Chicago. Friend was made a master in chancery for Cook County, and in 1920 was appointed to fill a vacancy in the circuit court. He was reelected to office until 1930, when he was appointed to the appellate court for the first district. Friend took some part in the charitable work of the Jewish community. In 1917–18 he was president of the Young Men’s Jewish Charities; he was a vice president of the Jewish Home Finding Society, board member of Mount Sinai Hospital, president of the Jewish Children’s Bureau (1945–48), and a director of the Jewish Charities of Chicago.

[Sefton D. Temkin]
FRIENDLY, FRED W. (Fred Wachenheimer; 1915–1998), U.S. television writer and director. Born in Providence, Rhode Island, Friendly began his career as a radio announcer in 1937. During World War II he was a correspondent for army publications, and in 1948 joined the National Broadcasting Company. He collaborated with veteran journalist Edward R. Murrow in the Hear It Now radio series. These were followed by several years of producing CBS Reports (1959–64) for the Columbia Broadcasting System. Friendly was president of CBS News from 1964 to 1966. He produced the innovative investigative TV news series See It Now, hosted by Murrow; it was the first TV program to be broadcast coast to coast across America (1951–57). He also produced the TV series Back That Fact (1953); the documentary film Satchmo the Great about legendary jazz musician Louis Armstrong (1958); and the CBS News documentary Harvest of Shame (1960), which dealt with the plight of migrant farmworkers in America.

In 1966 Friendly resigned from CBS when his decision to carry the live U.S. Senate hearings on Vietnam was overruled and the network chose to air reruns of I Love Lucy instead. Friendly then became a television adviser to the Ford Foundation, where he developed the Public Broadcast Laboratory, and was a professor of journalism at Columbia University.

Recognizing that animosity was growing between journalists and the judiciary in America, in 1974 Friendly collaborated with some of the country’s leading lawyers, journalists, and politicians to create a series of debates centered on society and the media. Now known as the Fred Friendly Seminars, broadcasts of these programs became highly popular fare on the Public Broadcasting Service.

Among his many honors and accolades, Friendly garnered 35 major awards for See It Now; 40 major awards for CBS Reports; and 10 Peabody Awards for TV production. In 1944 he was inducted into the Academy of Television Arts and Sciences’ Hall of Fame.

[Frank Healey / Ruth Beloff (2nd ed.)]

FRIENDLY, HENRY JACOB (1903–1986), U.S. judge. Considered by lawyers, judges, and legal scholars as one of the ablest lawyers of his generation and the preeminent federal appellate judge of his time, Friendly made a legendary record as a student at Harvard Law School. He became law clerk to Justice Louis D. Brandeis. He turned down an offer to teach at Harvard Law School and joined the prestigious law firm of Root, Clark, Buckner, and Ballantine, of which he became a partner in 1937. In 1946 he formed his own law firm; he was vice president, director, and general counsel of Pan-American Airways System. Thus, for over 30 years he was in private law practice with no involvement in public activities. In 1959 he was appointed judge of the United States Court of Appeals for the Second Circuit, in which he served until his death in March 1986. In the estimation of the legal profession, Friendly deserved to be coupled with Learned Hand for judicial competence and eminence. Felix Frankfurter in 1963 considered him the best judge writing judicial opinions. Professor Paul Freund wrote that Friendly “combined massive documentation and sharply critical, often astringent, analysis with invariably constructive, or reconstructive, proposals.” He was especially expert in administrative law, federal jurisdiction, criminal procedure, trademark, railroad, and commercial law. He was chief judge of his court for two years, and from 1974 to the time of his death he was also presiding judge of the special court set up by an act of Congress on railroad reorganization.

Judge Friendly served on the Council of the American Law Institute, on the board of overseers of Harvard University, and was the author of several books, including Benchmarks (1967) and Federal Jurisdiction: a General View (1973). In 1977 he was awarded the Presidential Medal of Freedom, and in the following year the Thomas Jefferson Memorial Award in Law.

[Milton Ridvas Konvitz]

FRIENDSHIP, a relationship between people arising from mutual respect and affection. The ideal of friendship in the Western world is largely derived from classical Greece. Not only do the myths and legends point to friendship as one of the great human achievements, but the philosophers make it one of the primary virtues of existence. The Romans continued this exaltation of friendship, as is evident in Cicero’s essay on the topic, De amicitia. Biblical tradition seems to take friendship, as it does so many other general values, for granted and accords it respect; yet it never raises the close relationship between one person and a chosen companion to the status of a major ideal. There can be no question that the significance of true friendship is recognized in the Bible. A friend (răw) is defined, almost accidentally, in Deuteronomy 13:7 as “one who is like your very self”; in Proverbs 18:24 a friend (ohev) is one “who sticks closer than a brother.” There are few depictions of friendship in the Bible; the most notable examples are those of David and Jonathan (1 Sam. 20), David and Barzillai (11 Sam.17:27–29, 1932–40), and Ruth and Naomi (Ruth 1:17–3:17). When Jephthah’s daughter goes off to bewail her fate she asks permission to do so with her companions (Judg. 11:37). The Bible seems to emphasize proper concern for one’s neighbor as a means for the creation of a sacred society, rather than intense person-to-person relationships. This may be a
safeguard against homosexuality, which was so much a part of the Greek conception of friendship.

Typical of the Bible’s ethical concern in human relations is the frequent reference to false friendship in the book of Proverbs. As the worthy friend is he who stands by you, so the bad friend is he who deserts you when you are in need. Thus the warning is issued that the rich, not the poor, have many friends (14:20); that friends flock to the gift giver (19:6); and that he who has many friends has reason to worry (18:24). The rabbinic tradition, like the biblical, shows appreciation of friendship. The friendship of David and Jonathan is held up as the supreme example of altruistic love (Avot 5:19). It does not consider it a major concern, however, though the good *haver* (associate or colleague, *ibid.*, 1:6; 2:13) and the good neighbor (2:13) are mentioned as ideals to be sought. The *amora* Rav is reported to have praised the friends of Job for going to see him when they learned of his suffering, even though they lived at a great distance from him. In response to Rav, Rabbah quoted the popular saying “Either a friend like the friends of Job or death” (BB 16b). The Talmud reports that Rabbi Zera showed friendship even to some lawless men who lived near him. It chides some of the other sages who did not do so for their hardness of heart but praises them for their repentance (Sanh. 37a). Modern Jewish thought, responding to the ethical implications of the concept of friendship, has shown a renewed interest in this subject, exemplified in the writings of Martin *Buber* (*I and Thou*, 1923, passim) and Hermann *Cohen* (*Religion der Vernunft* (1929), 510).

[Eugene B. Borowitz]

FRIENDSHIP LEAGUES WITH ISRAEL. Societies established in various countries for the promotion of friendly and cultural relations between their countries and Israel. Listed below are the countries where such societies exist. They have a total membership of about 30,000. Although a number of them were formed immediately after the establishment of the State in 1948, the majority were formed after 1965.

The leading members of these societies include distinguished citizens from all walks of life. The societies organize lectures, seminars, Israeli art exhibitions and concerts, and receptions for Israeli personalities. Some of them also organize annual study tours to Israel for their members. They publish pamphlets, quarterlies, and books on life in Israel. In Latin America, these organizations take the form of “cultural institutes.”

Though a few societies tend to be of a more political nature, the majority concentrate on cultural relations. They are composed mainly of non-Jews, but in some countries Jewish community leaders are also active as officers or members. In addition to the friendship leagues, there are a number of pro-Israel parliamentary groups e.g., in Great Britain, West Germany, and France. In Britain three such groups, Conservative Friends of Israel, Labour Friends of Israel, and Liberal Friends of Israel, are active mainly in political circles.

In Israel, corresponding societies promote friendship with 27 countries, while the Israel-Asia Friendship Council and the Israel-Africa Friendship Association are roof organizations to promote relations with the two continents as a whole, and the Central Cultural Institute in Jerusalem coordinates the work done for Spanish- and Portuguese-speaking countries.

The Council of Israel Friendship Leagues coordinates all these activities, which include the spreading of information of the respective countries and their cultures, contacts with sister societies abroad, entertaining visitors, and arranging concerts and exhibitions.

In their respective countries the friendship societies cooperate with the local Zionist federations and with other Jewish bodies, receiving support from the External Relations Department of the World Zionist Organization.

By the late 1970s the countries with Friendship Leagues and Cultural Institutes were as follows: Australia, Mauritius, New Zealand; in Europe – Austria, Belgium, Denmark, Finland, France, Greece, Holland, Ireland, Italy, Norway, Spain, Sweden, Switzerland, the United Kingdom, and Germany; in North America – Canada and the U.S.; in Asia – India, Japan, Nepal, Philippines, South Korea; Latin America (Cultural Institutes) Argentina, Bolivia, Brazil, Chile, Colombia, Costa Rica, Ecuador, El Salvador, Guatemala; Honduras, Mexico, Nicaragua, Panama, Peru, Uruguay, and Venezuela; Australia. Through its Youth Ambassador Student Exchange program for secondary school students, the America-Israel Friendship League, founded in 1971, has brought together over 5,000 students.

**BIBLIOGRAPHY:** Letter, published periodically by External Relations Department, Jewish Agency, Jerusalem (Jan. 1962–June 1965); Record of Activities of the Friendship Leagues Abroad and in Israel (November, 1965–); Benjamin Jaffe, Twenty Years of Activities (1977). **WEBSITE:** www.aifl.org.

[Benjamin Jaffe]

*FRIESS, JAKOB FRIDRICH* (1773–1843), German anti-semitic philosopher. He lectured in Jena and Heidelberg and published authoritative works on philosophy and psychology. On the one hand, Fries was an advocate of enlightenment, civil and constitutional rights and the equality of man. On the other hand he propagated a cultural, religious, and *voelkisch* conception of a homogeneous German nation excluding Jews as an ethnic and religious minority. In his pamphlet *Ueber die Gefaehrdung des Wohlstandes und Charakters der Deutschen durch die Juden* (Heidelberg, 1816), Fries accused the Jews of “physical separation” from the German people and demanded an enforced integration by the complete adoption of German culture and values and the destruction of Judaism and Jewish traditions: “We do not declare war on the Jews, our brothers, but on Jewry” (*Judenchaft*). Immediately after the Napoleonic wars, Fries took part in the nationalistic student agitation and was the only member of the professional staff present at the 1817 Wartburg demonstration. His popularity with the
students contributed to the success of his anti-Jewish writings. Under his influence, the Burschenschaft (students' associations) decided not to accept Jews as members. Although Fries' antisemitic attitude was not principally racist, his rabid language and the frequent use of the words "destruction" and "annihilation" in particular paved the way for radical forms of racial antisemitism.

[Leon Poliakov]

FRIEDEIS, LAZARO DE (16th century), physician. Scholars disagree on whether he was a native of Hungary or Holland. When Andrea Vesalius (1514–1564), the great anatomist, came to Padua, Friedeis became a member of his close circle of friends. He furnished Vesalius with the Hebrew names for some of the anatomic structures described in Vesalius' epoch-making work De Humani Corporis Fabrica and possibly also those appearing in Tabula Anatomicae. The Hebrew anatomic terms used are for the most part taken from the Hebrew translation of the Canon of Avicenna and in some cases directly from the Talmud.

[Suessmann Muntner]

FRISCH, DANIEL (1897–1950), U.S. Zionist leader. Frisch, who was born in Erez Israel, was taken by his family to Romania when he was one year old. He immigrated to the U.S. in 1921, settled in Indianapolis, Indiana, and eventually became an investment broker and the head of a large salvage firm. In 1934 Frisch, a militant General Zionist from his youth, became a member of the Zionist Organization of America's (ZOA) Administrative Council. In the course of the next 25 years he held numerous other Zionist posts before being elected ZOA president in 1949. In that same year, largely through Frisch's efforts, the ZOA, the Jewish Agency, and the World Confederation of Zionists reached agreement for financing various projects in Israel. Frisch's approach to Zionism was reflected upon the strength of the General Zionist organization and in the need for the development of a strong private sector in the Israeli economy. A collection of his essays, sketches, and letters was published as On the Road to Zion (1950).

FRISCH, EFRAIM (1873–1942), Austrian author and journalist. Born at Stry in the Ukraine, Frisch was a member of an Orthodox family. Following the success of his novel Das Verloebnis (1902), he worked at Max *Reinhardt's Deutsches Theater in Berlin as director of drama from 1904 to 1908. In 1902 his writing was also included in the first volume published by the Jüdischer Verlag, the Jüdischer Almanach, among contributions from Stefan Zweig and Max Liebermann. His views on the stage are contained in Von der Kunst des Theaters (1910). After some years with a Munich publishing house, Frisch co-edited with Wilhelm Hausenstein Der Neue Merkur (1914–1925), a literary and political monthly whose contributors included Gottfried Benn, Bertholt Brecht, Martin Buber, André Gide, Yvan Goll, Bernard Shaw, and Arnold Zweig. He also published translations from the French (Giraudoux, Cocteau), English (Priestley), Polish, and Yiddish (Mendele Mokher Seforim).

Zenobi (1927), a brilliantly written novel generally considered Frisch's masterpiece, shows how a gentle, impractical, and naïve fool becomes the touchstone for a depersonalized and corrupt world of materialism, militarism, and technology. Frisch's positive attitude toward Judaism is clear from the frequent and sympathetic presentation of the East-European Jewish milieu in his fiction. He once published a special Jewish issue of Der Neue Merkur in 1935 and in 1936 delivered four public lectures on Judaism at Ascona, Switzerland, where he later died.

[Harry Zohn]

FRISCH, EPHRAIM (1880–1957), U.S. Reform rabbi. An outspoken rabbi who held pulpits in Arkansas, New York, and Texas, Frisch stirred controversy throughout his career by praising communism, denouncing the poll tax, criticizing Zionism as a "menace," and ridiculing legislators who banned evolution texts from the schools.

A native of Shubocz, Lithuania, Frisch was the son of Rabbi David and Hannah Baskowitz Frisch. He immigrated to the United States in 1888 through the Great Lakes port of Duluth, Minn. Religious scholarship and political liberalism were prevalent in his family tree. His maternal great-grandfather, Rabbi Alexander Sender, who was hailed as a gaon, wrote the talmudic commentary, Hatarat Nedarim (1880), discussing and vosv. Frisch's cousin, Leonard Frisch (1890–1984), was a national Zionist leader and the editor of American Jewish World, a Twin Cities weekly.

Frisch grew up in Minneapolis and was ordained in 1904 from Hebrew Union College, where he was founding editor of the college annual. At his first pulpit, Anshe Emeth (1904–1912) in Pine Bluff, Ark., he launched the state's first county tuberculosis association, supported an African American minister who hosted biracial gatherings, and criticized the
governor for referring to Jesus in a Thanksgiving Day proclamation. In 1912, Frisch moved to Temple Israel in Far Rockaway, Queens. There he established a temple social service department that created Children's Haven of Far Rockaway for temporary care of indigent youngsters.

In the spring of 1915 Frisch founded the New Synagogue, a Manhattan congregation whose credo stressed humanitarian deeds, social action, flexible rituals, and liturgy augmented with secular readings. The following year, he married Ruth Cohen (1890–1934), a pianist and writer and the daughter of Galveston's Rabbi Henry Cohen (1863–1952). Her connections and congeniality drew people to the budding congregation. The New York Evening Post hailed Frisch and his congregation as "post/Darwin." By 1918, however, Frisch's opposition to the Balfour Declaration and his characterization of Zionism as a "menace" led to rebuffs from colleagues, disenchantment among congregants, and a line in the American Hebrew denigrating him as an "obscure rabbi."

In 1923 Frisch became rabbi of Temple Beth-El in San Antonio. In the conservative South, Frisch was a lightning rod for controversy. He criticized compulsory Bible reading in the schools, urged an American boycott of the Berlin Olympics, sympathized with the city's underpaid pecan shellers, and denounced the city's squalid slums. Jewish youth, inspired by Frisch's idealism, gravitated to the rabbi and his wife, who launched a young adult group that staged plays, dances, book reviews, and political debates. Older congregants were less enamored of the rabbi. During sermons favoring the New Deal and Filipino independence, some congregants walked out or spoke up in opposition. In June 1942, despite two years left on Frisch's contract, the congregation voted the rabbi into retirement. For a short time he directed the Social Justice Commission of the Central Conference of American Rabbis, then quit over administrative matters. Embittered and now a widower, he spent his remaining years living alone in New York.

[Hollace Ava Weiner (2nd ed.)]

---

**FRISCH, OTTO ROBERT** (1904–1979) physicist, nephew of the physicist Lise *Meitner*. Frisch was born in Vienna but was naturalized as a British citizen (1943). After gaining his D.Phil. in physics from the University of Vienna (1926) he worked at the national physics laboratory in Berlin (1927–30) and with the Nobel physics laureate Otto *Stern* in Hamburg (1930–33). With the coming of the Nazis, he left Germany in 1933 to work in Patrick Blackett's laboratory in Birbeck College, London, before joining Niels *Bohr's* laboratory in Copenhagen (1934–38). With the threat of war and invasion, Frisch moved to Mark Oliphant's laboratory in Birmingham, England (1939–40) but joined James Chadwick's laboratory in Liverpool as this was more appropriate for his work. With the merging of U.K. and U.S. research on nuclear weapons he moved to Los Alamos (1943–46), returning to England in 1946 as head of the nuclear physics division at the Atomic Energy Establishment in Harwell. In 1947 he was appointed Jacksonian Professor of natural philosophy at Cambridge and a fellow of Trinity College, working in the Cavendish Laboratory. He retired in 1972. His initial research in Germany concerned the physical properties of nuclear particles, including the discovery of the magnetic moment of protons. In Copenhagen he studied radioactive isotopes and the outcome of collisions between neutrons and nuclei. At the end of 1938 he and Lise Meitner calculated the enormous energy which could potentially be released by what they termed "fission," the process just described by Otto Hahn and Fritz Strassman whereby uranium nuclei are split by colliding neutrons. He rapidly identified the fission products experimentally in Bohr's laboratory. Frisch was early to recognize the practical implications of sustained fission and, in collaboration with Rudolf Peierls, he calculated that neutrons could induce a chain reaction in a small enough quantity of pure uranium 235 to make a bomb feasible. In Los Alamos he worked in considerable personal danger on the chain reactions in pure uranium 235 and plutonium underlying the first fission bombs. In Cambridge he developed devices for tracking particles, one of which was marketed successfully under his chairmanship. He was also deeply interested in science education and he wrote many well received books for general readers. He continued his commercial and literary interests in retirement. He was elected a fellow of the Royal Society in 1948.

[Michael Denman (2nd ed.)]

---

**FRISCHMANN, DAVID** (1859–1922), one of the first major writers in modern Hebrew literature. Versatile and prolific in his literary creativity, Frischmann was an innovator in style and in the treatment of his subject, especially in the Hebrew short story, the ballad, the essay, criticism, and the lyric-satiric feuilleton. He also distinguished himself as a translator of world literature, and as an editor. In introducing Western aestheticism into Hebrew literature, Frischmann was a major influence in the development of Hebrew literature according to the aesthetic concepts of the world.

**Early Career**

He was born in Zgierz, near Lodz, into a well-to-do mercantile family which, although traditional, approved of the Haskalah. His education included Hebrew religious studies as well as humanities. At a young age, Frischmann already showed signs of literary talent and was considered a prodigy. At 15, his first writings were published – the sonnet "Yesh Tikvah," a translation of Heine's "Don Ramiro," and "Tarnegol ve-Tarnegolet," an original short story (*Ha-Boker Or*, 1874). He published satirical writings in *Ha-Shahar,* whose editor, "Smolenskin, hailed him as a "brilliant star that has risen in our literary spheres – Boerne and Heine in German and Frischmann in Hebrew."

**Short Stories**

Frischmann's early satirical narratives, with their inherent social criticism, influenced by the writings of J.L. *Gordon and..."
K.E. *Franzos, gave way to the short story whose purpose was mainly aesthetic. Jewish life was now portrayed more objectively. Frequently, the main characters were Jews who had come into direct conflict with the mores of the traditional society in which they lived and who, because of these conflicts, had either become estranged from it, or were rejected by it. In "Yom ha-Kippurim" (1881), a Jewish girl attracted to the world of music becomes a famous singer but abandons her people and traditions. At a recital in the church of her native town, on the Day of Atonement, she meets her death at the hand of her widowed mother who, out of shame and pain, has become demented. In "Ha-Ish u-Miktarto," a famous rabbi is so addicted to smoking that he is forced to violate the Sabbath, first furtively, and later publicly; as a result, he is excommunicated. Frischmann empathizes with these protagonists who succumb to human weaknesses and describes them with compassion and understanding.

*Ba-Midbar* (1923), a series of fictional biblical tales, alluding to biblical motifs and written in a biblical style and language, are original both in their choice of subject and in form. Set in the desert, immediately after the exodus of the Israelites from Egypt, the characters are torn between the half-pagan primitive habits and lusts that they still cling to, and the new moral life preached by Moses as the word of God. Their leaders and priests, responsible for the observance and teaching of the new precepts, are themselves not always faithful to them. These stories, while evoking nostalgia for the ancient era, also reflect universal themes relevant to Frischmann and his time: the conflict between religion as an act of faith and as law, and instinct.

**Literary Critic**

Frischmann frequently was a scathing literary critic. Thus in an article, "Mi-Misterei Sifrutenu" (*Ha-Boker Or*, 1880), he violently admonished P. Smolenskin, the leading authority in Hebrew literature at that time, whom he accused of plagiarizing from M. *Hess's Rome and Jerusalem*. In *Tohu va-Vohu* (1883), he mocks and scorns the Hebrew literary journalism of his day because of its inefficiency and provincialism. In due course, Frischmann became an authoritative arbiter of good taste and a champion of literary writing for art's sake. He defended J.L. Gordon against the attacks of M.L. *Lilienblum -- who had accused Gordon of not being sufficiently nationalistic in his writings in a critical article published in *Ha-Asif, 1894*. His admiration for Gordon did not, however, prevent him from criticizing Gordon on another matter. He claimed that Gordon, after joining the editorial board of *Ha-Meliz*, had abandoned those liberal views which he had expounded for 30 years previously.

**An Iconoclast Poet**

Frischmann's literary nonconformism, expressed in two of his earliest poems "Lo Elekh Immam" and "Elilim," were to become the motto of his life and his literary credo. In "Lo Elekh Immam," he voices his refusal to follow the old path and expresses his fearless criticism:

```
I shall not go with them, I shall not go; their ways are not mine,
I cannot bear their prattle, their expressions, their talk or their conversation.
I cannot tolerate their ways, their manners, or their thoughts,
Their prophets are not my prophets, their angels are not my angels.
Thoughts repel me, thoughts without minds,
I detest feelings, feelings without hearts.
```

"Elilim" points to Frischmann the iconoclast; the poem harks back to the patriarch Abraham whom he sees as the first iconoclast. The poet claims that Abraham in smashing the idols had not completed the act, since the largest of the idols still survived. He calls upon the patriarch to endow him with his ancient venerated spirit, so that he might smite surviving idols.

A non-observant Jew, Frischmann rejected as futile and impractical the attempts at religious reforms in the 19th century, whose purpose was the adaptation of Judaism to the spirit of the times. In "Ani va-Avi Zekeni," Frischmann argues that the grandfathers who cling to Judaism would not assent to any reform of the *mitzvot* which, in their view, were all "given to Moses at Sinai," whereas the younger generation, with which the author identifies, does not need the sanction of tradition to act according to its conscience.

**Frischmann and European Culture**

Like many of his contemporaries, Frischmann's introduction to European culture was by way of German, a language he had studied in his youth. Two German-Jewish authors, *Heine and *Boerne, exercised a profound influence upon his writing. Frischmann visited Germany several times, and during his 1882 stay, became personally acquainted with a number of authors and scientists, among them B. Auerbach, a German-Jewish writer, and A. *Bernstein, whose large popular scientific work, *Knowledge of Nature*, Frischmann was to translate in part. Between 1890 and 1895, he studied philology, philosophy, and the history of art at the University of Breslau. He returned to Warsaw in 1895, and until 1910, translation became his regular occupation. The works he rendered from German, Russian, and English into Hebrew during that period include J. Lippert's *The History of the Perfection of Man* (1894–1908), George Eliot's *Daniel Deronda* (1893), legends and tales of Hans Christian Andersen (1896), selected poems of Alexander Pushkin (1899), Byron's *Cain* (1900), and Nietzsche's *Also sprach Zarathustra* (1900). Frischmann devoted his entire life to literature and avoided all public office or public involvements. His many opponents accused him of anti-Zionism. In actuality, it was his rejection of the use of art for ideological or propagandistic purposes that caused him to refrain from advocating social or political views.

**Frischmann as a Hebrew Journalist**

In the 19th century, the dividing line between belles lettres and journalism had not been clearly defined, and most authors
engaged in both disciplines without differentiating between them. Frischmann published a series of short stories, *Otiyyot Poreḥut* (1893), a series of book reviews, and a series of feuilletons on practical subjects, called “Ba-Kol-mi-Kol-Kol” in Ha-Asif. His adversaries often dismissed him as “merely a feuilletontz.” Frischmann, who did not accept the old forms, and left on all the genres he employed his mark as innovator – in style, structure, choice of content and its treatment – saw the feuilletont as a new form of poetry whose range extended far beyond that of any other type of poetry. In his eulogy of Theodor *Herzl*, Frischmann wrote:

I knew him as an artist in his field long before he became famous as the father of Zionism. My enthusiasm for Herzl, the feuilletontist, was so great, that for a time I almost hated Zionism because it had robbed me of his poetic powers and transformed a great poet into a man of public affairs concerned with petty politics. However immense his contribution to Zionism may have been, the loss to literature is immeasurable.

Frischmann had a special affinity for political leaders who had literary talents. He wrote with enthusiasm about the diary of Ferdinand *Lassalle*, and about the private letters of Rosa “Luxemburg.

**Editor and Publisher of Journals**

Frischmann published several short stories in the German literary monthly *Salom* (Leipzig, in 1885), in *Ha-Meliz* (whose editor, J.L. Gordon, invited him to join its editorial board in 1896); and in *Ha-Yom*, the first Hebrew daily. Frischmann preferred *Ha-Yom* because it was an independent journal and its editor and principal contributors, among them J.L. “Kantor, and J.L. Katznelson, shared the same liberal outlook as he. Frischmann served as assistant editor and published his feuilletonts almost daily; the series “Letters Concerning Literature” became one of the foundation stones of modern Hebrew criticism.

In 1901 Frischmann became editor of *Ha-Dor*, a literary weekly whose high literary standard attracted the most talented writers of the day. After one year it was forced to close down, due to its small circulation. Frischmann tried to revive it three years later, but failed after publishing 38 additional issues. Zalman *Shneour*, describing the *Ha-Dor* period in his memoirs, says: “Frischmann was generally considered a quarrelsome man; his antagonists considered him a cynic. In truth, he was a mild, pleasant man who loved talented and promising young people.”

In 1903 Frischmann became editor of the literary supplement of the Vilna daily newspaper *Ha-Zeman*, in 1909, in Warsaw, of the short-lived *Ha-Boker*, between 1908 and 1910 of the literary collections *Sifrut* (1909–10); and of *Reshufim* (1909–10; pocket-sized literary anthologies) in which he published, in serial form, his translation of *Also sprach Zarathustra*.

**Frischmann in Yiddish**

Hebrew was Frischmann’s literary vehicle of expression, and he was faithful to biblical Hebrew, which he had mastered probably better than any contemporary author, rejecting the “synthetic” Hebrew developed by *Mendele Mokher Seforim* and his school. Occasionally, however, he also wrote in Yiddish and in German. The few poems that he composed in Yiddish are lyrical in tone. He also wrote short stories and feuilletons in that language. His first Yiddish articles were published in *Shalom Aleichem’s Yidishe Folksbibliothek* (1888–89), but he also contributed Yiddish poems and articles to the literary annual *Hays-Fraynd*, the weekly *Der Yud*, and the daily *Fraynd*. From 1908, he was a regular contributor of weekly feuilletons to the Warsaw Yiddish daily *Hayaṭ*. His collected Yiddish stories were published in two volumes by the Lodz Pedagogue editions, and his Yiddish articles on drama and literature were published by the Warsaw Progress editions. These collected works are only a small part of Frischmann’s Yiddish writings, most of which are still uncollected.

**Frischmann’s Visits to Palestine**

Frischmann visited Palestine twice, in 1911 and 1912, each time with groups organized by *Hayaṭ*, in which he published his travel impressions. These he also published in Hebrew in a small book entitled *Ba-Areẓ* (1913). Overwhelmed by his experiences, he wrote emotionally about the holy places he had visited, the landscape, his meetings with the pioneers, and the beginnings of the revival of Hebrew. His initial skepticism gave way to enthusiasm, and he candidly and openly retracted his reservations about the rebirth of Hebrew as a vernacular.

**Frischmann in Russia During World War I and the Revolution**

At the outbreak of World War I, Frischmann was on a visit in Berlin, where he was interned as an enemy alien. Eventually, he was set free and allowed to return to Poland. When the conquering German army neared Warsaw, he left for Odessa where he remained until the Russian Revolution. While in Odessa, he wrote some of his most beautiful lyrical poems, translated *The Conversations of the Grimm Brothers* for the Moriah editions of Bialik-Rawnitzki and the poetry of the Indian poet Rabindranath Tagore. Frischmann’s translation of Tagore’s poetry is a masterpiece. The translation, together with several original poems, and a series of literary obituaries, were published in *Keneset* (1917), edited by *Bialik*. During his stay in Odessa, he also contributed weekly feuilletons to the Odessa Yiddish newspaper *Undzer Lebn*, until the Russian authorities closed down the paper.

After the revolution of February 1917, a Hebrew literary center was formed in Moscow, and Frischmann was invited to be the chairman of the editorial board of the A.J. Stybel publications. He was named editor of *Ha-Tekufah*, the quarterly published by Stybel. There he published his translations of Goethe, Heine, Byron, Oscar Wilde, Anatole France, and Tagore. He also continued his biblical stories of the *Ba-Midbar* series. Stybel’s generous support enabled him, as well as many other authors, to devote themselves entirely to writing. The publication program of the house was outlined by Frischmann in his address on “Belles Lettres” at the second Hebrew Language and Culture congress in Vienna (1913).
In 1919 the Stybel publishing house was closed down in Moscow, and reestablished in Warsaw, where Frischmann continued in his capacity of editor. There he also published a series of "New Letters Concerning Literature" in the monthly Miklat (another Stybel project, edited by Y.D. *Berkowitz in New York), and translated the "Legends" (Aggadot) of Max Nordau (1923) and Shakespeare's Coriolanus (published in 1924). Grave illness compelled him to travel to Berlin to seek medical treatment; there he died and was buried.

**Frischmann’s Conversations and Letters**

Besides his great literary prolificacy, perseverance in pursuing an idea or belief, and his immense contributions to the different branches of literature, Frischmann’s talent also revealed itself in his letters to friends (few unfortunately survive), and in conversation. Some of his conversations were written down later, from memory, by his admirers: J. *Fichmann, E. *Steinman, and Z. *Shneour. His letters to his contemporaries, rarely personal, are a valuable source of information on Frischmann and on the history of the Hebrew literature of his period. Eleven of his letters, Iggerot David Frischmann ed. by E.R. Malachi, were collected and published in New York (1927); others were published in different periodicals.

Collected writings of Frischmann have been published in various editions: (1) Ketavim Nivharim (4 vols., Piotrow-Kowar, Warsaw, 1899–1905), a selection of his writings with an introduction by Y.L. Kantor; (2) Ketavim Hadashim (5 vols., Warsaw, 1909–12); (3) Kol Kitvei David Frischmann u-Mivhar Tirgumav (16 vols., Warsaw, 1922*), his complete writings and a selection of his letters, as well as an additional volume (vol. 17) of his articles; (4) Kol Kitvei Frischmann (8 vols., Warszaw-Newyork, 1939), his complete writings; (5) Kol Kitvei Frischmann (8 vols. published until 1968), his complete works; (6) Tirgumim (1954), a collection of all his literary translations. Four books of Frischmann’s collected Yiddish writings were published by the Pedagogue editions (1909) in Lodz, and the Progress editions (1911) in Warsaw. Many of Frischmann's writings in Hebrew, as well as in Yiddish and German, have not yet been collected in book form and are still scattered in different periodicals. For English translations, see Goell, Bibliography, 674–81, 2046–91, 2794–95.

[Aharon Zeev Ben-Yishai]

**FRITSCH, THEODOR** (1852–1933), German antisemitic publicist and politician. One of the leading early racists, in 1886 he joined the Deutsche Anti-semitische Vereinigung (see "Antisemitism") which strove to repeal the emancipation law. In 1887 he published the Antisemiten-Katechismus … (1887) as a catalog of "Jewish misdeeds." Later renamed Handbuch der Judenfrage, it went through 49 editions until 1944. In 1902 Fritsch established the periodical Hammer as a forum for antisemitic authors of the völkisch movement in Germany. In the following years Fritsch played a leading role in the foundation of antisemitic and völkisch organizations like the Reichshammerbund (founded in 1912), the Deutschvölkische Schutz- und Trutzbund (founded 1919), a mass organization with more than 200,000 members, and the Deutschvölkische Freiheitspartei (founded 1922, in 1924 Fritsch became one of its Reichstag members). The Nazis honored Fritsch as their Altmäster, and Hitler characterized the Handbuch der Judenfrage as important contribution that "paved the way for the National Socialist antisemitic movement."

**FRITTA (Friedrich Taussig) (1909–1944),** Czech painter and graphic artist. In 1942 he was deported to the concentration camp at Theresienstadt. Here, together with fellow artists Leo *Haas, Otto Ungar, Friedrich Bloch (an Austrian painter), and later Karel Fleischmann,* he formed a group of painters who assigned themselves the task of creating a pictorial record of the last days of men facing death. Fritta’s contribution to this unique documentary was probably the largest. Their works were smuggled out of Theresienstadt over a two-year period. In July 1944 the Nazis discovered some of Fritta’s works depicting scenes of ghetto life. Fritta was imprisoned and deported to Auschwitz, where he died under undergoing torture. About 150 of his Theresienstadt drawings, buried in a tin case, were unearthed after the war, together with the works of other Theresienstadt artists. They are in the Jewish Museum in Prague.

cil of Jewish Communities in Czech Lands (1965), 206–18; Haas,
*ibid.*, 156–62.

[Avigdor Dagan]

**FRIULI–VENZEIA GIULIA,** northeastern region of Italy, Jews were already settled in antiquity at Aquileia in Friuli. Between 1028 and 1420 the patriarch of Aquileia ruled over Friuli. Under his protection, Jewish merchants and moneylenders settled in *Cividale, Cormons (1340), Gemona (1395), Pordenone* and *Porchia (1399), San Daniele, Trieste (1348), Udine (1387), and Venzone (1333). Within a brief period, prosperous Jewish communities formed around them. When Friuli was annexed by the Republic of Venice in 1420, there was no essential change in the status of the Jews. However, at the end of the 15th and during the 16th centuries the preaching of friars and the Counter-Reformation movement led to deterioration in the situation of the Jews and the expulsion from Udine in 1556 and Cividale in 1572. The situation of the Jews living in Habsburg territory also deteriorated. However, in the middle of the 17th century Jews still lived at Gorizia and there was a new settlement at Gradisca. Jews were then segregated in ghettos, including Trieste in 1696.

In 1777, Jews were expelled from all the settlement in the territory of the Republic of Venice. However, for Jews living in Habsburg territory, the 18th century was a period of growth in both Gorizia and Trieste. With Joseph II’s reforms, Habsburg Trieste became the center of attraction for Jews in Friuli. While in the course of the 19th century, all the other Jewish communities, with the exception of Gorizia, began a steady decline, Trieste grew to become one of the most prosperous communities of the Habsburg Empire.

The end of World War I, and the passage of the whole region to Italy, as well as the deterioration of the economic situation, produced a decline in the Jewish population in Friuli. The Holocaust weighed heavily on Friuli’s Jews, concentrated in Trieste. In the early 21st century, in all of Friuli, Jews lived only in Trieste.

**FRIZZI, BENEDETTO** (Benzion Raphael Kohen; 1756–1844), Italian physician, engineer, and scholar from Ostiano near Mantova. He graduated from Pavia and practiced in Trieste. In 1790 he founded the first Italian medical journal and published six *Dissertazioni di politica medica sul Pentateuco* (Pavia and Cremona, 1787–90) on precepts of the Law, presenting them in a modern scientific and apologetic manner. He also wrote *Diffesa contro gli attacchi fatti alla nazione ebraica nel libro intitolato dell’influenza del ghetto nello Stato* (Pavia, 1784), an apologetic and polemical work, which intended to disprove the accusations by a contemporary Italian – Giovann Battista D’Arco from Mantua, author of *Dell’influenza del Ghetto nello Stato* (Venice, 1782) that Jews hated Christians and that their economic activities tended to impoverish the countries they lived in. He described Jewish theology, philosophy, and ethics and then analyzed in great detail and with many examples the economic role of Jews in Europe, particularly in Italy. He outlined the valuable functions they fulfilled historically and attributed their success as merchants to attention to details and quality, realistically low prices, avoidance of borrowing at interest, and trade in perennially useful products rather than luxury items for which demand varies. Frizzi enumerated markets and services opened and developed by Jews and described their business methods at length.

In *Dissertazioni in cui si esaminano gli usi ed abusi degli ebrei nei luoghi ed effetti sacri e si propone la maniera di renderli utili in società* (Milan, 1789), he analyzed contemporary Judaism from a critical point of view, focusing in the first part on the inappropriate luxury of the synagogues and the tendency of rabbis to become preachers instead of scholars and doctors of theology; and in the second part on the prayers in general (Psalms, *Amidah*, etc.) and on the need to behave properly during the services. Finally, in the third part, he criticized bad sermons with their threatening manner and grammatical errors and also dealt with public and private charity.

He wrote his Hebrew work, *Petaḥ Enayyim*, in 3 vols. (Leghorn, 1815–25), to demonstrate that the rabbis’ teachings were based on scientific knowledge, expounding the book *Ein Ya’akov Ein Yisrael* (Frankfurt am Main, 1723) of Ya’akov Kabyb, a masterpiece of the religious and normative culture of Italian Jewish communities. He hoped both to increase his contemporaries’ respect for Torah and to attack traditionalists who saw Jewish law as untouchable and untouched by the modern spirit.

In addition, Frizzi published *Giornale medico e letterario di Trieste*, (4 vols., Trieste, 1790–91), *Opuscoli filosofici e medici* in (4 vols., Trieste, 1791–92), *Accademia letteraria sul metodo degli studi ebraici nella logica e altri filosofi rami* (Trieste, 1791), *Dissertazione sulla lebbra degli ebrei* (Trieste, 1795), and *Dissertazione di biografia musicale* (Trieste, 1803). A man of great learning and wide renown, Frizzi was considered one of the outstanding Jewish scholars of the Enlightenment in Western Europe.

**FROEHLICH, ALFRED** (1871–1953), pharmacologist. He was born in Vienna and became professor of pharmacology and toxicology at the University of Vienna in 1912. In 1939 he settled in the U.S. and became associated with the Jewish
Hospital in Cincinnati. He was the first to describe in 1901 adiposo-genital dystrophy, a form of obesity which is associated with a tumor in the pituitary gland and deficient development of the sex organs. He collaborated with Otto *Loewi on the pharmacology of the autonomous nervous system, and as a result of their discoveries, the use of a combination of adrenalin and cocaine was established in medical practice. Together with the neurologist L.F. Hochward, Froehlich recommended the use of hypoglysin during delivery, a practice that became universally accepted. He and H.H. Mayer investigated the contracture of striated muscle fibers under influence of tetanus toxin. He carried out experimental research in increasing the effect of certain drugs and made extensive investigations into the effect of theophylline.

**FROHLICH, HERBERT** (1905–1991), British physicist. Frohlich was born in Rexingen, Germany, in 1905. He earned his doctorate from the University of Munich at the age of 24 and lectured at Freiburg University before immigrating to England in 1933. There he was a research physicist, lecturer, and reader in theoretical physics at the University of Bristol (1935–1948), after which he became professor of theoretical physics at Liverpool. His varied research included electrical conductivity and he contributed to the microscopic theory of superconductivity. He held a number of visiting professorships, including one at Purdue University in the U.S. In 1951 Frohlich was elected a fellow of the Royal Society. He was the recipient of numerous awards and honors, including the prestigious Max Planck Medal. His publications over a half century include two books and more than 140 original papers and review articles.

FROMAN, IAN (1917– ), Israeli tennis developer. Born in Johannesburg, South Africa, Froman received his degree in dentistry in 1961 from the University of Witwatersrand. In 1964 he immigrated to Israel. A tennis player from his youth, he represented South Africa in the Wimbledon championship in 1961, participated in Maccabiah as a South African and as an Israeli, was captain of the Israeli Davis Cup team and trainer of the national tennis team. He left dentistry in 1974 to devote himself full time to advancing a tennis center for Israeli youth which opened in 1976. There are now eight such tennis centers throughout Israel with thousands of young people participating in the sport. In 1989 he was awarded the Israel Prize for sport and physical culture. In 2004 he was chosen to be the chairman of the Israeli tennis association, and was one of the torch carriers during the independence ceremony.

[Fern Lee Seckbach]

FROMM, ERICH (1900–1980), U.S. psychoanalyst, social philosopher, and author. Fromm, who was born in Frankfurt of rabbinic descent, studied at German universities and received his professional training at the Psychoanalytic Institute of Berlin. He worked at the Institute for Social Research in Frankfurt from 1929 to 1932, but immigrated to the U.S. when Hitler came to power in Germany. His first appointment in America was at the International Institute for Social Research in New York City (1934–39). He was on the faculty of Bennington College, Vermont, from 1941 to 1950. In 1951 he was appointed professor at the National University of Mexico. He was also professor at Michigan State University (1957–61) and New York University (1962). In 1974 he settled in Switzerland. A theoretician of the neo-Freudian school, he pursued an independent road in the application of psychoanalysis to the problems of culture and society. His psychological studies on the meaning of freedom for modern man have had a wide influence on western thought.

A student of the Bible and the Talmud, “brought up in a religious family where the Old Testament touched me and exhilarated me more than anything else I was exposed to,” Fromm was a disciple of Ludwig Krause and Nehemia Nobbel, and was greatly influenced by Hermann Cohen. Fromm believed that everyone has a religious need and that religion is “the formalized and elaborate answer to man’s existence.” He postulated two major kinds of religion: the authoritarian and the humanistic. He rejected the former, for here man is utterly powerless, and adopted the humanistic religion in which man experiences oneness with the All, achieving his greatest strength and self-realization, as in the Jewish prophets, where their doctrines have an underlying humanity and where freedom is the aim of life. He differed from Freud, and considered “the religious cult as vastly superior to neurosis, because man shares his feelings, his oneness, security, and stability with his fellow men, which the neurotic person lacks in his isolation.”

Fromm claimed that Judaism is an “untheological religion, where the stress is on the underlying substratum of human experience.” Making extensive use of Judaic texts and practices, he demonstrated their contemporary relevance to the human condition, showing, in a nontheological way, how the idea of God is a permanent challenge to all kinds of idolatry. In Fromm’s view, alienation, which is identical to idolatry in the Bible, is the sum and substance of human misery in our society. To save Western man from “depersonalization,” society must recognize the sovereignty of the individual. In contrast to Freudian orthodoxy, Fromm emphasized the need for a social and cultural orientation in psychoanalysis.

Fromm’s belief in the need for a society which recognizes man as a responsible individual is expounded in The Sane Society (1955). This society he regarded as the best antidote to the totalitarianism that he denounces in Escape from Freedom (1941). His other studies deal with the interrelation of psychology and ethics, psychoanalysis and social history, myth and religion, and dream symbolism. These books include: Man for Himself (1947); Psychoanalysis and Religion (1950); The Forgotten Language (1952); The Art of Loving (1956); and You Shall Be as Gods (1967), a psychiatric commentary on the biblical view of God in which he declares that the “Old Testament is a revolutionary book because its theme is the liberation of man.”

Fromm’s first wife was Frieda Fromm-Reichmann, whom he married in 1926.

[Menachem M. Brayer]

FROMM, HERBERT (1905–1995), German-born American organist, conductor, and composer. Born in Kitzingen on the Main, Bavaria, Fromm studied at the Academy of Music in Munich with Paul Hindemith. He worked as a theater conductor in Bielefeld (1930) and Wuerzburg (1931–33). In 1937 the Nazis forced him out of Germany and he went to the United States. There he became organist and director of music at
Temple Beth Zion, Buffalo, and from 1941 until 1973 at Temple Israel in Boston. He composed many works for the synagogue, and also a number of secular works. His synagogue compositions include Adath Israel, a service for Friday evening (1952); Song of Miriam, for women's choir, organ, or piano (1945); Six Madrigals (1951), for Sabbath and festivals; Avodat Shabbat (1960); Psalm Cantata, for mixed voices, organ, trumpet, viola, flute, and timpani (1963); Hemdat Yamin, a service for Sabbath morning (1964); Chamber Cantata (text by Judah Halevi), for mixed voices and eight instruments (1966); Hag ha-Matzot, suite on Passover melodies for harpsichord, flute, and cello (1967); and numerous anthems and organ compositions. In addition to his articles and essays in various journals and newspapers, he wrote The Key of See: Travel Journey of a Composer (1967), Seven Pockets (1977), and On Jewish Music: A Composer's View (1979). Fromm received the Ernest Bloch Award in 1945.

FROMM-REICHMANN, FRIEDA (1889–1957), U.S. pioneer of psychoanalytic psychiatry and psychotherapeutic teaching and research. Born in Karlsruhe, Germany, Frieda Fromm-Reichmann studied medicine, practiced in several German cities, and founded the South West German Psychoanalytic Institute. She worked at the “Weisser Hirsch” Sanatorium in Dresden, which was a crossroads of psychoanalysis, social reform, Jewish orthodoxy, and existentialist philosophy. With the advent of Nazism she left Germany in 1933 and went to the U.S., where she joined the Washington Psychoanalytic Society in 1935, worked at the William Alanson White Institute in New York, and at Chestnut Lodge in Rockville, Maryland. She believed in the voluntary acceptance of life's commitments and in acquiring the strength to accept criticism. She was also fearlessly critical, for instance, of Freud's concept of narcissistic neurosis, a psychotic withdrawal which he held to be inaccessible to treatment. She stimulated the application of linguistic and communications research to psychoanalysis, when participating in 1955 and 1957 at the Center for Advanced Studies in the Behavioral Sciences, Stanford, California. She influenced a wide circle of pupils. The popular fictional work I Never Promised You a Rose Garden (1964), written by Joanne Greenberg, a former patient, presented her therapeutic technique.

Her major books include Principles of Intensive Psychotherapy (1950) and Psychoanalysis and Psychotherapy (1959, with full bibliography).

She was married to Erich *Fromm for four years from 1926.

[Janos A. Schossberger]

“FRONTO, MARCUS CORNELIUS (c. 100–175), Roman rhetorician. Addressing his former pupil, Marcus *Aurelius, he refers to numerous casualties (not recorded elsewhere) inflicted on Roman armies by the Jews during Hadrian's reign.

(Jacob Petroff)

FROST, MARTIN (1942– ), U.S. congressman. Frost was born in California but raised in Fort Worth, Texas. As a youngster he was deeply involved in the National Federation of Temple Youth, the Reform Youth Movement where he was a regional and national officer. He went to the University of Missouri, where he received a bachelor of journalism degree. He then worked for a Delaware newspaper and later for the Congressional Quarterly while he trained to be a lawyer at Georgetown University Law Center. Upon graduation, he clerked for Judge Sarah T. Hughes until 1972. He was also a legal commentator on Dallas television.

He first ran for Congress in 1974 and was defeated in a primary against a very popular TV weatherman. He sat out the next campaign while he ran Jimmy Carter’s presidential campaign in North Texas. His district was more than one-third African American and 15 percent Hispanic, not necessarily an ideal political base for a Jewish candidate. Yet, with perseverance and organization, two traits that were to characterize his political career, he ran again in 1978 in the Democratic primary against the same incumbent weatherman and in a very big upset, prevailed.

Upon entering Congress Frost allied himself with then-Majority Leader James Wright, a fellow Texan who rewarded the freshman with a seat on the powerful House Rules Committee. He was an ally to Wright and his fortunes rose when Wright became speaker of the House. They dipped after Wright was forced to resign, but he rose again to leadership as chairman of the Democratic Congressional Campaign Committee and then as chairman of the Democratic Caucus, the third most important position in the House.

Frost was a successful fundraiser and very savvy political strategist and organizer; he headed the Democratic Congressional Campaign Committee in both the 1996 and 1998 cycles. In the 106th Congress he became chair of the Democratic Caucus, the first Jew ever to hold that position. His wife, Kathryn George Frost, retired as a major general and former adjutant general of the United States Army. She was the highest-ranking female in the United States Army. Frost raised three daughters, one of whom became a rabbi and one a chef.

Entering Congress in 1978, Frost served for 13 terms until he was defeated in the 2004 election after the mid-decade reapportionment bill, orchestrated by fellow Texan, House Majority Leader Tom Delay, passed the Texas Legislature. His district, which was once primarily a minority district was transformed by absorbing Republican strongholds, and what had been a secure seat was lost to the Republicans. When he was retired, he was one of the most senior Democrats in the House, in the South, and of the Jewish delegation.
He remained in Washington but also taught at the Kennedy School of Government at Harvard and served as a commentator for Fox News.

[Marshall Brachman (2nd ed.)]

FRUG, SHIMON SHMUEL (1860–1916), Russian poet. Frug was born in a Jewish agricultural colony in Kherson province, Russia; he was self-educated. He began his poetic career writing in Russian, published three volumes of verse, and was the first poet to treat Jewish themes in Russian verse. His poem “The Goblet,” written under the impact of the pogroms of 1881, was translated into Yiddish as “Der Kos” by I.L. Peretz and sung by Jews the world over. Soon Frug himself began to write in Yiddish, but his first collection of Yiddish songs and ballads did not appear until 1896. A complete edition in three volumes followed in 1904 and again, with additions, in 1910. His Yiddish national songs were key to the needs of his generation. In his popular song “Zam z‘n Sternen” (“Sand and Stars”) he argues with God, asking why He had only fulfilled half His promise to Abraham, making Jews as numerous as sand; but “where are the stars?” The song “Hot Rakhmones” (“Have Pity”), composed after the Kishinev Pogrom of 1903, bore the refrain “Have pity, give shrouds for the dead and for the living – bread.” It was recited and sung at mass meetings protesting against Czarist oppression of Jews. In his socialist and Zionist lyrics, he pleaded for a return of the Jews to productive labor on their ancestral soil. His songs inspired the early Zionist pioneers. He also composed ballads based on Jewish folklore, of which the best known is “Dem Shames Tokhter,” “The Sexton’s Daughter,” a Jewish parallel to the Greek tale of Admetus and Alcestis. Frug, who suffered from poverty, misfortune, illness, and family troubles in his last years in Odessa, characterized himself as a poet who wept all his life.

[Melech Ravitch]

FRUM, Canadian family. BARBARA ROSENBERG FRUM (1937–1992), radio and TV journalist, was born in Niagara Falls, New York, and educated at the University of Toronto. She wrote for numerous magazines and performed on TV and radio, but was best known for hosting CBC Radio’s popular current affairs show As It Happens. From 1982 until her death she was a host of The Journal, CBC-TV’s nightly current-affairs program. Barbara Frum received the Order of Canada in 1979 and the National Press Club of Canada Award for Outstanding Contribution to Canadian Journalism in 1975. Following her death from leukemia in 1992, she was awarded an honorary degree from the University of Toronto and the Academy of Canadian Cinema and Television John Drainie Award for Distinguished Contributions to Broadcasting.

Her husband, MURRAY FRUM (1931– ), was a real estate developer and arts patron. He was born in Toronto, Ontario, and received his degree in dentistry from the University of Toronto in 1956. He began his career in property development soon after graduation and became chairman and CEO of the Frum Development Group. A long-time patron of the arts, Frum chaired the Ontario Arts Council Foundation and the Ontario Cultural Attractions Fund, and was a trustee of the Art Gallery of Ontario. The Frum Collection of Primitive Art and Sculpture has been exhibited at such prestigious institutions in Canada and the U.S. as the National Gallery in Ottawa, the Art Gallery of Ontario in Toronto, the Museum of Modern Art and the Guggenheim Museum in New York, the Smithsonian Institute and the National Gallery of Art in Washington, D.C., and the Baltimore Museum of Art. Frum was awarded the Order of Canada in 2001.

Barbara and Murray Frum’s daughter LINDA FRUM (1965– ), author and journalist, was also born in Toronto, Ontario. In 1984 she earned a B.A. in arts from McGill University. Her work appeared in many Canadian publications, particularly the National Post, and she published two books, including a memoir of her late mother, Barbara Frum: A Daughter’s Memoir (1996). She was appointed chair of UJA Federation’s Women’s Campaign & Advocacy and was a member of the board of directors of the Canada-Israel Committee.

[Andrea Knight (2nd ed.)]

FRUMKIN, ALEKSANDR NAUMOVICH (1895–1976), Russian physical chemist. He graduated from the University of Odessa in 1915, where he taught 1920–22. In 1928–29 he was a lecturer on colloid chemistry at the University of Wisconsin, and from 1930 professor of electrochemistry at the University of Moscow. Frumkin was director of the Institute of Physical Chemistry of the U.S.S.R. Academy of Sciences 1939–49, and from 1958 of the Academy’s Institute of Electrochemistry. He became an academician in 1932, and was awarded the Lenin Prize in 1931 and the Stalin Prize in 1941. He wrote on surface phenomena, the theory of electrochemical processes, the electric double layer, diffusion processes in solution under the influence of electric fields, and other topics. His work
was applied in the U.S.S.R. to the generation of electricity by chemical means, the wetting of metals by electrolytes, flotation, and heterogenous catalysis. He was the author of *Elektrokapil’arnye yavlennyia i elektrodnye potencialy* ("Electrocapillary Effects and Electro Potentials," 1919) and a coauthor of *Kinetika elektrodnykh protsessov* ("Kinetics of Electrode Processes," 1952).

[Samuel Aaron Miller]

**FRUMKIN, ARYEH LEIB** (1845–1916), rabbinical scholar and writer; pioneer of Jewish settlement in Erez Israel. Frumkin studied rabbinics in his native Kelme, Lithuania, and at the Slobodka Yeshivah. He visited Erez Israel in 1867, and after two years in Odessa, returned to Jerusalem in 1871. There he began research for a history of the rabbis and scholars of Jerusalem, *Toledot Hakhamei Yerushalayim* (Vilna, 1874; ed. by E. Rivlin, Jerusalem, 1928–30, repr. 1969, with biography and index). Frumkin’s account of his first visit to Jerusalem, *Massa Even Shemuel* (1871), gives important source material on conditions in Erez Israel at the time. Returning to Lithuania, Frumkin was ordained a rabbi and took a rabbinical post at Ilukste, Latvia. After the 1881 pogroms, Frumkin participated, representing Hovevei Zion, in the consultations held in Germany to consider the plight of Russian Jewry. There he advocated settlement in Erez Israel as a solution, opposing emigration to the United States. With the financial support of Emil Lachman, a wealthy Berlin Jew, he bought land in *Petaḥ Tikvah*, built the first house there, and began a heroic ten-year period as a farmer-scholar, braving malaria and other dangers, establishing a *talmud torah* and a small yeshivah, and persuading more settlers to move there from *Yehud*. Lachman eventually refused to continue endowing the enterprise and Frumkin was compelled to leave the settlement. In 1894 he went to London and was active in Jewish life in the East End. He established a wine business, using the income to return to Erez Israel in 1911, where he lived first in Jerusalem and then returned to Petaḥ Tikvah.

Apart from *Toledot Hakhamei Yerushalayim*, Frumkin’s main contribution to Jewish scholarship is his edition of *Seder Rav Amram* (of *Amram ben Sheshna*) which he published as a large *siddur* (from an Oxford Ms.), with a commentary and notes (Jerusalem, 1910–12). He also published a biographical sketch of his uncle, Elías b. Jacob, called *Toledot Eliyahu* (1900), a *Passover Haggadah* with *Gei Ḥizzayon* commentary, 1913), and an edition of the Book of Esther with two commentaries (1893).

**FRUMKIN, BORIS MARKOVICH** (1872–after 1939), pioneer of the *Bund* and among its most prominent publicists; first historian of the Jewish labor movement in Russia. He graduated from Geneva University. From the middle 1890s, Frumkin ranked among the leading ideologists of the Jewish Social Democrat circles in Minsk. He was the editor of the *Arbayer Bletel* of Minsk (1897), the first periodical published by the Jewish Social Democrats in Russia. He helped to organize the Bund in Lodz, where he was imprisoned in 1898 for revolutionary activity. In 1906 he left Russia and became a member of the "Committee Abroad" of the Bund and secretary of the Organization of Workers’ Societies and Relief Groups for the Bund Abroad. After his return to Russia, he was again active in Lodz and edited (1913–14) the principal legalized organ of the Bund in St. Petersburg, *Di Tsayt, Undzer Tsayt*. After the February 1917 Revolution, Frumkin wrote for the Bundist press. During the split in the Bund in 1920–21 he joined the Bund (the faction that later joined the Communist Party). He was seen in Moscow in the mid-1930s. Later, he disappeared from the literary and public scene. He appears to have been still alive on the eve of World War II, but there is no information available on his end.

[Moshe Mishkinsky]

**FRUMKIN, ISRAEL DOV** (1850–1914), pioneer journalist in Erez Israel. Frumkin was born in Dubrovno, Belorussia and was taken to Jerusalem when he was nine. In 1870 he started contributing to the weekly *Havazzelet* founded by his father-in-law, Israel "Bak. Frumkin soon became its publisher and editor, and turned it into a militant paper that attacked financial corruption in the Jerusalem community. His enemies caused the sporadic banning of his paper and even his imprisonment. In *Havazzelet* he advocated the consolidation of the separate communities in Jerusalem, higher standards in education, and the inclusion of secular studies and vocational training in the schools. His early support of agricultural settlement in Erez Israel turned to adamant opposition as its secular character became apparent. Frumkin was especially hostile to Ahad Ha-Am, the Hovevei Zion, and the Herzl brand of Zionism in Erez Israel. He also fiercely opposed missionary ac-
FRY, VARIAN

(1907–1967), U.S. journalist and Righteous Among the Nations. On hearing of the fall of France to the Germans, in June 1940, a group of intellectuals, headed by Frank Kingdon, met at the Commodore Hotel in New York and decided to create an Emergency Rescue Committee in order to spirit out of the country well-known artists and intellectuals as well as German and Austrian socialist leaders – mostly Jews – who because of their past activities and anti-Nazi stance stood in danger of being turned over to the Germans under clause 19 of the Franco-German armistice, which obliged France “to surrender on demand all persons under German jurisdiction named by the German government.” The committee chose Varian Fry, a Harvard graduate and editor of several liberal journals, as its emissary to Vichy France. He was given $3,000, and instructed to explore rescue possibilities for the individuals on his list. He was to leave on August 4, 1940, and return within a month, with a possible extension of two more months. Arriving in Marseilles, he began writing letters from his hotel room to all those on his 200-name list whose addresses were known. The resultant stampede of people to his hotel room led him to open an office called the Centre Américain de Secours. He discovered that some intellectuals were afraid to disclose their whereabouts or, as in the case of Walter “Benjamin, had preferred to end their life. As the job was beyond the capacity of one man, he assembled a staff of trustworthy people to help him in what would become a vast rescue operation, including Albert Hirschman, Mary Jane Gold, former French officer Daniel Bénédite, Miriam Davenport-Ebel, Willy Spira (a Viennese cartoonist who helped to falsify credentials), Marcel Verzeano, and Johannes (Hans) and Lisa Fittko. The aim now was to get as many people as possible out of the country, in whatever way possible. In Fry’s words, “I had come to think of illegal emigration as the normal, if not the only way to go.”

The escape routes included Route A: from Marseilles to Lisbon through Spain, via the French border town of Banyuls; B: to Spain over the Pyrenees; C: with authentic-looking forged papers, from Pau (France) to Saragossa (Spain); D: Cuban visas on questionable passports; E: from Marseilles by boat to Oran (Algeria); F: an alternate crossing into Spain; G: from Marseilles to the French colony of Martinique. By May 1941, the office had handled more than 15,000 requests, of which 1,800 fell within the scope of Fry’s direct work, representing some 4,000 people. Altogether 1,000 were sent out of the country, and support and allowances were distributed to 560 others. Many others were referred to separate welfare agencies. Persons helped to leave France included novelists Franz *Werfel and Lion *Feuchtwanger, painter Marc *Chagall, sculptor Jacques *Lipchitz, political scientist Hannah *Arendt, psychologist Otto *Meyerhof, and many others. The French lodged protests with the American consul in Marseilles over Fry’s illegal emigration methods, and the police several times raided Fry’s offices in search of incriminating documents. The French wanted him out of the country, as did U.S. diplomats in Vichy France (including the consul-general in Marseilles, Hugh S. Fullerton, and the U.S. ambassador, Admiral William Leahy), who felt that Fry’s methods were hurting the good relations existing then between the U.S. and Vichy France. In Washington D.C., the U.S. State Department complained that Fry’s “continued presence was an embarrassment to everybody.” Fry was continuously followed by French secret agents, “part of a campaign to frighten me into leaving France of my own free will.” In a June 1941 letter to his wife, Eileen, Fry wrote, “If I leave, I abandon those human beings, many of whom I have come to know and to like very much, and most of whom have come to depend on me.” Finally, in August 1941, Fry was arrested and given an hour to pack, driven to the Spanish border, and told that his expulsion had been ordered by the Ministry of the Interior, “with the approval of the American embassy.” Fry’s office continued to function, headed by his French aide Bénédite, until the office was closed by the authorities on June 2, 1942. After his forced return to the U.S., Fry criticized the State Department’s immigration policy. As a result, he was placed under FBI surveillance as a subversive agent on the orders of J. Edgar Hoover. In a piece called “The Massacre of the Jews,” published in The New Republic in December 1942, Fry called upon the Allied governments to immediately set up tribunals to begin to collect evidence on the Nazi massacres of Jews, while at the same time open their doors to any refugees fleeing the Holocaust, and for the Pope to threaten with excommunication all Catholics who in any way participated in these frightful crimes.

In 1967, a few months before his death, France, which had expelled him in 1941, conferred upon him the Chevalier de Légion honor. In a ceremony at Yad Vashem, on February 2, 1996, U.S. Secretary of State Warren Christopher apologized on behalf of the State Department for its earlier abusive treatment of Fry and underlined the pride of the U.S. that a man of such high moral caliber was now honored as a great humanitarian under the Yad Vashem-sponsored “Righteous Among the Nations” program. Fry is the only American ever to receive the Righteous Among the Nations Award.

sional career as a scriptwriter, as well as his personal life, was interrupted by the Nazi occupation of Czechoslovakia. He was sent to the Theresienstadt, Auschwitz, and Dachau concentration camps and was the only member of his family to survive. He recorded his experiences from the Holocaust in his novel *Krabice živých* (1956; “A Box of Living People”). The Protectorate’s atmosphere is depicted in the story *Kat nepočká* (1958; “The Hangman Will Not Wait”). After the war, Frýd entered the Czechoslovak Foreign Service and spent several years in Mexico. His stay there inspired him to write the journalistic pieces *Mexiko je v Americe* (1952; “Mexico Is in America”) and *Usměvavá Guatemala* (1955; “Smiling Guatemala”), the novels *Studna supá* (1953; “The Well of Vultures”), *Prales* (1965; “The Primeval Forest”), and *Císařovna* (1972; “The Empress”) and some other works of prose. Beginning in the late 1960s Frýd published a fictionalized trilogy chronicling the life of his family and its fate. The first volume, *Vzorek bez ceny a pan biskup* (1966; “Sample without Value and Mister Bishop”), and the second, *Hedvábné starosti* (1968; “Silken Worries”) deal with the time of his grandparents and parents, i.e., Bohemian Jewry in the second half of the 19th and the beginning of the 20th century; the third volume *Lahvová pošta* (1971; “The Bottle Post”), is a testimony of the 1930s in Prague and of Frýd’s stay at the Theresienstadt ghetto and other concentration camps.

[Milos Pojar (2nd ed.)]

**FRYMER-KENSKY, TIKVA,** scholar of biblical studies. She received her bachelor’s degree from City College of New York in 1965 and her doctorate from Yale University in 1977. She was a visiting associate professor at the University of Michigan and the Jewish Theological Seminary before becoming the director of biblical studies at Reconstructionist Rabbinical College in 1988. In 1995 she joined the faculty of the University of Chicago Divinity School as professor of Hebrew Bible and the history of Judaism.

Frymer-Kensky’s areas of specialization include, in addition to Bible studies, Assyriology and Sumerology, Jewish studies, and women and religion. Her 1992 work, *In the Wake of the Goddesses: Women, Culture, and the Biblical Transformation of Pagan Myth,* attracted widespread attention and critical acclaim. The work traces the shift in the Middle East from polytheism, which included the worship of goddesses, to monotheism; it examines changes in the role of women and questions whether religious experience would be different for women were the deity defined as female.

*Motherprayer: The Pregnant Woman’s Spiritual Companion* (1995) is a collection of biblical interpretations, prayers, ancient Sumerian incantations, and meditations that draw from more recent Jewish and Christian tradition. Intended as a spiritual guide for mothers-to-be, the work follows the stages of pregnancy through birth. Though rooted in Frymer-Kensky’s scholarly research, it found a wide audience outside academia.

Frymer-Kensky received the Koret Jewish Book Award in 2002 and a National Jewish Book Award in 2003 for *Reading the Women of the Bible* (2002). Noting that a text from a patriarchal society would not be expected to contain so many stories about women, she examines four female groups: victors, victims, virgins, and “voice.” She suggests that the stories of women as both victors and victims originate during an absence of central power, coming before the rise of the Israelite monarchy and after its fall, and she relates the understanding of these stories to an Israeli conception of their subjugation by other groups.

Frymer-Kensky was editor, with David Novak, Peter Ochs, David Fox Sandmel, and Michael A. Signer, of *Christianity in Jewish Terms* (2000). This collection of essays examines aspects of Christianity that renounce antisemitism and that view Judaism as a spiritual path compatible with that of Christianity. She also served as editor, with Victor H. Matthews and Bernard M. Levinson, of *Gender and Law in the Hebrew Bible and the Ancient Near East* (1998). Her later work involves a commentary on Ruth and further investigation of biblical theology. She is a fellow of the American Academy for Jewish Research.

[Dorothy Bauhoff (2nd ed.)]

**FUBINI, GUIDO** (1879–1943). Italian mathematician. Fubini was professor of mathematics at Catania in 1901, at Genoa in 1906, and at Turin from 1908 until the Fascist anti-Jewish laws resulted in his dismissal in 1938. He immigrated the following year to the United States and worked successively at the Institute of Advanced Studies, Princeton, and New York University. Fubini, who was a member of the Accademia Nazionale dei Lincei, made important contributions to projective differential geometry, theory of Lie groups and analysis. His collected works in three volumes entitled *Opere Scelte* (1957–62) were published in Rome. The first book of this edition contains a record of his publications together with a bibliographical introduction.

[Barry Spain]

**FUBINI, MARIO** (1900–1977), Italian literary historian and critic. Born in Turin, Fubini belonged to the group that gathered around the young liberal intellectual Piero Gobetti (killed by the Fascists in 1926). Fubini was first a schoolteacher and later a professor of Italian literature at the universities of Palermo (1937–39), from which he was removed owing to the antisemitic laws promulgated by the Fascist regime, Trieste (1945–49), Milan (1949–67), and Pisa at the prestigious Scuola normale superiore (1967–77). He took an early interest in French literature, publishing two monographs, *Alfred de Vigny* (1922) and *Jean Racine e la critica delle sue tragedie* (1925), but subsequently concentrated on Italian literature,
particularly that of the Renaissance and Romantic periods. He wrote a number of studies of fundamental importance including *Ugo Foscolo* (1928); *Studi sulla critica letteraria del Settecento* (1934); *Vittorio Alfieri: il pensiero – la tragedia* (1937, 1960); *Dal Muratori al Baretti* (1946); *Foscolo Minore* (1949); *Ritratto dell’Alfieri e altri studi alfieriani* (1951, 1963); *Romanticismo italiano* (1953); and *La cultura illuministica in Italia* (1957). Stressing the indissolubility of the connection between culture and literature, Fubini formulated various modifications of Croce's aesthetics, to which he basically adhered. The results of Fubini's research on linguistic problems are contained in *Stile e umanità di Giambattista Vico* (1946), *Studi sulla letteratura del Rinascimento* (1947), and *Metrica e poesia* (1962). An authority on Dante, Fubini also published a collection of essays, *Il peccato di Ulisse e altri studi danteschi* (1966). He was editor of the *Giornale Storico della Letteratura Italiana*, and he promoted and directed the publication of several classical Italian texts, to which he appended important introductions and notes.

---

**FUCHS, ABRAHAM MOSHE** (Fuks; 1890–1974), Yiddish short story writer and journalist. Born in Ozerna, East Galicia (now Ukraine), Fuchs lived in Lemberg (Lvov), where he formed part of the literary group “Yung-Galitsye” before immigrating to New York in 1912. During World War 1 he lived in Vienna as a journalist. In 1938 he fled from the Nazis and went to London. In 1950 he settled in Israel. Fuchs began to publish short stories in 1911 and served as correspondent of the New York *Forverts* (1921–45). His books are *Eynzame Di Yarmolikhen* ("Loners," 1912), *Oyfn Berl* ("On the Hill," 1924), *Unter der Brik* ("Under the Bridge," 1924), *Di Nakhht un der Tog* ("Night and Day," 1961), and *Dertseylungen* ("Tales," 1976). Fuchs' protagonists are poor Galician Jewish villagers, whose natural surroundings he describes. His later tales are set in Israel. Some of his works have been translated into Hebrew, Polish, German, and English.

---

**FUCHS, ALFRED** (1892–1941), Czech journalist, publicist, translator and author. Born in Prague, Fuchs was a Zionist in his youth, but later he became an assimilationist and edited publications of the organized assimilationist movement of Czech Jews (see *Čechův Židů, Svaž*). One of his first works was *O židovské otázce* ("On the Jewish Question," 1919). Above all he translated Heine's works. Ultimately he was baptized and became one of the leading Catholic publicists in Czechoslovakia. He learned Hebrew in order to read kabbalistic literature (together with his friend, the Hasidic poet Jifi Mordechai *Langer*), but found greater affinity in the Catholic mystic philosophers. After a career with the Catholic press, he became chief of the press department of the prime minister’s office. He was a leading expert on canon law and published a number of penetrating studies on Vatican policy. Fuchs described his road to Catholicism in an autobiographical novel *Oltár a rotačka* ("Altar and Printing Press," 1930). He never concealed his Jewish origin, and at the peak of the antisemitic wave under Hitler, he wrote that if he were forced to wear the yellow star of David, he would wear that and his Vatican decorations with equal pride. In 1941 he was taken by the Gestapo from a monastery where he had found refuge and was tortured to death in the Dachau concentration camp.

[Avigdor Dagan / Milos Pojar (2nd ed.)]

**FUCHS, DANIEL** (1909–1993), U.S. novelist and screenwriter. Raised in the Williamsburg section of Brooklyn, Fuchs wrote three naturalistic novels based upon his experiences there: *Summer in Williamsburg* (1934), *Homage to Blenholt* (1936), and *Low Company* (1937). These were later published as one volume in 1961. The stories he wrote for the *Saturday Evening Post* led him to Hollywood, where he wrote a number of successful scripts for motion pictures. *West of the Rockies* was published in 1971. *The Apathetic Bookie Joint* appeared in 1979; *The Golden West: Hollywood Stories* was published in 2005.

**FUCHS, LILLIAN** (1901–1995), U.S. violinist and one of the first women to perform as a permanent member of a string quartet in America. Her musical family included her father, Philip, an amateur violinist; and brothers JOSPEH (1899–1997), a well-known violinist, and HARRY (1908–1986), a cellist. After early study of the piano, Lillian switched to the violin, studying with Louis Svecenski (1862–1928). She enrolled in the Institute of Musical Art (now Juilliard) and studied violin with Franz Kneisel (1865–1926) and composition with Percy Grainger (1873–1943). In 1924, she earned the silver medal for highest honors, the Morris Loeb Prize, and the Seligman Prize in composition. Fuchs married Ludwig Stein, a business man and amateur musician in 1930. They had twin daughters, Carol Stein (Amado), a violinist, and Barbara Stein (Mallow), a cellist, born in 1935.

Fuchs's debut concert as a violinist took place in 1926. That same year, invited by Marianne Kneisel to join an all-female string quartet, she switched to viola. In 1927, Lillian
joined the Perolé String Quartet as violist. In addition to live concerts, the Perolé Quartet was featured on regular Sunday radio broadcasts over WOR in New York City. Fuchs performed with them for 15 years and went on to play with the Budapest String Quartet as a second violist, which gave her acceptance in the highest ranks of chamber music.

In 1940 she began to concertize with her brother Joseph Fuchs. Their highly acclaimed performances of the Mozart Sinfonia Concertante, helped bring this and other classic duos to new life. Fuchs also enjoyed a career as a soloist with major symphony orchestras. Fuchs championed contemporary music and several composers created works written especially for her, including Bohuslav Martinu, Three Madrigals (Madrigaly, 1947) and Sonata for Viola and Piano (1955); Quincy Porter, Duo for Viola and Harp (1957); and Jacques de Menasce, Sonata for Viola and Piano (1955). Fuchs adapted many works for viola, such as Bach's Six Suites for Unaccompanied Cello; she was the first violist to record all six Bach suites, which she did on Decca records. She composed some of her own music, including Jota, for violin and piano, and wrote a number of works devoted to the development of viola technique.

In her long career, Fuchs taught and coached other chamber music performers, including Isaac *Stern and Pinchas *Zukerman. In 1962, the Manhattan School of Music engaged her to coach chamber music. She accepted a post at Juilliard in 1971 and in 1989, she joined the faculty at Mannes College of Music, teaching at both institutions until 1993.

**FUENN, MOSES ZEVI** (1843–1911), Hungarian rabbi. He was born in Lovasbereny, where his father, Benjamin Ze’ev Wolf, was rabbi, and Moses succeeded him in 1873. In 1882 he moved to Grosswardein (now Oradea), Romania, where he served until his death. His Yad Ramah (1940) includes important halakhic responsa, many of which reflect the problems facing European Jewry in his time.

Fuchs saw in Hasidism an antidote to Haskalah and assimilation, stating in one of his responsa: “The love of God and His Torah is the essence and source of Hasidism. When economic circumstances permit, one should occupy oneself in the study of Torah with deep deliberation and spiritual joy. It is also important to visit the **zaddik** from time to time, in order to learn from his ways. The wise man should learn from the **zaddikim** and their true disciples but pay no attention to the masses who go running after them.”

**BIBLIOGRAPHY:** S.N. Gottlieb, Oholei Shem (1912), 226; Z. Schwartz, Shem ha-Gedolim me-Emeg Hagar, 2 (1914), 14b–15a; E. Goldmann, Shalhevet Zarah (1942), 9–46.

[Naphtali Ben-Menahem]

**FUENN, JACOB D.** (1913–1995), U.S. jurist. For many years, Fuchsberg was a leading trial lawyer. He argued many cases before the U.S. Supreme Court, hundreds of cases before the New York State Court of Appeals and other appellate courts, and thousands of trials covering almost every facet of litigation. Some of the precedent-setting or socially significant cases he participated in as trial and appellate counsel were Oliver v. Postel, keeping the courts open to the press and public under the Sixth Amendment to the U.S. Constitution; the Knights of Pythias case, attacking color discrimination in fraternal organizations; the De Martino “Baby Lenore” case, which led to reform of New York adoption statutes and raised important questions of full faith and credit under the U.S. Constitution and a number of tort cases setting precedents in the award of adequate damages.

Fuchsberg served as president of the Association of Trial Lawyers of America (1963–64). In 1974 he was elected judge in the highest appellate court of the State of New York – the New York State Court of Appeal. He retired from the Court of Appeals in 1983 and founded the Jacob D. Fuchsberg law firm.

Fuchsberg wrote Examination of Witnesses (with L. Harolds and J. Kelner, 1965) and compiled Class Actions Primer (1973). He edited and authored a number of books on the law of damages and trial advocacy and wrote many articles on a variety of legal subjects for professional periodicals. He founded and edited Trial Magazine.

Fuchsberg was active in many Jewish causes and served as vice president of the Zionist Organization of America. He represented the New York Conference on Soviet Jewry.

[Julius J. Marchke]

**FUENN, SAMUEL JOSEPH** (1818–1890), Hebrew writer of the more traditional wing of the Russian Haskalah and an early member of Hovevei Zion. Fuenn, who was born in Vilna, received a traditional Jewish education, and afterward joined the circle of Haskalah supporters there. He was a founder of the first Jewish school in the city (1841) where he taught Bible and Hebrew. Together with L. Hurwitz he published the literary magazine Pirkei Zafon (1841–44), the first such Hebrew work to appear in Russia. When the government rabbinical school opened in Vilna in 1847 he joined it as a teacher of Bible and Hebrew language. In 1856 he was appointed inspector of the government Jewish schools in the Vilna District. In 1863 he opened a Hebrew printing press in Vilna. He edited and published Ha-Karmel (1860–88) which appeared first as a weekly and then as a monthly. Fuenn wrote extensively in Hebrew and Russian for this periodical, and his articles included studies of the history of Russian Jewry and literary criticism, as well as the first chapters of his autobiography, Dor ve-Doreshav. Because of his moderate views on the Haskalah, his traditional way of life, and his financial independence, Fuenn achieved a prominent role in the leadership of the Vilna Jewish community. He was also highly respected by the civilian authorities and was the recipient of government medals. When the Hibbat Zion movement began, he helped establish a society in Vilna and headed it, together with L. Levanda. He was later elected to the central committee in Russia. In his later years Fuenn
devoted himself to two important works. The first was a biographical lexicon of notable Jews, *Keneset Yisrael* (1886–90). The second was an extensive Hebrew dictionary, *Ha-Ozar*, which was the first in the history of Hebrew lexicography to cover the Bible, Mishnah, Talmud, the Hebrew poets, and medieval philosophers; the dictionary also included a translation of terms into Russian and German. Only the first volume, comprising the first seven letters *alef* to *zayin*, appeared in the author’s lifetime; the remaining three volumes were completed from Fuenn’s notes by S.P. *Rabinowitz (1900–03). For the meaning of Hebrew words Fuenn relies upon the works of the medieval grammarians, especially Ibn Janah and David Kimhi, as well as modern lexicographers. His Hebrew dictionary is a summary of the knowledge available in his generation, which still lacks systematic etymological insight. Its strong point is the collection of references to the sources, the Mishnah, the Jerusalem Talmud, and liturgical and Aramaic texts. He died in Vilna. Fuenn’s other works include a history of the Second Temple, *Divrei ha-Yamim li-Venei Yisrael* (Vilna, 1871–77), *Kiryah Nêcmanah* (Vilna, 1860), a monograph on the Vilna community, and a number of textbooks and translations of juvenile historical novels and short stories.

[Yehuda Slutsky]

**Fuerst, Julius** (pseudonym Alsari, 1805–1873), Polish Hebraist, bibliographer, and historian. Fuerst was born in Zerkow, Poland, the son of a *darshan* (*exponent* of the Bible). He studied at the University of Berlin, where Hegel was one of his teachers, and at the universities of Breslau and Halle, where he was the pupil of *Gesenius. He settled in Leipzig and taught Hebrew, Syriac, Aramaic grammar and literature, Bible exegesis, and other subjects at the university there (professor, 1864).

Fuerst owes his reputation to his monumental bibliographical work *Bibliotheca Judaica* (2 vols., 1849–51, 2 vols. in 3, 18632, reprinted 1960). The work is based solely on his findings without taking into account the important research done in the field by his contemporary M. *Steinschneider. His history of the Karaites, *Geschichte des Karaerthurms* (3 vols., 1862–69), was superseded by later works, even by the time of its publication. Fuerst also wrote *Lehrgedaebe der aramaischen Idiome* (1835), *Haruzei Peninim* (1836), *Ozar Leshon ha-Kodesh* (1837–40), a revision of *Buxtorf’s Bible concordance in collaboration with Franz *Delitzsch, and Hebreeisches und Chaldaisches Handwoerterbuch ueber das Alte Testament* (2 vols., 1851–61), with the supplement *Zur Geschichte der Hebreeischen Lexicographie* (1867); translated into English by S. Davidson, *A Hebrew and Chaldee Lexicon to the Old Testament*. He translated Saadia Gaon’s *Emunot ve-Deot* into German (1845), and wrote a comprehensive history of Hebrew literature, *Geschichte der juedischen Literatur und des juedisch-hellenistischen Schrifttums* (2 vols., 1867–70; Der Kanon des Alten Testaments nach den Ueberlieferungen in Talmud und Midrasch* (1868); and several Hebrew–Aramaic dictionaries and grammars. He collaborated with L. *Zunz and also worked on the publication of an edition of the Bible, *Illustrierte Prachtbibel* (1874), comprising 24 books with German translation and explanatory notes. He was a close friend of Franz Delitzsch, whom he assisted in writing his work on the history of Jewish poetry.

Fuerst founded and edited the weekly magazine *Orient* (1840–52), in whose scientific supplement *Literaturblatt des Orients* many of his scientific articles were published. Although most of Fuerst’s works are by now obsolete, he is thought to be one of the forerunners of scientific research in all branches of Judaic studies. His library was bequeathed to the *Hochschule fuer die Wissenschaft des Judentums* in Berlin.

**Fuerstenberg, Carl** (1850–1933), German banker. Born in Danzig. Fuerstenberg worked for the Berlin banking house of 5. *Bleichroeder from 1871 to 1883, when he left to join the Berliner Handels-Gesellschaft, another prominent issuing and investment bank. Under Fuerstenberg’s guidance the Berliner Handels-Gesellschaft became one of the leading financial institutions of late Imperial Germany operating in global business. It developed especially close connections with German heavy and electrical industries, and introduced Russian and United States securities to the Berlin Stock Exchange. Fuerstenberg also established firm relations with the New York firm of *Hallgarten and Company which were useful after World War I, when Germany needed foreign credit. Fuerstenberg married a Jewish woman whose family came from Poland. His attitude towards his Jewishness was strongly influenced by the idea of acculturation. His son Hans was educated as a Protestant. Fuerstenberg was known for his caustic wit. He refused all offers of titles and decorations. His memoirs were published by his son Hans.

[Joachim O. Ronall / Christian Schoelzel (2nd ed.)]

**Fuerth** (Heb. פּוּרְתָּ, פּוּרְתָּא), city in Bavaria, Germany. Jewish moneylenders are mentioned there in 1440. They were later expelled, but in 1528 Jews were allowed to resettle in the town. There were 200 Jewish residents in 1582. A rabbi is mentioned in 1607. The Jews were represented on the municipal council by two of their *parnasim*. The community dispersed during the Thirty Years’ War (1618–48). In 1670 refugees from Vienna augmented the Jewish community, which was concentrated around the Geleitsgasse. The “old synagogue” (near Koenig-
strasse) was built in 1617, a new one in 1697, and that of the *Fraenkel family in 1707. The first cemetery dates from 1607 and the hospital (hekadek) from 1653.

In 1719 the status of the community (consisting of 400 households) was regulated by the bishop. In return for annual payments, the Jews were promised protection for their lives and property; they were allowed to build synagogues and to employ a cantor, beadle (Schulklopper), and gravedigger; cases between Jews were to be tried by a Jewish court, while litigation between Jews and gentiles came under the jurisdiction of the cathedral court. The Fuerth community regulated its internal affairs by a series of takkanot in 1728. The first Jewish orphanage in Germany was established in Fuerth in 1763 and from the 17th century until 1824 there was an important yeshivah in the town. An Orthodox elementary school was established in 1862 and officially recognized as a secondary school in 1899. In 1811 Elkan *Henle of Fuerth published a pamphlet calling for emancipation of the Jews in Bavaria; Gruensfeld of Fuerth became the first Jewish lawyer in Bavaria (1843), David Morgenstern, the first Jewish deputy to the Landtag (1849), and Solomon Berolzheimer, the first Jewish judge (1863). Fuerth Jews contributed much to the economic, cultural, and political development of the city.

Hebrew printing was begun in Fuerth in 1691 by S.S. Schneur and his sons Joseph and Abraham and son-in-law Isaac Bing. From 1691 to 1698 they issued 35 works, including *Sifra with commentaries. Hirsch Frankfurter opened a press which issued nine books, between 1691 and 1701. Confiscations of Hebrew books from 1702 onward account for a notable part of the output. The community's directory in 1720–1730 lists 360 inhabitants; in 1737 and 1774, Hayyim b. Hirsch of Wilhermsdorf published 80 works and his press continued in the family until 1868; their non-Jewish successor issued a Pentateuch with haftarot as late as 1876. Between 1760 and 1792 Isaac b. Loeb Buchbinder (not Bamberg) printed 73 Hebrew books. Joseph Petschau and his son Mendel Beer printed 17 books between 1762 and 1769. S.B. Gusdorfer was active as a printer from 1852 to 1867.

The Jewish population numbered 1,500 in 1720; 2,434 in 1816 (19% of the total); 3,336 in 1880; and 2,000 (2.6% of the total) in 1933. In 1933–1941 1,400 Jews managed to leave Fuerth, mainly to the United States and Shanghai. Among those leaving was Henry Kissenger, the first Jewish secretary of state in the United States, who came to New York together with his brother and parents. Kissenger said: "By the time we left Germany it took no foresight, merely opportunity." On Nov. 10, 1938, the main synagogue was burned down; the other six synagogues and innumerable Jewish shops and homes were demolished. One hundred and fifty men were sent to Dachau. By May 17, 1939, only 785 Jews remained; the community was destroyed in three stages. On November 28, 1941, 83 Jews were deported to Riga. On March 24, 1942, 224 Jews, almost all Jews under the age of 65 were deported to Izibca, a way station to Belzec and on September 10, 1942, 153 Jews, mainly the elderly and children in an orphanage were deported to Theresienstadt. After the war some 40 Jews returned. The synagogue was restored and consecrated. There were 200 Jews living in Fuerth in 1970. In 1989 the community numbered 179. The membership increased to 587 in 2003. About 98% of them were immigrants from the former Soviet Union. Fuerth (together with Schnaittach) is one of the sites of the Jewish Museum of Franconia. The museum in Fuerth – which was founded in 1997 – is dedicated to the history and culture of the Jews in Fuerth and Franconia and to the present and future life of the Jewish community.

FUERTH, HENRIETTE (1861–1938), German social worker. Fuerth was born in Katzenstein, Germany. Herself the mother of 11 children, she was one of the founders of the Mother's Welfare Movement, an organization which concerned itself with family and health problems affecting mothers and their families. She established and directed the Organization for the Prevention of Venereal Diseases. Interested in politics as a means of achieving her welfare goals, she served for nine years as a socialist member of the Frankfurt City Council.

She wrote a great number of books and articles on social welfare, especially in relation to working women, sexual problems in society, and population policy. Among her works are Staat und Sittlichkeit (1912), Die soziale Bedeutung der Kaeufersitten (1917), Kulturideale und Frauenentum (1906).

FUKS, ALEXANDER (1917–1978), Israeli historian. Fuku was born in Wloclawek, Poland, and joined the history faculty of the Hebrew University in 1949, being appointed professor of ancient history and classics in 1957. Fuku was the author of

[Irwin L. Merker]

**FUKS, LAJB** (1908–1990), librarian and Yiddish scholar. Born in Poland, Fuks immigrated to Holland in 1934. In 1946 he became assistant librarian of the Bibliotheca Rosenthaliana, the Hebraica and Judaica Department of the Amsterdam University Library (see Jewish Libraries), and was its librarian from 1949 until his retirement in 1973. He lectured in Modern Hebrew and Yiddish at the University of Amsterdam from 1964. His main scholarly interest was the history of Old Yiddish language and literature. He edited The Oldest Known Literary Document of Yiddish Literature (c. 1882), 2 vols. (1957); and wrote Die hebräischen und aramäischen Quellen des altjiddischen Epos Melokin-Bak (1964). His other works deal with the history of Dutch Jewry, especially the history of Hebrew printing and bibliography in Holland. Together with R.G. Fuks-Mansfeld he edited Hebrew and Judaic Manuscripts in Amsterdam Public Collections, 2 vols. (1973–75), and Hebrew Typography in the Northern Netherlands 1585–1815, 2 vols. (1984–87). He was the editor of and frequent contributor to the Studia Rosenthaliana from its founding in 1967.

[Henriette Boas / Shlomo Z. Berger (2nd ed.)]

"FULBERT OF CHARTRES" (d. 1028 or 1030), bishop of Chartres (France). In 1009, Fulbert delivered a series of three sermons based on Genesis 49:10: "The scepter shall not depart from Judah." They dealt with Jewish objections to the Christian argument that since royalty no longer existed among the Jews, the Messiah had already come and that he was Jesus. The Jews claimed that their present distress was only temporary, as had been their captivity in Babylon; moreover, there might be Jewish kings in other parts of the world and there were still wise and powerful Jews who enjoyed an almost royal power.

**BIBLIOGRAPHY:** J.-P. Migne (ed.), Patrologia Latina, 141 (1880), 305–18; B. Blumenkranz, Juifs et Chrétiens... (1960), index; idem, Les auteurs chrétiens latins... (1963), 237–43.

[Bernhard Blumenkranz]

**FULD, AARON BEN MOSES** (1790–1847), defender of Orthodoxy and communal worker in his native Frankfurt. Fuld in his early youth met R. Phinehas ha-Levy Horowitz, author of the Hafizalah, and was close to the circle of his son, Zevi Hirsch Horowitz. He was also a pupil of Solomon Zalman Trier who headed the Frankfurter bet din, and to whom he used to refer as: "my esteemed teacher, the high priest." Fuld engaged in business and never held any rabbinical post. Although opposed to the Reform movement, he strove for the inclusion of secular subjects in the curriculum of Jewish schools. In a letter to Akiva Eger, Fuld asked for the approval of a curriculum in which secular subjects were included, stressing that the rabbis of "every city and province should strive with all their might that there be no slackening of the study of these subjects, essential nowadays so as not to provide an opening for the criticism of those who have risen against us" (Beit Aharon, introd., v–v1). In another letter, of 1843, written on behalf of the Frankfurter rabbinate, he protested strongly against the desecration of the Sabbath and the abolition of circumcision, attendant upon the strengthening of the Reform movement. On one occasion, when Fuld was rebuked by Moses Sofer (Schreiber) for having, according to his informant Akiva b. Abraham Moses Lehn, permitted shaving during the intermedial days of a festival, he wrote a letter of vindication, stating, "Those who said I permitted shaving during the intermedial days have spoken falsely about me, for such a thing never entered my mind" (Beit Aharon, introd., 11). At the same time, Sofer mentions Fuld with respect in his responsa as "the sharp-witted, learned rabbi" (responsa Hatam Sofer, YD (1841), nos. 88, 224, 319, 323).

Fuld’s work, Beit Aharon, comprises five sections: (1) Mesehiwe Milhamah Sha’rah, 17 responsa written between 1823 and 1830; (2) glosses to the Talmud; (3) glosses to the Arukh (also published as an appendix to the 1859 edition of Arukh); (4) Haggahot ha-Tishbi to the Sefer ha-Tishbi (Isry, 1541) of Elijah b. Asher ha-Levi Bah; (5) Haggahot ha-Meturgeman to the Sefer ha-Meturgeman (ibid., 1541) of Elijah b. Asher ha-Levi Bahur. Fuld’s notes to the Shem ha-Gedolim of H. J.D. Azulai were published at the end of volume two of the Frankfurt edition (1847).

[Yehoshua Horowitz]

**FULD, STANLEY HOWELLS** (1903–2003), U.S. attorney. Born in New York, Fuld received his LL.B. from Columbia University in 1926. After occupying a number of state legal offices in New York, Fuld was appointed to the New York Court of Appeals in 1946. In 1966 he was elected chief judge of the Court of Appeals in the State of New York, serving until 1973. Fuld defended personal rights against what he believed was infringement by the state, often dissenting in cases such as eavesdropping, public school prayers, and the Fifth Amendment. He was a member of the New York County Republican Committee and was active in communal and Jewish affairs. He was chairman of the law division of the Joint Defense Appeal (1945–46), the National Hillel Commission (1947–56), and the board of the Jewish Theological Seminary from 1966. He was a member of the American Bar Association, B’nai B’rith,
FULDA, city in Hesse, Germany. Jews are first mentioned there in 1235, when 34 martyrs were burned to death following a blood libel. Emperor Frederick I, after inquiries, refuted the charge in his judgment of the case. The martyrs were commemorated by Pesah ha-Kohen, a relative and friend of some of the victims, in three selihot. In 1301 King Albert I pledged the taxes of the Jews of the diocese to the abbey of Fulda. In 1310 Henry VII transferred full authority over them to the abbey. In the 1340s they fell victim to the Black Death perpetuations. Jews had been readmitted to Fulda by 1399. By the 16th century Fulda became the seat of a rabbinate which extended its jurisdiction over the entire region, for some time as far as Kassel. At the Frankfurt synod of 1603 Fulda was made one of the five Jewish district courts in Germany. Aaron Samuel b. Moses Shalom of Kremenets taught at the yeshiva from 1615 to 1620, and Meir b. Jacob ha-Kohen Schif (Maharam Schiff) from 1622 to 1640. Judah b. Samuel Meehler, who studied in Fulda and left the city in 1629 at the age of 20, wrote an informative autobiography. Jews of Fulda dealt in wine-retailing but were opposed by the burghers. Regulations restricting Jewish trade were issued in 1699, 1739, 1788, and 1792. There were 75 Jewish families living in Fulda in 1633 (compared with 292 Christian households). The whole community, apart from five families, was expelled in 1677. By 1708 their number had increased to 19 taxpayers. The community had a well, and owned houses, homesteads, and stables in the Jews’ street (first mentioned in 1667); by 1740 some lived outside this area. The synagogue and bathhouse were located on the “Jews’ Hill” near the community’s hospital, and the cemetery in a suburb. A Jewish school was established in 1815, and reducing the synagogue to rubble. In 1940 the November 1938, destroying its Memorbuch, which dated back to 1550, and in 1939. The synagogue was set on fire in 1939. The synagogue remained open until 1939. The synagogue was set on fire in November 1938, destroying its Memorbuch, which dated back to 1550, and reducing the synagogue to rubble. In 1940 the cemetery was destroyed. Four hundred and fifteen Jews remained in Fulda on May 17, 1939; 131 of those unable to leave were deported to Riga on December 12, 1941. 36 were sent to the Lublin district, and an additional 76 in September 1942. Theresienstadt and unknown destinations in the East. The few Jews who survived the Holocaust and returned to Fulda after the war turned their cemetery into a paved courtyard to protest against the frequent desecrations there. There were 17 Jews living in Fulda in 1967. The new Jewish community center and synagogue was inaugurated in 1968. As a result of the immigration of Jews from the former Soviet Union the number of Jews increased to 500 in 2005. Almost all activities of the community were focused on the new immigrants. There are commemorative plaques at the former and new Jewish cemetery and near the site of the destroyed synagogue.

FULLER, SAMUEL MICHAEL (1912–1997), U.S. film writer-director. Born in Worcester, Mass., to a Polish Jewish mother and Russian Jewish father, Fuller said that his father dropped the Rabinovitch family name and took Fuller from the Mayflower passenger registry. Samuel Fuller started out as a journalist, beginning his career at the age of 12 as a copyboy at the New York Evening Journal; by 17, he was the newspaper's crime reporter. He would go on to write for the New York Evening Graphic and the San Diego Sun, among other newspapers. From 1942 to 1945 he served in the U.S. Army's First Infantry Division in Europe and North Africa, earning the Silver Star and Bronze Star. Fuller toiled in Hollywood for 11 years before he directed his first film, the western I Shot Jesse James (1949). He drew upon his war experiences for the insightful films The Steel Helmet (1951) and Fixed Bayonets (1951), both of which were set in and released during the Korean War. He next wrote and directed Park Row (1952) and co-wrote Scandal Sheet (1952), based on his acclaimed 1944 novel The Dark Page. His 1963 film Shock Corridor features a journalist seeking a Pulitzer for solving a murder in an insane asylum. He followed this with the crime drama The Naked Kiss (1964). In the late 1970s, with financing from Lorimar Productions and United Artists, Fuller was able to direct the film he had wanted to make about his own experiences in World War II, The Big Red One (1980), which was partially shot in Israel. The film fell flat at the box office, and Fuller went to Europe to find backing for projects in the 1980s and 1990s.

[Fred Weintraub (2nd ed.)]

FULVIA (1st century C.E.), Roman proselyte. A lady of high rank, she was attracted to Judaism and entered the Jewish faith. She was then persuaded by a certain Jew, who had come from Ereẓ Israel, to send presents of purple and gold to the Temple in Jerusalem. The gifts, deposited with this Jew and his three confederates, were never delivered. Fulvia urged her husband to report the matter to Emperor Tiberius. The latter thereupon expelled all the Jews from Rome (19 C.E.). Four thousand young Jews were drafted into military service and sent to fight the brigands in the island of Sardinia. The expulsion is mentioned by the Roman historians, Suetonius, Tacitus, and Dio Cassius, all of whom connect the incident in some manner with proselytism.

[Isaiah Gafni]

FULVES, town in Navarre, northern Spain. A charter granted to Funes and the neighboring town of Viguera at the beginning of the 12th century also regulated relations between Jews and Christians, including the mode of establishing evidence in litigation. Ordeal by battle between Jews and Christians was prohibited and a high blood price was fixed for the murder of a Jew. Jewish landowners were required to pay tithes to the church. In 1171 King Sancho VI extended the same privileges to the Jews of Funes as those he had granted to the Jews of “Tudela in 1170, based on the fuero (“municipal charter”) of Nájera. The Jews were freed from other dues in return for undertaking maintenance of the citadel of Funes, and they were not to be held responsible for the death of a Christian killed by them during an attack on the citadel, where they were living. In 1328, following the death of Carlos IV, the Jews of Funes were attacked. Many Jews were killed. The Jewish community had its own executive official, the bedinus. Much may be learned of life in the community in the 14th century from the list of fines imposed on members who had transgressed the law. Little of importance is known of the Jews in Funes from the 14th century onward.

FUNK, CASIMIR (1884–1967), U.S. biochemist, originator of the word "vitamin." He was born in Warsaw and obtained his doctorate at the University of Berne in 1904. In 1910 he went to the Lister Institute in London where he studied beriberi, a deficiency disease in rice eaters. He found a substance in rice shavings (and also in yeast and milk) which prevented the disease, and called it "vitamine." This was vitamin B, later known to be a complex of several vitamins. He worked as head of the department of chemistry at the Cancer Hospital Research Institute until he went to America in 1915. With the support of the Rockefeller Foundation, he went back to Warsaw as head of biochemistry at the School of Hygiene (1923–27). During 1928–29 he operated his own Casa Biochimica at Rueil-Malmaison, France, also serving as consultant from 1936 to the U.S. Vitamin Corporation. During World War II he returned to America, and from 1948 was president of the Funk Foundation for Medical Research. Funk contributed numerous papers to scientific periodicals on various matters of synthetic organic chemistry and on other biochemical topics such as internal secretions, diabetes, and cancer. He wrote the book Die Vitamine (1914; The Vitamins, 1922). Funk's hypotheses on the importance of vitamins A, B5, C, and D to normal growth and development stimulated other investigators in the field of nutrition and laid the foundation for rational child nutrition and modern dietetics in general.

[Samuel Aaron Miller]

FUNK, SOLOMON (1867–1928), rabbi and scholar. Funk was born in Hungary and served as rabbi at Sarajevo, Bosnia, Boskovic, Czechoslovakia, and in Vienna. Among his published works are Die haggadischen Elemente in den Homelien des persischen Weisen Aphraates (1891); Die Juden in Babyloni-
nien 200–500 (2 vols., 1902–08); Grundprinzip des biblischen Strafrechts… (1904), a comparative discussion of the Bible and the Hammurapi Code; Entstehung des Talmuds (1919); and Talmudproben (1921). The last two small but well-presented volumes, which appeared as volumes 479 and 583 in the popular Gosechen series, did much to convey a balanced view of the world of the Talmud to non-Jewish readers. Other publications of Funk were Die Hygiene des Talmuds (1912); “Bibel und Babel” (in Monumenta Talmudica, 1913); and a pro-Zionist tract, Der Kampf um Zion… (1921).

[Naphtali Ben-Menahem]

FUNKENSTEIN, AMOS (1937–1995), scholar. Born in Tel Aviv, he was educated in Palestine and Berlin where he got his doctorate in 1965. While in Berlin, he was active in smuggling refugees from east to west Berlin. He was professor of history and philosophy of science at Tel Aviv University, the scientific revolution, and Bible commentary in medieval and modern times. Among his books was Theology and the Scientific Imagination from the Middle Ages to the 17th Century. He wrote on Maimonides and his views on messianism, on the connection between the thought of Maimonides and Thomas Aquinas, and on contemporary Jewish religious movements and their messianic ideology. In his writings he challenged the traditional view of the contradiction between science and religion and noted the contribution of Christian theology to the development of the new scientific outlook, from 1980. He also founded the departments for Jewish history at UCLA and at Stanford and Berkeley, California. In Berkeley he was professor of Jewish history and culture. He specialized in many fields of research including Jewish thought and culture, general intellectual history. In 1995 he was awarded the Israel Prize for historical research.

FUNT, ALLEN (1914–1999), U.S. radio and television personality. Born in Brooklyn, New York, Funt studied at Pratt Institute before earning a bachelor's degree in fine arts from Cornell University. While working at an advertising agency, he became an idea man who dreamed up gimmicks for radio programs. In World War II he used his radio experience in the Army Signal Corps, learning to handle a portable wire recorder, predecessor of the tape recorder, and began to experiment with concealment techniques. After the war, Funt created Candid Microphone, which had its premiere on the ABC radio network in 1947, using hidden microphones to snare the unwary. The format, though embarrassing to many of the prey, proved highly popular. The program moved to television in 1948 and was renamed Candid Camera a year later. As creator, producer, director, and editor of Candid Camera, Funt was part humorist, part psychologist, and part con artist, catching unsuspecting people in “the act of being themselves,” as he put it. In a typical stunt, passers-by were startled by a talking mailbox or by a hand reaching out of a sewer grating, angling for a hat just out of reach. In New York, many people just handed the hat to the hand and walked on. Funt, who sometimes participated in disguise as a dentist or garage mechanic, ended the ploy by saying “Smile! You’re on Candid Camera.”

[Stewart Kampel (2nd ed.)]

FURAYDIS, AL- (1916– ), U.S. pharmacologist and Nobel Laureate in medicine. Furchgott was born in Charleston, South Carolina, and received his B.S. in chemistry at the University of North Carolina, Chapel Hill (1937), and his Ph.D. in biochemistry at Northwestern University, Chicago (1940). His first postdoctoral appointment was at Cornell University Medical School (1940–49), where he studied mediators of shock. He was assistant professor in the pharmacology department of Washington University, St Louis (1949–56), where he developed his lifelong interest in drug-receptor interactions, particularly in the adrenergic system which regulates blood vessel flow and smooth muscle tone. His experimental methods were largely based on rabbit aorta preparations. He was chairman of the new department of pharmacology at the State University of New York (now called the SUNY Health Science Center at Brooklyn; 1956–82), where his research work centered on the anomalous response of rabbit aortic preparations to drug and other stimuli, which often produced relaxation of the vessel instead of the expected contraction. This was attributable to the unsuspected release of a factor from the cells lining the internal surface of the preparation (called endothelial cells), which later proved to be nitric oxide (NO). This discovery followed meticulous analysis of a serendipitous observation and led to the award of the Nobel Prize (1994, jointly with Louis J. Ignarro and Ferid Murad). Wider roles for NO have now been identified, including defense against infection and blood pressure regulation. After retirement in 1989 Furchgott maintained active contacts in teaching and research with his former department and the pharmacology department of the University of Miami School of Medicine. His honors include the Gairdner Award (1991) and the Lasker Award for basic medical research.

[Michael Denman (2nd ed.)]
FURIE, SIDNEY J. (1933– ), Canadian film producer-director-writer. Toronto-born Furie traces his career inspiration back to Captains Courageous, which he saw in 1937 at the age of four. He went to Pittsburgh to train in directing and scriptwriting at the Carnegie Institute of Technology, and in 1954 joined the Canadian Broadcasting Corporation as a writer and director, creating the series Hudson's Bay. His first feature efforts, A Dangerous Age (1957) and A Cool Sound from Hell (1958), were teenage rebellion films. Furie immigrated to England in 1960 and first tried his hand at horror films, Dr. Blood's Coffin (1961) and The Snake Woman (1961). Furie experienced his first box-office hit with the teenage musical The Young Ones (1961), which helped launch Cliff Richard. His success led to the cult film The Leather Boys (1964). In 1965, Furie was hired to direct the Len Deighton spy thriller The Ipcress File, starring Michael Caine. He followed with the western The Appaloosa (1966), and The Naked Runner (1967), starring Frank Sinatra. Furie turned to Hollywood when Paramount Pictures offered the director a four-picture deal, which included The Lawyer (1970), Little Fauss and Big Halsy (1970), Lady Sings the Blues (1972), and Hit (1973). His next film was Sheila Levine Is Dead and Living in New York (1975), a romantic comedy of unrequited Jewish love. After the Vietnam-era love story Purple Hearts (1984) fell flat, Furie turned to directing action films, including Superman IV (1987), the Iron Eagle series (1986, 1988, 1995), and The Taking of Beverly Hills (1991). In 1994, Furie returned to Canada to direct the pilot episode of the Lonesome Dove series. He continued to shoot made-for-television films, as well as direct-to-video features.

[Adam Wills (2nd ed.)]

FURMAN, YISROEL (Israel Fuhrmann; 1890 or 1887–1957), Romanian-born Yiddish folklorist. Born in Sereth, Furman lived in Czernowitz from 1920 to 1939 and after World War II in Bakau, Transylvania. A doctor of jurisprudence (University of Vienna), he worked as an attorney and was also a Yiddish poet and a key supporter of Yiddish schools in Bukovina but is best known as a Yiddish folklorist. He settled in Jerusalem in 1965 and worked intensively on his magnum opus, Yidishe Shprikhverter un Rednsarnt: Gezamlt in Rumeyne – Besarabye, Bukovine, Moldeve un Transilvanye (“Yiddish Proverbs and Expressions: Collected in Romania – Bessarabia, Bukovina, Moldavia and Transylvania,” Tel Aviv, 1968), based on expressions actually heard in, or from natives of, these regions; he also published a study of the terminology of bakers (Yidishe Shprakh, 33 (1974), 32–37). In his later years he turned to writing poems, which were published only on a website devoted to his poetry (http://home.interlog.com/~jfuhrman).

[Leonard Prager (2nd ed.)]

FURST (Fürst), MORITZ (1782–1840), early U.S. medalist. Furst was born near Pressburg, and after immigrating to the United States in 1807, he worked as an engraver for the United States Mint in Philadelphia from 1812 to 1839. He received quick recognition, and 33 of his patriotic commemoratives and portraits are still issued by this mint; his best-known work was struck commemorating the War of 1812. He also did the first recorded American Jewish medal, the homage paid to the patriot and religious leader Gershom Mendes Seixas on his death in 1816. Official portraits were struck by him for presidents James Monroe, John Quincy Adams, Andrew Jackson, and Martin Van Buren.

FURSTENBERG, HILLEL (Harry) (1935– ), Israeli mathematician. Furstenberg was born in Berlin but immigrated to the United States and studied at Yeshiva University, New York, obtaining both his B.A. and his M.Sc. in 1955, and his doctorate from Princeton in 1958. In the same year he was appointed instructor at Princeton and at MIT from 1959 to 1961; assistant professor at the University of Minnesota (1961–63); and full professor (1964–65). He relocated to Israel in 1965 on his appointment as professor of mathematics at the Hebrew University. Furstenberg works in the area of probability theory and dynamics and their applications to combinatorics and group theory. He was awarded the Rothschild Prize in 1978 and the Israel and Harvey Prizes in 1993. He is a member of the Israel Academy of Sciences and Humanities, the American Academy of Arts and Sciences, and the U.S. National Academy of Sciences.

FURTADO, ABRAHAM (1756–1817), politician and communal leader in France. His parents originally lived in Portugal as Marranos, but after his father’s death in the Lisbon earthquake (1755), his mother moved to London, where Abraham was born, and returned to Judaism. In 1756 she settled in Bayonne. They later moved to Bordeaux, where Furtado was educated. His dealings in property eventually enabled him to devote himself to literature, philosophy, and history, and to enter politics. In 1788 he and David *Grades were invited to sit on the *Malesherbes commission for considering proposals for the amelioration of the Jewish position, as representatives for southern France. Furtado became a municipal counselor in Bordeaux shortly before the French Revolution. A sympathizer with the federalist-minded Girondins, Furtado was proscribed with them in 1793. After the downfall of Robespierre, however, he was reinstated in civic office in Bordeaux. He was elected president of the *Assembly of Jewish Notables (1806–07) convened by Napoleon and acted as secretary of the Paris *Sanhedrin (1807). Furtado, who knew Napoleon personally, traveled to Tilsit in June 1807 to present a memorandum to the emperor in the hope of preventing restrictive measures against the Jewish community. His efforts were only partially successful. In 1808 he published in Paris his Mémoire d’Abraham Furtado sur l’Etat des Juifs en France jusqu’
à la Révolution. After Napoleon's return from Elba, Furtado refused the appointment of vice-mayor of Bordeaux, but accepted it from Louis xvIII when the monarchy was restored for a second time.

FUR TRADE AND INDUSTRY. Jews arrived at the fur trade and industry through their commerce between the Mediterranean littoral and Continental Europe, in particular Eastern Europe. Their active participation in the central European fairs enabled them to play an important role in the development of the fur trade. During the ninth century the Jewish merchants known as Radanites were among the principal agents in the international fur trade. They may have purchased the furs at the northern end of their European itinerary, but more likely bought them in the land of the *KhazarS, since pelts could be obtained there cheaply, and secured for the Khazar kingdom a central position in the international trade (taxes there were occasionally collected in furs). The report of Ibrahim ibn *Ya’qib in the tenth century shows that Jewish and Muslim merchants in Prague dealt in furs and hides of various kinds, among other goods. The fur trade must have remained an important part of the business of Jewish merchants visiting Russia (holikhei Russia) in the 11th and 12th centuries. Furs were among the wares of the 11th-century Mediterranean merchant Naharay b. Nissim. The extent to which the fur trade and payment in furs figured in Jewish life and imagination is shown in a 13th-century tale about a*Jew who went afar and saw in his dreams a Jew whom exalted ones were weighing in a balance, and his sins were found to weigh heavier; they said: as his sins are heavier he will have no part in the world to come. [Then] others came and said: you did not weigh fairly, and they put peltS and other furs on the man, and he was heavier; they said: he shall enter the world to come... And they said: those furs they put on him were furs he paid in tax” (Sefer Hasidim, ed. R. MargaloLioth (1924), no. 654, p. 421).

In the 13th century Jewish merchants imported furs from Hungary into Little Poland. The Jews of Volhynia and Red Russia, especially at the close of the 14th and beginning of the 15th centuries, held a prominent place among the merchants who imported Oriental goods and traded at the fairs of Lvov and Kiev—these imported, among other articles, furs and horses. During the second half of the 15th century, and especially after 1454, following the extension of Polish rule to *Gdansk (Danzig), participation of Jews in the northern trade intensified; among the cargoes rafted down the rivers there were hides and furs. Furs held an important place among the goods supplied by Jews to the courts of the Polish kings. Sebastian *Miczyński (1618) tells that “there are two Israelite brothers who, upon arriving in Lvov where various goods arrive from Turkey... took into their possession almost all the furs... and this is not all.... They [the Jews], despite existing laws and privileges, import from Bohemia, Moravia, and Ger- many many finished goods and prepared furs, fox furs made from the hide of the belly.” Throughout the 17th century, the Jewish merchants of Poland played a main role in the overland export of hides and furs. The regulations of the furriers' guild of Cracow of 1613 show that its members were, in fact, fur mer-
chants. In Bohemia during the 15th to 16th centuries the Jews were prominent in the fur retail trade. In 1515, when the municipal councillors of Prague sought to reduce Jewish competition in trade, they prohibited them, among other things, from preparing or selling cloths and new furs. On the other hand, they were authorized to sell used clothes and furs at the fairs. During the 17th and 18th centuries the Jews of Amsterdam also engaged in the trade of furs, which they imported from Frankfurt. The city of *Leipzig was an important center of the fur trade. Here, the Jewish merchants of Austria, Germany, and Russia played a pioneering role through their participation in the fairs of the city from the beginning of the 16th century. In recognition of their contribution toward the import of raw materials for the hide and fur industries, the Jews of Poland and Russia were authorized in 1747 to settle in Leipzig without paying taxes. Jewish merchants from Brody, Lissa (Leszno), and Shklov were among the most active fur traders at the fairs of Leipzig. During this period, the other principal centers of the fur trade in Germany were Breslau and Gross-Glogau (for furs imported from Russia, from the region of Crimea), as well as Luebeck and Hamburg (for furs from Siberia and the Scandinavian countries).

In North America the Jews played an important role in the fur trade during the colonial period. George Croghan, a prominent fur trader in the second half of the 18th century, was assisted by many Jewish suppliers. In 1764 the brothers Barnard and Michael *Gratz established an extensive commercial partnership with non-Jewish merchants and their activities included trade in furs. Other important fur traders in the colonial period were Hayman *Levy, Joseph *Simon, Salomou Simson, and David *Ferncks. In Canada, the town of Trois Rivières became the center of the fur trade, in which Aaron *Hart and Samuel *Judah, who exported furs to England, played a considerable role. The sales of the American-Russian Fur Company were handled by the J.M. Oppenheim firm, London’s largest fur house. Before the purchase of Alaska by the United States in 1867 the Russian firm began selling furs to independent fur traders of San Francisco, many of whom were Jews, eager to penetrate the lucrative seal islands of Alaska. Indeed the negotiations of Hutchinson, Kohn, and Co. for purchasing the Alaskan fur monopoly influenced the decision to purchase the territory. The Russian company’s rights and assets were subsequently bought by this firm. Californian Jews were prominent in the “fur rush” to Alaska. The Alaska Commercial Company, headed by Lewis *GersHte and Louis Sloss, continued to dominate the fur trade after Alaska was purchased by the United States. On the east coast a number of German-Jewish firms sprung up for the processing of fur products, the largest being A. Hollander and Sons of Newark, New Jersey.
The year 1815 was the start of a prosperous period for the fur trade of Leipzig as a result of which a local fur industry was established. The first Jewish company, founded by Marcus Harmelin in 1830, existed until 1939. With the unification of Germany in 1871, the Jewish fur industry of Leipzig received new momentum when Jewish fur merchants of Berlin, Breslau, Brody, Frankfurt, Fuerrth, and Hamburg settled there or opened branches of their businesses. Even the new Jewish companies then beginning trade in New York, such as Ullmann and Boskovitz, opened branches there. The fur trade between Russia and Germany remained at a peak level until World War I, and the important Jewish furriers of Leipzig took part annually in the large fairs of Russia. According to the census of 1897, Jews formed 90% of the fur merchants in Congress Poland, and according to the census of 1900 in Galicia they formed 80% of the hide and fur merchants. Even though World War I brought a crisis to the fur trade, the principal companies in Germany recuperated immediately afterward, when trade relations with the United States intensified. In 1921 the trade was also renewed with the Soviet Union. It has been estimated that in 1929 there were about 1,228 fur industry enterprises in Leipzig of which at least 513 were owned by Jews. Of the 794 fur merchants then living there, 460 were Jewish. Before Hitler’s rise to power, the Leipzig fur industry saw a period of prosperity during which many Jewish companies began to open branches in other places. Subsequently the Jewish fur industry throughout Germany was brought to an end. The centers of the Jewish fur industry were then transferred to other places, with refugees who had succeeded in escaping Nazi Germany occasionally occupying leading positions.

Though the fur-working industry in the United States in the 19th century was largely in the hands of Germans, the large Jewish emigration from Eastern Europe from the 1880s on had brought a flood of Jewish workers into the profession, many of whom were forced to labor under sweatshop conditions. In 1912 an estimated 7,000 out of 10,000 fur workers in the United States were Jewish, the great majority concentrated in New York, Philadelphia, and Chicago. A Jewish Furriers Union was organized in 1906 but soon dissolved. In 1913 the International Fur Workers Union came into being, with the leadership and rank and file of which were both heavily Jewish. Under the leadership of Benjamin *Gold, the Furriers International was for years among the most politically radical unions in America.

A study undertaken in 1937 indicated that approximately 80% of the employees in the fur industry in the United States, and over 90% of the employers, were Jewish. The largest of these Jewish fur firms was Eittington-Schild of New York City, whose president, Motty Eittington, was a leading figure for many years in the Associated Fur Manufacturers, as was another large Jewish fur dealer, Samuel N. Samuels. In Canada, Jews became prominent in this branch, notably in Montreal, Toronto, Winnipeg, and Vancouver. A census held in 1931 shows that 48.6% of the employers and directors and 31.82% of the workers in this industry were Jews. Most had acquired their professional knowledge in their countries of origin in Eastern Europe, and they contributed largely to promoting the industry in Canada.

In London Jewish companies were estimated in the 1960s to constitute about two-thirds of the city’s fur enterprises. They contributed considerably toward the development and improvement of methods employed in the fur industry, such as the preparation and dyeing of furs. In Argentina in the same period about 80% of the fur enterprises were owned by Jews who organized a trade association, the Sociedad Mercantil de Peleteros. In Israel the fur trade and industry employed in 1969 about 500 workers in 70 firms specializing mainly in broadtail and karakul. Production, primarily aimed at export, earned approximately $1,000,000 in 1963 and over $3,500,000 in 1969. A small number of minks and chinchillas were reared on farms. In subsequent years Jewish participation in the trade declined with the general decline in the wearing of fur and the hostility of pro-animal protestors, not to mention the movement of Jews away from traditional trades. Israel joined nearly 100 other countries in banning the use of traps. In 2003 Israel exported just $1 million worth of leather products and dressed furskins.

**FURTUNĂ, ENRIC** (pseudonym of Henry Peckelmann) (1881–1965), Romanian poet. Born in Botișani, Furtună practiced as a physician in Jassy. He spent much of his time writing poetry which he published both in Jewish periodicals, such as *Ha-Tikvah* and *Adam*, and in general Romanian journals. Two important verse collections were *De pe Stâncă* (“From the Rock,” 1922) and *Poemele resemnării* (“Poems of Resignation,” 1940). Many of Furtună’s poems had Jewish themes and he showed particular concern for the tragic homelessness of the Jewish people, for which the only remedy he saw was a return to Zion. Some of his poems are on biblical themes, the last being *Abijag*, a dramatic work published in Tel Aviv in 1963 when Furtună was over 80. There are other poems which show a biblical influence. Furtună also wrote plays and translated Hebrew poetry, especially that of H.N. Bialik and David Shimon, and Yiddish writers, notably Itzik Manger and Halper Leivick. Furtună emigrated to Erez Israel in 1944 but he left after two years and returned to Romania. In 1958 he settled in Brazil where he died in São Paulo.

[Abraham Feller]

FUTORANSKY, LUISA (1939– ), Argentinian writer, Futoransky was born in Buenos Aires. From 1971 she lived in Spain, Italy, Japan, and China, and settled in Paris in 1981, where she worked as a journalist. She conducted poetry workshops in U.S. universities and visited Israel frequently. In her poetry and prose, an uncommonly sharp and painful insight into feelings and circumstances is reinforced by an equally sharp humor, all of which is conveyed in a rich style that combines high language and everyday idiom. Love, voyage, exile, and womanhood are her basic themes in addition to explicit Jewish and Israeli motifs concerning Jewish identity and experience. An anthology published in 2002 (Antología, Buenos Aires) includes a selection of previous books such as Partir, digo (1982); La sanguina (1987); La parca, enfrente (1995); Cortezas y fulgores (1997); and De dónde son las palabras (1998). Her novels include Son cuentos chinos (1986); De Pe a Pa (1986); and Urracas (1992). Her essays appear in Peños (1990) and Lunas de miel (1996). She has received awards in Argentina and Spain. Her works have been translated into several languages.

[Florinda Goldberg (2nd ed.)]
GAAL (Heb. גֶּאל, the son of Ebed, head of a band that fought 'Abimelech son of Gideon (Judg. 9:26–41), who, with the help of mercenaries, had imposed his rule over Mt. Ephraim. Gaal's band is reminiscent of those that accompanied Jephthah (Judg. 11:10) and David (1 Sam. 22:2; 23:1–13). During Abimelech's absence from Shechem, Gaal incited the inhabitants to revolt and took advantage of the social, and possibly also of the racial, tension prevailing among the various sections of the town's population. It appears that Gaal conspired with the ancient nobility in the locality, which claimed descent from Hamor the father of Shechem (9:28) and which apparently belonged to the Canaanite population hostile to Abimelech. The immediate cause of the friction was the highway robbery conducted by the Shechemites (9:25). Apparently, the ruling families seized control of the roads and interfered with Israelite commerce. Informed by Zebul, the city prefect, Abimelech quickly returned and, by a clever stratagem, crushed the revolt. Gaal was driven from the city (9:30–41) and was not heard of again.

GAATON (Heb. גַּאַטְוָן), kibbutz in the hills of northern Israel, east of 'Nahariyiyah, affiliated with Kibbutz Arzi Ha-Shomer ha-Za'ir. It was founded in October 1948 while under fire from nearby Arab positions. The founding group of settlers hailed from Hungary; later, Israeli-born members and immigrants from Egypt and other countries formed the majority. Kibbutz factories manufacture cardboard and medical equipment. A boarding school for the performing arts, mainly dance, is located in the kibbutz. In 2002 the population was 422.

The name is historical, mentioned (Tosef., Shev. 4:11) as an enclave on the northern border of the area occupied by the returning exiles from Babylon, having been preserved in the Arabic names of the nearby ruin Khirbat Ja'tūn and the Ga'aton brook, which runs down from there to its outlet in Nahariyyah.

[Gefraym Orni]

GABBAI, family of Hebrew printers. ISAAC BEN SOLOMON (b. second half of 16th century) lived in Leghorn and was the author of the Mishnah commentary Kaf Nahat (appended to Mishnah, ed. Venice, 1614). Early in the 17th century he worked as a typesetter for *Bragadini in Venice. His son JEDIDIAH acquired the Bragadini type and decorations and set up the first Hebrew press in *Leghorn, which was active there from 1650 to 1660, issuing a number of important works. With part of the equipment and staff of this press, Jedidiah's son ABRAHAM in 1657 established a printing house in Smyrna, which existed until 1675. Abraham himself moved to Constantinople in 1660, where he was a printer for a number of years. His corrector (proofreader) was SOLOMON BEN DAVID GABBAI – probably not of the same family – author of the kabbalistic work Me'irat Einayim (between 1660 and 1665) and a theological work Tā'alumot Hokhmah (Bodleian Library, Ms. Opp. 602).

GABBAI, family with many branches in *Baghdad and India. Noteworthy members include ISAAC BEN DAVID BEN YESHU’AH (d. 1773), known as Sheikh Ishāq Pasha because he ruled with the firmness of a pasha from 1745 to 1773 as nasi of the Jewish community and as *sarrāf bāšā (“chief banker”) for the governor of Baghdad. On the other hand, his contemporaries praised his good deeds, especially his efforts to encourage R. Zedakah Ḥusin who was very active in propa-
gating the study of the Torah among Iraqi Jewry. He died together with his three sons in the plague of 1773. EZEKIEL BEN JOSEPH NISSIM MENAHEM GABBAI (d. 1826), also known as Baghdadi, was a prominent banker in Baghdad. With his assistance, Ta‘al Efendi succeeded, in 1811, in suppressing the rebellion of Suleiman Pasha, the governor of Baghdad. Gabbai was called to Istanbul, where he became a favorite of Khalid Efendi, the secretary to the sultan. He was introduced to the court of the sultan and appointed sarraf bāshi. In this position he revealed exceptional talents and wielded tremendous unofficial influence; many honors were bestowed upon him, and he succeeded in displacing the Armenian faction from the court. He exploited his position for the benefit of his coreligionists and family in the leadership of the Baghdad community. The nasi Sasson ibn Šālih was replaced by his brother Ezra who held the position from 1817 until 1824. When the Armenian faction regained its influence, Ezekiel was exiled, and both brothers were later executed as a result of libels brought against them. EZEKIEL GABBAI (1825–1898), a grandson of Ezekiel b. Joseph, was the first Jew to hold office in the Ottoman Ministry of Education. He was also an active member of the Istanbul community. In 1860, he founded a Ladino newspaper, El Zhurnal Izraelit, in which he fought for reforms within the Jewish community. He also summarized the laws of the Ottoman State in regard to the Jews. His son ISAAC published until 1930 the newspaper El Telegrafo, which followed a similar policy to that of his father. EZEKIEL BEN JOSHUA GABBAI (1824–1896), the disciple and nephew of R. Abdallah Somekh of Baghdad, traveled in 1842 to India, where he became wealthy. He was accustomed to set aside ma‘aser (“a tenth”) of his income for charities in India, Iraq, and Erez Israel. He extended his business to China in 1843, becoming one of the first Baghdaids to trade there. In 1853, he married Aziza (d. 1897), the daughter of Sir Albert (Abdallah) Sassoon. The traveler Jacob Saphir wrote of him in 1860 that he was a distinguished scholar, sharp-witted and shrewd, cultured and industrious. His five sons and five daughters included Flora (Farha), the wife of Sir Solomon Sassoon, David, president of the Jewish community in Shanghai, and one son who became a judge in Bombay. EZEKIEL BEN ŠALIH GABBAI (1812–1887) traveled in 1842 from Baghdad to India, where he was “gabbai (“treasurer”) of the Four Lands” (Jerusalem, Hebron, Tiberias, and Safed) for 40 years. Under his direction, large sums were collected for Erez Israel. In 1870, the traveler Solomon Reimann (Masot Shelomo, 182) stated that Ezekiel possessed a fortune amounting to several million francs. He later lost most of his wealth and became the manager for David Sassoon and Company in Calcutta.

AARON (d. 1888) and Elijah (d. 1892), sons of Shalom Gabbai, were born in Baghdad. In 1840, they journeyed to Calcutta and amassed a fortune in the opium trade between India and China. Outstanding philanthropists, they contributed generously to charitable causes in India, Iraq, and Erez Israel. Elijah lived in China for a time and later returned to Calcutta, where he became a member of the municipal council and an agent for David Sassoon and Company. RAPHAEL BEN AARON GABBAI (d. 1923) was also born in Baghdad and later settled in Calcutta. Another noted philanthropist, he left a bequest of £100,000 to be distributed among charitable institutions in Erez Israel, Baghdad, Calcutta, and London. SASSON BEN EZEKIEL MORDECAI GABBAI, “gabbai of the Four Lands” in Bombay during the 19th century, raised considerable funds for charities in Erez Israel. JOSHUA BEN SIMEON GABBAI (1828–1898) settled in Calcutta in 1851, where he was a communal worker and gabbai of the Maghen David Synagogue.

[Abraham Ben-Yaacob]

SOLOMON SALIH GABBAI (1897–1961), poet and educator in Iraq. After having taught for many years in Baghdad, he became rabbi of Amara (1943–44) and later rabbi of the Iraqi community in Teheran. He wrote many poems in Hebrew and collected them in two booklets entitled Shirrei ha-Kerem (Baghdad, 1925–26); some of these are poems on Zion. He also wrote an elegy on the massacre of the Jews in Baghdad during June 1941. He settled in Israel in 1951.

[Haim J. Cohen]

GABBAI (Heb. ʼgaben, ʼgabba‘im), lay communal official. Derived from the Hebrew gavah (ʼqavah – to exact payment), the word is actually part of the complete title gabbai zedakah (charity war- den) and all the relevant regulations, such as that individuals could not act as a gabbai, but collectors had to work in pairs, refer to this charity collector. In the Middle Ages, however, the meaning of the word was extended to include other commu nal officials. The original meaning of collector of taxes or treasurer merged in the usage of the medieval community with the parallel ancient meanings of collector of charities or administrator of them, and also came to connote supervisor and executive leader. The executive officer of a ‹hevrāh or ‹guild was named gabbai. He was an unpaid lay-elected official who administered the affairs of the particular association, whether burial, sick care, or the host of other purposes served by these groups. Very large societies had as many as 12 gabbai’im, each serving one month in the year, when he was gabbai hodesh. Smaller organizations elected only one or more executives. Where the work was plentiful, the gabbai had the services of a beadle and other paid employees. In the small association the gabbai usually did all the work himself. In the communal administration the gabbai was an officer in charge of a particular committee or activity. In the Crabow community there were officers termed exalted, gabbai’im gevohim. Some served as gabbai’im in the synagogue, managing its affairs and distributing honors, especially at the Reading of the Torah. There were also gabbai’ei Erez Yisrael. In 1749, for example, at the Jaroslaw session of the Polish ‹Council of Four Lands, such officers were appointed in local or regional communities to make collections for the maintenance of the
poor in Erez Israel. In modern times there were also gabba’im of the kolelim (see also ‘halukkah). The manager and supervisor of the affairs of a ḥasidic rabbi was also named gabba’i. Female heads of associational activities were called gabbaites. The elected heads of the synagogues, mainly among Ashkenazi Jewry, were titled gabba’i. British Jews employed the term *parnas in a congregational context instead of gabba’i, using the latter for the warden of the synagogue; the president is called *parnas in Hebrew.

[Isaac Levitats]

GABBAI, MEIR BEN EZEKIEL IBN (1480–after 1540), kabbalist of the generation of Spanish exiles. The details of his life are not known. Apparently he lived in Turkey and possibly died in Erez Israel. He wrote three books dealing with the principal problems of Kabbalah. They are Ḥolat Ḥakokot (written in 1507 and first printed in Constantinople, 1560), on the prayers; Derekh Emunah (written in 1539 and first printed in Constantinople, 1560), an explanation of the doctrine of the sefirot in the form of questions and answers, based on Sha’ar ha-Sho’el by *Azriel of Gerona and incorporating views of the *Zohar; and Avodat ha-Kodesh, on the entire doctrine of the Kabbalah, in four parts – on the unity of God, the worship of God, the purpose of man in the universe, and an explanation of esoteric aspects of the Torah – an important work which he wrote from 1523 to 1531. The last is the most comprehensive and organized summary of the doctrine of the Kabbalah prior to the Safed period and was one of the most popular books on Kabbalah even with recent generations. It was first printed in 1566–68 under the name Marot Elohim. Gabbai was one of the leading proponents of the view that the Sefirot are the essence of divinity.

[Gershom Scholem]

Ibn Gabbai is also one of the most important exponents of the theurgical approach in Kabbalah, which found its elaboration and complex expressions in both Ḥolat Ḥakokot and Avodat ha-Kodesh.

[Moshe Idel (2nd ed.)]

GABBAI, MOSES BEN SHEM-TOV (d. c. 1443), scholar of Spain and North Africa. He lived for a time in Calatayud and then moved to Teruel where he served as rabbi. He settled in Majorca (before 1387) but during the riots of 1391 escaped to North Africa and was appointed rabbi of Honein. Gabbai was closely connected with the royal Spanish court and King John I of Aragon granted him freedom of passage between Spain and Majorca to attend to his affairs in Majorca (from a document dated 1394). His sister was the wife of Simeon b. Zemah *Duran; Gabbai corresponded with the latter and with *Isaac b. Sheshet Perfet, both of whom he greatly respected. The poet Solomon b. Meshullam *Da Piera praised him in several of his poems. The latest mention of his name is in a responsa of Duran (Tashbez, 2599) addressed to him at Honein. From its contents it is clear that it was written in 1443, and not in 1427, as has been erroneously stated by his biographers. His extant writings are a supercommentary (written in 1421) on the commentary of Rashi on the Pentateuch (in manuscript); and a bakkashah (petitional prayer) which is also in manuscript.

[Israel Moses Ta-Shma]

GABBAI IZIDRO (Ysidro), ABRAHAM (d. 1755), Sephardi rabbi. A Spanish Marrano, his wife was tried by the Inquisition while he escaped to London and reentered Judaism. He studied later with David Israel *Attias in Amsterdam and published in 1724 a sermon containing some interesting autobiographical details. Thereafter he was rabbi in *Surinam and then *Barbados. In old age, he returned to London where he died. He left in manuscript a kabbalistic verse commentary, Yad Avraham on the *Azharot, which was published (Amsterdam, 1758) by his widow, who had settled in Bayonne.

[Cecil Roth]

GABEL, MAX (1877–1952), Yiddish actor and playwright. He is credited with having written 114 plays, mostly melodramas and adaptations of Broadway successes. His first play was The Sea King, 1895, performed in New York. Later he managed Gabel’s Star Theater and other New York playhouses. He wrote and produced plays for his wife, actress/singer/writer/producer Jennie Goldstein (1896–1960), whom he married when she was 16. These plays included Girl with a Past and Everything for Love. The couple starred together in his plays, and Gabel’s productions enjoyed extended runs. He toured with his wife until they divorced in 1930 and he retired to California.

[Ruth Beloff (2nd ed.)]

GABÈS (Ar. Qābîs; the ancient Tacapae), maritime town in *Tunisia, situated in a luxuriant palm forest. Gabès was an important commercial and industrial center. Under Arab rule the Jews were farmers and manufacturers, who wove silk and exported – mainly precious cloth; they gained considerable wealth as a result of their trade with Sicily, the Orient, and the interior of Africa. Some of them were merchants of worldwide importance. In Gabès many Jews devoted themselves to poetry and music, and their intellectual leaders, such as the Ibn Jama’ family, succeeded in converting their academy into a religious center whose importance was com-
parable to that of *Kairouan. These rabbinical scholars maintained contact with *Sura and *Pumbedita, where the gaon Abraham al-Qabisi (i.e., of Gabès) had already settled at the beginning of the ninth century. During the 12th century they frequently communicated with the Jews of *Spain; Abraham *Ibn Ezra stayed in Gabès. After incursions by the Normans of *Sicily (1117, 1147) the community was destroyed by the *Almohads in 1159. Once reconstituted, the community did not return to its former importance. During the following centuries, the Jews of Gabès generally lived in peace. Many of them were engaged in commerce. The weaving of cloth and the wood and jewelry trades were principally Jewish crafts. The community, which numbered about 3,200 before World War I, suffered extensively under the German occupation of 1942–43. From 1948 its members immigrated to France and Israel. Only about 200 families of wealthy Jewish landowners still lived in Gabès in 1970.

[David Corcos]

During the Hafisit period Gabès was an economic and administrative center of its region. We do not have any real information about Jewish life in Gabès before the middle of the 19th century. In 1858 Benjamin the Jewish traveler found out about 100 families in Gabès but this is the only information about the Jewish community. A French explorer of the Sahara and the Tuareg, Henri Duveyrier (1840–1892), visited Tunisia in 1886, and his observations on the Jewish community of Gabès were of great importance. Jews lived in both parts of the ancient town, Menzel and Jara. Some Jews came from Leghorn and integrated into the autochthonous community. Their economic life was based on the Trans-Sahara trade, maritime commerce, and agriculture. Some Jews enjoyed European citizenship.

During the French protectorate the Jewish community grew to 1,271 in 1909 and more than 3,300 in 1946. Thus the community became one of the largest in southern Tunisia. Most Jews came from *Djerba and the south. The French developed the port, the industry, and the minerals in the region of Gabès. Jews took part in those new economic opportunities. The Jewish community of Gabès was based on Djerba rabbinical authority. The rabbis came from Djerba and were committed to takkanot from Djerba. Gabès became the northern frontier of the Djerba periphery. For example, owing to its French nature, the Alliance Israélite Universelle could not open a school in Gabès. The rabbis in Djerba strongly opposed the Alliance initiative. Moreover, Rabbi Haim Khuri, the most famous sage in the 20th century, was born in Djerba and immigrated to Gabès, where his influence on Jewish life in Gabès was of great importance. He was the author of the books Bene Moshe, Derekh Haim, and Maza Hayyim. He was buried in Beersheba, and his grave became a holy place at which his sons organize a hillula every year. In 1909 the French created the communal committee, La Caisse de Secours et de Bienfaisance, as in all other large towns in Tunisia. Simon Seror was the president of the committee between the two World Wars and Haouiti Zana was president after World War II. Jews sent their children to tal-mud torahs and some of them even to French schools, which provided the only modern education.

The only Zionist activity in Gabès was the creation of the Zionist association Herut Zion just after World War I but Jews contributed to the national funds. As far as we know, Jews lived in coexistence with the Muslims. For example, at the fish factory of the Journo family, Arabs and Jews worked together in friendly relations. The only exception was the riot of May 20, 1941, in which seven Jews were killed and about 20 were wounded. After World War II and as a result of the German occupation, Zionist activity was stronger than before the war. All political trends took part in Zionist activity: Betar, Ze’irei Zion (a Marxist group), Torah va-Avodah, and others. Even a self-defense group was created but had little importance.

[Haim Saadoun (2nd ed.)]

GABINIUS, AULUS, Roman governor of Syria from 57 to 55 B.C.E. He was granted extensive authority, and his system of rule was characteristic of Roman imperialistic methods toward the end of the period of the republic. He put into effect Pompey’s decision to diminish the area of the territory of Judea, deprived Hyrcanus of the title ethnarch, divided the country into five districts, and rehabilitated the Greek cities which the Hasmonaees had destroyed. He defeated the efforts of Aristobulus II and his son Alexander to seize power in Judea.

GABIROL, SOLOMON BEN JUDAH, IBN (c. 1021–c. 1057; Ar. Abu Ayyub Sulayman ibn Yahya ibn Gabirol; Lat. Avicron), Spanish poet and philosopher.

His Life
The main source of information on Ibn Gabirol's life is his poems, although frequently they offer no more than hints. A number of details can be found in the works of *Ibn Sa'id and in the Kitab al-Muhadara wal-Mudhakara by Moses *Ibn Ezra (published by A. Halkin 1975), 36b, 37a, etc., and some information can be deduced from Ibn Gabirol's introduction to his ethical work, Tikkun Middot ha-Nefesh (Constantinople, 1550). His family left Córdoba in the unsafe years of the beginning of the 11th century, and he was very likely born in Malaga – or at any rate he lived there and regarded it as his native city, signing a number of his poems "Malaki," i.e., from Malaga – but as a child he was taken to Saragossa, where he acquired an extensive education. Orphaned at an early age, he wrote a number of elegies on the death of his father; on his mother's death in 1045, he mourned both his parents in "Nihar be-Korei" (14). Ibn Gabirol complained in his poems of his weak physique, small stature, and ugliness, and if we understand his words literally, he was frequently ill from his childhood on, suffering particularly from a serious skin disease that he seems to describe in his strange and terrifying poem "Ha-Lo Ezdak." Being unusually mature for his age, he began to write poetry at a very young age, at the latest 16 when he wrote Azharot (Venice, 1572). Ibn Gabirol likened himself to a 16-year-old with the heart of an 80-year-old ("Ani ha-Sar," 8). According to his contemporaries, his character, at times verging on arrogance, brought him into frequent conflict with influential men of his day, whom he attacked virulently, and with society in general. Since he wanted to devote his life to philosophy and poetry, he was dependent on the support of wealthy patrons, a subservience against which he rebelled from time to time. In 1038 Ibn Gabirol wrote a number of elegies on the death of Hai b. Sherira Gaon. One of his more important supporters was Jehuda b. Isaac ibn Hasan, whom he praised in a number of poems for his knowledge of the Talmud and the sciences, his interest in poetry, and his generosity ("Ve-At Yonah"). When Jehuda was killed in 1039 as a result of court intrigues, Ibn Gabirol wrote two elegies, one of which ("Bi-Ymei Yekuti'el Asher Nigmara") is regarded as one of the greatest of Jewish medieval secular poems. With the loss of his patron, Ibn Gabirol's financial status and social standing were drastically lowered and his incessant squabbling with the town nobles caused him considerable suffering. At the age of 19, he completed his great didactic poem, "Anak." It is thought that he wrote Tikkun Middot ha-Nefesh ("The Improvement of the Moral Qualities") in 1045, and soon afterward he seems to have left Saragossa; from then on few details are available on his life and work. Some scholars believe that he lived for some time in Granada, where his patron was *Samuel ha-Nagid, with whom he later quarreled as a result of his criticisms of Samuel's poems. Ibn Gabirol appears to have spent the year 1048–49 under the patronage of *Nissim b. Jacob ibn Shahin, but it is doubtful if he ever was actually Nissim's student. He was on friendly terms with Isaac ibn Khalfun and Isaac ibn Kapron. According to Moshe Ibn Ezra, Ibn Gabirol died in Valencia at the age of 30, while Abraham Ibn Daud states that he died in 1070, when he was approximately 50. However, the most exact date seems to be that given by Ibn Sa'id: 450 a.H. or 1057–58, when he was between 36 and 38. The many legends surrounding his life attest to the awe in which the man and his works were held after his death. One legend (found in the commentary to Sefer Yezirah (publ. Mantua, 1562), attributed to Saadia Gaon) relates how Ibn Gabirol made a female golem out of wood; another (in Shalshelet ha-Kabbalah by Gedaliah ibn Yahyä, Venice, 1587) tells how he was murdered by an Arab.

Works
In one of his poems, Ibn Gabirol boasts of having written 20 books, but only two are extant that can certainly be attributed to him: Mekor Hayyim and Tikkun Middot ha-Nefesh. Both are written in Judeo-Arabic. Sefer Al ha-Nefesh (Liber de Anima), which has been preserved in Latin, and Midvar Panimim ( Venice, 1546) are frequently attributed to Ibn Gabirol, but in both cases there is insufficient proof of his authorship. In their commentaries on the Bible, Abraham ibn Ezra and David Kimhi quote some of his interpretations, mostly allegorical, but it is not known if he composed a complete commentary of his own. The difficult task of recovering and identifying Ibn Gabirol's poems, which were scattered in prayer books, anthologies, and single pages dispersed in many libraries, was first undertaken in the 19th century by J.L. Dukes, S.D. Luzzatto, S. Sachs, and H. Brody, who brought out the first collection of his verse. The discovery in the Genizah in the early part of the 20th century of an ancient index of poems by Ibn Gabirol, Ibn Ezra, and Judah Halevi proved that there had been a very early collection of Ibn Gabirol's poems, and later a complete divan was found in manuscript (Schocken 37). Bialik and Ravitzky did not regard their seven-volume edition of Ibn Gabirol's collected works (1924–32) as complete. Brody and Schirman published a scientific edition of his secular poems in 1974. D. Jarden, collected and annotated the secular (1975) and liturgical (1976) poems in four volumes. Ibn Gabirol's poems have been translated into most Western languages (I. Goldberg, 1998). There is a good English translation of many of his poems by P. Cole (2001); a German translation by F. Bargebuer (1976); E. Romero translated into Spanish a large selection of his secular poems (1978), and M.I. Cano translated his secular poetry (1987) and a significant part of his liturgical poems (1992).

Poetry
In his poetic works Ibn Gabirol displays his great knowledge of biblical Hebrew and his linguistic virtuosity, while avoiding the complexity of many of his predecessors, including Samuel ha-Nagid. Employing images and idioms from Arabic poetry, he fuses them into an original style, with brilliant intellectual
metaphors. He can be a formalist in some conventional genres, but he also attains lyrical heights that are unusual in the Middle Ages, with deep reflections on his own life and his search for wisdom. While he wrote in biblical Hebrew, like all Andalusic poets, he was not a purist, and allowed himself some neologisms that provoked the censure of his most intransigent critics. In spiritual tone his poetry is shaped by Bible and talmudic literature as well as by early mystical Midrashim. In its mystical tendencies, his work is sometimes described as closely akin to Sufi poetry. Both his scientific knowledge, especially of astronomy, and his neoplatonic leanings are evident in his poems.

SECULAR POETRY. In accordance with contemporary tradition, most of Ibn Gabirol’s secular poetry was composed in honor of patrons whom he describes in extravagant panegyric. As he employs the full range of the Hebrew-Arabic rhetoric of the time in poems of praise and poems of friendship, it is often difficult to differentiate between the two. In the tone of the Arabic poems of self-praise, he refers to himself as a “violin unto all singers and musicians” (“Anti ha-Sar”) before whom are opened the “doors of wisdom” that are closed to the rest of his nation (“Ha-Tilag ke-Enosh”). Following convention, especially that of the great Arab pessimistic poets, he emphasizes the contrast between himself and the society in which he lives, frequently voicing complaints against time, i.e., fate, and his inability to find his place among his fellows, involved as they are in mundane matters and temporal successes. Nonetheless, he was alive to the impulses of youth and while he composed few love poems those few are powerful lyrics. An erotic note is sounded in his description of his relation to poetry, which he portrays as a desirable young girl. In his most personal poetry, he expresses the internal tensions of his own search for knowledge, his solitude and his confrontation with destiny and with the men of his time, his bitterness and despair, mourning his inability to enjoy the pleasures of the world and of love, and finding refuge in wisdom and in God.

In his “wisdom poetry” he depicts himself as devoting his life to knowledge in order to prepare his soul to join the “Source of Life” on its release from its bodily prison. Knowledge has two aspects consisting both of the effort of the intellect to scale the heights of the heavenly spheres and of the soul’s introspection. At first pleading with God to let him live, the poet soon begins to deride the world and time, regarding them as valueless and insignificant obstacles on the way to eternity. From the height of his identification with the infinity of the Godhead and of eternity, he regards with disgust the trials of the world below, the illusions of the senses, and the weakness of the flesh.

In accordance with the rules of rhetoric, some of Ibn Gabirol’s extensive nature poetry seems to have served as an introduction to his laudatory verse, for the patron’s generosity was often likened to the ordained plenitude of nature. It is clear from his nature poetry that he was influenced by the Islamic culture prevalent in Spain at the time, but within this traditional framework, the fine descriptions are accurately observed. Some of his winter poems (“autumn” according to the poet) include a few of his finest creations, e.g., “Avei Shehakim,” and “Yeshallem ha-Setav Nidro.”

A part of Ibn Gabirol’s poetry reflects his lack of social adaptation and his pessimistic view of the society of his time. His response is to complain in a harsh, satirical tone. If his contemporaries are not able to recognize his qualities, he pays them back with contempt, fustigating their ignorance and their wretchedness.

In another large section of Ibn Gabirol’s work, his ethical poems, he addresses the reader directly, propounding an ethic based upon individual introspection. These poems deal with the transience of life and the worthlessness of bodily existence in all its aspects as opposed to the eternal values of spiritual life and the immortality of the soul. Ibn Gabirol’s didactic tendency also finds expression in the many riddles he composed, which were possibly appended to letters, and it is also apparent in the dialogue form in which many of the longer poems were written. This style, developed in medieval Arabic poetry, was also used to introduce variety into the long poems which otherwise tended to be monotonous as a result of the identical rhyming of all the stanzas. The only secular verse he wrote in a strophic form is “Ki-Kholot Yeini” — a humorous poem that became a popular Purim song.

RELIGIOUS POETRY. Through his combination of pure Hebrew with the varied meters of Arabic poetry, Ibn Gabirol enhanced his poetic stature in the estimation of his contemporaries. Today, however, these qualities are dimmed by the great wealth of complex strophic forms he employed in his religious poetry. Stylistically, liturgical poets were always the elite of medieval Jewish poetry and Ibn Gabirol’s works in this genre are the apogee of the tradition. Ibn Gabirol composed a substantial number of religious poems in the difficult style of the early school of liturgical poets, possibly because they were commissioned by various communities or synagogues. Despite this, the freshness and vivacity of his imagery is striking. Many of these liturgical poems have been preserved, not only in Sephardi and Ashkenazi prayer books but also in those of the Karaites. It is on the basis of these poems that Ibn Gabirol is regarded as the major religious poet of Spanish Jewry, and many of them, such as “Reshat” and “Shahar Avakkeshkha,” are outstanding lyrical-religious creations even outside this particular context. In contrast to the long compositions of the classical piyyut Ibn Gabirol writes many short poems that reflect the feelings and predilections of the Andalusian believer in his relation with God. At the same time, he introduces many elements of secular poetry in the liturgical poems. Although his God is a personal deity, to whom he may turn in confession or supplication, Ibn Gabirol, unlike Judah Halevi, does not describe his great love for God as the relationship between the lover and the beloved. The poet, who in his secular verse is strong-willed and contemptuous of the base
world about him, becomes humble in his religious poetry as he begins to understand himself and man in general. When addressing God, he realizes his insignificance and his inability either to combat desire or to understand the essential evil of the senses for which there is no succor except in the compassion of God ("Adonai, Mah Adam," "Shokhenei Battei Homer"). At times, these expressions of longing and of profound love for God are akin to the emotions expressed in the love poems ("Shahar Aleh Elai Dodi"). As it was customary to compose liturgical poems according to a system of acrostics, most of the religious poems begin with the letter shin (S). In his shorter poems, Ibn Gabirol set out his own name "Shelomo" in the first letters of each verse, whereas in the longer ones he duplicated this name a number of times, combining it with that of his father Judah ibn (or ben) Gabirol. Other poems were composed according to an alphabetical sequence, but even in these he wove his own name, at times beginning an alphabetically arranged poem with a verse containing his name. Although surpassed by Judah Halevi’s poems in the same vein, Ibn Gabirol’s national poetry overshadows the modest efforts of Samuel ha-Nagid and should be regarded as a link between the two. This poetry emerged from a combination of the traditional longing for deliverance and the particular fate of Spanish Jewry. Political events, the fate of Jekuthiel, and the murder of an anonymous Jewish statesman by Christians in the forests along the border ("Asher Teshev Shekhaluh;" "Lekhu Bo’u ve-Hikavezu") must have reinforced Ibn Gabirol’s awareness of the dangers of exile. In "Ge’elot" and "Ahatot" the people of Israel speak to their God as a woman to her lover, telling of her sorrows, while her lover comforts her with promises of her deliverance. In these poems fear of the final destruction and of the end of the prophetic vision mingle with a fervent belief in the advent of the Messiah. Rashahyot, a collection of limpid short poems, is marked by extreme yearning for the savior. According to Abraham ibn Ezra, Ibn Gabirol was among those who tried to predict the Day of Judgment and this tendency is apparent in his poetry. The concepts and visions in Ibn Gabirol’s mystical poems are very difficult to reconcile with the philosophical concepts expressed in his other works. In these poems, knowledge of the Divinity can be apprehended only by the elect who have plumbed the mysteries of creation through which God manifests Himself. The very names of God are endowed with mystical significance, becoming potent symbols of the power of the Creator and the wonders of His creation. The account of the creation is similar to that which appears in Sefer Yetzirah. Many midrashic elements, as well as God’s reply out of the whirlwind in Job, join to form a dynamic, mystery-shrouded account of creation breaking forth from the turmoil of primordial chaos into reality and form. There are detailed descriptions of the upper spheres, the curtain of the heavens, and the abodes of the angels, written in the spirit of "heikhalot literature and the Pirkei de-Rabbi Eliezer. The close relationship between imagery and content in some of these poems, e.g., "Ha-Ra’ash ha-Gadol," and "Shinanim Shalananim," suggests that they may have been written in moments of ecstasy. Ha-Anak is a didactic poem apparently intended to teach the basic rules of Hebrew. According to Abraham ibn Ezra (introduction to Moznayim, s89), the poem contained 400 stanzas, of which only 88 are extant, and was based upon a series of acrostics. An introduction on the superiority of the Hebrew language is followed by an explanation of how the words in the language are related to 22 letters of the alphabet in the same way that form is related to matter. “Ha-Anak,” which Ibn Gabirol called Iggeret and Mahberet, is written in plain, flowing language, and was apparently designed for study, perhaps for teachers. The book was greatly admired by Abraham ibn Ezra, who regarded it as an important contribution to the understanding of the Hebrew language. The peak of Ibn Gabirol’s poetic achievement is Keter Malkhut, a long composition in rhymed prose dealing in high style with the essence of God, the work of the creation, with a description of the “spheres,” and a confession of the low condition of man, prone to sin (see below). The many editions, manuscripts, translations, and imitations (most important by David ibn Zimra) of the work bear witness to the widespread and continuing admiration it has aroused.

Judah Al-Ḥarizi has the highest praise for Ibn Gabirol’s poetry: “All the poets of his age were worthless and false in comparison… He alone trod the highest reaches of poetry, and rhetoric gave birth to him in the lap of wisdom… all the poets before him were as nothing and after him none rose to equal him. All those who followed learned and received the use of poetry from him” (Tahkemoni, “Third Gate”).

[Encyclopaedia Hebraica / Angel Sáenz-Badillos (2nd ed.)]

Philosophy

METAPHYSICS. Gabirol presents his philosophic views in his major work, Mekor Ḥayyim ("The Source of Life"). Written in Arabic, but no longer extant in that language, the full work has been preserved in a medieval Latin translation under the title Fons Vitae. A Hebrew translation of several extracts by Shem Tov ibn Falaqua (13th century), who claimed that it contained all of Gabirol’s thought, is also extant under the title Likikutim mi-Sefer Mekor Ḥayyim. In studying Mekor Ḥayyim, however, the loss of the Arabic original makes it difficult to explain certain terms.

Mekor Ḥayyim is written in the form of a dialogue between master and pupil, a style also current in Arabic philosophic literature of that period. However, it is not a typical Platonic dialogue, in which the student discovers true opinions for himself through discussion with the master; instead, the student’s questions serve to enable the master to expound his views. Mekor Ḥayyim, divided into five treatises, is devoted primarily to a discussion of the principles of matter and form. The first treatise is a preliminary clarification of the notions of universal matter and form, a discussion of matter and form as they exist in objects of sense perception, and a discussion of the corporeal matter underlying qualities. The second treatise contains a description of the spiritual matter that under-
lies corporeal form. The third is devoted to demonstrating the existence of simple substances. The fourth deals with the form and matter of simple substances, and the fifth, with universal form and matter as they exist in themselves. The doctrine of matter and form is, in Gabirol's view (Mekor Hayyim, 1:7), the first of the three branches of science, the other two being, in ascending order, the science of (God's) will and the science of the First Essence, God. Gabirol states (5:40) that he has written a special book devoted to God's will, but no further evidence of such a book is available.

Gabirol's cosmological system generally has a neoplatonic structure but with modifications of his own. The first principle is the First Essence, which can be identified with God. Next in order of being are the divine will, universal matter and form, then the simple substances – intellect, soul, and nature, and finally the corporeal world and its parts. Gabirol holds that all substances in the world, both spiritual and corporeal, are composed of two elements, form and matter. This duality produces the differences between various substances, but, according to some passages, it is specifically the forms that distinguish one substance from the other, while according to others, it is matter. Matter is the substratum underlying the forms; forms inhere in it. All distinctions between matter and form in the various substances stem from the distinction between universal matter and universal form, the most general kinds of matter and form, which, according to Gabirol's account of being, are the first created beings. However, Gabirol presents conflicting accounts of their creation. According to one account (5:42), universal matter comes from the essence of God, and form, from the divine will, but according to another (5:36–38), both of these principles were created by the divine will. In some passages Gabirol holds that universal matter exists by itself (2:8, 5:32), which deviates from the Aristotelian account of matter, but in other passages he states, in accord with Aristotle's view, that matter is akin to privation, and form to being, and that matter exists only in potentiality (5:36).

All forms, in addition to appearing in various levels of being, are also contained in universal form. Matter and form do not exist by themselves; their first compound is intellect, the first of the spiritual substances, from which the soul emanates, it, too, being composed of matter and form. Hence, as opposed to the Aristotelian views, spiritual matter exists, and it is found in all incorporeal substances. All spiritual, or simple, substances emanate forces that bestow existence upon substances below them in the order of being. Thus, soul is emanated from intellect. There are three kinds of soul, rational, animate, and vegetative, which, besides being cosmic principles, also exist in man. In contrast to the opinion of the Aristotelians, nature as a cosmic principle emanates from the vegetative soul. Nature is the last of the simple substances, and from it emanates corporeal substance, which is below nature in the order of being. Corporeal substance is the substratum underlying nine of the ten Aristotelian *categories. The tenth category, substance, is universal matter as it appears in the corporeal world, and the nine other categories are universal form as it appears in the corporeal world.

For soul to be joined to body a mediating principle is required. The mediating principle joining the universal soul to the corporeal world is the heavens; the mediating principle joining the rational soul of man to the body is the animal spirit. The relation of man's body to his soul is also said to be like the relation between form and matter (a parallel which is difficult to reconcile with Gabirol's account of these two principles). The soul comprehends the forms but not matter, since the latter principle is unintelligible. In order to comprehend sensible forms the soul must use the senses, because these forms do not exist in the soul as they are in the corporeal world. The forms which always exist in the soul are the intelligible forms. However, since the soul was deprived of its knowledge as a result of its union with the body, these forms exist in the soul only potentially, not actually. Therefore, God created the world and provided senses for the soul, by means of which it may conceive tangible forms and patterns. It is through this comprehension of the sensible forms and patterns that the soul also comprehends ideas, which in the soul emerge from potentiality to actuality (5:41).

All forms exist in intellect, also, but in a more subtle and simple manner than in soul. Furthermore, in intellect they do not have separate existence, but are conjoined with it in a spiritual union. “The form of the intellect includes all the forms, and they are contained in it” (4:14). Intellect, which is composed of universal form and matter, is below these two principles, and therefore can conceive them only with great difficulty.

Above the knowledge of form and matter there is a far more sublime knowledge: that of the divine will, which is identical with divine wisdom and divine logos. This will in itself, if considered apart from its activity, may be thought of as identical with the Divine Essence, but when considered with respect to its activity, it is separate from divine essence. Will according to its essence is infinite, but with respect to its action is finite. It is the intermediary between divine essence and matter and form, but it also penetrates all things. In its function as the efficient cause of everything, it unites form with matter. The will, which causes all movement, be it spiritual or corporeal, is in itself at rest. The will acts differently on different substances, this difference depending upon the particular matter, not upon the will (5:37). The First Essence, i.e., God, cannot be known because it is infinite and because it lacks any similarity to the soul. Nevertheless, its existence can be demonstrated.

The goal to which all men should aspire is defined in Me−kor Hayyim (1:1, 2:1) as knowledge of the purpose for which they were created, i.e., knowledge of the divine world (5:43). There are two ways to achieve this goal: through knowledge of the will as it extends into all matter and form and through knowledge of the will as it exists in itself apart from matter and form. This knowledge brings release from death and attachment to “the source of life.”
sources. On a number of points, Gabirol's philosophy is close to the neoplatonic system current in medieval thought, for example, the concept of emanation that explains the derivation of simple substances and the concept of the parallel correspondence between different grades of being. Nevertheless, it differs on two very important points from the Muslim neoplatonism: the concept of form and matter (especially the latter) and the concept of will.

Gabirol's concept of matter is not internally coherent. On the one hand, it reflects distinct Aristotelian influence, but on the other, the occasional identification of matter with essence (substantia) suggests a Stoic influence, possibly the result of Gabirol's reading of the Greek physician Galen (second century). A concept that particularly characterizes Gabirol's system is spiritual matter. One possible source of this concept is the neoplatonist Plotinus (205–270) in his Enneads (2:4), but there is no known Arabic translation of the latter's text (see *Neoplatonism). Theorem 72 of Proclus' Elements of Theology, which was translated into Arabic, sets forth a view of matter akin to Gabirol's. Like Gabirol, Plotinus and the Greek neoplatonist Proclus (c. 410–485) regard matter as the basis of all unity in the spiritual world as well as in the physical. However, they do not maintain that universal form and matter are the first simple substances after God and His will. Pseudo-Empedoclean writings set forth the view that matter (Heb. yesod) and form are the first created beings and are prior to intellect. Ibn Falaquera states explicitly that Gabirol followed the views expressed by "Empedocles," that is, in the Pseudo-Empedoclean writings. It is even more likely that Gabirol's views on form and matter were influenced by certain texts of the tenth-century philosopher Isaac *Israel or by a pseudo-Aristotelian text (see J. Schlanger, La philosophie de Salomon Ibn Gabirol (1968), 57–70) that appear to have influenced the latter as well as other authors.

In the identification of divine will and the logos and in the concept of the omnipresence of will, Gabirol's concept of will finds a parallel in "Saadiah Gaon's commentary to Sefer Yeẓirah. There is also a partial similarity of Gabirol's teachings to those of the Muslim Ismaili sect. In the text of Mekor Ḥayyim Plato is the only philosopher mentioned.

influence of mekor ḥayyim. Mekor Ḥayyim is unique in the body of Jewish philosophical-religious literature of the Middle Ages, because it expounds a complete philosophical-religious system wholly lacking in specifically Jewish content and terminology. The author does not mention biblical persons or events and does not quote the Bible, Talmud, or Midrash. To some extent this feature of the work determined its unusual destiny. Among Jewish philosophers Mekor Ḥayyim is quoted by Moses ibn Ezra in his Arugat ha-Bosem. Abraham ibn Ezra was apparently influenced by it, although he makes no direct reference to the work, and Joseph ibn Zaddik, the author of Ha-Olam ha-Katan ("The Microcosm"), also drew on it. There is also a clear similarity between the views of the Spanish philosopher and kabbalist Isaac ibn *Latif and those of Mekor Ḥayyim. Traces of Gabirol's ideas and terminology appear in the Kabbalah as well.

On the other hand, Mekor Ḥayyim was severely attacked by Abraham *Ibn Daud, an Aristotelian, in his book Emunah Ramah. Despite these influences, however, Mekor Ḥayyim was slowly forgotten among Jews. In its own time it was not translated into Hebrew, and the original Arabic text was lost.

In the 12th century Mekor Ḥayyim was translated into Latin by Johannes Hispanus (Hispanus) and Dominicus Gundissalinus. Hispanus, also known as Aven Dauth, may possibly have been the same Ibn Daud who criticized Gabirol. Gabirol's name was corrupted to Avicebron, and he was generally regarded a Muslim, although some Christians thought he was a Christian. Some Christian thinkers were greatly influenced by Mekor Ḥayyim. Aristotelians, such as Thomas *Aquinas, sharply criticized Gabirol's views, but the Franciscan philosophers, who favored Augustine, accepted some of them. The Jewish philosophers Isaac *Abarbanel and his son Judah *Abarbanel, better known as Leone Ebreo, seem to have been familiar with some of Gabirol's works. Leone Ebreo, who quotes him by the name Albenzubron, regards him as a Jew, and states his own belief in Gabirol's views. It was only in the 19th century, 350 years after the Abrabanels, that Solomon *Munk, the French scholar, rediscovered the Falaquera extracts and through them identified Avicebron as Solomon ibn Gabirol, a Jew. Among modern philosophers, Schopenhauer noted a certain similarity between his own system and that of Gabirol.

ethical work. Tikkun Middot ha-Nefesh. ("The Improvement of the Moral Qualities"), Gabirol's book on ethics, was written around 1045 and has been preserved in the original Arabic as Kitāb Islāh al-Akhlāq and in Hebrew by Judah ibn Tibbon's Hebrew translation (1167). In this work Gabirol discusses the parallel between the universe, the macrocosmos, and man, the microcosmos. There is no mention in the book of the four cardinal virtues of the soul, a Platonic doctrine which was popular in Arabic ethical writings. Gabirol developed an original theory, in which each of 20 personal traits is assigned to one of the five senses: pride, meekness, modesty, and impudence are related to the sense of sight; love, mercy, hate, and cruelty, to the sense of hearing; anger, goodwill, envy, and diligence, to the sense of smell; joy, anxiety, contentedness, and regret, to the sense of taste; and generosity, stinginess, courage, and cowardice, to the sense of touch. Gabirol also describes the relation between the virtues and the four qualities: heat, cold, moistness, and dryness, which are incorporated in pairs in each of the four elements of which the earth is composed: earth, air, water, and fire.

philosophical poetry. Gabirol gives poetic expression to the philosophical thought of Mekor Ḥayyim in the first part of his poem Keter Malkhut (The Kingly Crown, tr. by B. Lewis, 1961). Although the conceptual framework of Keter Malkhut is not identical in every detail to that of Mekor Ḥayyim, the differences are in many cases only of phrasing or emphasis.
The conceptual variations reflect the contradictions apparent in *Mekor Hayyim* itself. *Keter Malkhut* opens with praise for the Creator and an account of His attributes: His unity, existence, eternity, and life and His greatness, power, and divinity. God is also described as "Light," according to the neoplatonic image of the deity. "Thou art the supreme light and the eyes of the pure soul shall see thee" (tr. Lewis, 31). Nevertheless, Gabirol stresses that God and his attributes are not distinguishable: we refer to attributes only because of the limited means of human expression.

The next section speaks of divine "Wisdom" and the "predestined Will" (*ha-Hefez ha-Mezumman*), which together parallel the single concept of will (*Raazon*) in *Mekor Hayyim*. "Thou art wise, and from Thy wisdom Thou didst send forth a predestined will, and made it as an artisan and a craftsman, to draw the stream of being from the void..." (ibid., 33). His description of the creative activity of the predestined will corresponds with the concept of will in *Mekor Hayyim*, but despite the close ties between them, wisdom and will are not as closely identified with each other in *Keter Malkhut* as in *Mekor Hayyim*. In *Mekor Hayyim* Wisdom is seated upon the Throne, which is the first matter; in *Keter Malkhut* the link between these two substances is not clearly stated: "Who can come to Thy dwelling place, when Thou didst raise up above the sphere of intelligence the throne of glory, in which is the abode of mystery and majesty, in which is the secret and the foundation to which the intelligence reaches..." (ibid., 47). Apparently, in *Keter Malkhut* the foundation or element (*ha-Yesod*) is the first matter.

The will is the instrument and the means of creation; after the description of the will the poet goes on to describe the structure of the world according to Ptolemaic cosmology. The earth, "half water, half land," is surrounded by a "sphere of air," above which there is a "sphere of fire." The world of the four elements is circumscribed by the spheres of the moon, Mercury, Venus, the sun, Mars, Jupiter, Saturn, the zodiac, and the diurnal sphere, "which surrounds all other spheres." The distance of these spheres from the world, the length of their orbit, the magnitude of the heavenly bodies found within them, and, particularly, their forces and their influence upon nature, worldly events, and the fate of man are all described according to Ptolemaic and Muslim astronomy. However, beyond the nine spheres there is yet another, which is the result of philosophical abstraction: "...the sphere of the Intelligence, the temple before it," from whose luster emanates the "radiance of souls and lofty spirits...messengers of Thy Will" (ibid., 45). Above this sphere is "the throne of glory, in the abode of mystery and majesty," and beneath it is "the abode of the pure souls" (ibid., 47). In this exalted sphere, also, the punishment of sinful souls will be meted out. This part of the poem ends with a description of the soul that descends from the upper spheres to reside temporarily in matter, the source of sin, from which the soul can escape only by "the power of knowledge which inheres" in it (ibid., 50). The concluding section of the poem contains a confession of sins (*viddui*), and for that reason *Keter Malkhut* was included in the Day of Atonement prayer book of some Jewish rites.

Among the translations and editions of Gabirol's philosophical works are: the Hebrew text of Ibn Falaluqqar's *Likutim mi-Sefer Mekor Hayyim*, with a French translation by S. Munk, in the latter's *Mélanges de philosophie juive et arabe* (1859, 1927); a German edition by C. Baemker of the Latin translation by Johannes Hispanus (Hispalensus) and Dominicus Gundissalinus (1895); *Fountain of Life*, a partial translation by H.E. Wedeck with an introduction by E. James (1962); *La Source de Vie*, Livre III, translated with introduction, notes, and bibliography by F. Brunner (1950); *Sefer Mekor Hayyim*, a modern Hebrew translation by J. Bluestein (1926); *Fountain of Life* in an English translation by A.B. Jacob (1987); *Improvement of the Moral Qualities*, including the Hebrew text, translated with an introduction by S. Wise (1901); *Keter ha-Malkhut*, edited by I.A. Zeidman (1950).

[Shlomo Pines]

**GABLER, MILTON** (1911–2001), U.S. jazz impresario. Born in Harlem in New York City, Gabler said he fell in love with jazz at his family’s summer cottage in Throgs Neck, the Bronx. While a student in high school, he worked at his father’s hardware store and then transferred to another shop his father owned nearby, the Commodore Radio Corporation, a popular supply store. Gabler hooked up a loudspeaker over the door and tuned in a local radio station. Customers kept asking if the store sold records. It didn’t, but it soon did. By 1934, the renamed Commodore Music Shop became the country’s most important source of records and a meeting ground for fans and musicians. The store later had three addresses on East 42nd Street and had a branch on 52nd Street, where the jazz clubs were clustered. Also in 1934, Gabler began buying boxes of out-of-print jazz recordings from major record companies that had no plans to re-release them. Gabler then became the first person to sell re-issued records and was the first to print the names of all participating musicians on jazz records. In 1939, Gabler recorded Billie Holiday’s chilling and now-classic ballad about lynching, “Strange Fruit,” after her record producer refused for fear of losing sales in the South. On Commodore Records, Holiday sang, “Southern trees bear a strange fruit. Blood on the leaves and blood at the root.” Throughout the 1930s and 1940s, Commodore issued almost 90 recordings, using more than 150 musicians and singers. In 1941, Gabler was hired by Decca Records, although he continued to produce records for Commodore until 1950. He produced records for Peggy Lee, the Weavers, and the Ink Spots, among many others. He was the first to pair Louis Armstrong and Ella Fitzgerald on record and, as a lyricist, he wrote the words for “In a Mellow Tone” for Duke Ellington and “Love” for Nat King Cole. Gabler was one of the first to make recordings of Broadway shows and was a midwife at the birth of rock ’n’ roll. In 1954, he signed Bill Haley and the Comets to Decca. They were scheduled to record two songs. The first, “13 Women,” was considered more promising. The other was “Rock Around the Clock.” The group rehearsed one quick verse to set sound levels and recorded the song live in one take. Sound engineers were said to be alarmed at the high sound levels, but the song soon energized the market for the new sound of rock ’n’ roll. Gabler was the uncle of entertainer Billy “Crystal.

[Stewart Kampel (2nd ed.)]

**GÁBOR** (Greiner), **ANDOR** (1884–1953), Hungarian poet and journalist. Gábor first wrote for the Jewish press, publishing violent attacks on Hungarian antisemitism. He wrote a prize-winning translation of Frédéric Mistral’s Provençal epic, Mirèio, and was a founder of and writer for Hungary’s political cabaret. After the failure of Béla “Kuni’s Communist regime.

Gábor was an exile in Vienna and Moscow, but returned to Budapest after World War II and edited a satirical paper.

**GABOR, DENNIS** (1900–1979), British physicist and electrical engineer of Hungarian birth. Gabor wrote on electrical transients, gas discharges, electron dynamics, communication theory, and physical optics. He was also greatly concerned with the impact of science and technology upon society. Gabor taught at the University of Berlin-Charlottenburg as an assistant for two years. From 1926 to 1933 he worked first for the German research association for high voltage equipment and then as a research engineer in an engineering company. Gabor settled in England in 1933. Gabor theorized about a process of photographic recording which he named holography (1947). In the 1960s with the invention of laser beams the theory was realized, permitting cameraless three-dimensional full color photographic images. He was elected a Fellow of the Royal Society of London in 1956 and became professor of applied electron physics at the Imperial College of Science and Technology, University of London, two years later. Gabor was awarded the Nobel Prize for physics in 1971.

[J. Edwin Holmstrom]

**GÁBOR** (originally Lederer), **IGNÁC** (1868–1944), Hungarian philologist. Born in Abaújkomlos, Gábor studied at the Budapest rabbinical seminary and at the universities of Budapest and Paris, where he specialized in Semitic and Indo-European philology. His research was confined mainly to the theory of rhythm, and he translated medieval Hebrew poetry and various Sanskrit, Norse, French, Italian, Dutch, and other works into Hungarian. He initiated the “Popular Jewish Library,” and edited a French-language newspaper, Le Progrès (1896–99). His works include a translation into Hungarian of the 13th-century Icelandic Poetic Edda (1905); Manoello élete és költészete (“Poems and Life of Imanuel of Rome,” 1922); A magyar ritmus problémája (“The Problem of Rhythm in Hungarian,” 1925); and Der hebraeische Urrhythmus (1929). Gábor and most of his family died in the Holocaust at the end of 1944.

**GABOR, JOLIE** (1894–1997), **MAGDA** (1914–1997), **ZSA ZSA** (1917– ), and **EVA** (1919–1995). The three Gabor sisters (Magda, Zsa Zsa, and Eva) and their mother, Jolie, were among the first celebrities in post-World War II America to be famous for being famous. Although renowned for their beauty, glamour, and quick wit, the Gabors were also notorious for their many marriages to wealthy men. In truth the Gabors were smart business women whose fortunes were all self-made and who, more often than not, suffered broken hearts. Matriarch Jolie was born Jansci Tilleman in Budapest, Hungary, and married Vilmos Gabor, father of her daughters Magda, Sári (Zsa Zsa), and Eva. Zsa Zsa, already a beauty in Budapest, married the Turkish consul at 16 (she is rumored...
to have had an affair with Kemal Attaturk). By 1939 Eva was already in Hollywood, launching her acting career. During the war Magda was active in resistance activities in Budapest. Her reported relationship with the Portuguese consul afforded her the protection to escape to the border and to also have her parents escape from Hungary. After the war, Zsa Zsa, by then Mrs. Conrad Hilton, was able to appeal to Secretary of State Cordell Hull to have her parents admitted to the United States. Zsa Zsa’s career was launched in 1951 when she became a regular on the TV show Bachelor’s Haven, displaying her razor-sharp wit. Movie roles followed in such films as Moulin Rouge (1952), Lilli (1953), and Touch of Evil (1958). She married eight times, and had one daughter, Constance Francesca Hilton. For many years Zsa Zsa made a considerable income from department store appearances and other endorsements. Zsa Zsa gained a new measure of infamy for a 1989 trial after she slapped a police officer in Beverly Hills. Eva, the most serious actress of the three sisters, appeared in such films as A Royal Scandal (1945), The Last Time I Saw Paris (1954), and Don’t Go Near the Water (1957). She is best known for her role as the socialite wife of Eddie Albert in the 1960s CBS sitcom Green Acres. She is also known to countless generations of children as the voice of “Duchess” in the animated film The Aristocats. She married five times, all of which ended in divorce. For many years, Eva maintained a very successful wig business.

[Adam Wills (2nd ed.)]

GABRIEL, GILBERT W. (1890–1952), U.S. drama critic and author. Born in Brooklyn, New York, Gabriel graduated from Williams College in 1912. He worked at first as a reporter on the New York Evening Sun, then became literary editor (1915–17), music critic (1917–24), and drama critic (1925–29). He subsequently worked for The New York American (1929–37). He also wrote articles, drama criticism, and stories for such magazines as Vanity Fair, The New Yorker, Town and Country, The Stage, Harper’s Bazaar, and Collier’s. He lectured on drama and criticism at New York University and created the New Yorker “Profile” department. During World War II, Gabriel was second lieutenant in the Army and served two years in Alaska. In 1944 he went to London as deputy chief reporter on the New York Times. He left the service later that year with the rank of lieutenant colonel. Gabriel became drama critic for Theatre Arts magazine and in 1949 began to work for Cue magazine. Gabriel’s books include The Seven-Branched Candlestick (1916), Giminy (1922), Brownstone Front (1928), Famous Pianists and Composers (1928), Great Fortune (1933), Love from London (1946), and I Thee Wed (1948).

[Ruth Beloff (2nd ed.)]

GABRIELOVITCH, OSIP SOLOMONOVICH (1878–1936), pianist and conductor. Born in St. Petersburg, Gabriellovitch studied there with Anton *Rubinstein, Liadov, and Glazunov, and later with Leschetizky in Vienna. After 1896 he toured Europe and the United States as an internationally renowned concert pianist and conductor. In 1918 he was appointed conductor of the Detroit Symphony Orchestra. Ten years later he became, additionally, joint conductor of the Philadelphia Orchestra with Leopold Stokowski. He was also known for his series of historical concerts illustrating the development of keyboard music from Bach to his own day. He married the contralto Clara Clemens, the daughter of Mark Twain.

GAD (Heb. 72, “fortune”; cf. Gen. 30:11), a deity of fortune, equivalent in function and meaning to the Greek Tyché and Latin Fortuna. In Isaiah 65:11 Gad is mentioned together with Meni as the beneficiary of a food offering: “Who prepare a table for Gad, and who give Meni a full drink offering.” Although the name appears here (according to the masoretic pointing) preceded by the definite article, it refers to the deity (and see below). The Septuagint translates “for Gad” as τὸ δαίμονό, “for the demon,” while Vulgate renders both Gad and Meni by Fortuna. The rite described has elements in common with the Roman lectisternium in which food was spread on a table before an image of the deity. The Roman ceremony was meant to propitiate gods and repel pestilence and enemies. The rite condemned by the prophet may have served a similar function. This is the only unequivocal mention of the deity in the Bible. There are other references, however, which might be connected with the deity. Thus a place named Baal-Gad, “Lord of fortune,” is mentioned as the extreme northern limit of Joshua’s conquest (e.g., Josh. 11:17): Migdal-Gad, “Tower of Gad,” appears as a place in the southwest lowlands of Judah (Josh. 15:37). The word gad also occurs in proper names, but probably as the appellative meaning “(good) fortune” rather than as the name of a god, e.g., Gaddi (Num. 13:11), Gaddiel (Num. 13:10), and Azgd (Ezra 2:12). This is almost certainly the case in the name Gaddiyoi (“יהוה is my fortune”), which occurs on one of the Samaria ostraca. The character of the element gad in the names Gad Melek and Gad-Marom, on seals from the fifth to fourth centuries b.c.e. and an earlier period respectively, found in Jerusalem, is uncertain.

Gad also appears in other Semitic religions as an element in names. Though the meaning cannot always be determined, in many cases it is possible to interpret the element gad as an appellative meaning “fortune.” Thus in a number of Palmyrene inscriptions the word occurs in combinations where the second element is the name of Nabû, Bel, and other Babylonian deities. One Palmyrene inscription found at a sacred spring (Elfa), reading “Gadda,” clearly points to a deity to whom the spring was sacred. A bilingual inscription of the second century CE equates Palmyrene Gad with Greek Tyché. In Phoenicia the word is found as an element in personal names (e.g., גַּדַּי). A Punic (overseas Phoenician) inscription of the 4th–3rd century B.C.E. from Sardinia reads: bršt lnt pn b’lt whgd, “for the Lady, for Tinit Face-of-Baal and Gad.” An early second century B.C.E. Punic inscription from Spain (217) reads: bršt lnt ʿl rt whgd, “For the Lady, for mighty Tinit and the Gad” (cf. the definite article used with Gad in Isa. 65:11). It appears also as an element in Nabatean (e.g., ʿbṭḥ), Ara-
maic (e.g., גדיא) and South Arabian (e.g., עמגד) names. As a heterogram, GDE survived into Middle Persian, where it is read as zwarrah, “fortune.” Babylonian talmudic N72 refers to the god/genius of fortune and serves as well as the common noun “luck.”

[GAD (Heb. 72), one of the 12 tribes of Israel, tracing its descent to Gad, a son of Jacob, borne to him by Zilpah, the maid servant of Leah (Gen. 30:10–11). The tribe was comprised of seven large families, the Zephonites, Haggites, Shunites, Oznites, Er- ites, Arodites, and Areliots, named after the seven sons of Gad (Num. 26:15–17; with slight differences in Gen. 46:16). During the period of the Conquest of Canaan, Gad’s fighting men numbered 40,500 (Num. 26:18). According to Jacob’s blessing, “Gad shall be raided by raiders; but he shall overcome at last” (Gen. 49:19). Moses declared: “Poised is he like a lion to tear off arm and scalp” (Deut. 33:20), showing that Gad was a tribe of fighting warriors. Indeed, in the era of the monarchy, the Gadites are described as “expert in war,” as having faces “like the faces of lions,” and as being “as swift as gazelles upon the mountains” (1 Chron. 5:18; 12:9).

Its Territory

When Transjordan was conquered by Israel in the time of Moses, the Gadites (together with the Reubenites and half of Manasseh) requested permission to settle in the pasture lands east of the Jordan because of their abundant cattle. Moses acceded to their request, but stipulated that they first cross the Jordan and participate fully with all the tribes in the wars of conquest (Num. 32; Deut. 3:12–20; Josh. 1:12–18; 22:1ff.). Accordingly, the Gadites settled in Gilead, which was in the center of Transjordan, between the territory of Reuben in the south and that of the half tribe of Manasseh in the north. In the east their territory bordered that of the Ammonites and that of various nomadic desert tribes. On the west was the Jordan, from the Sea of Chinnereth to the Dead Sea; in the south, the vicinity of Heshbon and the northern tip of the Dead Sea; in the north the border passed by way of Mahanaim (Khirbet Mahna south of Nahal-Jabesh) and Lidbir (probably Lo-Debar (11 Sam. 9:4), south of Nahal-Arar) to the edge of the Sea of Chinnereth. The eastern border apparently receded westward to the region of Rabbath-Ammon, and then extended north-eastward to the region of the upper Yarmuk whence it turned to Mahanaim. This description of the territory of Gad in ac-
ments subsequently caused changes in the region of the tribe’s settlement, sometimes for the worse (e.g., I Kings 22:3; 11 Kings 10:33) and sometimes for the better (e.g., 1 Chron. 5:11).

Its History

The history of the tribe consists of a succession of wars with Ammon and Moab in the south, with the Kedemites, the Hagrites, and nomadic tribes in the east, and with Arameans in the north. During the era of the Judges, the submission of the people of Succoth and Penuel to the Midianites and the Kedemites led them into a fratricidal war with Gideon (Judg. 8; cf. verse 5; Josh. 13:27). The Gileadites as a whole were saved from the Ammonites by Jephthah (Judg. 11). At this time the Gileadites (= Gad) and the Benjamites entered into marital ties and a fraternal alliance (Judg. 21). In addition, the reign of the Benjamite Saul was a period of relief and respite for the tribes of Transjordan (1 Sam. 11:1 Chron. 5). Hence, the notable act of loyalty of the Gileadites to the slain Saul (1 Sam. 31:11–13) and to his family. The capital of Saul’s son Ish-Bosheth was Mahanaim (11 Sam. 2:8–9). Saul’s grandson Mephiboseth took refuge in Lo-Debar (11 Sam. 9:4–5), but this, in northern Gilead, was probably not Gadite but Manassite.

David’s wars with Aram, Ammon, and Moab greatly strengthened the position of Israelite Transjordan. In consequence the Gileadites supported David, and Mahanaim became his base, in his war against Absalom (11 Sam. 17:24–27; 19:33). Mahanaim later became the station of one of Solomon’s 12 commissioners (1 Kings 4:14). In the era of the divided kingdom, Gad belonged to the kingdom of Samaria. Elijah the prophet was a native of Gilead (1 Kings 17:1). When King Mesha of Moab rebelled against Israel, he dealt harshly with the Gadites at Aroth (Mesha Stele, 10–13, in: Pritchard, Texts, 320). The Gileadites suffered greatly from the Arameans and the Ammonites during Israel’s weakness in the first half of the rule of the House of Jehu (see *Jehu, *Jehoahaz; cf. Amos 1:3, 13); but Gilead was reconciled by Jeroboam 11 (cf. Amos 6:13; Lo-Dabar and Karnaim = Lo-Debar and Asheroth-Karnaim). The reign of Jeroboam son of Joash seems to have been a period of respite in their history (11 Kings 14:28; cf. 1 Chron. 5:17). There are allusions to some sort of ties between Gilead and the kingdom of Judah during the reign of Jotham king of Judah, on the eve of the destruction of Gilead (1 Chron. 5:17; 11 Chron. 26:5). In 732 B.C.E. the territory of Gad was laid waste by Tiglath Pileser III, and most of its inhabitants were exiled from their land (11 Kings 15:29), which was then invaded by the Ammonites (Jer. 49:1). However, there are indications that a remnant of the Gadites remained in southern Gilead, and it is possible that the Tobians known at the beginning of the Second Temple period derived from them. The Gadite remnant and the Judean refugees in Ammon (Jer. 41) formed the foundation of the Jewish community that developed in Transjordan in the days of the Second Temple.

[Yehuda Elitzur]

In the Aggadah

Gad was born on the tenth of Heshvan and lived to the age of 125 (Yal. Ex. 162). He was born circumcised (Rashi to Gen. 30:11). His name “Gad” was a portent of the manna (which was “like coriander seed,” Heb. gad, Ex. 16:31; Ex. R. 1:15). He was among the brothers whom Joseph did not present to Pharaoh, lest Pharaoh, when he saw their strength, would enlist them in his bodyguard (Gen. R. 95:4). Gad was ultimately buried in Ramia, in the portion of his tribe, on the east bank of the Jordan (Sefer ha-Yashar, end). According to some, Elijah was a descendant of Gad (Gen. R. 7:8).

GAD (Heb. גָּד), the seer (Heb. הָזֶה); one of the three prophets during the days of King *David*. Gad joined David when the latter fled from Saul to Adullam and he persuaded him to return to Judah (1 Sam. 22:5). He also instructed David to purchase the threshing floor of *Araunah the Jebusite and to build an altar there (11 Sam. 24:18ff.; ) this later became the site of Solomon’s Temple (1 Chron. 22:1). It is known that he remained in the court of David when the latter reigned in Jerusalem (11 Sam. 24:11–14; 1 Chron. 21:9–30). He was also one of the organizers of the levitical service in the Temple (11 Chron. 29:25) and, according to Chronicles, one of the chroniclers of the history of David (1 Chron. 29:29). An anonymous opinion in the Babylonian Talmud (BB 15a) credits Gad along with the prophet Nathan with completing the Book of Samuel following Samuel’s death.

[Josef Segal]

GAD, DEVORAH (1914– ), architect and interior decorator. Gad was born in Bukovina and studied architecture and construction engineering in Vienna. Immigrating to Ereẓ Israel in 1936 she first worked with Professor Oskar Kaufmann but later opened her own office together with her husband Yehezekel Gad. Among other commissions the firm designed the first buildings of the Israel embassies abroad, the residence of the foreign minister, the offices of El Al and Zim in New York, London, and Paris, and together with Professor Alfred Mansfeld the interiors of nine passenger ships, including the Shalom. Together with her partner L. Noy she also designed the interior of the Knesset in Jerusalem. She was awarded the Israel Prize for arts in 1966.

ENCYCLOPAEDIA JUDAICA, Second Edition, Volume 7
GADARA, ancient city of Gilead. It is first mentioned as a Hellenistic settlement in the description of the conquest of Erez Israel by *Antiochus III (Polybius, 5:71, 3). Although the name is of Semitic origin, the new settlers called it Gadara after a Macedonian city. It was among the cities captured by Alexander *Yannai, but *Pompey took it from the Jews and included it in the *Decapolis. It was part of *Herod’s domain in the Roman period and later became autonomous with the right of minting coins. An important center of Hellenistic culture, it was the birthplace of the poets *Meleager and Menippus and the philosopher *Philodemus. Jews lived there both during and after the Jewish War (60–70/73). In the days of R. Gamaliel and R. Akiva there is a reference to “Shizpar, the head of Geder” (RH 22a); the philosopher Oenomaus of Gadara (called “ha-Gardi” in the Talmud) was a friend of R. Meir (Lam. R., Proem 2; cf. Hag. 15b). In the Byzantine period, bishops of Geder are mentioned up to the sixth century. Under Arab rule the city declined and is the present-day village of Muqays (Umm Qeis) situated at a height of 1,194 ft. (364 m.) with a splendid view of the Sea of Galilee, the Jordan Valley, Galilee, and Mt. Hermon. First identified by Seetzen in 1806, the site has been frequently explored and excavated, especially since 1974 with the work of the German Evangelical Institute for the Archaeology of the Holy Land. The site contains many traces of ancient habitation: paved colonnaded streets; two temples, a fortified acropolis, baths, two theaters, a stadium; ruins of houses; tombs with sarcophagi, inscriptions, and statues, etc. The Jewish presence at Gadara is represented by the discovery of two blocks carved with a wreath containing a menorah flanked by a shofar and a palm branch; these may have come from a synagogue. On the bank of the Yarmuk are hot springs known as *Hammat Gader. The city’s area may have extended to the Sea of Galilee as indicated in the New Testament story of the “Gadarene swine” but variants of the text mention different cities, e.g., Gerasa (Matt. 8:28; Mark 5:1; Luke 8:26).

[Michael Avi-Yonah / Shimon Gibson (2nd ed.)]
GADNA (Heb. גַּדְנַ״ע; abbr. for גַּדְנַ״ע נְוֶּאַר, Gedudei No’ar; “Youth Corps”), Israel government youth movement for training 13- to 18-year-olds in defense and national service. Gadna, whose membership is voluntary, functions in high schools and youth clubs. It trains its members in firsthand knowledge of Israel’s geography and topography, physical fitness, marksmanship, scouting, field exercises, comradeship, teamwork, and mutual aid. It is administered by the Gadna Command which functions in the framework of the Israel Defense Forces and the Ministry of Defense and cooperates with the Ministry of Education and Culture. The corps may be activated in an emergency by special permission of the chief of staff.

In addition to regular training, Gadna organizes route marches for 16-year-olds, sharpshooting clubs with nationwide contests on Lag ba-Omer, and an international Bible contest for youth. In its air section (Gadna-Avir) youngsters construct model planes, study aviation, and practice gliding, under the direction of Air Force officers. In the naval section (Gadna-Yam) naval officers teach swimming, rowing, sailing, navigation, diving, and underwater fishing. There is a Gadna orchestra, which has played abroad. During vacations third-year high school students go to Gadna work and training camps in border settlements and immigrant villages, or participate in national service projects in landscape improvement, archaeological excavation, and assistance in hospitals. The corps also helps to reeducate and reintegrate delinquent youth.

Gadna, established in 1948, was the successor to Hagam (חֲגוֹמ, “Extended Physical Training”), which was founded in 1939, and Alummin, a general organization for the 14- to 18-year-old group. Its purpose, defined by Prime Minister Ben-Gurion in 1949, was "training for peace and not for war." In 1951 a Gadna training farm was set up at *Be’er Orah in the Negev, followed by others at Nurit in the Gilboa Hills, and at *Sedeh Boker and Kez in the Negev. In the early 1950s Gadna youngsters went out to help newcomers in immigrant villages and introduce them to Israeli life through Hebrew lessons, Israel songs, and games. Gadna’s work has been of interest to visitors from African and Asian countries, and a Gadna delegation traveled to Ghana, Nigeria, and Liberia in 1959. The first Gadna course for youth from Africa and Asia was organized in 1961, and Gadna instructors were later sent to various countries. In 1968 a Gadna unit was organized for *Druze youth. The corps published a monthly newspaper Be-Mahaneh Gadna ("In the Gadna Camp").

During the Sinai Campaign of 1956 and the Six-Day War of 1967, Gadna youngsters effectively replaced personnel in the postal system, civil defense, schools, hospitals, industry, and agriculture. Subsequently Gadna operated mainly in school frameworks. In some schools, Gadna is part of the curriculum, while others send students for a week to Gadna military camps that prepare them for military service, including weapons training and discipline. Different military branches run their own Gadna groups, such as the Air Force and Navy.

[David Coren]

**GADOL, MOISE S.** (1874–1941), U.S. founder and editor of La America. Gadol was born in Rostchuck, Bulgaria. At the age of 14 he was offered an opportunity to study in the Alliance School in Paris but felt compelled instead to assist his family who were of modest means. His early career was varied: a clerk in a law office, a salesman, and army service, among other jobs. He continued to study and organized the first Zionist society in Rostchuck.

He came to the United States for a visit and was drawn to the Sephardi community of New York whom he felt lacked any sense of self-identity and was ignored by the far more numerous Ashkenazim. His tool was the first Judeo-Spanish newspaper and he became a publisher, adding to the rich variety of local newspapers prevalent among the immigrant populations of New York. He entitled his publication La America. According to historian Marc "Angel, Gadol convinced the leaders of the Hebrew Immigrant Aid Society to establish an Oriental Bureau in order to help the “Oriental” Jews. Gadol himself served as the secretary of the Oriental Bureau, initially as a volunteer, and spent many hours helping newly arrived Sephardi immigrants get through the immigration procedures. He also helped many find jobs and keep their jobs. In the pages of La America, he printed a glossary in order to teach Sephardim English. Interestingly, he also included Yiddish definitions, believing that since many Sephardim worked for Yiddish-speaking employers, Sephardim needed to know Yiddish in order to advance in America.

The newspaper included news items about Sephardi communities in the U.S. and abroad. It included poetry and some literary work. Gadol was a forceful spokesman for Zionism, which caused resentment among some Sephardim of Turkish origin, who were cautious about endangering Turkish-Jewish relations. Like other immigrant newspapers, he pushed for the advancement of workers and for individual initiative. Gadol printed several articles by a person who signed her name simply as Miss A, which argued for the equality of women.

Gadol’s successes, however, did not last. His publication went under in 1925 and he tried his hand at business without success, eventually serving as a supplier of leather to shoe stores. The death of his wife in 1933 shattered him and only the intervention of a fellow Rostchuck native brought him back from the brink of despair. Once again he attempted to start his publication and he did write and publish a pamphlet Christopher Columbus Was a Spanish Jew.

He died a broken man and only the intervention of his former mentor saved him from potter’s field. Still, even in death he remains controversial. A historical article by Marc Angel led to a vehement denunciation by Albert *Amateau, who, at the age of 101, wrote an angry recollection of his dealings with Gadol.

[Michael Berenbaum (2nd ed.)]

GAETA, town N.W. of Naples. According to the Chronicle of *Ahimaaz (1054), *Aaron of Baghdad lived for a time in Gaeta in the ninth century, teaching his mystical and esoteric doctrines. The main occupation of the Jews of Gaeta in the 12th century was dyeing, on which they had to pay a special tax. From the 15th century Jewish loan-bankers and pawnbrokers were also active there. In 1468 the city requested the permission of King Ferrante I to expel a Jewish moneylender for usurious practices and to limit the sale of pawned goods. In 1471 a certain Salomon, and that the sale of objects given in pawn should not be permitted to give loans at interest (with the exception of * Ahimaaz by A. Zefoni (Zvi Preigerzon) (1966). In 1970 the number of Jews in Gadyach was estimated at about 75 (15 families). From the 1990s hundreds of hasidim from all over the Ukraine gathered annually in the town to pray at Shneur Zalman’s grave.

[Michael Galchinsky (2nd ed.)]
litical opposition and in July 1747 the Jews were again expelled from the whole kingdom. Jews returned to Gaeta in the 19th century. After World War II ships carrying Jewish illegal immigrants to Erez Israel passed through the port of Gaeta.

**GAFFAREL, JACQUES** (1601–1681), French Catholic theologian and Hebrew scholar. Gaffarel, who was particularly interested in kabbalistic literature, published a description of the manuscripts used by *Pico della Mirandola* (Paris, 1651). Gaffarel's writings include: (1) *Les tristes pensées de la fille de Sion sur les rives de l'Euphrate* (ibid., 1624); (2) *Abdita divinae cabalae mysteria contra sophistarum logomachiam defensa* (ibid., 1625; translated into French by Samuel b. Hesed as *Les profonds mystères de la Cabale divine*, Paris, 1912); and *Joh HWH, Dies Domini* (ibid., 1629; according to *Steinschneider* the fictitious author's name Elia b. David was invented by Gaffarel). He also published, with an introduction – without the author's consent – the *Historia de gli riti Hebraici* by Leon *Modena, whom he had met in Venice in 1633. His *Curiosités inouyés sur la sculpture talismanique des Persans; Horoscope des Patriarches et lecture des estoilles* (first published in 1632 or 1637) was published in a Latin translation with an extensive commentary by M.G. Michaelis (Hamburg, 1676).

[Joseph Elijah Heller]

**GAGIN, HAYYIM ABRAHAM BEN MOSES** (1787–1848), chief rabbi of Jerusalem. Gagin was born in Constantinople. He became *rishon le-Zion* (Sephardi chief rabbi) in 1842 and was the first to bear the official title of *hakham bashi*. Gagin was responsible for the taxes of the Jews to the government, and was granted authority to impose taxation within the community on meat (*gabela*), *mazzot*, wine, etc. He lived in the Old City of Jerusalem in the courtyard of his grandfather, Shalom *Sharabi*, the kabbalist, and the government placed a guard of ten soldiers near his dwelling to protect the Jewish quarter. In his time a violent dispute broke out among the rabbis of Jerusalem with reference to the *Kolelim* and the distribution of the funds for them which arrived from abroad. The following of his works were published: *Minḥah Tehorah* (Salonica, n. d. c. 1825–36); *Hukkei Hayyim* (1843); *Hayyim mi-Yrushalayim* (1882); and *Yeriot ha-Ohel* (2 pts., 1886–1904).

**BIBLIOGRAPHY:** Frumkin-Rivlin, 3 (1899), 276–8; M.D. Gaon, *Yehudei ha-Mizraḥ be-Erez Israel*, 2 (1938), 178–9.

[David Cocos]

**GAGIN, HAYYIM ABRAHAM** (b. circa 1450), Moroccan rabbi and poet, first known member of a family which produced many talmudic scholars. Gagin was born in Fez, but when still young, probably at the time of the massacre of the Jews of Fez in 1465, he left for Spain. There he studied under R. Isaac Aboab, the Sephardic chief rabbi (1787–1848), particularly on the Spanish expulsion. Nothing is known of his descendants until the 18th century, when they immigrated to Jerusalem, where the Gagin family produced a number of talmudic scholars, among whom was R. ḤAYYIM ABRAMAH *GAGIN, the first hakham bashi of Erez Israel.*

**GAGIN, SHALOM MOSES BEN HAYYIM ABRAHAM** (d. 1883), talmudist and emissary of Erez Israel. He was the son of Hayyim Abraham *Gagin, from whom he inherited a large library, of which *Frumkin made use in his Toledot Ḥakhmei Jerusalem.* Shalom was a member of the kabbalistic circle of scholars at the yeshivah “Bet El” in Jerusalem. From 1862–65, as an emissary of Jerusalem, he visited Tripoli and Algeria, as well as Tunis, where he influenced Caid Nissim Shamama to bequeath a large sum of money to Erez Israel. The vicissitudes which had degenerated into a social conflict, ended with the victory of the viewpoint of the Spanish Jews. The vicissitudes which resulted from this dispute were described by Gagin in *Ez Hayyim,* lengthy extracts of which were published by J.M. Toledano in his *Ner ha-Ḥaṿarav* (1911). He also wrote numerous *kinot,* particularly on the Spanish expulsion. Nothing is known of his descendants until the 18th century, when they immigrated to Jerusalem, where the Gagin family produced a number of talmudic scholars, among whom was R. ḤAYYIM ABRAMAH *GAGIN, the first hakham bashi of Erez Israel.*

[Yehuda Slutsky / Shmuel Spector (2nd ed.)]

Gaisin (1922–1992), U.S. magazine publisher. Gaines, the son of Max Gaines, publisher of the All-American Comics division of DC Comics and also an influential figure in the history of comics, having tested the idea of selling comics on newsstands, inspiring the creation of the character Wonder Woman. A veteran of the U.S. Army, William attended New York University. Upon his father's death, he inherited a faltering comic-book empire in the late 1940s and turned it into a huge success with science fiction, fantasy, and realistic war comics. His horror comics were subtle satiric approaches to horror with genuine dilemmas and startling outcomes, often drawn from classic authors like Edgar Allan Poe and H.P. Lovecraft. His fantasy titles dealt with adult issues such as racism and the meaning of progress and had stories adapted from the work of Ray Bradbury and others. The books featured artists who came to be among the most prominent commercial illustrators of the 20th century, including Will *Elder.

The first issue of Mad reached the newsstands in 1952 and had sharp sendups of movies, advertising celebrities, and comic strips: Mickey Mouse became Mickey Rodent and Superman was Superduperman. To the delight of its large teenage audience, it brought satire into the mainstream, along with up-to-the-minute New York humor sprinkled with Yiddish, nonsense, and non sequiturs. The cover featured a goofy-faced, gap-toothed boy named Alfred E. Neuman with the caption “What? Me worry?” It was an image and slogan that proved iconic, and the character appeared on the cover of virtually every issue of Mad and was picked up and satirized in other national publications.

Gaines's comics may have appealed to adults, but the general public considered comic books to be aimed at children. With the publication of Dr. Fredric Wertham's *The Seduction of the Innocent*, which found damaging material in the comics, comic books in the Gaines style drew the attention of the U.S. Congress and other moralists. Under questioning by a Congressional committee, Gaines defended his magazine. “The truth is that delinquency is the product of the real environment in which the child lives,” Gaines told the committee in voluntary testimony, “and not of the fiction he reads.” But the Comics Code Authority, modeled on motion-picture production rules, banned bloodthirsty material and Gaines suspended publication of his horror comics. He reissued Mad as a magazine in 1955 to skirt the code.

[Stewart Kampel (2nd ed.)]

Gaisin (Gaysin), city in Vinnitsa district, Ukraine, formerly within Poland. There were 65 Jews living in the town in 1765. After it passed to Russia Gaisin became a district capital. The Jewish population numbered 2,018 in 1847, 4,321 (46% of the population) in 1897, and 5,190 (34%) in 1926. It dropped to 4,109 (27.7%) in 1939. Gaisin was occupied by the Germans on July 25, 1941. Some of the Jews were murdered in the first months of occupation. Others were put to work building Highway Number 4, from Lvov to Stalino (Donetsk). Because of the terrible conditions, many died or were killed, so in 1942 Jewish deportees from Bessarabia and Bukovina were brought in from Transnistria. Most of the new Jewish workers also died or were "liquidated" in "selections" and "Aktionen." Only a few survived to the day of liberation on March 13, 1944.

[Yehuda Slutsky / Shmuel Spector (2nd ed.)]
GÁL, FEDOR (1945– ), Slovak publicist, political scientist, sociologist, and publisher, born of Slovak parents in the Terézin concentration camp. He attained a master's degree in chemistry and doctorates in both sociology and economics and worked in the field of prognostics. In 1989 he was a founder and chairman of the political movement the Public against Violence, which won the elections in Slovakia in 1990. Due to internal disagreements in the movement and anti-Semitism aimed at him, he left Slovakia. From 1991 he lived in Prague. Gál is active in numerous civic non-governmental organizations; he issued an animated TV series for children; and co-produced a CD ROM, Franz Kafka Lived in Prague (in three languages).

“GALACTION, GALA” (literary pen name of the priest Grigore Pişculescu; 1879–1961), Romanian novelist and writer. Galaction was one of Romania’s outstanding literary figures, and his humanitarian outlook made him a great friend of the Jews. Jewish types abound in his novels and stories, and their high moral character is contrasted with their bitter struggle for survival. He attributed this survival to a divine miracle. In two novels, Roxana (1930) and Papucii lui Mahmud (“Muhammad’s Slippers,” 1932), he makes a plea for understanding between Christians, Muslims, and Jews. As a result of his friendship with Jewish intellectuals Galaction used to deliver lectures to Jewish organizations, and he also wrote articles on Jewish festivals and religious lore for Romanian-Jewish organizations; he issued an animated TV series for children; and co-produced a CD ROM, Franz Kafka Lived in Prague (in three languages).

An admirer of Theodor Herzl, whom he considered a successor to the biblical prophets, Galaction wrote many pro-Zionist essays which were collected in Sionismul la prieteni (“Zionism among Friends,” in Herzl, 1929). A visit to Palestine (1926) inspired a series of articles in Adam (1929) and the novel Scrisori către Simforoza: In pământul făgăduinei (“Letters to Simforoza: In the Promised Land,” 1930). Galaction exerted a notable influence by his literary translation of the Bible (1938; in collaboration with Vasile Radu). His translations of the Song of Songs and the Book of Psalms are particularly remarkable. It is significant that, even at the height of World War II, Galaction courageously maintained his close ties with the Jewish community of Romania, and when the Jews were forced to clear the streets of snow, he insisted on joining them.

[Gora Litani-Littman]

GALAI, BINYAMIN (1921– ), Hebrew writer and poet. Born in Vlodivostok, Siberia, his family went to Palestine in 1926. He lived in Tel Aviv for many years, then moved to Haifa where he served as press adviser to the municipality. Among his volumes of poetry are Im ha-Ruah (1946); Armonim (1949); Shishiv She-Shishiv (1953); his collected poems, Al Hōj ha-Rahānim (1958) and Moṣaṭ Zafonah (1968); Mi-Yam le-Yam (1985); and Shirim Aharonim (1995). He also published volumes of plays, Sedem Siti (“Sodom City,” 1952) and Shotim u-Melakhim (“Fools and Kings,” 1971); a selection of sketches, Al Kafeh Hafukh (“Over White Coffee,” 1960); radio plays, Mayim Genuvim (1964); and two volumes of children’s stories. Galai wrote Sippur ha-Ah ha-Nidduah, o Via Dolorozah (1985) and a historical novel, Ha-Ma‘vet ha-Sha‘ōr o Divrei Yemei Geminii (1976). A list of his works translated into English appears in Goell, Bibliography, 23f.

[Getzel Kressel]

GALANT, ELIAHU (Ilya) VLADIMIROVICH (1868–after 1929), historian of Ukrainian Jewry. Galant, who was born in Nezhin, Ukraine, taught Jewish religion in high schools in Kiev. His studies of the persecution of Ukrainian Jewry from the 17th to the 19th centuries, particularly the blood-libels charged against them, appeared in Yevreyskaya Starina and other Russian-Jewish papers. In 1919 Galant was associated with the establishment of a Jewish Historical-Archaeographical Commission, known as the “Galant Commission,” founded under the auspices of the Ukrainian Academy of Sciences. The commission’s task was to conduct research on the history of Ukrainian Jewry based on government archival material, which was not accessible under the czarist regime. The commission’s work was interrupted by the ensuing civil war and it was not revived until 1924 with Galant as secretary. He edited the first two volumes of its proceedings, Zbirnyk prats Zhydivskoy istorychno-arkheografichnoy komisii (1928–29). Shortly afterward, Galant became suspect to the “Yevsektia, which criticized his work, and was forced to discontinue his scholarly activities in 1929.

[Yehuda Slutsky]

GALANTA, town in N.W. Slovakia. Until 1992 Czechoslovak Republic, since Slovak Republic. Jews started to settle in Galanta by the end of the 17th century. The earliest document is from 1729, when Count Ferdinand Eszterhazy granted the
Jewish community a room for prayer and ground for a cemetery. In 1830, 556 Jews lived in Galanta (31.2% of the total); in 1840 there were 430; and in 1850 there were 670 Jews in the town. In 1880 they numbered 714 (32.8%) and in 1900 there were 937. The second Czechoslovak census of 1930 reported 1,274 Jews.

The first rabbi was Wolf Duces (1757), during whose leadership the first synagogue was built. In 1760 the Jewish community of west Slovakia protested against Empress *Maria Teresa’s Toleration Tax (Toleranz Steuer) that Jews were forced to pay. The community benefited from the legislation of Emperor Josef II (1780–90), which permitted Jews to engage in agriculture and a variety of commercial activities. At that time, the community had a *talmud torah, a mikveh, and a cemetery. In the mid-1860s a yeshivah was established, which became renowned not only in Hungary but also abroad, and students flocked there from many European countries. It was recognized by the Czechoslovak authorities as an institute of higher education. In 1889 Samuel Neufeld opened a printing shop that produced rabbinical literature, including two printings of the Talmud. The shop existed under a variety of names until 1944. During the Spring of Nations, the Magyar national movement was supported by many local Jews. In 1918 Galanta, along with many other cities in Slovakia, was subjected to pogroms and looting of Jewish property.

After the Hungarian Jewish Congress of 1868, the Galanta Jewish community chose the Orthodox path. In 1891 a major dispute erupted over who should inherit the rabbinical seat. This led to a rift within the Jewish community and the establishment of two Orthodox congregations. The community split in 1893; the authorities made an uncharacteristic decision and recognized both congregations. Each chose its own rabbi, had a synagogue, a *talmud torah, and other religious institutions. The dispute drew attention in Hungary and abroad, and received international press coverage. The Czechoslovak authorities also recognized both congregations. It was uncommon to have two Orthodox congregations in a single community.

Between the wars, Jewish communal life thrived in Galanta. Agudat Israel was the main political force there, but the Zionist movement existed as well. The Galanta Jewish community was renowned for the religious-folkloric celebration of the (alleged) birth and death of Moses, on the seventh of Adar. The ceremony is still observed today.

The Award of Vienna, October 2, 1938, assigned southern Slovakia to Hungary, including Galanta. The anti-Jewish legislation in Hungary was applied to the conquered territories. By the beginning of 1940, Jews – including those of Galanta – were recruited to special forced labor army units (*munkaszolgalat), where many perished. On March 19, German troops occupied Hungary; shortly thereafter, they began to deport Jews to Auschwitz. In May 1944, the Jews of Galanta and its environs were assembled in the Kurzweil brick factory in *Nove Zamky. About 1,560 were deported on June 26, 1944; several survived.

In 1947 there were 272 Jews in Galanta. The Jewish community repaired one of the synagogues and the mikveh, and a kosher public kitchen provided meals until the survivors could adjust themselves. The *hevra kadisha was revived, and regular prayers resumed. In March 1985 the ancient small synagogue was torn down under the pretext that the space was needed for an apartment building. The congregation was given an apartment in which to hold its services. This, too, was replaced with another building in September 1983.

In 1947, upon their return from the concentration camps, members of the community founded a successful carpentry cooperative which, at its peak, had 250 workers. The communist regime, which followed the February 1948 coup d’état, nationalized the factory, and the Jews lost all their investment, including the money and the tools invested by the JDC. For years after the migration of 1948–49, Galanta served the Jews of southern Slovakia as a meeting point to celebrate the seventh of Adar as well as for bar mitzvahs for youngsters from the entire region. The community was still active in 2005.

[Sarlota Rachmuth-Gerstl / Yeshayahu Jelinek (2nd ed.)]

**GALANTE,** family of Spanish origin which produced a large number of scholars. An ancestor of the family was Mordecai Galante, who was among the Spanish exiles of 1492 and lived in Rome during the first half of the 16th century, dying there after 1541. His original family name was Angello. Because of his handsome appearance and his dignified behavior he was nicknamed by the Roman nobility galant ‘uomo, from which was derived the surname Galante adopted by his descendants. Both of his sons, Moses *Galante and Abraham *Galante, migrated to Safed. The former had three sons: Jonathan (d. 1678), who became a rabbi in Jerusalem, Jedidiah *Galante, the author of *Hiddushei Galante* (Wilhermsdorf, 1716), and Abraham, who served as dayyan in the bet din of Damascus. Moses *Galante II, the son of Jonathan, succeeded his father in Jerusalem. Around the year 1700 a certain Joseph Galante functioned as rabbi in Tyre. During the latter half of the 18th century another Mordecai Galante (d. 1781), who was a scion of the same family, was rabbi and head of a yeshivah in Damascus. He corresponded about matters of Jewish law with the foremost Sephardi rabbinical authorities of his time. A number of his halakhic dissertations are contained in the responsa *Berekhot Mayim* by Mordecai *Meyuhas* (Salonika, 1789), Solomon *Laniado* (Constantinople, 1775) and *Bigdei Yeshu* of Isaiah *Attia* (1853). A collection of his sermons was published in Leghorn under the heading of *Divrei Mordekhai*. To these were appended responsa by him entitled *Gedullat Mordekhai* as well as homilies by his son Moses under the title of *Kolo shel Moshe*. Mordecai Galante of Damascus was succeeded by his son Moses (d. 1806). The latter also wrote responsa, which were published in Leghorn in 1809 under the
name of Berakh Moshe. Attached to the volume was an appendix entitled Zikkaron la-Rishonim. It included also glosses on Joseph Caro's Shulhan Arukh Hoshen Mishpat by Moses b. Mordecai (I) Galante, as well as notes by Hakham Modai on Shulhan Arukh Orah Hayyim and Yoreh De'ah, and on *Hezekiah da Silva's Peri Hadash, and Hakham *Benveniste's Keneset ha-Gedolah. Moses Galante died in Damascus. Abraham *Galante, the historian, also belonged to this family.

**GALANTE, ABRAHAM** (1873–1961), Turkish politician, scholar, and historian born in Bodrum, Turkey. Galante was a teacher and inspector in the Jewish and Turkish schools of Rhodes and Smyrna. He protested the misrule of Sultan Abdulhamid II and partly in consequence of this he left for Egypt, where from 1905 to 1908 he edited the London newspaper La Vara and also contributed to Arabic, French, and Turkish newspapers and periodicals. He encouraged the acculturation of Turkish Jewry to its homeland, and conducted an active campaign for the adoption of the Turkish language by the Jews. At the same time he fought vigorously for Jewish rights. After the revolution of the Young Turks, Galante returned to Istanbul, at whose university he was appointed professor of Semitic languages in 1914 and later professor of the history of the Ancient Orient. Galante was a delegate to the first Turkish National Assembly after World War I and also a member of the Parliament which met in 1943. His principal field of scholarly activity was the study of Jewish history in Turkey, but he also wrote against the adoption of Latin characters for the Hebrew alphabet. His works (mainly in French) include Don Joseph Nasi, Duc de Naxos (1913), Esther Kyra (1926), Documents officiels turcs concernant les Juifs de Turquie (collections, 1931–54), Nouveaux documents sur Sabbetai Sevi (1935), Histoire des Juifs d’Anatolie (1937–39; appendix 1948), and Histoire des Juifs d’istanbul (1941–42). In the 1990s his collected works were published by the Isis Press in Istanbul.

**GALANTE, ABRAHAM BEN MORDECAI** (second half 16th century), kabbalast in Safed. He was the brother and a pupil of Moses b. Mordecai *Galante and a disciple of Moses *Cordovero. Galante, who was known as a distinguished and modest Hasid, received the title, “Ha-Kadosh” (“the saint”). He was the first to cite Joseph Caro’s Maggid Meisharim. His works include (1) Yare’ah Yakar, a commentary on the *Zohar (extant in manuscripts, to Exodus–Terumah 140:2). The work was abridged by Abraham Azulai, entitled Zohorei Hammah, and published in Venice (1655, and later in Piotrkow, 1881); (2) Kinat Setarim, a kabbalistic commentary on Lamentations (publ. by R.I. Gershon in the work Kol Bokhim, Venice, 1589); (3) Zekhut Avot, a kabbalistic commentary on the tractate Avot (in the work Beit Avot, Bilgoraj, 1911); and (4) Minhagei Hasidut, published by S. Schechter (1908). H.J.D. *Azulai relates that Galante built the court of Meron where the graves of *Simeon b. Yoḥai and his son Eleazar are located.

**GALANTE, JEDIDIAH BEN MOSES** (17th century), scholar and emissary. From 1607 to 1613 Galante visited the Italian communities as an emissary of Safed, possibly on behalf of its Italian community to which his family belonged. During his travels he wrote several halakhic responsa in reply to problems addressed to him and relayed the remarkable deeds attributed to Isaac *Luria (the Ari). In 1608 he published in Venice the responsa of his father, Moses *Galante. When some Italian Jews, who objected to one of Jedidiah’s rulings on a subject that divided the rabbis of Italy, accused him of embezzling the donations for Erez Israel, he took dramatic action. On a Sabbath in Elul 1609, after his sermon to a large Venetian congregation before which he had been invited to preach, he took a Scroll of the Law from the Ark and in the presence of the whole congregation swore to his complete innocence. The incident, which made a profound impression, was publicized by the lay leaders and rabbis of Venice in a specially printed notice circulated among the Italian communities.

**BIBLIOGRAPHY:** Sonne, in: Kovez-al-Yad, 5 (1950), 205–12; Yaari, Sheluhei, 152, 247, 842–3. [Avraham Yaari]

**GALANTE, MOSES BEN JONATHAN** (II) (1620–1689), Jerusalem rabbi. Galante was called *“Ha-Rav ha-Magen”* after his major work Elef ha-Magen which includes one thousand responsa and cases (unpublished). He was the grandson of Moses b. Mordecai *Galante (I). He studied in Safed and later moved to Jerusalem where he became a leading rabbi and headed the yeshiva Bet Ya'akov. His students included *Hezekiah b. David Da Silva, author of Peri Hadash, Israel Jacob Hagiz, his son-in-law (the father of Moses *Hagiz), and Abraham Yizhaki, the rabbi of Jerusalem. He and other scholars instituted an ordinance (takkanah) that the scholars of Jerusalem would not use the title “rabbi” (in order that one scholar would not have authority over another). From 1667–68 he served as an emissary of Jerusalem to the cities of Turkey and Hungary. In 1673 he was again in Jerusalem. Galante was influenced by the Shabbatean movement for a time. In 1665 he and other...
rabbis from Jerusalem went to Gaza in order to seek purification of the soul from "Nathan of Gaza. At the end of 1665 or early in 1666 Galante was in Aleppo where he was among the leading Shabbatean "prophets." According to the testimony in a letter from Aleppo (in Ms. Epstein, Vienna, Jewish Community Library 141), Galante was the "hakham Moses Galante" who accompanied Shabbetai Zevi to Smyrna at the end of 1665 and was appointed by him "King Yehoshaphat." He also accompanied Shabbetai Zevi to Constantinople. R. Abraham Yizhaki testified that Galante said "Although I would not believe in Shabbetai Zevi, I would not deprecate him. But after I saw that in writing to one of his followers here, he signed himself 'I the Lord your God' [i.e., he wrote the Tetragrammaton in his own handwriting], I excommunicate him daily." His published works include Zevah ha-Shelamim, commentaries on the Torah with the glosses of Galante's grandson Moses Hagiz (Amsterdam, 1708), and Korban Hagigah, sermons for the Three Festivals and novellae on the tractate Hagigah and on Maimonides' Yad ha-Hazakah (Venice, 1704, 1709).

David Tamar

GALANTE, MOSES BEN MORDECAI (l) (fl. 16th century), talmudist and kabbalist, one of the scholars ordained in Safed in the second half of the 16th century. Galante, who was born in Rome, was the brother of Abraham b. Mordecai "Galante. He was well acquainted with Ḥayyim Vital's disciples. Galante was a disciple of Joseph Caro who ordained him at the age of 22 (Responsa of Moses Galante, par. 124). His teacher in the field of Kabbalah was Moses Cordovero. From 1580 he served as av bet din in Safed as the successor of Moses di Trani. He lived to be over 90 and apparently died after 1612. His works include: (1) responsa, only partly published (124 paragraphs) by his son Jedidiah, with the addition of his novellae (Venice, 1608); (2) Mafte'ah ha-Zohar, an index of the biblical passages interpreted in the Zohar (incomplete; Venice, 1566); and (3) Kohelot Yaakov, a partly homiletic and partly kabbalistic commentary on Ecclesiastes (Safed, 1578).

Some of his sermons were published in the commentary on Ruth of Obadiah of Bertinoro (Venice, 1585).

David Tamar

GALATI (Rom. Galați; Ger. Galatz), port on the River Danube, in Moldavia, eastern Romania, first mentioned in the 15th century. Jews first settled there at the end of the 16th century. A cemetery which has not been preserved, was probably established in 1629; another, recently restored, was established in 1774. In 1803, 72 Jews paid taxes. Until the beginning of the 19th century the hevra kaddisha was responsible for the communal administration. Following a *blood libel in 1796, outrages were perpetrated against the Jews. In 1821 Greek revolutionaries who entered the town set fire to several synagogues, and in 1842 there were renewed attacks on the community by local Greeks. In 1846 anti-Jewish outbreaks again occurred in which synagogues were looted and Jewish houses and shops were destroyed. In 1859, in a similar attack, many Jews were killed. In 1867 a number of Jews among those expelled from the country drowned in the Danube near Galati: the catastrophe provoked a storm of protest throughout Europe. The Jewish population numbered around 7,000 in 1841, 14,500 in 1894, 12,000 in 1910 (22% of the total), 19,912 in 1930 (20%), and 13,000 in 1942. Jewish artisans and merchants contributed considerably to the city's economic and commercial development. In 1895 a community association with legal recognition (1906) was founded. The Zionist Baruch Zosmer was elected deputy mayor in 1928. Among the rabbis who functioned between the two world wars and after World War II were Abraham Jacob Derbaremdigher, Jacob Margulies, and Isaac Schapira. Hasidic courts such as that of Rabbi Abraham Joshua Heschel Friedman also functioned in Galati. Before World War II the community had 22 synagogues, a secondary school, two elementary schools for boys and one for girls, a kindergarten, a trade school, a hospital, an orphanage, an old-age home, and two ritual bathhouses. In 1881–1919 Galati was the center of the Zionist movement in Romania. In 1926, the Zionist Revisionist Organization of Romania was founded in Galati. There was also a cultural-religious society, a Zionist society, a youth organization Ze'Ire Zion, and a "culture" club. The Jews in Galati were subjected to constant persecution by the pro-Nazi authorities during World War II. The community was not destroyed during the Holocaust, but subsequently diminished through emigration. It numbered 13,000 in 1947, 9,000 in 1950, and 450 families in 1969, with two synagogues. In 2005, 252 Jews lived in Galati, with a synagogue, a kosher restaurant and a cemetery.

Haim Karl Blum / Lucian-Zeev Hersovici (2nd ed.)

GALATIA, district in Asia Minor, which became a Roman province in 25 B.C.E. Evidence of the existence of Jews in Galatia is scanty, but it is likely that Jewish settlement began with the establishment of Jewish military colonies by Antiochus III in adjoining Phrygia and Lydia (Jos., Ant. 12:147ff.) toward the end of the third century B.C.E. Jews lived in the neighboring countries of *Pergamum, *Cappadocia (1 Macc. 15:22), and *Bithynia (Philo, Embassy to Gaius, 281) in the second century B.C.E., and the first century C.E. Josephus tells of...
an edict of Augustus published in Ancyra, capital of Galatia, granting the Jews, among other privileges, the right to practice their ancestral traditions, and to transfer funds to Jerusalem (Ant. 16:162–5). However, “Ancyra” is a correction proposed by Scaliger from a faulty text which cannot be absolutely relied upon. Clearer evidence is available from accounts of the missionary activities of the apostle Paul among the various communities in the first century (1 Cor. 16:1; Acts 16:6; 18:23), in particular his Epistle to the Galatians. Jewish names in inscriptions found in the precincts of Galatia include “Esther” and “Jacob,” appearing on a tomb at Germa, southwest of Ancyra (Frey, Corpus, 2 (1952), 48, no. 796) and “Levi,” inscribed elsewhere (Henderson, in Journal of Hellenistic Studies, 19 (1899), 285, no. 178). The word “Galatia,” recurring a number of times in talmudic literature, is in some instances considered to refer to Galatia, e.g., the journey of R. Akiva to “Galatia” (b.B. 26a). It is similarly thought that Nahum or Menahem of “Galatia” came from Galatia although others identify “Galatia” with France or with a settlement in Judea. (Ket. 60a: Tosf., Er. 11:10; TJ, Ber. 4:4, 8b). In 11 Maccabees 8:20, it is specifically mentioned that Jews fought against the Galatians at the side of Seleucid kings in Babylonia, defeating them and taking much loot, but there is no available information as to which war is referred to, or its details.

[Galatinus, Pietro Columna]

**GALATINUS, PIETRO COLUMNA** (1460–1540), Italian theologian and Christian kabbalist. A Franciscan friar who believed himself to be the “Angel Pope” first prophesied by followers of Joachim of Fiore in the 13th century, Galatines wrote a monumental work of Christian mysticism, De arcanis catholicae veritatis (Ortona, 1518), first printed by Ger- sham *Soncino. Though anti-Jewish in tone, it was published in defense of the great German humanist Johann *Reuchlin and did much to promote Christian Hebraism. The book, which consisted a vast number of polematic texts, inspired many later Christian kabbalists, including the French vision- ary Guillaume *Postel. It was prefaced by laudatory Hebrew verses and laid great stress on numerology. The most popular of the kind in the 16th century, the Arcana was praised by *Amatus Lusitanus. Galatinus anticipated Daniel *Bom- berg by advocating the publication of the Talmud. He “explained” early Christianity’s lack of explicit reference to the Kabbalah by citing a passage in the Babylonian Talmud (Hag. 11bff.), which forbids the indiscriminate transmission of the creation and chariot mysteries (see *Merkabah Mysticism), especially in writing.

[Godfrey Edmond Silverman]

**GALBANUM** (Heb. נֶבֶר, *hellenah*), a gum resin mentioned among the ingredients of the incense in the Tabernacle (Ex. 30:34) and by Ben Sira as a spice (Gr. χαλβάνη). It was included in a *baraītā* (Ker. 6a), dating from Second Temple times, among the constituents of the incense used in the Temple. The Gemara (Ker. 6b) states that it was an ingredient of incense despite its offensive smell, thus demonstrating that a malodorous substance, when mixed with fragrant spices, also contributes to the general pleasant odor, thereby symbolizing that sinners of Israel are an integral part of its society. Greek and Roman natural and medical writers, referring to the medicinal qualities of galbanum, praise the spices imported from Syria (Pliny, Historia Naturalis, 12:23; Dioscorides, De Materia Medica, 387). In Israel six species of galbanum grow wild, but their resin is not used for any known purpose. A substance called umbelliferone, employed as a remedy for convulsions, is extracted from two species of galbanum, from Ferula galbaniflora which grows in Syria and Ferula schair which grows in Turkestan. These plants are of the Umbelliferae family whose stems contain a milk-like resin congealing on contact with air. It is also used in the lacquer industry.

**BIBLIOGRAPHY:** Loew, Flora, 3 (1924), 455–7; J. Feliks, Olam ha-Zome’ah ha-Mikra’i (19682), 276–7. [Jehuda Feliks]

**GALEN** (Galenus), CLAUDIUS (131–C. 201 C.E.), prominent physician in antiquity and author of important philosophical works. Galen was born in Pergamum (Asia Minor) and died in Rome. Medieval Hebrew authors and translators regarded Galen as “the greatest physician” (gedol ha-rofe’im, rosh ha-rofe’im). A popular legend among the Jews in the Middle Ages identified Galen with the patriarch Gamaliel II, who Carents to have written a handbook of medicine for Titus after the destruction of Jerusalem. This did not, however, prevent *Maimonides and other Jewish authors from sharply criticizing Galen for his attacks on the law of Moses (see R. Waltzer, Galen on Jews and Christians, 1949) and denying his authority in any field other than medicine (Pirkei Moshe (1888), 25). *Jedaiah ha-Penini launched a sharp attack on Galen (Iggeret Hitnazzelut, in Iggerot ha-Rashba (1881), 61), and *Immanuel of Rome relegated him to hell (Mahbarot, vol. 2 (1967), no. 28, p. 515). A derogatory opinion on Galen as a philosopher is also found in a work by Shem-Tov ibn *Falaquera (Ha-Mev- akesh, 33). On the other hand, in the question of the eternity of the world, Maimonides sided with Galen against al-*Fārābī (Guide of the Perplexed, 2:15). As Galen was a physician and author of medical works, his reputation among Jews was beyond dispute. Maimonides wrote Arabic compendia of the 16 “canonical” books and of several other works by Galen, and his Arabic commentary on Hippocrates’ Aphorisms is based primarily on Galen. Maimonides’ own aphorisms (Pirkei Moshe) are also primarily a selection from Galen’s works and the latter’s commentary on Hippocrates (as stated by Maimonides in the introduction).
The following works by Galen appeared in Hebrew translation (generally based on the Arabic text of Hunayn ibn Ishâq, but in some instances also on Latin versions) or as Hebrew adaptations: (1) *Ars Parva* (Melakhah Ketannah), translated by Samuel ibn *Tibbon in 1199 (manuscripts in Leiden and Paris) together with the Arabic commentary by the Egyptian physician Ali ibn Ridwân. This commentary was translated again under the title of Sefer ha-Tegni (manuscript in Rome and extracts in Paris) by ‘Hillel b. Samuel, but this time from the Latin translation by Gerard of Cremona. (2) Four books dealing with various diseases, their causes, and symptoms were translated by Zerâiah b. Isaac *Gracian under the title of Sefer ha-Holâ’îm ve-ha-Mikrim (manuscript in Munich). (3) Three treatises on compound drugs were also translated by Gracian under the title of Katagenê (manuscript in Hamburg). (4) The “Book of Crises” was translated by Solomon Boniârc of Barcelona under the title Sefer Bahran, based on the Arabic text by Hunayn. (5) The treatise on bloodletting exists in two Hebrew translations: one, based on the Arabic text, was made by Kalonymus b. Kalonymus in Arles (manuscript in Leiden); the other is an anonymous work based on the Latin translation and bears the title Sefer ha-Hakkazah shel Gidim (manuscript in Guenzburg collection). (6) *De cysteris et colica*, translated by Kalonymus from the Arabic of Hunayn (manuscript in Leiden). (7) Treatise on the regimen to be followed by epileptic boys, anonymous translation under the title Sefer be-Hanahagat ha-Nâ’ar ha-Niktpeh, based on Hunayn’s Arabic text (manuscript in Munich). (8) *De malitia complexionis diversae*, translated by David b. Abraham Caslari in Narbonne under the title Sefer Ro’â Mezeg Mithâllef, probably on the basis of the Latin text by Gerard of Cremona (Bodleian manuscript). (9) The Alexandrians’ compendia of Galen’s 16 “canonical” writings were translated from the Arabic version by Samson b. Solomon under the title Sefer ha-Kibbu’zîm la-Aleykandriyyim. Several manuscripts are extant, all fairly complete.

Apart from the compendia translated by Samson b. Solomon, there existed several compendia of individual works by Galen. Two of these exist in anonymous Hebrew translations: *Kelalei Sefer Galenus ba-Marah ha-Shi‘orâh* (on melancholy), based on the translation by Stephanus, as revised by Hunayn, and *Asifat Marot ha-Shetan*, on the colors of urine (three manuscripts). A second translation of the latter work bears the title Kibbu’zî Sifrei Galenus be-Minei ha-Shetan (manuscript in Leiden).

Galen’s commentary on the Aphorisms by Hippocrates was translated from the Arabic by Nathan b. Eliezer ha-Me’âti in Rome, together with Hippocrates’ own work (many manuscripts have been preserved). A second translation from the Arabic of both works was made by Jacob b. Joseph ibn Zabar (manuscript in New York), and a third, based on the Latin version of Constantinus Africanus, is probably the work of Hillel b. Samuel.

A large number of works attributed to Galen were also translated into Hebrew, including Sefer ha-Em, Sefer Issur ha-Kevurah, Panim le-Fanim, Sefer ha-Nefesh, and Likkutei Segulot u-Refu’ot mi-Galeno. Other works by Galen also influenced medieval Jewish literature, even though they were not translated into Hebrew. Thus, for example a work by Galen was quoted in *Saadiah Gaon’s commentary on Sefer Yeziyah* (45), in *Bahya ibn Paquda’s Hoqov ha-Levatov* (25), in *Judah Halevi’s Kuzari* (5:8), and in a letter by Zerâiah b. Isaac Gracian addressed to Hillel b. Samuel (in *Ozar Nehmad*, 2 (1857), 141).

[Moše Nahum Zobel]

**GALICH**

**ALEXANDER ARKADYEVICH** (Ginzburg: 1919–1977), Russian poet and dramatist. Galich was born in Dnepropetrovsk (Ukraine). He studied acting with Stanislavski theatrical studio and appeared with an army troupe at the front during World War II. From 1943 he was a drama teacher and wrote a number of plays, the most popular one being the comedy *Was vyzyvaet Taimir* (“Taimir Is Calling You, 1948). He also wrote the screenplay *Vernyie Druza* (“Faithful Friends,” 1958). Another of his plays, *Matroskaya Tishina* (“The Seaman’s Silence”), was banned in the Soviet Union. From the beginning of the 1960s he wrote poems which he set to music, performed, and recorded. His poems were critical of Soviet thinking and the language of the press. Some had Jewish themes, such as the poem “Korchak” (“Kaddish”) for the actor “Mikhoels and a cycle of poems on the emigration of Soviet Jews to Israel. In the 1960s he turned to Christianity. His poems were published outside the Soviet Union. He also fought for human rights. For all these reasons he was ejected in 1971 from the Union of Writers and Filmmakers. In 1974 he settled in Paris. He visited Israel twice, performing his songs in concerts.

He visited Israel twice, performing his songs in concerts.

[Shmuel Spector (2nd ed.)]

After numerous changes in the Middle Ages, Galicia was incorporated within the kingdom of Poland. The major part passed to the Hapsburg monarchy during the first partition of Poland in 1772; with the third partition of Poland the area under Hapsburg rule was extended to the north and northwest of the region. From 1803 Galicia formed a separate administrative unit (province). With the dissolution of the monarchy after World War I Galicia again passed to Poland (1918–19). In 1939, after the outbreak of World War II, western Galicia was occupied by the Germans and eastern Galicia by the Soviet Union, which incorporated it in the Ukrainian S.S.R. Eastern Galicia was also occupied by the Germans in 1941 and the Jews there suffered the fate of the rest of the Jews
of Poland and the Ukraine. After the war western Galicia returned to Poland, while eastern Galicia remained within the Ukrainian S.S.R.

During the period of Polish rule until 1772 Galicia was known as Little Poland (see *Lesser Poland), which within the Jewish organizational framework of the *Council of the Lands formed one of the four “lands” (provinces). For the history of the Jews in this period, see *Poland-Lithuania.

[Simha Katz]

After the 1772 Annexation to Austria

At the time of the region’s annexation to Austria in 1772, its Jewish population numbered 224,980 (9.6% of the total). Jews were to be found in 187 cities, 93 small towns, and 5,467 villages and homesteads. By 1773 the number of Jews had declined to 171,851 (6.5%), and by 1776 to 144,200. In 1780 the Jewish population stood at 151,302; in 1782 at 172,424, and in 1785 at 212,002. In 1776 the area in the region of Cracow was extracted from Austria, but it was returned in 1795 and structured administratively as “western Galicia” (including the *Lublin district). Until 1809 the Zamosec district was also in Galicia, under Austria, and between 1786 and 1818 *Bukovina was included administratively in Galicia. In 1805–46 Cracow and its environs constituted an autonomous republic, while the Ternopol district came under Russian rule, during 1809–15.

The non-Jewish population of western Galicia was almost entirely Polish in 1776, Jews constituting 3.1% of the population. Eastern Galicia was mostly Ukrainian, and the Jews there were 8.7% of the total population. Six towns (*Brody, *Belz, *Rogatin, *Peremyshlyany, Delyatin, and *Sokal) were almost entirely Jewish, nine other towns had a Jewish majority, and in seven cities (including *Lvov) the Jews constituted one-third or more of the total population. Initially, the Jews of Galicia continued in the framework of the socioeconomic structure of old Poland-Lithuania. In the villages Jews were occupied in *arenda; in the towns and townlets the majority of Jews were retailers or craftsmen, especially in the household industry (textiles, sackcloth, and sail cloth) and the garment industry (as tailors, furriers, and hatters). The export and import trade of the region was mainly in the hands of Jews, as the transit between Turkey and Russia in the east and Germany in the west centered in *Brody.

The Austrian “Code of Regulations Concerning the Jews” (1776) allowed the autonomy of the Jewish community to stand. A 12-member supreme Jewish council was created, headed by the chief rabbi of the region. The following specific taxes were levied on the Jews: protection and toleration tax (4 guldens per family), property and employment tax (the same), marriage tax (according to the wealth of the family, from 4 to 300 ducats). All Jewish beggars were expelled from Galicia. Aryeh Leib *Bernstein became chief rabbi, Mordecai Ze'ev Orenstein vice chief rabbi.

Emperor *Joseph II included Galicia in his statutes (1785–89) directed at the improvement of the condition of the Jews (see *Emancipation) and their ultimate *assimilation. His 1789 *Tolerationpatent mentioned 141 organized Jewish communities, each administered by three *parnasim, except for Lvov and Brody, which had seven. The autonomy of the community, the rabbinical court, and the craftsmen’s guilds were abolished. In 1786 the supreme council, established in 1776, was dissolved. The expulsion of the Jews from the villages began; various trade branches, peddling, and arenda were prohibited to them. At the same time they were actively encouraged to take up agricultural work. Close to one-third of the Jewish population was deprived of its means of livelihood as a result of these regulations. In 1789 Jews were included in the obligation to do military service (there was some active resistance to this by the Jews of Brody) and had to adopt German family names. Government-sponsored schools were established for the Jews, and attendance was made compulsory. A tax was levied on kasher meat (see *Korobka), and in 1797 on Sabbath and holiday candles as well (see *Candle Tax); this tax became the basis for the vote in the community. The average yearly income from the tax on kasher meat was 500,000–700,000 gulden, while that on candles brought in some 350,000 gulden annually.

In 1787 Naphtali Herz *Homberg was appointed chief inspector of the network of more than 104 government schools established for the education of the Jews. Both he and the teachers – who came mainly from Bohemia and Germany – were enthusiasts for total Jewish assimilation into German culture. Jews were bitterly opposed to this school system and as far as possible prevented their children's attendance. In 1806 all these Jewish schools in Galicia (attended by 3,550 pupils) were closed. The plan for settling 1,410 Jewish families on government-owned land, initiated in 1786, also failed, and by 1822 there were only 836 Jewish farmers in all of Galicia. On the other hand, Jewish physicians were granted equality with Christian ones and secondary schools and institutions of higher learning were opened to Jews. Nonetheless only 158 Jewish students attended such schools in 1827. Polish society in Galicia showed a relatively pro-Jewish attitude, its representatives including in their program for the region – presented to Emperor Leopold II – a demand for civil rights for Jews, though not the right to own estates or to hold elective office.

By 1827 there were about 115,000 Jewish males in Galicia, about 50,000 of whom were of working age. Of the latter, 28,524 (less than 60%) were gainfully employed, the majority in business, transportation, services, and the free professions. During the late 18th and early 19th centuries Jewish cultural and social life in Galicia was rich. The *Haskalah entered Galicia almost in its beginnings, Brody being its center. Mendel *Levin (Lefin), first at Brody and later in Ternopol, and J.L. Ben *Ze'ev were its pioneers there, followed by Dov Berish Ginsburg, Jacob Samuel *Bick, and Joseph *Perl. The years 1815 to 1850 represent the high point of the Haskalah in Galicia. In this period the following men were active in Galician social and literary life: Nachman *Krochmal, S.J. *Rapoport, Isaac *Erter, Meir *Letteris, Solomon *Rubin, Samson *Bloch, Joshua Heschel *Schorr (editor of He-Halutz), his brother Naphtali Men-
del *Schorr, Abraham *Krochmal, Samuel Leib *Goldenberg, Jacob *Bodek, Isaac Miesel, M. Silberstein, Abraham Menahem Mendel *Mohr, Joseph *Kohen-Zedeck, and others. Their literary and educational activity made Galicia of the 19th century a major center of Jewish thought and creativity. Traditional Torah education and scholarship continued in full measure in Galicia throughout the 19th century. Some of the great Talmud scholars of this period were Joseph Saul ha-Levi *Nathanison; Jacob Meshullam Orenstein, both of Lvov; Solomon b. Judah Aaron *Kluger of Brody; Aryeh Leib b. Joseph ha-Kohen (*Heller) of Stry, the author of Kezot ha-Hoshen; Shalom Mordecai b. Moses *Shvadron of Berezhany; Joseph *Engel, and others. Social life in Galicia was imprinted first by the acrimonious strife between mitnaggedim and Hasidim, and then, later between Hasidim and the Haskalah.

*Hasidism spread steadily in Galicia during the 19th century, and despite the opposition of the leading rabbis, it succeeded in permeating all strata of the population. Local rabbinic communities, in particular, had to accept the influence of the hasidic *zaddik whose followers were the strongest group in their community. The important figures of Galician Hasidism were the *Belz dynasty, founded by Shalom Rokeah in 1816; Zanz, founded by Ḥayyim *Halberstam in 1830; and the dynasties of the sons of Israel *Ruzhin (Friedmann), in *Sadgora (c. 1855) and in *Chortkov (1860). All Orthodox elements united against the Haskalah, which fought the Orthodox majority not only through education and propaganda, but through alliance with the state authorities and sometimes through the denunciation to them of the Orthodox, in particular, and of the Hasidim (in this Joseph Perl excelled). In the 1870s the Hasidim of Belz began to intervene in political matters. The Haskalah was influential in the large cities, e.g., Brody, Lvov, Ternopol, and *Zholkava, where Joseph Perl and others instituted Jewish schools with German as the language of instruction, and Haskalah leaders founded “reform” synagogues of varying trends. In 1816 Jacob Meshullam Orenstein excommunicated the maskilim of Lvov but was compelled by the authorities to rescind his decree. During the 1830s and 1840s the number of maskilim and their influence continued to increase in the large cities. In 1838 the communal leadership of Lvov installed a Reform rabbi Abraham *Kohn, who was poisoned in 1848. The striving of the Haskalah in Galicia for assimilation into German culture changed in the 1860s and the 1870s to a preference for assimilation into Polish culture; the extreme Orthodox tended to support Polish political aims.

The 1848 revolutionary parliament, which included three Galician Jews, rescinded the special taxes on the Jews, and in the constitution of March 1849, Jews were granted equality of rights. At the end of 1851, however, the government revoked the constitution and restricted the civil rights of the Jews. In 1859–60 most of the restrictions on Jews were lifted. Jews were also granted the right to be elected to the Galician Sejm, and consequently there were four Jewish deputies in 1867–72. In 1867 the Sejm elected a Jewish deputy to the parliament in Vienna, as the Austrian constitution of 1867 granted Jews equal rights.

The economic life of the Jews of Galicia also improved at about that time. Rich Jews entered “banking, large-scale export and import, industry, and the oil trade and industry. From 1867 the number of Jewish estate owners grew markedly. Jews entered the civil service and the judiciary (in 1897 Jews constituted 58% of the civil servants and judges). The majority, however, only felt a slight improvement. They resented attempts to draw them to the village and agricultural life and as a result failed in these areas. In the early 20th century the number of Jewish estate owners or lessees again increased significantly, Jewish merchants and industrialists eagerly investing in these fields. There was a corresponding increase in the number of Jews in agricultural management, and in agricultural schools and experimental farms for Jews.

In 1874, 98 Jews sat on 71 regional councils. In the Galician Sejm, five of the 155 deputies were Jews. There were 261 Jews on various municipal councils in Galicia, and in 45 municipalities they were the majority. Ten cities had Jewish mayors. The leadership of the Haskalah movement, as well as of the assimilationists – German or Polish – gradually passed into the hands of a new, university-educated group of writers like Ludwig *Gumplowicz, Joseph Ettinger, Moritz Rapoport, Dr. Eliezer Engelweicz, Meir Letteris, Marcus Landau, Joseph Kobak, Jacob *Goldenthal, Leo Herzberg-Fraenkel, K.E. Franzos, Marcus Dubs, and Meir Mintz. The number of Jewish students in the secondary schools (301 in 1856; 703 by 1867) and in the universities continued to grow. At the same time, a network of educational institutions was established under Jewish auspices.

From 1867 the assimilationist circles were split between those tendencies to Polish assimilation – organized in the Agudat Ahim (Fraternal Society) of Poles of Mosaic Faith – and those tendencies to German assimilation culture – organized in the *Shomer Israel (Guardians of Israel). In the elections of 1873, Shomer Israel of eastern Galicia allied itself with the Ukrainians against the Poles and succeeded in electing four Jewish deputies; the Jewish deputy from Cracow joined the Polish group in parliament. In 1878, on the initiative of Shomer Israel, a congress of Jewish communities was convened and resolved regulations for all communities, as well as the establishment of a rabbinical seminary. The Orthodox, led by the rabbi of Cracow, Simeon *Sofer, and the *zaddik of Belz, Joshua Rokeaḥ, opposed the convention and encouraged a boycott of it. In 1882 the Orthodox convened a rabbinical conference (in Lvov) whose regulations for the communities were diagnostically opposed to those of the congress of Jewish communities. Only those who lived according to the *Shulhan Arukh and paid their communal dues would be entitled to a vote in the communities. The Austrian authorities refused to endorse this Orthodox regulation despite the support of the Polish group in parliament. In 1890 the Ministry of Religion and Culture formulated a regulation of its own, approved by parliament and enforced until 1918. A proposal to establish a

ENCYCLOPAEDIA JUDAICA, Second Edition, Volume 7

343
rabbinoical seminary, adopted in 1907 by the Galician Sejm, was frustrated by the opposition of the Orthodox, who organized themselves in the "Mahzikei Hadas" ("Upholders of the Faith"), headed by the above-mentioned leaders. The Orthodox allied themselves with the Poles in the parliamentary elections of 1878 and elected Rabbi Sofer, who joined the Polish group in Parliament.

A number of monthly and weekly Hebrew periodicals circulated in 19th-century Galicia: Yerushalayim (1865–90); Ha-Mevasser (1860–70); Nesher ("Eagle"); Meged Yerahim (1855, 1859); Ozar Hokhmah (1849–65); He-Halutz, edited by Joseph Kobak; Ha-Ivri, edited by Baruch and Jacob Werber. In 1848–49 several Yiddish weeklies made their appearance: Tsaytung (1848–49); Di Yidishe Post (1849); Yidishe Tsaytung ("The Jewish Weekly"; 1865–67); Naye Yidishe Prese (1872), and Israeilit (1875–76).

Between 1860 and 1880 anti-assimilationist works and new trends in Haskalah, mainly influenced by Peretz *Smo- lenskin, began to appear. In 1875 the first society in Galicia for the settlement of Palestine was established in *Przemysl. In the 1880s Hovevei Zion (see *Hibbat Zion) gained momentum in Galicia. Growing antisemitism among the Poles aided this development. In 1884 the organ of the Polish trend of assimilation, Aguddat Ahim, ceased publication, confessing in its last issue that the Jews of Galicia could only "emigrate to Palestine or convert to Christianity." In Lvov and in the outlying towns, the first Zionist organizations were formed. The student Zionist organization of Lvov, Zion, published the first Zionist newspaper in the Polish language, Przyśłość ("Future," 1892); the periodical Wschód ("East") followed. Nonetheless, assimilationists continued to lead the communities, and, with the help of the Poles and brutal acts of terror, succeeded in electing their candidates to parliament until as late as 1907. These joined the Polish group and supported the demands of the Poles, even when they conflicted with Jewish interests.

In 1893 a Catholic convocation in Cracow proclaimed an economic boycott on Jews. From 1900 Poles and Ukrainians combined to exclude the Jews from the merchandising of agricultural produce through the establishment of a network of agricultural cooperatives and through propaganda among the peasants not to buy from or sell to Jews, and the various organizations of estate owners formed their own associations for buying and selling. In 1910 the Jews were forbidden to sell alcoholic beverages; 15,000 Jewish families lost their source of livelihood. This occurred at a time when the number of Jews had doubled in Galicia (between 1857 and 1910). As the table Jewish Population in Galicia, 1857–1910, shows, up to 1890 the percentage of Jews increased from 9.6% to 11.7%; from 1890 it was constantly declining and by 1910 became 10.9%.

The economic structure of Galician Jewry is reflected in the table Economic Structure of Galician Jewry, 1910.

The boycott and economic pressure impoverished the masses of Jews in Galicia. In 1908 there were 689 cooperative lending funds, most of which had been established with the help of Jews abroad. Between 1881 and 1901 a total of 236,000 Jews emigrated from Galicia. Impelled by circumstances, the Zionist movement entered local politics in 1906. In the general elections of 1907, three Zionist candidates – Adolf *Stand, Arthur *Mahler, and Heinrich Gavel – were successful. Together with the Zionist deputy from Bukovina, they formed the first "Jewish Club" in the Austrian parliament. In the general elections of 1911, all Zionist candidates failed, due to the terror exercised by the local authorities (mainly Poles) on behalf of assimilationist candidates (in Drohobych, for example, 20 Jews were murdered; see Nathan *Loewenstein). Despite the terror of 1911, Zionists continued the struggle against the assimilationists. The strife was further embittered when the Galician authorities canceled the licenses of 8,000 Jewish merchants of alcoholic beverages, who were consequently deprived of a livelihood (with their families, about 40,000 people were involved). The Zionists brought the merchants to Vienna to demonstrate, but the assimilationist Jewish deputies did nothing. Although the Austrian ministers promised their assistance, they failed to keep their word.

In the latter part of the 19th and the beginning of the 20th centuries, the Jewish labor movement of Galicia was organized. At first it was associated with the Polish *PPS, the Labor Zionist movement making its appearance later. The first convention of its various chapters took place in Cracow, in 1903. At the second convention, in 1904, the *Po’alei Zion party was founded. A number of Jewish organizations disassociated themselves from *PPS and in 1906 established the *Jewish Social Democratic Party (ZPS). The PPS countered by establishing a "Jewish section," which existed until 1914. Some of its members then joined the ZPS.

At the outbreak of World War I tens of thousands of Jews fled to Hungary, Bohemia, and Vienna. During the Russian occupation of Galicia, the Jews who remained suffered greatly. Following the fall of the Hapsburg monarchy in November 1918, the Jews of Galicia were caught in the Polish-Ukrainian war. The central government of the Western Ukrainian Republic (Eastern Galicia, see *Ukraine) was prepared to grant the Jews full national autonomy, but its civil service and the military continued to oppress the Jews. On November 22 and 23, following the occupation of Lvov, the Poles conducted a series of pogroms in which 72 Jews were killed and 443 injured. By the summer of 1919 the armies of Poland had captured all of Galicia. The particular motifs which had developed among the Jews of Galicia continued to leave their mark on that community, even as it fused with the Jewry of Poland during the period between the two world wars. The major ideological currents – Hasidism, the Zionist movement, the many devotees of Polish and German culture, respectively, and those who had traditionally cooperated with the Poles – continued to be the forces which shaped the internal and external character of Polish Jewry from 1919 to 1939. The Zionist deputies from Galicia, headed by L. *Reich and O. *Thon, came to terms with the Polish government in a July 4, 1925, "compromise" agreement (see *Ugoda). S.Y. *Agnon, like many others, immortalized the cultural atmosphere of the Galician shtetl in his works.

GALIL, UZIA (1925–), Israeli high-tech entrepreneur. Galil earned a B.Sc. from the Technion and an M.Sc.EE. degree from Purdue University. He began his high-tech career in R&D at Motorola in Chicago from 1953 to 1954 and in the Israeli Navy from 1954 until 1957. From 1957 to 1962 he served as the head of the electronics department at the Technion. From 1962 to 1990, Uzia Galil was chairman of the International Board of Governors of the Technion. In 1962 he founded Elron, a technology group specializing in defense electronics, communications, semiconductors, and medical imaging technologies, serving as its chairman and CEO until 1999. During this period he also acted as chairman and/or member of the board of directors of the publicly traded Elron affiliates – Elbit Ltd., a communications company, Elbit Systems Ltd., a defense electronics company, Emi Ltd. and Elscint Ltd., medical imaging companies, and the private companies in the Elron group. He continued to serve as a member of the boards of directors of Orbotek Ltd., Partner Communications Co. Ltd., and Net-Manage Inc., and as chairman of Zoran Corporation (all publicly traded). Subsequently he served as president and CEO of Uzia Initiatives and Management Ltd., a company he founded in 1999. In 2000 he founded the Galil center for telemedicine and medical information at the Technion, a joint venture with the Faculty of Medicine. Galil has been awarded an honorary doctorate in technical sciences by the Technion in recognition of his contribution to the development of science-based industries in Israel as well as honorary doctorates from the Weizmann Institute of Science, Ben-Gurion University, and Polytechnic University, New York. In 1997 he received the Israel Prize for his special contribution to Israeli society.

GALILEE ([Hébreu הגליל, Ha-Galil]), the northernmost region of Erez Israel.

Name

The name Galilee is derived from the Hebrew galil which comes from the root גל ("to roll"), and thus means a circle. It appears in the Bible in the combination Ge-li ha-Goyim "Galilee of the nations" (Isa. 8:23), a formula repeated in the Maccabees 5:15. The town of Kedesh (see *Kadesh) is mentioned several times with the addition "in Galilee" (Josh. 20:7; 21:32; 1 Chron. 6:61); in 1 Kings 9:11 the 20 cities Solomon gave to *Hiram of Tyre (in the region of Cabul) are defined as being "in the land of Galilee." In the *Zeno papry (259 B.C.E.) the name appears as Galila. The form Galilee as the name of the northernmost region of Erez Israel west of the Jordan is firmly established in the writings of Josephus, the New Testament, and talmudic literature.

History

In prehistoric times the eastern part of Galilee was settled by Neanderthal man in the Lower Paleolithic period: remains of human skeletons have been found in the *Arbel and *Amud valleys. With the establishment of urban civilization in the Early Canaanite period, cities were founded in the plains surrounding the Galilean mountain massif and in its northern plateau while the wooded core of the country was left unoccupied. Egyptian documents mention only the cities (apart from those in the Jordan Valley and the coastal plain) lying on the branch of the Via Maris (the road leading from Damascus to the sea) which crosses the southeastern corner of Lower Galilee: Shemesh-Adom, Adummim, Anaharath, Han-
nathon, and apparently cities in northern Galilee: Beth-Anath, Kanah, Meron, and probably Kedesh.

The armies of the Pharaohs and of the invading *Hyksos avoided the difficult mountain region as far as possible. Archaeological evidence indicates that the Israelite tribes exploited this situation by infiltrating into the forested hill country before attacking the Canaanite strongholds in the plains (see *Archaeology).

The victories of Joshua at the waters of Merom and of *Deborah at Mt. *Tabor ensured Israelite supremacy over the whole of Galilee. In biblical times Galilee was divided between four tribes: *Asher in the northwest, *Zebulun in the southwest, *Naphtali in most of the eastern half, and *Issachar in part of the southeast (see Twelve *Tribes: Book of *Joshua). By conquering the remaining Canaanite cities in the *Jezreel Valley, David annexed the whole of Galilee to his kingdom. Under *Solomon, Galilee was divided into three districts, each roughly corresponding to a tribal area: the ninth district included Zebulun and probably Asher, the eighth, Naphtali, and the tenth, Issachar. With the division of the monarchy Galilee became part of the northern kingdom of *Israel and was in the forefront of the struggle with Aram-Damascus (see *Aram-Damascius). In 732 B.C.E. *Tiglath-Pileser III, king of Assyria, conquered Galilee and turned it into the Assyrian province of Magiddu (*Megiddo). Some of the Israelite inhabitants were deported but the remaining remnant renewed its relations with Jerusalem in the time of Josiah who may have reunited Galilee with his kingdom (see *Ten Lost Tribes). Nothing is known of Galilee under the Babylonians and Persians; it was possibly administered from *Acre or *Hazor since Megiddo had lost its importance by this time (see Israel; *History, Second Temple). In the Ptolemaic period some estates in Galilee were held by Greeks; it appears in the Zeno papyri as a supplier of wheat to Tyre. It was part of the eparchy of Samaria in Seleucid times (see *Seleucia); its administrative center was the royal fortress on Mt. *Tabor (Ibytrion). According to 1 Maccabees 5:15 there were Jewish settlements in western Galilee in the confines of *Acre-Ptolemais. These were evacuated by Simeon but others remained in eastern Galilee; *Bacchides, the Seleucid general, is reported to have attacked the Jews of *Arbel on the Sea of Galilee. Galilee was incorporated into the Hasmoncean kingdom by *Judah Aristobulus I (104 B.C.E.). It rapidly became completely Jewish, for only two years later at the beginning of the reign of Alexander *Yannai, its cities could be attacked on a Sabbath for an easy victory. After *Pompey’s conquest (63 B.C.E.) Galilee was left to Judea; *Gabinius’ attempt to cut it off from Jerusalem by establishing a separate council (synedrion) at *Sepphoris did not succeed. Galilee was then a province (meris), a division established by Alexander Yannai, containing the sub-districts of Sepphoris, *Araba, Tarichaea, and Gischala in Upper Galilee. Under *Hyrcanus II, *Herod was governor of Galilee for a time; when he became king, Galilee was one of the centers of opposition to his rule and it remained a *Zealot stronghold until the fall of Jerusalem. After Herod’s death Galilee was inherited by Herod *Antipas, who founded its second largest city – *Tiberias. From Herod *Antipas it passed to *Agrippa I and then to Roman *procurators. In the last years of Nero, Tiberias and its vicinity were granted to *Agrippa II. In 66 C.E. Galilee joined in the Jewish revolt against Rome; it was the home of *John of Giscala, one of the foremost *Zealot leaders. The defense of the Galilee was in the hands of the historian Josephus who lost it to *Vespasian in 67. The Romans took no measures against the Jews of Galilee, some of whom, especially those of *Sepphoris and Tiberias, favored the Roman cause. Under *Trajan Tiberias became an autonomous city; Hadrian turned Sepphoris into a Roman city called Diocesarea but its population remained largely Jewish. Galilee did not take part in the *Bar Kokhba War (132–135; although historians dispute this point); what is certain is that after the expulsion of the Jews from Judea, Galilee was throughout the mishnaic and talmudic periods the stronghold of Judaism in Erez Israel. The activities of *Jesus and the early Christian apostles had no effect on the Jewishness of Galilee. The national authority of the patriarchate was reconstituted there in the second century, and the *Sanhedrin continued to sit in various cities, settling later in Sepphoris and finally in Tiberias. The priestly families which had been dispersed from Judea settled in Galilee. The remains of a score of synagogues and of a central necropolis at *Bet She’arim are material evidence of the prosperity and vitality of Galilean Jewry from the second to the sixth centuries, and the completion of the Mishnah and the Palestinian Talmud, of its spiritual productivity. The establishment of Christianity as the official religion did not at first influence the Jewishness of Galilee even though the Church set up an ecclesiastical hierarchy there and built numerous churches in the sixth century. Galilee was the center of the Jewish revolts against *Gallus Caesar (351) and the Byzantines (614). It fell to the Muslim Arabs in 635/6 and became part of the province of al-Urdunn (Jordan) with its capital in Tiberias. The Jewish villages continued diminishing but some existed until the time of the *Crusades. Under *Crusader rule Galilee was formed into a principality held by the Norman Tancred. It was lost in 1187 after their disastrous defeat at the Horns of Hittin, but part of it was regained in 1198 and all of it in 1240 only to be lost again during the 1260s. Ruins of Crusader castles (at *Mi’ilya, Montfort, etc.) attest to their rule. Under the *Mamluks Galilee was part of the mamlaka (“province”) of *Safed; under the Turks it was ruled by the semi-independent pashas of Acre. In the 16th century Safed became the center of Jewish kabbalism and Tiberias was resettled by Don Joseph *Nasi as the center of a proposed Jewish province.

[Michael Avi-Yonah]

In the second half of the 19th century, Galilee’s population increased and, on the whole, progressed, thanks to an extended period of peace. The Jewish community, concentrated mainly in Safed, somewhat improved its standard of living, although it continued to be dependent on *halukkah (donations from the Diaspora). In 1856, Ludwig August *Frankl found 2,100 Jews in Safed, and 50 in *Peki‘in, the only other Jew-
ish community in Upper Galilee at that time. Until 1895, the number of Jews in Safed increased to 6,620, and in Peki’in to 96. Even before the arrival of settlers of the Ḥovevei Zion and Bilu movements, there were stirrings within the Safed community for a more productive way of life, and in 1878 a group formed to settle at Gei Oni, the forerunner of *Rosh Pinnah; later a second group which formed to settle in the Golan eventually established Benei Yehudah. Rosh Pinnah became the cornerstone of a Jewish settlement network in eastern Upper Galilee and on the rim of the *Huleh Valley. In 1891, Russian Jews founded Ein Zeitim north of Safed. A second phase began in 1900 when the *Jewish Colonization Association (ICA) bought rather flat land with basalt soil in eastern Lower Galilee with the object of establishing “true” farming villages, i.e., based on grain crops, and *Ilaniyah, *Kefar Tavor, *Jabneel, and other settlements were founded. More moshavot were added through private initiative, and a training farm was set up on *Jewish National Fund (JNF) land at *Kefar Hittim. The Galilean moshavot set the stage for the beginnings of the cooperative movement of Jewish laborers and of “Ha-Shomer ("Guardsmen’s") Association." In the following decade, however, the Galilean moshavot and the Tiberias community stagnated, and those of Safed and Peki’in even decreased. As a result of World War I Safed’s Jewish community was decimated, whereas Galilee’s Arab rural society, based on a solid foundation in agriculture, emerged from the war unscathed and was even consolidated.

The Third, Fourth, and Fifth aliyot, which gave a powerful impulse to Jewish settlement in other regions, hardly touched Galilee, although all around it new Jewish areas were created, in the Jezreel Valley to the south in the 1920s, and in the Zebulun Valley to the southwest in the 1930s. The expansion of the *Stockade and Watchtower network during the 1936–39 Arab riots completed this outer ring, in the Acre Coastal Plain to the northwest, in the Bet Shean Valley to the southeast, and in the Huleh Valley to the northeast. In Galilee proper, only the kibbutz Kefar ha-Horesh was established in 1935 near Nazareth.

It was at the end of the decade that settlement spread into the hills near the Lebanese border in the northwest (*Hanithah, *Elion, *Maẓẓuvaḥ), while *PICA and the JNF, reacting to the British *White Paper of 1939, strengthened the “settlement bridge” in southeastern Lower Galilee connecting the *Jezreel and the *Kinnarot valleys (e.g., the settlements *Sharonah, *Ha-Zaore'im, etc.). In the 1940s, several more outpost settlements were set up, some of them at particularly difficult and isolated sites (e.g., *Manara, *Yehi'am, *Misgav Am).

The largest part of Galilee, however, continued to be exclusively non-Jewish, causing the UN partition plan of 1947 to allocate to the proposed Arab state the bulk of the area, from the Lebanese border south to, and including, Nazareth and from the shore of the Acre Plain east to the vicinity of Safed; only a strip of eastern and southeastern Galilee was left to the Jewish state. In the War of Independence, the Jewish vil-

lages, many of them isolated, held their ground without exception. In battles before the State of Israel was proclaimed (May 14, 1948), new positions were gained and continuous fronts consolidated: the southeastern corner of Lower Galilee was cleared of enemy strongholds; Tiberias and Safed became unexpectedly all-Jewish towns when the Arabs left them; and when on May 12–13, 1948, the Acre Plain was occupied by Jewish forces, direct contact was renewed in western Upper Galilee with the Hanithah bloc and Yehi'am. In the ten days of fighting between the first and second truces ("Operation Dekel," July 9–18, 1948), western, southern, and more of southeastern Galilee were taken, Arab forces were dislodged from their positions, and *Sepphoris and Nazareth came into Israeli hands. The rest of Galilee, corresponding to the previous British Mandate borders, was brought under Israeli control in "Operation Hiram" (Oct. 29–31, 1948); this fact was endorsed in the 1949 Armistice Agreement with Lebanon, in which a strip of territory west of the Naphtali Ridge which Israel had occupied returned to Lebanon.

In contrast with the events in other parts of the country, the movement of Israeli forces in Galilee was followed by only a minor exodus of the Arab population; although a considerable part of the Muslims left, most of the Christians and almost all of the Druze remained. This caused a relative increase of the latter two communities in Galilee’s total population, with the following pattern of ethnic distribution thus emerging: Druze inhabit villages in western Upper Galilee, between Acre and Mount Meron, and one village, al-Maghār, further southeast. Around Nazareth in southwestern and central Lower Galilee, there are mostly Greek Orthodox and Roman Catholic villages, but also a number of Muslim villages which remained intact. Two villages of the Greek Catholics, Miṣilyā and Fassūta, lie in western Upper Galilee, and one of the Maronite faith (Gush Ḥalav = Jish), near the Lebanese border further east. During and immediately after the War of Independence, 12 new kibbutzim were created, not only in the Acre Plain (Ṣa‘ar, *Gesher ha-Ziv, *Kabri, etc.) but also in the hills near the Lebanese border (*Ga‘aton, Yiiftah, *Sasa, *Baram, etc.) and in Lower Galilee (*Lavi, *Ein-Dor, etc.). In the beginning of the 1950s, about 30 moshavim were added, many of them initially in the form of “work villages,” the settlers earning their livelihood as hired workers in soil reclamation, afforestation, and other projects until a minimum of land became available for their own farms. This was intended to create more or less continuous chains of Jewish settlements across Galilee from west to east. In the same period many new comers were absorbed in Tiberias and Safed, but the growth of both towns later slowed down. Two new urban centers were established in southern Galilee – *Miẓgal ha-Emek in 1952, and Upper Nazareth in 1957. In the northwest, *Ma‘alot and *Shelomi were founded as nuclei of development towns, but their progress was far from satisfactory. The new moshavim in the hills also encountered difficulties, as their infrastructure of cultivable land and available water proved too narrow and the choice of farming branches was limited by local conditions.
The non-Jewish villages of Galilee, on the other hand, entered a phase of prosperity. Provided through government aid with access as well as internal roads, water installation, electricity, educational facilities, and municipal and social services, they modernized their farming methods and added new branches (e.g., deciduous fruit orchards) to the traditional ones (such as olives, tobacco, sheep, goats); many inhabitants worked in the cities as skilled or semi-skilled laborers, but kept their dwellings and holdings in the villages. Housing improved, and the built-up areas of the villages expanded, as most of them doubled or even tripled their population between 1948 and 1968. When surveys showed that Galilee’s opportunities were still far from being fully used and that more settlers could be absorbed there, both urban and rural settlement was furthered. Upper Nazareth grew quickly in the 1960s, and the initial stagnation at Migdal ha-Emek was overcome by industrialization. In 1963 a Central Galilee development project was started by the Israeli government, the JNF, and the Jewish Agency settlement department. Within its framework, a new village bloc was established near the Lebanese border (Biranit, Shetulah, Netu’ah, Zariit) and development work was carried out in the Yodfat-Mount Haazon area. In 1964, the town of Karmiel was founded, which expanded mostly after 1967. In the 1980s a new plan to keep Galilee Jewish was launched, focusing on the establishment of small communities (Mizpim, or Lookout Points) located on hills and mountains. Until 1982, 33 such Mizpim were established. These new settlements are concentrated in two major areas—the Segev zone and Tefen zone. Inside the Tefen zone there is an industrial area founded by the industrialist Stef Wertheimer. Many of the Galilee settlements earn their livelihoods from tourism, mainly renting out guest rooms.

The northern part of the Galilee area, mainly Kiryat Shmoneh and the rural settlements around it, suffered for years from bombardments by Palestinian organizations operating in Lebanon. These attacks led to Operation Peace for Galilee in 1982, a full-scale invasion of Lebanon culminating in the siege of Beirut and the expulsion of Arafat and the Palestinian terrorists under his command. The IDF fell back to a narrow buffer zone in 1986 and withdrew from Lebanon completely in 2000.

Northern Israel, comprising in addition to the Galilean hill regions areas in the Upper and Central Jordan Valley, in the Jezreel Valley, and in the Acre Plain, increased its population from 53,400 in the 1948 census to 1,111,500 in 2003 (with nearly half Arabs). In Galilee proper (i.e., the natural regions of eastern Upper and Lower Galilee, the Hazor Region, the Nazareth-Tir’an hills, and western Upper and Lower Galilee) the total population was around 400,000.

[efraim orni]

GALILI (Berchenko), ISRAEL (1911–1986), Israeli politician and former Haganah commander; member of the First and Third to Eighth Knessets. Born in Brailov, in the Ukraine, Galili was brought to Erez Israel by his parents in 1914. He studied printing at an elementary school in Tel Aviv. In 1924 he was among the founders of the No’ar ha-Oved ve-ha-Lomed youth movement, and in 1930 one of the founders of kibbutz Na’an. Galili was active within the Youth Center in the Histadrut, and in 1927 joined the Haganah. In 1935 he became a member of its Central Command on behalf of the Histadrut. During World War II Galili played an active role in the preparation for a possible German invasion of Palestine. When the split took place in *Mapai in 1944, after Sì’ah B broke away, he became one of the leaders of Ahдут ha-Avodah–Po’alei Zion. After the war Galili played an active role in the armed underground activities against the British Administration and was placed in charge of the Haganah’s purchasing and arming department. On “Black Saturday” on June 29, 1946, he managed to evade arrest by the British. In the years 1946–48 he was chief of the Territorial Staff of the Haganah, in which capacity he participated in the preparation of the Israeli War of Independence. During the war one of his main tasks was arms acquisition. In the Provisional Government formed by Ben-Gurion in 1948 Galili was appointed deputy minister of defense, in which capacity he opposed the breakup of the *Palmah as ordered by Ben-Gurion. In January 1948 Galili supported the union of Ahдут ha-Avodah with *Mapam and was elected to the First Knesset in 1949 on the Mapam list. He was not elected to the Second Knesset, but in 1954 he supported the split of Ahдут ha-Avodah–Po’alei Zion from Mapam, against the background of differences of opinion regarding the Soviet Union. He was reelected to the Third Knesset on the Ahдут ha-Avodah–Po’alei Zion list. In the Third to Fifth Knessets he was a member of the Knesset Foreign Affairs and Defense Committee. In 1956 he supported the establishment of the first Alignment with Mapai, and in 1968 supported the establishment of the *Israel Labor Party. In the years 1966–77 he served in successive governments as minister without portfolio, except for a brief period after the Six-Day War when he served as minister of information. Galili was always a behind-the-scenes figure, acting as adviser to Prime Minister Golda Meir and Yitzhak *Rabin. Several months before the elections to the Eighth Knesset Galili prepared a policy proposal, known as the Galili Document, which outlined the Labor Party’s policy in the occupied territories for the next four years. The document was considered relatively hawkish and was opposed by the Labor Party doves. The document advocated that Israel develop the economy, infrastructures, and social services for the Arab population in the West Bank and Gaza Strip, and economic ties between Israel and the territories; hold municipal elections in the territories (this was actually done in 1976); continue the open bridges policy initiated by Moshe *Dayan; enable the employment of Arabs from the territories in Israel while ensuring equal salary and employment conditions for them; build permanent housing for the refugees in the Gaza...
Strip; acquire land for Jewish development and settlement in the territories; encourage Jewish settlement activities more or less within the parameters of the Allon Plan; and continue the development of Jewish Jerusalem. Galili was not chosen as a candidate on the Labor list in the elections to the Ninth Knesset, and gradually turned into one of the “party elders” and a mentor to former members of Ahдут ha-Avodah. He encouraged Yigal *Allon to contend for the Labor Party leadership in 1980, and after Allon’s death encouraged Yitzhak Rabin.

[Susan Hattis Rolef (2nd ed.)]

GALINSKI, HEINZ (1912–1992), leader of the Berlin Jewish community after World War II. Born in West Prussian Marienburg, Galinski worked in a textile retail store in Rathenow before he moved to Berlin on the eve of World War II. After being taken for forced labor, he was deported to Auschwitz in February 1943. His father had already been killed in Berlin before the deportation; his mother and his wife were murdered in Auschwitz. Galinski was liberated by British troops in Bergen-Belsen on April 15, 1945.

Galinski was involved in preparing the first restitution laws and in rebuilding the Berlin Jewish community. In 1947, he married again; a daughter was born two years later. In 1949, he was elected president of the Berlin Jewish community, an office he held until his death in 1992. Jewish life in Berlin was clearly shaped by his activities. In contrast to his predecessors and some other German-Jewish politicians, Galinski saw German-Jewish life after the Holocaust not as the closing chapter of a long German-Jewish history but rather as a period for reconstructing the future. During his 43 years in office, the Berlin Jewish community built a new community center (inaugurated in 1959) and an elementary school and opened its doors to Jewish immigrants, mainly from the Soviet Union. In 1971, he signed a treaty with the Berlin city government which defined the position of the Jews.

From 1988 until his death, Galinski served as president of the Zentralrat der Juden in Deutschland, an office he took over from Werner *Nachmann, who had died amidst allegations of fraud and embezzlement. It was Galinski’s prime task to clear the name of German Jewry’s central institution. Galinski had been Nachmann’s political rival for decades. While Nachmann kept up close contacts with conservative politicians and represented a more lenient position toward dealing with the Nazi past, the memory of the Holocaust and the prosecution of Nazi crimes always played a central role in Galinski’s activities. Among the many honors he received were an honorary doctorate from Bar-Ilan University (1983) and the title of honorary citizen of Berlin (1987).

GALIPAPA, ELIJAH MEVORAKH (d. 1740), Turkish rabbi. Galipapa was born in Sofia and went to Jerusalem in 1702. He fled from there after being imprisoned for his inability to pay the heavy taxation imposed on him, and reached Rhodes where, in 1704, he became deputy to the chief rabbi, Elijah ha-Kohen ibn Ardut. Galipapa is the author of Yehei Eliyahu (Constantinople, 1728) in two parts: (1) the takkanot (ordinances) instituted by the prophets; (2) novellae. Many more of his novellae remain unpublished. His tombstone still stands in Rhodes.

[Simon Marcus]

GALIPAPA, HAYYIM BEN ABRAHAM (1310–1380), Spanish talmudist. Galipapa was born in Monzon, Aragon. He served as rabbi of Huesca and subsequently of Pamplona. The following works by him are known: Emek Refa’im, a commentary to the tractate Semahot which includes a description of the *Black Death and the persecutions of the Jews which came in its train in Catalonia and Provence during the years 1347–50 – extracts from it are given by *Joseph ha-Kohen in his Emek ha-Bakha and Divrei ha-Yanam le-Malkhei Zarefat; Iggeret ha-Ge’ullah, mentioned by Joseph Albo in his Ikkarim (4:42); a commentary on the Seder Avodah (for the Day of Atonement) of Joseph b. Isaac ibn Avitur, extracts from which are given in the Kovez Maasei Yehei Geronim Kadmonim (1856; pt. 2, 120–2). There is also extant a letter by *Isaac b. Sheshet (Resp. Ribash 394) to Galipapa from which the latter’s views on halakhah can be seen. Galipapa’s place in the Spanish Judaism of his time was determined by the great daring he displayed both in thought and in halakhah. According to Joseph Albo (loc. cit.), Galipapa maintained that all Isaiah’s prophecies of deliverance had reference to the Second Temple and Daniel’s vision in chapter 7 to the Hasmonaeans. It is evident that in his work Galipapa intended to abolish belief in the coming of the Messiah or at least to deny that there was a basis for such belief in the Bible. Galipapa also showed an exceptional tendency toward leniency in halakhah. He maintained that there was no need to conceal permissive laws out of fear that the permission would cause the ignorant to fall into error with regard to things forbidden “for they are all wise and with understanding, knowing the Torah, expert in the minutiae of the precepts, and as full of precepts as is the pomegranate of seeds” (Isaac b. Sheshet, loc. cit.). In opposition to the opinions of all authorities before him he ruled that combing the hair on the Sabbath is not forbidden. To find a basis for this permissiveness Galipapa was compelled arbitrarily to amend the text of the Talmud, thus aggravating still more the opposition to him.

[Simon Marcus]

GALIPAPA, MAIMON (14th–15th century?), Spanish satirical poet. Galipapa, called “En” (= Don) Maimon Galipapa, was
possibly identical with the Galipapa mentioned in a document of 1553 from Valencia. He is the author of *Ma‘amarei ha-Rofe‘im*, a parody on the Aphorisms of Hippocrates, a medical work highly popular in the Middle Ages, and *Neder Almanah*, a satire about a widow who quickly forgets her late husband. Presumably he also wrote the anonymous humorous pamphlet *Midyenei Ishah* ("Contents of a Wife") which appeared together with *Ma‘amarei ha-Rofe‘im* in Ferrara in 1551.

*[Jefim (Hayyim) Schirmann]*

**GALLICO, JOSEPH SHALOM** (d. 1624), Hebrew poet. Originating in Salonika, Gallico was for 14 years *hazzan* in Amsterdam. He later migrated to Ereẓ Israel. His "Imrei No‘am" (Amsterdam, 1628) is a collection of devotional poems for the festivals, fast days, weddings, and circumcision. The Spanish songs according to whose tune they were to be sung are generally indicated. Some of the poems are by Gallego; other poems of his are included in the collection *Kol Tefillah ve-Kol Zimrah* by David "Franco-Mendes (Ms.). He also translated into Spanish the ethical writings of *Jonah Gerondi* (Sendoro [Sendero] de Vidas, Amsterdam, n.d. and 1640).

*[Jefim (Hayyim) Schirmann]*

**GALLICO** (or Gallichi). Italian family of French origin. The family first lived in Rome where it was known from the 14th century. In 1323, a "Gallichi" (which may however imply "French") synagogue is mentioned there. Later the Gallico family spread to other Italian towns. MALACHI (Angelo) GALLICO was physician and rabbi in Cori, a village of Rome, in 1565 when the community decided to accept the invitation of Joseph *Nasi and move en masse to Tiberias. SAMUEL GALLICO, rabbi and kabbalist, published a summary of Moses *Cordovero’s Parades Rimmonim*, under the title of *Asis Rimmonim* (Venice, 1601). In the 16th, 17th, and 18th centuries several other rabbis and scholars belonging to this family are mentioned in Mantua, Modena, and Siena. Another member of the family was the Hebrew scholar and poet Abraham b. Hananiah dei Gallicchi *Jagel*.

*[Attilio Milano]*

**GALLICO, ELISHA BEN GABRIEL** (c. 1583), talmudic scholar and kabbalist in Safed. Gallico was a pupil of Joseph "Caro and a member of the latter’s *bet din*. After the death of Caro, he was a member of Moses "Trani’s *bet din*. Gallico was the teacher of Samuel "Uceda. Gallico’s signature appears – once together with the other scholars of Safed – on several responsa (in Caro’s *Avkat Rotkel*, etc.). After Caro’s death, according to his instructions, Gallico banned Azariah dei Rossi’s *Me’or Einayim*. The collection of Gallico’s responsa has been lost; however several of them are quoted both in the work *Kenest ha-Gedolah* and in the responsa *Ba’ei Hayyey* by Hayyim "Benvenisti. Gallico wrote homiletic and kabbalistic commentaries on all the five scrolls. The commentaries on Ecclesiastes (Venice 1578), Esther (Venice 1581), and the Song of Songs (Venice 1587) have been published. Toward the end of his life he headed a yeshivah in Safed.

*[David Tamar]*

"GALLING, KURT" (1900–1987), German Lutheran biblical scholar. He was professor at Halle from 1928 to 1945, at Mainz from 1946 to 1954, from 1955 at Gottingen, and from 1962 at Tuebingen. A student of Hugo Gressmann, Galling was a versatile and prolific scholar and a pioneer in bringing precision into biblical archaeology, especially through his *Biblisches Realexikon*. Galling published works and articles on archaeology and biblical history, theology, and exegesis, including *Der Altar in den Kulturen des Alten Orients* (1925), *Die Erwachungstraditionen Israels* (1928), *Biblisches Realexikon* (1937), *Der Prediger Salomo* (1940, 1964), *Das Bild vom Menschen in biblicher Sicht* (1947), *Die Bucher der Chronik, Esra, Nehemia* (1954), and *Studien zur Geschichte Israels im persischen Zeit- alter* (1964). From 1957 to 1962 Galling edited the third edition of *Die Religion in Geschichte und Gegenwart*, to which he contributed scores of articles in various fields.

**GALLIPOLI**, port in European Turkey, on the S. coast of the Gallipoli peninsula. Benjamin of Tudela, the 12th-century traveler, found 200 Jews in Gallipoli; they are also mentioned during the reign of Michael viii Palaeologus in 1261. In the Byzantine period there were a few cases of conversion in the 13th century. In 1354 Gallipoli came under Ottoman rule. Mehmed the Second transferred, after 1453, many Jews from Gallipoli to Istanbul. They founded a separate congregation, one of the "Sürgün" congregations in Istanbul. But in the 16th century there were only three or four members in this congregation and at the beginning of the 17th century it ceased to exist. Jews are registered in the census of 1488/1489 of Gallipoli. Jews in Gallipoli served as *sarrafs* (bankers), and in the 15th century they paid for the privilege of a license to work as a group in this profession. There were also Jews in Gallipoli who owned real estate. It seems that a group of Romaniots returned to Gallipoli before 1492, but they remained with a status of "Sürgün"
and paid their taxes in Istanbul. The number of Jews increased at the end of the 15th century, when the Romaniot Jews were joined by refugees from Spain and Portugal. In the census of the year 1519, 15 Jewish families and two bachelors were registered along with three merchant Jews from Istanbul who were staying in the city. In 1520–35, 23 Jewish families lived in the city, representing 0.3% of the general population. There were 5,001 Muslim and 3,901 Christian inhabitants. Between the years 1547 and 1557 a first firman for the Sephardim and Romaniot was enacted. It exempted the Romaniots from part of the Ottoman taxes and community taxes. The Sephardim were considered wealthy. At the same time new orders were issued which related to the economic rivalry between the Sephardim and Ashkenazim in the community. But in 1577 the Sephardim complained about economic hardship and their inability to pay the Ottoman taxes. New community regulations from the middle of the 16th century tried to prevent the transfer of Jewish real estate to the Gentiles and the entry of Gentiles into the Jewish quarter. In that century Rabbis Judah Ibn Sanghi and Ishai Morenu were active in the community. In 1600–01, 30 Jewish families lived in the city (1.72% of the population), all in the Jewish quarter. Local Jews were the tax farmers in the city during the 17th century, but in 1648 the "emin" of the city threw the Jews out of this position.

The emissaries Rabbi Moses ha-Levi and Joseph ha-Cohen visited the community between 1668 and 1684, and the emissary Hayyim Yáakov visited it in 1670. The traveler Samuel ben David visited in 1641–42 and wrote that there were two synagogues in the city, but it seems that the community was united under the leadership of one rabbi. In 1656 the local Jews ransomed an Ashkenazi woman from Eastern Europe. The emissaries Rabbi Moses ha-Levi and Joseph ha-Cohen visited the city in those special cases in which the community had small and had to adopt the religious regulations of the Istanbul community in those special cases in which the wealthy leaders of Gallipoli did not know how to decide. Peretz wrote the well-known halakhic work *Zokhreno le-Hayyim* (3 vols, Salonica, 1867–72). Another rabbi of the community was Jacob Ibn Haviv (d. 1863). At the end of the 19th century Rabbi David Pardo (b. Istanbul, 1838) served there for seven years. The Jews of Gallipoli had many commercial and economic connections with the Gentiles. The majority spoke and wrote Ladino.

In 1912 there were 2,500 Jews in Gallipoli. The earthquake in the same year destroyed the Jewish quarter with the two synagogues which had been active from the 19th century onwards, but no Jews were killed. During the Balkan Wars (1912–13) refugees, including Jews, streamed into Gallipoli. The Va‘ad ha-Hazzalah ("Rescue Committee"), founded then, aided the refugees, as well as Jewish soldiers from Syria and Iraq. In 1915 the Zion Mule Corps, as part of the British Army, fought the Turks on the Gallipoli peninsula (see *Jewish Legion*). Until c. 1920 there lived in the city 600 Jewish families with three synagogues. From 1933 all religious and administrative affairs of the Gallipoli community were subordinated to the district rabbinate of Ḳanakkale. As a result of emigration to Istanbul and the United States between the two world wars and subsequently to Israel, the number of Jews in Gallipoli decreased. Two of the three synagogues of the community were burned during World War II. In 1948 there were about 400 Jews in Gallipoli, and in 1951 about 200. By 1970 the few remaining families in Gallipoli were mainly engaged in commerce. In 1977 the Jews of the city numbered only 22 persons, of whom four were youngsters. Of the breadwinners six were merchants. In August 1977 no Jew remained in the city after the immigration of local Jews to Istanbul and Israel. The Jewish cemetery contains 835 tombstones, of which the oldest is from 1628 and the latest is from 1986.

**[Leah Bornstein-Makovetsky (2nd ed.)]**

**GALON (Heb. גָּלוֹן)**, kibbutz in southern Israel, northeast of *Kiryat Gat, affiliated with Kibbutz Arzi ha-Shomer ha-Za‘ir. It was founded on the night of Oct. 6, 1946, as one of 11 settlements established simultaneously in the Negev. The founding members hailed from Poland, where a number of them lived in ghettos or were partisans fighting the Nazis.
of Independence (1948), Galon served as a vantage point for Israeli columns in dislodging Arab forces from the Bet Guvrin and southern foothills area. In 1968 it had a population of 350 inhabitants, rising slightly to 385 in the mid-1990s and dropping to 287 in 2002. Its farming was based on field crops, flowers, avocado plantations, citrus groves, dairy cattle, poultry, and ostriches. The kibbutz owned a factory producing fans for industry and agriculture and motors for air-conditioners and ran a guesthouse and facilities for hosting seminars. Its name, meaning "Monument to Strength," commemorates fallen ghetto fighters.

[Éfraim Orni / Shaked Gilboa (2nd ed.)]

**GALSKÝ, DESIDER** (1921–1990), Slovak publicist and journalist, born in Michalovce, Slovakia, lived in Prague. Galský took part in the Slovak National Uprising against the Nazis and was imprisoned. After the war, he worked for two decades as an editor in publishing houses. He served as chairman of the Council of Jewish Religious Communities in Czechoslovakia (1981–86) and was dismissed by the Communist regime. He assumed the position again after the Velvet Revolution in 1989. He was killed in a car accident in 1990. A master of non-fiction, Galský wrote dozens of books on such topics as M. Bornmann, F. Lesseps, and world discoveries, but not any Jewish-related subjects.

[Milos Pojar (2nd ed.)]

**GALUT (Golah)** (Heb. גָּלוּת, גָּלוֹחַ, exile.

**The Concept**
The Hebrew term galut expresses the Jewish conception of the condition and feelings of a nation uprooted from its homeland and subject to alien rule. The term is essentially applied to the history and the historical consciousness of the Jewish people from the destruction of the Second Temple to the creation of the State of Israel. The residence of a great number of members of a nation, even the majority, outside their homeland is not definable as galut so long as the homeland remains in that nation’s possession.

Only the loss of a political-ethnic center and the feeling of uprootedness turns Diaspora (Dispersion) into galut (Exile). The feeling of exile does not always necessarily accompany the condition of exile. It is unique to the history of the Jewish people that this feeling has powerfully colored the emotions of the individual as well as the national consciousness. The sense of exile was expressed by the feeling of alienation in the countries of Diaspora, the yearning for the national and political past, and persistent questioning of the causes, meaning, and purpose of the exile. Jewish mystics perceived a defect in the Divine Order which they connected with alienation in this world – “the exile of the Divine Presence.”

**The Diaspora Pattern**
The process of Jewish dispersion in various countries during different periods was due to the combination of national catastrophes, military defeats, destructions, persecutions, and expulsions, as well as to normal social and economic processes – migration to new places of settlement and transition to new means of livelihood. The expression "Egyptian Exile" for the period before the Exodus is merely a homiletic conception of later date; but there is no doubt that Jewish dispersion had already begun in a normal way a long time before the concept of exile developed. The conquests of the Arabs between 632 and 719 changed the pattern of the Diaspora by uniting large parts of the Jewry of the Roman Empire with that of the Persian Kingdom. The Muslim armies extirpated the Jews from the Arabian peninsula, with the exception of those in Yemen and Wadi al-Qara, but created favorable conditions of development for the exiles in the remainder of the lands of Islam. In the Christian world, this period is marked by the progress of the Jewish dispersion in Gaul and later in Germany and Britain. From the 11th century, the Jewry of the West (see *Germany*) managed to maintain itself under increasingly difficult conditions and even spread to central Germany. The changes in the territorial supremacies of Christianity and Islam as a result of the Crusades and the Reconquest in Spain, as well as the *expulsions in the Christian countries, brought changes in the configuration of the Jewish Diaspora from one period to another.

By processes of both expulsion and attraction, the Jews penetrated the expanses of Poland-Lithuania during the 15th century. The migration eastward was halted by the total prohibition imposed on the admission of Jews by the grand duchy of Moscow (see *Russia*). After 1497 there were no professing Jews (except for the underground of forced converts – * anusim*) left in all of the lands bordering the Atlantic, including England. During the 17th century, however, the Jews returned and penetrated to the Netherlands and England. The Jewish population in the Ottoman Empire had increased in numbers after the Spanish Expulsion. The largest Jewish concentrations during the 16th to 18th centuries were to be found in the Ottoman Empire and the kingdom of Poland-Lithuania. The persecutions of 1648–49 (see Bogdan *Chmielnicki*) started off the migration of Jews in Eastern Europe toward the West, a process which continued and intensified throughout the modern era.

At the close of the 18th century, the partitions of Poland as well as the French Revolution led to a Jewish expansion toward the western provinces of Russia, the northeastern provinces of Austria, the Kingdom of Prussia, and the French territories. Economic, social, cultural, and political developments made Ashkenazi European Jewry the most important in the Diaspora, both numerically and in dynamism, throughout the 19th century and the first 30 years of the 20th. As formerly, liberalist or restrictive trends in this period also determined the pattern of Jewish dispersion in the world. It was only in 1917 that the revolution in Russia abolished the *Pale of Settlement and removed the last barriers to the settlement of Jews throughout the territory of the great Eurasian power.

In America individual Sephardi Jews had already begun to arrive during the 16th century. However, the emigration of
considerable groups of Jews there was only to begin during the mid-19th century when many left Germany; the transfer of masses of Jews from Eastern Europe to the new world, especially the United States, only began during the last quarter of the 19th century. The flow of mass immigration to the United States and later also to Canada and the South American countries, coupled with the impetus of Zionism and trends of modern nationalism, have contributed to the shift to new centers of gravity. The catastrophe of the persecutions in Germany from 1933, the conquests of the Nazis until 1939, and the decimation of European Jewry in the Holocaust from 1939 until 1945, created a situation in the 1970s such that the numerical majority in the Jewish Diaspora was to be found on the American continent, while Ereẓ Israel had the third largest Jewish concentration in the world (Soviet Russia was the second). In the early 21st century, after the collapse of the Soviet Union and the exodus of over one million Jews, the largest Diaspora communities were the United States and France. In Ereẓ Israel, the independent Jewish politico-national center has been revived. As in the Second Temple era, through the State of Israel, the Jewish nation has regained the basic pattern of a Diaspora with a state as its center (see *Diaspora).

Second Temple and Mishnah Period

It can be assumed that the severe persecutions in the days of Antiochus Epiphanes and the success of the ensuing rebellion contributed to the Jews’ feeling of being out of place in the Diaspora and their yearning for Judea. Despite this, the growth of the Diaspora was more pronounced in the hellenistic kingdoms and in the Roman Empire. Prophecies and poems of pietists gave expression to the tragedy of the *galut combined with the feeling of the inevitability and continuity of the Diaspora. In the second half of the second century B.C.E. the sibyls explain to their nation, “it is thy fate to leave thine holy soil” (Or. Siby. 3:267), a fate described as encompassing the whole world and causing hatred toward those who are dispersed because of their way of life (ibid. 3:271–2). In the second half of the first century it was stated that, “among every nation are the dispersed of Israel according to the word of God” (Ps. of Sol. 9:2); the conquests of Pompey were also seen as a cause of the *galut (ibid. 17:13–14, 18). Even prior to the destruction of the Temple they sensed the dangers which stemmed from the general dispersion, as foretold in the biblical warnings (Test. Patr., Ash. 7:2–7). On the other hand there were groups who expressed the feelings of the people in their own cultural terms and wrote favorably of the Diaspora and their neighbors, tending to regard the dispersion as a normal and even desirable situation (Philo, De Legatione ad Gaium, 281; Jos., Ant., 4:115–6).

After the destruction of the Temple the question of the *galut as existence under foreign rule without a Temple and without a spiritual center was discussed. In the spirit and the style of the Bible, it was said that “behold we are yet this day in captivity, where’sthou hast scattered us, for a reproach and a curse and a punishment” (1 Bar. 3:8); but thought was directed mainly to the possibility of existing in a land of gentiles and under their rule (ibid. 1:12, 4:6). The question of the meaning and the justification of the exile begins to be asked in all earnestness: the evil nations dwell in prosperity and the chosen people suffer; the author of IV Ezra (3:32–34; 6:39) argues with his Creator, asking: “Have the deeds of Babylon been better than those of Zion? Has any other nation known Thee besides Zion?… If the world has indeed been created for our sakes, why do we not enter into possession of our world? – How long shall this endure?” He is bitter about the fact of “the reproach of the nations” and the profaning of God’s name which occurs in the *galut (ibid. 4:23–25), but he lays no stress on the physical suffering entailed. Accepting neither the cosmic explanation of the exile, nor the mysteriousness of the ways of the Lord, nor the world to come, which nullify the valuation of the events of this world (ibid. 4:9–10), he seeks to explain the exile as a road of suffering which must be traveled in order to reach the good (ibid. 7:3–16). He is comforted in the exile by the vision of the lion – the Messiah – who will destroy the eagle – Rome (ibid. ch. 12).

The author of II Baruch (10:9–16) almost desairs of all life, from the survival of the people to cultivating the land, a mood which is also found in the “ascetics who multiplied” (ibn 60b) after the destruction of the Temple. The essence of the tragedy of the exile seems to him, too, to be a diminution of the honor of God in the eyes of the gentiles and the degradation of the Jewish people (II Bar. 67:2–8). The deep spiritual shock which followed in the wake of the dispersion is expressed in this book: there were Jews who despaired of the possibility of spiritual leadership of the people after the destruction of the Temple and the cessation of the sacrifices and the priesthood (ibid. 77:13–14). In the spirit of Jabneh and from the power of the Torah, which exists even in the *galut, the author answers their despondency: “Shepherds and lamps and fountains come from the law…if therefore ye have respect to ponder on the law and are intent upon wisdom the spiritual leadership will not be lacking” (ibid. 77:15–16).

Thus the problems of the *galut, its meaning, and its essence were considered in great depth and with considerable apprehension during the first two generations after the destruction of the Temple. It is true that the ideas voiced in the Apocrypha were not heard by the people in general and their influence was not noticeable, but they reflect a feeling and emotional state which are similar to those expressed in the Mishnah, the Talmud, and the Midrashim.

The thinking of the *tanna'im and amoraim on the *galut and its meaning is extensive and varied, developing in the light of the changes which took place from the days of the Second Temple until about the fifth century C.E. In general the patterns of thought and the imagery of the Bible prevail, together with those of many apocryphal works. However, they express their feelings with greater and more penetrating detail, arising from the depths of their degradation and the suffering occasioned by the rise of Christianity, when they passed from subjugation to alien pagans to subjugation to the rule of a Jewish heresy.
Apprehension of the pain of the destruction was so severe that “the ascetics in Israel who refused to eat meat and to drink wine increased”; this recourse to complete abstinence, whose intention was self-annihilation of the nation (“it is fitting that we should decree upon ourselves not to marry nor beget children”) was not accepted, and the moderate path of limited mourning and remembering the destruction of the Temple was followed instead (BB 60b). Yet from the beginning the galut was a phenomenon which demanded an explanation: even the gentiles asked: “And His People, what did they do to Him that He exiled them from their land?” (Arn 1.4). The sages could not be satisfied with a general answer about the sins of the people, and they gave their opinion about the specific causes of the destruction of the Second Temple. Unlike the first exile, which resulted from idol worship, incest, and the shedding of innocent blood, the second destruction was caused by baseless hatred and the love of money (Yoma 9b). Alongside these realistic types of explanation, there is a widespread tendency to connect the galut with the past and to find in it links for the future. Abraham had to decide whether to choose for his children either “Gehinnom or foreign kings,” and some say that Abraham chose Gehinnom for himself and God chose the foreign kings for him (Gen. R. 44:21). Even the ram struggling among the thorns was a symbol for Abraham that “thy children will be trapped by iniquities and be entangled by troubles … and by foreign kings” (TJ, Tan. 2:4, 65d; Gen. R. 56:9; Mid. Hag. to Gen. 22:13). When the tribes in the desert “wept without cause,” “from that hour it was determined that the Temple would be destroyed in order that Israel would be exiled among the nations” and there would then be a reason for their weeping (Num. R. 16:20; Tan. 29a).

R. Abbahu, at the end of the third century, compares the expulsions of the people and their banishment as punishment for violating the covenant with the expulsion and banishment of Adam from the Garden of Eden after he had transgressed the commandment of the Lord (Pars 119b). The exile from “country to country” was considered one of the ten decrees proclaimed against Adam (Arn 42, 116). The sages give varied interpretations to the dispersion and its temporary nature, regarding as a specially severe decree the fact that the Jews were not concentrated in one place, but scattered among the nations “as a man scatters grain with a winnowing shovel and not one grain sticks to another” (Sifra 6:6). Everywhere the Jews are only “temporary” (i.e., wanderers) and the “dwellers” (the permanent population) are the children of Esau (Deut. R. 1, 22). The suffering of the exile is equal to all other suffering combined (Sif. Deut. 43); it is “like death and the abyss” (Mid. Ps. to 71a). In the galut Israel is a mendicant (ibid. to 9:15), deprived of its pride, which has been given to the gentiles (Hag. 5b). There is no way for the exiled nation to defend itself since “Israel is among the 70 mighty nations; what can [Israel] do?” (Pr 9:32a).

The very soul of the Jew is affected in the galut, which renders him “unclean with iniquities” (Song R. 8:14). Nor is the individual soul alone affected: the galut detracts from the completeness of the Kingdom of Heaven (Mid. Ps. to 97a). The Shekhinah “moans like a dove” and the “Holy One blessed be He roars like a lion” over the destruction of the Temple and over the children of Israel … “Whom I have exiled among the nations” (Ber. 34; cf. Hag. 5b). From the time of R. Akiva it became accepted belief that “in every place where Israel was exiled the Shekhinah was exiled with them” (Mekh., Pisha 14; Meg. 29a; TJ, Tan. 111, 64a; etc.). This idea connected the exile of Israel with the fate of the world as a whole and became a source of encouragement and faith.

Despite the feeling of suffering and the oppression of the exile, the rabbis at all times firmly believed that the galut would not mean total destruction. God had made the nations of the world swear that “they would not subjugate Israel overmuch”; the great sufferings in the galut constituted a violation of this oath, and this would hasten the advent of the Messiah (Ket. 111a; Song R. 2:7).

The rabbis saw a cause for satisfaction even in the negative aspects of the galut. The suffering emphasizes the faithfulness of Israel and gives it an opportunity to say to God “How many religious persecutions and harsh edicts have they decreed against us in order to nullify Thy sovereignty over us, but we have not done so” (Mid. Ps. to 5:6). The sages saw the dispersion as a prerequisite for the redemption: in the settlement of Jews throughout the whole Roman Empire (“if one of you is exiled to Barbary and another to Sarmatia”) they saw (in the second half of the second century) a fulfillment of this condition (Song R. 2:8; Par 47a–48a; Pr 15:7b). Nevertheless, according to the opinion of Rav: “When Israel merits it, the majority of them will be in the land of Israel and a minority in Babylonia, but when they are unworthy of it, the majority will be in Babylonia and the minority in Erez Israel” (Gen. R. 98:9).

The increase in the number of converts in the Roman Empire gave added meaning to the dispersion. At the beginning of the third century the amoraim R. Johanan and R. Eleazar gave the interpretation that “the Lord did not exile Israel among the nations except in order that there should be added to them converts” (Pes. 87b). In the eyes of the homilists who expressed similar sentiments, the people of Israel was like a “flask of perfume,” which emits its scent only when it is shaken, and to Abraham, who made converts, it was said, as a sign for his descendants, “Wander about in the world, and your name will become great in my world” (Song R. 1:4). This evaluation of the Diaspora is similar to that of Philo and Josephus, and it is possible that the amoraim are only repeating views which were widespread for a long time before them, when the conversion movement was at its height. With the adoption of Christianity by the Roman Empire and with the decrease in conversion, the dispersion took on an additional aspect of national security. When a Christian sectarian boasted, “We are better than you,” for “when you were given permission to destroy Rome, you left none in it except a pregnant woman” and “you have been with us many years and we do not do anything to you,” R. Oshaiah answered that
it is not the mercy of the rulers which assured survival in exile, but the political situation. Their wide dispersion saves the Jewish people from total destruction and thus "the Lord did a righteous thing to Israel in scattering them among the nations" (Psalms 87:6; cf. Sefer Torah 151a–b). As a favor to His exiled people the Lord sees to it that no one kingdom dominates the world: "He divided His world into two nations, into two kingdoms … in order to preserve Israel" (ibid. 201a, 4). In the ancient promise to the patriarchs that their children would be "as the dust of the earth," the rabbis found a symbol of the galut; "As the dust of the earth is scattered from one end of the world to the other, thus your children will be scattered from one end of the world to the other, as the dust of the earth causes even metal vessels to wear out but exists forever, so Israel is eternal but the nations of the world will become nought … as the dust of the earth is threshed, so thy children will be threshed by the nations …" (Gen. R. 41:9).

Like Ezekiel, and in the same language and spirit, the sages deal with the problem of religious observance in the Diaspora. The absence of sacrifices and of the Temple was liable to undermine the foundations of the religion. Some maintained that from a religious point of view the Jewish people in exile could be compared to a slave who had been sold and the laws obtaining in his former master's house did not apply to him: "When we were in His city and in His house and in His Temple we served him; now that we have been exiled among the nations – let us act as they do" (Sefer Torah 151a; Sifra, Be-Hukkotai 8:4). An echo of the fear expressed by the author of 1 Baruch is heard in the saying of the sages that in the exile "knowledge has been taken from them … they will be lacking in the study of the Torah" (Mekh., Ba-Hodesh, 1). These were, however, the effects of the first shock. The people overcame them, finding solace in the teaching of the sages. The commandments assumed new value in the galut and the Torah was studied. When the national organism sought means of defense and survival for its separate life as a community in an alien environment, it was realized that in exile the nation had lost all signs of social-national unity; "for what has remained to them … all the boons which had been given to them have been taken from them; and were it not for the Torah which remained to them, they would be no different from the nations of the world" (Sifra, Be-Hukkotai 8:10). In the galut the Torah was both the anchor and the protective wall for survival, preserving unity; this had already been symbolized in the promise of the "dust of the earth": "As the dust of the earth is not blessed except with water, so Thy children are not blessed except by the virtue of the Torah" (Gen. R. 41:9). Even God wondered at the way they maintained their religious-national status in the long exile: "My child I am full of wonder, how did you wait for Me all these years? – and Israel answered … were it not for the Sefer Torah which Thou hast written for us the nations of the world would already have made us lose to Thee" (Parashat Torah). The Torah is the marriage contract which was given to the faithful wife.

To the sages, the social and psychological battle of the people as a whole and of each individual to resist the blandishment of "assimilation in the exile gave meaning to the troubles and sufferings which resulted from it. From their knowledge of the conditions of life in the exile they understood that "had they found a refuge, they would not have returned" (Gen. R. 33:6). In interpreting the ideas expressed by Ezekiel, they saw the social disabilities and the physical suffering of the exile as a means of annulling the desire to abandon the Torah: "Without your consent, against your will, I imposed My sovereignty upon you … for they immediately humble their heart in repentance" (Sifra, Be-Hukkotai 8:4–5). It is stated even more emphatically, perhaps as a result of the increase in their troubles and persecutions: "When your bones are crushed and your eyes are put out and the blood of your mouths spill to the ground, you cause His kingdom to reign over you" (Sefer Torah 151a). The sufferings on their part add a special reward and meaning to the observance of the Torah and its study: "The later generations are better than the former; although there is subjugation to foreign kings, there is study of Torah" (Yoma 9b).

The spiritual struggle to explain and justify the exile became intensified from the time that Judaism was obliged, from the fourth century onward, to contend with Christianity, which saw in the exile of Israel a witness and a sign that the divine favor had been taken from Israel and given to the church and its adherents. This polemic tone is particularly noticeable in the words of the paytanim and in late Midrashim (see Assimilation).

As the duration of the exile extended, fears grew: when they saw that oppression increased "with taxes … and with poll taxes … Jacob became afraid … would it last forever?" The people found their consolation in Messianic promises which were bound up with the liquidation of the galut and the ingathering of the exiles – "from Babylonia … from Gaul and from Spain" (Parashat Torah 151a–b). When despair grew until they even went as far as to complain, "Is there any remedy for a servant whose master creates evils and troubles for him?" – the remedy for this weakness of spirit was found in the doctrine that the troubles themselves were a sign of the true election of Israel (Haggadah 5a).

The concept of exile and the description of the feelings it inspired which occur in the Mishnah, Talmud, and Midrash reveal a community battling against adverse conditions and finding a rationale for accepting its sufferings and looking forward to the end of the galut. Through this concept the essence of the phenomenon, the reason for the dispersion among the nations, the religious, social, and national qualities of the nation for whom there remained only the Torah were considered; and in it expression was also given to the struggle against the religion which sought to find in the condition of the exile itself support for its claim that Judaism had come to an end, and that it could claim to be its heir.

**Ideology in the Medieval World**

During the Middle Ages both the reality of galut and its image acquired new intensity. Changes were wrought by the power
and violence of events, the strength and fervor of continuous religious *disputations with the surrounding nations, and the soul searchings among Jews on the implications of galut, which appeared as a central element of both faith and world destiny. Every change in the fate of the exiles of “Edom” (as Christendom was termed) or “Ishmael” (Islam), in their legal position, and in their spiritual confrontation with Christianity and Islam, required fresh adaptation of the concept of galut to the new challenges.

In fact the position of the Jews and their status differed with time, place, and the attitude adopted in principle and practice toward them by Christian and Muslim rulers and peoples (see *History; *Blood Libel; Jewish *Badge; Covenant of *Omar; *Dhimmi).

Despite these distinctions, however, a fundamental conception of galut remained. Basically, throughout the Middle Ages exile was for the Jews everywhere a political and social condition characterized by alienation, humiliation, and servitude, and regarded as such by both non-Jews and Jews. Danger to life and limb and the actuality of expulsion were its permanent accompaniments. It was this situation which gave rise to ideas and imagery concerning the exile and its meaning in the minds of the dispersed and downtrodden nation.

The challenge of exile induced in response a system of thought which viewed galut as a course of suffering which uplifted the spirit, a penance for sins in this world, and a preparation for redemption. As an outcome both of medieval thinking in general and of the Jewish spiritual legacy in particular, Jewish thinkers emerged who, while they viewed exile against all its horrors, showed the majesty of God's purpose, and the greatness of the Jewish heritage, and who reinforced the faith of fellow Jews and countered the arguments of gentiles. The attitude of the Jews to exile during the Middle Ages can be measured by the extent of the response made by different generations to the appearance of pseudo-messiahs and "messianic movements, which were a direct and spontaneous expression of the desire to abolish the exile. The condition of alienation in the Diaspora also found perpetual expression in tradition, customs of mourning for Jerusalem, and the symbols perpetuating the memory of the destruction of the Temple. The immediate preparedness of individuals or groups of Jews to return and settle in Ereẓ Israel, the support given by the Diaspora for the immigrants, and the calls for aid and immigration from those in the Holy Land and their emissaries continued in all periods. The stories current in Jewish tradition concerning the "Ten Lost Tribes criticize under the veil of utopian legend Israel's lack of kingship and sovereignty and express the desire for their restoration. In conjunction with these popular expressions of the condition of galut, in which ideas concerning the exile and redemption are interwoven, Jewish thinkers advanced their views on the meaning of the sufferings and purpose of galut, and developed the ideology a stage further.

During the seventh century, with the rise of Islam and its victories over Christianity, it appeared to the Jews that temporary events constituted a retribution on Israel's enemies and that it was the intent of Providence to ease the yoke of the exile (see *Nistarot de-Rabbi Shimon bar Yoḥai). During the eighth century, Anan b. David confirmed the custom of preserving strict mourning for *Rabbi Shimon bar Yohai, and prohibited the eating of meat and drinking of wine. During the tenth century, after a number of messianic movements had failed, rationalist and skeptical outlooks increased within the community and a kind of Judaism that did not anticipate redemption was conceived (Saadiah Gaon, *Beliefs and Opinions, treatise 8). The ideas of the Karaites "Al-Kirkisāni testify that a similar attitude was emerging among certain Karaites (L. Nemoy, in *HUCA, 7 (1930), 395; J. Mann, in *JQR, 12 (1921/22), 283). However, the majority of the people did not agree with such extremes.

With time, the constant humiliation to which Jews in the Islamic Empire were subjected was felt more intensely, and in the period of unrest, when the Abbasid caliphate was in process of disintegration, the misfortunes of exile multiplied. Exile under Islam appeared a terrible fate to those living in it. Saadiah Gaon expressed the sentiments of those who remained among the faithful despite all adversities: "the servitude has been drawn out and the yoke of the [alien] kingdoms has been prolonged, behold every day we are increasingly impoverished and our numbers are reduced as time advances" (prayer for period of misfortune, to be found in *Siddur Rav Sa'adyah Ga'on (1963), 77–78, see also 350–1).

Out of this conception of the harshness of the exile, systematic arguments were advanced to prove that the galut was only temporary, and explanations were given on the meaning of the sufferings it entailed and the methods to be followed to bring about its termination. The Karaites "Mourners of Zion" (*Avelei Zion) gathered in Jerusalem, where they mortified themselves and prayed for the end of the exile, proclaiming their emotions in words saturated with the feeling of the misery of exile and expressing in their poetry the pain for the condition "of our poor mother," "whom we lifted up our eyes to see and could not recognize as a result of her ill appearance" (Kovez le-Divrei Sifrut… (1941), 141–2). They considered that "Karaism is the path toward redemption, while the Rabbinit prolongs the exile" (J. Mann, in *JQR, 12 (1921/22), 283).

Saadiah Gaon developed a theory of his own to explain the meaning of the exile: he considered that its imposition as a temporary punishment had substantial internal sense. Exile had befallen the nation "partly as punishment and partly as a test" (*Beliefs and Opinions, treatise 8, 291), while this trial also had a purifying value: "to refine our dross … and to terminate our impurities … He has exiled us and scattered us among the nations, so that we have swum in the roaring waves of the kingdoms, and, as the smelting of silver in the furnace, in their fires … we have been purified (*Siddur Rav Sa'adyah Ga'on (1963), 78). Because of these principles "we patiently await" (*Beliefs and Opinions, treatise 8, 292).

According to this conception, the endurance of the nation is a result of its historical experience and religious faith, and cannot be conceived by one "who has not experienced
what we have experienced nor believed as we have believed” (ibid., 293). Saadiah Gaon points to the certainty of the justice of God as perceived by the believer, and the strength which he has revealed in his struggle against the severity of the exile as manifested in the present time, to prove that there must be meaning and end to galut: it is inconceivable “that He is not aware of our situation or that He does not deal fairly with us or that He is not compassionate … nor … that he has forsaken us and cast us off” (ibid., 294). In the exile “some of us are being subject to punishment and others to trials” This is the correct religious manner of explaining “every universal catastrophe … such as famine, war, and pestilence” (ibid., 295). In this respect, galut is not to be distinguished from other natural and historical calamities which do not differentiate between the righteous and the wicked.

An explanation advanced by an anonymous profound thinker in some fragments extant from the tenth century gives the meaning of the exile as a mark of Israel’s election, as a divine gift and the “blessing of Abraham” (HUCA, 12–13 (1937–38), 435 ff). In his opinion, as far as can be discerned from the fragments, the purpose of the dispersion among the nations is that Israel should assume the function of the priest of the world, who atones for the sins of the nations and guides them by means of the yoke of the sufferings which he bears on his back and by the arguments which he constantly voices in their ears. The anonymous author is firmly convinced that “just as the dispersion has come about and materialized, so will the ingathering come about and be realized without delay” (ibid.)

From the beginning of the 11th century the academies of Babylonia were in a state of continuous decline, while Islam not only failed to disintegrate but also received additional strength by the accession of the Turks. The political situation with which Jews were faced was that of a hostile Islamic and Christian world composed of fragmented states. This situation called forth “Hai b. Sherira Gaon’s description of the nation as “a threshold over which every passerby tramples” (H. Brody, Mivhar ha-Shirah ha-Ivrit, ed. by A.M. Habermann (1946), 59). Protests emerged against God that the nation is “like Job … forgotten … in judgment and not remembered in mercy … the King has rejected me … He has seen me slaughtered and devoured and has not rebuked those who consumed me” (ibid. 59–60).

From the beginning of the tenth century, plentiful evidence is available concerning the feelings of exile among the Jews of Christian Europe. In Germany, Simeon b. Isaac (Simeon the Great) described the state and feeling of exile during the period. Next to the fact of material suffering, he places especial stress on the spiritual danger which faced Jews in the Christian arguments that the exile is a proof of the Jews’ responsibility for the sin of the crucifixion and their punishment for it, so that the exile can only be ended by their conversion to Christianity (Piyyutei R. Shimon ha-Gadol, ed. by A.M. Habermann (1938), 40–41). “Gershon b. Judah also felt the pressure of missionary arguments based on galut during the 10th to 11th centuries: “the enemy urges … your yoke to remove … to accept a despised idol as a god” (H. Brody, op. cit., 69–71).

Conditions deteriorated after the massacres of the First Crusade (1096) and the numerous cases of martyrdom (see “Kiddush ha-Shem”) that accompanied it (see “Crusades”). A thousand years had elapsed since the destruction of the Temple and the beginning of the exile, and pertinence was thus added to the claim of the Christians that an exile of over one thousand years was a proof that God had abandoned the nation. The Reconquest in Spain transferred many Jews under Islamic rule to Christian dominance. Rashi was a witness of this change for the worse. He explains the hatred of the Christians for Jews because Israel does not “pursue after their lie in order to accept their erroneous belief” (on Ps. 69:5). He felt strongly the degradation of Israel and the mocking that their mourning evoked (on Isa. 52:14; Ps. 69:11; 88:9). The root of the evil was that the nation “is exiled … from Erez Israel” (on Isa. 53:8). With a vivid vividness of expression his commentaries (particularly to Isa. 53) convey the feeling of calamity experienced by the generation which underwent the persecutions of 1096. The sufferings related of the “servant of God” by the prophet are understood by Rashi terms of the tragedy which befell his nation in Germany. There is a special religious justification for the acceptance of these sufferings in the concept of sanctification of the Holy Name: “His soul [of the martyr] is given over and sacrificed for My holiness, to return it to me as a trespass offering for all that he has transgressed … this is an indemnity [Old French: amende] which a man gives to the one whom he has sinned against.” Even so, Rashi is unable to reconcile himself to the flourishing state of the cruel nations, which weakens the hands of the God-fearing from His service as well as undermining their trust in Him (on Ps. 69:7; 88:11). On the subject of the sufferings of the righteous in the exile, Rashi follows the doctrine of Saadiah Gaon. In the climate of perpetual controversy with Christianity, Rashi conceives that the cause for the cruel persecution of the Jews originates in the jealousy of the nations of the Divine election of Israel, a fact which – despite everything – still applies (e.g., on Ps. 102:11). This explanation came to be generally accepted by Jews.

During the 12th century, “Eliezer of Beaugency, in France, advanced in his commentaries the idea that the perseverance of Jews in their faith in the Christian environment is the outcome of divine decree: “I will not put it in your heart to worship wood and stone, so that you become one nation with them and they do you no further evil; but I will harden your hearts against their faith … and they will hate you so that among them you will fall by the sword, by fire, by captivity, and by plunder” (on Ezek. 20:32–33). Jews long to die “in battle,” but their endurance of the life of exile is also an exposure to mortal danger. Ezekiel’s vision of the “valley of the dry bones” is interpreted by Eliezer as referring to the House of Israel which had died in exile, to be “a great comfort to all those who have died for the unity of His Name, and even if they have not been done to death, since all their lives they have endured dis-
grace and shame and have been smitten and struck because they do not believe in their idol – and with this they have also died" (on Ezek. 37:9–15; cf. Sefer Hasidim, no. 263).

Of the tosafists (see *Tosafot* *Eliezer b. Samuel of Metz, the disciple of Jacob b. Meir *Tam, emphasizes the bane of the exile from its spiritual aspect and attributes it to lack of political independence: "... our intelligence is confused, because we are in captivity without a king or country, and people who are not settled have neither heart nor knowledge" (Sefer Yere'im ha-Shalem, ed. by A.A. Schiff (1892), 72, nos. 31–32). *Moses b. Jacob of Coucy ascribes to the exile an ecumenical significance and purpose for drawing proselytes by serving as an example of moral conduct: "now that the exile has been prolonged more than necessary, Israel must abstain from the vanities of the world and take up the seal of God, which is truth, so as not to lie either to Israel or to the nations and not to lead them into error in any matter, and [Israel] must sanctify themselves even in that which is permitted ... and when God shall come to deliver them, the nations will say: He has done justly, because they are honest men and their Law is sincerely observed by them. But if they behave toward the Gentiles with deceit, they will say: see what the Lord has done, that He has chosen as His portion thieves and swindlers ... God sows Israel in the lands so that proselytes may be added to them, and so long as they deal deceitfully, who will join them?..." (Semag, Assayin 74).

The conception of exile of the *Hasidei Ashkenaz* is dominated by the phenomenon of Kiddush ha-Shem, which permeates all their thoughts on life. A description of the rigor of exile in 12th-century France was put into the mouth of the Jew in the disputation composed by Peter *Abelard (cf. Baer, in Zion, 6 (1934), 152–3). Spanish Jewry from the 11th century envisioned exile as an element in specific ideological-mystical configurations. In his Megillat ha-Megalleh, *Abraham b. Hiyya ha-Nasi considers that history was immanent in the Creation; thus even "this harsh exile in which we find ourselves today was decreed by the King in the six days of Creation"; the sins of the nation, which was its direct cause, were also foreseen in this primordial decree. Thus predestinational-astrological conception moves exile away from the notion of punishment, facilitating the discussion of the subject with Christians and especially with the mystics among them.

Powerful expression of the inner dilemma arising from the search for the reason for the exile is given by *Judah Halevi in his poetry and thought. His Kuzari was written "to defend the humiliated religion," and its dominant motif is the knowledge that the Christian and Muslim worlds "despise us for our degradation and poverty" (Judah Halevi, The Kuzari, tr. by H. Hirschfeld (1964), pt. 1 no. 113). To meet the arguments of the oppressors who claim that the degradation of the Jews in the exile shows that "their degree in the next world [will be] according to their station in this world" (ibid. no. 112), he advances his theory on the ethnic election of the Jewish people. Israel suffers for the sins of the nations which are by nature inferior to itself; "Israel among the nations is like the heart amid the organs of the body," and the diseases with which it is afflicted – its degradation – are a sign of its central position in human history and the nobility of its character (pt. 2 nos. 29–44). The Jewish nation is entitled to be proud of its affliction in the exile, as all monotheistic religions glory in martyrdom. However, only a minority of Jews willingly and lovingly accept the yoke of the exile, while for the remainder the affliction is enforced, a fact which explains the length of the exile. Every Jew who suffers in the exile nevertheless has great merit, whether he bears the yoke of exile by compulsion or out of free choice "for whoever wishes to do so can become the friend and equal of his oppressor by uttering one word, and without any difficulty" (pt. 1 nos. 112–5). Judah Halevi did not relinquish his optimistic faith in final victory. He enlarges upon the ancient simile that the nation in exile is to be compared to "the seed which falls into the ground": to the person who observes the external condition of the seed, its sowing signifies its destruction; but to the one who has real knowledge, the sowing "transforms earth and water into its own substance, carries it from one stage to another until it refines the elements and transfers them into something like itself" (pt. 4 no. 23). Judah Halevi admits that for some Jews the acceptance of the yoke of exile is no more than merely passive agreement (pt. 2 nos. 23–24). The survival of the sick and dispersed nation which resembles "a body without a head ... scattered limbs ..." in this lengthy exile is in itself a proof that "He who keeps us ... in dispersion and exile" is "the living God" (ibid. nos. 29–32). The sorrows of exile continue: "we are burdened by them, whilst the whole world enjoys rest and prosperity. The trials which meet us are meant to prove our faith, to cleanse us completely, and to remove all taint from us" (no. 44). With realistic insight into the sensation of exile, Judah Halevi promises the one who accepts these consolations with sincerity the peace of mind required to lead a human existence in the exile, because "he who bears the exile unwillingly loses his first and his last rewards" (pt. 3 no. 12).

During the second half of the 12th century, despair also seized the exiles of the Islamic world. In about 1160, *Maimon b. Joseph addressed to his brothers in Arabic the Iggeret ha-Nehamah ("Letter of Consolation"), when he himself had left his place of residence from fear of the Muslim *Almohads. He particularly stresses the constant terror and anguish of a life where security is absent. To fortify the souls which find themselves in this distress, Maimon formulated his meditation on exile in metaphor. The Torah is a life-line which is thrown to one who is drowning in the sea of exile, "and whoever seizes it has some hope." The exile is only lengthy viewed in human dimensions. From the terrifying description of the storms of the sea and the weakness of the man caught up in them, he evokes a picture of consolation: "it so happens ... that while the current overthrows walls and hurls up rocks, the frail thing remains standing. Thus with the exile ... the Holy One, blessed be He, will save the frail nation...."

His son, *Maimonides, considered the exile of his time to be part of the continuous attempts through history to turn
the Jewish people from its religion. Some have attempted this by force and others by persuasion; Christianity has merely introduced the innovation “that for its purpose it combined the two, that is coercion and arguments … because it realized that this was more effective for achieving the effacement of the nation and the Torah” (Iggeret Teiman). Islam learned this combined method from Christianity. However, the attitude of Islam is the hardest and most degrading: “there has never risen against Israel a worse nation” than Ishmael (ibid.). When Maimonides imputes responsibility for “the loss of our kingdom and the destruction of our Temple” to “our ancestors … who did not study the art of war and the conquest of lands” because they believed in the foolishness of astrology (from his responsa to the rabbis of Marseilles), this realist-political explanation is only considered by him a description of the natural punishment which had resulted from having sunk into one of many sins. Born into a generation which had been tried by forced *conversions, and having witnessed religious coercion and escaped from it, he conceived the exile as a furnace whose purpose is to purify and test “until religion is retained only … by the pious of the offspring of Jacob … who are pure and clean, who fear God” (Iggeret Teiman). The exile and the sufferings of the people “and all that will befall them is as a holocaust upon the altar” (ibid.); these words are accompanied by an enumeration of the sacrifices actually demanded of his contemporaries.

The feeling of exile as experienced in Spain during the Reconquest period, with the changes in political situations and conjunctions where the plight of the Jew remained unaffected, was expressed by David *Kimhi in his simile of the animals which were ensnared within a circle in the forest and which, in turn, the lion encircled with his tail; “thus, we in the exile are as within the circle, we cannot leave it without falling into the hands of the carnivores: for if we can extract ourselves from the rule of the Ishmaelites, we fall under the dominion of the uncircumcised … we therefore withdraw our hands and feet for fear of them” (commentary to Ps. 22:17); Jewish adherence to faith in persecution and suffering is stressed (on Isa. 26:13; Ps. 44:21).

During the middle of the 13th century, a period bringing the conception of Nahmanides that the world and the Divinity had become impaired as a result of the exile assumed a more practical and concrete meaning for the generations which followed the expulsion from Spain, Portugal, and Sicily (1492, 1497). Exile presented itself from the viewpoint of Kabbalah as the misery arising from a cosmos fractured internally, as the terror of a world in which a struggle was taking place between light and darkness, purity and impurity; a world situation in which Israel, the nation of light, is delivered into the hands of the children of darkness, that is the children of Edom, who in this array of symbols are subjected to a double measure of hatred. A dynamic mystic-universal meaning was attributed to efforts to amend the world by deeds, knowledge, and example (a meaning taken up by the kabbalists of *Safed, and the *Shabbateans).

An explanation of the negative phenomena of the exile and the manifestations of continuing survival in it were given
15th-century realities and concepts by Isaac *Arama. Its torments and persecutions are attributed to being in close relation to gentiles by residence “in their towns and settlements.” Yet in its state of semi-serfdom and semi-protection, and to a large measure thanks to this enslavement and protection by the crown, the nation has been able to survive exile. Isaac Arama also places the forced converts within his tableau of the exile: “even though they have become assimilated within the nations … their feet have not found complete rest; because they [the nations] constantly insult and despise them and contrive against them … libels … and they always consider them as reverting to Judaism” (Akedat Yeḥak, Deut., shāṭār 98).

The underground life of the anusim is depicted as exile accompanied by even heightened terrors. To the question of the length of the exile, of the shining of the Divine countenance on the Christian world and its success, which had already been asked in former generations and disturbed the generation of the Expulsion with even greater urgency (ibid., Lev., she’arīm 70 and 60), Isaac Arama attempted to offer several answers. Jewish history until this exile “was merely to be considered as a betrothal …”; the marriage had not yet taken place. There is therefore no reason to speak of a divorce (ibid., Ex., shāṭār 50). Moreover, even according to Christian thinking, the Law was only revealed thousands of years after the Creation, while Jesus came to redeem souls from the original sin long after this revelation. By comparison Israel’s wait for redemption is not long, even if anguished (ibid., Deut., shāṭār 88).

Purification from sins and removal of the evil inclination from the heart are also advanced as reasons for the intensification of the sufferings and their prolongation (ibid., Gen., shāṭār 14).

Isaac *Abrabanel vividly contrasts the kind fate accorded to the gentle nations and the evil which had befallen Israel in the exile (introduction to Ma’yenei ha-Yeshu’ah).

He distinguishes between the cause of the hatred by the Christians – the crucifixion of Jesus – and that of the hatred by the Ishmaelites – the rejection of the Koran (on Hinneh Yaskil Avdi). Exile is also characterized for him by the fact that “the exiles … will not become tillers of the land … but will engage to a limited extent in the commerce of goods …” (Yeshu’ot Meshiḥo, iyyun no. 2 ch. 1), but he considers this laudable, because the acquisition of land abroad would reduce the yearning for redemption (ibid., iyyun no. 1 ch. 1). The steadfastness of Israel as manifested in endurance of suffering, in holding fast to the faith in disputations and in maintaining purity of religion and worship, Abrabanel regards as a threefold gain from the galut (on Hinneh Yaskil Avdi). The steadfastness of the faithful stands out in contrast to the conduct of the anusim, who silenced their voices and hid their faith; he stresses the merit of those who gave up their homes and belongings and went into exile with pride in order to practice Judaism openly. Even during those evil days Abrabanel believed that by its spiritual strength the nation would yet succeed in its desire to “bring the Gentiles under the wings of the Divine Presence,… by its knowledge and wisdom … it would remove them from their false beliefs”; Israel will act kindly toward its tormentors and will instruct its tormenters (ibid.).

The words of these scholars preserve the strength and originality of men who observed the condition of a physically stricken but spiritually intact and healthy nation, of thinkers who drew from the sources of tradition and who perceived the past in the light of the present and the present in the light of the past. However, the words of Solomon *Ibn Verga, written about 30 years after the Expulsion, reveal the mood of a man who has lost contact with the social framework against which he should direct the sharpness of his rebuke. His thought is abstract and presented in the form of analogies detached from concrete situations. The subsidiary reason for the exile advanced by Maimonides – that the Jews were defeated because they did not study the art of war and relied upon astrology – becomes a recurrent argument of Ibn Verga, that “at first, when the Jews found favor in the eyes of God, He fought their wars … they did therefore not study … war … and when they sinned … they were not familiar with the instruments of war, and God was not with them … and they fell as a flock without a shepherd” (Shevet Yehudah).

The condition of exile caused the Jews to forfeit their wisdom: “our mind is in exile, being enslaved to the exile, to the search for means of livelihood, to the taxes and decrees of the state; how can it preoccupy itself with wisdom?” (ibid.). Analysis of the situation, accompanied by wishful inclination, leads Ibn Verga to conclude that it is the Christian masses who hate the Jews, while “the kings in general … the princes, the wise, and all the notables of the land loved them”; even the pope “loves the Jews” because he authorizes them to live in his country and trade there. Ibn Verga, however, realizes that the fury of mass passions is an overwhelming power “and if the king safeguard us and the populace rise against us, how can we be secure?” (ibid.). Ibn Verga is preoccupied with searching for “the reason for the great hatred felt by the Christians against the Jews.” This he finds in a combination of religious and natural factors: on the one hand, religious fanaticism which paves the way to belief in fantastic libels against the Jews, on the other, the desire for loot and the fact that every community “seeks to absorb its neighbor and to integrate it within itself”; the Gentiles therefore hate the Jews who refuse to assimilate into them. He also echoes the steadfast pride of the exile who declares to the “Master of the world: You go to great lengths that I should abandon my religion … despite the dwellers of heaven, I am a Jew … and will remain as such” (ibid.). This divine persecution is explained through the ancient and powerful answer of the prophet: “You only have I known of all the families of the earth; therefore, I will visit upon you all your iniquities” (Amos 3:2). But concomitantly, exile continues naturally because of religious hatred, “the jealousy of women, the envy of money,” and the accusations brought against the totality of Jewry because of the sins of individuals “who have sought to dominate the nations.”

The thought of *Judah Loew b. Bezalel (the Maharal of Prague) on the exile at the beginning of the 17th century bears
the imprint of the situation which followed the Spanish Expulsion on the one hand and the relative prosperity in his country, Bohemia–Moravia, in his time; it is based upon both the fundamentals of Kabbalah and the rabbinical systems of halakhah and homiletics current during the 16th to 17th centuries. The mainstream of his thought is expressed in Nezah Yisrael, and marginally in Gur Aryeh, Or Hadash, and Be'er ha-Golah. The Maharal divides the “night of exile” into three “watchs”: the first is one of painful slavery, the second of massacres and forced conversions, while the third – that in which he is living and which appears to him the last before dawn – consists essentially of consecutive expulsions. Like Ibn Verga, he too preferred the order of the king’s peace and protection according to God’s will against the popular frenzy and violence which did not spare the weak. The Maharal analyzed the religious-spiritual-social nature of the exile in terms which anticipate the theories of organic nationalism of the 19th century: “Exile is a change and a departure from order: for God has situated every nation in the place which is appropriate to it … According to the natural order the suitable place for them [the Jews] is Erez Israel where they are to live in independence…. As with every natural existing object, they are not to be divided into two … since the Jewish people is one nation, more indivisible and inseparable than all the other nations … dispersion is unnatural to them …; moreover, according to the natural order, it is improper that one nation be enslaved by another because God has created every nation for itself…. It is therefore unbecoming that in the order of nature Israel should be under the dominion of others.” In several aspects, exile is thus an anomaly in the eternal natural order, every deviation from which cannot be but casual and temporary.

This combination of natural factors is the guarantee for the redemption from the unnaturalness of exile. For “all things which are removed from their natural place are unable to survive in a place which is not natural to them … because if they subsisted … the unnatural would become natural and this is impossible … therefore, from the exile, we can perceive the redemption.” In the meantime, however, the exile continues by the express will of God (because “that which … departs from the limits of reality requires excessive supervision and reinforcement in order to survive”), and it is by Him also that assimilation in the exile is prevented. So long as this anomaly is maintained, it has its own legitimacy and roots to feed on by the laws of nature: the rule of Edom over the world becomes the defective condition of this world. There is an essential spiritual contrast, even if the depths of its profundity cannot be perceived, between Edom and Jacob: as between “water and fire, although not endowed with intelligence or will, are opposed to each other by nature.” The struggle between the two is for the totality of the creation, because “each desires the possession of all that exists, which is this world … and the world to come, and thus repels his opponent.” In the present stage of this struggle “Esau has gained for himself out of the quarrel a world of shame and disgrace … to which he is related; Jacob is removed from it, because impurity is foreign to him and he was born the last”; it is impossible that Jacob and Esau should possess both worlds together, because, if so, there would be two extremes in one subject. With pride he sees the exile as an expansion into far-flung regions where the dispersed Jews await the era of perfection of the world, which they will rule.

In opposition to the physical dispersion of the material reality, there are spiritual factors which unite the nation. This is unity created and symbolically expressed both by consciousness of national solidarity and by Torah study and prayer. Engaged in the latter the nation is in a state resembling redemption. To the question: “If … the Divine Presence is indeed with Israel in exile … why does Israel spend most of its days in this world undergoing oppression and expulsions?” the Maharal replies that “this world is not the portion of Israel”; hence, it is to the advantage of the Jews to be removed from its benefits. The Maharal developed a theory against censorship of thought and literature and religious coercion which regarded these as the exercise of tyranny, and the struggle against them as the true and full expression of the free divine spirit in man.

The galut feeling in Poland-Lithuania, an exile which appeared relatively easy during the 16th to 17th centuries, is reflected in the commentaries of Samuel Eliezer b. Judah ha-Levi “Edels (the Maharsha) on the aggadot of the Talmud. He was grateful to the Turks for the refuge which the exiles had found in their country, and he considered the “Kings of Ishmael” “merciful kings” (Hiddushei Aggadot, on bb 74b), while “Esau and his offspring … have tormented us in every generation more than all the other nations …” (ibid. on Meg. 11a). With their persecutions, the Christians are intent on placing obstacles in the path of the Jewish people toward perfection (ibid. on Bek. 8a).

Edels accepted the viewpoint of the author of Shevet Yehudah concerning the difference of attitude toward the Jews on the part of the various classes: “It is obvious that by the king and the princes they will be not humiliated and despised also when in exile, but only by the populace and the masses of the nations” (on Ta’an. 20a). On the other hand, the hatred of the populace saves the Jews from being appointed officials in “most contemptible crafts” (ibid.). Of special interest is the discussion of Edels with the Christians on the subject of the destruction of the Temple, the cessation of its existence, the revelation of the Divine Presence within its walls, and the length of the exile as evidence of the departure of the Holy Spirit from Israel. The Jew insists that the Divine Presence is not really bound up fully with one location only; partially at least the Jews can carry on the divine task even in dispersion and exile (ibid. on Bek. 8a and Ar. 10b).

*Ephraim Solomon b. Aaron of Luntschitz (Leczyca) regarded the exile as a social problem, part of the problem of justice in the world. He arranges a kind of double confrontation, between the wealthy of Israel and the condition of their nation and between the nations of the world and the distribution of material bounty among them; as result of this comparison “the superiority of victory is always upon my lips to
reply to the nations who adduce a proof for their religion from their success … to refute their opinion and to overthrow their towers: because in every generation … our eyes witness that God has handed over all the benefit of temporary success to those who are unworthy of it, and this forms part of His profound and wonderful counsel – in order that the axe should not become proud against him that hews therewith, and that the nations should not say our hand is powerful; because they [i.e., the Gentiles] also agree that there are among them wicked people that are unworthy of success and even so they see their houses filled with wealth, while according to their evil ways [i.e., the Christian faith] they do not deserve that God should bestow of his abundance on them.” However, the goods of this world, which are putrid flesh and stale bread, are thrown to the dogs of this world (Olelot Efrayim, 1 (1883), 3 nos. 5–6).

He warns the “blind in the camp of the Hebrews” not to rely on their prosperity and to remember the communities which have been destroyed.

Once Italian Jewry had established itself in a renewed structure in the towns and states of the post-Renaissance period, it became imperative to explain the exile to the urban dwellers whose minds were inclined toward rationalistic reasoning and commercial considerations. In 1638 Simone (Simḥa) “Luzzatto completed his Discorso circa il stato de’gl’hebrei…” (“Discourse on the State of the Hebrews . . .”), in which he attempted to shed light on the exile in a manner most acceptable to the rulers in Venice – by the exploitation of humanist trends of thought and mercantile considerations. This apologetic tractate, which was intended to convince despots governed by cold political considerations and commercial-utilitarian motivations of the usefulness of the Jews, also reflects the self-criticism resulting from feelings of inferiority induced by the contrast with gentile existence. Many ideas which had formerly been expressed within the Jewish framework of the concept of exile were now brought out to the non-Jewish world and illumined with the cold and harsh light of realistic calculation.

In the 17th century Manasseh Ben Israel also addressed himself to Gentiles in order to overcome objections to the return of Jews to England by the members of the Protestant sects who were prejudiced by religious fervor in addition to their economic considerations. Manasseh Ben Israel expressed not only the desire for survival of the galut but also its tendency toward extension with the expansion of the known world and the discoveries of new territorial and social horizons. Much of his reasoning is drawn from the arguments of Luzzatto, but, voiced by Manasseh, they assume a more religious content and a less submissive tone. He is not deterred from declaring to the nations in their own language, in the manner of the early medieval debaters, that the sufferings of the “Servant of God” had befallen the Nation of God, and that the nations in their various countries “have slain them, not for wickednesses, which they did not commit, but for their riches which they had” (The Hope of Israel, sec. 29). Even the expulsions serve the process of the expansion of the exile, because when one ruler expels them, the second accepts them with affability and grants them a “thousand priviledges” (ibid., sec. 33). Commerce enables the Jews to live in wealth and with the acquisition of properties, as a result of which they “not only become gracious to their Princes and Lords” but also causes “that they should be invited by others to come and dwell in their Lands,” because “wheresoever they go to dwell, there presently the Traficq begins to flourish” (A Declaration to the Common-wealth of England, fol. 1–2). The central theory of Manasseh on the continuation of the exile and its extension is that so long as the prophecy of Daniel remains unfulfilled and the exiles have not yet been scattered to the extremities of the world, the redemption will not come.

**Ideology in Modern Times**

The feeling that there was room for expansion and progress for the Jews in general society, the apologetic trend of appeal to the non-Jewish world, and the awareness of new attitudes intensified with the changes in society and opinions of 18th-century Europe. In the modern era the nature of the debate on the exile assumed a different character as a result of social experiments made by Jews and non-Jews to abolish the exile. From the 18th century, ideas on and explanations of the exile were channeled to new methods of expression, both through organized movements which attempted to remodel the character of Judaism and through individual thinkers (see *Emancipation; Reform; Haskalah; Assimilation; Hasidism; Hovevei Zion; Zionism; Agudat Israel; Mendelssohn; S.R. Hirsch; J.L. Pinsker; Ahad Ha-Am; S. Dubnow; M.J. Berdyczewski (bin Gorion); J.H. Brenner; J. Klatzkin; A.D. Gordon; A.I. Kook; F. Rosenzweig; S. Rawidowicz). The conception of the exile of these movements and personalities cannot be separated from their essential standpoints and lines of thought and should be considered within their specific contexts. Even those whose thinking followed ancient paths ascribed their views to innovations brought about by these movements in the modern era. Until the second half of the 19th century, it appeared that supremacy was being achieved both in reality and in ideology by the trends which sought to abolish the exile through integration within the surrounding nations or through continuing a respected existence within their midst by finding a meaning in this situation either as a divine punishment or as part of a sublime religious purpose. However, from the second half of the 19th century, this reality deteriorated in the emergent world of nationalism. Jews increasingly viewed the exile in terms of anger and despair, which even though presented in modern idioms, resembled in content the ancient conception of the exile expressed by former generations. Numerous efforts were made toward finding a means of preserving the distinctiveness and historic continuity of the nation within new and changing circumstances.

By the second half of the 20th century and into the 21st, the two fundamental conceptions in Jewish ideology of the modern era on the subject of the exile have resumed their struggle with renewed intensity. One line of thinking points
to the Holocaust in Europe, the brutality of its perpetrators, and the apathy manifested by the majority of the nations of the world during the years 1939–45. It was argued that hatred of the Jews has not disappeared even after the atrocities of Hitler, while the Jews are subject to powerful forces of assimilation in places where they have free social interchange. There is the reality of the establishment of the State of Israel in contrast to the difficulties of maintaining the unity of world Jewry and the ties between the nation in its country and the minorities abroad. All these phenomena are interpreted as signaling the degeneration of the Jewish position and the danger attached to the continuation of the exile, and are put forward as decisive proofs for the necessity of its liquidation.

Adherents of the other line of thinking point to the political freedom and equality of rights legally granted to individual Jews in all the countries of the world and the authorization accorded in most states to Jewish organizations to pursue their cultural and social activities. They stress the organizational, spiritual, literary, and philanthropic achievements of the Diaspora communities; the political and material strength which is added to the State of Israel by the support of Diaspora Jewry; and the role of the Diaspora as exemplified in the Second Temple era. The success that the Germans achieved in modern times in uniting their dispersed nation around their country is noted. These believe – in common with the Jews in the days of Philo and Josephus, the geonic period, and the 19th century – that the Diaspora has a reason, and a right of existence; that there is national utility in the maintenance of the Diaspora according to its potentialities in its diffusion throughout the world. In fact, many who approve the existence of the exile are inclined to consider the state as a more favorable form of Jewish survival and sympathize with the principle of the “ingathering of the exiles.” On the other hand, the majority of those who condemn the exile recognize that there is no possibility in sight of terminating the Diaspora. The Six-Day War (1967) and its aftermath strengthened both the consciousness of identity and feelings of interdependence between Israel and the Diaspora for the majority of Jews. However, a radical and vocal minority expresses strong disapproval of this tie. The link with Israel has become a touchstone and testing furnace for the existence of Jews in present-day Communist-ruled countries.

Down through its history the feeling of galut has been one of the most permanent and prolific incentives in Jewish thought. It has expressed the desire for redemption and preservation as a nation even in the most difficult days. The discussion between Jews and adherents of other monotheistic religions on this subject, the spiritual pride and religious feeling it engendered, resulted in the formulation of new patterns of explanation of the exile from generation to generation which enabled the Jew to bear his suffering without losing his humanity or his faith in God and justice. The spirit of Jacob has been saved out of the tragedy of the exile because the feeling of exile has been one of the principal factors creating the particular sensitivity to questions of divine and social justice among most Jews. As the result of a specific situation, according to Judah Loew b. Bezalel, the Jewish nation has become different from the other nations of the world through its experience of suffering and humiliation and detachment from the rest of society for generation after generation, and through alert and proud reaction to this trial.

**GALVESTON PLAN,** a project to divert European Jews immigrating to the United States from the large eastern ports of the United States to the southwestern states. In 1907 Jacob H. *Schiff initiated and financed the plan, hoping to alleviate the concentration of immigrants in the big cities of the northeast and middle west. The Jewish Territorial Organization undertook to complete the task. A Jewish Immigrants’ Information Bureau (JIIIB), directed by Morris D. *Waldman, was established in 1907 in Galveston, Texas, to settle and sustain the immigrants, who began to arrive in July of that year. Rabbi Henry *Cohen of Galveston was instrumental in the entire effort. The Jewish Territorialist Organization (ITO) was established in 1901 by the United Hebrew Charities of New York, the B’nai B’rith, the Baron de Hirsch Fund, and other Jewish immigrant aid agencies. Its stated aim was to disperse Jewish immigrants to other communities and thus alleviate the plight of Jewish charities in New York. The ITO helped the Jewish immigrants get from Russia to Bremen, Germany, and from there, the Hilfsverein der Deutschen Juden cared for the Jewish emigrants and put them on ships for Galveston. Once the Jews got to Texas, the JIIIB assumed responsibilities for them and helped them resettle in other communities.

However, several major Jewish immigration organizations refused to assist, and in 1910 the U.S. Department of Commerce and Labor deported a large number of immigrants who had arrived at the port of Galveston, alleging that the immigrants had violated labor laws or were liable to become public charges. Nevertheless, the Galveston plan managed to settle 10,000 immigrants before it ceased operations at the outbreak of World War I as relationships between the Jewish
organizations had deteriorated and potential immigrants were less willing to go to Galveston.

For Galveston, see "Texas."

GAMA, GASP AR DA (c. 1440–1510), Jewish traveler; his original name is unknown. Born, according to one account, in Posen (Poland), he made his way to Jerusalem and then Alexandria, was taken prisoner and sold as a slave in India, where he obtained his freedom and entered the service of the ruler of Goa. When the Portuguese explorer Vasco da Gama arrived off Angediva in 1498, he was greeted in a friendly fashion by this long-bearded European on behalf of his master, but Vasco da Gama treacherously seized the Jew and compelled him to embrace Christianity under the baptismal name of Gaspar da Gama. He now had to pilot the fleet in Indian waters and was subsequently brought back to Portugal. In Lisbon, Gaspar was granted a pension by the king, who employed his linguistic ability in subsequent Portuguese naval expeditions. In 1500 he accompanied Cabral on his voyage in western waters and was with Nicolau Coelho when he first stepped ashore in Brazil. On the return voyage he met Amerigo Vespucci, the Tuscan explorer after whom America is named, at Cabo Verde and was consulted by him. Later he went to India once more with Vasco da Gama (1502–03) and again in 1505 with Francisco d’Almeida. He took part in the latter’s expedition against Calicut in 1510, when he may have died.

GAMALA (Gamla), ancient city in lower Golan. It was called Gamla because it was situated on a hill shaped like a camel’s hump (Heb. gamal, “camel”). According to the Mishnah it was fortified in the time of Joshua (Ar. 9:16). Alexander Yannai (Jannaeus) captured the city (83–80 b.c.e.) and it continued to be inhabited by Jews (Jos., Ant., 13:394); it belonged to the Herodian territory of Gaulanitis (Jos., Wars, 1:105). During the war against Rome it was fortified by Josephus and since the Jewish rebels could maintain contact with Babylonia by way of Gamala, the city underwent a prolonged siege in 67 C.E. Because of its nearly impregnable position and strong fortifications, it was captured only after very severe fighting; Vespasian killed many of its inhabitants while others committed suicide (Wars, 4:31–54, 62–83). First identified by Y. Gal at a rocky spur between the branches of Nahal Daliyot, close to the village of Deir Qeruh, the site was surveyed and subsequently excavated by S. Guttman for ten years from 1976. More recently new excavations have been conducted at the site by D. Syon, who is also in charge of the publication of the late Guttman’s work. The earliest remains at the site date from the Early Bronze Age. The principal archaeological remains at the site are the remains of the town dating from the Late Hellenistic period to the destruction by the Romans in 67 C.E. The settlement was built on the slope of a spur with a fortification wall along the unprotected sides. The buildings were built inside the town on terraces. Residential and industrial buildings were found separated by alleyways. A large public columned building was uncovered with benches along the walls, and it was identified by the excavator as a synagogue. A large olive press was also excavated as well as a number of residential buildings. Large quantities of finds were uncovered, including pottery, chalk vessels, coins, arrowheads, and ballista balls.

GAMALIEL, RABBAN, the name and title of six sages, descendants of "Hillel, who filled the office of nasi in Erez Israel.

RABBA GAMALIEL HA-ZAKEN ("the elder"), a grandson of Hillel, lived in the first half of the first century. As president of the Sanhedrin he maintained close contact not only with the Jews of Erez Israel, but also with those in the Diaspora. The Tosefta has preserved three letters, containing reminders about the times of separating tithes and information about the leap year, which Rabban Gamaliel dictated to the scribe Johanan, while seated in the company of sages upon the steps of the Temple Mount. In these letters he addresses "our brethren in Upper Galilee and in Lower Galilee," "our brethren of the Upper South and of the Lower South," and "our brethren of the exile of Babylon, the exile of Media, and the other exiles of Israel" (Tosef. Sanh. 2:6; TJ, Sanh. 1:2, 18 d; Sanh. 11b). Like his grandfather, Hillel, Gamaliel was responsible for many *takkanot, many of them bearing the formula, “for the benefit of humanity" (Git. 4:2–3), particularly on behalf of women (ibid.). Of particular importance is his decision permitting a woman to remarry on the evidence of a single witness to the death of her husband (Yev. 16:7). Stories have been preserved testifying to his ties with the royal family, apparently that of “Agrippa I (Pesa. 88b). Among his pupils were Simeon of Mizpeh, Joezer of Ha-Birah, and Nehemiah of Bet Dali (Peh 2:6; Or. 2:12; Yev. 16:7). According to Acts Gamaliel was tolerant toward the first Christians, and Paul was one of his pupils (22:3). Of his children there are known Simeon, who succeeded him, and a daughter who married Simeon b. Nehanel ha-Kohen (Tosef., Av. Zar. 3:10). The sages’ regard for Gamaliel was expressed in their saying: “When Rabban Gamaliel the elder died the glory of the Torah ceased, and purity and saintliness [lit. “separation”] perished” (Sot. 9:15).
RABBAN GAMALIEL II, also called Rabban Gamaliel of Jabneh, grandson of (1), succeeded 'Johanan b. Zakkai as nasi c. 80 C.E. He saw his life’s work as the strengthening of the new center at Jabneh and the concentration and consolidation of the people around the Torah, constituting an authority that would be capable of filling the place of the Temple and of the Sanhedrin which had met in the Chamber of Hewn Stones. To this end he worked energetically for the elevation of the dignity of the nasi’s office, and for the unification of halakhah. The Talmud reports a heavenly voice “that was heard in Jabneh” establishing the halakhah in accordance with Bet Hillel (Er. 13b; TJ, Ber. 1:7, 3b), corresponding to the aims of much of Gamaliel’s activity. It also describes his vigorous exertions as not directed to increasing his own honor or that of his household, but rather to preserving the unity of the nation and the Torah (BM 59b). In private life and in his personal relationships he was modest and easygoing, showed love and respect toward his pupils and friends, and even to his slave, and was tolerant of gentiles (Tosef., BK 9:30; Ber. 2:7; Sanh. 103b; et al.; Sif. Deut. 38). In respect to laws and prohibitions he was at times lenient to others and strict with himself (Ber. 2:6; TJ, Ber. 1:2, 3a). In spite of this, his firmness as nasi and his endeavors to increase the power of the new center aroused the strong opposition of the elder scholars of his generation. According to later talmudic tradition this led to a severe struggle in which Gamaliel did not hesitate to excommunicate his own brother-in-law, “Eliezer b. Hyrcanus (BM 59b). Of greatest consequence was Gamaliel’s dispute with “Joshua b. Hananiah on the fixing of the new moon (see *Calendar). Gamaliel regarded the affair as a test of the authority of his bet din and ordered R. Joshua to demonstrate publicly that he accepted the discipline of the nasi: “I charge you to appear before me with your staff and your money on the day which according to your reckoning should be the Day of Atonement.” On the advice of his colleagues, Akiva and Dosa b. Harkinas, R. Joshua bowed to the command. When he came before Rabban Gamaliel, the nasi rose, kissed him on his head and said to him: “Come in peace my teacher and pupil – my teacher in wisdom and my pupil because you have accepted my decision” (R.H 2:8–9). From this passage in the Mishnah it would seem that the tensions between Gamaliel and Joshua had been resolved. According to the Talmud, however, they did not cease with this affair. The firmness of Gamaliel was regarded by most of the scholars as an insult to the dignity of R. Joshua and led to a revolt against his authority which ended with his removal from the office of nasi and the appointment of “Eleazar b. Azariah in his place (Ber. 27b–28a). The nobility of Rabban Gamaliel’s character was vindicated, however, by his not absenting himself from bet ha-midrash and by his participation in the establishment of the halakhah under the direction of the new nasi. In the end Gamaliel appeased Joshua, and the scholars, meeting him halfway “out of respect for his father’s house,” reinstated him as nasi. According to the Jerusalem Talmud (Ber. 4:1) he alone was nasi, Eleazar b. Azariah only serving as his deputy, av bet din, but according to the Babylonian Talmud (ibid.) Eleazar b. Azariah continued to share the post of nasi with him.

Rabban Gamaliel was recognized as one of the greatest scholars of his generation by his colleagues, by his many pupils, and even by his opponents. His halakhic pronouncements, among them traditions from his father and grandfather, are abundantly cited in the Mishnah and beraitot. His activity, together with that of his colleagues and pupils in Jabneh, laid the foundation of the Mishnah. Exceptionally important takkanot with respect to religion and worship are associated with the name of Rabban Gamaliel, their aim being to face up to the new reality created by the destruction of the Temple by the implementation of laws and customs designed to serve as a “reminder of the Temple.” Rabban Gamaliel played a large part in formulating Passover eve ceremonial after the destruction of the Temple (Pes. 105), in determining the final version of the 18 benedictions (*Amidah), in making it a duty for each individual to pray, and in deciding in favor of the custom of praying three times a day. It is clear that Rabban Gamaliel was close to the general culture and learning of his time, permitting among other things the study of Greek (Tosef., Sot. 15:8). His son Simeon’s testimony that many youngsters studied Greek wisdom in his father’s house (Sot. 49b) seemed incomprehensible to the scholars, who later explained the phenomenon in terms of the political activity of the nasi and in the light of the need to maintain good relations with the ruling powers. He did not refrain from bathing in the bathhouse of Aphrodite in Acre, regarding the image there as serving a decorative purpose only (Av. Zar. 3:4). Gamaliel’s son, Hanina, testified that it was customary in his father’s house to use seals which had figures in relief (TJ, Av. Zar. 3:1, 42c). He was apparently also acquainted with the principles of Greek science. He used astronomical diagrams to examine the witnesses of the new moon (R.H 2:8), and he fashioned an instrument to measure distances (Er. 43b). Gamaliel was not only the chief religious authority but also the recognized national-political leader. It is probable that the Roman government also recognized him as the spokesman of the Jews. In any event he made journeys – either alone or in the company of other scholars – to the governor in Syria to receive “authority” (Eduy. 7:7; Sanh. 11a) and also to Rome in order to intercede for his people (TJ, Sanh. 7:19, 25d). In his contacts with non-Jews, he also appeared as the spokesman of Judaism in its battle against idolatry and heresy (Av. Zar. 3:4, 47, et al.). Associated with his name is the introduction of the “Birkat ha-Minim in the Amidah, aimed at excluding the Christians from the Jewish fold (Ber. 28b; Meg. 17b).

The year of his death is not known, but in all probability he did not live to witness the revolt in the time of Trajan (c. 116 C.E.). The life and death of the great nasi are embellished in the aggadah. Tradition assigns to him the great takkanah – on behalf of the poor – of abrogating ornate and expensive funerals and introducing the practice of burying the dead in simple flaxen raiment.
GAMALIEL III or Rabban Gamaliel be-Rabbi, the son of *Judah ha-Nasi, lived in the first half of the third century. He was appointed nasi in accordance with the testament of his father who instructed him to conduct his office with firmness (Ket. 103b); his brother Simeon was appointed hakham in the same testament. In the Mishnah Gamaliel rejects the extremist desideratum of isolation from the affairs of the world, takes a positive view of occupation and labor, and exhorts those occupied with communal affairs to work for the sake of heaven and not for their own benefit and honor. He counsels (apparently on the basis of his own experience) caution and suspicion in one's dealings with the government (i.e., Roman authority), even when it appears friendly (Avot 2:2–3). It is reported of Rabban Gamaliel and his bet din that they voted to invalidate ritual slaughter performed by Samaritans (Hul. 5b and Rashi, ibid.). Not many of his halakhic sayings have been preserved, but the greatest amoraim of the first generation – Samuel, Hosea, Hanina, and Johanan – were his disciples and highly valued his teachings. Among the discoveries in the Bet She'arim excavations of 1954 were two adjoining decorated sepulchers, bearing the inscriptions in Hebrew and Greek, “Rabbi Gamaliel” and “Rabbi Simeon” respectively, which are thought to be the graves of the nasi and his brother.

RABBAN GAMALIEL IV, the son of *Judah Nesiah, lived in the second half of the third century.

RABBAN GAMALIEL V, the son of Hillel II, lived in the second half of the fourth century; very little is known of either father or son.

Rabban Gamaliel vi, the last nasi. An order of the emperors Honorius and Theodosius ii, dated 415, has been preserved, which deprived Gamaliel of the post of nasi and of the titles of honor given by the government to that office as a penalty for having built a synagogue without authorization and for having defended the Jews against the Christians. Gamaliel's death in 426 brought to an end the institution of the nasi. From an allusion in the works of the medical author Marcellus (fifth century) it would seem that this Gamaliel was also a physician.

GAMALIEL BEN PEDAHZUR (fl. first half of 18th century), pseudonym of the author of The Book of the Religion, Ceremonies, and Prayers of the Jews (London, 1738). This is the earliest translation of the Jewish prayer book, published in English with a scurrilous introduction. It appears from a letter in The Gentleman’s Magazine (28 Oct. 1758), 468 that the author was an apostate named Abraham Mears. The work throws interesting light on the life and customs of London Jewry in the 18th century.

[Cecil Roth]

GAMARNIK, YAN BORISOVICH (1894–1937). Born in Zhitomir, Gamarnik joined the Communist Party in 1916, taking part in preparing the October Revolution of 1917 in Kiev and in 1918–19 heading the Communist organizations and revolutionary councils of Odessa, Kharkov, Crimea, and Kiev. In 1919–20 he served as a divisional commissar on the southern front. From 1929 until his death in 1937 he was head of the political administration of the Soviet army and a member of the Party Central Committees of the Ukraine, Belorus sia, and ultimately the U.S.S.R. He also served from June 1930 as deputy people’s commissar for defense and chief editor of the Red Army journal Krasnaya Zvezda. He was awarded the highest state distinctions. During the mass arrests he committed suicide. His wife was the sister of Hayyim Nahman Bialik’s wife.

GAMBLING. Gambling was known to the ancient world. Games of chance were an appreciated pastime, often turning into addiction, among the Greeks – Herodotus relates that the Lydians supposedly invented some games (History 1:94); among the Romans, who are known to have bet heavily on chariot races; and among the Teutons, of whose gambling habitsTacitus states that in their less sober moments they even gambled themselves into slavery (Germani, 24). While the Hebrews were also acquainted with gambling (Judg. 14), it was only from mishnaic days onward that the rabbis took a definitive attitude toward gambling.

Professional and Compulsive Gambling

Professional gambling in any shape or form, whether among Jews or non-Jews, was severely frowned upon. The professional gambler was considered a parasite who was engaged in a useless endeavor and contributed nothing to better the world. Some rabbis went so far as to declare the professional gambler a robber whom the Mishnah (Sanh. 3:3) disqualified from giving testimony; he was looked upon as a spineless wastrel who, instead of engaging in the study of Torah or in the pursuit of an honest livelihood (Maim., Comm. to Mishnah, Sanh. 3:3), frittered his time and efforts away on a demeaning occupation and unseemly conduct (Rabban (ed. 1920), 224d; Mordekhai, Sanh. nos. 690, 695).

The rabbis recognized the inability of the compulsive gambler to control his passion for the game (Shiltai ha-Gibborim, Sheb. 756), considered him a moral weakling, and consequently dealt with him severely. One medieval rabbi advised: “Do not show pity to the gambler who pleads ‘pity me in order that I may not be shamed and disgraced by him who has won a gulden.’ Better he be disgraced…” (Judah he-Hasid, Sefer Hasidim, ed. by R. Margoliot (1957), no. 1026; cf. no. 400). So vehement was his opposition to the gambler that if the latter were to lose his money and require assistance from charity, it was to be denied to him.
Public calamities that befell the Jewish community were often considered the consequence of, and the punishment for, excessive gambling. In 1576, in Cremona, three scholars proposed a ban on gambling after a pestilence had abated. They maintained that the popular passion to gamble was the main source of all calamities that had befallen the community. A similar view had been expressed earlier by Judah Katzenellenbogen (Isaac Lampronti, *Pahad Yizhak*, 3 (Venice, 1798), 54a).

**Effects of Gambling**

Community leaders, keenly aware of the painful and destructive effects of gambling upon an individual's character, meted out severe punishment. Gambling debts could not be collected through the Jewish courts (Resp. Rashba, vol. 7, no. 445). The gambler was often placed under ban, dismissed from the burial society (ibid., nos. 244, 270; Resp. Rosh 13:12), at times prohibited from holding his wedding in the synagogue courtyard (Loewenstein, in *JLG*, 8 (1910), 184f.), not called to the Torah (Finkelstein, Middle Ages, 282–95), etc. Family life was also disrupted by gambling habits, and there is much evidence readily available to show how difficult relationships were between gamblers and their wives (Resp. Rashba, vol. 2, nos. 35, 286; vol. 7, no. 501; Rosh, resp. 82:2, inter alia). Women refused to live with such husbands; wife-beating and drinking were common (Zikhron Yehudah no. 71; responsa Maharyu no. 135) and the education of children was jeopardized (Rosh, resp. 82:2). Repelled by the conditions under which they were forced to live, gamblers' wives often sought divorce. The gambler's desertion of his family was not an uncommon occurrence. One moralist even suggested that women should join their husbands in their acts of gambling in order to save their marriages (Moses of Jerusalem (Moses Henochs), *Brant-Shpigel*, ch. 10).

Gambling was denounced not only by Jewish law and by Jewish moralists, but its evils and terrible consequences were warned against by popular folk singers, in colloquial expressions, and in proverbs. "Gambling poems," describing the sorrow of a home where the man gambles, speak pitifully of the mental anguish of the gambler's "widow," the hidden tears, and the neglect of the children.

**Curbs on Gambling**

Jewish writings mention many gamblers who made conscious efforts to curb their passion and activities. A common practice among them was to take an oath not to indulge in games of chance, although this usually resulted in a double violation: gambling and breaking a vow. The vows varied: some gamblers set a time limit to their vows; others excluded specific days or special occasions; while still others only refrained from placing monetary stakes, but played, for example, for stakes of fruit (Resp. Rashba, vol. 3, no. 305; Maharshai, resp. no. 185). Rabbis discouraged hasty vows, realizing that these did not lessen the lure of games of chance.

**Exemptions**

Communal restrictions to suppress gambling were often enacted; the frequency of these enactments, however, shows how futile the prohibitions were and how popular the games. Taking into consideration the attraction of games and gambling, the enactments were flexible: on many festive occasions (e.g., Hanukkah, Purim, the intermediary days of Passover and Sukkot, and the New Moon) the restrictions were lifted (Israel Bruna, resp. no. 136). Special family occasions also received communal dispensation for gambling (Finkelstein, Middle Ages, 282–42, 284–91). In general, however, the prohibitions were enforced and accompanied by severe penalties: excommunication and flagellation were commonly meted out to transgressors (Resp. Rashba, vol. 7, nos. 244, 270); fines were imposed and honorary functions within the synagogue withheld.

**Types of Games of Chance**

The medieval gambler was enticed by all sorts of games. Dice were known from ancient times, and games such as "odds or evens" played with pebbles, knucklebones, and bowling were also quite old. Games with nuts, although often played by children, were also a pastime for the gambler (*Haggahot Mordekhai*, Sanh. nos. 722–3; Resp. Maharam of Rothenburg, ed. Prague, no. 94). Not until the 15th century did cards capture the fancy of the Jewish masses (I. Abrahams, *Jewish Life in the Middle Ages* (1932), 415ff.). Tennis, popular among the Jews of Italy during the 16th century, was, just as chess, not merely played as a pastime but enormous stakes were wagered upon the outcome of such matches (Henderson, in *IQR*, 26 (1935/36), 5; for cards and chess see "Games"). By the 18th century, lotteries were very popular. The different types of gambling were not universal; each country had its own fads and favorite games.

Many authorities felt that it was permissible to indulge in games of chance on occasions (*Mordekhai*, Sanh. 690f.). Gambling, however, carried with it a stigma; but while public opinion looked down upon it, all the private and communal efforts to stem the tide of gambling did not stop Jews from indulging frequently. One scholar even urged the abolition of all decrees against gambling since men could not withstand such temptation (*Mordekhai*, Shev. 787).

**Synagogue Gambling**

Gaming in the synagogue was not uncommon; a sharp contrast was drawn, however, between the usual forms of gambling and cases where the primary motive was not personal gain. A multitude of responsa cite instances where the winnings at games of chance were not considered fruits of sin (e.g., Resp. Maharam of Rothenburg, ed. Prague, no. 493). One of the clearest statements was made by Benjamin Slonik who differentiated between gambling for private gain and that in which the winnings, even if only in part, went to charity. He saw no violation in the latter case and demanded full payment of gambling debts to charity. There were many instances where the rabbis and communities joined in games of chance. One rabbi ruled that he who wins at a lottery should pronounce the blessing *She-Heheyana*; should one win together with a
partner, one must also add the blessing ha-tov ve-ha-metiv (B. Levin, Shemen Sason (1904), 53 no. 27; see *Benedictions).

It seems hardly likely that any blessing should be required if the winnings were considered the rewards of sinful acts. It would thus appear that Jewish law prescribes the professional and compulsive act of gambling; frowns severely and condemns the occasional act of gambling when indulged in for personal gain; while occasional gambling, where all or part of the winnings go to charity, has never aroused condemnation and frequently even has had the approval of the Jewish communities.

These findings might have bearing on the modern controversy over congregationally sponsored bingo and card games organized to raise funds to meet the tremendous budgets of the synagogues. Jewish history and rabbinic literature shows that such methods are not new. Synagogues and communities have indulged in similar games in the past, and the revenues have been used to meet their financial obligations. Rabbis not only did not frown upon such acts but frequently encouraged them. The *United Synagogue of America at successive conventions has, however, ruled that bingo is a form of fund-raising not to be permitted by their congregations, the opinion being that it is not in keeping with the spirit of Judaism.

[Leo Landman]

### In Jewish Law

It is said that people who play games of dice are the sinners “in whose hands is craftiness” (Ps. 26:10), calculating with their left hand and covering with their right, and defrauding and robbing each other (Mid. Ps. to 26:7). Dice are variously named in the Talmud as kubbiyyah (RH 1:8; Sanh. 3:3; et al.), pesipas (Sanh. 25b), or tipas (Tosef., Sanh. 5:2), apparently all words of Greek origin denoting small, wooden, mostly painted cubes. The player is sometimes called kubiuotos, and it is said of him that he is afraid of daylight (Hul. 91b). Slaves are said to be notorious gamblers—which is the reason given for the rule that the sale of a slave could not be rescinded where it turned out that he was a kubiuotos (RH 92b–93a and Rashbam ibid.).

However sinful and reprehensible gambling may be, it was not regarded as a criminal offense in talmudic law. A gambler who had no other trade but lived by gambling was disqualified as a judge and as a witness (RH 1:8; Sanh. 3:3), and in order to have his disqualification removed, had first to pay back (or to distribute to charities) all the money he had earned from his gambling (Sanh. 25b; Piskei ha-Rosh, Sanh. 3:10). For the purpose of such disqualification, moreover, the concept of gambling was expressly extended to include betting on animal races and the flights of pigeons and other birds (Sanh. 25a–b). Opinions differ as to the reason for such disqualification: some hold that taking money from another by way of game or sport, without giving valuable consideration in return, is like larceny; others hold that wasting time and money in gambling, instead of engaging in studies or in a trade or profession, amounts to ignoring the “general welfare of the world” (yishuvo shel olam); both schools conclude that gamblers cannot, therefore, be reliable (ibid.; and Yad, Gezelah Va-Avedah 6:10–11 and Edut 10:4). The rule did not apply to occasional gamblers who earned their livelihood by an honest trade (Sanh. 3:3; Rema, H.M 370:3; Mordekhai, Sanh. 690; Kesef Mishneh, Edut 10:4; et al.). A vow not to earn money was understood to mean not to win money by gambling (TJ, Ned. 5, 4, 39b).

As gambling easily grows into an irresistible obsession, vows and oaths to abstain from it in the future were frequently taken, and the question arose whether such vows were irrevocable: those who held that they were regarded gambling as offensive and prohibited anyway (cf., e.g., TJ, Ned. ibid. and Korban Edah and Penei Moshe ibid.; Resp. Rashba, vol. 1, no. 756; Resp. Radbaz 214; Resp. Maharashdam, 1b 84; et al.); others also considered the psychological aspect and held such vows to be impossible to maintain (Resp. Ribash 281, 432; et al.). But so long as the vow had not been lawfully revoked, any gambling in contravention of it would be punished with *flogging and heavy *fines (Resp. Rosh 11:9).

In the Middle Ages, the playing of games of chance came to be recognized in many communities as a criminal offense: with the impoverishment of ghetto populations, the public danger of gambling and the necessity to suppress it called for drastic measures. The following is an example of a communal law (*takkanah*) on gambling: “Nobody may play at cards or dice or any other games whatsoever that the mouth could speak or the heart think, even on Rosh-Hodesh, Hanukkah, Purim, hol ha-mo‘ed, and other days on which no Tahanun is said, and even at the bed of a woman confined in childbirth or at a sickbed – and everybody whoever it may be, including boys and girls, manservants and maidservants, shall be punished if they should (God forbid) contravene and play; if the offender is well-to-do, he shall pay for every occasion two silver coins, one for the kubiustos and Rashbam ibid.).

However sinful and reprehensible gambling may be, it was not regarded as a criminal offense in talmudic law. A gambler who had no other trade but lived by gambling was disqualified as a judge and as a witness (RH 1:8; Sanh. 3:3), and in order to have his disqualification removed, had first to pay back (or to distribute to charities) all the money he had earned from his gambling (Sanh. 25b; Piskei ha-Rosh, Sanh. 3:10). For the purpose of such disqualification, moreover, the concept of gambling was expressly extended to include betting on animal races and the flights of pigeons and other birds (Sanh. 25a–b). Opinions differ as to the reason for such disqualification: some hold that taking money from another by way of game or sport, without giving valuable consideration in return, is like larceny; others hold that wasting time and money in gambling, instead of engaging in studies or in a trade or profession, amounts to ignoring the "general welfare of the world" (yishuvo shel olam); both schools conclude that
ishment, with imprisonment up to one year and a fine of up to 5,000 pounds, of professional gamblers (and much lighter punishment for occasional gamblers); the prohibition attaches to games in which money or other material benefits can be won, and the results of which depend more on chance than on understanding or skill, or — as in the case of bets — depend purely on guesswork.

[Haim Hermann Cohn]

The Validity of an Agreement Dependent on Casting Lots

An agreement dependent solely on casting lots. Casting lots is mentioned in tannaitic literature as an acceptable way of dividing property amongst heirs (BM 106b). The amoraim discussed the nature of the legal mechanism of acquisition (kinyan) after the results of the lots are obtained. The conclusion reached in the Babylonian Talmud is that the benefit derived by each of the siblings from the very fact of the mutual agreement to disband the partnership creates the wholehearted agreement required in order for the transaction to be valid (Rashbam, ibid.). Similarly, any agreement in which the sides undertake to make payment in accordance with the results of casting lots has binding force, albeit on condition that a formal kinyan was performed so long as there was no kinyan the sides can withdraw from the agreement (Meirat Einayim on Sh. Ar., hM 207:33).

The conditions required to validate an agreement involving lots or gambling are that it be carried out fairly; and that each participant enjoy equal chances of winning. Rabbi Jair Hayyim Bacharach was asked about a case in which people had cast lots, the stakes being a golden goblet. In the particular case he adjudicated, the lots were cast in an unfair, unequal manner; hence, he ruled that the lottery was invalid. Had the lots been cast fairly, he ruled that they would carry binding validity for “we see from the Torah, the Prophets, and the Writings that lots were relied upon when they were cast without human thought or intervention… Most likely, if the lots are cast fairly, an element of divine intervention obtains” (Responsa Havot Ya’ir §61).

Agreements dependent on both luck and skill of participants. In the case of games involving a combination of both skill and luck, we find a controversy regarding whether the agreement among the sides is valid or not. As stated earlier, the amoraim argued in the Talmud (Sanh. 24b) as to why dice-players are disqualified from serving as witnesses or judges. According to Rabbi Shesheth, it is because “they are not concerned with the general welfare.” In his view, their disqualification is more societally oriented. Rami bar Hama, by contrast, argues that their disqualification stems from the invalidity of the agreement among them, which transforms the transfer of money among them into theft, thereby disqualifying them as witnesses or judges.

In this second view, games of dice “constitute an asmakhta [a transaction built upon a fallacious presumption], and an asmakhta is not binding” (BM 66b. See “Asmakhta”). Each participant presumes that he has the skill and ability to beat his opponent and to win the money; hence, when he initially agrees with the other parties to abide by the results of the game, his consent is not sincere. Hence, the required act of acquisition does not take place among the sides, and the money that ultimately goes to the winner is in a sense stolen (Rashi, ibid.).

The law was decided in favor of Rabbi Shesheth, who said that the reason that dice-players are disqualified from serving as judges or witnesses is their “lack of concern with the general welfare.” Some explain this in the sense that dice-players, being unfamiliar with the normal workings of the world, are thereby unfit to serve as judges. This approach would seem to imply that, from a monetary standpoint, the agreement among dice-players is valid (Rashi, ibid.). Yet according to Maimonides (Yad, Gezelah 6:11), even the rationale of “lack of concern with the general welfare” includes the issue of theft. In his view, winning money in a dice game still involves a “trace of theft” to it, thus making it rabbinically prohibited. No full-fledged acquisition takes place between the sides; what occurs is instead a farce (Meirat Einayim on Sh. Ar., hM 34:40). In the view of Alfasi [Teshuvot ha-Géonim (ed. Harkabi, §5647, §84)], or that of the Talmudic text he had before him, it follows that Rabbi Shesheth does not disagree with the principle that dice-games constitute an asmakhta.

When the dice game is played for money that is not literally lying on the table before the players, but only exists as a debt, such that each participant undertakes to pay in the future if he loses, the winner is unable to claim the money from the loser through the rabbinic court. The reason for this is that such a case constitutes an outright asmakhta, or because such an act is devoid of any act of acquisition (Tosafot, Er. 82a; Tur, hM 207:17).

Games of skill. We find a controversy among the halakhic authorities regarding games in which winning depends on skill rather than luck. The Talmud (Er. 104a) mentions such a game between women employing nuts and apples, and the game is deemed prohibited on the Sabbath. Or Zarua (Pt. 11, Hilkhot Yom Tov, §357) rules that even on weekdays that game is prohibited, because it is like dice games.

By contrast, Shiltei ha-Gibborim rules that this game is exclusively one of skill, and as such cannot be likened to dice games. In wake of this controversy, later authorities disagreed regarding chess: should chess be considered not an asmakhta, as it requires skill and only people of good character play it, or should we not distinguish between different types of games, and instead consider even games of skill an asmakhta? (see, for example, Responsa Torat Emet §180).

Purchasing lottery tickets. Contemporary halakhic authorities deliberated the issue as to whether one is permitted to purchase lottery tickets. Rabbi Ovadiah Yosef ruled that, owing to the problem of asmakhta, it is forbidden to purchase such tickets. By contrast, Rabbi Avraham Shapira, when he served as chief rabbi of Israel (see Bibliography: Shapira), ruled that the purchase of lottery tickets differs from play-
